The third document, HQ, is a secretary's report of my oral comment to the Board of Education and its meeting on June 29, 1967. There is no other heading. But, this relates primarily to the advisory council on the equality of educational opportunity—the so-called Berge committee report.

Q. Have you had occasion to review the transcript shown, HQ? A. I have.

Q. It is a correct transcript of your oral remarks? A. To the best of my recollection, it is, yes.

Mr. Ris: We offer in evidence—

The Court: We will receive them all.

(Whereupon, Defendants' Exhibit HO was received in evidence.)

Mr. Ris: Was HN also received?

The Court: HN has been received. HQ will be received over the objection for the limited purpose of reflecting the thinking at the time and the knowledge that was communicated to the Board members.

[1916] Q. Dr. Oberholtzer, I am going to leave these exhibits for a moment and we will return to them shortly. Now, Dr. Oberholtzer, we have already had considerable testimony, but I'm not sure it's entirely clear so I want you to explain it to us the best you can—what difference, if any, there be between what's known as a rated capacity of a school building and the actual utilization of a school building; what the relationship may be. And whether merely reflecting pupil membership to rated capacity is always a fair comparison; whether the actual utilization of that building must be taken into that consideration. A. I had heard some of the testimony with respect to this and I can understand why there might be some difficulty in understanding the matter.

We are obliged to have what amounts to certain base figures from which to consider capacity of a building or utilization of a building. And this has been—it was during my twenty years—different terms were used and there were some differing practices as was pointed out this morning in how you calculated capacity. We found it difficult to explain to citizens through the years, and I find it here. But, it is a necessary part of our consideration.

The tendency of most lay citizens is to take capacity as an ironbound—you go above or below a certain figure. That was not the purpose of this matter at all. It was to give [1917] an indication on the basis of a formula from which you derived the utilization. And just to repeat, usually building capacity was calculated on the basis roughly of 30 pupils per classroom with certain variations. But, that was the basic—there were variations, as was pointed out this morning with respect to major things.

For example, whether you included libraries or not. Whether you included the gymnasium or not. So it made

some difference from year to year as to what a capacity was. But, this was simply the starting point of consideration of utilization.

And when we took a look at the—at a given pupil population in the school in terms of suitable programs, you always had a variation as to utilization. The confusing part is that we still find citizens referring to under-utilization and over-utilization based on this 30 pupil. This is really of no meaning, if you consider the program. I have to say it that way. And yet, we were obliged to publish a capacity figure, and this is why we got ourselves into arguments with people about what it meant, and I have heard some of them here.

For example, if there were—if we had testing results, achievements, and I'm referring to standardized achievement results. If there was generally let's say lower achievement than another school, there would be a different [1918] picture as to its utilization.

Let me generalize I hope in a meaningful way. Using the middle line of achievement as the median, if the major achievement was well above the median, it was possible to have larger class sizes, a larger number of pupils in a given building and still maintain a very good educational program. This is largely because in those areas or neighborhoods where there was a generally high achieving group of pupils, that group is more capable of self-direction in its own study activities and did not need lesser number of pupils.

If there was lower achievement in certain areas, it was necessary to have a larger number of teachers per pupil per group of pupils. That is, the number.

This is where you get into teacher-pupil ratio.

And generally speaking, one of the adaptations that we

made through the years for those schools where achievement was not as high as I have just referred to, there would be lower pupil-teacher ratios. Every room would be occupied and the building would be utilized from our standpoint fully for that program.

Now, if you just take a 30-pupil average and calculate it, then that building was not utilized, and I have heard that term used here, underutilized. That in our estimation is not the case. The building was fully utilized and that's why I want to make it clear at this point because I can if advisable [1919] point to particular schools and that may be useful to do so.

But, this is in general the case. So, we instituted the other kinds of adaptations to endeavor to raise the achievement levels, but one of the basic adaptations was to lower the pupil-teacher ratio. In other words, if you want to translate this into pupil capacity and utilization, instead of let's say using 30 pupils as a normal capacity in those schools, you in fact ought to use closer to 25 as a rated capacity.

Q. Now, we had considered this at one time as a way in which to relate to this and we tried it. But, we found people constantly getting confused as between the two applications. This is in fact what has happened.

Q. And some of the comments that I heard this morning relate specifically to what I have just said.

Q. Can you relate this specifically to either Manual or Cole from the testimony you heard this morning? A. Yes, sir. It would apply both to Manual and Cole. The achievement level at Manual and at Cole was not in this higher bracket that I am talking about generally, and please keep in mind that one of the basic facts of

education is the individual differences, and I'm talking now only in general, not individual.

There was a need in both instances of a much lower pupil-teacher ratio and this was requested year after year by the principals in those schools. And we did accede in [1920] their request for lower-pupil teacher ratios as one of the means of endeavoring to raise the achievement levels.

Q. Dr. Oberholtzer, there has also been a problem with respect to this exhibit, which is 390 and 390-B. And there was particular reference to certain elementary schools which are represented by blue circles, Columbine, Whittier, Gilpin, Crofton, Ebert, Elmwood, Fairview, Westwood and Elyria.

Q. Can you relate what you have just been discussing with respect to utilization compared to rated capacity as to these particular schools?

Mr. Greiner: Your Honor, I object. That exhibit speaks as of September 1968; at a time when the Superintendent was no longer Superintendent.

The Court: Well, he can give us whatever information he has on this subject. It may not be in date particularly.

A. If it would be useful, I will comment, as I knew the schools.

Q. That's all we're asking. Anything you have of your own knowledge; what you know from your own experience. A. From what I know of those schools—they were generally in what would be termed low economic—socio-economic neighborhoods and this is based upon the average income of the family, and they would be generally

in the portals that I was talking about, not of the high achieving schools, but of the lower achieving schools. Yes.

[1921] Q. Dr. Oberholtzer, you say that you had various adaptations that were used in those low achieving schools. Why were you using adaptations there? What was your objective? A. Our endeavor was to try to raise the achievement levels of the children in those schools. It has come to be known in these later terms as providing equality of educational opportunity. What we were trying to do was to provide the conditions whereby these boys and girls might achieve more nearly in keeping with their abilities.

Q. Directly tied in then to making available equality of educational opportunity? A. It was directly related to it, yes, sir.

Q. Now along the same line, but deviating a bit, there has been some evidence introduced at this trial concerning the achievement results by schools and particularly with respect to the triennial testing that was done and the fact that although there were publications made of the test results, that here were no publications to the general public or even to the Board itself at its meetings of analysis, school by school, so that schools were compared. Is that the fact? A. That was a fact during my administration.

Q. Why did you do that, Dr. Oberholtzer? A. May I comment then, because I recommended the institution of the triennial surveys of testing of achievements [1922] which began in 1950 and were continued at three-year intervals thereafter. At the same time an opinion survey which accompanied it, which is pertinent to this, I hope, later. We did consider many times in staff the desirability of reporting comparative results and decided not

to do it, essentially for the same reasons that we did not publish comparative results of individual boys and girls. We felt that it would not be desirable. There are individual differences among boys and girls, many differences. There are many differences among schools. And it was in our judgment an unfair practice to do this.

Now, this is a very short answer to a difficult and complicated question, but I would add immediately that the results for every school were made public in the neighborhood. Where that school was located we did compare their results with the city wide results and it was an obligation of the principal and the faculty to discuss with the citizens of that community the results and at least one meeting was held in the schools to do this on each occasion.

The Board was furnished the overall results. The community at large was furnished the overall results. A special edition of the review, for example, was published.

Q. And the review is what? A. The review is an official publication of the Denver Public Schools issued at first once a year and then I think [1923] three times a year, which was an attempt to make a public report to the citizens of some important things going on in the schools.

Q. To whom is the review circulated? A. A copy was given to every boy and girl in the schools to take home, for one thing, so that there was a public statement of the results. We also mailed copies to organizations and to a large number of individuals who expressed an interest and wanted copies. The members of the Board were provided copies. All members of the staff, certified and classified, were provided with copies.

Q. Did the staff itself compare school by school? Did they have that material available? A. That material was available, and there, however, were no discussions with

faculties or with schools comparing them with other schools. We did every year—when I say "we," the deputy superintendent of instruction made a personal visit to every school at least once a year, all schools in the district, for the purpose of discussing these results with the principal and the faculty committee, usually the so-called instructions committee of the faculty, raising questions as to what they were doing to improve the situation.

[1924] Q. In each school, was there a standing instruction of the faculty? A. There was, for a long number of years. This is an old custom in Denver. It was here when I came and continued.

Q. Dr. Oberholtzer, as the years went by and we had overcrowded situations, you had various expedients to solve the problems, either temporarily or permanently, correct? A. We did.

Q. When you first came, was consideration given to the use of mobile units? A. There was some consideration at that early date.

Q. Were they being used at all in the Denver system? A. No mobile units. There were some so-called temporary buildings that had been there since World War I.

Q. At Gove primarily? A. There was, I think, one or more, perhaps one or two, at Gove, but there was another junior high school that had one or two.

Q. Was that the extent of the temporary buildings? A. That was the extent of the temporary buildings at that time. We called them temporary buildings. They were not temporary.

Q. Were mobile units being used in other districts in the metropolitan area? [1925] A. I don't recall any mobile units. There were some called, again, temporary buildings. For example, our neighboring Jefferson County embarked

on, I think they called them cottage schools. They were homes, in fact, converted to schools temporarily, but I don't recall any so-called mobile units at that time.

Q. In the '60s, there was some use made of mobile units in Denver, were there not? A. There was a very late development, after we had considered other ways in which to meet the increasing population.

Q. What other ways were used? A. Well, basically, we made a decision early not to build temporary buildings in connection with the first bond issue, so we constructed no temporary buildings for elementary or secondary schools for a long period of time. I have to qualify that, because in the late 1960s, there was a change. Instead, we did utilize several sessions of schools and so there were at times as high as 200 rooms on double sessions in the district, mainly in the elementary schools, although there were at times some secondary schools, rather than building temporary or mobile units. Now, this was in lieu of permanent construction, until we could get it.

Now, our ideal was to provide permanent [1926] construction wherever possible. We had the usual problems of insufficient funds to do all the things that we wanted to, to meet the needs. A great many of the needs were met through the three bond issues and the other program that I referred to, but a lot of them were not met.

Q. Would you just define what is meant by double sessions? A. A double session—let me use the term in the elementary schools first—for example, it meant that a given classroom in a given grade would have two sessions in a day. There would be one teacher in the morning and one teacher in the afternoon, and, generally speaking, that, as I recall, went from 8:30 to 12:30 and 12:30 to 4:30 in the

afternoon, with some overlap of teachers, so that there were in fact two teachers in a given room at a time.

Q. Two different groups of pupils? A. No, one group of pupils, but there were two teachers for that group in the overlap period of time at the noon hour.

Q. No, I'm speaking about the morning session and the afternoon session. A. There were two sessions of pupils but no overlap of pupils. The overlap was in the teachers who were working with the pupils. That was mainly in the—

[1927] Q. Just a minute, let's back up.

The Court: I thought double sessions involved full utilization of the buildings by starting at seven in the morning with one shift and commencing at twelve with the second.

The Witness: Now, Judge, we are coming to that in a moment. That's the secondary school, not the elementary school.

Q. Well, in the elementary school, do you have one group going in the morning and a second group going in the afternoon? A. In the secondary school, but they started—

Q. I am talking about the elementary. A. Two groups in one room.

The Court: When do they start?

The Witness: 8:30 in the morning to 12:30 and 12:30 to 4:30. What he is talking about is a secondary school. That's another matter. I will come to that.

Q. I don't think it is clear that you had separate teachers, morning and afternoon. A. That's what I stated.

Q. Two groups of pupils, morning and afternoon? A. Yes, sir.

Q. And the teachers overlapped over the noon hour? A. That's right.

[1928] Q. So the teachers overlapped? A. They had the same day as any regular teachers.

Q. All right. How about the secondary school? A. It was as the Judge indicated. We began there much earlier, and our endeavor was to provide, as nearly as we could, the full time element for them. We began about seven, went to twelve, and twelve to five. That's the secondary school, that's true. Here again, there were two groups of pupils and two faculties. There was not a continuation of teachers. Now, this was widely used in both elementary and secondary schools as a temporary measure to meet overcrowding. There was another means of doing this used in the secondary schools only.

Now, I have to refer to stages of overcrowding, if I may here. At the first stage, there would be extended days, and by that I mean they were taking normal school days, which began around 8:30 or so, and extended to about 3:30. They would add a period on in the morning and in the afternoon, or one or the other or sometimes both. This enabled them to accommodate another group of young people in the schools. When that did not meet the need, then we had to go to a double session, and that's the second stage.

Q. Was the extended day technically used only at the secondary level? [1929] A. In the secondary schools, yes.

Q. That had to be tied in to a so-called tutorial system where they went from class to class. A. This was adaptable in the secondary schools because you have a quite dif-

ferent organization. You do it subject by subject. Certain subjects would be offered in the morning and certain in the afternoon.

Q. So, a normal day, say, at a high school, was seven periods and on an extended day you would extend it to nine periods? A. That would be typical.

Q. The pupils would still take the normal course? A. They would be involved for seven periods, for the most part.

Q. You could accommodate more pupils in the nine periods? A. Right.

The Court: I think we will take our afternoon break at this time, Mr. Ris.

(Whereupon, at 2:27 o'clock p.m., the Court recessed.)

[1930] (Following a recess, the trial resumed at 3:48 p.m.)

Q. Dr. Oberholtzer, we were discussing various—

The Court: Double sessions.

Mr. Ris: I think we were through with double sessions, unless the Court had some—

The Court: That was the last thing.

Mr. Ris: I'm through with it.

The Court: I'm pretty well checked out on that now.

Q. Now, what other options are there that have been used from time to time for a solution of overcrowding in the schools that we have not discussed so far? A. Well, a limited—to a limited extent, some transportation. But,

transportation was used more often to accommodate pupils in areas where there were no schools and you transported them. The other was the mobile units to which you referred. But, that did not come into the picture until late 1960's, as I recall, around 1965-1966, somewhere in that time. Those were the principal ways.

Q. Did you on occasion or as a matter of practice have to determine what the wishes of the parents of the children or the students were as to some of these various options? A. Yes, there were discussions. Sometimes extended discussions; sometimes very brief discussions, depending particularly on the differences between elementary and secondary schools. There was usually some discussion. Very often in [1931] the case of the elementary schools it would be the principal and the faculty with the citizens. Sometimes, the central staff would be involved. Rather frequently in the case of the secondary schools where board action was necessary and much larger numbers of pupils involved, there were hearings and sometimes in the schools there were meetings, representations were made at the board meetings.

So it varied greatly from school to school. But, there usually was some consideration of the citizen interest.

Q. Do you remember a circumstance pertaining to the Smith Elementary School and questionnaire to parents as to various alternates—or to various options, I should say? A. I do have some recollection of it, yes. But at the same time that Smith was being considered, Stedman was also being considered. And Dr. Hendryman attended the series of meetings at Smith School and I attended a series of meetings at Stedman School. So I am familiar generally with what went on at Smith, but I did not attend the meeting.

Q. You were not personally present that evening? A. I was not.

Q. Did Mr. Olander attend the one at Smith, if you know? A. He might have. But, Dr. Hendryman was the man primarily responsible, my deputy superintendent.

Q. At that meeting—at Smith, you were aware that [1932] the meeting was being held? A. Oh, yes. And he was assigned to go there.

Q. And at that time and prior to that meeting was it known busing was to be had out of Smith to what schools the children would be bused? A. I don't recall that particular—there was a discussion of possible busing and of possible mobile units, as I recall. These were the—or double sessions; such arrangements. But, the primary issues resolved between mobile units and busing.

Q. Boundary changes also a solution to overcrowding? A. I don't recall any extended—at least any extended discussion of any changes in boundaries at that time. There were perhaps some, but it is primarily ways of making a significant difference in the overcrowding.

Q. Dr. Oberholtzer—

The Court: Well, were the solutions—the discussions and solutions the same at Smith and Stedman?

The Witness: No, sir. The solutions were not the same.

The Court: Were you going to ask him about his experience at Stedman?

Mr. Ris: No, but I'll be glad to.

The Court: He said he attended Stedman.

Q. Would you tell us about your experience at Stedman. [1933] A. I'm glad to have the opportunity. I did discuss

with Dr. Hendryman his experience so I had some general knowledge of what occurred.

Mr. Greiner: Pardon me. I thought the question pertained to Stedman, Your Honor.

The Court: Well, that was my object.

A. All right. I will discuss Stedman then.

The Court: Very good.

Q. That was the question. A. In the case of Stedman I was present at the meetings where there were citizens interested in solutions to the overcrowding of that school. The discussions resulted in the citizens recommending that we relieve the overcrowding by busing out some children from the school.

[1934] Q. What type of meeting was this, Dr. Oberholtzer? A. A public meeting.

Q. Was it a PTA meeting or a special meeting called for this purpose? A. It was a special meeting called for this purpose, at which I understand a general invitation was extended to citizens of the community.

Q. Do you remember when this meeting was held? A. In the afternoon.

Q. What month or year? A. I can't recall precisely. It was, I think in the spring of the year.

Q. January, 1966? A. I was thinking of later. It might have been.

Q. There has been some evidence as to certain overcrowding in Columbine and Harrington in the early '50, specifically 1951 and 1952. Do you recall what the situation was at Columbine and Harrington in particular at that time? A. '51-52?

Q. Right. A. There was an increasing population of students in that area, and as I recall, rather serious overcrowding of those schools.

Q. Do you recall what the situation was with [1935] increase in number of Negro students in either of those subdistricts at that time? A. Well, again, we had no statistics and I have no distinct recollection of the racial composition, no. I do know there was some general changing and moving of population beginning about that time, but not a large group.

Q. All right, do you recall making any changes or establishing of any optional zones in that area where the race, directly or indirectly, went into your consideration or decision? A. That was not a part of our consideration.

Q. Directly or indirectly? A. Directly or indirectly.

Q. Now, with respect to the 1956 boundary change, when those changes were made between Cole and Smiley and Cole and Morey and East and Manual, do you recall what was done with respect to the pupils that were already enrolled in any of those optional schools, as to whether they could continue or had to complete their junior high experience or the senior high experience at the new school? A. The general policy at that time, and I presume it was followed then, was to permit a boy or girl to continue in the school of attendance. For example, if you were in a junior high school, to continue his attendance [1936] there. In the senior high school, to continue there.

Q. I would direct your attention again to Plaintiffs' Exhibit 333, June 20, 1956, and Paragraph C. Does it so indicate that all the present seventh, eighth and ninth-grade pupils may continue at either Smiley or Morey or

Cole, where they were presently attending? A. Correct. Paragraph C.

Q. With respect to Manual and East, referring to Paragraph B, what is provided? A. All present tenth, eleventh, and twelfth-grade pupils living in this area may continue at East and Manual High Schools under the present option.

Q. And when did it become mandatory then as to the future students? A. Well, all pupils entering the senior high school from the area in the future, beginning September, 1957, would attend Manual High School.

Q. Now, Dr. Oberholtzer, I would like to take a look, if we may, at Barrett. First, Barrett construction and, first, to the Barrett site selection. Can you tell us in what year the property was acquired by the school district, roughly, Jackson, Colorado Boulevard, East 29th Avenue to East 32nd Avenue? A. It, as I recall, was acquired in 1949.

Q. Were various school sites selected during your [1937] tenure in office? A. A great many sites and one of the first of my jobs was to participate in this selection, resulting—and this is an instance, the 32nd and Colorado site—resulting from the Carmichael study. This was one of the early sites acquired, and we acquired sites throughout the city where there was some projected increase and where we did not have, or where there was potential increase, and we did not have sites, and in this case it was a potential that we were looking to. 32nd and Colorado was a junior high school site, as I recall, because of its size, but we did acquire a goodly number of both elementary and secondary school sites in a period from roughly 1948 to 1950, and then thereafter periodically, as expansion, annexations occurred, so on.

Q. Again, attempting to obtain a time sequence, you assumed your responsibilities on August 1, 1947? A. Right.

Q. Do you remember when Dr. Carmichael began his study and survey? A. Well—

Q. Or do you remember when you got his report? That's the important thing. A. Well, it came in 1948, as I recall, before the close of school or about the close of school. Dr. Carmichael [1938] was employed sometime before December of 1947, as I recall, to begin his studies, and he begin promptly to make these studies of pupil populations and projections of populations and assisted us also generally in commenting on the location of sites, but we had in addition a committee of realtors who did the actual negotiation for sites at our direction. That is, the general locality. You can't always buy a site where you would like to have it, because the neighborhood perhaps was already built up. Rarely did we have the opportunity to go into an undeveloped territory and select a site where we would like to have it.

Q. All right, in your years of connection with the Denver Public Schools, have school site locations ever been selected for the purpose of containing minority pupils, that is, Negroes and Hispanos, in schools separate from Anglo students? A. No.

Q. Now, with regard to the Barrett construction, what was the problem that led to that construction, Dr. Oberholtzer? A. Well, again, as in other cases, a rising and in this instance a very rapidly rising school population and an overcrowding of schools in the immediate neighborhood. In this instance, the most contiguous schools would have been, I believe, Columbine and Harrington, but rapid [1939] rise there led us to recommend the construction of a school at 29th and Jacbson. We had an available site.

It was at the east end of the territory involved, where the children were. We would have much rather had a school farther to the west, but there was no site for it. This was the available site.

At the same time, there were other needs very closely related and similar to the Barrett situation. For example, the Denison Elementary School. I mention this because the plans of Barrett and Denison were identical. That is, they were prototype schools, and the situations very similar, rapidly rising population.

Q. Again, in connection with the decision to build on this site, were parents of the children in the community consulted? A. There were discussions, as I recall, about the construction of the school, yes.

Q. Do you remember when the authorization was given by the board for the schools? A. As I recall, I recommend that we construct the school late in 1958, somewhere in that neighborhood.

Q. Had planning been considered prior to that for any period of time? A. In this instance, as in others, yes, over a period of months, some consideration had been given.

[1940] Q. I hand you what has been marked as Defendants' Exhibit GC, which purports to be Pages 9 and 10 from certain minutes. Do you recognize what that is? A. These appear to be copies of minutes of the Board of Education.

Q. Relating to Barrett School? A. Yes.

Q. Have you reviewed these recently? A. I have had an opportunity to read them, yes.

Q. What is the date of the meeting? A. The date of the communication is April 8, 1959.

Mr. Ris: We offer into evidence Defendants' Exhibit GC.

Mr. Greiner: No objection, Your Honor.

The Court: It will be received.

(Whereupon, Defendants' Exhibit GC was received in evidence.)

[1941] Q. Now at the same time do you recall what the situation was with respect to Columbine? I think you mentioned Harrington. A. I think I did mention Columbine and Harrington.

Q. I'm sorry. I missed that if you did. A. There was an increase in population at both Columbine and Harrington, yes.

Q. Was there any difference in the population movement between 1958 when Barrett was first being discussed and 1960 when it was completed and occupied? A. It's my recollection that about that period there was a considerable change in the population, increase, yes.

Q. Now, had you anticipated the amount of increase and the amount of population movement in that area during the planning stages? A. Well, we had anticipated some increase obviously, or we would not have constructed a school. But, as I look back on it now, there was more really than we had anticipated.

Q. Now, do you normally build for a hundred percent of your maximum estimated membership? A. That was not our customary practice. We usually tried to make an estimate of the peak population for a given area and then we would construct a school for about 85 percent of that peak.

Q. Do you recall any of the children in what turned out [1942] or what ultimately became the Barrett subdistrict

for being bussed to any other school for that before Barrett opened? A. I believe there was some transportation at that time to Park Hill Elementary School.

Q. Do you recall whether or not there were double sessions at either Columbine or Harrington before Barrett was constructed? A. I can't recall precisely but I wouldn't be surprised if there were. There was a rather substantial increase. There probably were.

Q. With respect to the establishment of the eastern line of the Barrett Subdistrict to Colorado Boulevard, will you state the matters considered in coming to that conclusion? A. Well, here, again, we were concerned with meeting the needs of a group of young people, boys and girls, in that immediate area. The school site was at the eastern edge of the area under consideration, next to Colorado Boulevard. We were concerned about the traffic on Colorado Boulevard, and I must say if you examine the map as we looked up and down Colorado Boulevard we tried where we had the responsibility of building schools not to set the boundary lines over. Elementary schools now I am talking about.

And so, we did set the eastern boundary with that—that was one of the factors; but not all of them.

Q. Even though the boundary line—even though the [1943] school site was on the eastern boundary line of the subdisrtict, was the size of the subdistrict such that it was within the one mile walking distance for elementary students? A. Yes. We had, if I may add, a situation quite similar developing in the western part of the city, and I referred earlier to the two plans that were used, one at Barrett and one at Denison. Originally, keep in mind, this site was not intended to be an elementary school site, but as we found development in the city and in this

instance a much larger population development over a relatively short period of time than we had expected, we were under the necessity of building an elementary school. The same thing happened at Denison School, which is very comparable. The school site is right up against Sheridan Boulevard on the west side of that subdistrict. These are two instances, coincidental, that happened right about the same time, but similar circumstances of unusual increase, rapid increase.

Q. At the time of planning for the Barrett School in 1958, did the district own another site further east, in the Hallett area? Somewhere in there? A. Elementary school site now you're talking about?

Q. Yes, sir. A. I don't recall any within any relatively close distance, no.

[1944] Q. Senator George Brown testified he understood or thought there was another available site further east. A. There might have been, but nothing close that I recall. Quite a distance.

Q. Was there any racial or ethnic basis for establishing the site of Barrett where it was built? A. That was not a factor in building the Barrett School.

Q. During the years of your association with the Denver Public Schools, have attendance and boundary line changes been drawn for the purpose of segregating minority students, that is, Hispanos and Negroes, so as to keep them separate from Anglo students? A. No, sir.

Q. Now apparently prior to the Voorhees report there was no detailed written policy as to boundary selection criteria or factors of boundary changes. Is that a correct statement? A. Yes, sir. There were such. I noticed—

Q. Will you tell us what they were? A. I noticed this and again as I reread the report, there were available

criteria. I was looking through, for example, the reviews, copies of the school review, and you will find for example in 1960 a special edition dealing with school boundaries and the criteria, so I am a little surprised [1945] that the report said that there was no previous publication. We did have a policy manual that related to boundaries and such, but I referred specifically to the review as one instance. And there were others, but I can't recall specifically.

Q. Was this policy book that you referred to limited solely to boundary matters? A. No, this was a compilation of a large number of policies by the Board of Education, rules by the Superintendent which had the effect of policy by sanction of the Board authority. It was a combination of such and a rather thick document—if I may show you with my fingers—about so thick. (Indicating.)

Q. Now, were optional zones in use throughout the district when you arrived in 1947? A. There were optional zones in various parts of the city, both for secondary and elementary schools when I arrived in Denver.

Q. Were they in use in both predominantly Anglo areas as well as predominantly Negro areas? A. Yes.

Q. And these continued until 1964, as I understand it? A. Yes, rescinded in 1964 in part as a result of one of the recommendations of the study committee.

[1946] Q. To your knowledge during the period they were in use, were they used for racial segregation purposes? A. They were not so used.

Q. Dr. Oberholtzer, do you have any specific recollection to the 1961 boundary changes involving Boulevard, Brown and Ashland? Can you add any light to those changes? A. I have heard the testimony and I am sorry, I can't add any specific light to that situation.

Q. Can you tell me if during the period at about 1961 or '62 there were any discussions in staff with respect to the phasing out of the old portion of Boulevard or even of Ashland itself? A. Yes, I remember those discussions. I heard the testimony this morning. The Boulevard School was made up really of two parts; one distinctly older than the other. And there was sort of a passageway between the two buildings.

Q. Was the new part contained so far as heating and— A. It was not a new building. Let's call it a more recent part. It was also an older building. It was not a new building. In other words, construction—I don't remember the precise date, but long before I came to Denver. The other part of the building was one of the very old buildings in the city and the nature of it was such that we deemed it inadvisable to continue to have school in the building. And so we razed the building.

[1947] Q. And that was following the 1961 lowering of the capacity at Boulevard? A. That did result in the lowering of capacity. Now I do remember that aspect of it. But, as to the other discussions, I don't recall.

Q. Now, with respect to the 1961-1962 boundary change study, which among other elementary schools involved Stedman and Hallett, do you recall that particular study that was made, Exhibit 52? Are you familiar with that? A. Do you have anything that would help me recall it? I remember the general situation.

Q. Will you look at Exhibit 52, please, Dr. Oberhholtzer. Do you recall this particular document at all? A. This is one of the many such documents where we were considering in staff possible school boundary changes. It was not the sort of document which would have been presented to a board meeting or to the board in regular meeting. It's possible that some board member or staff member—I am

sure the staff members had copies. But, this is not a report. It was for study only, and among many proposals that I made over a period of years.

Q. And this related only to elementary schools? A. It apparently does, yes.

Q. The title on the first page I believe refers— A. Yes, it does.

[1948] Q. At that time who made the determination with respect to boundary changes at the elementary school level? A. By the bylaws of the Board, that was the responsibility of the Superintendent and his staff, with the additional responsibility of informing the Board from time to time. This was done by letter and by various means. But, they were informed.

Q. Dr. Oberholtzer, at about this time do you recall a situation existing at Smith, the pupil membership at Smith where it had a temporary but rather drastic drop that was developing? A. There was a period in—now I am trying to relate it to the particular years. Let me describe it in general; when we built Smith School, we tried our best as usual to predict what the peak enrollment would be. But, it increased more than we had expected and there was an addition necessary. Then there was the construction in that vicinity of a parochial school, as I recall, which resulted in a decided drop in the membership of the Smith School for a short while. But that I mean a period of possibly a year or two.

Then there was another rapid increase in pupil population, and this is typical of some areas. You get varying population trends, down and up. And in the case of Smith School I suppose we have one of the most drastic instances of rapid change, both ways, down and up.

[1949] Q. Was this drastic change predictable before it

happened? A. As we looked forward, we could not see it. If you used 20-20 hindsight, I suppose it is predictable, but we did our best to ascertain what was going to happen and things happened that we didn't expect.

Q. With respect to Exhibit 52, would you please look at pages 16 and 17? A. 16 and 17.

Q. Yes, sir. On page 16, you will notice two references for proposed boundary changes on Stedman, the first three items referring to Maps Nos. 10, 11 and 12. A. Yes.

Q. And the last column there, "Effective Date, 1962." Would you then refer to page 17 and refer to Stedman, showing actual membership in 1961, and then estimated membership for subsequent years. Do you now recall the reason for the variance between the 1962 shown on page 16 and the fact that there is no drop in estimated membership for Stedman on page 17 until 1964? A. I am sorry, I am trying my best to remember what specifically happened there. I don't recall at the moment.

Q. Do you recall whether you made no changes in 1962 with respect to Stedman boundaries by reason of any racial or ethnic factors in the area, in the subdistrict? [1950] A. There would not have been any changes at that date with respect to racial or ethnic factors. As I recall, the initiation of that factor in our consideration began in 1964, not in 1962.

Q. Well, was there any inaction in 1962 with respect to Stedman boundary lines related to racial or ethnic factors? A. Well, the obverse would be so, too.

Q. With respect to the busing out from Stedman in 1966, do you recall how the pupils were chosen who were to be bused out at that time? Was it optional? Was it mandatory? A. I am trying to reflect on your question. There were several considerations. Yes, with respect to options,

yes, it was optional with the parents concerned. That is, with the parents I am talking about now. There were considerations as to what grades, as I recall, should be in the picture for relieving the overcrowding, and once those were decided upon then the option was with, as I recall, the parents.

Q. Was there any selection by achievement level of the individual students? A. I do not recall any selection on that basis, no, sir.

Q. Do you know whether all children whose parents elected to have them bused out were accommodated? A. I think so. The best I can recollect, they were.

Q. Did you have occasion to establish a new department [1951] in connection with community relations in the 1960's? A. Yes, I did. In connection with the trip that I referred to, to Philadelphia, New York, Detroit, and Chicago. One of the matters of interest to me was the staff resources available to the Superintendent and the Board especially, to make studies of the situations, particularly with respect to racial-ethnic matters, and as I recall in each instance there was a special staff member appointed, sometimes an assistant superintendent, sometimes some other title, whose responsibility was to work, usually directly with the Superintendent on such matters, and one of my recommendations after I returned was the establishment of the Office of School-Community Relations. This came in connection with also my recommendation that there be a special study committee established for equality of opportunity.

Wes felt it highly desirable to have a qualified staff member who would be available to the study committee for its studies, and this was one of the reasons for the establishment of that office, not the only reason.

Q. And who was the first one to be appointed as director of that department? A. Miss Mildred Biddick was the first director.

Q. And how long did she hold that position, do you know? A. Well, let's see, it must have been about four years. [1952] I judge from '62 to about '65 or '66.

Q. Then who took over? A. Mr. Gilbert Kruder succeeded her as the director.

Q. Now, with regard to teacher recruitment, employment, assignment and transfer, we have evidence that early in the game and during your tenure, why, there weren't too many minority teachers and they were limited to a relatively small number of schools. Can you give us what the situation was when you arrived and what happened chronologically after that? A. Well, this is substantially correct, what I have heard in the testimony, minorities here I suppose referring to Negro-Hispano-Asian.

At the time that I arrived, most of the minority teachers were in the central part of the city in the schools, the central part of the city.

Q. Was there any educational theory at that time, generally accepted in the profession, with respect to assignment of minority teachers to predominantly minority schools? A. Yes, there was. The thought was that the minority teachers, as you have called them, in this instance mainly Negro teachers, could best be assigned to those schools where there were some concentrations of Negro pupils and where in a sense there would be an immediate empathy, understanding, role-model playing. This was currently acceptable [1953] theory at that time.

Q. What is meant by role-model? A. Well, as I would say it, it is an adult of in this instance the same race to whom the children could look up to as a model. They have

attained status and achievement in their profession or their occupation and as a person.

Q. Did this have some relationship to the motivation of the child? A. A very intimate relationship, yes, sir.

Q. Now, with respect to the identity of applicants by race or ethnic origin, what was the practice and why during the early years before '64, particularly? A. I am not sure that I understand. Each applicant was—a teacher applicant, now, we are talking about?

Q. Yes, sir. A. We had different procedures for different employees. The teacher applicants, usually by letter, sometimes otherwise, made inquiry and for an application blank. The first process would be to file that, and the accompanying materials, which included a transcript and a college record, references and such. When that was completed, the usual procedure was for the person to come in for an interview with one of our staff and then an appraisal was made by the particular staff person whether this person was qualified and should be recommended for appointment. This is in general the procedure.

[1954] Q. Well, with respect to any designation of race or ethnic background, was that asked on the application? A. That was not on the application, no, sir.

Q. Was a photograph required? A. There was a photograph required at that time.

Q. And was that continued during your tenure? A. That was continued up until a certain time when we were asked to discontinue it.

Q. By whom? A. And this was done by Mr. Reynolds, who is the director of the Colorado Anti-Discrimination Commission, the state commission.

Q. State agency? A. A state agency. He came over to look—I don't recall how it came about, but he was appar-

ently aware or had looked at our application blanks, and in his judgment this was a discriminatory practice, and in light of his judgment we discontinued it.

Q. At what period did actual recruiting begin to attempt to get more minority teachers, Negroes or Hispano? A. Well, there were efforts all throughout my tenure to hire the best qualified persons that we could for teachers, and there were applicants from among Negroes as well as Anglos, Hispanos—as between Negroes and Hispanos, relatively few Hispanos, more Negro applicants. We did make some [1955] appointments. I don't think there was any great increase for quite a period of time there. In fact, there weren't large numbers of applicants. We did make intensive efforts to increase the numbers, especially with the advent of the special studies committee and thereafter, its report.

Q. As of 1964? A. As of 1964.

Q. Now, before 1964, was race or color either a positive factor or a negative factor? A. Now, here again, we were not operating on a basis of trying to make a distinction as to racial or ethnic factors. We were endeavoring to hire the best qualified persons that we could find for the schools.

Q. Regardless of race or color? A. Regardless of race or ethnic factors.

Q. Then the Voorhees report made some affirmative recommendations pertaining to both recruiting and the distribution of minority teachers? A. This was one of the aspects of that report to which we gave careful attention, yes.

Q. Did you take action according to that direction? A. We did take action, affirmative action, to endeavor to increase the numbers.

Q. Now, respect to the assignment of teachers or transfers, was there anything else you could add to the [1956]

testimony you heard here in the last couple of days? I don't want to just repeat it, but anything— A. No, sir, not in substance. Let me just make one comment. Some emphasis was made several times on the seniority rights, and as was pointed out, the administration did have the power to appoint—I mean, to transfer—initial appointment, too, placement, and if in our judgment there was a serious deficiency, then we did make some transfers, and we did. We would talk to teachers.

Now, I didn't hear this in the course of the testimony that I have heard, because I personally did some of this talking with some of the teachers. There were different conditions under which we were operating. Let me give I hope just a brief description of this, because one of the first things that occurred when I came to Denver in 1947, there was a disagreement among the certified employees as to how they were to be represented in their views with the superintendent and the Board.

I will simply state that after a long period of consideration, beginning in 1947, shortly after I came, in 1948, there was established what was known as the Employees Council of the Denver Public Schools. This was an organization of both certified and classified employees on a proportional basis to the number of employees in a classification. This was the group that recommended policies to the superintendent [1957] and the board in a variety of ways, among the personnel, and so there were policies in the policy book to which I refer that held for quite a while, and there was more discretion on the part of the superintendent and staff at that time as to transfers than there is at present, apparently.

In 1962, we entered into the first formal agreement with, for example, the Denver Classroom Teachers, and there-

after there have been subsequent agreements with changes, and I think there is more emphasis now than there used to be on the matter of seniority and tenure.

Q. Were these agreements beginning in 1962 the result of what's commonly called collective bargaining between the administration and the organization representatives? A. These collective bargaining, professional associations, that sort of terminology, yes, and the process.

Q. Mr. Lorenzo Taylor testified that in the years 1952 to 1956—approximately four years—he said there were 150 applicants to the school district seeking appointment and somewhere between 30 and 40 were so employed. A. What period?

Q. 1952 to 1956. A. '52—

Q. To '56. Now, 30 or 40 employees employed out of 150 applicants, how would that compare with the number of teachers who were employed during the comparable period, [1958] compared with the total number of applicants in that period? Could you give us an estimate? A. Well, my estimate would be that that would be a higher proportion than we hired among the Anglo applicants, because we were hiring at that period—it must have been ranging all the way from 300 to 600 new teachers each year. It varied. We had some years where there were 2500 increase in school population. I remember one year where we had about 5500 increase, so it varied, but there would be each year anywhere from 3,000 to 5,000 applicants total, most of whom would be Anglo applicants. So I would say that if this figure is correct—I am taking his figure, I don't remember it—but if that is the figure, it would be a relatively high proportion of the group.

[1959] Q. All right, now, another witness, Dr. Oberholtzer, was Ethel Rollins, social worker, who testified

that she was informed that shortly after she was employed, assigned, that it was the policy of the school district to have white certificated personnel within a school vote as to whether to accept a Negro teacher or other certificated personnel who was assigned to that school. Was there any such policy? A. There was no such policy.

Q. Was there any such practice? A. I'm not aware of any such practice.

Q. Dr. Oberholtzer, you made several references in your testimony concerning pupils in reference to their achievement and in some reference to their socioeconomic environment. Do you have an opinion from your experience, your education and your experience both before you came to Denver and in Denver as to what factors go into an individual's achievement, whether they achieve highly or whether they achieve poorly?

Mr. Greiner: Your Honor, I would object on the basis the witness isn't qualified. I don't think there has been any foundation laid to show that he has studied this question.

The Court: You might ask him some preliminary questions on it.

[1960] Mr. Ris: Well, I think his entire background is shown in the exhibit.

The Court: I'm inclined to agree.

Mr. Ris: It gives his educational and professional experience plus—

The Witness: If I may just add, my graduate studies were related directly to some of these questions, if he wants to look into it.

Q. Go ahead and tell us some of what your background is in this field in this regard. A. Well, from my Master's

degree—through my Master's degree through my doctorate, there was work in psychology, in education, in sociology, in statistics and in measurement, all of which are related, I think, to the subject at hand. I hesitate to say in this highly-controversial field that anybody is an expert, that knows all of the answers. Certainly I do not. This is an extremely difficult field. Witness the current controversy as to the importance of native intelligence and what it is. But I think most psychologists would agree as most persons with a degree that there are differences among people as to their native capacity. I'm talking about individuals now.

So, there are such things as—let's call it native ability, to do school work, for example. And this [1961] was the original definition related to the intelligence quotient. It was an attempt to try to assess the capacity frankly to do school work. Now,through the years, ideas about this have changed. But there is a native capacity I think without doubt. It's very difficult to measure precisely and to take into account. But there are differences. This is the most important factor.

Secondly, related to it, is the whole—if I may use the term—environment, in which this child was reared, grows up, becomes a person. There are, within this environment, the home, the community, the school. And I don't want to be pedantic in recital, but these are all important, very important factors. There is also, importantly, the determination and the motivation of the pupil himself. After all, he is the one that learns. Nobody else but he can learn for himself. We have to be reminded of this. There are indicators within the environment.

Now, I want to get back to the specific question as I

remember your question; some factors in the community, was it?

Q. What factors that create differences in achievements. A. In achievement, yes.

Q. Right. [1962] A. I mentioned the individual. And the individual is all-important. But there are things that affect the individual, situations, people, and these have a bearing on every boy and girl.

I think perhaps—and I'm giving you my opinion— realize there are studies of this and, over a long period of time, I have concluded that probably the most important factor affecting the individual himself, aside from his native intelligence, is his home environment; his mother and dad; his sisters and brothers; the neighborhood in which he grows up and becomes a person. These are all very important as they affect his achievement.

Q. Can you be more specific as to what differences there are in the home that has made a substantial difference to the child? A. Well, for example, the educational level of the parent has much to do with it. With his own understanding of what a school is; of what a school can do; his own experience in school affects his relationship to the child. If that relationship has not been satisfactory, the tendency, for example, would be to reflect that in the child; not always. But when you come to studies—and there have been studies in professional literature of the influence of achievement insofar as the home is concerned, the educational level of the parent is one thing. The [1963] occupation of the father and the income level.

Now, these are all indicators which have been objectively studied in various instances and this is usually what is referred to generally as socioeconomic factors. These three indicators.

And where those three indicators, if I may put on a continuum, are relatively low, the chances are the achievement of the pupils will be relatively low. Now, there are individual exceptions to this. No doubt about it. But study after study will show you this relationship. These are the principal factors. There are other factors. Now I'm referring here not only to the community. Let me talk about the individual pupil.

There are two major factors that we see in schools and one is his attendance at school. If he does not attend school, the chances are he is not going to learn what is offered at the school in the way of opportunities. I am talking about most individuals. If this child is obliged to move from school to school as many as three, four, five times within a given school year, his work is affected.

Q. Is this a situation that is common? A. This is a situation in Denver and in most large cities. It unfortunately is a factor that is not a atypical in low-income families that do move from time to [1964] time from one place to another. We have schools of very high mobility. This is the term we use; pupil mobility.

Q. By that you mean turnover in the school population? A. Where they move. A child moves from one school to another, or where there is an in-and-out at schools.

Q. Can you give use an illustration of a specific school in Denver in percentages? A. Yes. Two schools come to mind. Downtown Emerson Elementary School, why, there is—

Q. Where is it located? A. There is one of the highest. And Morey School is located—

The Court: He asked where Emerson is located.

The Witness: Oh, it's on 14th and—

The Court: And Emerson?

The Witness: No, it's not Emerson, Judge. That's Ralph Waldo Emerson was the origin of the school name. It's about Ogden somewhere, I believe, in that neighborhood.

The Court: Also the origin of the street name, I think.

The Witness: Was it? Yes. But I don't think the school was located there.

The Court: I've been here longer than you.

The Witness: Okay, Judge. You're probably right.

[1965] The Court: But not that long either.

A. But the Emerson School and the Morey Junior High School, are within a short distance of each other. Those two school probably—I know they are among the highest in terms of mobility. I do recall—and I can't name the years—but in talking with principals of Emerson School, the mobility or turnover of the Emerson School was more than 100 percent in a given—

Q. A single school year? A. In a school year. That means you had a complete changeover of the student body within a year. Now, there—this is not typical, but it is not atypical altogether either. There are other school of high mobility.

The Court: Well, through the years that was—well, I would say it was above average economics—

The Witness: It was until recently.

The Court: Until, I suppose, the late '50s.

The Witness: That's right.

The Court: Fairly solid economically fixed area,

I would say, at that time.

Mr. Ris: Originally, yes.

Q. When was the changeover in that school from a static school population to high mobility? A. The Judge has indicated, as he recalled, it was in the '50s. And, as I recall, most markedly in the '60s.

[1966] Q. What other substantial factors are there which you relate to achievement in your opinion, Dr. Oberholtzer? How about language? A. Well, I can give you variations of the home environment. Where there is a home environment with a low income, there are usually fewer books, magazines, reading materials in the home, which has an effect on a child.

The matter of language—that is, the use of oral language one of the best indicators of whether a child can do the usual work. And if one were seeking a single factor as an indicator of capability of doing school work, you could just ask for the vocabulary, the range of vocabulary, the oral vocabulary.

Now, these are not exact. These are general indicators. But, the language of the child has much to do with his capabilities and it is especially important what happens to that child in his early years before he gets to school.

The largest education program that Denver has had—it was here when I came and I think it continues—is a speech correction program. And this results from difficulties that children have with the language when they come to school. And when a child comes with a limited oral language, he has difficulty in learning to read. Reading is based on an oral language base.

[1967] The Court: Of course, his exposure is probably the most important element in changing

this, isn't it? Exposure to persons who have vocabulary; who enunciate?

The Witness: I would agree.

The Court: We will call a halt now until 9:15 tomorrow morning.

(Whereupon, the trial recessed at 4:59 p.m.)

[1970] * * *

Direct Examination by Mr. Ris (Cont'd):

Q. Dr. Oberholtzer, when we recessed last night I believe we were still on the general subject of achievement with particular reference to low achievers and some of the basic background reasons therefor. One of the last things we were discussing was the background of some of the youngsters, the low achievers, with particular reference to their home environment and so forth. Now, I think one of your last statements concerned the matter of communications; communication in the home, parents, depending on their extent—the extent of their educational level. And, the occupation and income of the family.

Now, I would like to pursue this one step further [1971] if we may, please. And this pertains to the age at which you believe these children become disadvantaged culturally, so to speak. When it begins, and when the most important years are that they create this gap between an underprivileged child and a child coming from an average middle-class home in a socio-economic level. Would you pursue that, please? Tell us your opinion. A. Well, there are no differences as between low income or high income with respect to the timing of influence. Life is a continuing stream, and a person is influenced throughout, of course. But, what are known currently as cognitive psychologists

contend generally, and I believe with them, that there are very important influences at early ages that affect what a child is capable of doing in school.

Q. Specifically what ages are you referring to? A. I am referring— Again, life is in continuing stream. I don't think there is any one mark to stage. But, most of the psychologists will say at least beginning at age 3, 4 and 5, some say earlier. As a matter of fact it begins with the first verbal oral attempts at language, and from there on, to a marked degree. The language capability of a child, his potential, when he comes to school affects markedly what is done about reading and his capability of learning to read. So, where there is, let's say, a relatively low degree of capability or of communication as you have expressed it in [1972] language, that child has a marked handicap when he comes to school. He comes with that to school.

And, if I may add, if I had the power as a person to allocate the dollars for education as I would like to do them, I would put proportionately a larger—much larger proportion for those early years that are sometimes called early childhood education years, probably three and four and five years old. The five-year-old now is kindergarten.

Q. Is that the age level of what we know now as the Head Start program? A. Head Starts programs vary. Most of them I think are four or five-year-olds, rarely three-year-olds. But, this is the early childhood area which has come into prominence in recent years and largely because of the findings of the cognitive psychologist.

Q. Now, Dr. Oberholtzer, in your discussion of the various factors and differences in background which reflect

on a child's achievement level, you have made no reference to race or color as an element? A. I have not.

Q. Is that a factor in your opinion? A. I do not think that race as such is as I think the factors that I have mentioned are.

Q. Dr. Oberholtzer, there has been some question raised at this trial concerning the facilities and equipment between [1973] the various schools. Could you tell us during the period of your administration, twenty years that you were Superintendent, what was done and what was accomplished with respect to any attempt at making the physical facilities and equipment as equal as possible? A. Well, throughout the twenty years there were substantial amounts of funds allocated to the maintenance of buildings. I well remember my first experience when I came in August in visiting buildings.

Q. August, 1947? A. 1947. To my amazement I found in many of the clasrooms, one single drop cord light in the middle of the room. That was the lighting. They were already under way with a program to change that situation. Mention was made in the testimony that I earlier heard of the fluorescent lighting program, which was true, and we were able to step up that program so that every classroom in the district had good lighting. That took a period, as I recall, of two or three years to complete. In other ways we changed the situation from fixed seating that was in some of the rooms to tables and chairs. We generally supplied equipment comparable to the new schools. In other words, tables and chairs and such.

We made an endeavor, for example, to include central libraries, lunchrooms, and in other ways to make the buildings equal insofar as types of facilities were concerned.

So, [1974] there was a continning and a very large program of maintenance throughout the twenty years.

Q. Was the maintenance budget increased substantially during that period? A. I can't remember specific figures at the moment, but there were increases, yes. It varied some from year to year but as between the beginning and closing, yes, there were increases, dependent on the kind of program.

Q. Now, with respect to the educational organization in the various schools, both at elementary and at the secondary level, would you inform the Court as to whether there were equal offerings on the basic three R's, for example, various classical subjects, reading, writing arithmetic, or were there differences in curriculum offerings at any of the various schools? A. There were the same basic offerings. For example, reading was taught in all schools, arithmetic and such. The subjects, the basic subjects, the so-called three R's, were taught in all of the schools. There were differences in the curriculum within specific subject areas, to be sure, depending upon the needs of the pupils, their interests, and such.

Q. What was the reason for that? A. As I indicated, differences based on needs, on interests, on their background, and such.

Q. Did that have any relationship to attempts to offer [1975] everything on an equal educational opportunity? A. This was related directly to that in an attempt to provide equality of opportunity.

One of the things, if I may add another word, related directly to this, is the matter of pupil-teacher ratio that was referred to yesterday in testimony. One of the typical arrangements or changes made where there were no achieving pupils was to provide a lower pupil-teacher

ratio; in other words, to make possible teacher-pupil contacts more frequently individually than might otherwise be the case.

Another type of arrangement, which we instituted and practiced in many of the lower achieving schools, especially, was team teaching. In this instance, instead of perhaps two teachers there would be three teachers working with groups, sometimes a group of thirty or sixty different pupils, but they were divided up into smaller groups, and where you had, for example, three teachers with sixty children, you would have a pupil-teacher ratio, of teacher to pupil, 1 to 20. The normal in many schools was 1 to 30. So this was one of the typical changes made.

Q. Were there also varying assignments with respect to non-teacher personnel, social workers, so forth? A. There were changes made with respect to that. We instituted the employment of teacher aides, for example. These were frequently people who assisted with the clerical [1976] tasks of the teacher so that more attention could be given to the professional aspects by the teacher herself or himself.

Q. There has been some evidence here concerning compensatory educational programs. Were those also initiated during your regime? A. What I have indicated were some aspects of compensatory programs. There were introduced some newer types of curriculum materials, for example. In some instances there were, for example, more community trips to enable children to see first hand some of the community environment that they had not seen before, and that was used as a basis of discussion and of reading and of writing. There perhaps were more materials developed by the teacher herself in addition to the standard materials of textbooks and such. These are illustrations.

There were also provided special teachers of reading where there were marked deficiencies, and this came in before the federal program, but also it was enhanced or expanded after the federal programs were introduced. As a matter of fact, in the so-called target areas, as they were designated, which were under the criteria of the federal government, certain so-called low income areas, there were mobile units moved in on school grounds, and teachers would take groups of pupils to help them with reading.

Q. When these federal programs were offered on a [1977] national scale, did the Denver School District take advantage of those programs, apply for them? A. We did apply for funds, for approval, and we did participate in the programs, yes.

Q. In substantial amounts? A. In substantial amounts, yes.

Q. Now, specifically with regard to the Head Start program, can you tell us what was done under the federal programs in that regard? A. The Head Start program in Denver was made up of a number of different agencies participating, one of them being the Denver Public Schools, and in our instance we made a beginning, I am trying to recall, one summer. Then we had programs in the regular school year and in the summers, both, that is, it was a continuing program. These programs were offered in housing centers. We leased space in the housing centers. These were low income centers, and we provided the opportunities basically in those centers. As I recall, there were some twenty centers.

Q. Dr. Oberholtzer, it was during the sixties that the open enrollment program was first initiated, is that correct? A. An open enrollment program was initiated fol-

lowing the report of the special study committee on equality of opportunity. The recommendations were made, I believe, in May, 1964, and this was instituted in the fall of 1964.

[1978] Q. On your trip east, Philadelphia, New York, Detroit, Chicago, did you investigate their plans of open enrollment in 1962? A. We did, and we found them utilizing such programs.

Q. When the limited open enrollment was established in Denver, was that based primarily upon the experience of these other districts that you investigated? A. We did base it pretty largely upon their experience, not precisely the same, but very similar.

Q. Was there any one district to which it was more closely related than other cities? A. Our plan was patterned more especially after New York and Detroit.

Q. What was the objective of the open enrollment plan? A. The objective of the open enrollment plan was to make it possible for boys and girls who might be attending a given school to attend some other school outside of their subdistrict where they were supposed to attend and where, in their judgment, they might get perhaps a different educational opportunity if they wanted it.

[1979] Q. Dr. Oberholtzer, in 1964 is when the optional areas were abandoned throughout the entire District, is that correct? A. They were rescinded or abandoned again as the result of the recommendations of this study committee report in 1964.

Q. Now, do you remember what month in 1964 the boundary changes were considered by the Board of Education at a formal meeting? A. I believe it was May.

Q. Was it at that same meeting that you announced the changes that you were making in the elementary school

boundaries? A. Well, that was a pretty long meeting as I recall, and I think that was one of the features, yes. There were actions by the Board on my recommendations for a number of policies. One of the major policies was with respect to school boundaries, subdistricts. For the first time we took into account racial and ethnic factors as a policy of the Board of Education. And that was in May 1964.

Q. Was it at that meeting that he made the recommendation which led to the adoption at that meeting of policy 5100? A. That was one of about three or four different policies, as I recall. That was one. There was one on boundaries, one on pupil transfers, one on pupil transportation. That's four. There might have been another one.

The Court: I'd like to ask a question here. I may [1980] forget it if I don't right now. You indicated yesterday that you were reticent or hesitant about taking any positive action involving classifications based upon race. Was it your view that the Colorado Constitution prohibited you from taking any action that would have a tendency to desegregate prior to 1964?

The Witness: Judge, it was our view— In substance, yes. To express it differently and use the language of the Constitution, it said you shall not make a distinction or classification based on race or color. And it was the interpretation of our attorney and our interpretation that this would in a sense prohibit what you have said, yes.

The Court: Thus, then you avoided any possible policies that would have a tendency to relieve the concentrations of Negroes at Negro schools, for example?

The Witness: As I have indicated, yes, Judge.

The Court: Okay. Well, I gathered that impression from what you said, and I wanted to clarify it.

The Witness: I tried to indicate throughout that our boundary lines and our actions were based without distinction as to race and color. That was our effort.

Q. Either in a positive manner or a negative manner? A. —or a negative manner.

Mr. Ris: May I pursue this one since you brought it up?

[1981] The Court: Well, I would encourage you to do so.

Q. In 1962 was there a request made to Mr. S. Arthur Henry to make a thorough study of the decisions, the court decisions that had come down since the Brown decision in 1954? A. There was such a request made for written opinions, and it was made by me. It was also made by the special study committee on equality of opportunity.

The Court: That was in 1954 when Brown No. 1 was decided, is that right? 1954? Is that what you asked?

Mr. Ris: Yes, Volume I, Exhibit 4.

And then this request was made in 1962, however, Your Honor.

The Witness: Let me remind us that we did make requests of the attorney as to the meaning of the Brown decision. I did. Oral opinions were given me that it applied to de jure segregation, where they had equal and separate school systems.

Q. A dual system? A. Dual systems.

Q. But in 1962 it was when you asked Mr. Henry to review the matter at that point in time and to prepare a written opinion for you and for the Voorhees Committee? A. I am not sure whether it was in 1962 or 1963. It seems to me it might have been 1963. It was during the course of the deliberations of the special study committee that that [1982] was requested. I requested it and they requested it, a written opinion. And, he did render a summary of opinions.

Q. And was that furnished to the special study committee? A. It was.

Q. Was that reflected in the study committee's report. A. I believe it was, yes.

Q. Also, let me ask you this, Dr. Oberholtzer, along the same line. When the 1964 Civil Rights Act was passed were you concerned with it? A. Yes, we were. The Civil Rights Act occurred—of 1964 you're referring to?

Q. Yes. A. And the special study committee report came out in the spring of 1964, as I recall it. We were much concerned with the provisions of these Civil Rights Acts and apparently here again there was not to be an assignment—I can't recall the precise language, but the import of it was that there would be no assignment of pupils on the basis of color or race. That was as I recall the wording.

Q. Well, in any event whatever the wording was, that act was studied by you and attempted to be worked into the overall planning of the District? A. That's right.

Q. Now, after the Voorhees report came in then and the action that was proposed at the May 1964 meeting, after [1983] that time did you report to the Board then, with

respect to various elementary school boundary changes and particularly with reference to northeast Denver? A. I did.

Q. And I would direct your attention to Exhibit 70 and an overlay, Exhibit 71, which purport to show the specific changes with reference to Stedman, Hallett, Philips, Ashley, Montclair and I presume Park Hill down in here. Yes, Park Hill here. Could you tell us the basic background and reasons for these specific changes and with particular reference to whether they had any objective of segregatory intent or objectives? A. I can answer the latter. There was no such objective. The objectives were primarily again changes of boundaries resulting from the rapid moving of population in this area and changes in population. I don't recall any. Now, I have to say that because it was at this juncture, one way or the other where we were officially and actively considering the matter of racial and ethnic factors. I do recall that in the case of the secondary school boundaries we did. May I add that the boundaries in this instance as in many instances in the elementary schools involve such a relatively few numbers of pupils, however, in terms of the total school population, that conceivably any one change could have not made a significant change in the racial or ethnic composition of [1984] the student body.

Q. Was that true with respect to these immediate changes in the northeast Denver area? A. I would think it would be so. I have no recollection of any changes—any specific numbers with regard to race or ethnic factors.

Q. Now, at this same meeting I believe you recommended changes at the junior high and high school levels, did you not, which were adopted? A. Yes, the elementary schools were by way of information for the Board in case there were questions about it. In the case of the secondary schools it was my obligation to recommend changes, yes.

Q. Now, I am referring to Exhibit AM which purports to be junior high, 1964, showing old boundaries, the dotted lines—dotted black lines, and the new boundaries with the orange lines. You recognize that exhibit? This being Gove? And this Smiley? A. Lots of arrows and lines there.

Q. Yes. A. Do you have an earlier junior high?

Q. Yes, I do.

1963 or 1964? Either one. A. This one is good.

Q. Okay. That's Exhibit AL. [1985] A. I'm asking for this, because with the opening of the new senior high schools, George Washington and others, in this instance George Washington.

Q. And that was in 1960? A. In 1960 we had determined certain boundary lines, and at the same time, as I recall, we had certain related boundaries in the junior high schools which this refers to. This is—although this is 1963, it reflects the changes that were made about—oh, in '59 or '60, with the opening of the new high schools. I call your attention particularly in this instance, Gove Junior High School boundary, which goes east out along Colfax—quite a long boundary. It's an unusual boundary. Based largely upon available transportation, moving east and west to the school. And also on the fact that you had Hill Junior High School located down here not very far. To the west is Morey. To the immediate north of Gove and a little east is Smiley. Over here is—the big circle and then Gove farther to the west. At this time you will note that there were still optional areas.

"A" here, largely, as I recall, between Cole and Smiley. And "B" as between Gove, I believe Gove and Morey. That was the situation in 1960 and up until 1964, as I recall.

Now, if you will look at 1964.

Q. All right.

(Referring to Exhibit AM.) [1986] A. The new boundaries established here were established with an application of the racial and ethnic factors in mind. No specific pupils in mind, but areas of the city, of the School District. For example, and—in an effort to achieve a higher degree of integration the area north of City Park, that area which was previously, I believe, in an optional zone as between Cole and Smiley, became in a sense a mandatory zone to Gove.

Q. Was this area north of City Park predominantly black? A. I believe it was, largely so. Again, an area from—

Q. And that's basically a major portion of the Barrett subdistrict, is it not? A. Yes, sir.

Q. Then the area just immediately north of Barrett I believe that's Harrington— A. Yes, that's Harrington. The Harrington School which was formerly again in, I believe, within the optional zone largely became a part of the Smiley District. The optional zones, if you will notice, are done away with in this instance, and we have established boundaries. But, for the first time in the case of the junior high schools we endeavored here in 1964 to take into account the racial-ethnic factors.

The Court: The Harrington optional zone was abolished?

The Witness: Yes, sir, the whole junior high school [1987] optional zone was abolished and this became mandatory to Smiley in this instance.

Q. And was this adopted by the Board, also, at the May 1964 meeting? A. Yes.

Q. Which is the same meeting that you announced these changes? A. The elementary school boundary changes, yes.

Q. Now, at the same meeting, then, in '64, was there also a high school boundary change recommended and adopted? A. May we have again the two maps?

Q. All right, we have a '62 senior high map, which I will show you first. A. In this case, again I would refer you to the presence of optional zones, and this represents the boundaries following the establishment of the new senior high schools, in this instance the George Washington High School, which affected markedly the boundaries, particularly of East High School which is contiguous to it.

Q. What other high schools were open at the same time, Lincoln? A. Abraham Lincoln—I am trying to think—and Thomas Jefferson, the senior high schools. There were in this instance three major ABC optional areas relating to East, C relating only to East and to George Washington.

[1988] Now, if we may see the '64 boundary map.

Again, at the meeting of the Board in May of 1964 the optional zones were rescinded or abandoned, and this had its effect upon the boundaries of the high schools, so that for one effect there were no longer any optional zones and substituted therefor were the more or less mandatory zones.

If I may call your attention here especially to the action of the Board, I think it would be useful to start with what was formerly Optional Zone A just north of City Park. Do you want me to point that out?

Q. Yes, would you please. A. This is the former optional zone, Optional Zone A, which was optional as between East High School and Manual High School. As the result of the Board action, if you will notice the red outline, this part of the area which was the largest part of the area, was assigned to the East High School. This part

of the area which was contiguous or closest to the Manual High School was assigned to the Manual High School. There was formerly a small optional area here which had been optional between East and Manual; this was assigned to East High School.

In the case of George Washington High School and East High School, this dotted line area was the former optional zone. As the result of the Board action, this was no longer optional, but in addition they took this territory [1989] in the red line and assigned the whole area to George Washington High School, and this was because of our studies showing some moving of Negro pupils generally eastward, and to some extent southward, and this was in anticipation, also, of some possible further moves in an effort to change, again, the racial-ethnic composition.

Q. Dr. Oberholtzer, there has been some evidence there were not too many black students living in this area at the northern part of this new change at the time. May I ask you to expand just a little bit, were you projecting ahead that there would be a further movement of Negroes into this area? A. It seemed to us logical. There had been moves generally in this direction, and it seemed to us this would be a logical future change, yes, and then you go either way and you have to take into account some reasonableness as to the distance. This is quite a distance from this point to George Washington High School. It is also quite a distance from up in here to East High School. But those factors were taken into account, and we held hearings. I remember one hearing at East High School that was attended by a large number of people with respect to the boundaries. And we would generally hold hearings or people would attend Board meetings and express their views as to what should be done. In this instance there was considerable interest.

Q. Then this was done with an intention of change? [1990] A. This was done with an intention of changing the racial-ethnic factors to the extent feasible there.

Q. Thank you. Dr. Oberholtzer, in the May 1964 meeting of the Board where these various boundary changes were made and optional zones abolished, you mentioned it was at that meeting that Policy 5100 was adopted? A. Yes, sir.

Q. Was it at that meeting that the limited open enrollment policy was also adopted? A. Yes, sir.

Q. And you also mentioned that a major policy change was made with respect to transportation. What was it? A. That included a provision making it possible to—I can't recall the precise wording of it, I don't have it before me, but it made it possible to transport children where there was overcrowding, to relieve them, the schools, so affected, and to move them, the children, into other schools where there might be an improvement in the educational program for the children, in other words, because there would be less crowding, and so on.

Q. Again, such transportation away from the child's own neighborhood school, that is contrary to the neighborhood school concept in its purest form, is it not? A. Yes, it is to some extent, yes.

Q. This overcrowding situation that you referred to, [1991] and busing to relieve it, was that intended as a permanent thing? A. No, it was again intended to be somewhat temporary until perhaps more permanent arrangements could be made to relieve the overcrowding.

Q. And what were the permanent arrangements dependent upon? A. Primarily money funds to construct.

Q. Now, yesterday you referred to Exhibit HN which was a worksheet entitled "Recommendations of the Special Study Committee." A. Correct.

Q. Which summarized the 155 recommendations made by the special study committee, is that correct? A. Correct.

Q. Now, was continuing action taken then thereafter with respect to those recommendations? A. The document to which you refer was simply a listing—I don't happen to have it before me.

(Document handed to the witness.)

A. This is a matter which I developed. It states all of the recommendations, the 155 recommendations, of the special study committee in order from 1 to 155, refers to the pages in the document, the report itself, and indicates my assignment for study to the various staff members. This [1992] was one of the initial steps that we took.

We developed a statement of all of the recommendations which were printed and distributed to all school employees of the District, to every faculty, for study, with the suggestion that they make a study of it and report their views and findings with respect to this.

I also assigned it to various other groups, one of them being the Central Committee on Instruction, which made quite an extended report. This is typical of the beginning aspects of attention to the study.

Q. Was that done? I mean, did these people get these reports back to you? A. They did. They rendered reports to me and many of them—most of them were rendered directly to the Board of Education as well.

Q. And was action taken? A. Action was taken on a large number of these recommendations.

Q. We will get back to the action in just a moment. Subsequent to the receipt of the Voorhees report in 1964, there was then appointed a second committee called the Advisory Council on Equality of Educational Opportunity? A. Yes, sir.

Q. What was the objective of this—

The Court: When was that?

[1993] Mr. Ris: I beg your pardon?

The Court: When was the appointment of that committee?

Mr. Ris: Do you remember?

The Witness: I believe in January 1966.

The Court: Go ahead, Mr. Ris.

Q. What was the objective of this council as compared to the former study committee? A. The precise wording—I have the report, just a minute.

This was a continuation, to some extent, of the earlier report, but the advisory council was given a specific charge that I think is of pertinence to our interests here. May I read some of this? I think I can answer your question more quickly.

Q. All right, sir. A. The Advisory Council on Equality of Educational Opportunity in the Denver Public Schools—I was in error—was appointed on March 17, 1966.

The advisory council was given, on March 21, 1966, the following charge:

"Against this background (of increasing school population leading to concentrations of minority group children in certain areas, as alleviated by certain procedures instituted by the Board of Education in conformity with recommendations [1994] of the special study committee in 1964), the Board of Education requests your study and advice on the following matters, with your report to be submitted at the earliest possible date. Your recommendations will be most helpful if they can be reasonably specific

and can meet the tests of educational validity and financial feasibility.

"A. Should the present policies and procedures of the Denver Public Schools, particularly Policy No. 1222C be applied to the location of new schools or additions to schools in northeast Denver?

"B. If not, what changes should be made in present policies and procedures? What new policies and procedures, if any, should be adopted?"

That was the specific charge to the council.

Q. All right, sir. So there were two basic things they were to answer. And then they submit their report in February 1967, Exhibit 21. A. I was reading from your Exhibit 21, yes, the plaintiffs' exhibit.

Q. Would you refer to page 84 of that exhibit, sir, and what was their answer to the charge with respect to continuation of Policy 1222C as to new schools in northeast Denver? A. "The present policies of the Denver Public Schools, in particular, Paragraph 1(b)(6) of Policy No. 1222C and Paragraph 4 of Policy No. 5100 answer Question A of the charge [1995] and therefore no schools should be built in northeast Denver until plans are developed to implement Paragraph 1(b)(6) of Policy 1222C and Paragraph 4 of Policy No. 5100."

Thereafter they recite the particular paragraphs.

Q. All right, sir. Now, did you, first as to the Voorhees report, have occasion to report to the Board of Education approximately one year after the report and approximately two years after the report as to the progress that had been made with respect to the recommendations? A. I did.

Q. Did your two-year report summarize the entire two years so that it included the one-year period as well? A. Yes, sir, it did.

Q. Yesterday you already identified Exhibits HO and HP as being your written reports, first for the one-year period, then secondly for the two-year period, correct? A. Yes, sir.

Q. With respect to the two-year report, Dr. Oberholtzer, would you hit the highlights for us as to what—not the studies that were made but what actual progress had been made with respect to the recommendations? A. I will endeavor to do it, because this was a summary in itself, and I will have to cite some—

Q. Hit the highlights for us. A. I will try to. First of all, it includes the [1996] General Policy Statement 5100. With respect—

Q. Dr. Oberholtzer, 5100 was really the first policy statement by the Board which added racial heteogeneity to boundary considerations? A. It was.

Q. Go ahead. A. In May of 1964, as to what was done, the recommendations of the special study committee were divided into several categories, one of them being on administration and organization, and I'd like to cite just a few things that happened.

As I have already indicated, the optional areas were discontinued as of September 1964, referred to in these charts.

Secondly, to the usual criteria for setting boundaries, there was added the factor of ethnic and racial characteristics of the school population, making, to the extent possible a heterogeneous school community and the mobility and levels of educational attainments of the pupils.

They also adopted the limited open enrollment for the school year 1964-65, and that was continued in 1965-66. There were quite a few recommendations relating to build-

ings, equipment, libraries and supplies, and I will cite just a few of many changes that were made.

An addition under construction at McMeen Elementary School, it says "to provide for pupils who have had to be bused to other schools."

[1997] An addition to the Hallett Elementary School was authorized to provide permanent classroom space. Under special assistance from the School Lunch Division of the Colorado Department of Education, experimental lunch programs were set up in areas of low income using increased amounts of surplus commodities to enable pupils to buy lunches at 15 cents.

An addition was made to Smiley High School in the form of an industrial arts facility, recommendations on curriculum, guidance and instructions, to cite a few things.

For example, a revision of the social studies program was in process, including certain specific objectives, and I will cite only two to illustrate.

Grade 1, to help pupils appreciate and understand cultural backgrounds of other families.

In grade 11, understanding that all persons should be considered as individuals and judged on their merits, their differences should be respected and their rights safeguarded.

The subcommittee of the K-12—that is kindergarten through 12—human relations committee initiated and is conducting a 10-week seminar for teachers for the purpose of exploring ways of supplementing the social studies guide with specific suggestions for dealing with human relations concepts and learnings related to the various grade levels.

[1998] Library services were given special attention, selection of books dealing with human and intergroup relations for the purchase of professional library and for

examination and contribution to school libraries at each level.

Title Two of the ESEA, which is the education—the Federal Education Act—made possible the ordering of $171,000 worth of library books approximately 60,000 volumes to be owned by the Denver Public Schools but to be available for use in public and private schools in Denver. During the summer of 1965 Head Start programs under the Office of Economic Opportunity were conducted for eight weeks in ten centers. Head Start programs were funded under the same Office of Opportunity, varying from six to ten weeks in twenty centers located in the housing projects that I referred to. Team teaching programs of improving language and reading skills, recommended strongly by special study committee, has been expanded to include arithmetic and has been extended into Grades 1, 2 and 3, especially in the eighteen elementary schools in the target area of the greatest need. Under Title One of the ESEA a project has been funded to help educationally disadvantaged pupils progress through a planned reading improvement program for one-half day for eight weeks for pupils of 4, 5 and 6.

The Metropolitan Youth Education Center set up jointly with Jefferson County has provided counseling, basic [1999] education training, and assistance in securing employment for 450 out of school and unemployed youth from the two districts. In each instance we have cited and I have not taken the time to read the specific recommendations referred— For example, there are eight related recommendations on this one act of ours. The second center for the Metropolitan Youth Education Center is being added in Denver with assistance of the Title One funds. Well, there are many others. Under personnel,

pupils, orientation rooms have been provided in eleven elementary schools for pupils who change school frequently and are lacking in skills needed for progress in the larger group class. Neighborhood aids are provided through OEO funds to assist the teacher and help make contacts with the home.

In the secondary schools of the target area the counseling load of teachers has been reduced and time for counseling has been doubled to permit counselors to have time to give to those students as individuals and to give them special attention.

Also, under ESEA opportunities for substitute tutoring in areas of special academic needs by teachers is provided and an after school library program to give access to reference materials and to encourage reading. A program under ESEA will bring counselors in target area high schools back to work in August to do intensive counseling with dropouts and potential dropouts; to encourage them to return to [2000] school and to plan a program to meet their needs. As to the personnel of the District, recruitment visits were made during the year 1964-65 to forty-three college and universities located in fourteen states.

In addition recruiting materials were sent to eighty-five other colleges and universities. An analysis shows that 403 new teachers were hired for the 1965 calendar year. The number of Negro applicants has enabled the Division of Personnel Services to increase the number of well-qualified Negro teachers. Recruitment visits in 1965-66 have included more intensive and extensive visits to Arizona and New Mexico institutions of higher learning as the number of qualified Spanish-named applicants to the Denver Public Schools is limited.

As of October 15, 1965, all junior and senior high schools and 67 of the 89 elementary schools had at least one teacher with a minority background. The high percentage of minority teachers in schools with the concentration of minority pupils has been reduced somewhat so that no faculty now includes more than 50 percent minority teachers. Letters were written to 55 teacher training institutions throughout the country, emphasizing the importance of preparing teachers to teach all children. Those of different racial and ethnic backgrounds, and those disadvantaged in educational terms. Replies were received from 31 of the institutions. A report [2001] on the improvement of human relations was presented to the Board of Education on November 18, 1965, and to all committees on instruction later. Included was a report of the work of the K-12 committee on human relations and a review of the participation of the Denver Public Schools personnel, a variety of human relations activities during the summer of 1965. A five-day institute designed to develop an understanding of the unique culture of the Spanish-named Americans of the Denver area has been funded with ESEA. The emphasis will be on classroom practices which will build upon the pride of the heritage and the—and improve the motivation and skills needed for the educational achievements.

Approximately 247 teacher aids, non-certified persons, usually from the area near the school, have been hired to relieve teachers of some lunchroom and playground duties. Then there is a section relating to school community relations. I will cite just a few of the many actions taken.

Carefully planned tours of the community with commentary by persons most able to interpret the development and interrelationships of the agencies and opportu-

nities to meet parents and businessmen of the area have proved valuable for new and experienced teachers. A three-day tour is planned for those schools in the target areas before the opening of school.

In northeast Denver the lack of recreational programs [3002] for the growing youth population led to the planning of a coordinated program for recreation involving the city recreation department, the public schools, a number of churches, and concerned individuals. A community study hall association has been providing volunteer staff for 20 study halls located in the community centers, churches, or school buildings. The encouragement and the assistance with learning has proved important to pupils and volunteers. In many cases added enrichment programs have opened new experiences to the young people. Under OEO a coordinator has been paid to help coordinate and help expand the program. A project of youth motivation was funded to assist high school young people, particularly Spanish-named, in four high schools, to have an opportunity to work at a club with adults who can help and see that they can succeed in school and can plan for a satisfying vocation.

A part-time coordinator and neighborhood aids have been appointed to expand and improve the program initiated four years ago under voluntary leadership. This spring the Latin American student clubs held a very successful all-day workshop with the support of interested Spanish-named adults.

Just two more to conclude—

The Court: Just a second. There is no need for putting this verbatim in the record, is there?

Mr. Ris: I just wanted him to highlight—

[2003] The Court: I mean, you wish to have the reporter transcribe all this?

Mr. Ris: He's not reading the entire report.

The Court: Well, if that's what you wish, that's the way we'll do it. In other words, I believe we could refer to the exhibit and the pages. But, if you say you wish to have it done that way, why—

If you think it would be better to have it all in the transcript, that's fine.

Mr. Ris: Actually, he hasn't been reading. He has been skipping through, and hitting the highlights.

The Court: I realize that.

Mr. Ris: I think we have to have it in our record, yes, sir.

The Court: Okay.

A. Through the cooperation of Opportunity School with neighborhood organizations and the Denver Housing Authority staff, a number of basic education classes enrolling 180 adults has been set up in the neighborhoods where the people live. The purpose is to enable mothers and fathers uprate their own skills and to help their children make better use of school opportunities. The Denver Public Schools is again providing work experience for 200 high school youths, age 16 to 21, in clerical, maintenance and custodial programs under a neighborhood youth corps project. In addition to supervision [2004] work experience there will be educational occupation and personal counseling and a physical examination. I was simply trying to give you a few of the many highlights in this report.

Q. Thank you. Now, after the Berge committee reported and submitted their recommendations which are reflected in Exhibit 21, what was done with respect to considering

and implementing any of the recommendations in that report? A. I did make an oral report to the Board of Education about it, and we did proceed to implement various aspects of that report as well.

Q. That report came out in February of 1967? A. Yes.

Q. And you left your position in August of 1967? A. Right.

Q. Before you left then did you give an oral report to the Board which you previously identified as Exhibit HQ? Correct? A. Yes, sir.

Q. I don't want to cut you off, Dr. Oberholtzer, but I also want to cut down the volume. Can you highlight and summarize that even more succinctly than the last one? A. I'll try to do it more succinctly.

Q. If you will, please. A. In this instance the advisory council came up with four aspects of equality that are somewhat different from the [2005] aspects that I have referred to here in my comments. And in light of our discussions yesterday of school capacity, I think this is especially pertinent, because the first of their recommendations—major recommendations related to the term school capacity, and they wanted us to make a special study highlighting some of the various conditions that would affect the capacity and in essence highlighting what I suggested yesterday, that you had to take into account mobility, attendance, achievement and a variety of factors, and we did institute a study, as I recall, in two elementary schools while I was still in office. And one was Stedman and the other, I believe, was Greenlee. I will not take time to indicate that. There is in this report when you read it considerable discussion of that.

A second and most interesting report—or recommendation—related to what was variously called the cultural arts

center, cultural arts program, or the academy of arts for children. In essence what they recommended was a means of enabling children of different cultures, and this related to elementary schools, to become acquainted with those cultures more directly than they ever had before, and to become acquainted with not only children but particularly with adults of the community of different ethnic groups.

And so we set up a center in the Gilpin School. And for example children were transported for part of the school [2006] day from Moore to Gilpin and they participated in classes together with those children, and they also participated in unique and special cultural programs. One of them I remember was by a lady of Japanese ancestry playing a rather unique musical instrument and explaining it to the children. There were dances. There were art programs, various aspects of native culture for the children.

Q. It wasn't limited to learning how to play the auto harp, was it, Dr. Oberholtzer? A. It was not essentially an attempt to teach a skill. But rather to become acquainted with various cultural aspects of different ethnic groups. Again in the general realm of what is called a human relations program.

A third aspect of the program was entitled the Superior School Program. And this was related especially—it was an attempt, I suppose you would call it now in some aspects, a compensatory program. It was an endeavor to suggest ways—ways unusual, unique where superior programs might be instituted in the schools where there were some concentrations of minority groups. For example, in the Negro or in the Spanish—and I remember, for example, that we as a result instituted some Spanish programs at Baker Junior High School.

Q. Was this basically for low achievers or high achievers? A. This was basically for low-achieving pupils.

[2007] The fourth aspect of the advisory council report was related to what they called educational centers in elementary and secondary schools. And this was one where I know there was considerable investigation of the possibility of what was then called educational parks, centers, and some effort was made, to acquire sites and some federal land near Lowry as I recall it.

We made an extensive study of centers, but there was no other specific action taken at that time. However, there were applications of this idea subsequent to my time, and I simply refer to it in the bond issue—that was offered in the fall of 1967, I believe it was, after I had retired.

Q. The basic planning for that bond issue having been done by you and your staff? A. The basic planning having been done, but we did try to incorporate some of their ideas in the center in that bond issue proposal.

Q. Dr. Oberholtzer, just two small matters. Now, going back—I want to clarify something.

The May 6th, 1964 board meeting was a meeting where the various major policy decisions were made and referred to, and 5100 adopted; the boundary changes made at the secondary level and so forth. Was action of the Board on those various policy changes and boundary changes—was it a unanimous decision of the Board in each instance?

[2008] A. My recollection is it was a unanimous vote.

Q. With regard to guidance—vocational guidance I am referring to specifically—there has been considerable testimony here concerning vocational matters at Cole and Manual. Were similar—were vocational guidance offerings made at all other secondary schools as well? A. There were offerings at all high schools. There were vari-

ations among the high schools. Since you have referred to the vocational guidance I heard some comments yesterday in testimony. I would like to amplify a little bit. There was some concern expressed because of—I believe certain unique offerings—now, pre-law, was it? Pre-med and so on in the twelfth grade. And I think you could easily infer that this was all that was offered or it was deferred until the twelfth grade. As a matter of fact, for many years we have had in the Denver high schools a course in vocations which is required of pupils. And this is an attempt to give them an idea of the fields of endeavor or improvement, descriptions of them, and as I recall given at about the tenth grade.

Furthermore, we had at least for many years when I was Superintendent, with the cooperation of the State Employment Service, vocational aptitude—or preference tests. Interest tests, rather. Not aptitude. Interest tests which were provided in all of the junior high schools with the [2009] purpose of calling to their attention again various fields of endeavor for which they might prepare for and which they might be interested.

So I will give—I will cite only these two other instances to show that we have been concerned for many years in the matter of vocational preparation and of attempting to give young people some view of this.

I'd like to mention one other thing, that is, and that is referred to only casually in this report, in vocational education, we institnted before I left office in the high schools certain other experimental courses in vocations that I think are continuing. For example, our concern in the high schools, in vocational education, is to find the kind of preparation—to offer the kind of preparation that young people can use to get jobs.

So many times vocational educational is given, and then there is a gap between the education and the actual time of entering upon a job. That kind of vocational education is virtually useless. We tried to avoid that mistake, and so we offered, for example, in the electrical trade—we had courses in preparation for entry occupations in the electrical trades. We had another type in the basic metals trade. We had another in the business occupations. These are still operating in the high schools. But they have been limited because again we had to provide special facilities for them [2010] and we were not able to expand them in all instances.

Mr. Ris: Thank you. You may examine.

[2011] * * *

* * * * *

Cross-Examination by Mr. Greiner:

Q. Dr. Oberholtzer, when you arrived in Denver as Superintendent of Schools in 1947, I believe you mentioned that there were fifteen schools that had Negro teachers, is that correct? A. I don't recall I mentioned that particular number, but there was a small number.

Q. Can you identify some of those schools for us? A. Some of them—most of them would have been in the central part of the city, such as Whittier.

Q. And you can think of more than just Whittier, can't you? Was Greenlee one? A. I don't recall that Greenlee was at that time, it might have been. Whittier, Wyatt, Wyman.

Q. How about Wyatt? A. Wyatt I did mention, I believe.

Q. How about Crofton? A. Probably Crofton, yes.

Q. How about Gilpin? A. Yes.

Q. How about Mitchell? A. Probably, yes.

[2012] Q. Garden Place? A. It might have been, yes.

Q. Bryant-Webster? A. I am not so certain about Bryant-Webster.

Q. Elmwood? A. Elmwood, probably, yes.

Q. Emerson? A. Doubtful at that time.

Q. Was Emerson predominantly Anglo in '47? A. I think it probably was.

Q. So I take it, then, you found—first of all, do you recall how many Negro teachers there were in 1947? A. It was a relatively small number, I think probably less than fifty.

Q. Less than how many? A. Fifty.

Q. And do you recall when the first Negro teacher was placed outside of the core city schools in a predominantly Anglo school? A. I don't recall precisely, no.

Q. It was about 1955 or 1956, was it not? A. It probably was in the 50's somewhere.

Q. Didn't that happen at Mrs. Biddick's school at that time where she was principal? A. I don't happen to recall that instance.

[2013] Q. You don't recall the circumstances? A. I do not.

Q. I take it that you don't deny, do you, Doctor, that when you came to Denver you found that minority teachers had consciously been assigned to minority schools on the basis of their race? A. They had been assigned to minority schools.

Q. Because they were minority? A. In large part because they were minority teachers, yes.

Q. And when would you say that changed, that policy? A. Well, you have already indicated one change.

Q. 1955? A. From there on.

Q. All right. Now, one of the reasons that you felt there was some validity, as I understand it, in this racial assignment of minority teachers, was because they were to act as role models in the minority schools, is that correct? A. This is one function, yes.

Q. Now, did you have an opinion at the time, Doctor, as to what proportion of teachers in a minority school had to be minority teachers in order for this Negro role modeling function to be fulfilled? A. There was no specific number, no.

Q. Might one black teacher have done the job? [2014] A. Not necessarily, no.

Q. Would eight black teachers have done the job? A. I have no specific number.

Q. You said there was literature at the time, as I understand it, that in effect said that this was a good thing to do? A. "This" being what?

Q. The placement of minority teachers in minority schools. A. Yes.

Q. That literature also said, did it not, that Anglo students might benefit from Negro role models? A. Possibly, yes.

Q. Possibly? A. Yes.

Q. You believe that to be the case, don't you? A. I do believe it, yes.

Q. And yet some seven years passed before a Negro teacher was placed in an Anglo school? A. That's correct.

Q. Now, I take it there must have been some resistance, then, Doctor, in the white community concerning the placement of black teachers in white schools, is that right? A. I don't know of any specific resistance.

Q. You recall the findings of the 1964 Voorhees [2015]

Committee, do you not? A. Some of them, yes, in general.

Q. One of those findings was, was it not, that black teachers have not been assigned to white schools because there was a resistance in the Anglo community? A. At a later date, yes. I don't know that it referred to any specific date.

Q. Well, the report spoke as of 1964, did it not? A. Yes.

Q. Then the report found that there were still the concentrations of minority teachers in the minority schools, did it not? A. I believe it was referring to the current time in that statement.

Q. And I believe the report also referred to the resistance of the principals of the Anglo schools about placement of Negro teachers, do you recall that? A. I recall the reference, yes.

Q. Now, what was done during this time period between 1947 and 1955 or 1956 regarding the placement, for example, of minority principals, where were they placed, Doctor? A. As I recall, the first Negro was appointed, I believe, at Whittier School.

Q. And that was a predominantly minority school? A. Minority school, yes.

[2016] Q. What year was that, do you recall? A. I can't recall the specific year. It was in the 50's.

Q. Can you tell us, Doctor, when the first Negro principal was assigned to a primarily Anglo school? A. In the 1960's.

Q. Do you recall the incident? A. What?

Q. Do you recall the particular appointment? A. As I remember, I think you are referring to the University Park Elementary School—no, not University Park, Washington Park.

Q. Washington Park? A. Washington Park.

Q. What was the situation with regard to the assignment of assistant principals, do you recall when the first minority assistant principal was placed in the School District? A. I am sorry, I don't.

Q. Do you agree that he was placed in a minority school? A. I would agree that would have been the case.

Q. And do you recall the first instance of when a minority assistant principal was assigned to an Anglo school? A. No, I do not.

Q. Would it also have been sometime in the 1960's? A. Yes, it might have been in—it would have probably [2017] been in the 60's.

Q. Now, as I understand it, shortly after you arrived on the scene you said that a staff member had pointed out to you a provision in the Colorado Constitution. A. Yes.

Q. Do you recall that? A. Yes, I do.

Q. Who was that staff member? A. Mr. Guy Fox.

Q. Mr. Guy Fox? A. Guy Fox, F-o-x.

Q. Was he a lawyer? A. No, sir.

Q. What was his position? A. He was director, as I recall, then, of Pupil Personnel Services.

Q. Now, as I understand it—correct me if I am wrong—from the early 1920's the School District had until your arrival conducted an annual racial census of the schools, had it not? A. I found that to be the case after my attention was called to this, yes.

Q. And the racial census was published in the Superintendent's Circular for each teacher, was it not? A. Yes, there was an annual Superintendent's and [2018] Secretary's report. I think that was a public report.

Q. Now, do you know what use was being made of that racial report during that time period? A. I do not.

Q. Do you know why it was being compiled? A. I do not.

Q. Now, as I understand it, you gave some orders in 1947 that that census stop, is that right? A. I did.

Q. And yet it took nine years to eradicate it, is that right? A. It was going on without my knowledge, that is, some reporting, but it never came to my attention, as there are many reports that do not come directly to my attention or to the staff.

Q. But do you know whether or not there was any difference of the routing of these reports between 1947 and 1956 when you finally got them cut off and the routing that had previously occurred? A. There must have been some difference, and I have been thinking in my own mind to find what happened. I do not know. And there was before I came a department of research, and I was told that there were some reports from that department. Now, that department did not exist after my coming for more than one or two years, but there was a Department of Budgetary Services, and the normal routing of such material [2019] would probably be to that office, but that office never, in the time that I was in office, made a report to me of such statistics.

Q. Now, I recall that you said that you had a conference, then, with Mr. Henry, who was then counsel for the School District? A. I did.

Q. What was the subject of that conference, can you tell us? A. The subject was the one that I have indicated, what are the indications of the constitutional provisions, and especially with respect to the collecting and the publishing of such data.

Q. And did Mr. Henry's firm render a written opinion? A. He did not render a written opinion. He rendered an oral opinion.

The Court: Just a moment. I don't think we have fixed the time of this conference with Mr. Henry.

The Witness: It was in the fall, Judge, of 1947, and I can't name a specific date, shortly after I came.

The Court: And then you had another conference following the decision of the Supreme Court in the Brown case?

The Witness: We did, yes, and there were many other conferences, but these were—

The Court: I mean one relevant.

[2020] The Witness: Relevant to this.

Q. Calling your attention, then, to the fall of 1947, Doctor, do you recall how long it took for this opinion to be rendered, did this consideration carry over some period of time? A. I don't remember the length of time, but there was within a reasonable time a response.

Q. You said yesterday in your testimony that Mr. Henry said that he felt it would be desirable to stop the racial census. Did he say it would be necessary, or did he say it would be desirable? A. I can't recall the specific word, but the intent of his reply was that we should not continue.

Q. Now, at this time you were aware of the District's policy, were you not, of assigning teachers on the basis of race? A. They were assigned to minority areas for reasons I have indicated before.

Q. Did you inquire of Mr. Henry whether or not the Colorado Constitution might apply to that kind of assignment policy? A. No, I did not.

Q. Did you have occasion to discuss that relationship? A. That particular relationship, no.

Q. Now, seven years later the United States Supreme [2021] Court decided Brown against Board of Education. Have you read that opinion? A. I have read it.

Q. And you discussed that opinion with Mr. Henry? A. I did.

Q. Was there a written opinion rendered on that occasion? A. At that time, no. There was an oral opinion.

Q. And you were aware at the time that Brown was decided, were you not, Doctor, that there were then existing in School District No. 1 schools at all levels of education that were predominantly in minority in racial composition? A. I was aware of their general composition, yes, in that there were so-called minority schools.

Q. Do you recall offhand, Doctor, how many such minority schools there were in Denver in 1954? A. Not a specific number, no. I made no particular count on such basis.

Q. Well, in considering the possible impact of the Brown decision, didn't you consider what it might then take, if Brown required desegregation in Denver, wasn't that one of the things you considered? A. No, the opinion given was that the Brown decision did not apply to us.

Q. So you never got that far in the process of trying [2022] to determine what it might have taken at that time, is that right? A. We were not then concerned because of that opinion.

Q. Now, you were familiar, were you not, Doctor, with the findings in Brown of the educational and psychological damage caused minority children by their concentration in minority schools? A. I was aware—

Mr. Brega: Just a minute, if I may. I object to that question. The decision in Brown was rendered upon a dual system, and that opinion states that by legally segregating those people it does create those problems, but this is not the situation as it existed in Denver, nor has it ever existed by law in Denver. Since 1893 we have had an open school policy.

The Court: I think the question was whether he read the language in Brown and was aware of it, that's all, and I think it is a permissible question. Isn't that the thrust of your inquiry?

Mr. Greiner: That is correct, Your Honor.

I am not sure the question has been answered.

The Witness: Will you repeat the question? I did not think that was the trust of your question, the last one.

[2023] Q. Now, did you read the Brown decision A. I did.

Q. And you were familiar with the findings in that case? A. I was.

Q. And one of those findings was of the psychological and the educational damage done to children in those southern systems, is that right? A. Wherever they had separate school systems, yes.

Q. And was the basis of that decision or did you consider whether or not the basis of that decision at the time was the concentrations of these minority students in all minority schools? A. Not in that light, no, sir.

Q. Well, now, you have testified as an expert. You have a background of psychology, is that right? A. To some extent, yes.

Q. Did you see any basis for distinguishing the type of damage found in Brown and the type of damage which might occur in a northern so-called de facto setting? A. There are possible bases, yes.

Q. What are they? A. So far as I know, there is not in evidence—to the best of my knowledge, evidence to show that in all instances, including the Coleman report, that there is [2024] necessarily damage.

Q. But—well, the Supreme Court found damage. That's

a constitutional fact in the South, is it not? A. Again, let me refer to the fact that they were talking about the separate school systems where there were concentrations.

The Court: I think his answer is that he didn't feel it was pertinent in relationship to the system in Denver; that he didn't regard the isolation per se as the important factor. Isolation as a matter of law he says, is the thing he felt might be damaging.

Q. Is that the purport of your answer? A. That was the purport of my answer, yes.

Q. Now, there was a great deal of discussion, I assume, among educators when the Brown decision was made, is that right? A. There was.

Q. And I believe you said yesterday that the consensus was that Brown would only be applied in the South, is that right? A. At that time, yes.

Q. Were there any differing views expressed at that time? A. Yes. Never unanimous, on subjects.

Q. Some people thought that Brown might apply in the [2025] North as well? A. I think so, yes.

Q. Even to the so-called de facto situations? A. Some people did, yes.

Q. Was that one of the questions that Mr. Henry rendered an opinion on? A. Well, may I say again, as I have said before, his opinion was that this applied to the de jure segregation; separate schools.

Q. Now, did you become aware at a point in time, Doctor, and I take it that during the late '40s, throughout the '50s until perhaps the dispute in 1962 about the building of the proposed junior high school—throughout that time period, if I could capsulize your policy, it was to

build schools where the children were, isn't that right? A. In essence, yes.

Q. Did there come a time, Doctor, when you realized that this policy was leading to more and more predominantly minority schools? A. It was apparent in the late '50s that there was a movement of population into areas, for example, where we had already built schools.

Q. Well, now, for example, since 1950—between the period 1950 and 1962, it is also true, is it not, Doctor, that many schools received additions to their [2026] facilities? A. That's correct.

Q. And many of the schools which received those additions were at the time they received them minority schools, were they not? A. Some of them were.

Q. Now, I'd like to draw your attention next, Doctor, to the controversy that surrounded the 1956 boundary changes.

The Court: Well, as a matter of fact, when they reach a certain percentage of concentration, Doctor, why, they just—I think your experience probably shows that they just—if you let nature take its course, they just go Negro. That's all. Pretty soon they are predominantly Negro. Do you think that that is a justifiable conclusion? When they get over, say, 40 percent Negro, why—and whether it's from neighborhood movement or what—it's only a matter of time?

I mean, it's very definitely predictable that they will be predominantly Negro?

The Witness: No, I don't think that is definitely predictable, Judge.

The Court: They don't stabilize, do they?

The Witness: Some do. Some don't. What you have said frequently happens, but I don't think it happens [2027] in every case.

The Court: Not invariably?

The Witness: It happens frequently, yes.

The Court: You think that East High, for example, is predictably going to become a predominantly Negro school in a very short time?

The Witness: Do I think so? No, I do not think so.

The Court: If it's permitted to go just the way it is—

The Witness: No, sir, not necessarily.

By Mr. Greiner:

Q. It's true, is it not, that East is getting more Negro each year? A. I think there is some increase, yes.

Q. And the Anglo enrollment this year is just barely 50 percent Anglo? A. I'm not acquainted with that figure.

Q. Now, first of all, with respect to the building of new Manual, it's true, is it not, Doctor, that Manual High School today is the smallest high school in the district? A. It is the smallest senior high school, yes.

Q. And it was at the time it was built, also, was it not? A. I believe it was, yes.

[2028] Why was Manual built so small, Doctor? A. Are you talking about new Manual or old? A. New Manual. A. The new Manual was built in the same general location as the old Manual and substantially the same attendance area. That was the reason.

Q. It was built to serve a particular community? A. The community in that area, yes.

Q. What was the composition of that community, Doctor? A. Negro and Anglo, largely; some Hispano.

Q. Well, you recall, do you not, Doctor, that as early as, I believe it's 1950—1951, that Manual was already a predominantly minority school, do you not, about 40 percent black, 35 percent Hispano, 25 percent Anglo? A. Somewhere in that neighborhood.

Q. And I assume that that neighborhood that new Manual was to serve wasn't getting any whiter between, say, 1951 and '53 when new Manual was opened? A. No.

Q. It was becoming blacker, was it not? A. There was some tendency, yes, to that.

Q. Well, it's true, isn't it, that when new Manual opened, Doctor, it only had 77 Anglos in it?

Mr. Brega: Your Honor, I object to this line of testimony. In 1953—that was prior to Brown and at [2029] that time the law in the country was separate but equal. That was all right. If that were the case in Denver, that would not have been unconstitutional at that time. I think it's moot and not relevant to the issues.

The Court: Well, I think that we have been permitting inquiry into the history of this for various purposes. So we will not draw the line at this point.

The Witness: Would you repeat the question, please?

Mr. Greiner: Would the reporter read it, please?

(Question read by the reporter.)

A. I do not recall that figure.

Q. Do you recall what its Anglo composition was when it opened? A. No, I do not.

Q. Was there any doubt in your mind that, when new Manual opened, Doctor, it would be predominantly minority in its composition? A. It appeared to be so at that time, yes.

Q. So you knew that as a fact, did you not? A. I have answered your question. I said it appeared to be so.

Q. Now, did you consider what might happen to the racial composition of new Manual in the event you had built it larger, for example, during the planning stages for new [2030] Manual? A. Racial factors and ethnic factors were not a part of our consideration in the construction or location of schools.

Q. And I take it your answer is the same with regard to a possible change in the boundary between what has been that for old Manual and that for new Manual? A. I would give you the same answer.

Q. Well, you're not telling me, are you, Doctor, that you were in fact, when you built Manual, building a separate but equal school, are you? A. I don't know the import of this question.

The Court: What he's asking you is, just so I think you will be aware, is whether this was built to be a Negro school and planned as such, although you were determined, undoubtedly, to give it equal facilities. That's the essence of what he's asking you.

Mr. Greiner: That's correct.

A. We were again building a school to house the children of that particular area, and there was, as you have said, a high percentage of Negro pupils in that area, yes.

Q. Well, for example, the whole curriculum at Manual was tailored, was it not, for these minority students? A.

It was tailored to the students who were attending [2031] that school, yes.

Q. And those were minority students. You don't deny that, do you? A. No, I'm not denying it.

Q. Now, at the time that Manual was being planned—and I'm still talking about new Manual—East was considerably older capacity, was it not? A. It was—I don't recall specifically. I think it might have been some overcapacity.

Q. And was a projection— A. In the sense you have determined capacity, I want to come back to that and amplify the answer.

Q. Well, can you give me a number, Doctor, at which the enrollment at East would have had to reach at which point you would agree with me that it was overcapacity? A. I cannot give you a specific number. As I indicated to you yesterday, there was no specific number. The programs were different at East and at Manual and the achievement levels of the pupils were different and we had a lower pupil-teacher ratio at Manual than we did at East.

Q. My question goes to East and not to Manual. A. I'm talking about East. It has a higher level pupil-teacher ratio because the achievement level was higher and consequently it was able to house a larger number of [2032] pupils. That's the basic reason.

Q. And I take it the gist of your testimony yesterday, Doctor, was that in an Anglo school such as East, its rated capacity comes very close to its utilization figure, does it not? A. It may or it may exceed it. Not all Anglo schools. I'm sorry. You generalized. Not all. Some.

Q. Well, let's talk about East. A. All right.

Q. Are you telling me then that East could afford to

house more than its rated capacity? A. It could at that time.

Q. And that would require a pupil-teacher ratio of about thirty, is that right? A. I didn't say that. That does not go with the utilization above 100 percent.

Q. Well, rated capacity is based on thirty pupils per room, is it not? A. That's class size. And pupil-teacher ratio is a different matter from class size.

Q. Well, did you have team teaching at East in 1953? A. Not necessarily. We had a lesser number of teachers for the number of pupils, proportionately.

Q. In other words, you disagree that in 1953 East [2033] was being overutilized? A. I didn't say that. I said it was capable of rendering or offering a suitable achievement educational program and the pupils could achieve well with a higher pupil-teacher ratio and they were. I didn't comment on the utilization.

Q. Well, I'm not trying to argue with you, Doctor; I'm trying to find out whether—I mean, the school district does use the terms overcapacity and undercapacity, does it not, in describing enrollments at schools? A. It does on occasion, yes. And I indicated my reservations yesterday about that and tried to explain.

Q. Well, is there some term that you would prefer that I use to describe those two phenomena? A. No, I don't think you could use any other term.

Q. Well, do you have a term that you would prefer? A. When we were talking with people about capacity of buildings, we tried to go into the programs, as I explained yesterday, and this was a matter that we usually had to discuss with respect to a particular school. And you cannot use a formula such as that and apply it to a program.

This was a figure from which you worked. That's all it was.

Q. Now, I take it, then, that in 1953 you had some [2034] projections in existence, did you not, as to what the projected enrollment at East would be in the future; what the projected enrollment at Manual would be in the future? A. Are you referring to a specific year, Mr. Greiner? 1953, did you say?

Q. Yes. A. It would have been normal to have projections. We had annual projections for the following year and at stated periods we did have projections for as much as five or more years.

Q. And you recall, do you not, Doctor, that those projections showed, one, that East would continue to expand its enrollment year after year after year? A. This was because— Yes, let me qualify it, also. —because Denver was expanding to the east and southeast. And the East High School was housing those pupils.

Q. Then you also projected that Manual would stay at the very same pupil population, is that right? A. Somewhere in that, I think, relatively level population.

Q. Would you agree with me, Doctor, that with respect to those projections at East, that at some point those projected figures reached a number where you might agree that East would have been overcapacity? A. Yes. We had to make judgments of that sort. But [2035] there was no specific number at which that occurred.

Q. So there were no standards, is that right? A. I did not say that.

Q. No precise standards? A. I said there was no specific number at which you made that decision, and it varied with schools. And it did—in other words, there was no cutoff point. You're trying to imply that there

was a specific cutoff point with each school and there was none.

Q. But there was in fact a cutoff point for each school? A. A decision was made in that case as it is in each individual school. But there is no point that can be applied to all schools as I'm trying to say.

Q. Now, new Manual when it opened had a capacity of what? About 1,600 students? A. As I recall, fifteen to sixteen hundred; in that neighborhood.

Q. 1,525 or— A. Something of that sort.

Q. And its enrollment when it opened was about 1,200 students? A. Here again, you're getting into the question of time of program and the application of the thirty pupils per room. And using that application, the capacity was [2036] 1,525.

Q. Yes. And the enrollment was about 1,200. A. The enrollment actually was, I think, lower.

Q. And it was clear, was it not, from your projection that it was East that was going to be under the most pressure in terms of continued increases in enrollment? A. Yes, because of the area from which the children were coming, the pupils.

Q. But you made no attempt at all, I believe you will agree with me, to relieve East by using Manual, isn't that right? A. We did not.

Q. The Court asked the question as to what I would refer to as a tipping point in a school, Dr. Oberholtzer, a point at which the minority population gets at a certain point and then just continues on until it is a predominantly minority school. Now, are you aware of any instance in Denver, for example, where a school had reached, say, 40 or 50 percent minority and then had a reverse, so that the Anglo population increased from that point on?

A. It was my impression that the Park Hill area—that there were concerted efforts to create what was called an integrated community, and I believe that there was a change in that instance. I can't recall specific figures but that is my general impression.

[2037] Q. That was the result of some affirmative action by the community? A. By the citizens of the community, yes.

Q. And without that affirmative action, do you think that same result would have obtained? A. It would be doubtful, yes.

Q. Because there is no other experience in our current recent history in Denver, is there? A. I know what you have said is the general trend, but I know of no specific turning point that you have referred to. I really don't.

Q. Now, when you were planning new Manual, there was a great deal of consultation with the school's community, is that right? A. There was a study made and consultation with the community, yes.

Q. And in that community I believe you will agree it was black and Hispano, was it not? A. A large part of it.

Q. Now, were you aware—and I take it that there were a few Anglos, were there not, in new Manual when it opened? A. I have made some reference to it previously. I know there was some there. I can't recall how many.

Q. Do you know where they lived? [2038] A. No, I do not.

Q. Did you have any idea in 1950, '51, '52, and '53 where the edge of the Negro population was at that time? You did, didn't you? A. I was aware of certain general moves of the population, but as to a specific street, no, I cannot indicate that.

Q. You did not know whether or not there were few,

if any, Negroes living east of York or even east of Williams at that time? A. What time?

Q. 1953. A. I don't recall any specifics of that sort of that date. No, I do not.

Q. Now, did you have a consultation with the principal of new Manual concerning the establishment of boundaries for new Manual? A. There must have been such a conference. I cannot now say definitely when. Yes, we did have that in practically all instances.

Q. Was the subject of the eastward movement of the new Manual boundary discussed at that conference? A. In general, the boundaries would have been discussed, in all directions. I don't recall specifically eastward. All boundaries would have been discussed.

[2039] Q. Do you recall whether the principal pointed out to you at the time that the Anglo enrollment of Manual could be increased by moving the boundary eastward? A. I do not.

Q. You don't know whether that was—A. I do not recall any such comment.

Q. Now, the boundary for new Manual was placed—the eastern boundary was placed what? About a half a block from the school, mandatory to the attendance area? A. There were two types of boundaries; one mandatory, one optional.

Q. Was there any other senior high school in the district at that time, Doctor, that had its building right up against its boundary line that way? A. That's a relative term, right up against. But, I don't recall any as close as that.

Q. Now, turning your attention to the 1956 boundary changes, you mentioned that there were meetings that you attended in the black community; for example, at a meet-

ing at Manual High School. Do you recall that meeting? A. I think I did attend a meeting, yes.

Q. And there were also appearances before the school board in its public meetings, is that correct? A. Right.

Q. And the school board and you personally were made [2040] aware at that time, were you not, Dr. Oberholtzer, of the racial considerations, the racial results of the boundary changes which you were then proposing? A. There were some statements made about that, yes.

Q. Did you disagree with those statements? A. I didn't express either agreement or disagreement. My response then was, I think, as well as I recall, that we were not then taking into account the racial or ethnic factors in establishing the boundaries of the schools.

[2041] Q. It was clearly pointed out to you, was it not, what the effect of those boundaries would be, the racial effect would be? A. There were some statements to that effect, yes.

Q. Could you verify those statements as to whether or not they were accurate? A. We did not have any counts at that time of racial or ethnic population, and we did not attempt to verify or to comment on them.

Q. Did you have any doubt of their veracity? A. I simply received their statements for consideration.

Q. Is it my understanding, Dr. Oberholtzer, that you felt that your hands were tied, that you simply couldn't consider that kind of information? A. The policy of the District at that time was not to take into account the matter of racial and ethnic factors.

Q. Did you get an opinion from counsel in 1956 concerning that? A. That specific issue, no, I did not, that I recall.

Q. Were you aware at that time of any of the desegre-

gation moves that were made in the South in the Brown decision? A. I was aware in general of some moves.

Q. You were aware of the fact that in order to desegregate you had to take into consideration the race of the pupils involved? [2042] A. Yes.

Q. But again you didn't think that that would apply in Denver? A. That was not the policy of the District at that time.

Q. Well, I take it that the policy of the District was mandated in your view by the Colorado Constitution, is that right? A. This was certainly one aspect of it, yes. My duties, as chief executive, were to administer the policy of the District.

Q. Was another reason, Dr. Oberholtzer, the fact that in order to integrate or desegregate Denver Public Schools at that time you would in essence have had to abandon the neighborhood school policy? A. We were not then considering, may I say again, any policy of what you call desegregation or integration, because the policy of the District was not to take into account racial or ethnic factors.

Q. I take it that during this period of time, at least, you felt that there was no educational premise to desegregation or integration, is that right? A. This was not then a factor in the determination of our policies or in the application of our policies.

Q. Now, as I understand it, the factors that were used [2043] with respect to boundary changes were such factors as capacity utilization, distance, safety, convenience of pupils. Do you think of any others offhand? A. Natural features.

Q. Natural hazards? A. Hazards and such, and the type of program in the building.

Kenneth Oberholtzer—for Defendants—Cross

Q. Now, when you were present at those meetings in 1956, didn't you find that you were being presented with proposals which talked about alternatives to the boundary changes which you had proposed, in terms of your own criteria that you have just mentioned to me? A. There were some, a few proposals, yes.

Q. For example, you recall the fact, don't you with respect to distance, I believe the whole area east of Colorado Boulevard, north of 28th, was in fact closer to Manual than to East, is that right? A. I am sorry, would you repeat that again?

Q. East of Colorado Boulevard, the entire area north of 28th Avenue or Street, whichever it is. A. North of 28th I think it would be.

Q. Would be closer to Manual? A. Probably closer, yes.

Q.And it was pointed out to you that the transportation from that area of the city was basically east-west; in [2044] other words, that the public transportation available to such schools as Manual and Cole was better than it was to East and Smiley, is that right? A. These were some factors, but not all factors taken into consideration, yes.

Q. Now, was there a natural hazard that made you hesitant about expanding Manual's boundary to the east? A. I don't recall any, no.

Q. All right.

Is there any other facet of pupil convenience other than distance that you can think of? A. Principally that.

Q. Pardon? A. Principally that.

Q. Distance and accessibility of public transportation? A. Right.

Q. Well, then, what was it, Doctor, in the terms of the criteria which you have described for me? A. A program of the school and the utilization of that school, its capacity, that was the main reason. We felt there was not the capacity at that school for additional pupils.

Q. Now, you knew at that time, did you not, that eventually you would either have to add on to East or build a new high school, is that right? A. That was one thing in prospect, because the growth [2045] of the area was to the east and to the south, nearest to East High School.

Q. You just told me, though, Doctor, that north of 28th it wasn't closest to East High School.

The Court: He said that in another context. He said the reason he knew he had to build a new high school was that the largest growth was nearest to East High School, to the east and south. He wasn't quibbling with you on that point.

A. I don't intend to quibble on that point. I know that, yes.

Q. So the basic question, then, is the question of capacity utilization, is that right A. You had a high school which was then offering a program to the pupils and the capacity and utilization of that school appropriate to the achievement level and the pupils in the school, yes, that was the basic and it usually is the most important consideration.

Q. Because the School District, I take it, throughout this whole period was strapped for money, was it not? A. Generally to construct buildings.

Q. So your natural inclination would have been to use all the available capacity that there was at East?

The Court: He said it was a good school. It had a national reputation, did it not?

[2046] The Witness: They did have a national reputation. But again, refer to the achievement levels of the school—

The Court: You said you wanted to make full utilization of that facility. Wouldn't that have been a factor?

The Witness: This was not the primary factor. It was because this school had a high achievement level relatively, and they could accommodate, without affecting that achievement level, more pupils. This was the basic consideration. And this, in the reverse, was the case in Manual.

The Court: Its averages were higher than any other school, I would imagine. I expect you wanted to use it as a show place, too, didn't you?

The Witness: There was no particular intent on our part to use it at that time as a show place.

The Court: Well, to set a standard.

The Witness: It was one of the best high schools.

The Court: It was a yardstick school?

The Witness: Well, again, our policy then, as I have indicated, I think, I am not sure, we were not trying to compare high schools and to indicate necessarily one better than another.

The Court: This was a fact, though, wasn't it?

The Witness: It was a fact that the achievement level at East High School was high and a good school, yes.

By Mr. Greiner:

Q. I take it, then, with respect to [2047] the children in Manual that you felt it would be better to keep those children in Manual where they could get the benefit of this lower pupil-teacher ratio? A. The policy of the District was to offer a school to children living in different areas and to make adjustments and to endeavor to offer the best program we could for those children. There are great variations in children all over the District.

Q. Now, for example, when you send a black child into a predominantly white school, Doctor, you generally send them from an environment in the sending school that had a low pupil-teacher ratio into an environment where its class size is going to be larger and the pupil-teacher ratio is going to be greater, do you not? A. When we send?

Q. Yes. A. That would be a fairly typical situation but not always the case.

Q. Well, for example, the busing out at Stedman that finally took place in 1966, that was the occasion there, wasn't it, that's what happened? A. This was at the request of the parents and at their option.

Q. Are you saying that those parents were making a bad educational decision? [2048] A. I am saying that they made the decision in response to the question that you have asked me. I did not make that decision. It is a matter of individuals, and I cannot give you a general class or group answer, and by and large, the children who I think opted, I would expect them, although I can't recall, to be the ones who were achieving better than others. This would be the natural inclination for them.

Q. Why do you say that? A. I say this is the natural inclination for them to do it, because I know at that

time I heard some parents express doubt as to the wisdom of doing this, they were apprehensive about what their children would achieve in the new schools. I heard this expressed at the Stedman School. Not all parents were favorable to the idea. Some of them did want to do it. I don't think you can generalize, as you have indicated.

Q. Well, for example, the busing out at Stedman in 1966, there were approximately how many children bused out of Stedman? A. In 1966? My recollection is about a hundred or so.

Q. Not all of those children were black, is that right? A. I frankly don't know the composition, but probably a majority were.

Q. But also some Anglos were bussed out of Stedman? A. Let me remind you again there was no requirement of black or Anglo to be transported.

[2049] Q. So both blacks and whites left Stedman in that busing program? A. The option was with the parent without regard to race.

Q. Were there many whites left in Stedman after that busing program was instituted? A. I do not recall the composition of the school.

Q. Now, with regard to the Negroes, then, who were bused out of Stedman into predominantly Anglo receiving schools, that was a fact, was it not? A. They were, yes, that was the request.

Q. Now, did you make an effort, Doctor, in the receiving schools to lower the pupil-teacher ratio into classes which were to receive those black children? A. No, there was no effort to lower the pupil-teacher ratio generally, as I recall, but there was an effort made to receive them well in the school and to try to offer them the best educational

program. I don't recall any general lowering of pupil-teacher ratio, no.

Q. Now, you also mentioned with respect to the boundary proposals in 1956 in East, Manual, Smiley, Cole proposals, that you had private meetings where you called in representatives of the community, is that right? A. I did.

Q. About how many such meetings were there, Doctor? [2050] Let me remind you this was under consideration for about six months. A. Yes, over a period of several months, and there must have been at least ten different meetings.

Q. Now, were these meetings—first of all, were there any of these meetings that were attended by both blacks and Anglos at the same time? A. As I recall, in each instance.

Q. In each instance? A. Yes. I am talking now about the meetings in the Board room where I met with people.

Q. Right. Now, during the course of those meetings were there expressions from Negroes? A. There were.

Q. Were there Negroes who didn't want Anglos to go to Manual? A. I don't recall that specific question or answer.

Q. Were there Negroes who didn't want their children to be forced to go to East? A. I don't recall in that context of being forced. I do know that there were many who said they were pleased and wanted to remain at Manual and didn't want any changes.

Q. Now, were there Anglos who didn't want their children to be forced to go to Manual? A. I don't recall any such instances.

[2051] Q. Then I take it there was no community sentiment on this boundary proposal? A. There was commu-

nity sentiment, a divided sentiment, some wanting changes, some not wanting changes.

Q. Well, did I miss some alternatives, Doctor? Whites being forced to go to black schools, blacks being forced to stay in the black schools, blacks being forced to go to the white schools, the whites being forced to stay in the white school? A. Perhaps I am confused by your emphasis upon forced. There was no discussion of force.

Q. I am sorry. A. The question was basically your comments about the boundary lines and should they be changed. There was no question of forcing people, that I recall, that ever came up in those discussions.

Q. Well, now, did some of the people that you talked to live in the area north of City Park? A. There was a random selection of people, as far as I recall, over the general area affected.

Q. Between York and Colorado Boulevard, is that right? A. There were some from that area.

Q. Did you find many black representatives from that area, Doctor? A. I don't recall the specific locations of people, [2052] Negro or whites, but they were from the general area.

Q. Do you recall that the people in that area, the racial composition in that area—it was still predominantly Anglo, was it not, in 1956 between York and Colorado Boulevard? A. As well as I recall it, it would have been, yes.

Q. So that if you had moved the boundary of Manual to the east, say, to Colorado Boulevard, you would have picked up a lot of Anglo children, is that right? A. If we had done that, probably we would have, but there were other factors; we were not considering racial factors at that time.

Q. Weren't there Anglo parents in that area who were concerned about the fact that if you made such a change

their children would have to go to Manual? A. There were some expressions by Anglo and black, concerned both ways, yes.

Q. Now, that area between York and Colorado Boulevard after 1956 remained optional, did it not, between Manual and East? A. A part of it did, as I recall.

Q. Now at that time there were still a great many optional zones scattered throughout the city at all levels of education, is that right? A. There were several, yes.

Q. Now, as I understand it, every once in awhile you [2053] would make a change or a revision in an optional zone, for example, the 1956 boundary proposal was just such a change, was it not? A. This was one, yes.

Q. Do you recall, Doctor, the fact that you would every once in awhile make an analysis of who was going where out of optional zones? A. An analysis not on racial or ethnic factors but simply numbers of pupils.

Q. Yes. And you could locate those pupils geographically, could you not? I mean the principals, for example, of the two schools that might be the subject of an optional zone, they would know what students were— A. There would be generally what we called a spot map made by the principal showing the location of the pupils affected.

Q. I take it that when an area which had previously been optional, when you find that the experience was that no one was exercising the option, then you would stop the optional zones? A. This was a general practice, and this was the principal reason for moving a boundary, yes, from optional to mandatory. This would be the principal reason, yes.

Q. Because the primary rationale of these optional zones was to accommodate parent sentiment, was it not? [2054] A. It was basically to do that. In the case of high schools and junior high schools primarily.

Q. To give them a choice? A. Give them a choice, because we found whenever we tried to set school boundaries you usually found people on either side of that boundary in disagreement as to which way it should be, and one way of determining a decision was to make option areas, then they could make their choice between the two schools.

Q. Now, in 1962—well, let's look at Barrett, I guess, next. Planning for Barrett began when, in April of 1958, is that right? A. It was about 1958, as I recall.

Q. Do you recall at what point in time the School District became irrevocably committed to the building of Barrett? What is that event? A. I am sorry.

Q. What is the event that makes you irrevocably committed to a school building? A. That would be—the awarding of a contract to the construction would be the last time, but we have several steps preceding that which commits you to a school.

Q. Do you recall when the contract on Barrett was let? A. I am sorry, I do not. I think I recall that I made a recommendation to the Board in December of '58 with regard [2055] to Barrett School. That would be where I entered into the situation.

Q. All right. Do you recall when you first began getting expressions of concern from the local community about the location of Barrett? A. About the location of Barrett?

Q. Yes, sir. A. I can't recall a specific date. It would have been probably somewhere in that general area, '58, '59.

Q. In other words, at the time that you were receiving these expressions of concern it wasn't too late to stop the building of Barrett? A. There were some expressions, but not many expressions of concern.

Q. Well, it was pointed out to you, was it not, Doctor, that when Barrett opened it would be predominantly

minority? A. There were some people who did so, yes, not very many.

Q. You didn't have any doubt but what that was true? A. There was a trend, a movement of population into that area, yes.

Q. There was a movement of black population, was there not? A. To a large degree.

Q. For example, you knew that Columbine was predominantly black by that time, didn't you? [2056] A. It must have been, yes.

Q. And that Harrington was predominantly black? A. Would have been changing rapidly. Harrington and Columbine were contiguous north and west, I believe, at that time.

Q. Yes. And you knew that there were a great many black children being bused out of the Harrington area down to Park Hill Elementary School? A. There were some, yes.

Q. There were about 200 of them, were there not? A. I think that was the number, yes.

Q. Now, who did you consult with with respect, first to the size of Barrett? A. Well, here again we were dealing with a specific area of land, so to speak, of the city. We consulted—are you talking now about personnel, persons we consulted with? The staff would have made studies of the area and of overcrowding, the population particularly of the contiguous school areas.

Q. Now, is it true that the planning of Barrett contemplated that children would be diverted from Harrington to Barrett, A. As I recall, this school was built primarily because of overcrowding occurring at Columbine and Harrington.

Q. Was it then contemplated that some Harrington children would be sent to Barrett? [2057] A. Yes.

Q. And it was also contemplated that some Columbine children would be sent to Barrett? A. This was the main reason for building the school.

Q. And it was also contemplated that the optional zone between Harrington and Park Hill would be terminated, was it not? A. I believe that was part of the consideration.

Q. So the busing from that area into Park Hill of these 200 children was to stop? A. We were endeavoring, yes, to eliminate that and to find a more permanent home for the children.

Q. Were you aware of the eastern edge of the Negro population movement in 1958? A. I could not define any edge, no, we had no racial counts at that time, or ethnic.

Q. Do you have a general idea? A. A general idea of where people were located, but no specifics.

Q. You knew, didn't you, that there were very few blacks living east of Colorado Boulevard at that time? A. In 1956?

Q. '58. A. '58. I would judge there would be relatively few.

Q. And the same condition obtained in 1959? [2058] A. I'm not sure about that because there were some rapid changes occurring in the late 50's and I can't pinpoint where or when.

Q. What was the school immediately east of Colorado Boulevard? A. There were lots of schools immediately east of Colorado Boulevard. If you are talking about where Barrett is located, yes, Stedman.

Q. Stedman didn't have many blacks in it, did it, in 1959? A. You are asking me about figures in specific schools. I cannot recall, I don't know, but I am just going to assume that there would not be very many.

Q. The condition at Stedman didn't change very radically

in 1960, did it? A. Well, here again you are asking me about a specific school. I was aware of some rapid changes approximately from 1958 on, and whether it affected Stedman I don't recall at the moment.

Q. So with regard to the building of Barrett you were told that when it opened it would be predominantly minority, is that right? A. As I recall, it was predominantly minority.

Q. Do you recall that very shortly after it opened it was practically 99 percent black? [2059] A. I am sorry, I can only give you the general impression. I did not have a count.

Q. So with that knowledge you went ahead and built Barrett, the knowledge of what the results would be? A. We did not know what the final results would be. We were aware of conditions and changing conditions.

[2060] Q. Now, by 1962 Barrett was on a very large site, was it not? A. It was on a site intended originally as a junior high school site.

Q. And Barrett only took up a very small portion of that site? A. A small part of it at the southwest part, I believe.

Q. So in 1962 you made a proposal to build a junior high school at 32nd? A. That's right.

Q. On what? At the area just north of where Barrett was located? A. It would have been located at the northern edge of that site, yes.

Q. And do you recall when that proposal was first made? A. For the junior high school?

Q. Yes, sir. A. That was in 1962.

Q. Was it in January? Or was it midyear or late year? Would it help you to put it in relationship to the—

A. There was a report issued at that time, a building

[2061] report. I think you have it in your records somewhere.

Q. Is that Exhibit 405? A. Would you mind my seeing that?

Q. That's dated February 1962. A. It would have been a part of that report.

Q. A part of this report? A. Yes.

Q. That's Exhibit 405? A. I couldn't recall whether it was January or February. But February.

Q. Now, I take it that with respect to the building of the junior high school that you were told eventually the same things about it that you had been told about Barrett, is that true? A. We were told, yes. That was several years later.

Q. Two years later? A. After the opening of Barrett. But not after we planned Barrett.

Q. What had happened, Doctor? A. Well, as I told you—

Q. What had happened in the interim that made your response to the community reaction to the junior high school differently than what your response had been to the building of Barrett? A. Well, there was a genuine community response in [2062] this instance. A concern that there would be segregation if a junior high school were built in that area. I must say when we were considering Barrett there was not such a community response. There were some individuals, but there was certainly a divided opinion in the community at that time about Barrett.

Q. Well, in other words, in 1962, because of a larger community response, you felt that it was constitutionally acceptable to take race into consideration? A. I felt that

it was advisable to give heed to their views and to reconsider the matter at that time.

Q. Did you get a further opinion from Mr. Henry at that time? A. It was at about that time or a little later when— This occurred at about the time a special study committee was set up, too.

Q. Not quite, I believe. That was set up in June. A. It was a little later. But the study committee was set up partly as a result of differing views that were expressed.

Q. I believe I asked you if you got a legal opinion from Mr. Henry at that time. Would you answer that question? A. I don't recall a specific legal opinion at that particular juncture, no.

Q. Now, when was the field trip reflected in [2063] Exhibit HM taken? Do you recall that? Do you have that exhibit in front of you, Doctor? A. Let's see. I must have it. HM.

Q. Yes. That's the transcript of notes taken. A. I don't seem to have the exhibit.

Q. Here we go. I'm handing you Exhibit HM, Doctor. Does that refresh your recollection as to when the trip was taken? A. Yes.

Q. How long was that trip? A. As I recall, we were away about two weeks.

Q. Where did you go first? A. Philadelphia.

Q. What was the situation in Philadelphia with respect to the racial composition of the school district there? A. I don't recall a special composition. But they were much concerned because there were apparently—there were large numbers in Philadelphia, and large numbers of Negro pupils.

Q. Was it predominantly black by that time? A. I don't recall. By that you mean majority or more?

Q. Yes. A. I don't recall the specific compositions of any of those cities but I know there was enough to be of great [2064] concern and they were making studies.

Q. Now, had there been any previous studies of the problems of Philadelphia in this respect? A. By then?

Q. Yes. A. Well, they had in Philadelphia what was called a fellowship commission that is referred to in this report that had been apparently studying this matter over a period of years. I don't know how long. But for some years.

Q. Did you talk with some representatives of that commission? A. Yes. There were some in attendance I met at meetings in the superintendent's office where there were a variety of people present. I don't recall specifically who all was there.

Q. Had that commission issued any kind of an interim report? A. There were some reports at that time. I don't recall whether they were annual reports or what.

Q. Were you given copies of those reports? A. We did look at some, yes.

Q. Did you bring some back to Denver with you? A. No, I did not, not that I recall now.

Q. Do you recall—what was the subject of that report? [2065] A. The subject of the reports were primarily in the general field of human relations; what to do with respect to a better understanding particularly among the different ethnic groups of the city.

Q. This was to try to break down the attitudes of discrimination or prejudice? A. I think primarily so.

Q. Would you say that that was its primary emphasis rather than improving educational opportunity in Phila-

delphia? A. Well, it was related to that. It was an attempt to improve the school community relationships, frankly, with respect to racial and ethnic matters.

Q. Now, in 1962, Doctor, was Philadelphia assigning black teachers in white schools? A. I do not recall the answer to that specific question.

Q. Do you recall asking that question at the time? A. I don't remember now specific questions that were asked. We were in extended periods of discussion. I'm sure personnel was one of the matters, yes.

Q. Did you also discuss the assignment of administrative personnel who were in minority and white schools? A. We generally discussed the areas of personnel, curriculum, buildings, human relations, a variety of subjects.

Q. All right. Anything else you recall, Doctor, about [2066] what you learned in Philadelphia? A. Not at this moment, no.

Q. Then where did you go? A. To New York City.

Q. Now, New York had been the subject—its school district in Manhattan and boroughs—those school districts have been the subject of many reports, have they not? And studies? A. Yes.

Q. Had you, before going to New York, reviewed any of those reports which were already in existence? A. I had been aware of some reports and New York probably had issued more reports than any other school system up to that time. But I can't recall the title of a specific report. They did have a commission on integration that did some publications. I'm sure I must have read or more of their reports before I went but I don't have a specific recollection at this moment.

Q. I take it from the resume contained in Exhibit HM

that the scope or the direction of the New York program was broader than just community relations, is that right? A. It was much broader than in Philadelphia.

Q. It was broader than the Philadelphia program? A. Yes.

Q. And it included concern with educational opportunity [2067] in these minority schools? A. Yes. There were a variety of subjects and the basic interest was an equality of educational opportunity.

Q. And they also were considering the problem of assignment of minority teachers in white schools, were they not? A. That's right.

Q. And also the assignment of minority administrative personnel in white schools, is that right? A. They were giving much more active consideration than Philadelphia at that time.

Q. Well, were they giving it more active consideration than Denver was at that time? A. Consideration of the assignment now of people?

Q. Yes. A. Yes.

Q. Now, did you get any current reports from the New York commission to study? A. My recollection is that we did have some reports. But again, I can't at this stage remember the title.

Q. Do you know whether or not one of the subjects of those reports of the commission on integration in New York was whether or not there was a relationship between concentrations of minority students and equality of educational opportunity? [2068] A. I do not recall a specific on that, no.

Q. You do recall that that was under consideration? A. It was one of the considerations, but I do not recall anything specific on that.

Q. And you don't recall that they had reached any conclusions in New York? A. At that time?

Q. Yes, sir. A. I don't remember any, no.

Q. Anything else that you learned in New York in talking with these people? A. Well, of major importance to us was, as we looked at our situation, was their procedure of having citizens' advisory committees to help them assess the situation, to make a study. Also, their employment of a specialist in this area, in the staff, and these were two major recommendations. We were looking essentially for procedural ways of looking at our situation; how they looked at their situations, what they had done. And these were two major things we brought back from New York.

Q. New York, relatively, has a high population of Puerto Ricans, does it not? A. It does, yes. Manhattan does. I think Manhattan does.

Q. Did this interest you? Did you see any parallel [2069] between the Puerto Rican problems in New York and the Hispano problems of Denver? A. The question again was, did I see any relationship or what?

Q. Yes. A. There were discussions, as I recall, during our visit there and I was aware of—yes, of Hispanos in Denver, and in New York the Puerto Ricans there. They're not in Denver, however. I think you have quite different situations in New York than you have in Denver.

Q. So you didn't see that you could learn anything that might have utility in Denver with respect to New York City experience? A. Here again, I want to reemphasize what I said just a moment ago. We were trying to find procedures and ways of studying the situation and what we ought to do; not primarily substantive matters that you're referring to.

Q. But substantive matters were not ignored? They must have come up in these conversations. A. That's right. And we took that into account. But my comments, if you will note, with respect to the board, were related only to the procedural matters, and that is what this report is.

Q. Yes. I noted that. Now, then, did you go to Detroit? [2070] A. We did.

Q. And how long did you spend in Detroit? A. I don't recall, several days.

We spent several days in each case.

Q. You don't recall what the racial composition of the Detroit school district was in 1962? A. I do know there was a substantial number. I can't recall the composition.

Q. You don't know whether it had sprung over the 50-percent minority at that time? A. I could not testify as to that, no.

Q. Detroit was also studying its problems? A. It was.

Q. And had there been any interim or final reports by its study group? A. Well, there were two reports referred to in my statement; one was the general citizens advisory committee on school needs and out of that was set up a study committee on equality of opportunity.

Q. Pardon me. Which one was the Romney Committee? A. That was the first one set up in 1957. The citizens advisory committee of the school, chaired by Mr. Romney, and this was to take a look at the school needs of the city generally. They had five subject committees and, in a large way, we finally fashioned our so-called study [2071] committee after the Detroit experience. They had, growing out of this so-called Romney Committee, appointed another committee which did a special study with respect to

equality of opportunity, and that was the one that we were mainly interested in because it related to our question.

Q. Was the subject committee operating at the same time with the base committee that was operating? Is that right? A. You're talking about the five subject committees referred to in this report?

Q. Yes. A. This came at a later date. You see, the first committee was appointed in 1957. The second committee was appointed in 1960. And this is the one appointed on equal educational opportunity. It is the one that had the five subject committees, if you're looking at the report. It shows at the bottom of Page 3. And then continues over to Page 4.

Q. Now, had that committee that was studying equality of educational opportunity in 1962 issued any kind of a report? A. As I recall, there were several reports which we looked at in the assistant superintendent's office.

Q. Did that report find a relationship between inequality of educational opportunity and concentrations [2072] of minority students?

Mr. Brega: Object to the question. It calls for a hearsay answer.

The Court: Overruled.

[2073] * * *

Cross-Examination by Mr. Greiner (Cont'd):

Q. Dr. Oberholtzer, this morning we were discussing the standards that the School District was employing, namely, that in certain of the schools of the District it was felt that because of the programs being carried on in those schools a lower teacher-pupil ratio was required. Do you recall,

Doctor, when you first lowered the pupil-teacher ratio at Manual, was it done for old Manual? A. There was no particular stage at which you said there will be lower. As I recall, there was a gradual lowering of the pupil-teacher ratio.

Q. Was the lowering process of the pupil-teacher ratio at Manual still in progress when you left as Superintendent? A. Yes. The most recent principal, Mr. Ward, had requested further lowering.

Q. Do you recall when the lowering began? A. I can't remember any specific date, no.

Q. Do you recall when the District formulated the policy, [2074] when it made the determination that it would be advisable to lower the pupil-teacher ratio in these low-achieving schools? A. This was one of the early determinations when I came to Denver, and I think there had been some recognition of that prior to my coming, but not as much as subsequently.

Q. Now, were there schools at the time of your departure, Doctor, which had achieved what you believed to be the appropriate pupil-teacher ratio? I am talking still about the low achievement schools. A. Appropriate to particular schools. Again, there was no formula. It was an individual matter.

Q. Can you identify some of those schools for us? A. Well, we were working toward that—certainly one of the most recent studies that I recall was at Stedman School.

Q. Do you recall what the ratio had been at Stedman before this policy began to be implemented? A. I can't recall a precise figure, but it must have been between 25 and 30, and we were endeavoring to get it below 25.

Q. That was over a relatively short period of time, was it not, since Stedman, say, in 1960 was still a predominantly

Anglo school? A. Are you making an observation or a question?

Q. Well, did the program begin sometime after Stedman became a predominantly minority school? [2075] A. The particular program I am talking about came as the result of the recommendations of the advisory council.

[2076] Q. So that would have been sometime after the spring of 1964? A. After 1967.

Q. Oh, after '67? A. After '67 I'm talking about. This particular marked reduction.

Q. All right. Can you identify any other schools where at the time of your departure you felt that the pupil-teacher ratio had been reduced sufficiently? A. Well, we were in the process of doing this at the Greenlee School, as I recall, and the pupil-teacher ratios were approximately the same.

Q. Now, as I understand it, is it fair to say, Doctor, that your overall objective in these low achieving schools was to get the ratio down at least as low as twenty-five to one? A. Twenty-five or below, preferably.

Q. Now, as I recall the statistics published by the school district in 1968, and I have reference to an exhibit in evidence, Exhibit 83, some of the schools in the district had pupil-teacher ratios significantly below twenty-five to one. Is that correct? A. Some did.

Q. Some were as low as sixteen to one? A. Sixteen, seventeen; in there, yes.

[2077] Q. And the ratios for example at Moore and Morey and Cole were quite low, were they not? A. They were relatively low. And the situation at Morey is unique in that it was also a special education center for junior high schools.

Q. Well, as I understand it, special education teachers

and pupils were not included in those ratios, were they, generally?

Mr. Ris: If the Court please, I think it's only fair to the witness—if he's referring to—if counsel is referring to a specific exhibit, that the witness be given an opportunity to see the exhibit.

Mr. Greiner: I'm asking in general whether special education was considered.

Mr. Ris: May I finish my objection? To see whether the matter that he is referring to is as stated in that exhibit.

The Court: Well, if there is some particular information that you have at hand, you might call it to his attention. It would save time that way, I think.

The Witness: Let me answer your question to this extent, that the attempt at Morey—I know was to reduce significantly the pupil-teacher ratio.

Q. I'm handing you what's in evidence for example as Exhibit 83 and at the back that represents pupil-teacher [2078] ratio data in rank order. I am showing you the page that lists the junior high schools. Do you know whether or not that statistic as it appears in Exhibit 83 includes special education pupils and teachers? A. I do not, no. This was in 1968.

Q. What was the practice while you were superintendent? A. I think generally that it was not the practice to include it.

Q. Now, I take it, Doctor, that some of the schools which were the subject of this lower pupil-teacher ratio have been low achieving schools for a number of years. I'm talking

principally now about the core city schools. A. Relatively speaking, yes.

Q. What do you mean, relatively speaking? A. Relatively low.

Q. Well, they were the lowest in the city, were they not? A. Some of them—One has to be the lowest.

Q. That's a good point, Doctor; but, on the average, they were all below the city average, were they not? A. Most of them were.

Q. In the core area? A. Yes.

Q. And you started the triennial testing program in 1950, is that right? [2079] A. We started it in 1950, yes.

Q. And you had been testing—I suppose you were testing for achievement after your very first year here as superintendent, is that right? A. The triennial program was introduced in 1950, but individual schools had their own testing programs aside from that.

Q. When did you first become aware of the identity of some of these lower achieving schools, Doctor? A. Notably in 1950, with the first triennial survey.

Q. Now Doctor, I take it that you reviewed the results of this triennial program every three years, is that correct? A. We did.

Q. Did you find, Doctor, that this lowering of the pupil-teacher ratio had any significant impact on raising achievement in the schools? A. It did have an impact and through the years there was some improvement in the schools.

Q. Would you say, Doctor, that the achievement was up to grade level in those schools? A. In terms of the standardization achievement tests generally, no.

Q. Well, I take it the situation at Manual was similar, was it not, when we compare the achievement, for example, of [2080] old Manual with the achievement of new Manual?

A. Well, the achievement of old Manual I don't recall. We began as I said the triennial survey in 1950. That would be the first results.

Q. I guess that would have been the only result that you would have been familiar with of old Manual? A. The only one, yes, and it was relatively low.

Q. And then it was still low when you left the school district, was it not? A. It was still low but there was improvement in the achievement of the pupils.

Q. Was it up to grade level? A. No.

Q. Now, I'd like to call your attention to the boundary changes which were proposed in 1962 for the Park Hill area elementary schools. Do you recall that, at least initially, there was a proposal made to relieve overcrowding at Stedman Elementary School as one of those changes? A. You're talking now, I think, about the matter that was brought up yesterday in testimony in which, I believe, there was some question as to whether there were proposals anticipated in 1962 or 1964.

Q. That's right. And the thrust of my question, Doctor, is whether there was an initial proposal and for some reason it was changed, or whether there never was such [2081] a proposal? A. No, the intent—I think the intent was to make the proposal for 1964, not for 1962.

Q. Now, do you recall whether or not it's true, Doctor, that in 1962 Stedman was the most over-utilized of those Park Hill schools? A. I do not recall that point.

Q. Would you accept the fact that there is evidence in this record of that fact? A. Of what schools now are we talking?

Q. Talking about Smith, Park Hill, Philips, Hallett and Stedman.

Mr. Ris: If the Court please, I think, if there is evidence to this effect, whatever the exhibit is, the witness should be furnished with it.

The Witness: I would like to see the evidence, if there is such.

The Court: Well, he may if you have it.

The Witness: I don't recall that.

Q. I'll try to find that for you in just a moment, Doctor.

The Court: You're talking about overcapacity—or population in excess of rated capacity?

Mr. Greiner: Yes, and my question goes to—

The Court: At Stedman, more than the other [2082] schools?

Mr. Greiner. It's Exhibit 51.

Q. This is Exhibit 51, which is in evidence, which is a bar graph purporting to show the capacity utilization in 1961 at Stedman, Smith, Hallett and Park Hill. Now, at least according to that exhibit, which is in evidence, Stedman was the most overcapacity, is that correct? A. This exhibit shows that, yes.

Q. And do you know, also, Doctor, whether or not Stedman also had the highest Negro population at that time of those schools shown on that exhibit? A. I could not testify to that effect, but it was probably so because of its location.

Q. Now, if I understand what you have been telling us, Doctor, a school which is over-utilized and has minority population—significant minority population, it in effect gets over-utilized faster than a school that doesn't have minority population. Isn't that true? A. It would be generally so, yes.

Q. Well, can you explain then why the decision was made not to—why Stedman wasn't proposed for immediate relief in 1962, if that's what the fact was? A. I'm trying to recall, but I think there was some reduction in Stedman contemplated later. And we contemplated some changes in 1964.

[2083] Q. That is correct, but my question is, why wait two years?

The Court: If you remember.

A. I don't recall the reasons, frankly, at this time.

Q. Now, I believe you recall the subject of the actions taken at Harrington, Columbine and Stedman Elementary Schools? A. When?

Q. I believe that was in 1951, the school year beginning 1952. A. We have talked about several situations. I am not sure.

Q. Do you have any recollection of what the reasons for those changes in the boundaries was? A. In '51-'52?

Q. Yes. A. I am sorry, I don't recall.

Q. But you do recall telling me, do you not, Doctor, that optional zones were not one of the devices used by the District to relieve overcrowding? A. That's a general policy, yes.

Q. You mentioned the opening of a parochial school near Smith, and I don't believe that the record shows when that school was opened. Do you recall? A. It was opened, I believe, in the early 1960's. I can't give you a precise date.

[2084] Q. And do you recall that Smith was built in 1955? A. Yes.

Q. And the addition that you had reference to in your testimony was built in 1957, was it not? A. That's right.

Q. So by the time 1964 rolled around, both of those events that you have described had already taken place? A. I believe that is correct, yes.

Q. Now, handing you what has been marked for identification Exhibit 245, which is a newspaper clipping, I wonder if that refreshes your recollection, Doctor, as to whether the school District, and this speaks as of 1952, owned any other School sites east of Colorado Boulevard that might have been used for the Park Hill area? A. Are you referring now to an elementary school site?

Q. You built Barrett on the junior high school site so I guess no, I don't limit my question to that. Any school site. A. There were some in existence at that time, yes, east.

Q. And where were they? A. This map doesn't show any street designations.

Q. It shows— A. I am sorry, it does indicate 35th and Dahlia, 36th and Jasmine.

[2085] Q. 36th and Jasmine is where you ultimately built Smith, did you not? A. That would be the Smith School, yes.

Q. Now, you also mentioned, I believe, Doctor, that in the May 6, 1964 Board meeting quite a few important policies were passed by the School Board in response to the 1964 study committee report; do you recall that? A. I do, yes.

Q. Now, one of the recommendations of the study committee report—or can you tell me whether one of the recommendations concerned the use of transportation to relieve overcrowding? A. There was such a recommendation and a policy recommended.

Q. Now, you have reference, do you not, to Policy 1226A, which I will show to you? It is identified as Plaintiffs' Exhibit 34. I believe it is over on the second page, is it not, designated multiple pupil transfers? A. Yes.

Q. Just so the record is clear, Doctor, I'd like to point out to you that that particular provision was not passed until February 2nd, 1966, was it? If you will note the reference on the first page of the exhibit. A. This policy is effective February 3, yes.

Q. 1966? A. '66, correct.

[2086] Q. So you agree we do have the May 4, 1964, Board minutes identified as Plaintiffs' Exhibit 32, and I think that if you would look there you would find there is no reference in the 1964 meeting to this provision. A. I will take your word for it. I didn't think so.

Q. Now, if that policy had been recommended, Doctor, in March of 1964, why did it take some two years before the Board adopted it as policy, do you recall? A. I do not recall any specific reason for that, no.

Q. Now, you have on your desk in front of you two of the defendants' exhibits, I believe, that deal with compensatory education expenditures. I have reference to Exhibits EM and EN. Do you have those? A. Yes, I do. I have EN and EO.

Q. All right, we will take those, then. EN purports to show the expenditure of federal funds in junior high schools, is that correct? A. From '68 to '69. That was after my date.

Q. Were there any federal funds being spent in junior high schools during your tenure on such programs? A. My recollection is that there were some, yes. The Education Act was made effective at an earlier date, during the period when I was Superintendent.

Q. That was what, about 1965? A. I was thinking it was a little earlier. Might have [2087] been '65, '64, in that neighborhood.

Q. We are talking about the elementary and secondary schools? A. ESEA, right.

Q. What were the criteria for receiving federal funds, Doctor? First of all, did the District have to put up matching funds to qualify for this assistance? A. I don't recall that there were matching funds there. I think there were two basic requirements. First of all, you could not apply for funding unless the school was within the designated target, so-called target area, which was essentially an area of low income families.

Q. What did you use, the 1960 census data to determine that? A. My recollection is they were using the '60 census figures at that time, and the other was that you could not use funds in lieu of or in substitution for any programs that you had. They had to be either in addition to or new programs. Those were the essential criteria.

Q. In order to continue the funding for a given program in a school, would you have to submit any kind of an evaluative report on the program to the federal government? A. There were some requirements in connection with the application. You did have to have a plan of evaluation, yes, sir, testing and such.

[2088] Q. How often did you have to send in these evaluations? A. My recollection is that that was an annual matter.

Q. I take it that some of these programs were abandoned because the evaluation did not show the improvements which had been anticipated? A. There was no abandonment that I recall during my tenure.

Q. Well, did these federal programs work in raising achievement? A. There was some increase in achievement, but generally not significant changes in achievement.

Q. Now, in addition— A. Let me qualify, please.

Q. I am sorry. A. For some of the programs. Because I want to point out that there were some programs where there were significant differences. May I add that?

Q. Certainly. A. One of the most significant programs was one that we instituted in the way of summer school opportunities for elementary school children in the low-achieving areas, and my recollection is that they were run about six weeks and we had those centers in various parts of the city, and we concentrated on the reading program at first and we'd spend the entire morning, for example, simply on reading, which meant we were [2089] spending from two to three hours on reading only, and the results of those programs were significant. We did have achievement levels raised during a six-week period, as I remember, all the way from one to two and more years reading level. It demonstrated to us the necessity of concentrated programs, particularly in the basic subjects, and thereafter we did make some adjustments in time in the regular program. And where we were able to do that we did get some differences, significant differences.

Q. Now, do you recall how many students participated in that summer reading program? A. I can't recall because it started with a relatively small number of centers, as I remember, five or six centers, and expanded, and there would be, I think, two or three rooms at a center, and the general practice was to have groups of, my recollection is, 15 to 20 children, a relatively small group, and concentrated time available for study. We later instituted programs in arithmetic. The first programs were in reading.

Q. That was a District Y program, was it not? A. This was in various parts of the city, wherever there were low-achieving groups in schools, and we were trying to put them in centers where it would be relatively convenient for them to come to it from their homes.

Q. Did you find that it was possible to re-create the [2090] summer school situation in the regular classroom? A. It was feasible to create it in some instances, and we did endeavor to reduce the class sizes, more especially in the lower elementary school grades.

Q. Did you find that the children retained, Doctor, their increased achievement levels in reading? A. Unfortunately, there is a rate of forgetting as well as a rate of learning, and there was, in many instances, a rapid rate of forgetting as between the close of that period and the opening of school. So we did institute, as the result of that, some changes, with more concentrated efforts on the part of the teachers and the schools in the beginning of the school year to overcome the deficiencies.

Q. Do you recall during your last year in office, Doctor, approximately how much in the way of theses federal ESEA funds were received by the District? A. I am sorry, there was a substantial sum, but I can't recall the amount.

[2091] Q. Well, for example, EM shows that in 1968-69 some $601,000 was spent on secondary schools—pardon me, the elementary schools. Do you recall whether during your tenure similar amounts of money were being spent? A. In elementary schools?

Q. Yes. A. My recollection is that there was a lesser amount. I'm not positive about that. The figure of six hundred thousand sticks in my mind as a recommendation and I can't put it in point of time.

Q. Now, did you ever make any determination of the

cost per student of this type of program? A. There were some determinations—now, this type of program? Are we talking about the regular program in the school year?

Q. I'm sorry. I'm talking about compensatory programs that were undertaken in the schools. A. During the school year?

Q. Yes. A. There were some cost figures but I don't have them in my mind, frankly. If you were going to ask me about them, I can't recall. They were substantially larger. But generally speaking, those programs would run in the neighborhood of 51 percent or more per pupil above the normal average cost.

[2092] Q. What is the normal average cost? A. When?

Q. Well, let's take your last year in office. A. It varied as between elementary, junior and senior high schools.

Q. Well, if you recall, why don't you give it to us for each level? A. Well, it would have been on the order of, I suspect, around five hundred dollars for elementary, six hundred for junior and seven hundred for senior high schools. Something of that order. That would be the relative order of it.

Q. How much was it at the elementary level? A. I thought around five hundred. It might be—might have been less.

Q. Then you're saying that the federal programs infused another $250 per student? A. That would be generally the case in those programs.

Q. Do you know whether or not there was a great decrease in per-pupil expenditure after you left from the federal program? A. No, sir, I do not know.

Q. For example, EM, which you now have in front of you, shows that in the selected 20 minority schools there

was a little over a half million dollars spent, is that right? [2093] A. Well, for the year 1968-69, yes.

Q. And there were approximately 13,000 students in those schools which would come out to be about forty dollars per student, according to my arithmetic? A. Well, let me just remind you that the program was not applied equally to all students. There were selected programs within those schools. This isn't a grand total for the school. You had programs within the schools.

Q. I see. So far any given program you might only have a selected number of students participating, is that correct? A. That's correct. You would have those that were deficient in achievement, would be the general rule. It didn't apply equally to all pupils.

Q. Now, I wasn't sure what your response meant, Doctor, and I'd like to clarify it with respect to the busing out at Stedman to relieve overcrowding there. Did you say that there was no integrating purpose behind that busing out? A. There was at that time some idea of that purpose, yes. We're talking about 1964 now?

Q. 1960—

The Court: 1966.

Q. 1966, I believe. A. Yes. That was one of the elements in it.

[2094] Q. Then why were Anglo students allowed to be bused out? A. Because at that time we were not making a distinction in any school in the matter of transportation as to whether he was Negro or white. And we gave them the option of going. This was then a voluntary matter on the part of the parent.

Q. During your tenure, was it always voluntary? A. It was always voluntary.

Q. Had you set some sort of a goal for the number of students that you wanted to get out of Stedman? A. We had not at that time set goals of that nature, no.

Q. Subsequently, did you? A. No.

Q. Now, at the time of the junior high school proposal in Northeast Denver, that was in 1962, there was also then under consideration a series of changes in the attendance areas between Morey, Cole and Byers, were there not? A. I believe there were, yes.

Q. And do you recall that there was opposition to those changes on the basis of the racial results which might be achieved by them? A. I think there were such comments, yes.

Q. Now, was this about the same time that you were [2095] considering the junior high school in Northeast Denver? A. In the relatively same period of time, I believe.

Q. Was there as much opposition to those junior high school boundary changes as there was to the proposal to build a new junior high school? A. I do not recall. I can't state a proportion.

Q. But the same factors were being mentioned? A. Similar, yes.

Q. And can you recall why you decided, Doctor, not to build the junior high school on the one hand but that you did decide to go ahead and make the boundary changes on the other? A. We were faced with the situation in the one instance of an immediate action, and the other of a long period. The construction of a new high school is different—quite a different matter than changing a boundary line, and we were confronted then with the matter of the relative capacity of the schools and the programs of

the schools. This was a matter of concern then. And we were not concerned with the racial or ethnic factors.

Q. Well, you were concerned with those factors up at that 32nd location. A. We were not intially concerned. May I remind you, it became a part of our concern in subsequent time.

Q. Yesterday you mentioned as the most important [2096] factor affecting achievement, Doctor, something you called native ability. What is native ability? A. I'm talking here of what is generally reflected as the ability, the intellectual ability in this instance, to do school work; the capability of a child. You call it brightness; intelligence and such. This is a general term.

The Court: I think he wants to know what the source of it is according to your belief.

A. Well, I'll be glad to—

The Court: Is it inherited? Is it a product of the exposure to educated parents? I think you indicated that.

A. Well, I have indicated, I think, that I felt that there were some innate capacities in terms of intelligence, but I do not confine it to that. I think there are many important environmental influences, though it's a combination— What a child is able to do is a combination of these factors.

The Court: Does that answer your question?

Mr. Greiner: Not quite, Your Honor. I'd like to pursue it just briefly if I might.

Q. I take it then that native ability is something you're born with, is that right? A. That's the intent of that

statement, yes. You [2097] are born with certain genes with respect to the color of your hair and your eyes and your physical makeup and you are also with your intelligence.

Q. Now, are you familiar—I think you said it's called, I think the Jensen Report? A. I am in general familiar with it.

Q. Is that what you have reference to? A. No, I do not agree with the Jensen Report.

Mr. Greiner: I have no further questions, Your Honor.

Cross-Examination by Mr. Brega:

Q. Doctor, I'd like to ask you a few questions about the 1956 boundary changes at the time that you had Hill Junior High opened and then the contiguous areas changed.

The Court: The series of junior high boundary changes? Is that what you're referring to?

Mr. Brega: Yes.

Q. I think we have had an inference here that the only change that was of any concern was the Cole-Morey-Byers change. And I'd like to know if, during this period of time, in 1956 at the time these changes were being considered, whether all of these areas were involved. In other words, did they all come out of Hill? Is that where they started? A. The reason for the considerations at that particular [2098] arose from the opening of the new Hill Junior High School. That was the beginning. When you make a change in one situation, you also affect other represented situations that are contiguous. But it also afforded the opportunity for considering other situations.

Q. Well, I gather then that, had Hill not have been opened at that time, there probably would not have been any other boundary changes in Cole and Morey and Byers? A. That's probably so, yes.

Q. In other words, the Hill construction was what caused you to think about these other boundary changes? A. Right.

Q. And at the time these changes came up I presume that you published these for the general populace of Denver to see what you intended to do? A. As I recall, they were rather widely reported, yes.

Q. You weren't trying to hide the fact that you were going to make any changes? A. No. All such proposals are made at a public meeting of the Board of Education at the regular or special meetings, and they are subsequent to press comment and other kinds of public comment and information.

Q. Now, regarding the type of information that was presented to you about how the Cole-Morey changes would affect the racial balances of the schools, did anyone present [2099] figures to you of the percentage of blacks or whites being taken out of any one of the areas, for instance, in the Cole-Morey change? Did anyone come up and say, "You're going to take 75 percent of the black students out" or— A. I don't recall any such figures. We had no studies with respect to that, I'm certain of. But whether we were presented with them, I don't recall specific figures, no.

Q. To the best of your recollection, then, is that people were just talking about generalities of what would happen? A. That's my present recollection, I would guess.

Q. And there were several different groups that were

advocating different positions, I presume, at those meetings? A. Are we now talking about 1956?

Q. Yes. A. It is my recollection that there were several viewpoints yes, as to that.

Q. And, if I am correct, you mentioned that there were blacks who were in favor of the changes and blacks who were opposed to the changes at the Cole-Morey site? A. Well, if you are now referring to the series of meetings that I held in the Administration Building, yes. This was so.

Q. And these people really represented their own [2100] interests? In other words, rather than as a community interest to you? A. We were endeavoring to get a random sampling of people in various geographical parts of the area affected, though they were not representative of any groups so far as I know; only of themselves.

Q. Now, you mentioned in this regard that at this time you were not considering the racial factor in your changing of boundaries, and I just would like to touch on that a moment.

Does that mean that you were treating all of the races and ethnic groups equally in your determination of these boundary changes? A. I simply meant that this was not a factor in our considerations.

Q. In other words, you were dealing with pupils regardless of what their background was? A. Simply dealing with numbers of pupils, not with respect to their racial or ethnic factors.

Q. And at the time of these 1956 boundary changes, did you have any studies that indicated proposed mobility of the black community in this part of Denver? A. Studies of such?

Q. Yes. A. I do not recall any such studies. We had no [2101] studies based on race or ethnic factors.

Q. Did anybody present any studies to you at the time? A. I don't recall any.

Q. I would like for you to consider in this light—in light of what you thought or knew at that time, rather than what we have now to us—the facts that we now have—in considering the Barrett site, did anyone present a study to you indicating what the percentage of black and white students was on the east side of Colorado Boulevard? A. I don't remember any such studies, no.

Q. And did you have any of your own? A. I did not have.

Q. Did you have any idea that the black population on the east side of Colorado Boulevard would increase from 1960 to 1966 at the annual rate of 67 percent a year? A. We had no statistics or no predictions of such.

Q. In the exhibits before the Court it indicates between 1963 and 1968 that the population of the black students in the Denver Public Schools increased 45 percent. Did you have any idea that that was going to happen? A. We had some idea of a probable increase but not of a percentage. And this again was a general figure.

Q. Now, at the same time that you were dealing with these problems in 1966, Stedman, Smith and that area, the [2102] school situation in Denver was such that most of your schools were overcrowded at that time, were they not? A. (No answer.)

Q. Let me refresh you. The 1967 report—it indicates that in 1966 fifty-three percent of all schools in Denver were overcrowded during that year. A. If you are using this formula—and they did use that formula—I don't have a specific recollection of figures.

Q. Well, what I'm getting at—is the only problem you were facing in the Denver area—was it just Northeast

Denver? A. Well, there were relative degrees of overcrowding. When you take this figure now—I think you're probably taking the so-called rated capacity and anything above that rated capacity would be considered overcrowding. Is that what you're talking about?

Q. Yes. Would that same condition have existed in Southwest Denver and Southeast Denver and other parts of the city? A. It was rather general over the city. It was not confined to any one. But there were certain areas where it was more marked than others. At that time the Northeast area was one of the most crowded.

Q. Now, you mentioned that there were several steps [2103] before the letting of the contract in Barrett that actually committed you to the site. Would you tell us what you mean by that? A. Well, as a general rule, the steps are the superintendent or some member of his staff recommends that plans be made for a new school at a particular location. And the first step is to draw up some preliminary plans. Ahead of all this recommendation are some other steps. But insofar as the specific board actions, these are the steps. Then the preliminary plans are presented for consideration before the Board of Education. It either approves or rejects or it defers. Then there is an authoriaztion at that time to proceed to working drawings and the final plans.

The next step upon completion of those is to receive bids for the construction of the approved final plans. There is a time when those final plans are approved. The final step is to receive the bids for the construction of the school and to act upon them. Then you are committed to the school.

[2104] Q. And when you were involved in the consideration of Barrett did the staff investigate the traffic count

on Colorado Boulevard as one of its important aspects? A. This would be in general one of the aspects of our consideration in the environment, streets and such.

Q. And did it— A. I would have to answer yes, it must have been a part of it. I have no specific recollection of count as such.

Q. And you also, I presume, then, were studying the new construction that was taking place or going to take place on Colorado Boulevard? A. Yes.

Q. I believe the 1967 report indicates—excuse me.

The Court: Advisory?

Mr. Brega: No, I had the wrong one.

Q. In your consideration of the 1964 report, the Voorhees report, and you made those assignments out to the staff, the staff, as I understand it, filed a report with the Board of Education that "The busing of large numbers of students back and forth across the city to achieve racial balance would maximize to a serious extent the school's strangenesses and emotional strains of those students." A. May I see that?

Q. Yes (handing document to the witness).

Mr. Greiner: Is that an exhibit?

[2105] Q. Does this refresh your recollection?

Mr. Greiner: Pardon me. Is that an exhibit?

Mr. Brega: No.

Mr. Greiner: I would object to counsel reading from something that is not an exhibit.

Mr. Brega: I am asking him to refresh his recollection. I will make it an exhibit if you want. It is just another—

The Court: We will let him look at it. I don't see how that could do any harm.

The Witness: It might help.

By Mr. Brega:

Q. This was prepared by your staff? A. Well, no, this was prepared by the executive board of the committee on instruction. This is not a part of my staff. This is another group. It is a professional staff, so to speak, a representative group from different schools in the city. But there were instruction committees and there was an executive board, and that I believe is what—let me see. Yes, this is the executive committee of the committee on instruction. I did request them to make a study of the recommendations of the committee, and this is a part of that response. It is not my assignment to the staff that we were referring to earlier.

Q. Right. And they were requested to make a study partially on the advisability and feasibility of busing students? [2106] A. They were to make a study of all of the recommendations of that committee.

Q. And does this refresh your recollection on what their response to that was? A. Yes, in this particular instance.

Q. Would you tell us what that response was? A. You want me to read it?

Q. That would probably be the easiest.

Mr. Greiner: Well, I object, Your Honor. If he is going to read it, I would ask that it be marked as an exhibit, that it be identified.

The Court: This is a report of a committee to evaluate the advisory committee's report, as I get it, is that right?

on Colorado Boulevard as one of its important aspects? A. This would be in general one of the aspects of our consideration in the environment, streets and such.

Q. And did it— A. I would have to answer yes, it must have been a part of it. I have no specific recollection of count as such.

Q. And you also, I presume, then, were studying the new construction that was taking place or going to take place on Colorado Boulevard? A. Yes.

Q. I believe the 1967 report indicates—excuse me.

The Court: Advisory?

Mr. Brega: No, I had the wrong one.

Q. In your consideration of the 1964 report, the Voorhees report, and you made those assignments out to the staff, the staff, as I understand it, filed a report with the Board of Education that "The busing of large numbers of students back and forth across the city to achieve racial balance would maximize to a serious extent the school's strangenesses and emotional strains of those students." A. May I see that?

Q. Yes (handing document to the witness).

Mr. Greiner: Is that an exhibit?

[2105] Q. Does this refresh your recollection?

Mr. Greiner: Pardon me. Is that an exhibit?

Mr. Brega: No.

Mr. Greiner: I would object to counsel reading from something that is not an exhibit.

Mr. Brega: I am asking him to refresh his recollection. I will make it an exhibit if you want. It is just another—

The Court: We will let him look at it. I don't see how that could do any harm.

The Witness: It might help.

By Mr. Brega:

Q. This was prepared by your staff? A. Well, no, this was prepared by the executive board of the committee on instruction. This is not a part of my staff. This is another group. It is a professional staff, so to speak, a representative group from different schools in the city. But there were instruction committees and there was an executive board, and that I believe is what—let me see. Yes, this is the executive committee of the committee on instruction. I did request them to make a study of the recommendations of the committee, and this is a part of that response. It is not my assignment to the staff that we were referring to earlier.

Q. Right. And they were requested to make a study partially on the advisability and feasibility of busing students? [2106] A. They were to make a study of all of the recommendations of that committee.

Q. And does this refresh your recollection on what their response to that was? A. Yes, in this particular instance.

Q. Would you tell us what that response was? A. You want me to read it?

Q. That would probably be the easiest.

Mr. Greiner: Well, I object, Your Honor. If he is going to read it, I would ask that it be marked as an exhibit, that it be identified.

The Court: This is a report of a committee to evaluate the advisory committee's report, as I get it, is that right?

Mr. Greiner: I am not sure it has been established that he ever received it.

The Court: It hasn't been.

The Witness: I would be glad to indicate that I did receive such a report.

Mr. Greiner: You did? All right, then, we would have no objection to his reading it.

The Court: We can always Xerox that page and make it a part of the record.

Mr. Brega: The whole report, Your Honor, is a response to this, to the advisory committee's recommendations. [2107] I don't have any hesitancy about putting it in. It is just another huge volume of recommendations.

The Court: We wouldn't necessarily need the whole thing. Just take the page.

The Witness: I am sorry, we are now talking about the study committee, not the advisory committee.

Mr. Brega: That's right.

The Witness: The 1964. We are not talking about 1967.

The Court: You are not saying the Berge committee recommended compulsory busing?

Mr. Brega: No, the Voorhees committee.

The Witness: This is the first committee.

Mr. Brega: If we did, we would be in real trouble; this is the '64 committee.

The Court: I see.

By Mr. Brega:

Q. Would you read that section we are referring to? Let's start again. A. The paragraph is headed "Bounda-

ries, Busing and Emotional Security." Incidentally, the choice of subjects and the arrangement was the committee's choice. I don't know why they have this particular one.

"Busing large numbers of pupils back and forth across the city to achieve racial balance would maximize to a serious extent the school's strangenesses and emotional [2108] strains which already undermine learning for so many youngsters. The recommendation that this not be done (that was recommendation 6) seems sound.

Q. Stop right there. Recommendation 6 refers to the Voorhees report? A. Of the Voorhees report or the study committee report.

Q. All right. I wanted to ask you if you agree that this transportation of students did have an adverse effect upon their ability to achieve. A. This transportation, what are we talking about now?

Q. As we mentioned here, the mass busing of students back and forth the city, I want to know what the strangenesses and the emotional strains we are referring to are. A. Let me point out that this was an opinion expressed about a contemplated situation. That's all that is.

Q. We are facing that in this lawsuit.

The Court: He says he can't evaluate it until it is an accomplished fact. I take it that is what he said.

The Witness: We are talking simply about an opinion here.

Q. Do you have an opinion as to what it would do? A. I do not have a general opinion. I think it is possible that there could be such an effect, but I would not want to generalize.

Q. Now, I would like to call your attention to Exhibit [2109] 83, which is the triennial test scores of 1968, and I am going to give you an example, if I may, of two schools, Knight Elementary and Gilpin Elementary, and for Grade Level 5, the word meaning test score for Gilpin was 4.7 and for Knight was 6.7. And that indicates two grade differences, I presume, then, between the students and the word meaning. In the report it also reflects that the Gilpin median family income in that subdistrict area is $3,680 and that the median income for the Knight subdistrict is $10,000 plus, and I want to ask you if in your opinion the income level does have or can have any effect on the achievement level of those students.

Mr. Greiner: Your Honor, I would object. The income data which counsel has reference to is 1960 data. The test results which counsel has reference to are the 1968 tests. I don't think there is any proof —it is an apple and an orange. He has come up with a peach.

The Court: Can you answer the question? Do you understand?

The Witness: I am not familiar with the report, Judge. This is a 1968 report. I can only answer in general terms as to his question.

I have previously indicated to you that there have been studies which pretty well establish that the income of a family is one of the good indicators, only one, that has some bearing upon the achievement of pupils, but I would not [2110] rest on any one indicator.

Q. And also in this study in 1968 the average daily at-

tendance of Gilpin was 88.7 percent, and at Knight it was 94.5 percent. I will ask you if in your opinion—

The Court: Are you talking about different years now?

Mr. Brega: No, no, same year, under the triennial testing report, two schools, one of which has a high achievement level and one of which has a low achievement level. I am asking now if in the Doctor's opinion the difference in the attendance percentage at these schools in his opinion has any effect on the achievement level of these schools.

A. I would have to answer only in general terms that there is an effect, and in general the better the attendance the more probability of higher achievement. It again is one factor that has to be considered, and you are talking about generalities. This varies tremendously among individual pupils.

Q. Let's carry this on.

The Court: I think we can all agree that good attendance is desirable in this problem, and then we can get on to the next point. I don't want to hurry you, though.

Mr. Brega: I don't want to hurry on this, either, if I don't have to.

The Court: No, not necessarily. I just think that [2111] is fairly obvious, that attendance affects the results.

Mr. Brega: Your Honor, I believe the whole tenor of the plaintiffs' case is that the reason that we have low-achievement schools and the reason we have high-achieving schools is because one is minority and

the other is Anglo, and I want to bring out that there are as many other reasons as there are—

The Court: You go right ahead.

By Mr. Brega:

Q. Now, Doctor, in consideration of these factors of achievement, is it your opinion that race has anything to do with the achievement level of students? A. I have answered that question, I think, several times, that I do not think so, not race per se, no.

The Court: I don't think the plaintiffs have maintained that, have they?

Mr. Brega: Well, every one of their schools that they have presented to you—

The Court: I hadn't understood that they maintained that there is anything constitutionally inferior about a person of a minority race. I have not heard anything like that.

Mr. Brega: We don't maintain that, either.

The Court: You are not suggesting that they are suggesting it?

Mr. Brega: No, except that they are suggesting if you take minority students and put them in a school that is [2112] predominantly Anglo, there achievement record is going to suddenly change.

The Court: You go ahead. As I say, don't mind me.

Mr. Brega: I won't. It is an academic exercise.

By Mr. Brega:

Q. While you were Superintendent did you have various grouping levels within a grade in your clases? A. There was no plan for grouping which was applied generally

throughout the school system. This was at the option of a school or a teacher. There was some grouping particularly in the elementary schools, in reading, I think you would customarily find within any given grade, and I am talking particularly where they had the so-called home room or self-contained classroom with one teacher in charge throughout the day, and if that teacher were teaching reading the chances are there might be two or three groups within that class.

Q. And in your opinion is that a sound educational system? A. Well, this is a means for the teachers to work effectively with groups of children where there are less individual differences in a particular group.

Mr. Brega: No further questions.

Redirect Examination by Mr. Ris:

[2113] Q. Dr. Oberholtzer, do you still have Exhibit 34 there? A. 34?

Q. Yes. A. Can you tell me what it is about?

Q. 1226A. A. I'm not sure. I have got a lot of papers here.

Q. Here it is. I believe this was referred to you by Mr. Greiner, in particular, reference to page 2 and a date shown on page 2 being February 3, 1966, is that correct? A. Correct.

Q. What does that February 3, 1966, refer to? A. It says the effective date of the policy.

Q. All right, sir. Will you look on page 1 at the very top, second paragraph, entitled "References"? A. Yes.

Q. What is the first reference? A. Minutes of the Board of Education, May 6th, 1964.

Q. What does that mean? A. Well, it means that one

of the references in the development of this particular policy were the minutes of that meeting.

Q. Do you recall that the initial draft of this policy was prepared and enacted at the May 6, 1964 meeting? A. Well, that was my recollection, and I was wondering when this matter was presented to me. I couldn't recall a [2114] deferral for two years, and I thought all of those proposals were acted upon that night.

Q. Would you like to take a look at the minutes of that meeting?

The Court: I think this arose, if I may make a suggestion—

Mr. Ris: Yes, sir.

The Court: —in connection with the testimony that the Stedman meeting was in 1966 to formulate a policy to relieve overcrowding. He said, "why did you wait two years after the announcement of Policy 1226A was put in effect?"

Mr. Ris: The original one was in effect in '64 and the original enactment was in '64. That's all I am trying to establish. Counsel left the impression it was in '66, which was impeaching—

The Court: You mean started busing them out of Stedman?

Mr. Ris: Which was impeaching testimony with respect to his testimony on cross.

If you will agree the original enactment was in '64, that takes care of it.

Mr. Greiner: No, I will not. I have the '64 minutes here. It is not in them.

Pardon us, Your Honor. I am talking about multiple pupil transfer.

[2115] Mr. Ris: You are talking about an amendment, then, to the basic document?

Mr. Greiner: That was not passed until 1966, and that is what the busing out to relieve overcrowding was all about.

The Court: I think you brought out yesterday, Mr. Ris—

Mr. Ris: We may be talking about two different things.

The Court: I think that's probably right.

Mr. Ris: Rather than belabor it, we will compare a little later and we may call Dr. Oberholtzer back.

Mr. Greiner: If you are right, I will so stipulate.

Mr. Ris: All right. We may be talking about two different portions.

The Court: Here was the testimony yesterday, that Dr. Henderman went to Smith, Dr. Oberholtzer went to Stedman. There were citizens interested in the overcrowding problems at both schools. This was in January 1966. Then I suggested to you that you pursue the Stedman meeting. Do you remember that?

Mr. Ris: Yes, sir.

The Court: And you did it.

Mr. Ris: Yes.

The Court: He said they solved the problem at [2116] Stedman differently than they had at Smith, remember?

Mr. Ris: Yes.

The Court: They decided to use busing to relieve overcrowding at Stedman?

Mr. Ris: Right.

The Court: But not Smith.

Mr. Ris: That is right. What I was getting at

here was some testimony this morning concerning the May '64 meeting at which various policies were adopted, and I thought Mr. Greiner was attempting to impeach him that some of those policies were not adopted at that time. If he was getting off on another point, I was drawing a different point of inference. That is our point of difference.

The Court: I think the dispute is whether the School Board authorized busing to relieve overcrowding at Stedman in 1964.

Mr. Greiner: Or anywhere else. Our position is that they didn't, they didn't do that until this February '66 meeting.

Mr. Ris: I misunderstood. So I will go on to my next point.

The Court: All right. I think I'm about ready to take the afternoon recess anyway; then perhaps you can solve the problem.

Mr. Ris: I will take care of it during the recess.

[2117] The Court: All right. You may step down.

(Whereupon, the trial was recessed at 3:25 p.m.)

(Following the recess, the trial resumed at 3:41 p.m.)

Mr. Ris: If the Court please, with respect to Exhibit 34, we have resolved the matter. Apparently the items on Page 1, A, B and C, were a result of the 1964 action, and Paragraph D—Part D, Page 2, 1966 action of the board. So we're in agreement on that.

By Mr. Ris:

Q. Dr. Oberholtzer, prior to 1963 when new Manual was being planned, with all of the various aspects, site size and

so forth—at that time was there any projection of any substantial increase in the general population in the Manual area? A. There was not at that time.

Q. Now, with respect to the increase at East, that transpired and you were asked specifically on that, I believe, with respect to the 1953 period. Were there projections at that time with respect to potential population increase in the east with respect to specific school sites for secondary schools out there? A. Yes, we had anticipated some increase generally in that direction some years before that, as a matter of fact.

Q. Had the district acquired a site further east for [2118] a potential high school? A. We had acquired a site at the eastern edge of the city, I believe, or pretty well toward it at that time, at 6th and Monroe, somewhere.

The Court: Monaco.

A. Monaco. I'm sorry. Yes. Monaco.

Q. What year was that site acquired? A. 1948.

Q. What happened to that site? A. That site was sold but we did acquire another site which became the George Washington High School which was further south and we were obliged to make this change as we did in some other sites because of the rapidly changing situation and annexations and development of the city in the eastern part.

Q. Increasing population in that area? A. Yes.

Q. At the time of the George Washington site—at the time it was purchased, where was it with respect to the city limits? A. As a matter of fact, the site itself was outside the city limits and we were obliged to get action of the City Council to bring it in the city limits. It was contiguous to the city limits.

Q. What year was that site acquired? [2119] A. Let's

see, that must have been about—it was in the '50s, around 1956, I would guess.

Q. And then George Washington was built on that site in 1960, as I understand? A. The school was opened in 1960 on that site.

The Court: Well, you took that site in preference to 6th and Monaco because of the movement to the south and to the southeast? Is that it?

The Witness: It was primarily because that particular site was too far north, Judge, in relation to the developing population. You see, the eastern boundaries of the city was Aurora and the population moved south and the annexations were all southeast. So this was an attempt to meet the crowded condition at East High School and also to accommodate the rapidly developing annexed areas to the southeast that were expected.

Q. To the immediate east of 6th and Monaco, you have, of course, Lowry Air Force Base and beyond that you had Aurora? A. Well, there were boundaries—fixed boundaries to the east. The expansion was to the southeast.

Q. In view of the city limits of Aurora, that was your ultimate boundary in that direction at that time? A. Right.

Q. Dr. Oberholtzer, in the '50s, particularly when [2120] you were planning Barrett in 1958, did you have any general knowledge or any general information available to you from which you could reasonably predict or project what historically may now show happened to that northeast area and Park Hill as to the numbers of Negroes that moved into that area, the speed with which they moved in and the geographical area that resulted because of it? A.

Well, let me answer that in two parts: In the first place, again, we had no racial statistics or data. We were aware, as I think I have previously testified, of some movement of population. But we certainly were not aware of the rapidity or the extent to which this took place, as you look back on it now. We were not aware of that.

Mr. Ris: I have no further questions.

* * * * *

[2183] * * *

Mr. Greiner: Your Honor, the plaintiffs' only rebuttal witness will be Dr. Dan Dodson, whom we now call.

Dan Dodson, a witness called by and on behalf of plaintiffs, having been first duly sworn, was examined and testified as follows:

The Court: Give us your name and address, please.

The Witness: Dan Dodson, 4 Washington Square Village, New York City.

Mr. Greiner: Your Honor will recall that Dr. Dodson was qualified at the summer hearing, and we are offering Dr. Dodson as an expert witness. And I wish to inquire of counsel as to whether they question the foundation or the adequacy of it.

Mr. Ris: No. He was so qualified in July, and that qualification still stands. We would ask that his testimony be limited to rebuttal and not a repetion of what went on in—

Mr. Greiner: We will try not to be repetitious.

By Mr. Greiner:

Q. Dr. Dodson, with respect to the evidence which has been adduced by the plaintiffs in this case, with respect to

certain characteristics of the schools which the plaintiffs [2184] have designated as predominantly minority schools in this School District, we have evidence, for example, that these schools experience a higher rate of teacher turnover than the normal schools of the District; that these schools have more brand new teachers than the average in the District; that these schools have more probationary teachers than the average school in the District; that these schools have fewer teachers with ten or more years' experience, and that the median years' experience of the teachers in these schools is lower than that of the average for the School District.

We have also had in evidence that there are in these minority schools concentrations of compensatory educational programs; that these are in fact the schools which received such programs; especially those federally funded under the Elementary and Secondary Schools Act. We also have evidence that at the secondary level these schools contain greater numbers of sections of the so-called modified sections of courses which were the courses designed for slow learners. There has also been some evidence that in comparison with a group of Anglo schools, that these differences which I have just described to you between the so-called minority schools and the so-called predominantly Anglo schools—that these differences are even greater when we compare the minority and the Anglo schools than when we compare the minority schools with the averages for the District.

[2185] Now, I'd like you to comment, Doctor, if you can —Plus, we have had the fact that the achievement in the minority schools has for a number of years been significantly lower than the achievement for example in these predominantly Anglo schools. There is also evidence that

the minority schools have by and large older physical plants, smaller site sizes.

Now, Doctor, taking these factors which I have related to you into consideration, can you relate to the Court how if at all the combination of these factors affects the minority child's ability to learn school?

Mr. Brega: I object to the question. It's improper rebuttal. He has predicated it on a hypothesis basis on facts entered at the plaintiffs' case and not anything introduced by the defendants or the intervenors. The hypothetical question is one which is based upon certain facts which have not been disclosed by the evidence and which has been contradicted by the evidence. We don't believe it's—

Mr. Ric: The defendants also object for the same reasons stated by counsel and also for the reason that there is wholly an insufficient foundation. Merely conclusions as to broad summaries of what counsel says the evidence is.

Mr. Greiner: Your Honor, the point of the question is that we heard the day before yesterday for most of the afternoon, and part of the morning yesterday, that these [2186] minority students come to the school clothed and cloaked with so many disabilities, that the implication is that the school is helpless to educate them. We would like to point out through the witness that these disabilities can in fact be overcome and that it is the school itself, the minority school which ultimately causes the minority student this unequal educational opportunity.

The Court: Well, I think we ought to ascertain first whether he has an opinion on the subject. I assume he has.

Mr. Greiner: I believe he does, Your Honor.

Mr. Ris: We will stipulate that he has.

The Court: Ordinarily, though, we do ask an expert whether he feels he can give an opinion.

Is that right?

The Witness: Yes, I would have an opinion.

The Court: Do you have an opinion as to causation in terms of ability of the response of the child to this, whether it stems from his having grown up in a home that is economically and culturally deprived, or whether the substantial factor is the school itself? I think that's really our issue. I mean, as a cause factor?

The Witness: Yes, I would have an opinion on that.

The Court: I don't see why he can't discuss that. It's been the big issue in the case. The evidence on the [2187] part of the plaintiff has been presented, which prima facie tended to establish that the schools themselves were deficient. The defendant has offered evidence showing that they have put forth special effort, that the facilities are actually superior at a school like Manual; that the extent of their effort is greater at these institutions because of the fact that the subjects are handicapped in many ways. Dr. Oberholtzer said that the real problem is that they haven't had the start that the child has who comes from a home where the parents are pretty well educated and he sees the only remedy as being a Head Start program that starts at the—that commences at age three, to bring them into line with these other students by the time that they commence the first grade. So I think that this is an important issue in

the case. So we will let him comment on it. And the objections will be overruled for the reasons stated.

By Mr. Greiner:

Q. Do you have the question in mind now, Doctor? A. I think so. I hardly know where to begin with it. But I think that the point of takeoff would be that the school itself is reflective of the broader society or the dominant power arrangement of the community, and that when it comes to dealing with the children of minority, it has a problem of adjusting its programs that are designed for a majority to serve minority children for very definite reasons. Usually [2168] it is a teacher who is less experienced; usually it is a school that is older and so on. Usually it is a school by the time it becomes segregated that is looked upon by the whole community as being inferior. And when it is looked upon as being inferior this does make it indeed so, because you can't keep up the morale of the teachers nor the children, nor you can't keep up the expectations for performance and achievement in the schools. Teachers feel less privileged when they are sent there to teach and escape as quickly as they can. More than this, they come to look at these children as being less worthy and of whom less is expected. Consequently there has developed what's called the self-fulfilling prophesies; that because nothing is expected, no standards are held. And consequently the person comes to fulfill the prophesy that you had of him in the beginning. Some evidence of this is that the differences are not this great between children when they first come to school between the majority and the minority, and that with each succeeding year these children of the minority tend to fall further behind. The

alternative that I would pose to the position that the trauma resides—or the limitation reside in the pre-school experience, is that all this combines to teach these children of the minority that they are powerless people and consequently as all people tend to do when they feel powerless, they resign in apathy and that the limitations to learning is not in [2189] their cognitive apparatus nor abilities nor in the lack of pre-school stimulation, but resides instead in the apathy that stems from a pervasive powerlessness and impotence in the community.

Q. Now, Doctor, I believe that you were in court yesterday when Dr. Oberholtzer was testifying regarding the summer school reading program at which minority students had participated. Do you recall that? A. Yes.

Q. Do you recall the fact that he said that the results of that program were that in some instances reading levels were advanced by between one, two and three grade levels? A. Yes.

Q. And you also recall that he testified that the children also had a rate of forgetting just as they had a rate of learning so that they didn't retain that? A. Yes.

Q. Now, could you comment on the fact that these children were able to improve their reading ability? What does that demonstrate to you? A. I think what Dr. Oberholtzer suggests is that these kids are not dumb; that they are not incapable of learning; that they can learn these skills. But they learn for keeps what is required of them to cope with the life of which they are a part, and reading skills in a school that teaches them [2190] that they are powerless is not one of those skills that is needed to cope with the world of which they are a part.

Q. Well, is there an effect then on minority—on a minority child's motivation brought about in these minority

schools? A. This is the problem of motivation. I worked with the—I studied the unrest in the White Plains High School recently in New York—a suburb of New York. And I was impressed there that when these children got a dose of this black militant etiology, when there was something they could invest their lives in that they thought had significance for them, that their teachers reported they were carrying around "Senones Wretched of the Earth" (first word phonetically spelled) which is the bible of the new Left, and many of them were carrying around the Kerner Commission Report. A lot of these non-readers I'm talking about now were carrying around reports of this sort, that they read when there was something that motivated them to read. And it was not a limitation of innate skill at learning or ability. The school teaches them fundamentally to be dumb.

Q. Now, Dr. Oberholtzer testified as to a number of factors which in his opinion affected the achievement of these minority children. And I might relate some of them to you. One was the question of native intelligence. Secondly was the home environment, the educational level of the parent, [2191] the presence of reading materials in the home, the attitude demonstrated in the home towards the school. I wondered if you could relate in your opinion how these factors which Dr. Oberholtzer felt had to be corrected at a preschool age; how these factors relate to these causative factors that you have described that are present in the minority school. A. The question I would have on this is whether poor folks' and black folks' children get stimulation or don't get stimulation and this kind of thing. And I think that in our attempt to discover why children don't learn, we tend to look for the limitations in the potential of children rather than to look for the limitations of the establish-

ment itself. And that consequently we find what we tend to look for. The minority has always looked to the school to be an instrument of social change which would produce for its children an entree into the broad life of the community. Robert Lind's study of "Middletown" a midwest urban community—

> Mr. Brega: Just a moment. I am going to object to any editorializing on someone else's study.
>
> The Court: Overruled. This is not offered, I am sure, to establish the truth of the matter that he is citing. He is simply citing it to illustrate his conclusions, as I understand it. So, I will permit him to do it.

A. Lind quoted the taxi driver who said he realized he would never make it, but "By George, his kids would." He [2192] would pay the price and education would take them out of the status of life which they had and make them into people who participated in the main stream. This has been traditional in American life; that the minority looks at the school as an instrument that would provide the gateway through which its youth would move into the main stream. But, the black population has never been encouraged to believe that it could make the main stream up to very recent times; so very recent that it's very hard for them. They now look to the school to be the instrument of change. You can't tell me that the black parent doesn't have aspirations for his child. Unless and until, as so often happens, he too finds that the school is not going to provide this kind of service, then he either does one of two things; he becomes extremely militant and becomes a pressure to the reform of the school, or else, he just resigns in apathy and says "What's the use of trying to do anything?"

I think it's this kind of thing that we're dealing with that revolves around the expectations of the school that I think is involved with parent attitudes and with whether or not there is a motivation from the home and so forth for black children.

Q. Now, Doctor, with respect to these problems of educating a minority child in a minority school, first of all with regard to the question of efficacy of compensatory [2193] education programs that are undertaken in these schools, are you familiar with the question of whether or not these compensatory programs have proven to be effective in raising the achievement levels of minority students in these minority schools? A. There is a considerable body of evidence on this—data on this, I should say.

Q. Can you relate some of this evidence to us, please?

Mr. Ris: May we have some background from the doctor as to what his experience has been on this; whether he has done any studies or just what his background is?

The Court: I think he ought to describe the basis of his knowledge and his ability to make or offer the opinion.

Q. Can you describe for us, Doctor, your acquaintanceship with this problem? A. Well, I have been director for the Center for Human Relations and Community Studies of New York University for the past ten years, up to a year ago, and I have been pretty well related to all of this material. Now, I have not evaluated compensatory education programs, except I have been involved with the literature and helped in the literature of the researches that have accrued on it.

Q. So you personally have conducted no studies, is that right? [2194] A. To evaluate compensatory programs, that's right.

Q. But you are familiar with the literature in this field? A. Relatively so, yes.

Q. And you work with it and apply it, is that correct? A. Yes.

Q. Can you describe or identify for us some of the literature which you have reference to?

Mr. Brega: Well, Your Honor, I'm going to enter an objection to this testimony. There isn't any evidence that shows that there's a proper foundation for him to testify as to the literature on that basis.

The Court: All he's going to do now is describe the literature in the field. I can't see anything wrong with that. Now, the next question may be objectionable when he tried to summarize it. So, we will look forward to hearing from you then.

Mr. Brega: I guess I'll be back.

A. There are four or five studies that I would consider crucial in this. One was the High Horizons program of New York in which they spent first around a hundred dollars per child extra, trying to raise the aspiration levels of children in junior high by taking them to concerts, by trying to enrich a background, raise their horizons. Two hundred and fifty dollars extra per child at the high school level. They [2195] thought they had found considerable results in the first—

Mr. Ris: Just a moment. I am going to object to his testimony as to the results.

The Court: Let's just describe the literature first.

Q. Now, was there a report on that High Horizons program? A. It is included in "Racial Isolation in the Public Schools" produced by the United States Commission on Civil Rights.

Q. And what is another study that you have familiarity with? A. If I could just say—this data we were encouraging to them—

Mr. Ris: I am going to object and move that that part be stricken.

Q. Well, we will get to that. Let's just describe the project in general. A. When they tried to put it in operation on any large scale with any large state with $80 per child compensation they found no significant—

Mr. Ris: Just a moment. Could the witness just tell what his studies have been?

The Court: Just tell us what studies.

The Witness: This is the first. The second is [2196] called The All Day Neighborhood Schools of New York City, and here there was the attempt to put people into extra counseling and work with the children, kept them after school and so on. And this ran for several years in the New York City community.

Q. Was there a program in Rochester or Syracuse, New York, that you have familiarity with? A. A program in Rochester in which they tried to use reduced class size and they very carefully had a comparison between the class size of twenty of the desegregated programs that they compared them with. But, that was the Rochester study.

The Court: Well, these programs—these presumptions or suspicions wouldn't apply only to minority children, would they? I mean they would apply to anybody who is economically handicapped, I expect, white or black? It doesn't make any difference?

The Witness: It so happened all these were minority situations.

The Court: Well, there is no basis for distinction here, is there?

The Witness: No.

The Court: In other words, this handicap that exists in certain areas is perhaps common to whites as well as to blacks, isn't it?

The Witness: Except, Your Honor, that color stands [2197] as a badge of identity that doesn't allow the black child to escape into the main stream. If as when he does something for himself and—If he can be absorbed into the main stream, there is no problem. The black child doesn't have this prerogative.

The Court: I mean the problem of getting over this initial hump in terms of being able to speak acceptably and in terms of being able to read and do certain other fundamentals on a competitive basis—that doesn't exist as much for the—

The Witness: I would say these are not racial problems altogether at that level.

The Court: Right.

Q. Doctor, was there also a program in St. Louis, Missouri? A. Yes, the Banniker District program led by Sam Shepherd gained national attention in an attempt to take compensatory education and raise the aspiration levels, to raise the achievement scores.

Q. Now, you have in front of you what's been marked for identification as Plaintiffs' Exhibit 27, entitled "Racial Isolation in the Public Schools." You have mentioned the St. Louis program. Are the results of that program reported in Exhibit 27? A. Yes.

[2198] Q. And what about the New York program which you described? A. Yes.

Q. And was there also a program in Berkeley, California, on compensatory education? A. Yes.

Q. And are the results of that program described in Exhibit 27? A. That's right.

Q. Now, was there also a program in Rochester, New York? Have you described that for us? A. Yes, the Rochester program I have made reference to already, and it—I believe it is not described in here. It is described in a study done by the Board of Regents of the University of the State of New York called "Racial and Social Class Isolation in the Schools."

Q. Now, Doctor, we have had evidence in this case—

The Court: I'd like to find out first the extent of your personal exposure to any of these studies. How you come to know them.

A. I have had an intimate relationship with the High Horizons, the All Day Neighborhood Schools, and a considerably contact with Shepherd in the Banniker District.

Q. And you are familiar with how those programs were established, how they functioned? [2199] A. Yes.

Q. And how they were evaluated? A. Yes.

Q. And you are also then familiar, are you not, with the results of those evaluations? A. That's right.

Q. Now, Doctor, we have had evidence in this case that various types of compensatory education programs have

been conducted in the minority schools of Denver; that there have been efforts, for example, to reduce the pupil-teacher ratio, to reduce the class size, to provide remedial reading and arithmetic teaching to the minority child. And yet, we have also had evidence, Doctor, that these compensatory efforts have not been able to bring these children up to grade level with respect to achievement. And I would ask you if this is an experience unique to Denver?

Mr. Ris: If the Court please, I am going to object to that. There is an insufficient foundation again.

The Court: Overruled.

A. There is no evidence in any of this that the compensatory education has ever made up for these deficits. The evidence from the data seems to be that you cannot by compensation overcome these limitations.

Q. Now, the— A. Let me say—so much that the Board of Regents after [2200] having this study to which I have referred—

Q. That's the Rochester study? A. That's the one which included the Rochester material. But, it was a review of the whole material. It arrived at the conclusion that—

Mr. Brega: Just a moment. Now, I am going to object to conclusions arrived at by the Board.

The Court: Overruled.

A. —that the compensatory education is—that they are not against compensatory education but that compensatory education by itself has not produced results that the aims of the programs have set out to accomplish.

Q. And this is a report published by whom? A. It is a study done by the State Department of Education, its Divi-

sion of Evaluation, of New York State, looking at national data and drawing up recommendations which the Board of Regents of the State of New York adopted as their own.

Q. Now, you're not of the opinion that has no value, this compensatory effort?

The Witness: They would say that the compensatory education has not produced the kinds of results that the aims set out to accomplish.

The Court: Well, they are nevertheless using it wisely. As a matter of fact, Harvard started with a Head [2201] Start program for law students a few years ago, and it's been very successful. Now, most law schools in the country run a summer program to bring these college graduates into a place where they can compete with entering law students, isn't that right? And the same is true with Hispano. They're doing this in Denver. You don't think this kind of program has any value?

The Witness: Ordinarily they have done some other things, haven't they, like taking them out of an environment, out of a melieu into some—

The Court: Well, at that level I suppose they are living on the university campus.

The Witness: Exactly.

The Court: But I think Harvard brought these students out of southern Negro schools.

The Witness: But they took them out of a melieu and out of a segregated pattern into something that they thought would offer wider—a wider world for them.

The Court: You think then that under those conditions that compensatory education can have a real value?

The Witness: Their position was that as between compensatory education and desegregation, they had many evidences that desegregated education did achieve results where they had careful measurements as between students who were left behind, and they produced compensatory educations, [2202] and students who were desegregated without the compensatory education. And they said we need the compensatory education but that this by itself is not enough; that it has to be paralleled with a rearrangement of the encounters of children in the school system.

Q. In other words, I take it, Doctor, that compensatory education would still have some value but that it would be most valuable in an integrated setting? Is that the conclusion?

Mr. Ris: I'm going to move to strike that. I object to the question. It's a leading question. Anything that he wants to ask the doctor—

The Court: Well, it's a summing up. He has already said that.

Do you have anything else to say on that?

The Witness: The thing that compensatory education does not deal with is the inherent inequality that stems from segregation.

The Court: From isolation?

The Witness: From isolation.

The Court: Is this a factor—is this a result of the fact that young people seem to go in groups and they think in groups and whatever the normal group is, why, they seem to go—

The Witness: The Coleman report—

[2203] Mr. Brega: Just a minute. I hate to do this but I have to object. He's editorializing on other reports and things like that that aren't in evidence.

The Court: Look, this is a sociological issue to a degree and I don't see how you can close your eyes to all of the literature and study that has been done on the subject. I mean, we can't bring it all into court and read it. If I have a witness who wants to put an interpretation—

Mr. Brega: I appreciate that.

The Court: —on it, then— If you have got an interpretation different than this, why, you're free, of course, to put it in. But I must overrule your objection because I don't see how I can try to find some answers here if you close the doors to some of these sources. So I'm going to permit him to answer.

The Witness: The Coleman report, done for the Department of Health, Education and Welfare, a national study, concluded as one part of it that the greatest impetus to learning was to be in groups of wide ranges of ability as against the narrowed range of ability that isolation produces. That's where they had the contacts with youngsters who were further ahead of them or whatever, that they did better than in the isolation kind of thing. This, of course, went for whites as well as blacks, but as [2204] a general educational principle. The other problem of compensatory education tends to leave the impression that the limitations are in the children and consequently they must be compensated for and not in these things that I have described that are the limitations of the school system itself.

So that by the time you have set up compensatory education and set children off apart to be compensated, you have already created the psychological climate at that point and it makes it impossible to compensate for even the psychological damage of being set apart. And it keeps the attention focused on the limitation of the person which further traumatizes him.

The Court: I might add, in commenting on this evidence, I don't know that it's all relevant to a decision in this case, because some of it is material that would be properly submitted to the legislature. It may not hit the constitutional law target that we are shooting for here, you know. So I'm not here ruling, and I want the record to be clear on it, that this is all necessarily relevant to the decision that we will ultimately have to make.

Mr. Greiner: Yes, Your Honor. What we're simply trying to do, I think, is to fill out the picture of the inequality that exists in these minority schools.

The Court: I understand.

[2205] *By Mr. Greiner:*

Q. The evidence from the defendants, Doctor, has also discussed the factor of pupil mobility as having an effect upon the achievements of children. First of all, with respect to mobility, is that generally expressed as a percentage; turnover? A. The most common reference to it would be, what percent of people would you need to enroll during a year to keep your register to the level at which you started at the beginning of the year.

Q. Now, for example, a school that has—that had a turnover rate of even as high as 100 percent—does that mean

that the entire school population has turned over? A. Not necessarily. I had a doctoral candidate who was principal of a school where the turnover was one hundred and some percent, something over a hundred. But when he analyzed it he found that 80 percent were there the whole year and the rest was just a revolving door of 20 percent who did the turnover, that added to the 100-percent-turnover figure.

Q. Now, we have also had evidence, Doctor, that schools —particularly schools in Northeast Denver, have undergone transitions from once being predominantly Anglo schools to the point where they are now predominantly minority schools. And I wondered if you had had occasion to study any of the after effects of such a transition on the achievement [2206] in those schools.

Mr. Ris: Excuse me. May I ask—are you referring to Denver? Or generally?

Mr. Greiner: In general. In particular, I'm referring to a study that was undertaken in Newark.

A. Traditionally the standards have tended to—that is, the norms for reading or other achievement indicia of achievement, have fallen when these changes have taken place, particularly if it is a rapid movement, because this is a mass movement of people rather than a slow, gradual long-range change. And I'm working now in Newark, New Jersey, and the pattern seems to be there that when the community starts changing the norms of reading started going down and went down until the school had changed its composition. Then it leveled off for a bit and then it plummeted again and it is at this point, it seems to me as I examine that data and look at it, that at this point the school lost any legitimacy in the community, the re-

jection by the whites of the blacks, leaving it segregated, and so on, created a loss of any confidence that the school was their school or that it was a legitimate institution in their community. And it's about at the bottom of that drop that Newark burned and it seems to me the frustration that comes from this sense of segregation and isolation, creating the despair that has attended, has come in the wake of that [2207] thing in the Negro community, and has created schools that are really custodial institutions. They are not really—when a school loses its legitimacy, when it is not—when the authority is not by consent of the governed in the school, it becomes a custodial institution. At that point its growth and development tends to stop because no custodial institution has produced growth and development of the people.

Q. Now, the effects of the Head Start program have also been discussed and evidence presented, and I wondered if you were familiar with any studies regarding the effects of this Head Start program. A. The New York study to which I have referred already concludes as the result of its evidence that Head Start has produced no discernible achievement.

Q. Is there generally any sort of a followup program for Head Start children? A. You mean—

Q. Was there? A. They move from Head Start usually into public schools.

Q. Now, we have also heard some evidence, Doctor, that in schools that are undergoing transition, that, for example, schools which may be 50 or 60 percent minority, those schools would then begin receiving these compensatory [2208] education programs. I wonder, from your experience, if you can tell us how the Anglo community views or what holding effect upon the white majority these compensatory education programs of the schools have.

Mr. Ris: If the Court please, I don't think that the facts stated by counsel are in evidence in this case. I object to it for that reason.

The Court: I don't know what he hoped to get from the witness. I suppose—Mr. Brega asked a witness the effect of the majority community on compulsory busing; whether that has an effect on it. But I take it that this is in that area, is it not?

Mr. Greiner: It's the question, Your Honor, of how the whites who remain or who are left behind in the school in transition—how they view that school and the effects that it has on their decision of whether or not to depart from that school.

The Court: Well, we have had some evidence to the effect that they leave pretty fast, once it becomes committed. I don't know that this has any real value. I think it's pretty obvious what happens.

Have you got another question?

Mr. Greiner: We have no further questions, Your Honor.

Mr. Ris: If the Court please, could we have about [2209] fifteen minutes recess at this time to confer with Dr. Oberholtzer, primarily, before cross-examination of Dr. Dodson?

The Court: Yes, indeed.

Is there a point where the concentration of minorities accelerates? Is there a percentage point where it reaches a particular level and then the process of concentration accelerates? I mean, have you conducted any studies that reveal—

The Witness: There is a concept called "tipping point," and I have written on that a little from the observations and work that I have done. And we

have always been curious about what is a tipping point if one indeed exists. There are so many other factors that have to be taken into account that it makes it very difficult and dangerous to take a figure out of a hat and say this constitutes a tipping point. Many of the high schools in New York, when they reached about 25 percent, you begin to get a polarization of black and white. When you get about 35 percent you begin to get the withdrawal of the whites. But this does not take into account so frequently the kind of quality of program that makes a climate conducive to people staying there. In the New Rochelle community, I did study that and—

The Court: Now, at what point do you think a [2210] stabilization must occur in order to prevent changing the entire character of the school?

The Witness: This again depends much more on what the size of the black community is and what its proximity is to the particular school that is in question. In other words, in communities that have completely desegregated, so that all schools have some blacks and no schools are all black, there seems to be—

The Court: Where are these?

The Witness: —there seems to be no problem with this.

The Court: Where are these communities?

The Witness: New Rochelle, White Plains, Coatesville, Pennsylvania. Well, these come from my mind offhand. And where they have just completely desegregated the school system, this has taken the pressure off any schools reaching a tipping point and it has provided a stability of those communities that

has been outstanding. New Rochelle, particularly—which particularly has the longest experience, I think, stands out in that regard. And they have a school—the Mayflower School that was 44 percent black when I studied it before the Kaufman decision on New Rochelle, and the year before last, when I studied it again, it had still held 44 percent black over eight years' time. But they had desegregated the [2211] whole school system in the interim. But it had remained a desegregated school with that high proportional—the elementary school at that high proportion of black over that period of time. But, if a school is at the edge of the ghetto and there is a greater fear and anxiety about what's going to happen, and so on, then the tipping point is much lower, and you begin to get mass withdrawal at a much lower proportion.

The Court: All right. We will be in recess. You let us know when you're ready.

(Whereupon, the trial recessed at 10:30 a.m. and resumed at 10:52 a.m.)

The Court: Before you start, I have a question I wanted to ask. Do your studies reveal that the segregation of Hispanos or the Spanish-speaking or Spanish-surnamed presents identically the same problem as the Negroes?

The Witness: Mine has been with Puerto Ricans. But I would say identically the same problems.

The Court: In other words, that these produce the same isolation that you speak of and the same restrictive influences?

The Witness: The same sense of impotence, of apathy, withdrawal. Yes.

The Court: And in this community I think there is some evidence to indicate that the Spanish-surnamed have [2212] populated the areas that the Negroes have abandoned. And as Negroes have moved eastward, why, I think there has been a tendency on the part of—I expect, first, the Irish lived there.

The Witness: Probably.

The Court: You know, of course, that they put the Irish in the same category as the Anglos; an astonishing conclusion. They have never before in history been called Anglos, prior to this trial.

The Witness: Each group has come through the same process, seems to me, of being washed, in a sense, of being alienated—the bright ones, at least—and made over ultimately and absorbed into the main stream. The difference with the black, even more than the Hispano, is that the color stands as a badge of identity when they're ready to join the establishment. And, consequently, it keeps them set off in a way that is very difficult for them to gain acceptance and this makes race a factor in it that was not there for the others. When the others learned the language, the manners and the dress, they could escape identity. The blacks couldn't do that.

The Court: Well, in that respect, then, the Spanish-surnamed people are not subject to the same problems?

The Witness: Not the same. There is a difference. There is much more escaping or passing, as the blacks would [2213] call it, or being transmuted from identity with the ghetto Spanish-background people into

mainstream with the Spanish than there would with the black in our area, by far.

The Court: Go ahead.

Cross-Examination by Mr. Ris:

Q. Dr. Dodson, when you were in Denver you testified, and you testified last July—you indicated you made no studies at all of the Denver situation. A. That's right.

Q. Have you made any since then? A. No.

Q. Have you ever been a member of a school board? A. No, sir.

Q. Have you ever been a superintendent of schools? A. No, sir.

Q. Have you been on the administrative staff of a school district? A. No, sir.

Q. You stated that you have studied or made some studies of the Puerto Ricans. Would that have been in the Harlem area of New York? A. Principally, yes.

Q. Where else? A. There was some Puerto Rican element in the [2214] Mt. Vernon community, a suburb of New York City.

Q. It was all in the New York City metropolitan area? A. That's right.

Q. Were most of those people individuals who had come either originally or were just one generation removed from Puerto Rico? A. That's right.

Q. And speaking a Spanish language? A. That's right. And a few Cubans.

Q. Have you made any studies of the so-called Hispano group in the Denver area? A. No sir.

Q. Or anywhere in the West? A. No, sir.

Q. So you really have no knowledge of the Hispano

group so you could make comparisons with the Puerto Ricans, is that correct? A. No, sir.

Q. Is that correct? A. That's correct. I have not.

Q. I think we understood each other but sometimes it looks peculiar on the record. A. Yes.

Q. At the very beginning of your questioning by Mr. Greiner, he mentioned various facts in evidence. For [2215] example, the age of a school building. Does that have anything to do with equality of educational opportunity in your opinion? A. I think it does. If the tendency is that the majority of the black population tends to be relegated to these outworn, overused, old buildings, it stands as a symbol of their impotence in the community, that they don't have facilities comparable to the others. And it lends to the aura produced in the community that this is a place of less choice, and you go there only because you're not able to require that you be allowed to go someplace else.

Q. It's a psychological thing then? A. That's right.

Q. But insofar as the age of a building itself, if it has been properly maintained and modernized and—it would be just as good physically as a new building, would it not? A. I have had a doctoral thesis on this problem and it tends to say that the new building, at least in a short run, didn't make that much difference; that there was not a great amount of difference.

Q. A doctoral thesis by one of your students? A. That's right. But it is the psychological effect of it that is involved.

Q. That is tied in directly, the fact that in many [2216] instances families of a lower socioeconomic status move into the older areas of the city, is that not true? A. That's right.

Q. So that's a matter of normal population movement rather than anything the school district has done at that point? A. I would say it's the typical pattern.

Q. Now, with respect to the experience of a teacher, are younger teachers today, as compared to five, ten years ago, better trained in human relations? Do they have any different social outlooks with respect to racial and ethnic relations, do you think? A. We would hope that maybe they are better trained. But I would doubt it.

The Court: They probably have more spirit and drive and idealism at the outset, don't they? Doesn't that make up for something?

The Witness: You don't escape the problem. Hunter College recruited 100 young people, trained them specifically to work in the ghetto, helped them to develop all the understanding they could about this great challenge of working in the ghetto, and fifty of them resigned their appointments when they understood they were going to Central Harlem. You just can't escape the pervasive, do what you will, the pervasive feeling; the less privileged, when you're [2217] assigned to the ghetto community.

Q. Well, you're a professor of education, aren't you? A. Yes, sir.

Q. And you are educating people to be teachers? A. I am alleged to be, yes, sir.

Q. Isn't that what you're hired for? A. That's what I'm getting paid for.

Q. Well, isn't that one of the things you're attempting to do? A. Yes, sir.

Q. Train these teachers to accept this situation and work with it? A. Well, I hope I'm not training them to accept the situation. I hope I'm—

Q. I mean, to recognize the situation and to— A. To correct the situation, yes.

Q. To correct it? A. Yes. But I do not believe to train them to just accept and go to work in that situation—

Q. Well, to correct it. A. —does them service either way. My students are trained to try to understand these conditions and situations but I would hope that they would understand also the context I have tried to describe here; that this can't [2218] be a substitute for a creation of community schools that bring all the community together in a common encounter.

Q. Well, then, one of the problems is that people who come to you to be educated as teachers, come with fixed ideas, whether from whatever source? A. Yes, they come with—well, a normal range of attitudes, I would guess.

Q. And you think that they're leaving your school now with no different attitudes than as of ten years ago when teachers graduated? A. Well, I would hope so but I don't think, by and large, teacher education has made that much difference in ten years.

Q. What are you doing about it? A. Well, I'm attempting to train a different teacher, one who works also to change the structure through which people relate to each other. At the same time, that she has to begin with the kinds of conditions into which she is going to go.

Q. You're still trying? A. Beg pardon?

Q. You are still trying? A. Still trying.

Q. Then you havn't achieved your aim in that regard either, have you? [2219] A. I certainly have not. In all humility, I confess.

Q. Now, you have referred time and again to the powerlessness of minority pupils. Can you expand on what you mean by powerlessness in that context? A. Wherever there are social orders, there is a status arrangement for ordering of people. And the consensus on dominant values and so on makes some people then able to have their interest taken into account in the communal decision making and others do not have that capacity when decisions are made affecting their destiny. Consequently, there is a power arrangement in the community in which people who are relatively speaking powerful, and others who are, relatively speaking, powerless, and the issue that we are dealing with, all out of proportion, in my judgment is this of power relations and that the people who are powerless tend to resign in apathy in the face of pervasiveness, powerlessness, and that this is the fundamental phenomenum we're dealing with.

Q. Well, you have the same breakdown as in decision making in all—in any group, do you not? A. You have sub-subgroups in which there would be a power arrangement within the group.

Q. Right. A. But when the groups come up against each other, then there are the powerful and powerless.

[2220] Q. You are taking the two different groups again here? But in each group you have the very same thing, down to the small—

The Witness: There is an element of power.

Q. —you have the so-called pecking order in every group, don't you? A. There tends to be some.

Q. Now, with regard to programs in the Denver Public

School system, in the so-called predominantly minority schools, there has been substantial evidence here concerning such programs. You didn't hear that evidence and I don't presume you have read the transcript, have you? A. No.

Q. You have made no study of the programs so you don't know how the Denver programs particularly at Manual and Cole Junior High School compare to any of the programs in any of the cities you studied? A. No.

Q. So you're expressing no opinion as to the specific Denver programs? A. That's right.

Q. Now, with regard to the handicap a child coming from a family in a neighborhood and a lower socioeconomic status, you wouldn't deny that those children are handicapped as compared to me, would you, before they ever get into [2221] school? A. I would deny that the experience that they have brought with them, the experience through which they have come by the time they are of school age, has so impaired their sensory mechanisms that they do not have the capacity to acquire and organize, experience in ways comparable to what you or I might have done at a comparable stage of our lives. I would be planting corn in East Texas today if teachers had seen the low socioeconomic status kid and the limitations of him and his inability to learn because he didn't have all these things and had believed them.

Q. You aren't alone in the courtroom in that regard. But you will concede that they do come handicapped as to a child coming from a middle-class neighborhood, middle-class family, and with the opportunities that have been offered that child at three, four, or five years old, would you not? A. A scholar named Hune—J. McVey Hunt best described

my position on this. He said that the computer was devised with the mind—the way the mind works in view as a model, but once the computer was developed it then was something that could be compared with the mind and the way the mind works. He said the computer is a marvelous instrument but it works on only that which it is programmed to work on. And I would say that is a comparable kind of [2222] thing; that each of us out of the heritage from which we come have that computer between our ears, programmed to work on what was required for us to do in order to cope with our environment. If you doubt that, take a well sandpapered middle-class child and put him in a slum environment and see how he copes and who is the dumb one and who is the bright one, because the slum child learns to cope with the environment out of which he comes.

Now, because that program—because that computer between his ears is not designed to work on a lot of education doesn't mean he is not capable of learning; doesn't mean he's not capable of being re-programmed. It does mean some different context in dealing with it, but it doesn't mean by any means he is dumb or incapable of acquiring experience and so on.

Q. I don't feel—you still haven't answered my question. A. All right. I think that if the school is going to present these children with a standardized body of middle-class mythology, values and rituals and knowledge, and measure his work by the extent to which he comes up to—acquires this material, that he is at a disadvantage. Consequently, it is the limitation of the school in not beginning with the child where he is in expanding his world of environment from where he is, to take him through a [2223] process that brings him into growth and development. He is handi-

capped only because the school presents him with this kind of a standardized pattern that teaches him he is different and apart. And that's the sort of disadvantage rather than the limitation in the potential of the child.

Q. And so, by putting a man into a middle-class integrated school—isn't that exactly what you're doing? A. If the school is simply going to put him there and then say "There, you're dumb because we're not going to make any allowance for the fact you're here," it may create some problems. Although the data tends to say that, put into these situations, under these circumstances, they learn better than with compensatory education segregated.

Q. Well, you don't deny that compensatory education has a valid function in the educational system, do you, Doctor? A. If compensatory education is not used for continued segregation, which it often is, and— The British learned a long time ago that the way to control tensions in the colonies was to squirt a little more welfare on them and that would keep them sufficiently tranquilized in Egypt that they wouldn't dissent to the Promised Land. Consequently, their use of welfare as a tranquilizing function is well developed in this country and compensatory education [2224] in large measure is squirting welfare to keep down tension and to control, to make people acceptable to segregated patterns rather than to help produce a desegregated society.

Q. You don't know that that is done in Denvor, do you? A. I would be surprised if it were not.

Q. I say, you don't know, do you? A. No, I don't know.

Q. Getting back to this power relationship, do you think it's the function of the school to change this power relationship among citizens? A. The school—

Q. Is that one of the duties of the school system? A. The school system seems to be the handmaiden of the power arrangement, and consequently, its local program is geared to support the power arrangement that is. Consequently, its aim and objective is what is called socialization, that is, to socialize everybody into the values and the mythologies of the dominant society. If the black is really socialized into this, the Kerner Commission report says it's a racism society. It means that he is socialized into that which teaches him that he is a second-class citizen. He has to become socialized to the fact that he is a second-class citizen. The result is that the minority community presses for the school to [2225] be an instrument of social change rather than simply socialistic and this is the big conflict in education today.

Q. And there is a conflict in that, is there not? A. Yes, exactly. There is a big issue between the black community and the dominant society.

Q. The question as to whether the school is to educate it and go beyond it or be an instrument of social— A. Whether it is to be socialistic or whether it's going to be an instrument of change that is going to provide school experience where all children can be educated comfortably together.

Q. Now, Doctor, what happens to a first grader if he is sent to a middle-class integrated school and every night he goes back to his home, which is again in the ghetto area, and his ghetto community and ghetto neighborhood and so forth? Does the fact that he is still a resident of this community and of this family environment have any effect, in your opinion? A. This would depend on how his family interpreted it and it would depend on the—and I'm assuming you are assuming that he got a good experience at the

integrated school. I would say that would be a window that would open his vision to the vistas on the horizons and give him something to aspire toward, even though he came back to squalor or to a segregated, poor environment.

[2226] Q. But would that make the difference, you think, then, between the law students who are taken into completely new environments where they live and spend their leisure time? A. I think this would be part of it. That depends in part on what is the readiness of a person and sometimes depends on many other kinds of things. But I would not say that you would relegate a child, even in his schooling, to a second-class citizenship thing if you could help it. That would be an opportunity for him to see the world beyond.

The Court: You mentioned that you were talking about aims of education. Do you think that integration indeed does have a tendency to increase polarization of the races, consistent with what you have said here before?

The Witness: This depends on how it is handled, Judge. The mixing of bodies doesn't guarantee that people are going to love each other. Getting to know you may mean, "I don't like you as well as if I didn't know you so well," in spite of a beautiful little lyric. But that depends on the kind of climate that is produced when they are brought together in the encounter. It depends on the climate of the encounter.

Q. There is no guarantee then? A. There is no guarantee. But it is a certainty that, if they are not brought together, that these problems are [2227] not healed.

The Court: But, surely, this is an objective, I assume, from a sociological standpoint, to decrease polarization?

The Witness: It is hoped that, wherever these encounters are arranged through education, that there would be a cutting down of the polarization, the growing differences of goals and objectives. And in most desegregated situations, if it is handled at all well, this is what tends to happen.

The Court: So then the object of the educational process even the one you're talking about, is not to develop a militant black segment?

The Witness: No.

The Court: I think that that inference was left by one of your questions, Mr. Ris.

The Witness: On the contrary, I would say that the alternative to militancy, as to the—as in New York and other large cities, they are now pressing for the local school—to break up the school construction and make for local control. The alternative to it is a desegregation program that would arrange so that everybody has a stake in every school and that there wouldn't be this polarization, and I think it's bound to come until we do make these common schools mean that they serve everybody rather than these-schools-are-ours-and-those-schools-are-theirs kind of [2228] thing, that come through segregation.

The Court: So then, concentration—the result of it is going to be a complete polarization, a militancy that goes with it, I suppose?

The Witness: I think a parallel could be drawn—Well, yes. The increased concentration with the in-

creased difficulty of segregation, I think, undoubtedly makes for increased polarization.

Q. But it sometimes has some very adverse results, does it not? A. The polarization?

Q. Yes. A. Oh, yes.

Q. Washington, D.C., is an illustration of that, is it not? A. Not particularly, I would say. The whites didn't stay. They fled to the suburbs.

The Court: That's what he means.

Q. That's exactly what I mean.

The Court: He says, if you have integration, why, it will result in concentration because, he says, all of the whites will leave. They won't submit to it.

A. There are two points I would make on Washington, D.C. The first is, while I helped to draw up the plans for the desegregation of the schools of the district, if I were [2229] to do it again I would do it differently in light of the experience that we had.

But the second is that I would doubt seriously that the public schools of Washington, D.C., that the core city of Washington, D.C., is any more segregated than is the core city of Chicago, where they fought desegregation to the very bitter end; that it was a phenomenon of blacks taking over the entire city and suburbs being lily-white to where a black could not get in, so there was not the opportunity of the blacks spreading out and the Capitol district being so restricted as an inner-core city area. I doubt seriously that the schools' desegregation made a great contribution to that living arrangement that is the Capitol district now.

Q. Well, Dr. Dodson, is it true then that it depends a great deal on the local situation as to the population overall, the percentage of minorities to the overall population? A. I think the size of numbers is a factor. I would also say that policies of schools become a factor, too. I was in a case in Little Rock, Arkansas, in the federal court on desegregation and here the board's policy of ringing off their school and the next one to it as the neighborhood expanded as being black schools and so on, meant that the housing arrangement—the schools' policies created [2230] segregated patterns within the city itself and was the major contribution to the segregation within the residential patterns of living.

Q. Well, let's get back to my question. It makes a substantial difference as to the local variables, does it not, as to the size of the city itself? A. Each city is different, yes.

Q. You have constantly referred to New Rochelle and White Plains. Those are the cities where you have done most of your studies, is that correct? A. Where I have done two of my studies.

Q. Have you done any others? A. Yes.

Q. Where? A. Mt. Vernon; Orange, New Jersey; Englewood, New Jersey—

Q. And you found substantial—

Mr. Greiner: Could the witness be allowed to finish his response?

Mr. Ris: Yes.

The Witness: This is sufficient.

Q. And there were substantial variations in those communities with respect to the geographical size of the city?

A. Yes. All these happened to be suburban-type [2231] communities. New York City, where I have served as consultant at various times—I was consultant at the time of the boycott and the severe turbulence there—and that would be a different kind of problem to the suburban community.

Q. You really can't compare White Plains with Manhattan, can you? A. No, that's right.

Q. So that the various generalizations you have made here are just broad generalizations and not applicable specifically to any one city in every respect? A. They would be generalizations based on the impression of experience with whatever data I have to back them, yes.

Mr. Ris: That's all. Thank you, Dr. Dodson.

Cross-Examination by Mr. Brega:

Q. Doctor, in relation to Denver, have you had occasion to visit any of the Denver Public Schools? A. No, sir.

Q. Have you seen the older schools or the new schools? A. No, sir.

Q. Have you analyzed any of the maintenance programs on in these schools? A. No, sir.

[2232] Q. In other words, the opinion that you gave on the school buildings having effect was just a general overall opinion of yours? A. That's right.

Q. Have you had occasion to study in Denver the Hispano and Negro groups? A. No, sir.

Q. Have you studied the mobility of the Negro and Hispano groups anywhere? A. Yes.

Q. In regard to those studies, have you found that generally they tend to live in clusters? A. They tend to be segregated in urban communities, yes.

Q. In other words, they moved in with like race or ethnic

groups? A. There may be reasons for that but that is the fact, yes.

Q. Now, in looking at the situation in Denver, have you studied the mobility of the blacks or Hispanos in this city? A. No, sir.

Q. Have you given any study to the historical background and their origin in Denver? A. No, sir.

[2233] Q. In regard to Denver, have you— And when you discussed the schools that you mentioned that were black, were you referring to schools that were all black or all white? A. Predominantly so. What I would refer to here, that by the time the imbalance occurs in either direction, to the point where the community begins to say— where one part of the community begins to say, "These are our goals," and the others begin to say, "These are ours," why, then, you have lost the content of the community school and these have become schools that are then identified with whatever type group it is.

Q. I see. And that's where you reach this tipping point? You mean then it goes predominantly black? A. That's right.

Q. Do you have any explanation why Manual High School in 1969 in Denver was 60 percent Negro and in 1968 was 76 percent Negro? A. I don't.

Q. And it reversed in this case to the—

Mr. Greiner: Your Honor, I object to that because the question doesn't reflect what was happening to the Hispano enrollment in Manual. I think it is quite unfair and misleading.

The Court: Overruled.

[2234] A. I know nothing of the problems of any of your schools in Denver.

Q. And you don't know or do you know that Denver does not have an all-white or all-black school in its entire system? A. This I do not know.

Q. Now, you mentioned the Coleman report and Mr. Ris questioned you about the preschool factors of environment, home life, and you mentioned that you didn't think that was something that would be a permanent block, I presume. A. Yes.

Q. Are you familiar with the portion of the Coleman report which states that the school brings little influence to bear on a child's achievement; that that is independent of his background and general social context? Are you familiar with that part of the Coleman report? A. That's part of the findings of the study. But because there is a correlation doesn't mean necessarily that there is causation.

Q. Well, there is some correlation, is there not? A. There is correlation but it doesn't mean there is causation.

Q. Now, isn't it also true that in your study you found that race is not causally related to the achievement level in these minority schools? [2235] A. That's right.

Q. It is causally related probably because of socioeconomic stature of many of these areas racially oriented? A. And because the dominant society defines race and behaves with reference to race in the way that it does.

Q. But now, in considering these achievement factors, the socioeconomic class is one very significant factor, is it not? A. It is highly correlated with—

Q. Achievement? A. —achievement.

Q. And also correlated with achievement is a motivation of the parents of the child? A. This I know of no solid data on.

Q. Well, certainly, your opinion would be that that would be a correlating factor? A. I think, where parents en-

courage the children, it would be better. The issue here though is whether poor folks encourage their kids or not. And I think you're grabbing at a stereotype when you conclude that, because they are poor, they don't encourage their children.

Q. No, I haven't said that. A. You didn't say it but I'm adding it as a qualification to what you're asking.

Q. Well, the educational background of the parent [2236] is significant, isn't it? A. Not necessarily. If it were, a lot of us would be condemned now because we came from backgrounds where our parents were not educated.

Q. Well, I suppose that's right. Isn't it also significant that it is important in some cases? Do you think it's totally unrelated to achievement? A. I think it does not present insuperable barriers to a school that wants to do a job.

Q. We're not talking about insuperable barriers. We're talking about whether it has effect on the achievement. A. If you mean by this that this in some way limits his capacity to learn, I would say no. If you mean by this that the school then begins to look at him as a person who comes from this kind of background and begins to behave toward him this way, sets standards for him that are not relevant to his heritage, then he faces increasingly mounting problems that are of the school's making, not his.

Q. In other words, you think, then, that it's the school's problem? A. I certainly do.

Q. And so your opinion is that the school has an obligation for a social change? A. That's right.

Q. For the entire community? [2237] A. That's right.

Q. Not for just the—not for the achievement or academic aspect of the school? A. That's right.

Q. I presume you include in that housing patterns in the various communities? A. I would say there is a—I was

just saying a few minutes ago that there is a very definite relationship between policies of boards of education in many of these places and the housing patterns that are there. As I tried to say in my testimony last time when I was questioned on this point, the housing patterns cannot—community housing patterns cannot stand in the way of a child having his chance; that the school has an obligation to intervene in his behalf to the end that the circumstance of his birth and where his parents were forced to live shall not deprive him of his chance, and the school has this as a definite obligation.

Q. Is it your opinion then that the school system or the school board has the obligation to create housing patterns to integrate the races? A. It doesn't have the obligation to create the housing patterns but it has an obligation to overcome the limitations that are set by housing patterns.

Q. In other words then, you mean that the board must [2238] cure any racial imbalance created by housing patterns in their school system? A. I think that's right.

Q. Now, merely by bringing people together is not going to achieve integration, isn't that right? A. But it's certainly—you're not going to achieve it unless they are brought together.

Q. But if you forcibly bring them together, isn't it a fact that they have more militancy than before? In other words, than if they had voluntarily come together? A. Not necessarily. There is not a high correlation between the resistance that the whites put up at the time of the desegregation. Desegregation—once it is instituted—

Q. Didn't you do a study in two schools, one of which there was resistance to the integration and the other went along smoothly and they found, in the resistance school, that they had trouble all along? A. There is no guarantee

—Well, you find differences in the acceptance of desegregation. Mt. Vernon district on Long Island fought to the Supreme Court against desegregation; fighting the Commissioner of Education's order that they desegregate. Once it was clear that the pattern was changed and that this was going to be the way it was, they turned right around and very quickly passed appropriate measures to develop a school that would be an educational [2239] park in the middle of the district and the whole thing was forgotten within a year's time.

Q. You are also familiar with Atlanta, are you not, that forcibly integrated eight years ago and is now virtually and totally segregated because of the resistance? Are you familiar with that? A. I don't think that you can say it was because of the desegregation. But I'm aware of the problem that Atlanta has faced, yes.

Q. What I'm getting to, really, is the point that if the people are brought in on a voluntary program such as New York had and that Dr. Fox—or Mr. Fox studied, whom I'm sure you know— A. Yes.

Q. And this was a voluntary open enrollment program, was it not? A. That's right.

Q. And wasn't it thought that this voluntary program would have more benefit or could be more beneficial than a forced program? A. No. It was a stopgap measure, because there were other things that the community would not go along with at the time. The voluntary program or whatever, is a very limited method of dealing with the problem. It places the whole onus on the parent who wants to see desegregated [2240] education for his child. It siphons off his leadership from the community that would press for more education if he stayed to fight for education for everybody. It relieves the board of education of any

responsibility for doing what is its obligation, which is to arrange the encounter between children to the ends that they learn the skill of the citizenship with the era of which they are a part.

The Court: Are you talking now about unconditional free choice? Or in this reciprocal kind that they have put into effect here? That is, whereby you have to get a corresponding white person to exchange? Do you think there is any difference between the two?

The Witness: No, sir. I would take the position that, as long as you leave it to the parents to seek his civil rights, the board of education is reneging on its responsibility; that it's the function of the school system to arrange these encounters for everybody and not for the few.

Q. Well, I presume then it's your opinion that all of the schools in the district must be racially balanced? A. That would be my hope.

Q. And you consider that, then, the obligation of the school board? A. That is correct.

Q. Now, I'm sure you are familiar with the studies [2241] in New York where the enrollment programs show that there was no basic difference in achievement level after those children were bused and put in a new school for integration purposes? A. I would say that this experience with open enrollment, and I did a comparable study of six schools and found almost comparably what they found on it, that this kind of experience did not show a dramatic difference in results. But this does not preclude the need for— It doesn't take into account the citizenship values. It

doesn't take into account the length of the operation of the program, and it doesn't take into account many other factors that I could relate to. It does say fundamentally that the open enrollment did not accomplish miracles.

Q. And New York started in 1962? They have been working now seven or eight or nine years on it? A. That's right.

Mr. Brega: No further questions.

Mr. Greiner: No further questions.

Mr. Ris: Nothing further.

The Court: Very well. You may be excused.

(Witness excused.)

Mr. Greiner: Your Honor, at this point the plaintiffs rest.

Mr. Ris: We have no rebuttal.

Hearing on Relief, May 11-14, 1970

[8] • • •

The Court: Now, you undertake to represent the Hispano community too?

Mr. Greiner: That's correct, Your Honor.

The Court: And are you certain that they wish to be bused, integrated? Every word I get, every piece of evidence I get is that there is a difference of viewpoint here, a very major difference. That they would resist any effort to integrate.

Mr. Greiner: Your Honor, the only answer that I can give the Court based on the record in this case is that we had no intervention in this case after notice of publication and quite a bit of publicity. We had no intervention from—in behalf of the Hispano community that would indicate that divergent view. I think one of the questions—

The Court: Well, I think we ought to keep this in mind in presenting the evidence, this inquiry in mind, and consider whether it's proper for a Court and counsel to determine what's good for them and order them to do it whether it is of their consent or not, you know. I don't see that that is saving their constitutional rights, if this be true.

Mr. Greiner: Well, I think, Your Honor, it's going [9] to be what it—what it boils down to is a question of, is there another reasonable, realistic alternative? That's what this hearing is all about. And the question of the consent of the people who are to be affected by the plan of relief is really a secondary question. The question is, how do you remedy the inequality? A lot of children in the school district wouldn't go to school at all—

The Court: I'm not talking about the children. I'm talking about the people, you know. No, I'm merely saying that our basic legal problem is remedying the invasion of the constitutional rights. And, if it's true that there is a segment that says their rights are not violated, why, I don't see that it is any of our business to say, "Well, they are. And you're going to get them remedied whether you like it or not." I just don't—Not a single Spanish-origin person has appeared here demanding relief or even suggesting that any should be granted to them.

Mr. Greiner: Well, I think the only basis upon which we can proceed, Your Honor, is the status of the record and the record—in the record there is no dissenting Hispano intervenors.

The Court: Okay.

[13] • • •

JAMES COLEMAN, a witness called by and on behalf of plaintiffs, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Greiner:

The Court: Give us your name and address and profession.

The Witness: James Coleman, Baltimore, Maryland. I'm a sociologist at Johns Hopkins University.

By Mr. Greiner:

Q. Dr. Coleman, you're currently in the Department of Social Relations at Johns Hopkins, is that correct? A. That's right.

Q. How long have you held that position? [14] A. Since 1959.

Q. What are your duties and responsibilities in the Department of Social Relations? A. I'm Professor of Social Relations at Johns Hopkins.

Q. Have you prepared a resume of your experience and qualifications? A. Yes, I have.

Q. Handing you what's been marked as Plaintiffs' Exhibit 512, and I would ask you to identify that, please. A. Yes, that is my resume.

Mr. Greiner: Your Honor, we would submit Dr. Coleman's resume. It is part of our memorandum which has previously been supplied to counsel.

Mr. Ris: No objection.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 512 was received in evidence.)

By Mr. Greiner:

Q. Dr. Coleman, I wonder if you could relate for us just briefly some of the experience which you have had in the field of the analysis of the factors which led to inequality of educational opportunity in schools which are racially isolated? A. My initial and major experience in this direction came with the analysis of the survey of equality of educational opportunity which was requested of the Commissioner of [15] Education in the Civil Rights Act of 1964. That was published in July of 1966. Subsequent to that time I have carried out some further examination of the same data and more recently some examination of data from a number of specific cities which have carried out some studies of their own.

Q. Can you identify some of the cities for us? A. Yes. New York, Chicago, Philadelphia, Baltimore, Los Angeles. These were not detailed examinations but simply looking at some of the work which—reviewing some of the work which those cities have done themselves.

Q. You mentioned this 1966 publication. I'm handing you what's been marked for identification as Plaintiffs' Exhibit 500 and entitled Equality of Educational Opportunity and ask you if that is the document to which you have reference? A. Yes, it is.

Q. Can you tell the Court, please, Dr. Coleman, what your duties and responsibilities were in connection with that study? A. In connection with the survey which led to this and the publication of the report, I was director of the staff which produced the report.

Q. What was the purpose of the study? A. The purpose of the study was to fulfill Section 402 of the Civil Rights Act which requested the Commissioner of [16] Education to carry out a survey of the lack of equality of educational opportunity in the United States, as a consequence of several factors, the principal of which was racial characteristics of the students.

Q. Now, would you describe briefly how the study was conducted? For example, how many students were the subject of the study? A. The study was conducted by carrying out—by selecting a sample of schools, first selecting a sample of high schools throughout the United States and then selecting a sample of feeder junior high and elementary schools which served those high schools and then examining the characteristics of the schools, some of the characteristics of the teachers, and some of the characteristics of the students in Grades 1 through 6, 9 and 12.

Q. What characteristics were considered? A. Well, there were a number of characteristics of the schools and of the school districts which were considered which included the major characteristic that educators have characteristically examined in terms of school quality. Most of the kinds of things which school financial resources go into purchasing and then a number of characteristics of teachers, ranging from things of having to do with their attitude to things, having to do with their experience, to a test of verbal skills which was given to the teachers.

[17] Q. What method was used to survey the teachers? A. The teachers were surveyed by essentially a relatively short questionnaire which they completed. This was in similar form of that which was completed by students, but shorter, and the test involved—associated with the questionnaire—was also short.

Q. Do you recall approximately how many students responded to this questionnaire? A. Yes, there were something over 600,000 students in the five grade levels that I mentioned throughout the United States, around 4,000 schools being involved.

Q. And approximately how many teachers? A. If I recall correctly, something around 60,000 teachers.

Q. What were the geographic characteristics of this survey? A. Well, the geographic characteristics of the survey were 50 states of the United States and the District of Columbia, without carrying out a representative sample of each state; nevertheless, carrying out a representative sample of regions in the country. So that properties of the survey and the sample were to have a representative examination of schools serving children in different regions and particularly children of different races in those regions, different races or social origins.

[18] Q. Did you also study children in urban and rural settings? A. Yes, within each region there was a separation between students who attended schools in metropolitan areas and those who were outside metropolitan areas.

Q. Was Denver one of the areas which was the subject of this study? A. With regard to that, I have to indicate I am not at liberty to say for the following reason: that in carrying out the survey an explicit promise was made to the superintendents of schools in all of the districts which were surveyed that none of the districts would be identified in publication or otherwise, so that there has been—this has been adhered to in the past, and unless I am formally directed to do so, I would prefer not to.

Q. For what period of time was the study conducted? A. The study was conducted in the fall of 1965—beginning in September—and extending through to October, covering a very short period of time, and the analyses of the data were then carried out in the winter and spring of—the winter of 1965 and the spring of 1966.

Q. And then what has been marked for identification as Plaintiffs' Exhibit 500 was published at what time? A. In July of 1966.

Mr. Greiner: Your Honor, at this time we would [19] offer Plaintiffs' Exhibit 500.

Mr. Ris: May I voir dire the witness?

The Court: Yes.

Voir Dire Examination by Mr. Ris:

Q. Dr. Coleman, you are the director of this survey as you have indicated. You had substantially—a substantial number of people who were actually doing the detail work on it? A. Yes.

Q. Who drafted the questionnaires? A. The questionnaires were drafted principally within the Office of Education by a group of staff members there.

Q. There have been substantial criticisms since the report was published and before the survey was completed as to whether some of the questions were not quite fair, isn't that correct? A. Well, no.

Q. You're not aware of any such criticism at all? A. I'm not aware of the criticism about the fairness of the questions. I think there was a good deal of concern in various localities of the country about some of the questions which were asked, but I don't think having to do with fairness.

Q. What were the nature of the objections to which you [20] refer? A. I think objections had to do with the question—the objections were of several sorts; that is, a short time prior to that in some states there had been either—in some local boards there had been resolutions that there would be no racial identification of children. Now, in Grade 1, where the teacher completed the questionnaire, the teacher was required to fill in the questionnaire which required filling in the race of the child. And that was seen in some localities as being in violation of the resolutions which had recently been passed by these localities. So I think that was probably the major—that, and the very fact that having children identify themselves with regard to race or with regard to ethnic origin, because there was also a question having to do with whether a person came from Mexican-American or Puerto Rican background, and those questions, I think, were the ones which excited the most concern. Simply because there had been, as I indicated, a number of district resolutions passed against any kind of racial identification.

James Coleman—for Plaintiffs—Voir Dire

Q. Were you aware that Colorado had a constitutional provision pertaining to classification of students by race? A. I don't think that that constitutional provision was—I don't know the details of that constitutional provision, but it was not in the judgment of the attorneys at the U.S. Office of Education—it was not violated by [21] this.

Q. The question was, were you aware of such a provision? A. I was aware in a number of states that there were provisions of this sort.

Q. Is that the type of objectionable situation it was; as to race and—and then the geographic areas? A. Yes.

Q. Now, you say you're under some orders not to disclose the cities that did not—the cities that did participate. Can you tell us then that Denver is not one of the participants in this area? A. I cannot say anything in regard to systems which did not participate.

Q. And under whose direction is this order? A. Alex Andermood was Assistant Commissioner of Education at this time and he is the one who made that—

Q. But you will answer it if ordered by the Court? A. I certainly will answer it if ordered by the Court. I would like at the same time to communicate with the Office of Education before doing so.

Mr. Ris: If the Court please, may I ask the Court to order him to answer whether Denver is represented in the study?

The Court: Well, this is voir dire. For what purpose? What are you seeking to do?

[22] Mr. Ris: It's one element—

The Court: This is premature.

Mr. Ris: The Court may be right. Maybe it's a little premature and he has to communicate with

Washington. Later in cross-examination—but it might save some time if we could resolve it now.

The Court: You're going to object to this coming in?

Mr. Ris: Yes, sir.

The Court: Doesn't it teach us anything? Wouldn't it be of any value at all?

Mr. Ris: I think it may be of some value.

The Court: Do you think it's prejudicial to the defendants?

Mr. Ris: I don't think it's competent. As I am going to continue my voir dire, there is a great deal of raw data that the Department is not permitting access to anybody on it and the Hopkins case refused admissibility on that basis, and this is the next step I'm going to take. But I was trying to get this one point at the moment which I think would be relevant later on.

The Court: Well, I suppose we could assume that Denver was included. Do you have reason to believe that Denver was not studied?

Mr. Ris: I'm informed that Denver was not and I [23] just want it as a matter of record. I'm informed by the superintendent of schools.

The Court: For purposes of your objection, I expect we could assume they were not.

Mr. Ris: All right.

Do you stipulate then there is not—

Mr. Greiner: I don't know that to be the fact.

The Court: Okay. I expect then you can tell us, Doctor, whether Denver was not.

The Witness: As I say, if possible, I would like to communicate with the Office of Education because

there were two categories of school systems which did not participate; those which were not originally sampled and those which were sampled but refused to participate.

The Court: Do you know the answer to the question?

The Witness: No, I'm not clear which of these categories Denver was—

The Court: Well, he's not in a position to answer it right now, anyway.

Mr. Ris: All right.

By Mr. Ris:

Q. Then, at a recess, can you verify this? A. Yes.

Q. Is it true, Doctor, that there were eleven major school systems which, for either one of the reasons you just [24] stated, are not included in the study? A. Yes, there were a lot of—a large number of systems were not included for one of these two reasons.

Q. I'm speaking of major—say, over 500,000 population. A. Yes. I don't have the specific numbers but I would certainly think that would be approximately right.

Q. Now, Dr. Coleman, is it true that all these questionnaires came in and were reviewed and you—I presume were computerized and so forth? Is that correct? A. Yes.

Q. And the raw data itself is locked up in the archives of H.E.W.? A. The data available is on tape to any researcher who wants to carry out further examination of the data, and a number have done so.

Q. Are they available for court purposes? A. Yes.

Q. Would they—were they available in the Hopkins case? A. They were available in the Hopkins case.

Q. Isn't it true that H.E.W. declined to produce them?

A. H.E.W. declined to permit identification of the particular systems involved; that is, H.E.W. declined to have a specific analysis of the District of Columbia schools [25] carried out, pursuant to the agreement that had been made with the school superintendents when the survey was carried out.

Q. So Judge Wright declined the admission of the report, is that correct? A. I don't think so.

Q. Do you know? A. I testified in that case.

Q. I understand.

The report was not admitted into evidence, was it, Doctor? A. Well, I'm surprised that—I testified at great length in that and I had thought that the report was certainly discussed in the case.

Q. But it was not admitted into evidence? A. Well—

Q. Do you know? A. No, I'm sorry. I am—my impression is that it was admitted into evidence. Now, if you know to the contrary, then—

Q. I have been so informed and I am surprised that you thought it was. A. Well, I think it was, yes.

Q. Who actually did the correlating of the answers to the questionnaires? The staff people? [26] A. Yes.

Q. In the Deparement of Education? A. In the U.S. Office of Education.

Q. So the report itself, Exhibit 500 in this case, contains the ultimate conclusions rather than any of the basic raw data from which conclusions were drawn? Correct? A. That's right, yes.

Mr. Ris: If the Court please, we would object to the admission of this—any more than any textbook or other document to buttress the testimony of the witness—

The Court: Do you wish to have it introduced simply for reference purposes?

Mr. Greiner: That's correct, Your Honor.

The Court: Or cross-examination?

Mr. Greiner: I am going to ask the witness to relate—to advise the Court as to what the major findings of the study were; what the conclusions were that were reached and most of these causative factors.

The Court: Well, can he refer to it? We will withhold a ruling on that until a little later on. But he can refer to it all he wishes and it can be used to cross-examine him.

Direct Examination by Mr. Greiner (Cont'd):

Q. I believe you said there were some 600,000 students [27] surveyed.

The Court: Were you offering it testimonially as well? For the purpose of utilizing its content as if it were evidence in the case, testimony in the case?

Mr. Greiner: I believe, Your Honor, what I'm about to do is demonstrate through the witness that the survey was broad enough in its scope, it covered districts like Denver even if it may not have covered Denver, so the question as to its relevancy or its pertinency, vis-a-vis Denver, which—we think it is pertinent and relevant because it was the broadest survey ever conducted and it is very thorough. So I think, to answer Your Honor's question—

The Court: Well, really, I think that the facts and figures in it might be of some value to us. I suppose—if he's going to give conclusions that are

contained in it, I suppose he can be cross-examined by those.

Mr. Greiner: That's correct, Your Honor.

The Court: Very well. Go ahead.

Q. Now, Doctor, you said that there were some 600,000 students surveyed. A. That's right.

Q. And some 4,000 different schools? A. Yes.

Q. And can you tell us whether or not urban school systems such as Denver were in fact included in this survey? [28] A. There were a very large number of urban school systems which were included in the survey. The original sample was carried out in such a way as to be representative of regions of the United States as well as representative of the United States as a whole, and one classification within regions was urban areas. Now, no school district is exactly like any other and that is why we have a representative sample; so we can get a broad conclusion as to which are representative of the country as a whole, and of regions. Something like between 60 and 70 percent of the schools selected in the sample or in the school systems selected in the sample participated in the survey and others declined to do so.

Q. Are you familiar with the existence of any other study of equality of educational opportunity which was as comprehensive as that you directed? A. There has not been, to my knowledge, any similar survey. There have been plans which have been discussed in the U.S. Office of Education for the carrying out of further national surveys. There is also a national assessment of education which is currently being carried out, but there are no such surveys covering elementary and secondary education which are as broad as this one.

Q. Have lawyers' studies been used as a basis of other studies of equality of educational opportunities? [29] A. Yes, it served as a basis of a number of local studies which have been carried out in local school systems and they have carried out changes in their systems through school integration or some other activities. They have used that as a source. There has also been a number of things in various places which have stemmed from this in one way or another, the organization for economic cooperation and development in Europe has established equality of educational opportunity which follows very much the pattern which was initiated by that survey.

Q. Can you summarize or capsulize for us Exhibit 500, several hundred pages in length, on what were the major conclusions reached by the study? A. Well, first of all, let me say that there were a number of sections to the survey or a number of things which were reported in that volume, and the only ones which I will make any statement on here are those which have to do with elementary and secondary education, for which this major survey that we described was carried out. There were also other surveys for secondary education and some other examinations which are in the report which I think are not relevant to the present case and so I will report only on those that I see as possibly relevant.

The survey attempted to examine the question of equality of educational opportunity in what might be seen as [30] three different ways. One is through looking at the input resources into schools and how those varied according to particular classifications of students that were surveyed. I should remark at the outset that the survey examined the equality of educational opportunity with regard to the following racial and ethnic groups: Negro,

Mexican-American, Puerto Rican, Oriental, American Indian, and whites other than those who were included in the previous classification.

So, with regard to these six groups and with regard to Negroes and whites in particular regions of the country, there was an examination of, first of all, as I indicated, the input resources into schools.

Q. Can you give use some example of those resources? A. Well, there were a large number of items having to do with schools which were examined—which examined such things as the number of books in the school library, the age of the textbooks, the age of the school buildings, the size of the site on which the school building existed, the kinds and number of curricula that existed in the school, the existence of audiovisual equipment, the existence and character of science laboratories; whether they were free public kindergartens or not, and a whole variety. The classroom size, per pupil expenditure of instruction; the number of items on this—of this general character.

Q. And what was the second? [31] A. The second was the degree of racial segregation in schools, that is, as with the first, not taking as a given or as answered the question of whether this in itself constitutes inequality of educational opportunity, but rather recognizing that our task was to examine inequality of educational opportunity as it may be defined by a number of people in the population and in the Congress and in the Executive of the federal government. Our task was to examine the different possible definitions of inequality of educational opportunity and one of these is clearly the degree of racial segregation in the schools. So that this was the second major area that we examined, that is, the racial composition of the schools.

The third major area that we examined was to look not at the input resources into the schools but at the output resources of the schools, and in that we took a fairly narrow definition of output. We didn't look at the kinds of social attitudes or anything of that sort that might be seen as a legitimate output of education, but took a narrow definition, really, examining principally verbal skills and mathematic skills of children of these six different groups and, as I said, of Negroes and whites in different regions of the country.

Q. This then was the achievement data? A. That's right. This was the achievement data and [32] again, not viewing this per se as a measure of the equality or inequality of educational opportunity, but viewing this as an element which is relevant to the question of equality or inequality of educational opportunity because the further examination of that data was to see how this achievement varied as a consequence of different resource input into the school and then to see how those resource inputs were related to the race of the child. So that, essentially, this third area was to examine what might be described as those resource inputs of the school that were relevant to the outputs of the school; that is, those which exhibited some degree of impact or effect upon the achievements of students in the school.

Q. Can you tell us what the major factors were in the school which contributed to the presence or absence of unequal educational opportunity? A. Well, if I could go back to the prior question, I think it didn't—I didn't completely answer that. I should say that, in examining those three kinds or three definitions of what might constitute inequality of educational opportunity, we found a smaller degree of difference with regard to input resources at the

—of the sort I described before, a smaller degree of difference between schools attended by persons in these different racial and ethnic groups than had been previously anticipated or that had been previously felt to be [33] the case. So that, with regard to that measure of inequality of educational opportunity, we found smaller differences than anticipated.

Q. You're talking about the physical resources? The hardware of education? A. That's right. Now, with regard to the third conception of equality of educational opportunity that I just described, the question came, what were the sources in the school or what were the characteristics of the school that were most highly related to the achievement of students or the output of the school. And we grouped those characteristics of the school into three broad categories; those which were characteristics of the school of the sort I described before with the physical input into the school, including things about the curriculum but not including characteristics of the teachers. The second broad set of characteristics was those having to do with characteristics of teachers and the third one was one which was introduced only in a later stage of the analysis and what might be described as educational resources brought by other children to the school. What was done was to measure the characteristics of the home environment of the children who were in the school and then to examine how a child in that school—how a child's performance was the function of family background of the other children in the school. That was the third general set of resources [34] in the school that we examined.

First, as I said, was more merely the physical and curricular aspects of the schools and the second was charac-

teristics of the teacher and third was the characteristics of the students in the school.

Now, we found, first of all, that schools differed. Schools attended by these different racial and ethnic groups differed least with regard to these first two categories and most with regard to the third category. That is, they differed least with regard to physical input of the schools and next with regard to the characteristics of the teachers in the school and the most with regard to the characteristics of other students in the school. Secondly, when we related the output of the school to—the performance of students to the other three characteristics; that is, when relating performance of students in the school to these three clusters of characteristics, we found that the one which was least related to performance was the physical and curricular aspects of the school. What was the next most related to performance was the characteristics of the teacher, and what was the most related to the performance were the characteristics of other students. So that there was roughly an inverse order between those characteristics which were effective in producing educational output and those which were similar for the schools attended by children of different racial and ethnic [35] groups; that is, those characteristics in which the schools attended—for example, were attended by Negroes and whites—differed most with characteristics of the other students in their schools, and with the ones which were shown to be most effective in the analysis.

Q. Now, with regard to this third factor, student environment or the environment created by the student group, did you also have occasion to study the peer group environment created? I know you have studied the black

school children and the environment created by those children, is that correct? A. Yes.

Q. Now, did you also consider Mexican-American or Hispano children separately? A. Yes.

Q. What did you find was the relationship, if any, between the types of school environment created by those two groups? A. Well, first of all, I think it can be fairly stated that of the six racial and ethnic groups that were described there were four which had roughly similar levels of performance and roughly similar levels of family background when one looks at the kinds of resources that existed in the family. Those were Puerto Rican, Mexican-American, American Indian and Negro, and two which had both higher levels of performance [36] and higher socioeconomic characteristics of background, those of whites which I mentioned before and Oriental Americans. In terms of kinds of impact that a child from one of these first four groups—the kind of impact that the average family background of children in these four groups and that is not of any particular child, but I'm talking about average family background in terms of its socioeconomic resources, those were roughly similar across these four groups.

Obviously, of course, there are major differences between, for example, American Indians and the other three groups, but at least among the other three groups, especially when urban-rural differences are controlled, with socioeconomic backgrounds which are not extremely different, then what was found, and it was found in the study, was the—what was found was the socioeconomic backgrounds or the educational resources in the home rather than specific racial characteristics of the student which related—which was the environmental resource that I described earlier.

Q. Now, Doctor, on the basis of that factor, the similarity of the types of background, for example, and the Hispano—and that Hispano and Negro children bring to school with them, did you or can you reach any conclusions as to the effects of the peer group, the student peer group in schools which are predominantly minority in their character, such as, for example, 40-percent Hispano and 40-percent black, and [37] contrast it with schools which are predominantly composed of one minority group. Is there a difference? A. In terms of our examination, there would be no reason to see any difference at all. As I say, in elaboration of that, the important set of variances or the set of variables which were found to be important were that educational resources brought by the child into the school from his home and which then had an impact upon other children in the school, and these were related to the racial characteristics of the children, but it was not the racial characteristic or the ethnic characteristic per se, but these educational characteristics as it affected other students.

Q. And there is a correlation, is there not, between the socioeconomic factors and the race? A. Yes.

Q. Now, did you also have occasion to study the different mixes of the ethnic groups and racial groups in these schools? A. There has been a good deal of examination of that. That was examined only in fairly small—a fairly small report that we are discussing, but it's been examined with regard to these same data in subsequent analyses. And first of all, I should say it's difficult to make strong inferences in this area. Essentially, if I understand your question correctly, you're asking what is the effective [38] student body of different socioeconomic positions,

for example ranging from, say, zero to a hundred percent middle class. Is that your—

Q. That's right. A. First of all, I should say that the inferences cannot be absolutely conclusive in this regard, but there seems to be a kind of majority effect, that is, that if the school is predominantly middle class, then there are beneficial effects on those students who are not middle class in the school or who come from family backgrounds which have poor educational resources in them; without being deleterious, effects the quality upon the other children.

If the majority is in the reverse direction, there seems again to be this kind of majority or climate effect of the school which leads to the—which does away with those benefits. As I say, the inferences in this area cannot be entirely conclusive, but that is both on the basis of these data, principally to further analyses which have been carried out, and on the basis of some other research which has been—

The Court: Well, then, the culturally-deprived whites would be exactly in the same position in your mind?

The Witness: Yes, sir.

The Court: As the Negroes or Hispanos or Orientals, is that right?

[39] The Witness: Yes, sir.

The Court: And with similar deprived—

The Witness: Yes, sir.

The Court: Well, they say it's the middle class—upper middle class influence that produces most significantly; whether the students are Negro or whatever they are.

The Witness: Yes, sir. That's certainly the evidence of our survey. Now, there has been some other examination which is not entirely consistent with that but I think all of the examination of this question shows that the major influence is that of the educational resources in the child's home, which are principally derivative from the socioeconomic background of the child.

The Court: That's what the defendants here said at the trial. They said that the whole problem was that of the culturally—cultural deprivation, economic deprivation, and not the schools themselves. This was the education that was being offered; that they were just dealing with a group of students whose level of basic knowledge was low. And so on.

The Witness: I'm not talking now about the influence of the child's background upon his performance. I'm talking about the influence of the background of other children in the school upon his performance and, if I understand what you just said—

[40] The Court: Well, you said that was what determined the inferiority of the schools, that is, whether or not they had a large number of white middle-class students.

The Witness: Yes, sir.

The Court: Isn't that what you said?

The Witness: Yes, sir.

The Court: So it follows that, if our culturally and economically deprived are in the minority, why, then the school itself is going to be an inferior one.

The Witness: Yes, sir. That would certainly be the conclusion.

The Court: And I take it that you're saying that the quality of the educational effort is not going to make very much difference.

The Witness: What I'm saying is that inferiority of that school is for, let's say, for example, for a hypothetical child whose school is a predominantly lower-class black school, for example, or predominantly middle-class school, that his educational experience will be very much a function of that social composition of the school more than of the explicit resources which the school has put into the system. In other words, I think that's what you just indicated.

The Court: So you're spinning your wheels trying to improve these schools and thus improve the educational [41] experience of the child in them by programs of this kind?

The Witness: Yes, sir. I think that would be the principal inference one would draw from the results of most of these programs as well. That is, our survey didn't examine explicitly programs—that is, special programs that had been introduced because in many respects many of these programs began only after our survey was carried out. Many of them have been done, for example, in response to Title I of the Elementary and Secondary Education Act which came out about—only subsequent to that, but the results of these further—of studies of these special programs have not been very encouraging with regard to their effects.

Mr. Greiner: We're about to get to that, Your Honor.

The Court: I figured you were. I will let you develop it.

By Mr. Greiner:

Q. Dr. Coleman, you have mentioned studies that were conducted subsequent to that which you directed. Are you familiar with the report of the United States Civil Rights Commission which was based in part upon the data gathered in the Coleman report? A. Yes.

Q. What was the nature of the study conducted for the Civil Rights Commission? A. Well, the Civil Rights Commission report directed [42] itself much more specifically to questions of school integration in comparison to compensatory programs than the survey that we carried out did. Ours was directed toward broader questions and so that there was analysis—there was both further analysis of the data which had been gathered under our survey. Analysis of some special data in particular localities. One examination very—one very intensive examination of the effects of socioeconomic and racial integration in Richmond, California, for example, that is reported in the appendix to that survey, and then there was an examination of compensatory education programs which existed at that time.

Q. Now, was this study then put out in published form? A. Yes, it was.

Q. I'm handing you what's been marked for identification as Plaintiffs' Exhibit 27 and 27-A, being the appendix to Exhibit 27, and ask you if you can identify those for us? A. Yes, these are the reports to which have been—to which you have been referring.

Q. Now, what role did you play, Dr. Coleman, in the creation of the study now represented by Plaintiffs' Exhibits 27 and 27-A? A. I played no role whatsoever other than as a consultant to the study and was not very deeply involved.

Q. As a consultant, what did you do? A. I simply discussed at a meeting of consultants of [43] that study the general directions that the survey might take and what kinds of data it might use. One of the persons who worked intensively with me on the equality of educational opportunity was a major staff member in this report. He carried out the analysis of—a further analysis of these data.

Q. Now, Exhibit 27 was published when, Doctor? A. I believe it was 1967.

Q. And how much time subsequent to the publication of the Coleman report was this? A. I think it was less than a year.

Q. Now, does Exhibit 27 then attempt a further evaluation of, for example, the then compensatory education programs? A. Yes. It carries out a further examination —or a more explicit examination of the compensatory programs and certainly our survey didn't carry out such an examination at all. I should say, however, that partly because of the fact that many of those programs have been subsequent to the publication of this, there has been much more recently, by the New York State Department of Education, a very comprehensive survey carried out of both compensatory programs and school integration activities at local levels which has a title similar to this. I've forgotten exactly the title.

Q. I think we just happen to have that with us, [44] Doctor. It's been marked for identification as Exhibit 508. That's Dr. O'Reilly's study. A. That is the Report on Racial and Social Class Isolation in the Schools. That's the most recent and comprehensive survey which has been done up to this point. I think, in contrast to nearly everything that's been done before which was quite partial and

quite—well, either partial or a little early with regard to the evaluation of compensatory programs, and I think this is really kind of a benchmark for evaluation of these programs at this point.

Q. Now, turning your attention back to Exhibit 27 and 27-A—do you recall what conclusions were reached in those studies regarding the efficacy of compensatory education programs in these isolated schools? A. Yes, the conclusions that were reached were essentially conclusions—the conclusion that compensatory education programs had not shown any generally effective methods for increasing achievement of children from disadvantaged backgrounds. That is, it was a fairly discouraging conclusion with regard to those compensatory programs. And those fairly discouraging conclusions, I think, have been really characteristic of most of the examinations of compensatory programs which have been carried out.

Q. Now, when we talk about compensatory education, Dr. Coleman, what kinds of programs are we talking about? What [45] are some of the objectives of these compensatory programs? For example, does it include remedial instruction? A. Well, the objectives of the programs, the objectives of the—of many of the programs are very directly to increase achievement in cognitive skills which are viewed as the principal resonsibility of elementary education. That is, verbal skills and mathematical skills. So that the goals have not completely focused upon that but very largely focused upon these two things, verbal and mathematical skills.

Q. What about factors such as—I believe it's called cultural encouragement or broadening the horizons of the child? A. Well, there has been some of these, as well. However, from the point of view of the kind of evaluation

which has been used both in the report under question, racial isolation in the public schools and other evaluations, most of those valuations have to do with these specific cognitive skills, that is, the question of whether a given compensatory program increases such cognitive skills more than would be expected by the regular program that the child would attend through that period of time.

Q. Well, factors such as building self-esteem, for example, and overcoming a negative attitude in the child, or getting additional parental involvement with the education of the child? Aren't those factors which would also lead to [46] improvement in these cognitive skills? A. Yes, these certainly might well do so, and it's just that the final criterion which has been used principally for evaluating these surveys is whether in fact cognitive skills are increased. Now, many of the things of the sort you described have some value in their own right and also may be factors which, if improved or if effected, then, in turn affect cognitive skills which are the principal criteria that have been used in evaluating the cognitive skills.

Q. Dr. Coleman, I'd like to turn your attention to the question of integration. What is the nature of your study on the question about the causal relationship, if any, between integration of the minority child and, by that, I mean placing them in a—let's say a majority Anglo school? What is the relationship between that process and the improvement of the minority child's achievement? A. I'm not sure I understand the question. Well, could you state it in other words?

Q. Well, can you tell us if there is any beneficial effect upon the minority child? A. If there is any beneficial effect upon the minority child? Can you continue the question?

Q. By integrating the child. A. Well, I'm sorry. Let's say that the survey that [47] we carried out was a survey which examined only children in those schools in which they were found and so what we had to do was to examine children who were in integrated schools and had—and had this similar background but in integrated—segregated schools. The only was I can answer your question is to say that, in terms of the analysis that we carried out, the analysis was limited not to moving children from one school to another and see what the consequences were, but limited to examining children in the schools in which they were found, controlling insofar as possible on the backgrounds of these children, and then looking at their performance in the schools that they were with. And, as I indicated, the performance was more strongly related to the educational background of the other students and by that factor, the racial composition of the school they were in, than to any other single characteristic of the school—

Q. What was the relationship? A. That the higher the educational resources of the other children in the school they brought with them from their homes, the greater the achievement of any particular child in that school, controlling on his own family background. So that it was a positive effect of the educational resources in the homes of the other children who were in the school.

Q. Then what in your mind is the primary factor that is present in the integrated school, the predominantly Anglo [48] schools, that led to their improvement and achievement of the minority child? A. Well, I must make inferences because of the fact that one has simply the statistical education and then the question is, what are

the mechanisms involved, and if I understand your question, you're asking what are the mechanisms?

I am tempted to express—and a number of people have at some length—the inference that I would draw from various evidence that I have had—I have seen is that it has to do with the linguistic and conceptual challenge that environment brings to a child. Well, that environment brings for a child—that linguistic and conceptual challenge is the thing which is provided for—created by the environment of the other children in the school. What that means in effect is that, if the inference is correct, is that a child from a linguistically-impoverished background will be most affected by a school situation which has a—which is more linguistic, particularly the rich or different educated environment.

Q. Are you familiar, Doctor, with any programs of compensatory education which supply this factor that you have just described? A. Well, I think that, if a program of compensatory education were to be effective, it would probably have to be through that kind of mechanism. I think that the major [49] problem with compensatory programs is that it's much more difficult and, if possible, much more expensive to introduce such environmental changes in the child's environment, not only within the classroom but outside the classroom when the actual social environment that he experiences in the sense of other children he talks to remains homogeneous with his past.

Q. Now, did Exhibit 27 also consider these same factors? A. Yes. Again, it's difficult to isolate these factors per se and as a consequence I think one must depend upon inferences with regard to this.

Q. But with—were the conclusions which you have just described also reached by the Civil Rights Commission

study? A. The conclusions that I have described were certainly compatible with the conclusions that they reached.

Mr. Greiner: Your Honor, at this time we would offer Plaintiffs' Exhibit 27 and 27-A.

Mr. Ris: We would object on the grounds of insufficient foundation.

The Court: Are you offering the content of both of these as testimony?

Mr. Greiner: Well, I think really the function of these is simply to inform the Court of the state of the art, so to speak, insofar as the analyses which have been conducted [50] concerning really the primary issue we have before us and namely what works and what doesn't work.

The Court: What part are you going to rely on? The whole thing?

Mr. Greiner: There is a particular section there, Your Honor, toward the back which contains the analysis of compensatory programs as well as an analysis of the then integration programs which were in existence at the time that report was published. The appendices, which is 27-A, is simply data used by the study in reaching its conclusions.

The Court: Are you familiar with this material?

The Witness: Yes, I am.

The Court: Have you read it?

The Witness: Yes.

The Court: No, I mean Mr. Ris.

Mr. Ris: I have read so much that I—

Mr. Greiner: We listed that as an exhibit on about June 16th last year.

Mr. Ris: I'm familiar with the volume and I have a copy, yes, Your Honor, insofar as the particular part counsel is referring to.

The Court: Well, he's got a paper clip there.

Mr. Ris: Mine didn't have a paper clip.

Mr. Greiner: I'm not sure that paper clip is in the right place, Your Honor.

[51] The Court: Well, we will receive it for whatever value it may have, bearing in mind that it is hearsay, of course. This is somewhat an unusual type case, but if there are parts of it that you feel are particularly incompetent, why, you can call my attention to those.

(Whereupon, Plaintiffs' Exhibits 27 and 27-A were received in evidence.)

By Mr. Greiner:

Q. Dr. Coleman, calling your attention then to the breadth of these surveys represented by Exhibit 500, Exhibits 27 and 27-A, in your opinion are the results of that survey sufficiently founded in the data—is the data comprehensive enough that you would consider it to be reliable in applying it to a school district such as Denver's?

Mr. Ris: I'll object to that because the witness stated he had very little to do with 27 and 27-A except on a consulting basis, and so, by his own admission, he has not examined the data and cannot draw such a conclusion.

Mr. Greiner: Your Honor, I believe the witness has stated that most of the data upon which 27-A is based is data that was developed in the course of preparing Exhibit 500.

Q. Is that correct? A. That's correct.

The Court: Are you familiar with the Denver condition?

[52] The Witness: I am familiar with some considerable part of the Denver situation now. I have read a number of documents relating to this case, yes.

The Court: Well, do you feel you can answer this last question, as to whether this 27 is germane to the problem here?

The Witness: Yes, I would certainly think it is germane, that is, surveys which are carried out on a school system other than a particular school system under consideration have, I think, characteristically been used as a basis for policy in particular school systems.

The Court: The thing that worries me about all this is that what you say is that the schools are not inferior as counsel proved at the trial, but that the students are inferior. They proved it overwhelmingly that the schools were inferior; their offerings were inferior. Now, in coming up with a new tack—it's not the schools at all, it's the students and their economic and cultural deprivation that makes the educational experience one that is noncompetitive. It's dull; not exciting. I mean, I get that from what you're saying. Sort of a self-defeating proposition. They proved the constitution was violated and now they are unproving it.

Mr. Greiner: Your Honor, what we're trying to avoid is a duplication of the testimony that the Court has already received. We could go into teacher attitudes, teacher [53] experience.

The Court: Well, he says it is of no consequence.

The Witness: I'm sorry. I didn't mean to say—

The Court: You said these programs were worthless. I'm exaggerating a little bit to make my point. Isn't that what you're saying?

The Witness: No, what I am saying—

The Court: Virtually worthless?

The Witness: I'm really trying to say the following that is, that first of all that, of the school resources which are provided by the school system, those which show most relation to a child's achievement are the characteristics of the teachers, in particular the verbal skills of the teachers. But that these are not as important for the achievement of the particular student in terms of our analysis as the social composition of the rest of the student body. Secondly, that with regard to compensatory programs, if one evaluates these programs simply in terms of the increase in performance that occurs as a consequence of them or that occurs for children who have participated in them, there is very little cause for optimism with regard to the overall effectiveness of these programs. But, of the things which the school board provides, the characteristics of teachers and in particular the verbal skills of teachers seem to be the most important characteristics.

The Court: We will take a short recess.

[54] (Whereupon, the trial recessed at 11:06 a.m. and resumed at 11:23 a.m.)

Mr. Greiner: Your Honor, Dr. Coleman isn't back yet.

Your Honor, we are just about finished with Dr. Coleman. I don't believe the Court has ruled on 500, and we would offer that at this time. Perhaps we could dispose of that while we're waiting.

The Court: Well, he's going to give us some information on it, isn't he, as to whether Denver was considered?

Mr. Greiner: We can certainly check on that.

The Court: I mean, before we ruled on it? I mean, we were withholding a ruling. He didn't know the answer.

Mr. Greiner: I'm sorry, Your Honor. We can't seem to find Dr. Coleman. He may be calling Washington, but I haven't been able to find him.

The Court: Do you have any other witnesses you wish to call?

(Colloquy not transcribed herein.)

The Court: Well, if you wish to take a recess while you find him, I'll be glad to do that. Would you prefer this?

Mr. Greiner: I would prefer it, Your Honor. I think things would follow a lot more logically.

The Court: Are you going to ask him how many white middle-class or black middle-class people he needs in order [55] to achieve the objectives? What percentage he needs?

Mr. Greiner: I believe he said the majority, Your Honor.

The Court: A simply majority?

Mr. Greiner: Yes.

The Court: In order to make any impact?

Mr. Greiner: You need a majority to create this environment that is necessary.

The Court: Okay. Well, let us know when you're ready.

(Whereupon, the trial recessed at 11:29 a.m. and resumed at 11:35 a.m.)

Mr. Greiner: We apologize. The witness thought we were in recess until 12:30 and therefore went ahead and tried to place this call to Washington.

The Court: That's all right. The reporter is having trouble getting his testimony. I don't know how we can remedy it but I'm afraid you're going to have to keep your voice up full.

The Witness: Fine.

By Mr. Greiner:

Q. Dr. Coleman, just prior to the recess, we were discussing the educational resources which the schools allocate to particular schools, which the system allocates. Now, is there a condition that you're aware of of these homogeneous residential areas which do exist and how [56] do these neighborhood residential patterns relate to the kinds of students that you find in the schools? A. Well, the answer to that depends very much upon the way in which the school system organizes its schools in relation to residents. That is, most school systems organize their schools in relation to the residents by having fixed school districts and some of these are very ethnically homogeneous. And a few school systems don't operate in that fashion. But the impact of the educational resources that I described before that are brought with other children to the school from their home really is the function very much

then of the social composition of the schools which are organized in most districts in the United States, are in turn the function of the socioeconomic and ethnic composition of the neighborhood.

Q. So then it's a matter of student assignment policy? A. That's right.

Q. Now, could you report to the Court on your telephone call and what the status was? A. The telephone call at this point is inconclusive. I indicated to the people of the Office of Education to give me an answer with regard to two questions, that is, the status of Denver with regard to which of these two categories it was in, and secondly, the question from their counsel as to what their position is with regard to the nature of this [57] information. So they are searching—they're doing that now.

The Court: Finally, Dr. Coleman, you mentioned that you were on this Cabinet committee. Can you give us the nature of—

A. Well, I'm not on the Cabinet committee because only Cabinet committee members are on the Cabinet committee. I'm a consultant to the Cabinet committee on school desegregation which is attempting to first develop legislation for $500 million worth for this year and a billion dollars for next year for implementing school desegregation, both in the South and North. And for then laying out guidelines for the conditions under which such money can be used by schools—by local school systems so that I am principally advising the committee with regard to the guidelines which school systems would—the guidelines for school systems with regard to the use of the moneys for school desegregation.

Q. In that context, does school desegregation include transportation? A. Yes, in the conception of the Cabinet

committee as it currently—I think I'm probably not really —the Cabinet committee is still determining the character of these things and so I'm not really specifically knowledgeable about what will be the outcome of the Cabinet committee's deliberations.

[58] Q. What is the time table for making this $500 million available? A. There will be some funds—it is expected that there will be some funds available by the end of June.

Q. Then, directing your attention back to the relationship between the neighborhood school policy and the homogeneous character of schools that are created by that policy, is there any way that you can see, Doctor, that we're going to adhere to the neighborhood school policy of attaining the racial and ethnic heterogeneity which you believe to be necessary for equality of educational opportunity? A. It seems to me there is a very—a specific incompatibility between neighborhood school policies and equality of educational opportunity as it derives from the social composition of the school itself. I think this was not necessarily the case in the past but there has been a general shift over a period of time toward increasing homogeneity, not solely with regard to race but increasing the homogeneity of neighborhoods, and this homogeneity of neighborhoods has, in terms of the evidence that I have seen with regard to school performance, has reduced the equality of educational opportunity as a consequence of the —of increasing the homogeneity of neighborhoods. I think, as a consequence, it's probably necessary in order for equality of educational opportunity to exist to have affirmative action [59] of sort that is not necessary when neighborhoods were less homogeneous than at present.

Mr. Greiner: We have no further questions, Your Honor.

Cross-Examination by Mr. Ris:

Q. Dr. Coleman, the budgetary amount that you are working on as a consultant to the Cabinet committee—is that to provide funds to the states for compensatory education programs basically? A. No, this is not basically what this is designed for.

Q. What are the funds designed for? A. The funds are basically designed to aid school districts in implementing desegregation.

Q. And certainly it's for providing additional educational curriculum, increasing teacher input and so forth, is it not? A. Yes.

Q. And to provide situations where the need appears that there can be smaller teacher-pupil ratio? A. Well, insofar as that is carried out in desegregated settings, insofar as the orientation of that program exists.

Q. But it is to provide that as one of the things—that's one of the things it's to provide, is it not? [60] A. It's to provide—yes, certainly.

Q. To provide more facilities, physical facilities, more teacher availability to the students to attempt to increase their educational achievement? A. Well, let me say two things. First of all, neither the legislation nor the specific guidelines for the utilization of these funds is completed. When legislation is completed then it may be changed in Congress. So that it's not possible for me to say anything specifically about what that legislation or—about the specific details of how those funds will be used. But, I can say that the major orientation of the persons who are responsible for administering those funds is for their use in aiding school desegregation.

Q. Well, the funds are not going to be limited to transportation of pupils from one school to another? A. No.

Q. Obviously not. A. No.

Q. So there are many other programs that are being considered for the use of these funds? A. Yes.

Q. To increase the educational opportunity of the children? A. Exactly.

Q. Has your entire career been engaged in sociology, [61] Dr. Coleman? A. Since I have completed my education, it has. Before that, I worked as a chemist for two years.

Q. And you have never taught in public school systems? A. No, I have never taught in the public schools.

Q. Never been involved in planning or administration of a public school system? A. No, I never have.

Q. Have you ever visited the Denver schools, in any of the individual schools? A. No, I have not.

Q. Have you ever visited with the superintendent or the members of the staff pertaining to vote conditions? A. No, no vote factors.

Q. Are you acquainted with the programs that are presently in existence or contemplated in the Denver schools, particularly Manual High School and Cole Junior High? A. Yes, I'm acquainted with some of their programs. I'm not acquainted with them in precise detail, but I have read about particular programs at Manual, and also programs at Cole and some of the elementary schools.

Q. And what has been the source of your information? A. Some of the material which I think was submitted by the defendants in this case.

Q. That came in during the previous trial? [62] A. Yes.

Q. Have you read some of the transcript? A. Yes.

Q. Is that the extent of your information? A. I also read some of the material which was presented by the Superintendent of Schools, both in 1968 and more recently.

I just scanned the material which was dated, I think, May 5th, 1970.

Q. You're not holding out yourself as an expert to the Denver situation? A. No, certainly not.

Q. Have you had some change of opinion yourself or some change in the inferences you have drawn from your study since the original publication of Exhibit 500? A. No, I think not. At that point or within a month after that was published I wrote a statement which was a review in an attempt to summarize some of the conclusions of that which was published, and that statement I think was substantially the same as what I have been indicating.

Q. Dr. Coleman, insofar as a child coming from a home and neighborhood environment where he has been culturally deprived in his beginnings, his awareness, preschool, and then attends say a middle-class school, was it your original thought as a result of your study that this child would absorb facts and learning processes from middle-class students [63] —students in the middle-class homes who came with the more advanced learning process and knowledge? A. That was not my belief prior to carrying out the study. Prior to carrying out the study I assumed, as I think most of us assumed, that there was far more impact of the usual school resources that we conceive of as school resources relative to the impact of these less tangible things that you were just describing. In carrying out that analysis and as a result of that analysis I was forced to come to that conclusion.

Q. Well, you have more of a feeling now, as I gather from your testimony previously, then, it's more of a matter of a motivation now rather than actually learning from the peer group? That is, he is more highly motivated rather than the learning process itself? A. No, I think

it's simply a matter of having to cope with a more challenging environment which is less like that that he has come in contact with in the past, and to myself, I have often used the analogy of an English-speaking child attending a school in which all the children spoke French. That is, this is the way in which you would—he would very quickly come to learn French; not through anything other than the fact of being confronted every minute of the day with the necessity for communicating with those students.

Q. Doctor, wouldn't you recognize that some children [64] when they go into a school, that basically they are frustrated and give up? A. Well, my assumption before carrying out the survey was that particularly—well, especially class—lower-class students, that is, students from especially deprived backgrounds—if someone separated, for example, Negro students in integrated schools between those who were white disadvantaged and those who were not white disadvantaged, that there would be a negative effect for those who were white disadvantaged. And I'm not surprised in both our analogy and in other analogies to find that was the case.

Q. You didn't find that to be the fact, though? A. No.

Q. You have never been informed of that occurring in individual cases in any of the schools systems? A. In fact, it's kind of a general conception that one gets from an anecdote case that would lead to having the prior expectation or certainly led me to have that prior expectation.

Q. Actually, your study didn't study individual students, did it? A. Well—

Q. I mean, you were studying the large mass of students? A. Yes, but we did that essentially by studying the individual students. That is, we just didn't look at the [65] average performance in the classroom. But we looked as

to how a particular child in that classroom—how his performance was affected by other children in that class, whether it was related to the performance of others in the class.

Q. What do you mean by a stable racial integration pattern, Dr. Coleman? A. Well, when I use that term I mean one in which the—essentially in which the population is stable; one in which the racial composition of the school doesn't change sharply over a period of time.

Q. And there are some schools that are not stable, although racially integrated, is that correct? A. That's right.

Q. There are problems if the school is not stable? A. I'm not sure I understand the import of your question.

Q. Well, is there any difference between a stable racially integrated school and a nonstable racially integrated school in its operation and achievement? A. I think there are both internal and external sources of instability. That is, some of the sources of instability have to do with simply population movements quite independent of the school. But some of them have to do with the problems that arise within the school; problems [66] that are not treated when they arise by the particular school principal.

Q. In your study with respect to teachers, you mentioned that verbal skills, you found, made a substantial difference. Did I understand you correctly? A. Yes.

Q. Was that the principal difference you found in teacher characteristics? A. Well, no. We examined a number of teacher characteristics but this was the one which was most highly related to the achievement of students in the schools of these teachers.

Q. You mean basically in minority schools? A. Well, yes, for minority students. Whether they were in predomi-

nantly white schools or predominantly black schools or predominantly schools of another ethnicity. That is, independent of that, the finding was that the student's performance was related to verbal skills of the teacher.

Q. This was regardless of the experience that the teacher had in teaching? A. Yes, the experience that the teacher had did not appear to be as important a factor in and of itself as those verbal skills.

Q. Was this also true and important regardless of the advanced degree the teacher might have? [67] A. Yes, although these other factors, in particular the education of the teacher, were not unrelated to the child's achievement; just that they were not as highly related as the verbal skills.

Q. Did you find, also, that this verbal skill was the overlying or important—

The Court: Beg your pardon? Keep your voice up, too.

Mr. Ris: All right.

Q. —that the verbal skill was the most important, again, regardless of the race of the teacher or the ethnic origin of the teacher? A. Yes.

Q. So that the race or ethnic origin did not make the difference that the verbal skill did? Correct? A. That's right.

Q. Now, in your study and your conclusions, Dr. Coleman, have you differentiated the predominantly white schools by socioeconomic class of the students attending those schools? A. We haven't classified the schools simultaneously by—well, if possible, let me start over again.

Q. Go ahead. A. Could I ask you repeat the question because I think—

The Court: Have you isolated schools in your study [68] upon the basis of racial or of cultural and economic deprivation?

The Witness: Yes. We certainly have.

The Court: You have made studies that were based upon this? This matter, regardless of race?

The Witness: Yes.

The Court: I think that's what he's leading to.

Q. That's exactly what I'm leading to. And, regardless of the race, if it's a low socioeconomic homogeneous neighborhood, you find low achievement? A. Yes.

Q. And that is true regardless of the racial composition of the school, if it's a low socioeconomic area? A. Yes.

The Court: Well, that's a problem for the legislators or the school board; not for the Court. In other words, there is no—according to you, there is no discrimination based upon race or color or national origin. The discrimination, if any, is based upon poverty. And that may not be anything a court can do. I mean, there is no constitutional deprivation.

The Witness: Two things have to be distinguished. One is the deprivation which arises to a child from his own background and the other is the deprivation which may accrue to him as a consequence of the backgrounds of the other [69] students in the same school that he is attending, and the research that I was reporting found both of those factors to be important in a child's achievement; the first being more important, but the second not being negligible.

The Court: Well, if you have a school that is 100-percent white but is economically and culturally de-

prived, why, its level would be just as low as one that is 100-percent black.

The Witness: The results of the research would say that a child in that school would be suffering lack of equality of educational opportunity as a consequence of the other students in the school, independent of the fact that it was white rather than black.

The Court: I thought that's what you said.

By Mr. Ris:

Q. Now, in addition to the family background of the child—the neighborhood background of that student is also of powerful impact? A. The survey that we carried out did not distinguish between the composition of the neighborhood and its effect and the composition of the school and its effect. The major reason it did not was because most schools—the composition of many schools, most schools, is similar to the composition of the neighborhood itself.

Q. Well, then, Dr. Coleman, we end up with the general conclusion that there are many factors, social and economic [70] factors that determine a child's environment and it has just a tremendous effect on how he is going to achieve in school, is that correct? A. Yes, I think that would be a—

Q. And I would gather then that we conclude that the schools have to take that child as he is and that we have very little impact on him? A. Well, I wouldn't conclude that because I would conclude that the schools, insofar as—well, the schools which themselves have a certain social composition and thus constitutes a certain environment, do either reinforce his family background environment or act apart from it. Insofar as they do reinforce it and insofar

as he does come from a disadvantaged background, then I think the schools do exercise a kind of—in a sense a depressive effect in that regard.

Q. Then the search at the moment—the search of the sociologists and educators and all is how to find a program within the school that is at least in part going to offset this socioeconomic background to this child—that the child is subject to up to this point? A. Well, that would be the strategy, to carry out such a search. At the same time, the social composition of the schools has been shown to be important and this social composition of the school is in itself a factor which then [71] either releases the child from this background environment or fails to do so.

Q. What happens when the child gets out of school and goes back home to his home in the neighborhood environment? Does he have some regression? A. Well, I think two kinds of questions can be asked. One is, what happens to the child? Well, I'm sorry. I thought you mean after the end of school. I think I misunderstood the question. I mean, when he leaves the school during the—

Q. Right. And in the summer vacation. A. There is some evidence now, particularly during summer vacations, that there is a strongly depressive effect upon, for example, Negro children, whether it's neighborhood or home or whatever, but during the summer period.

Q. Dr. Coleman, you were quoted in a recent Senate hearing as expressing an opinion that children should have some experience in a psychological minority environment and some experience in a psychological majority environment. What do you mean? Did you make such a comparison? A. Yes, I did. If I were designing an educational experience for a child, I would certainly include both these

kinds of experiences; the experience of being in a psychological majority and the experience of being in a psychological minority. I think both of these are quite important. Now, [72] these are independent of the question of what is the kind of environment that is most conducive to learning cognitive skills. These have to do with the types of environment that affects a child's social attitude and his sense of self-esteem and things like that, and so I was referring to those when I raised the question of being in a psychological minority and in a psychological majority.

Q. Would such a plan be consistent with a child spending part of this time in his homogeneous neighborhood school and part of the time in an educational center where he could be a minority there as compared to a majority elsewhere? A. Yes, I think that would certainly be consistent. Now, the impact upon his cognitive skills would depend really upon the proportion of time in those two environments.

Q. Did you express in your opinion that an ideal or an optimum would be about 50 percent each way? A. I am not sure what I said in that.

Mr. Ris: That's all we have at this time.

* * * * *

[80] * * *

Redirect Examination by Mr. Greiner (Cont'd):

Q. Doctor, would you report to us, please, on what you learned from your conversation with the Washington office? A. Yes. I'm sorry if my fears were unfounded and—well, I'm happy that my fears were unfounded and the Office of Education—it was indicated that the proscription was against releasing any data on particular schools or school districts which had participated, and not against indicating

[81] which had not. The Denver school system was not drawn in the initial sample of the schools which were sampled or school systems which were sampled for the survey. It had a probability of being drawn but it was not drawn. So it was not part of the survey.

Mr. Greiner: That's all we had from Dr. Coleman, Your Honor, unless you have further questions.

The Court: No.

(Witness excused.)

Mr. Greiner: Our next witness is Dr. Neal Sullivan.

NEAL SULLIVAN, a witness called by and on behalf of plaintiffs, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Greiner:

The Court: Give us your name, address and profession.

The Witness: Neal Sullivan, 287 Harvard Street, Cambridge, Massachusetts.

By Mr. Greiner:

Q. Dr. Sullivan, have you compiled a resume of your experience and so forth? A. Yes, I have.

Q. Handing you what's been marked for identification as Plaintiff's Exhibit 513, I ask you if that is your resume? A. Yes, it is.

[82] Mr. Greiner: Your Honor, we would introduce it at this time.

Mr. Ris: No objection.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 513 was received in evidence.)

By Mr. Greiner:

Q. Dr. Sullivan, by whom are you currently employed? A. The Massachusetts State Board of Education.

Q. What position do you hold with the State Board of Education? A. I'm the Board's secretary.

Q. And how long have you held that position? A. For sixteen months.

Q. Now, what are your duties and responsibilities for the State of Massachusetts? A. To carry out the policies adopted by the State Board and by the general court and to oversee the operation of the public schools, housing, and 1,250,000 students.

Q. Now, does Massachusetts have a statute requiring the elimination of racial imbalance? A. Yes, they do.

Q. Do you, in the course of your duties, administer that statute? A. Yes, I do.

[83] Q. Can you give the Court some indication of what is involved in the administration of that statute? A. That was a mandate of the general court indicating that when a school—when a single school would have more than 50 percent black students that the local school committee would have to take action to reduce that and keep it below 50 percent.

Q. Now, what kinds of action have been taken by these local school districts? A. Redistricting, reorganization,

pairing of schools, busing students, to the development of educational parks.

Q. Can you give us some idea of the types of programs that are now under way in the public schools of Massachusetts that are directed towards either desegregation or integration of student bodies? A. I think the one that would be the most significant to this Court would be the City of Boston, with approximately the same student population. A large city, but with a similar public school population. The reason for the size of the school population being about the same is that Boston has an extremely large parochial school population, so that I think it's significant that when I am in Denver I talk about what's going on in Boston— Boston is busing students. Boston is discontinuing neighborhood schools. Boston is developing an intricate program with 28 affluent white suburbs. Boston is doing everything that is necessary under the law to desegregate and then integrate its schools. And at the same time the State Department of Education is running an experimental school in the heart of the black section of the City of Boston that is a suburban school, bringing together black and white children.

Q. Now, these integration programs, many of them, I take it, are brought about by the mandate of this state legislation, is that correct? A. Boston was, or the school committee of Boston gained national notoriety for feet-dragging, procrastination, and doing all those thing that many school committees do. A lot of talk and no action. The law certainly stimulated them. I think I stimulated them a little bit, too.

Q. Now, with regard to the transportation of students in Boston, for example, can you tell us what is involved there? How many students are being transported? A.

Boston is now transporting children on an inner city basis to the suburbs to—to 28 suburbs. I would estimate approximately 2,000 students are being moved out of the city every day in what is known as the MEDCO program and a bridge program. That is, blacks going out.

Q. That's one-way busing, is that correct? A. That's one-way busing; out of the city to the suburbs. There is another program in which Boston cooperates [85] with the state when we bus white youngsters into the city now with state money. The state legislature this year has provided funds for that program. In addition, in the City of Boston, using state money, there are black and white children, many thousands of them, elementary, junior high and high school students, being bused to accomplish integration.

Q. Now, is this busing essentially voluntary, Doctor? A. Yes, it is at the present time.

Q. Now, has that voluntary program in Boston succeeded in turning any formerly all-black schools into predominantly Anglo schools? A. No. As a matter of fact, I am critical of the voluntary nature of the program. It still is a program that wouldn't solve the problems of the City of Boston. The thing that is going to solve Boston's intricate racial problems, school problems, is the assistance given Boston in school buildings. Now, there—they are now planning $200 million worth of new schools and this is the thing that is going to make the difference in Boston. I would predict that there would probably be fewer students riding ultimately in the Boston plan. They are building these large educational park-like schools on the periphery of the ghetto, and with Boston's transportation system, the public transportation system, there is a strong possibility that the busing aspects of this will not be of major concern.

[86] Q. Now, how long has the MEDCO program been in existence? A. I think approximately four years.

Q. Has there been any attempt to evaluate the effects of that program on the achievement of minority children being bused into the Anglo schools? A. Yes, indeed, and also achievement of the Caucasian children in the lily-white suburbs. And that research indicated that the black child's achievement improved and that the Caucasian child just went along on a very steady pattern that he has been achieving on for all these years.

Q. What kinds of racial compositions are being achieved in these formerly Anglo schools? A. Well, it's not the significant type we're talking about because we move 2,000 black children out to 28 communities. What happens here is that there is an attitudinal change on the part of white parents. It was not easy. There was trouble in the 28 communities. There was resistance on the part of the white suburbs, but not resistance enough that practical educators didn't go ahead with the program. It was a good program educationally, sociologically and psychologically, so you do what is right and you convince the school committees. You don't have to convince every person in the suburb. If we waited for that we would never have any integration.

Q. Now, the plaintiffs in this case, Doctor, in [87] designing their plan for relief, have really split it into three parts, the first being desegregation and the second being integration. In other words, programs directed for smoothing this transition when you first have the desegregation.

What types of programs have you—have been used in the Massachusetts programs to achieve that transition? A. Well, the Massachusetts, I think, was similar to most states and educational systems. Initially it was a moving

body type of concept and program, assuming that everything would fall into place, And large amounts of money. It was not budgeted by school committees nor the state in order to prepare children, nor to prepare faculty in order to prepare the ancillary services that relate to the child once he is moved. At the present time we're doing better in Massachusetts. We're far from a position that would be worthy of imitation. We have a long way to go. I think desegregation is moving faster than integration and it is certainly the latter goal that we are working toward. Desegregation is just now getting started. Integration is to achieve something that is worthwhile.

Q. Now, you mentioned programs directed toward, first of all, preparing the faculty of the staff. What kind of programs do you have in mind? A. Well, I would have to cite the efforts made in Berkeley where we have a staff of a thousand teachers where we [88] gave that our prime consideration, our prime budgetary effort, which was made in the area of faculty. There would be no sense in integrating children or trying to desegregate if the faculty wasn't ready to accept the child and to accept the philosophy of the program. So, for a period of two years, we put hundreds of thousands of dollars into the Berkeley program and I think overall it might have—well, during the period I was there, it would have exceeded well over a million dollars. It meant a complete retraining of those teachers who were going to be affected, particularly in the elementary schools. It meant taking them out of their lily-white schools and their ghetto schools—taking them away from there. It meant giving them courses in human relations. It meant taking the children, mixed groups with the teachers, to science camps outside of the city where they lived together. We did everything that a good school

system does in order to prepare those teachers who were going to supervise it and carry it out to prepare them for the day of integration.

Q. Now, you have mentioned Berkeley, Doctor. You were, for some period of time, the Superintendent of Schools for the Berkeley School District, is that correct? A. Yes.

Q. Is that the position you held before your current position? [89] A. Yes.

Q. What was the period of your tenure in Berkeley? A. Four and one-half years.

Q. During what years are we talking about? A. 1964 through—to February, 1969.

Q. Now, during that period while you were there—while your were Superintendent of Schools in Berkeley, was Berkeley undergoing the implementation of a plan of integration? A. Berkeley started its integration certainly after I arrived.

Q. Was one of your duties as the superintendent the administration of a program for integration? A. Yes, indeed.

Q. Now, as I understand it, the program in Berkeley was done in stages, is that correct? A. That is correct.

Q. What was the first stage of the program? A. To integrate the junior high schools. There are three large junior high schools, one black, one white and one in between. And the first assignment was—and these were Grades 7, 8 and 9. The first assignment was to break away from the old 7th, 8th, 9th-grade organization and reorganizing them, completely desegregated, on a 7th and 8th-grade basis. And the 9th-grade children in the city, on a single campus, and that completely desegregated the [90] junior high schools with that one act.

Q. Then when did the segregation of the elementary

schools at Berkeley commence? A. Well, actually it went on in pieces during the period of 1964 through 1968. For example, we bused hundreds of black children into the prestigeous lily-white schools in the hills; those nice neighborhood schools, and we conducted that program and carefully evaluated it for a period of three years. It went so well that the lily-white schools and the parents in those schools were prepared to accept completey desegregation of the Berkeley elementary and primary schools and early-childhood schools that was effected in September of 1968.

The Court: What is a lily-white school?
The Witness: All white, Your Honor.

By Mr. Greiner:

Q. So I take it integration of the elementary schools was first undertaken on a pilot basis, is that right? A. Indeed it was.

Q. How many schools were affected? A. All the schools, some black children, and incidentally a cross-section of black children, some slow, medium, some fast; different age groups. The different sections. Some in trouble, some not in trouble. All bused to every single school throughout the Berkeley area. They had—they all had some—

Q. Were any Anglo children bused into the black schools? [91] A. None.

Q. Did those schools then remain predominantly black? A. They did.

Q. What is the racial and ethnic breakdown of the Berkeley school population? A. Forty-three percent black, five percent Chicano and fifty-two percent white.

Q. There is some Oriental there, is there? A. Yes, and as a matter of fact, I guess I gave too many of the Chicanos

in there because we would have to add Orientals in that group.

Q. Now, as I understand it, the chronology of the integration program was to start at the junior high school level first. Was that your own choice? A. No, it was not. If I had complete freedom to integrate a school system and I, as superintendent of schools, couldn't expect that—but, If I had, I would integrate the early childhood and kindergarten and the first grade first. And not junior high schools.

Q. What's the reason for that? A. The great payoff is the earlier you do it the richer the reward. Very difficult to integrate thirteen, fourteen, and fifteen-year-old students. They have their minds set. They have attitudes that have been reinforced by living in isolation for thirteen years, and it's tough. [92] As a matter of fact, around the country the integration of our high schools has not worked for that very reason. So the great payoff comes at early childhood education, but it's been rarely tried.

Q. Now, you mentioned that the pilot elementary integration program was studied, I take it, for its results, is that correct? A. That's correct.

Q. Can you describe for us what aspects of the program were subject to the study? A. Everything. It was carried on by Professor Johnson from San Francisco University—San Francisco State. It was Dr. S. I. Hayakawa's school, not San Francisco University. I want to make that distinction. This was the very distinguished professor who headed the program up and he conducted it over a period of three years.

Q. Now, for example, was the effect of the integration upon the minority child's achievement evaluated? A. Yes, it was.

Q. What kind of findings resulted from that evaluation? A. That was the most interesting, I thought, part of the research, other than the attitudinal results and the research on the black youngsters transported into the white schools clearly indicated improvement; improvement in achievement. He reacted to the composition. Many of these [93] youngsters had been straight-A students in the black schools. When they got up into the white school they were straight-C and B students by comparison. And they were receiving poorer marks. Their parents went to the white schools and visited there. We saw to that. It was only fair. They saw the great differences in the two buildings; libraries, rugs, properly-lighted schools, lunchrooms that were adequately staffed as against the large blackboard-jungle-like school that we had along the waterfront. Now, the black youngster went into this school during the daytime and returned to his own home at night and he had—it had a great effect on the siblings in his own home. He had homework to do. He had homework in his other school, too, but he didn't do it for one reason or another, and I think I can advance reasons why he didn't. But when he came home from the white school and when he was going back the next day to compete with whitey he started to do his homework and the results were most satisfying to the parents who suddenly insisted that they wanted the same good things for the siblings in the family and all of the neighborhoods also.

So the results were clearly indicated; changed achievement rates on the part of the black students.

Q. Now, when the elementary school integration program was fully implemented in Berkely, can you tell us—tell the Court, please, just what was involved in that program? [94] A. Well, that was a complete desegrega-

tion program and a great deal of planning went into that. I probably spent, and my staff, most of our time during a two-year period to make sure that it would go well. The first year we spent working with the community orienting and educating them as to the why of integration. And that is a major job. We did the same amount of work with the staff and the same amount of work with the students. This was an around-the-clock preparation. We were, at the same time, analyzing the budget and extrapolating the costs to see what it's really going to cost to integrate a school system; to really figure out honestly what it costs to bus half the students in the city. All those intricate details were worked out. Every answer was given. Meetings were held; radio, television. We printed our own newspaper with our stories.

Everybody was given a chance to come up with a plan. We asked the community this one question: Is integration in America and Berkeley a worthwhile goal? And that was the question. The answer was a resounding yes, and then we asked the community if the answer is yes, would you help us find ways of carrying it out. We had hundreds of plans submitted and finally ended up with two and it narrowed down to one which turned out to be the Berkeley Plan. And that was the one that was implemented.

Q. Now, in describing the Berkeley Plan, what sort of [95] other studies did you have available to you to give you guidance? A. Very little.

Q. When was this plan taking place? What time period are we talking about? A. The period 1966-1967, 1967-1968. Those two years where we made the all-out efforts for total integration of the primary elementary schools.

Q. Were there any other integration programs then in existence which you could use as models for your own pro-

gram? A. No. Riverside had made a good move—Riverside, California, and Camden, New Jersey; Evanston, Illinois; and there were others. We felt that there was one missing dimension that—to the few that made an effort, and that missing dimension was this: they didn't seem fair to all concerned; fair to the whites. They didn't seem to us to be fair to the blacks.

Q. Why not? A. The black child was the only one taking the bus ride.

Q. Now, we were inquiring, Doctor, about the components of the integration program in the elementary schools. What was done? For example, did you simply close the formerly all-black schools? A. No, we didn't. Every school—and there are old [96] schools in Berkeley—they have the same problem that a city has like Boston. Berkeley could spend a hundred million dollars on its schools right now because many of them should be torn down. The interesting thing was that the schools that were in shambles were the black schools. These at one time were white schools prior to World War II. When they were finally taken over completely by the blacks, no changes were made. The library, cafeteria, fluorescent lights, the rugs went into the white schools. Also, the teachers who were more experienced seemed to follow the white students and not the black child, and instead of having trees and grass, we had asphalt jungles on the playgrounds. It was similar to those stories that we can read about in the inner city school. Berkeley was no exception. The blacks took over old schools and they became more old and tired. Very interesting. Once those schools were integrated, the first thing that the school committee had to do was put in a sprinkler system in them. Also, the town took out the incandescent lights and put in fluorescent lights. They did

all these things that should have been done many years before just for humane reasons. And it wasn't until the white child was to enter those schools did the community really make the decision to put the money into them to correct them.

Q. Now, how were these formerly all-black schools utilized? What did you do with the grade level difficulty in [97] the elementary schools? A. We're now talking about the Berkeley Plan and the high schools. They were very small. Some of them were as small as eight groups; cozy neighborhood groups, I like to call them. Some were slightly larger than cozy, but really not big. They were delightful schools for the upper middle class and middle-class people. Those schools had limited playground space and for that reason they became the K-3 schools. All of the white children in those schools, all the fourth-graders, all the fifth-graders and all of the sixth-graders were given bus rides into the black section of Berkeley where those schools were made into middle-class schools, Grade 4, 5, and Grade 6. That basically was the plan.

Q. Now, was that reassignment mandatory? A. Absolutely.

Q. Was that bus ride mandatory? A. Absolutely, until someone wanted to have his mother drive him or get on a bike. He had to go to school.

Q. Now, prior to the implementation of the Berkeley program, how many predominantly white schools were there in Berkeley? A. Well, let's look instead at the predominantly black ones. I would say six predominantly black and fourteen or fifteen predominantly white in that area.

[98] Q. What was the total student population? A. Sixteen thousand.

Q. Now, once you mentioned programs directed toward faculty and staff. What was it that you found that it was necessary for the faculty and staff to learn in connection with this integration program? A. Well, we learned a great deal. We learned, for one thing, that the universities and colleges in preparing teachers for this wonderful profession of mine completely ignored the entire factor of human relations.

Q. What do you mean by human relations? A. You have to live with one another; the social ethics of getting along together, the climate of the community, the respect for the other people; understanding a little bit, at least, about the history; what was true about the black man, really; what happened to him in America; the history of the things; the history of the Oriental; the history of the Mexican; the history of the white man in America.

Q. These were programs of minority history that were taught to the teachers? A. Oh, yes. We had to start over, teachers and students.

Q. Now, were there also minority history programs that were implemented for students themselves? A. Absolutely. We introduced a kindergarten through the twelfth grade, a social science curriculum that included [99] the history and the culture—the cultural achievement, the giants in our history who were black in the world and the —and who had been somehow or other left off the history pages. This was put in the program, yes.

Q. Were you also breaking new ground, Doctor, in the development of those curricula? A. Well, not really. I think most school systems in the country are sensitive to this problem and I am very proud of what's been done from Maine to California in this area. I think educators have been quite responsive.

Q. Now,—so the Berkeley Plan then was a plan premised on integration? A. Absolutely.

Q. Now, prior to the implementation of the Berkeley Plan, what, if anything, in the Berkeley school system was done or attempted to be done to improve minority achievement through compensatory programs? A. Well, the first thing they did—they just about doubled their tax rate in order to have many, many millions of dollars to pour into these black schools.

Q. How long did the compensatory effort last? A. Four years, and it continued. When integration was effected, compensatory education didn't stop. You see, I believe that's the best compensatory education; integration. So all this was a compilation of those things that we learned. [100] For example, the thrust in our curriculum was that everyone is going to learn to read. And we first had to convince teachers that everyone had the ability to read. That was one of those reasons for the in-service program because a lot of teachers look at someone and say he is black and he can't learn, and if you're white you can read. So they work with you. They don't work with the people over here. So we had to do a great deal of work with reading and we all became reading teachers and we mandated reading courses and proper methods courses for our entire staff, and I mean the entire staff, all the way through high schools. Those teachers who were teaching English and social science were expected to become versed in the program.

Q. That was part of the integration program? A. Absolutely. They certainly wouldn't have moved into a desegregation and an integration program without preparing the students for this, and one of the ways to prepare them is to better educate them. Now, the results of our efforts

clearly indicated that we were not going to do it in isolation. It was a missing component, and we found this missing component when we bused black children into the white schools. Different things happened.

Q. Now, before you had the integration program at Berkeley, can you describe for us the types of compensatory programs which were attempted? [101] A. I think Berkeley, like every other community that has a heart, tried everything that had been called to our attention. The major thrust was obviously where the money is, and that is what the teachers insisted upon, is to lower classes—lower class size. That costs money. That costs considerable money. Class size then was given the first consideration. The second was materials and equipment. Hundreds of thousands of dollars for the electronic equipment that most schools have now. Those new books that try to incorporate the black man in our history. The addition of paraprofessionals. In other words, children that the youngsters could identify with. Lots and lots of black administrators at high levels. That's very important. Berkeley gave that top priority. Black principals in white schools. We felt that was only fair. White principals in black schools. We felt that was good. You name it and we tried it.

Q. Did you have cultural enrichment programs, for example? A. Yes, we did. We bought all the records and all those humanity series and Encyclopedia Britannica and others that do just an excellent job. We gave them the ride to the school, and a ride to the park. The ride to the super market, the camp, and a ride to the police station. We wanted them to have—to meet everything.

Q. Did you have programs that were designed to build [102] the minority child's self-esteem? A. We tried.

Q. Well, so you had four years of primary emphasis on compensatory education. What was the impact of compensatory—the compensatory program on the minorities' achievement? A. It had no effect.

Q. What, in fact, did happen? A. We integrated the schools. What happened was overall there was retrogression in all the black schools in achievement.

Q. Now, since the full implementation of the integration program at Berkeley, have there been continuing studies of its impact on minority achievements? A. Massive studies; overstudies. I'm not there any longer, but there they are under the microscope, yes.

Q. What are the results of these studies? A. Of course, they have only been in there sixteen months, actually, of school following the complete integration of the schools. I talked to the superintendent of schools there. I haven't personally seen the evidence. He tells me that—

Mr. Ris: Just a moment. We will object to this. If there is some evidence of this, we would like to see it.

The Court: Sustained:

By Mr. Greiner:

Q. Well, what was it then that led the [103] Berkeley community to decide to change its student assignment policy? A. It was based on—obviously the school committee had an effect on the community. A school committee that was committed to doing what was right for the children and a superintendent who believes in quality integrated education, a staff that cared, and a selling job to that community, and then not waiting for the consensus on the part of a hundred and twenty-five to a hundred and

fifty thousand students. But the school committee voting to do what was right and they did.

Q. Now did you, as the superintendent at Berkeley, feel that there was an educational premise to the integration program? A. If I hadn't, I wouldn't have recommended it.

Q. What other bases were there for the decision to integrate? A. Psychological and sociological and legal and moral.

Q. What about the psychological basis? A. Well, my experience with black children—and I have taught in black schools in the South and when I served there as a superintendent of schools in Berkeley I am a teacher. In meeting these children, it was very clear to me that in their isolation they were completely rejected and psychologically this came through. Inferiority complexes; a [104] feeling that they couldn't accomplish anything. So, psychologically, the experience was devastating and has been for 200 years. Sociologically, we are stereotyping black people. We don't have fair housing in states where I have worked. So they live in ghettos. And that tells the community something. Morally, I think as an educator I should do what I consider is right. And legally I would leave the courts to decide that. I followed what I thought was meant by the Sixteenth Amendment and the Civil Rights Act of 1964.

Q. Now, when Berkeley was considering all these plans before the ultimate plans were actually decided upon, was the alternative of simply increasing the compensatory education and leaving the schools segregated? Was that an alternative? A. Yes, absolutely. And a segment of the community pushed real hard saying that the money that we were going to spend for busing, if it could be put

into programs in the ghetto schools, everything would come out okay. Now, that's the oldest promise of them all, and it was rejected.

Q. During this period of emphasis on compensatory education, what were the costs of that compensatory program? A. Well, the tax rate was $3.25 when I went to Berkeley. In order to do all these things that I talked about doing, the lowering of the pupil-teacher ratio, increasing teacher salaries, improving facilities, using money for transportation, the tax rate went on a vote of the people from [105] $3.25 to 4.75. That happened two years after I arrived in Berkeley.

Q. Well, approximately how many million dollars were spent for compensatory education before the integration program was implemented? A. I would hesitate to give you a figure here today.

Q. But that money was not effective in raising the minority achievements? A. No, it was not.

Q. Now, did you have any experience with regard to using larger class sizes in the integrated school than had been possible in the segregated school? A. Well, we moved during those years into differentiated staffing, into large groups, small group organizations. But we did not, when we went into integrated classes, indicate to people it would save money. As a matter of fact, we retained those pupil-teacher ratios we had introduced into the all-black schools when we totally integrated the system. We continued to have a lot of pupil-teacher ratio in the integrated schools.

Q. Now, what in Berkeley—did you have complete community acceptance for this integration program? A. No, certainly not. There was a recall election during the early years of my administration.

Q. They didn't like what you were doing? [106] A. A

good many people didn't like what I was doing, that's right.

Q. Now, what was done to marshal community acceptance of the integration plan? A. I mentioned earlier that we used the media completely. I had my own radio programs. I had my own column in the local newspapers. We found this effective. But I think probably our most effective communication vehicle was the openness of the school committee meetings, the willingness of the school committee to everything; where to move around the community to hold its meetings in black schools and in Oriental areas and in the hills. It was an all-out effort by not five people nor one person, but an entire staff. The staff, for example, the union, clearly indicated in its negotiations with the school committee that they wanted integrated schools. The students themselves spoke out on the subject. We spent a great deal of time with the clergy; the clergy took a position on the subject. Spent a great deal of time with the Chamber of Commerce that was reluctantly opposed to—initially opposed to school integration; came around in favor of it. The town businessmen. The university staff. We worked with all of them and asked for their support and in the end got it from most of them.

Q. Now then—

The Court: Well, you have had that kind of [107] acceptance of your ideas and your program in Massachusetts, apparently.

The Witness: Your Honor, I think that integration is widely accepted across Massachusetts today. We have pockets of resistance, particularly in Boston and Springfield.

The Court: But you're doing it quite differently in Massachusetts. You're following different patterns.

The Witness: Yes, in a way. As Commissioner of Education, I have several hundred committees for which I am responsible. But I'm continuing to use the media. I'm continuing to ask every school committee to do those things that I did in Berkeley. I have my own study advisory council, my teacher advisory council on a state basis, so I'm doing the same things I did in Berkeley but now on a state basis.

The Court: Well, is this a statewide system?

The Witness: No, it is not, Your Honor.

The Court: How come you can exchange students inside—or to the suburbs?

The Witness: That has to be by vote, Your Honor, with the school committee in the respective suburban community. It has to be by cooperation. And not by edict of the state. I only have persuasive power in this area.

The Court: And so these suburban schools agreed to receive the students?

[108] The Witness: (Nods affirmatively.)

The Court: Is this an exchange program?

The Witness: No, it was a direct movement of blacks into the white schools. There was no exchange. Now there is a movement back in the suburbs into the city, but that's a separate program. The two are not related.

By Mr. Greiner:

Q. Doctor, when you got the minority child into the desegregated school, what did you find with regard to that child's level of achievement? A. It was many years below the level of the white child. We didn't discover that when he got there. We knew it before he went.

Q. Now, what did you do to help the minority child catch up? A. I think the greatest thing we did was to integrate every classroom in the same manner we integrated the city. Every classroom in every building also had to be integrated and in this same degree. They were heterogeneous classes. Berkeley had been a district tracking school system. And it continues to have some of the tracking aspect at the secondary level, although they are quickly eliminating it. But at the elementary level we went from homogeneous groupings to completely heterogeneous arrangements. And in my opinion it had the greatest effect on the black child.

The Court: Well, to what extent? What do you [109] regard as heterogeneous composition?

The Witness: This would be, Your Honor,—

The Court: What do you mean by your telling us that?

The Witness: Children of different intellectual capacities, ranging from the area of the low 90s, the high 80s in the Intelligence Quotients to the 150s and 160s. The wide range. We would not put the low students together. We would not put the fast students together.

The Court: What about racial composition?

The Witness: The same way, Your Honor. In each classroom we used computers to do this. There

would never be in a classroom—and again I indicated at the secondary level there is still a trace of the tracking system that goes on. But at the elementary level the classroom would have somewhere between 30 and 35 percent black children and the other composition, the 55 to 65 percent would be either a combination of blacks and Orientals and Chicanos or all blacks in some cases. But each classroom would have the same racial composition as the school and as the community.

By Mr. Greiner:

Q. Now, prior to the implementation of the integration program, I believe you mentioned that the minority schools in Berkeley continued to have less experienced teachers, is that correct? A. No question about it, that's right.

Q. What about the rate of teacher turnover at those [110] minority schools? A. Three to four times as high as it would be in the white schools.

Q. Now, what had been done prior to integration to try to hold the experienced teachers in those ghetto schools? A. No particular bonus, but instead an effort to provide all teachers with top salaries. That was the thrust at Berkeley. I'm not about to say that teaching in an all-white school is a picnic, but teaching in a black school is just an impossible situation. Both the all-white school and the black school can indeed be challenging, and should be rewarding. So the Berkeley Plan was to upgrade the salaries of all teachers; not some teachers.

Q. Now, did you consider the alternative of additional compensations as an inducement to get these good teachers into the black schools? A. It was considered and rejected.

Q. Why did you reject it? A. It was not fair. It wouldn't

get the job done. Providing additional money in communities that I'm familiar with where there have been insensitive programs, providing transportation in and providing some extra money—it hasn't brought out better teachers. Instead, when Berkeley completely integrated its schools, the greatest reward for the recruiter was that we had 300 applicants for many of our [111] jobs. Teachers like to teach in an integrated setting if salaries are commensurate with the challenge.

The Court: You mean they prefer integrated schools over the segregated schools?

The Witness: No, I didn't mean to say that, Your Honor.

The Court: I'm curious.

The Witness: No. I think teachers—the teachers that I have been employing now for these good many years since moving with the Kennedy administration into the South and recruiting blacks and whites, teachers by and large would prefer teaching in an integrated setting.

The Court: And this is a—there is a tendency for them not to like to teach in a segregated school?

The Witness: Particularly segregated black schools, Your Honor.

The Court: I suppose, like anybody else, they don't like to travel long distances.

The Witness: Your Honor is right. That's one of the reasons.

The Court: They probably prefer to live in more pleasant areas.

The Witness: That's one of the reasons.

The Court: Go ahead.

By Mr. Greiner:

Q. Prior to the implementation of [112] the integration program, can you describe for us the types of classroom discipline problems, keeping the child's attention, and so on, which took place in the minority schools? A. It was similar to those minority schools that I visited and that I have operated all over the country. It just happens that when you put black children together in isolation you bring out the very worst of them, and I think that is true with any minority group. It certainly was true in the Irish ghetto school I attended outside of Boston when I was a kid.

I don't think you bring out the best in people when you isolate them and when you add to their frustrations of their being rejected, and it makes it doubly difficult and so discipline has been hard and it was hard in the Berkeley schools in the all-black schools.

Q. Does this take teacher time away from teaching? A. It makes it almost impossible at times.

Q. Now, what was the experience on classroom discipline problems in the integrated environment? A. Well, this probably was the most satisfying part of the integration program, particularly for the teachers who were coming from the all-black schools. Now, we found for the first time perfect control, perfect relationship; group self-discipline. And there indeed was a controlling and a leveling factor brought into the school, brought into the [113] classroom by the white child. There was no question about that. It became an easier situation in order to conduct an educational program.

Q. Now, approximately how many children are now being transported under the Berkeley program? A. Four thousand.

Q. And in considering this transportation—let's see. That's about 20 percent of Berkeley's school children? A. Yes, and we're talking about the elementary school and that's about half of them. There is no transportation provided for the junior high school youngster. They get there on their own.

Q. I see. So, half of Berkeley's elementary school population is transported? A. Approximately.

Q. Now, when you were considering transportation as an alternative, was this opposition on the school based on safety reasons? A. Absolutely.

Q. What did you find? Did you study the safety factors and the—in the school transportation system? A. An exhaustive study was made.

Q. What was it that you found? A. It was the safest way to get to school.

Q. Was there a—was this a local study or did you go [114] to national sources? A. We started in the State of California and that particular system—we had the complete cooperation of the California State Patrol and we used their research. The year that we studied it they didn't have a single death in the transportation of hundreds of thousands of students under extremely difficult conditions. Miles and miles. The same general observation was made with the national study through the National Education Association. The most dangerous way to get to school was to walk, and the most dangerous place to walk is in your own neighborhood, and the next most dangerous way to go to school was to ride with your mother or father in that second car.

Q. Now, have you also had an opportunity in the Berkeley program to study the impact of integration upon the Anglo child's achievement? A. Yes, indeed.

Q. Were there adverse implications? A. No.

Q. What happened to the achievement levels of the Anglo child? A. Continued on its very steady pattern. No change.

Q. What kinds of racial composition are we talking about in the integrated schools? A. Thirty-five to 45 percent black in every classroom.

[115] Q. Now, from your experience as a school superintendent and in your position with the Department of Education with the State of Massachusetts, you have had some experience in both compensatory programs and in integration programs. A. That is correct.

Q. Do you have an opinion, Doctor, as to which is the most effective way to go about this? A. Yes, I do.

Q. What is that opinion? A. That is the best compensatory educational program that I know of is integration.

Mr. Greiner: No further questions.

Cross-Examination by Mr. Ris:

Q. Are conditions in Boston comparable to those in Berkeley from the school standpoint? A. Public schools, I would say no.

Q. What's the school population in Berkeley? A. As I indicated in the testimony, 16,000.

Q. What is it in Boston? A. Approximately 100,000 of public school students.

Q. What is the parochial school population? A. Close to 50,000.

Q. In Berkeley what is the geographical area of the school system? [116] A. I would estimate in the area of 25 to 30 square miles.

Q. Do you know what the average busing distance is for

a child under the present plan? A. I would estimate around three or four miles.

Q. And what's the general nature of the population in Berkeley? A. Are you speaking now of school population?

Q. No, I'm thinking of professionals and the occupation of parents. A. I would say it's a cross-section of America; lots of poor people and quite a few rich.

Q. Would you say that the average intelligence of a native of Berkeley is higher than that of the average person in the State of California generally? A. No, I wouldn't say that.

Q. You wouldn't say that? A. No.

Q. Do you say that the problems of any school district are the same as the problems of any other school district? A. If they have similar racial compositions, yes, and socio-economic conditions, I think they're very similar.

Q. Can you take one plan for one system and apply it to another? A. No, I clearly indicated that I thought each city [117] should develop its own plan of integration.

Q. Each city has to be handled—has to handle their problems on a case-to-case basis? A. Yes, I think that you involve all the people to come up with the Denver plan.

Q. Now, your first plan in Berkeley, you indicated was a partial plan. How many children were involved in that before you went into your September, 1968, all-city plan? A. Are you talking about the busing of the primary youngsters to the hill schools?

Q. Yes, sir. A. Three or four hundred.

Q. Was it more than 250? A. I would estimate from three to four hundred here today in this courtroom.

Q. Well, you wrote an article in the Harvard Educational Review, didn't you, concerning the Berkeley Plan,

the Berkeley Unified School District? A. I recall writing for the Harvard Review, yes.

Q. Do you remember stating that approximately 250 Negro elementary school children were being transported from overcrowded areas? A. Would you repeat that question, please?

Q. Approximately 250 Negro children have been transported from the overcrowded poverty areas of—

[118] The Court: The question is, did you write that?

Q. Did you write that, sir? A. If it's in the Harvard Review—What's the date of that?

Q. Well, I don't find the date on it. I'm sorry. A. Because 250 might be the right—

Q. Well, did that expand? A. Yes, it did increase as it went along; not to any great degree. I indicated three or four hundred would be tops.

Q. Now, this was your first plan, was it? A. At the primary level?

Q. Yes, sir. A. Yes.

Q. And were these children selected to do this or did the parents volunteer? A. The parents had to be involved.

Q. And they had to volunteer their children to do it? A. That's right.

Q. Do you know whether this was—whether there was any correlation at all to the socioeconomic area of the people who were interested enough to volunteer their children as to the balance? A. Well, we had sufficient volunteers so that we could—

Q. Well, not everyone that volunteered was taken? Did [119] you make any study to determine the family back-

ground of the children who were volunteered? The parents of those who volunteered as compared with those who had not volunteered? A. No, because we felt it was a cross-section of the school but never attempted to find out—

Q. What that—what exactly that correlation might be? A. Yes.

Q. What did you do? A. What did we do about what?

Q. Attempting to determine this socioeconomic background of the family from which each of these children volunteered? A. We determined the socioeconomic background of all children in Berkeley.

Q. I'm asking you, did you do it on an individual basis? A. Yes.

Q. How did you do that? A. By questionnaires to the parents.

Q. And you did that on these 250 children? A. Did it on all the students.

Q. What did you find out? A. A real wide range of socioeconomic conditions in the community.

Q. And then what did you do with that information? A. In selecting the students to become involved in the integration plan, we took a cross-section of them.

[120] Q. And in each instance you actually went back into the child's background and determined what that background was? A. We tried.

Q. What type of questions did you ask? A. I don't remember specifically because I didn't work on the questionnaires.

Q. Did you see the questionnaires? A. I recall seeing them.

Q. Do you recall what the questions were that were included in that questionnaire? A. No, I don't.

Q. But you did not select anyone who had not volunteered through their parents? A. That's right.

The Court: Well, in this busing program—that's a voluntary program?

The Witness: Yes, it is, Your Honor.

The Court: Well, did you design that?

The Witness: No, that was designed by the school committee of the City of Boston.

The Court: In other words, this doesn't represent any change of viewpoint that you had from Berkeley to Boston?

The Witness: No. Again, my powers are persuasive, Your Honor, and this was a voluntary system and in an interim [121] period prior to the erection of these many new school buildings.

The Court: In other words, you still hold the views that you had when you were in Berkeley?

The Witness: Yes, I do, Your Honor.

The Court: But you're not able to put them all into effect in Boston?

The Witness: That's right, Your Honor.

By Mr. Ris:

Q. With respect to the achievements of the pupils in Berkeley, was the district norm higher than the national or state norm before your integration went into effect? A. I think so, definitely.

Q. And so you started out on a higher basis to begin with at all levels? A. Not at all levels, no.

Q. The average? A. It would be higher.

Q. Now, with reference to your—one of your writings—it's impossible to separate the effects of integration and

the effect of the students' social class. How do you analyze the effects of integration? A. In terms of the class a child is coming from. If you would read a little more there—

Q. In the comparison of predominantly Negro schools [122] with the hill school levels, are the foothill schools the ones that already were partially integrated? A. That would be correct.

Q. And in your article you're talking about three schools, the three levels: one, the hill schools which would be under, it says here—

The Court: Then the foothill schools were what? You haven't mentioned those before.

The Witness: This would be partially integrated.

Q. Now, how many were there of the so-called hill schools? A. Well, I would say eight.

Q. How many foothill schools? A. Four.

Q. And the Negro schools? A. Four.

Q. Now, in comparison—and I will go back in the quotes here—in comparison with the predominantly Negro schools with the foothill schools, it is impossible to separate the effects of integration . . .

Now, if you can't make a distinction to the effects of integration and the effects of the students' own social class, as stated in this article, then how do you determine the effects of integration you previously testified to? A. Through the experience that we had by moving the [123] black youngster from the very low socioeconomic areas of the city into the higher socioeconomic areas.

Q. You can't determine the effects of integration after you move, can you? A. That's right.

Q. As you say here, that you cannot separate the effects of integration from the effects of the students' own social class? A. Well, we're talking there about the foothill schools and just as in most communities, thank God there are some black people who make it despite the system.

Q. Lots of people, white people, make it despite the system? A. Indeed. We have a different type of circumstance with black—with the black child responding altogether differently to the environment than the youngster whose family didn't make it and hasn't made it and is in great trouble.

Q. Now, even after these youngsters from the Negro schools moved to the hill schools, was the achieving gap closed between the children that were moved up in the hills and the children who were originally on the hill? A. I indicated that there was progress made; slow progress initially on the part of the black youngsters moving up with no slowing down on the part of the white child.

Q. But you stated in the article nevertheless it [124] remains a considerable achieving gap between the Negro and other students even at the hill schools? A. Indeed, and that's correct. And that's why we can't delay with integration.

Q. Then integration per se is not the only answer, is it? A. I think it's the only answer in America. If we're going to have—

Q. All you do is integrate, and that solves everything? You don't mean that, do you, sir? A. It might not solve everything but, if we have to make some choices here as to what we're going to do in our society, I suggest to you that the top priority I would give would be to give inte-

gration a chance. We haven't given it a chance. That's all I'm saying.

Q. Well, that, in and of itself is not sufficient, though, even under your theory, is it? A. Under the Berkeley Plan, I felt that there were so many indicators in Berkeley after the complete integration that it became a more mature community where people were living together in harmony so that I was convinced that, with that experience and the experience that I had in the South, that indeed it was the answer today. Economy is needed. Everyone has to make a living. We have to have health services. We have to live in decent surroundings. I'm not saying a [125] school is going to correct all these things. It's going to help, though.

Q. That's what I'm trying to get at—that mere integration isn't the beginning and the end. You don't deny that? A. It's going to go a long way, but there have to be other factors involved in America.

Q. Now, also, even under your own theory that integration in the schools has to be—as you say in the article, a massive educational revolution? Right? A. I like that expression.

Q. Well, that's yours, isn't it? A. You bet. I like that language.

Q. You need something more than integration? A. You bet. Massive reform.

Q. Massive education revolution for which community— A. Would you read that?

Q. Certainly there can be no educational—equal educational opportunity in Berkeley or any other place without racial integration of the schools, and this is italicized—massive educational revolution for which community educational centers offer the most promise. A. I'm talking

here about a part of the Volume II: Racial Isolation. That was given to you this morning as an exhibit, in which I wrote one of those articles—one of [126] the suggestions, and it was the—on the educational part. What I'm talking about here is a much larger community center for a single campus where we would bring together larger numbers of children where we would have the libraries, the cafeterias, the gymnasium facilities, the classrooms, the speech teachers, special facilities, the nurses and so forth that you can't have in a small neighborhood school. That's what I'm referring to here.

Q. And this is why you get into that particular type of center, a differentiated staffing as you mentioned? A. Exactly.

Q. So one without the other is still ineffective, is that right? You have to have a continuing thing? A. Well, one without the other is what Berkeley has now because Berkeley doesn't have the other that I'm talking about. They're spending a great deal of extra money educating children in an integrated setting in small schools. Small schools are expensive to operate. And the final Berkeley Plan on my leaving there was a recommendation for a series of educational parks to replace the neighborhood schools for reasons of economy and services.

Q. And that has not been accomplished even at Berkeley, then? A. Not yet.

Q. Now, even beyond that, that is not going to solve [127] all the problems of the disadvantaged youngster, is that correct? A. That is correct.

Q. Still a lot of things that the school district can't do anything about? A. (No answer.)

Q. That has to be done by—it's got to be done by other governmental agencies? A. Let's assume all school sys-

tems will make the massive and the humane effort that Berkeley made and then there would be fewer of these things left out.

Q. Well, you have your own theory in this article. You said that education and reform itself is not sufficient. So I think it has to go beyond the school district for all these problems before all these problems are solved. Isn't that true? A. Indeed it does. Reform has to be a cross-sectional thing in our society.

Q. Now, you talked about Berkeley, that the entire system became engulfed in a reading program; all the teachers at all levels. A. I indicated that, at the secondary level, those teachers, English and social sciences—

Q. Now, this great effort that was done went beyond the normal curriculum, did it not? [128] A. Yes, it did.

Q. And it involved additional programming? A. Yes.

Q. Additional teachers? A. Yes, indeed. Machines, everything.

Q. And how do you distinguish between those inputs from compensatory education? A. They are part of compensatory education.

Q. Oh, they are? A. Yes.

Q. So they're still needed, are they? A. Indeed.

Q. Even under your theory? A. Yes.

Q. To what extent did you have student mobility, particularly in the core area schools in Berkely? Was it a major factor? A. Which school?

Q. In the core area. A. Extremely high mobility.

Q. Did you find a decrease in mobility after the integration? A. We found that to be true but we also found another phenomena that is understandable. We found the heavily-populated blacks in Oakland and Richmond segregated schools [129] falsifying records and doing all sorts

of things in order to get into the Berkeley schools. I couldn't blame them. I didn't like at all the falsifying of records but I could understand what they wanted.

Q. You got an influx then? A. Yes, we did.

Q. Now, you talked about an increase in the tax rate. Much of that went for things that were other than strictly compensatory education, did it not? A. I would say yes.

Q. Capital improvements, increased teacher salaries, increased costs of doing business, so to speak? A. Indeed.

Mr. Ris: That's all.

Redirect Examination by Mr. Greiner:

Q. Dr. Sullivan, it's a fact, is it not, when Berkeley was considering its integration program, that there were great fears expressed that integration would lead to white flight? A. Yes, indeed.

Q. Now, you mentioned there was an influx of blacks into Berkeley. Was that also—was there also an influx of Anglos? A. That probably was the most satisfying of all the [130] phenomena that occurred around the Berkeley Plan. You see, Berkeley, since 1948, had started to lose its white population. The mayor of the city was concerned concerned. It was not until Berkeley took the first initial steps to desegregate its schools did the white migration stop and turn around, and during my years in Berkeley there was an increase in the white population. I'd like to make it very clear in answering the question from the defense about the increase in the black population—we had to be extremely rigid and find those black children who were illegally entering the school system and asked them to leave. But there was a stop in the white movement out and there was a slight increase in movement in.

Mr. Greiner: No further questions.

Mr. Ris: Nothing further.

The Court: I gather from what you have said, Doctor, that you believe that the isolation of the black students is one major problem in the inferior education?

The Witness: I definitely do, Your Honor.

The Court: And then you do not agree with Dr. Coleman's thesis that the big problem is economic and cultural deprivation and that the solution is to integrate the deprived with the culturally-adequate group?

The Witness: Judge, as you report what Dr. Coleman said, I will accept it. I was in the courtroom earlier this [131] morning and I must say I couldn't hear Mr. Coleman. I'm sorry.

The Court: I may be oversimplifying what he said.

The Witness: If that's what he said, then I would enter a demurrer. I think the big problem in education is the isolation of black people.

The Court: I believe he said that, if you had a school populated by blacks, if 50 percent of them were from homes that were economically and culturally secure, that the result would be just as good as if you had 50 percent of students from white homes that were middle-class homes.

The Witness: Your Honor, I have read that and I suggest to the Court today that what we should start to do is become equally interested in at least what happens to the attitude of these people. Let's assume that making—I am concerned about their hardened attitude about their brother whites and yellows and browns. I have supervised black schools and I can

report to you that we had some singular success in achievement, but I can report to you that the attitudes didn't improve. Instead they worsened, and that concerns me even more than achievements.

The Court: I can understand that. What do you think you do to accomplish this improved atmosphere? Do you stimulate the student to do more work? You say there is an attitudinal change.

[132] The Witness: Absolutely, and you put your finger on it, Your Honor. The word is stimulation. Indeed. And it is stimulated and I think I heard you say this morning that the black man is competitive when he is given that opportunity.

The Court: I don't think there is any question about that.

The Witness: I thought I heard you say that. And I agree with you. And I suggest that, if we provided him with those opportunities to compete against the white student, that the—that his own level of achievement would richly reflect the competition. The achievements would change. We know this to be true, if they were given that opportunity.

The Court: Well, am I to understand that you took a couple of years to get this program really set up and off the ground at Berkeley?

The Witness: Yes, Your Honor. It took two years in order for me to guarantee to the parents that there would be something good at the end of the bus line and that I could guarantee that for them. It took two years for us to do it, to complete everything.

The Court: And in Boston, when you get these new facilities completed, do you expect to carry out

the same kind of a program you have had in Berkeley?

The Witness: Yes. We're moving toward that direction in Boston now, retraining of staff, and there is [133] real receptivity in the city and in the staff in preparation of programs.

The Court: But your view is that there should be a combination, apparently, is that correct?

The Witness: Absolutely.

The Court: That people now say there ought to—they ought to have a home school and a campus school as well?

The Witness: No, I'm not saying that. My experience here indicates that that is doubly expensive and I oppose that type of arrangement.

The Court: How would you work it out, then, for them to have the exposure?

The Witness: I think the way that I worked it out in Berkely and that it is being worked out now in Boston and in innumerable other communities throughout the United States, where a child is given a single campus and on that campus—it's large enough to have a multiracial setting with different types of facilities that that student and his fellow students need, and I think the best arrangement is to do that—the best way to do that is by keeping them on a single campus, on a permanent basis. That doesn't say you don't give them the rich rewarding field trips and exposures. You do that, Your Honor.

The Court: But this is a long-term program, this campus idea, isn't it? You can't use the same facilities that [134] you have at present.

The Witness: You can use some of the same facilities, Your Honor, but again you're being very perceptive and I have strongly recommended that the state and federal government provide our cities with dollars so that school administrators can built these facilities without pushing harder on local bond issues and overburdening local property taxpayers on the tax basis. I think we need state and federal help for these buildings and I think we're going to get it. We have it in Massachusetts now.

• • • • •

GEORGE BARDWELL, a witness called by and on behalf of plaintiffs, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Greiner:

[135] The Court: Please state your name and address.

The Witness: George Bardwell, 22801 South Harrison, Denver, Colorado.

The Court: You're the same George Bardwell who has testified before and has been qualified, is that right?

The Witness: I have.

By Mr. Greiner:

Q. Dr. Bardwell, in front of you on the witness stand you will find a stack of exhibits, the first of which has been marked for identification as Exhibit 509. Would you please describe Exhibit 509 to the Court? A. Yes, Exhibit 509 is a table showing the twelve of what are designated elementary schools showing the enrollment data by

the Anglo percentage, Negro percentage and Hispano percentage; teacher experience data for 1968 for new teachers, probationary teachers and median experience; and percentile median achievement for 1968, Grade 5.

Q. Now, with regard to the percentile achievement of the schools which to date the Court has designated, how many such schools are there, first of all? A. Excuse me?

Q. How many Court-designated elementary schools are there on that chart? A. There are twelve.

Q. And what is the source of the data on Exhibit 509? A. The source of the data, the Defendants' Exhibit F-1, [136] Plaintiffs' Exhibit 246, 247 and 377.

Mr. Greiner: Your Honor, we would offer 509 at this time.

Mr. Ris: No objection.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 509 was received in evidence.)

Q. Dr. Bardwell, referring to Exhibit 509, how many of the Court-designated schools are achieving at below the 25th percentile? A. Eight.

Q. Now, next in front of you is what has been marked for identification as Plaintiffs' Exhibit 510. Would you please describe that to the Court? A. Yes. Exhibit 510 shows ten target schools which we have classified as Plaintiffs' target schools, showing the ethnic enrollment, teacher experience data, and the median achievement.

Q. And the source of the data on 510 is the same as the source of the data on 509? A. Yes.

Mr. Greiner: Your Honor, we would offer Exhibit 510 at this time.

Mr. Ris: No objection.

The Court: It will be received.

[137] (Whereupon, Plaintiffs' Exhibit 510 was received in evidence.)

Q. Now, first of all, Exhibit 510 shows certain of the achievement data for these target schools, is that correct? A. Yes, it does.

Q. How many of these target schools are performing below the 25th percentile? A. Every single one of them.

Q. And Exhibit 510 also makes comparison, does it not, between the schools which have been designated by the Court and these target schools? A. Yes, it does.

Q. Now, what is the comparison with regard to the teacher experience information? A. In the case of the Court schools, the percentage of new teachers for the twelve Court schools is 23 percent. In the case of the ten target schools the percentage is 20.

Q. What is it for probationary teachers? A. For probationary teachers for the Court schools, 48 percent, and for the target schools, 42 percent.

Q. And is the city average also given? A. It is.

Q. What is the city average of the probationary teachers? A. Thirty-seven percent.

[138] Q. What about the median years' experience? A. In the case of Court schools, 3.5 years. In the case of the target schools, 3.7 years, and in the case of all schools in the city, all elementary schools, 5.6.

Q. What is the comparison between the achievement levels of the target schools and the Court schools? A. For the twelve Court schools, 21 percent percentile at Grade 5 and for the ten target schools, 20 percentile.

Q. And again, achievement at the 20th percentile means

what? A. It means that throughout the United States 80 percent of the children at the Grade 5 on this test are performing above that particular level.

Mr. Ris: If the Court please. Excuse me. When I said no objection to this, I have no question as to its authenticity or correctness of the figures. I do object to what's being done with it now and with the questions now being asked Mr. Bardwell to inject these other target schools into this particular hearing and, as I said, as I said in my opening statement, it was our position this was going only to the Court-designated schools. I just want to make my record on that, please.

The Court: You're not asking me to retry the issues that have already been tried?

Mr. Greiner: No, Your Honor. The Court has made [139] a distinction which the Court in its opinion designated as being tentative in nature. We're taking the Court at its word and we are introducing evidence to show that there really is no logical basis for distinguishing between the schools which you have already selected and these remaining target schools. That's certainly the purpose of this proof.

The Court: Well, we will permit you to make your record, anyway.

Q. First of all, Dr. Bardwell, you will recall that in the opinion of March 21, the Court used a rule of thumb of between 70 to 75 percent composition of one minority group. Do you recall that? A. I do.

Q. Now, referring to Exhibit 510, are there any schools

among plaintiffs' target schools that meets that criteria? A. Yes, there are.

Q. What is the racial composition of Smedley Elementary School? A. Seventy-seven percent Hispano.

Q. And what is the racial composition of Elyria Elementary School? A. Seventy-three percent Hispano.

Q. Are these both low-achieving schools, also? A. They are.

Q. And what is the achievement level at Smedley? [140] A. Nineteen percent.

Q. And what is it at Elyria? A. Twenty-three percent.

Q. And what is the Anglo population as shown by Exhibit 510 of Gilpin School? A. Gilpin, seven percent.

Q. Gilpin? A. Excuse me. Three percent.

Q. Crofton? A. Seven percent.

Q. Ebert? A. Eleven percent.

Q. Wyatt? A. Two percent.

Q. Boulevard? A. Thirty percent.

Q. Garden Place? A. Seventeen percent.

Q. Wyman? A. Twenty-eight percent.

Q. Have you given it for Smedley and Elyria? A. A. Twenty percent for Smedley and twenty-seven percent for Elyria.

The Court: What are you reading from?

Mr. Greiner: Exhibit 510, Your Honor.

[141] Q. So all of these target schools—have you combined the Negro and Hispano enrollments? What is the percentage composition of the combined enrollment? A. All of these would have 70 percent or the greater minority enrollment.

Q. Now, you have what's already in evidence as Exhibit

883 in front of you. Now, I'd like to direct your attention, Dr. Bardwell, to the tables in back of Exhibit 883 that contain socioeconomic data.

The Court: What exhibit is this now?

Mr. Greiner: 883, Your Honor.

Q. Now, the tables in Exhibit 883—do they give socioeconomic data by school? A. They give mean family income from the 1960 census.

Q. And that is by school? A. It is by school.

Q. Can you find the data there for Gilpin School? A. Yes.

Q .What is the mean family income of Gilpin? A. $3,680.

Mr. Ris: If the Court please, this is all ten years ago, the 1960 census. We don't think that's relevant with the changes that have happened since then.

The Court: It has very little probative value.

Mr. Greiner: Well, Your Honor, it gives us a starting [142] point and then we're going to try to update it to the best of our ability based on other data.

The Court: Are you going to go through all these schools with this?

Mr. Greiner: Just ten of them. It won't take long

Q. What is the city median family income? Do you have that, Dr. Bardwell? At that time? A. $6,400.

Q. And what was the family income at Crofton? A. $3,630.

Q. At Ebert? A. $3,608.

Q. Wyatt? A. $4,050.

Q. Boulevard? A. $5,355.

Q. Garden Place? A. $4,830.

Q. Wyman? A. $4,606.

Q. Smedley? A. $5,008.

Q. Elyria? A. $4,500.

Q. And Swansea? [143] A. $5,590.

Q. Were any of these schools of this socioeconomic of family income—were any of these schools up to the city-wide average? A. No, they were not.

Q. Now, I wonder if you could step to the board here and direct your attention to the map that's been placed there.

Mr. Greiner: This would be Exhibit 514.

Q. What is Exhibit 514? A. It's a map of the junior high school boundaries in September of 1967, as shown by this map by the blue dots—these are the Court-designated schools.

The Court: Who prepared this plan that you are offering? Or are you just trying to refute what was in my opinion? Of offer some rebuttal or something of that sort?

You make an offer of proof. I mean, just for the record.

Mr. Greiner: I'll be happy to, Your Honor.

The Court: We will not have any of this. There's no point in retrying the case. I'm not going to do it. We spent all those weeks, you know, trying the lawsuit. And you had full opportunity and, too, I don't want any more testimony based upon the testimony received this morning, you know, that would supplement the main case. You follow me, don't you?

I mean, that would support the position taken by Dr. Coleman [144] or by Dr. Sullivan. Because, really, it goes to the basic issues that we tried, this material.

Mr. Greiner: Well, perhaps I misread Your Honor's opinion of March.

The Court: I didn't think we were going to go over all that material again, you know. We developed a tremendous record of factual material that you can refer to if you like. But I didn't—the purpose of the hearing now is for the most part to receive any suggested remedies that you wish to offer, you know, so that we can enter a final judgment in this case. It won't be too final, I don't think. I think it's going to be temporary final. But, I mean, it doesn't look to me like we're going to wrap up this in one fell swoop. We do the best we can.

Mr. Greiner: Your Honor, the major thrust of the plaintiffs' evidence at this hearing is going to be directed toward remedies. But, as we said on April 16th in our first preliminary memorandum, we did feel that in the Court's opinion of March 21 that the Court had indicated that it had tentatively selected a criteria of racial composition and the Court at least in my mind indicated that it had not closed its mind to this question.

The Court: Well, I just don't feel that we should reopen the whole case. Do you follow me? Do you know what I'm talking about?

[145] Mr. Greiner: We are not reopening the whole case. We're only talking about these ten additional schools, Your Honor.

The Court: Well, I say to you that—you make your offer of proof and maybe we can get some enlightenment from that as to what you have in mind.

Mr. Greiner: What we have in mind is, Your Honor,—in our offer, is as follows: that the evidence which is already in the record in this case regarding the achievement in these target schools, regarding the racial composition of these target schools, regarding the teacher experience of these target schools, all shows that the educational situation in these ten additional target schools is exactly as bad as—

The Court: Oh, I agree with that, but the record shows that. If you will remember in my finding I said that we were limited under the pleadings and the issues developed to attack racial segregation. Isn't that right?

Mr. Greiner: That's right.

The Court: In other words, what Dr. Coleman said today, namely, that desegregation of poor people and deprived people creates this problem. Well, this is a problem that I cannot deal with. It's not a Fourteenth Amendment problem, you know. I don't think I can. If it doesn't deal with discrimination based upon race or national origin or creed. But, if it is discrimination based upon poverty, this is not [146] open to me. I mean, in and of itself. That's what Coleman said.

Mr. Greiner: I believe what Dr. Coleman said, Your Honor, is that—

The Court: Am I wrong about that?

Mr. Ris: No. Counsel, in his proposed—

Mr. Greiner: I'd like to be able to finish my offer of proof.

The Court: That's what I thought he said.

Mr. Ris: That's what he said. He is merely arguing now; not even suggesting additional proof. It's not even an offer of proof.

The Court: Well, we will see what he's got.

Mr. Greiner: What Coleman said this morning, Your Honor, was that the factor in school which contributed most to the inequality of educational opportunity was the homogeneous peer group. We asked Dr. Coleman if there is any difference in the kind of peer group environment created by Negroes as compared with Hispanos. He said no. If there is a racial basis for saying that a school that is 75 percent of one ethnic minority is a segregated school, that same basis obtains if it's 35 percent of one minority group and 40 of another. We can see very clearly that the effects are exactly the same. Those children got in those schools—

The Court: All right. That is all argument based [147] upon the evidence that is in the record now, I suppose. I mean, you introduced evidence at length and in depth concerning the conditions in these schools, all of them.

Mr. Greiner: That's correct. We haven't correlated the socioeconomic data which is already in the record and that was the purport of my last question to Dr. Bardwell. In words, there is a very strong correlation in this city between socioeconomic status and race and ethnicity. You can talk about the upper-middle-class black school but when we look at the schools that are the subject of this presentation, there are no such schools. They don't exist.

The Court: Well, I suppose that you might classify the Northeast Denver schools along this line, some of them.

Mr. Greiner: Well, but we look at the achievement level of those schools—we see then that there is no good achievement in those schools.

The Court: Well, then, Dr. Coleman's testimony doesn't come out. That's the only thing I can say.

Mr. Greiner: Perhaps it doesn't on that one point.

The Court: What do you propose to have Dr. Bardwell testify to?

Mr. Greiner: Well, we will get to the 1960 census data in the record. Dr. Bardwell has also conducted a study, I believe in 1967, dealing with the socioeconomic conditions of this north central portion of the school district and in [148] this portion many of these target schools to which we're having reference. We do have some updated socioeconomic data. That was all I was seeking to put through this—

The Court: Do you have an exhibit on that that he has prepared?

Mr. Greiner: We're going to make one, Your Honor, right here by just labeling the schools for which we have this additional data.

The Court: What is the story? What's he going to say?

Mr. Greiner: That the socioeconomic status of this neighborhood is still very, very low in terms of the rest of Denver. These are still low socioeconomic schools, just as they were in 1960.

The Court: That the condition is the same as that which he has read from Exhibit 883?

Mr. Greiner: That's correct.

The Court: Substantially?

Mr. Greiner: Relatively, yes.

The Court: It hasn't changed on any of these schools that you have just mentioned?

The Witness: Schools we're talking about here and the area that comprises a good portion of the target schools that we have in mind, that this is in the area that is precisely in the middle of the so-called census poverty area [149] of the city in which I was consultant to the mayor's office on the survey of that particular area to determine certain socioeconomic characteristics, educational characteristics of these residences. This is the so-called poverty area of the city. And it is in that area—The results of the study are published on poverty and jobs in Denver through the mayor's office and I just simply wanted to point to the fact that half of the target schools that we're talking about here are located precisely in the middle of this poverty area.

The Court: Okay.

Mr. Greiner: May we proceed with that, Your Honor?

The Court: Well, doesn't that pretty well wrap it up? What you're saying is that there is no substantial change relatively.

The Witness: What I'm saying, Your Honor, is that it is peculiar in a way that, if one were to look—if one were to lay the red dots on the northern area of the city here, which is called the poverty pocket of the city, that one would find five of the target schools in that area and that the schools that we have designated here as Court schools, while lying also in that poverty area, that these lie in the middle of the worst of it.

The Court: What do you want him to do? Mark up the map now?

Mr. Greiner: Yes, just to indicate these other [150] target schools and their locations.

The Court: All right. One more map isn't going to kill us.

Mr. Ris: I'm not sure, Your Honor.

By Mr. Greiner:

Q. Would you identify, please, the schools that you are marking? A. This is Garden Place and—

The Court: I'll take judicial notice of the fact that it is the poverty area.

A. This is Boulevard, and this is Crofton. This is Gilpin and this one is Wyatt. This one is Swansea. This one is Elyria. This one is Wyman and this one is Ebert.

Q. Thank you, Doctor.

Dr. Bardwell, did you participate in the drawing of the plans of the plaintiffs relating to the desegregation of the Court-designated elementary schools? A. I did.

Q. Turning you attention next to Plaintiffs' Exhibit 501, which is before you, would you describe for us what Exhibit 501 pertains to? A. Yes. It is a proposed plan which we have designated Plan 1 for desegregating the Court's elementary schools.

Q. Would you advise us, please, of the general concept of Plan 1? What is the basic premise? A. This plan is based—

[151] Mr. Greiner: The corrections were in the defendants' plan, Your Honor.

This begins at Page 12 of our memorandum.

Q. Do you have the question in mind, Doctor? A. Yes, I do. This plan desegregates the twelve designated Court schools by use of exchange transportation with seventeen other elementary predominantly Anglo schools. By retaining each of the Court schools as well as the seventeen Anglo schools as Grades K through 6— The way in which this plan was constructed is roughly as follows: Anglo schools were selected which had approximately 85 percent Anglo enrollment and over in 1969, and a second criteria, those schools whose capacity could accommodate the exchange transportation with the Court-designated schools, and, three, the Anglo schools were selected such that the racial composition of the schools, once the exchange transportation was finished, would not depart by more than one standard deviation from the city average. In addition to that, the plan incorporates the feature that, after the exchange transportation is completed, that the capacity of the 29 schools that are involved would not depart by more than ten percent of full utilization of the plan. The next step was to compute mileages from each of these schools to every other school and construct tables that were useful then for the computer. This information was transferred to punched cards and a rather complex computer [152] program was written and developed for the solution of what is called a linear program transportation solution for these 29 schools. The solution is given in Exhibit 501-C.

Q. Now, the results of this linear program and the transportation plan—how does this plan affect the distance traveled by children under the transportation plan? A. No other conceivable plan of transportation would have less transportation than what this plan has. It minimizes the total amount of transportation and hence inconveniences of all students.

SE IN CENTER

Q. What about the effect of the cost of transportation? A. It minimizes the total cost.

Q. What criteria was used in terms of the composition of the school population resulting from the cross transportation? A. The criterion was adopted that no school after the proposed plan had been effected would depart from this city average by more than one standard deviation.

Mr. Greiner: Your Honor, at this time we'd like to offer Plaintiffs' Exhibit 501, which is really just a narrative description of this first alternate plan.

The Court: Very well. Do you have any objection?

Mr. Ris: No, sir.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 501 was received in evidence.)

[153] Q. Now, again, with respect to this first plan, Exhibit 501, looking at Exhibit 501, what is the range of Anglo composition which will result from the implementation of this plan at the affected schools? A. This shows that the minimum percent Anglo composition at any one of the affected schools is 54 percent.

Q. What is the maximum Anglo composition? A. Sixty percent.

Q. Now, how many schools are going to be affected should Plan 1 be adopted? A. Twenty-nine.

Q. And of those 29, there are 17 Anglo schools? A. That's right.

Q. And the 12 Court-designated schools? A. That's right.

Q. How many students will have to be transported under Plan 1? A. 8,380 students.

Q. And do you know how many of those will be Anglo? A. Yes, 4,284.

Q. Do you also have a breakdown of Negro and Hispano? A. Not separately, but as combined, 4,900.

Q. So roughly the same number of minority students and Anglo students? A. That's right.

[154] Q. Now, what effect would the implementation of this plan have upon the twelve mobile units now located at Smith Elementary School? A. The plan contemplates that the capacity utilization of Smith Elementary School would be 106 percent, and of the permanent facilities, and the mobile units would be withdrawn.

Q. There were mobile units at others of these minority schools affected by this plan—does the plan contemplate their removal, also? A. They would be removed as well

Q. Now, does the plan address itself to overcrowding which exists in some of these schools? A. It does.

Q. And would you describe that, please? A. Yes. Of the Court's elementary schools which were overcapacity in 1969, Bryant, Webster, at 112 percent; Fairmount, 131 percent; and Greenlee at 116 percent, all utilized to within ten percent of the rated capacity. In fact, in those schools it would be less than that: 105 percent and 106 percent and 105 percent respectively.

Q. Now, those percentages which you have just given are shown on Plaintiffs' Exhibit 501-A, are they not? A. They are.

Q. And how is Exhibit 501-A—how was it developed? A. This is one of the solutions of the linear program [155] and just merely a summary of the characteristics of the schools after Plan 1 had been implemented.

Mr. Greiner: Your Honor, we offer 501-A at this time.

Mr. Ris: We have no objection.
The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 501-A was received in evidence.)

Q. Now, we have talked about the remedying of overcrowded schools. What, if anything, did the plan consider with respect to the underutilization of certain of the schools? A. Of the twelve elementary schools which were designated by the Court, in 1969 Columbine was 80 percent. Elmwood realized its capacity at 87 percent. In each of these cases implementation of this plan in these schools would be utilized to the extent of 94 percent in each case. Now, these other schools—

Q. Now, next calling your attention to 501-C, would you describe for us what 501-C is? A. 501-C is a detailed transportation schedule for the sending and receiving Anglo students and the sending and receiving of minority students. It depicts the number of students to be transported from each of the schools, each of the Anglo schools, and indicates how many of those students are to be received at each of the minority schools.

[156] Mr. Greiner: Your Honor, we offer 501-C.
Mr. Ris: No objection.
The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 501-C was received in evidence.)

Q. Now, have you also prepared an estimate on the operational costs? A. I have.

Q. And this is the transportation program? A. Yes.

Q. Is that shown on what has been designated Exhibit 511? A. Yes.

Q. Would you tell us, please, what the source of the data in 511 is? A. For proposed Plan 1, the estimated maximum cost—

Q. Pardon me. What is the source of the data? A. Excuse me. The source of the data is based upon a memorandum dated April 10, 1968, to the Superintendent, Dr. Gilberts, from Howard L. Johnson entitled Daily Average Number of Pupils to be Transported . . . in the 1968-69 school year. The second source is the volume, Transportation in Denver Public Schools, dated April 1968, in particular Pages 2 through 6.

Mr. Greiner: Your Honor, we offer Exhibit 511 at [157] this point.

Mr. Ris: We don't challenge the source. We don't challenge the arithmetic as made, but we do challenge the ultimate figures. We will have some evidence—

The Court: Very well. It will be received subject, of course, to the right to refute it.

(Whereupon, Plaintiffs' Exhibit 511 was received in evidence.)

Q. Referring you then to Exhibit 511, Doctor, have you made an estimate of the operational costs—or the maximum operational costs of Plan 1? A. Yes.

Q. What is that cost? A. $623,600.

Q. Now, can you explain to us how you developed this cost per student/mile figure of 3.23 cents per student/mile? That's reflected on Exhibit 511. A. Yes, from the memorandum that was just cited as one of the sources of this exhibit, the total number of route miles per day were developed from the figures supplied by Mr. Johnson to Superintendent Gilberts. These figures show that for the ele-

mentary schools 18,928 miles, and for the junior high schools, 13,972, making a total of 32,900 miles per day one way. Now, by dividing that by the number of students that were involved in this figure, 8,744, which was [158] the number of students being transported at that time, we come up with an average number of miles per student of 3.8 miles now being transported, using, of course, 1968 information. By examining the transportation in the Denver Public Schools report, the administrative services, the budgeted 1968 transportation cost for regular transportation for junior high school students and elementary school students was $382,740. By dividing that dollar figure by the total number of miles just calculated by 181, which is the number of school days in the year, by two, for one way, gave us cost per mile of 3.23 cents per student/mile per day one way.

Q. Now, 511 also contains a resume does it not, of the average miles which a student would be transported one way under this Plan 1? A. It does.

Q. What is that distance? A. For the Anglo students the average student/mile would be six and one-half miles. For the minority student the average student/mile would be 6.3.

Q. And the overall average? A. Overall, 6.4.

Q. And what costs are included, Dr. Bardwell, in the costs per student/mile figure shown on Exhibit 511? A. These include the salaries of supervisors, bus drivers, bus mechanics, equipment repair, contracted services, [159] replacement of buses, pupil transportation insurance, gasoline, lubricants, tires, tools, repair parts, supplies and other expenses; garage repairs and maintenance by private garages.

Q. Now, do these costs include the capital cost of acquiring additional school buses? A. They do not.

Q. Why not? A. In order to do that, it would require a detailed examination of the bus routes to be taken, the number of students that would be picked up at each school in each bus, and it is very difficult to determine this figure because at the present time the school district utilizes its buses to the extent of about 70 percent of their rated capacity and this means that, if more students were to be transported, it is likely that the percent utilization of the capacity of the buses would be increased and so therefore that is an unknown factor. In addition to that, there is likely to be some rerouting of students that are now on buses. This contributes to uncertainty. And in addition to that, one would just simply have to get a detailed schedule of the buses before one would be able to—

The Court: What exhibit are you reading from? What exhibit do you have in front of you right now?

The Witness: I don't have any now, sir.

The Court: Well, I thought he had.

[160] Mr. Ris: 511 he has been referring to.

The Court: Yes. That's right. That has not been received yet, has it, Mr. Greiner?

Mr. Greiner: I believe it has, Your Honor.

The Clerk: Yes, Your Honor.

The Court: All right.

Q. Now, are there other alternatives in devising the actual transportation schedule or transportation of these students? Are there other thing that can be done to increase the utilization of both existing equipment and new equipment? A. Yes. I mentioned that, to take advantage of some of the students that are not now being transported

among the various schools, some utilization of facilities might be had by rerouting some of these students, making that ride a bit shorter. In addition to that, it would be worthwhile to institute linear programming in the use of transportation schedules in the district, and this would then minimize the total amount of transportation for the district.

Q. What about the time of day at which different schools are open? A. It's possible, as is being done now, to stagger the starting time of schools so that one bus could serve for two.

Q. Now, what impact, if any, Dr. Bardwell, does Plan 1 have automatically upon teacher assignments in these Court-designated schools? [161] A. Well, automatically it doesn't have any effect on teacher assignments simply because each of these schools will be designated K through 6 schools and therefore some conceivable arrangement in order to equalize the teacher talents would be necessary if such a plan were to be implemented.

Q. Now, Doctor, I'd like to call your attention to what's been marked for identification Plaintiffs' Exhibit 502, which purports to describe the second alternative plan for desegregating the Court-designated schools. Would you please compare or contrast Plan 2 with Plan 1? A. Plan 2 again directs itself to the twelve Court schools. This plan envisages that a Court school would be only a 4 through 6 school. And that, paired with each one of these Court schools, or perhaps more than one, would be a group of predominantly Anglo schools which would enroll only Grades K through 3, and thus the Court schools would exchange K through 3 students with 4 through 6 pupils from the Anglo schools.

Q. Now, in terms of the number of students to be transported under the second alternative plan, Doctor, how does the transportation requirements compare? A. In the case of Plan 2, it would require the transportation of approximately 11,109 students.

Q. So that's approximately 3,000 additional students? A. Yes.

[162] Q. And increased transportation requirements in a pairing concept? A. Because, under Plan 2, it would mean that roughly half of the students—not quite that many, but let's say roughly half of the students would be transported because those students that are now going to a school and, let's say kindergarten through 3, would have to be transported to a school that would be designated kindergarten through 3 if their school was not.

Q. Do you have more children being transported because —There are whole classes of children being transported, is that correct? A. That's correct.

Q. Now, what impact does the second alternate plan have upon the overall underutilization of the schools that you mentioned? A. In the case of Smith Elementary School, for example, the mobile units that would be involved at that school would be removed and the utilization of that capacity would be at 114 percent. Other mobile units throughout the district that would be involved in this plan would also be eliminated.

Q. How does this plan affect the overcrowding that now exists at Montbello Elementary School? A. Well, it is proposed under this plan that Montbello, being a severely overcrowded school at this time—

[163] Q. What is the current capacity utilization? A. 173 percent.

Q. What grade levels does it encompass? A. K through 6.

Q. What will this plan do for Montbello? A. It is proposed that Grades 4 through 6 at Montbello at the current time will be transported to Columbine, which is a 4 through 6 school. That would result in a capacity utilization at Montbello from 173 percent to 118 percent and would convert the Montbello into a K through 3 school only.

Q. Now, will any minority students be bused into Montbello under this proposal? A. No.

Q. And what would be the racial composition of Columbine, the receiving school of these Montbello children? A. The racial composition at Columbine after the transportation would be—

The Court: Before you leave that, you would be using Montbello then, just its school population to integrate Columbine? And Montbello would remain a white school? Do I understand you correctly?

The Witness: Columbine would be paired with Bradley, Ellsworth and Montbello; all three schools. Columbine has a good deal of unused capacity at this particular time, and at the same time Montbello is overcapacity. In order to [164] utilize that, it is proposed here that this particular arrangement with Montbello students would be effected.

The Court: You wouldn't have any Negro students into Montbello?

The Witness: No.

The Court: Are there any there now?

The Witness: Yes, the racial composition is about 85 percent Anglo.

The Court: And it would remain about that percentage?

The Witness: After the plan is implemented, the

racial composition at Columbine would be 59 percent Anglo.

The Court: I mean Montbello.

The Witness: Montbello would be—and I am assuming here that the same portion exists for the K through 3; that it would be around 85 percent.

By Mr. Greiner:

Q. How would the second plan affect the capacity utilization of Bryant-Webster, Fairmount and Greenlee? A. In the case of Bryant-Webster, we remind ourselves again that there is 112 percent capacity. Fairmount is at 131 percent and Greenlee is at 116 percent, and these are utilized as capacity utilizations below these particular schools.

Q. Then what about the capacity utilization of such [165] schools at Coulmbine, Elmwood, Fairview, Mitchell and Whittier? A. All of these schools are underutilized by as much as 20 percent and under the proposed plan these schools would be utilized more heavily than they are now. For example, in the case of Columbine the percent capacity would be 101 percent.

Q. Now, directing your attention to what's been marked as Exhibit 502-A, Doctor, would you please just briefly describe for us the data reflected on that exhibit? A. Yes, this table shows the effect of the pairing plan proposed here and shows the Court schools and those schools that are suggested as pairing schools for each of the Court schools. The enrollment in 1969 for kindergarten through Grade 3 and for Grades 4 through 6 are shown on that table and also the percent capacity after the implementation of the plan, the resulting percentage Anglo at each of those schools, and the number of students transported for kindergarten through Grade 3 and Grades 4 through 6, the total

number of students that are transported one way each and every day and the average miles of students one way.

Q. Now, can you summarize for us the source of the data shown on Exhibit 502-A? A. Yes. In the case of the enrollments for kindergarten through Grade 6, this is the September 26, 1969, report of [166] the pupil membership by the office of planning, research and budgeting in the Denver Public Schools. In the case of mileage calculations, these were taken from the data indicated in Plan 1.

Q. These are the distances involved? A. These are the distances between the various schools.

Q. And that is also the source of the average miles per student one way? A. A calculation resulting from that.

Mr. Greiner: Your Honor, we would offer 502-A at this time.

Mr. Ris: No objection.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 502-A was received in evidence.)

Q. Then calling your attention to 502-B, what is that exhibit, Doctor? A. This is a table capsulizing the characteristics of the Court schools, their racial and ethnic compositions, and the enrollments in Grade K through 3 and Grades 4 through 6; the number in special education; and their capacity.

Q. Is this then just a summary of data that are in evidence from other sources in this case? A. Yes, it's for the Court's convenience.

Mr. Greiner: We offer 502-B, Your Honor.

[167] Mr. Ris: No objection.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 502-B was received in evidence.)

Q. Then, with regard to Plan 1—I think I forgot to offer 501-B, which is also—is it not a resume of the statistical data on the schools to be affected by Plan 1? A. That's correct.

Q. Prior to implementation of the plan? A. That's correct.

Mr. Greiner: We would offer 501-B.

Mr. Ris: No objection.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 501-B was received in evidence.)

Q. Now, under the pairing plan in the second alternative, what will the range of racial compositions at the affected schools be in terms of Anglo composition, Doctor? A. In every case the schools will have 51 percent Anglo enrollment or better. These remain at a low range of from—a low of 54.1 percent to a high of 67.5 percent and, in contrast, for example, Columbine having six-tenths of one percent of Anglo students to 97 at—97 Anglo at Bradley.

Q. Now, how are students to be selected for participation in this plan at the selected schools? [168] A. There would be no problem of choice here simply because those kindergarten through Grade 3 pupils, for example, the one—at one of the Court-designated schools, would be automatically selected for transportation to one of the pairing schools. Similarly, those students in Grade 4 through 6 at one of the predominantly Anglo schools would be auto-

matically transported to one of the receiving Court schools. So there would be no problem of selection of students.

Q. Eventually all students at the selected schools would participate in this plan? A. That's correct, if they remained in that school.

Q. Now, what does the second plan do with respect to the assignment of teachers? A. Here again, it would suggest that the assignment of teachers would be automatic as well, because those teachers that specialized in Grades K through 3 obviously couldn't very well stay at a school in which only Grades 4 through 6 were held, and therefore the assignment of teachers to a kindergarten through Grade 3 would be automatic as well as the students.

Q. In other words, the teachers would follow the students? A. That's correct.

Q. Now, referring back to Exhibit 511, the cost [169] estimate under Plan 2, how many students would be transported at the elementary level? A. 11,109.

Q. And what would be the average miles trip per student one way? A. 6.3 miles.

Q. And you have used the same cost per student/mile? A. I have.

Q. And then what would be the total maximum operating cost of Plan 2? A. It is estimated to be 813,800.

Q. Next I'd like to call your attention, Doctor, to Exhibit 503. Would you please identify for us Exhibit 503.

Mr. Ris: If the Court please, we're now getting into Part 3 or proposed Plan 3 and, we assume, proposed Plan 4, which gets into the target elementary schools, the plaintiffs-designated schools rather than the Court-designated schools, so I would object to any testimony as to Plan 3 or Plan 4 as being beyond the scope of this hearing.

The Court: Well, before we reach that point, have you prepared a narrative summary of Plan 2?

The Witness: Yes, sir.

The Court: Has that been received?

Mr. Greiner: That's Exhibit 502, Your Honor. I don't know if we have offered that. I thought we had.

[170] The Court: I don't recall either. I don't have any record of it.

Mr. Greiner: Here it is, Your Honor. We offer 502.

Mr. Ris: No objection.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 502 was received in evidence.)

The Court: Well, it's at least within the area of the plans and he is going to argue that there is no rational basis for omitting at least some of these schools, so I suspect that this is sufficiently relevant to receive it.

We are now embarking on Plan 3?

Mr. Greiner: Yes, Your Honor, Exhibit 503.

By Mr. Greiner:

Q. Would you describe for the Court, Dr. Bardwell, the relationship between Plan 3, the narrative statement for which is Exhibit 503, and Plan 1? What is the relationship between the concepts involved? A. The concepts here are identical. That is, Plan 3 is identical to Plan 1 except that it incorporates the additional ten target schools and additional number of predominantly Anglo schools, making a total of 50 schools altogether.

Q. So, whereas Plan 1 affected some 29 schools, as I recall it, Plan 3 would affect 50 elementary schools? A. That's right.

[171] Q. And how many of those would have been previously predominantly minority schools? A. You mean of the 50?

Q. Yes. A. Excuse me. Twenty-two.

Q. How many of them would have been previously predominantly Anglo schools? A. Twenty-eight.

Q. Now, what was the bases used for selection of the Anglo schools with which we preface Plan 3? A. The criteria for selection of Anglo schools in this plan was identical to that used in Plan 1 except that the racial composition of the particular school, in order to be included, was 80 percent or more.

Q. Eighty percent Anglo or more? A. That's right.

Q. How many students would have to be transported if Plan 3 were to be implemented? A. 11, 471.

Q. Now, how does that compare with, for example, the amount of students—the number of students that would be transported under the pairing plan, the second plan? A. It would be only 362 students more under Plan 3.

Q. Now, what about the average miles traveled per student one way under Plan 3? [172] A. In Plan 3, six and a half miles. Plan 2, 6.3.

Q. And Plan 1 was 6.4? A. Plan 1, 6.4.

Q. What is the average range of Anglo enrollment which would be achieved under Plan 3 if it were implemented? A. In Plan 3 the average enrollment in any school would be 51 percent.

Q. And the maximum? A. The maximum would be 61 percent.

Q. Then have you also prepared an estimate reflected on Exhibit 511 of the total cost of the transportation under the third plan? A. Yes, $867,000.

Q. So that's about 50,000 more than the pairing which the Court just designates? A. That's correct.

Q. Now, calling your attention to Exhibit 503-A, 503-A simply shows the results of implementation of Plan 3, is that correct? A. That's correct.

Q. And 503-B is a compilation of what, Doctor? A. 503-B is merely a capsule summary of the racial and ethnic distribution of students for the schools, both the Anglo schools and the Court and target schools that are involved in this plan, together with a summary of the numbers [173] of students to be sent and received under this Plan—under this transportation plan at each one of these schools.

Q. And then 503-C depicts what? A. This is a detailed transportation schedule for each one of the 50 schools involved, which shows the number of students to be transported from each school to every one of the other schools in order to achieve the objectives of that plan.

Mr. Greiner: Your Honor, we offer 503-A, -B and -C at this time.

Mr. Ris: Objection on the grounds it's beyond the scope of this hearing.

The Court: Overruled. It will be received.

(Whereupon, Plaintiffs' Exhibits 503-A, 503-B and 503-C were received in evidence.)

Mr. Greiner: We are also offering 503, Your Honor, which is a narrative description of the plan.

The Court: Very well.

Mr. Ris: Same objection.

(Whereupon, Plaintiffs' Exhibit 503 was received in evidence.)

By Mr. Greiner:

Q. Now, Doctor, finally, with regard to a plan for the desegregation of both the target schools and the Court schools, I call your attention now to Exhibit 504. Would you explain to the Court the relationship between the [174] fourth plan and Plan 2? Both plans still utilize a pairing concept, do they not? A. They do. Plan 4 is identical in its conceptualization to Plan 2.

Q. Except there are more minority schools selected? A. In this case there are, of course, the twelve Court schools as well as the ten target schools. Together then this would be 22 minority schools which would be involved in the pairing plan.

The Court: Identical with Plan which now?

The Witness: Identical to Plan 2 in concept. That's the pairing plan. Except here we are involved with ten target schools in addition to the twelve Court schools.

Q. So that each of the current minority schools would become Grades 4 through 6, is that correct? A. That's correct.

Q. And each of the affected Anglo schools would be K through 3, is that right? A. That's correct.

Q. Now, have you prepared an exhibit—and I will now refer you to Exhibit 504-A—showing the proposed pairings of the target schools? A. That's correct.

Q. And then the pairings of the Court-designated schools would remain the same as under Plan 2, is that correct? [175] A. That's correct.

Q. And then 504-B depicts what? A. Merely a summary table showing the characteristics of these target schools

with regard to the enrollments and the membership composition so far as grade level is concerned in 1969.

Mr. Greiner: Your Honor, at this time we would offer Exhibit 504, 504-A and 504-B.

Mr. Ris: Same objection as to the 503 series.

The Court: Overruled.

(Whereupon, Plaintiffs' Exhibits 504, 504-A and 504-B were received in evidence.)

Q. Now, Doctor, with regard to this fourth alternative plan for desegregating both the target schools and the Court-designated elementary schools, how many schools will be affected in this plan? A. In this plan there would be 53 schools.

Q. And what would be the total number of students that would have to be transported under this plan? A. 16,845.

Q. And what about the average length of the bus ride? A. 6.6.

Q. And what would be the maximum annual operating cost of such a program as you estimate it? A. In this case we have estimated $1,292,800.

[176] Q. Now, would this plan also have the same effect upon the—for example, the location or the elimination of mobile units at Smith and so on? A. It would.

Q. And the overcrowding at Montbello, the same concept is included? A. (Nods affirmatively.)

Q. Now, what about elementary schools which are overcapacity? Would their—would this utilization be reduced there? A. The utilization would be reduced.

Q. What about the range of Anglo composition at the paired schools if this plan were implemented? A. The

range of Anglo compositions would be from 50.3 percent Anglo to a high of 63.8.

Q. How are students selected for transportation in this plan? Is it just the same as Plan 2? A. Here again, the selection would be automatic.

Q. Would it have any effect on teacher assignment? A. In the same way as Plan 2.

Q. Now, that Plan 4 would cost an estimated $1,292,000? A. That's right.

Q. But you also prepared an estimate of what it would take to desegregate all of the elementary schools in the district? [177] A. I have.

Q. And is that estimate reflected on Exhibit 511? A. It is.

Q. And how many students would be required for transporting under the citywide plan? A. In this case, for the entire 91 schools, 14,364 students.

Q. What would be the total cost of that plan? A. The maximum cost of $904,000.

Q. The average miles of students one way is almost a mile less than any of the other plans. What's the reason for that? A. Well, when you give yourself the flexibility of desegregating all the schools in the city, you can do that much more efficiently than by picking out certain schools, because your transportation routes become much more efficient.

Q. Now, have you also prepared a proposed plan with respect to the junior high schools? A. We have.

Q. Now, one of the junior high schools that was designated by the Court for relief was Cole Junior High School. Before we get to the details of this plan I wonder if you could describe for us the general condition in terms of

capacity utilization that we now find in the junior high [178] schools in the district? A. Yes, we have a situation here in the case of the 18 junior high schools—In 1969 the enrollment was around 23,440 students. Excuse me. The capacity, 23,440. And yet, the enrollment was 22,419, which means that the junior high schools as a total are underutilized to the extent of about 1,021, and this means that the building of Place School, due to open in 1971, and assuming it will have a capacity of 1,200, this means we will have an unused junior high school capacity in 1971 of approximately 2,200 students. But, in addition to that, there are certain schools within the district in which Jefferson is one and John F. Kennedy is another in which the capacity utilization of these schools is more than 100 percent, and yet a very large part of their enrollment was bused in in 1968.

Q. How many students were bused into Thomas Jefferson? A. The best figure that I have here is for 1968 and at that time 1,284 students were bused in.

Q. What was the other school? A. Excuse me?

Q. What was the other school? A. John F. Kennedy.

Q. And how many students were being bused into Kennedy? A. 533.

Q. Now, these are students—Anglo students who are [179] already on buses, is that correct? A. That's correct.

Q. Now, is there a relationship, Doctor, between the overcrowded junior high schools today and the racial composition? A. Well, generally, one finds that except for the two schools that were affected by the Court's order, Hill and Smiley, that the more heavily utilized the school is, then the higher its racial composition in terms of Anglo percent.

Q. The minority high schools are less utilized? A. Than when it happened to be underutilized school.

Q. Would you explain for us, Doctor, the first alternative being proposed by the plaintiffs as it affects Cole Junior High School? A. In order to desegregate and improve the conditions that we have referred to earlier with regard to Cole, it is proposed that we can increase the Anglo percentage of students at Cole from 1.4 percent, the percentage in 1969, to 66 percent by implementing this particular plan, while at the same time relieving the overcrowding at Thomas Jefferson and John F. Kennedy without requiring any new transportation of students in the district. This could be accomplished by simply transporting those students, 1,038 of them that are now on a bus going to Thomas Jefferson or John F. Kennedy, and simply have their designations to be Cole Junior High School [180] instead of Thomas Jefferson or Kennedy.

Q. Now, do spaces have to be created for those Anglo students if they are to be received at a school? A. No.

Q. Why not? A. Because Cole at the present time has 989 students, but the capacity for 1,725. In other words, the percent capacity in 1969 was 58 percent.

Q. So then the first alternative simply contemplates a diversion of Anglos already being bused? A. I might add —excuse me—that there is the additional proviso here that the few students, about a hundred, a hundred and twenty, would be transferred from Cole to either one of the two schools—they happen to be bused into Cole at the present time—just north of Vasquez Boulevard, which is over the two-mile limit under the transportation arrangement with the school district. It's across a heavily-traveled highway and so they are transporting to Cole now.

Q. So these students would not be bused into Cole any longer but could be sent to either John F. Kennedy or T.J., is that right? A. Or one of the other schools that happens to have available space.

Q. Now, have you also prepared a second alternative [181] plan dealing with junior high schools?

The Court: Are these special education groups that are now being bused at schools?

The Witness: Excuse me?

The Court: Are there special education groups that are now being bused to this school, to Cole?

The Witness: No.

The Court: I had thought that there was some evidence on that at the trial. These are regular students?

The Witness: These are regular students and it is my understanding that these students are now two miles away from Cole and they happen to be in an area just north of Vasquez Boulevard.

The Court: You mean out toward Commerce City, that area?

The Witness: That's right, that being beyond the two-mile limit. Then they are entitled to transportation.

The Court: How many of them are there?

The Witness: About 124.

The Court: And you propose to send them where?

The Witness: It wouldn't make too much difference, I suppose, given the shortest bus ride, probably to Thomas Jefferson—this would take advantage of the use of Valley Highway, which would be very quick transportation.

The Court: It's a pretty long ride, though, isn't [182] it, the north end of town to the south end?

By Mr. Greiner:

Q. Now, have you also developed a plan, Doctor, that would be broader in scope than just Cole Junior High School? A. Yes, the second alternative for the junior high schools would be to correct the segregated status of Horace Mann, Lake Morey and Baker, in addition to the secondary status of Cole.

Q. Baker is also a Court-designated school, is it not? A. That's correct.

Q. What is the racial composition of minorities at Morey? A. 26.8 percent Anglo.

Q. How would this second alternative plan with regard to the junior high schools—

The Witness: It is proposed here that—

The Court: Have you completed Cole?

Mr. Greiner: Yes, the first alternative as to Cole, Your Honor.

The Court: Have you got a narrative on that one?

Mr. Greiner: Yes, we do. It has been marked for identification as Exhibit 505 and we offer it at this time.

The Court: It will be received.

(Whereupon, Plaintiffs' Exhibit 505 was received in evidence.)

[183] The Court: Do you have an alternative plan on Cole?

Mr. Greiner: Yes, they are both contained in Exhibit 505, Your Honor.

Q. Would you describe then this second alternative? A. It is proposed under this alternative that again the transportation that is now being undertaken in the district with regard to certain schools, particularly Anglo transportation, that this transportation be rerouted to Cole, Horace Mann, Lake, Morey and Baker, and this would mean rerouting of approximately 2,278 Anglo students that are now on a bus, but it would in addition require that 1,900 approximately minority students from these five junior high schools be transported out of these schools in order to have an effective racial composition after the implementation of the plan of approximately 70 percent Anglo.

Q. So that the new transportation required would be 1,900 minority students? A. That's correct.

Q. And the other transportation would be that of—which really already exists except the designation would be changed? A. That's exactly right.

Q. What would be the racial composition resulting at these five schools? A. It would be approximately 70 percent Anglo in each [184] case.

Q. Now, how would this plan affect the overcrowding at certain of these junior high schools? A. The transportation could be arranged in such a manner that John F. Kennedy, Thomas Jefferson, whose capacities are now utilized fairly heavily, would be relieved by the transfer or rerouting of students that are now being transported into those two schools. Additional relief might be given to some of those schools also whose capacity is somewhat overutilized if we consider that overutilized is above, let's say, 100 percent.

Q. Are any of these schools on double sessions? Or do you know? A. It is my understanding that one of them is but I'm not certain of that.

Q. Now, how would this proposed second alternative relate to the superintendent's general proposal of a model school complex? A. It would seem to us that, if these five schools were desegregated according to this alternative, then the racial composition of the entire junior high school picture for the city would look very good and then the superintendent's model school complex could be given a great deal more flexibility because each one of these junior high schools then would be approximately equal in racial composition. And so [185] the problem of what might be called exchanges for this—for integration purposes wouldn't have to be undertaken.

Q. Now, how do these plans relate to the relief which has been granted by the Court under Part 1 of the reinstatement of the resolutions? Doesn't the injunction—won't it call for certain transportation for students out of Cole, for example? A. Oh, yes, yes. That's incorporated under both of these alternatives. That is, the number of students that were assigned out of Cole under the resolutions will be carried through, and that was implicit when these plans were drawn up.

Q. So that, as I recall, some 200 would be transported out of Cole under Part 1 of the Court's decision? A. That's correct.

Q. And you are proposing that some 1,900 additional be transported out of both Cole and other minority schools? A. That's right.

Q. Now, have the plaintiffs also prepared a plan as to the only senior high school in the district which has been designated by the Court for relief? A. Yes, we have.

Q. And that is the plan for Manual High School? A. That's correct.

Q. And this plan is reflected in Plaintiffs' Exhibit 506?
[186] A. It is.

Mr. Greiner: Your Honor, we offer 506 at this time.

The Court: Very well.

(Whereupon, Plaintiffs' Exhibit 506 was received in evidence.)

• • • • •

[193] • • •

By Mr. Greiner:

Q. Dr. Bardwell, calling your attention to where we were at the close of court yesterday, you recall that we were discussing the Manual plan which is contained in a narrative statement which has been marked for identification as Exhibit 506, and there are two alternatives in the courses of action proposed in Exhibit 506. A. Yes, there are.

Q. Now, what is the first alternative course of action with respect to Manual High School? A. Well, as the Court will recall, in Resolution 1520 and 1524 there were certain boundary changes for George Washington and East and South, and consistent with the philosophy that is expressed in those two resolutions, the plaintiffs have suggested that the high school boundaries of the city be redesigned consistent with the redistricting that [194] was effected by Resolution 1520 and 1524. Thus, for example, under those resolutions the students in certain Park Hill areas were assigned to George Washington and under our plan of redistricting these students would continue to go to East as they were reassigned under those resolutions. Students assigned to East from George Washington around the Ellsworth Elementary area—these would continue to go to

East. Students assigned now to South from south of Cherry Creek area would instead go to East—that would go to East, would now be assigned to Manual. Students now assigned to East under the resolution around the Harrington area would remain at East. In addition to that, Montbello area would be assigned to George Washington rather than East.

Q. Have you prepared a map which reflects these suggestions, Doctor? A. We have.

Q. And that's Exhibit 507? A. It is.

Mr. Greiner: Your Honor, we introduce 507.

The Court: Now, this is all geared to next fall?

The Witness: Yes, sir.

The Court: This would take effect regardless of the year the student was in high school?

The Witness: I suppose it would be conceivable, for example, to continue those students now attending those high [195] schools—to allow the effect of the plan to take place. It would be an optional feature to it.

By Mr. Greiner:

Q. In other words, it would be done in stages? A. Yes.

Q. Has the introduction of the effectiveness of boundary changes in stages by the child entering a certain grade level—has that been a device employed by the school district in the past? A. It has in the past.

Q. And Exhibit 507, which has just been introduced—that purports to depict at least our rough suggestions as to how those boundaries could be redrawn, is that correct? A. Yes, and the net effect of this would show that consistent with the philosophy of those two resolutions that the

boundary lines for George Washington High School have effectively been moved north; that the boundaries for East High School have been moved south; and Manual High School have been moved south, and in order to accommodate those changes then certain other adjustments in the boundary lines for other high schools in the city had to be made as well.

Q. And those are shown on this exhibit. Now, if you were to ignore for the time being the feeder relationship into these senior high schools from the junior high schools and simply send students out on the basis of geography as [196] depicted in Exhibit 507, do we have sufficient data at this point to know what the—what exactly—where exactly these boundaries would have to be drawn? A. No.

Q. What would be necessary before we could predict where the boundaries would have to be drawn in order to achieve, say, a racial balance at Manual? A. Additional information in the form of what kind of desegregation plan would be adopted so that one would know the racial composition of the various elementary schools.

Q. Well, let's leave that aside. Let's say just on the basis of geography and feeder relationship. A. We would not.

Q. Would you have to have a block count then? A. You would have to know block statistics with regard to number of students in these areas. Certain projections of school population over a period of time in order to find out whether or not these boundary lines are practical or realistic.

Q. Now, this is the same kind of information that was necessitated in the formulation of Resolutions 1520 and 1524, for example, when the boundary lines were redrawn? A. That's correct, the sort of information that was gathered on behalf of Barrett in order to find out—excuse me—

under the resolution in order to find out what children— [197] how many children were in various blocks of the areas that were actually involved in those resolutions.

Q. So this again is a procedure which has been formally employed by the District? A. It is.

Q. Now, what about—

The Court: Before you get to that, could you tell me—just describe generally where the new boundaries of Manual would be?

The Witness: There's been no attempt, Your Honor, to draw those boundaries along certain street paths but rather to indicate as best we could—the best we know at this point an approximation of what elementary schools would be included within that particular high school district. And the attempt has been made here to try to keep the number of students about the same in order to utilize effectively the capacity of the high school as we have now; thus, for example, when a particular area has been assigned to Manual, let's say from the now South High School area, certain additional areas would have to be assigned to South in order to effectively utilize the capacity of South.

And a similar philosophy has been used in the redesign and construction of the other high school areas as well. Notice that the net addition and the net subtraction from each of those areas is about the same after the [198] redistricting has been done.

The Court: What I think you're doing is maintaining the east and west boundaries and greatly extending the north-south boundaries and—at East

and Manual, is that correct? Generally, is that what your scheme is?

The Witness: Excuse me, Your Honor?

The Court: Greatly extending the north-south boundaries?

The Witness: That's right.

The Court: In other words, in effect to narrow the corridors?

The Witness: In effect, they become strips, thinking in terms of providing access for the predominantly Anglo population in the south and southeast, to be incorporated with Manual, East and George Washington.

The Court: Thus, you take Manual's—you take Manual's south boundary all the way to Washington Park?

The Witness: It's conceivable. That's right.

The Court: And redistrict it on the east to York Street or something of that sort?

The Witness: You will recall, Your Honor, that Manual is a smaller school than some of the other schools in the area so that its attendance areas can be somewhat smaller than some of the other high schools.

The Court: You'd do about the same thing to East?

[199] The Witness: That's correct, but it is somewhat larger.

The Court: From York to beyond Colorado Boulevard?

The Witness: Well, excuse me. On the east, the boundaries are considerably east of Colorado Boulevard.

The Court: Yes, I said beyond Colorado Boulevard.

The Witness: Yes.

The Court: From York Street eastward beyond Colorado Boulevard, and then it wouldn't go all the way to the city limits, I take it?

The Witness: That's right.

The Court: And East High and Washington would take up where Manual leaves off, is that correct?

The Witness: That's correct.

The Court: When you say you would send Montbello on to—

The Witness: Yes, that would include Montbello. At the present time Montbello has been assigned to East and even in terms of distance there isn't too much choice between East and Washington.

The Court: And Washington's south—its south boundary would be right near Washington?

The Witness: That's correct.

The Court: And would project north?

The Witness: (Nods affirmatively.)

[200] The Court: Okay. Go ahead.

By Mr. Greiner:

Q. Turning your attention next then, Doctor, to the second alternative for Manual, would you describe, please, for the Court, what the concept is of the second alternative, the first concept being the integration matter. A. We have been impressed with the possibility of using Manual as an open school and effecting some of the innovative programs at Manual.

The Court: Well, you say "we." Whom do you mean?

The Witness: The plaintiffs.

The Court: Your whole staff?

The Witness: That's right.

The Court: You can only speak for yourself here.

Mr. Ris: I object to any testimony from this witness—by his own testimony, his previous qualifications as a mathematician and statistician—Now, when he gets into other fields and we would object to any testimony at all from him expressing opinions on—

The Court: Well, I agree that his last statement —that "We have been impressed with the idea that Manual become a special school" is perhaps not within the field of his expertise.

Mr. Greiner: Your Honor, I think this becomes apparent from the questions and responses in this area—[201] Dr. Bardwell is really talking about what the Board itself has proposed.

Mr. Ris: Well, I will object to that. It's not within his specialty.

The Court: Quite true. I'm grateful, of course, for any help I can get from anybody, you know. I need it badly. At the same time, I'm not going to be greatly impressed with—I mean, I just feel that the last statement ought to be stricken.

Let's start all over again. I mean, undoubtedly he has been impressed. And also, he can't testify for any group, I don't believe. I'm sure you've got a staff of people working but I don't think it's permissible for him to express the summary of the thinking of the group. I'm sure you see what I mean.

Mr. Greiner: I think we can overcome this, Your Honor.

The Court: Very well.

By Mr. Greiner:

Q. Dr. Bardwell, with respect to the second alternative for Manual, what is the philosophy depicted by this alternative? What are we going to do with Manual? A. The intent here is to consider Manual an open school.

Q. Now, what does that mean? A. It effectively means opening Manual to attendance by any high school student in the city to participate in some of the special programs that would be available at Manual.

[202] Q. Now, where does the idea of these special programs come from? What is the source of them? A. It comes from the School Board's response contained in the Board Resolution 1562.

Q. Can you specifically identify the reference that you have? A. Yes, this is a report to the Board of Education, a plan developed in accordance with Resolution 1562 supplied by Superintendent Gilberts in May, 1970, and I have reference in this regard to Manual as an open school, Pages 125 to 135, approximately.

Q. This is part of the defendants' plan, is that correct? A. It is.

Q. So, essentially, what the plaintiffs are suggesting here —suggesting that the defendants' plan be adopted and applied to Manual? A. As one alternative.

Q. Now, under this alternative, what children would be able to attend Manual? A. Any high school student in the District.

Q. Now, under the Board's proposal, what types of programs would be foreseen at that open school? A. There are a number of programs that have been detailed in the response to the Board Resolution 1562, which [203] is the Board's plan, and I might indicate as an illustration on

Page 127 some of the program activities that the Board has in mind. For example, building trades; cosmetology; power and transportation; metals and metal fabrication; machine metals; home economics related occupantions. In addition to that, certain professional programs: those that would be in premedicine, prelaw, preeducation; the area of data processing; communications; preengineering.

Q. Now, as I understand what the Board has described on those pages, Doctor—these are programs which are already in existence at Manual, is that correct? A. That's correct, or intended.

Q. Or in the planning stages? A. Or in the planning stages.

Q. Now, where would the formal students who are now attending Manual—what alternative would they be given? A. It is our proposal that those students be given the option of continuing at Manual or attending any other high school in the area—in the District.

Q. Now, do you have any kind of an estimate of—

The Court: That's what the School Board recommended, too?

The Witness: No, I don't think that aspect of the optional attendance of Manual students is a part of the Board's plan.

[204] Mr. Greiner: I think this is one question, Your Honor, as to whether the Board's proposal—new proposal for voluntary enrollment would be applicable to Manual students. I believe that it would be. That's my initial understanding.

The Court: So then it would be just exactly what you're proposing here? Right?

Mr. Greiner: Yes, in essence, that's right.

Q. Now, do you have any estimate as to what the maximum amount of additional transportation might be that would be required to effectuate an open school at Manual? For example, what if everybody at Manual open to transfer—how many students would we be talking about? A. The present time, if we considered all the Manual students, transporting them out, this would mean about 990 students. Let's say, to utilize the capacity of Manual which would be about 1,500 students, that we're talking about a maximum of about 2,500 that would require transportation.

Q. So that is outside transportation? A. Yes.

The Court: How many is that?

The Witness: Twenty-five hundred.

The Court: Would be transferred?

The Witness: Altogether.

The Court: What's the total enrollment at Manual [205] now?

The Witness: Nine hundred ninety, sir.

The Court: What's the capacity?

The Witness: About fifteen hundred.

The Court: But this plan, I supose, would use the facilities to a greater extent?

The Witness: That's true.

The Court: Night classes and other things.

The Witness: Right. So there—this would mean, of course—the Manual capacity would be 1,600 students transferred in at the high school and all the other students being transported out.

The Court: Twenty-five hundred?

The Witness: Yes.

The Court: But it is unlikely that nine hundred would be transferred on an open enrollment basis. Very remote, I suppose.

The Witness: That's right.

The Court: If half of them applied it would be pretty—a pretty high number, I suppose; at first, at least. Maybe later when they got accustomed to the program—

The Witness: Quite conceivable.

By Mr. Greiner:

Q. Doctor, I have had a chance to consult with one of the staff and I believe the number of students at Manual is 1,500, not 900. [206] A. You're correct. Yes.

Q. Is that right? A. Yes.

Q. And the capacity is 1,800? A. That's right.

Q. So then the maximum amount of transportation, rather than being 2,500, would be about 3,300, if you had an absolute turnover? A. That's about right; about 3,100.

Q. Eighteen and fifteen?

Mr. Ris: He doesn't have his computer.

A. I messed up on that.

Q. That's New Math.

Now, I would next like to call your attention, Doctor, to the area of the second major component of the plaintiffs' proposed plan, namely, the integration component, and would you first of all describe what the common premise of this integration component is?

Mr. Ris: If the Court please, again I think this is beyond the scope of this man's expertise, and we object to it.

The Court: Well, he is just describing it now, I take it.

Mr. Greiner: That's correct.

The Court: Proceed. Overruled.

[207] I don't know what it is either, but we will find out, I expect here. What is the component?

Mr. Greiner: The integration component, Your Honor. You recall, Your Honor, that we've got desegregation, integration and compensation as elements of our overall plan. Now we're talking about integration.

The Court: You mean the Manual program alone?

Mr. Greiner: No, all of the programs at each level.

A. The proviso is that one of the desegregation plans have been accepted by this Court—it is proposed that certain plans be implemented to ease the transportation from a desegregated status to a—an integrated status for the plans that are being proposed here in which certain components of integration regarding students parents, faculty and staff are being proposed.

Q. Now, has the Board in its proposal—

The Court: What page are you on now?

Mr. Greiner: I'm in the memorandum, Your Honor.

The Witness: 49.

The Court: Okay. That would be of some help to me to understand what he is—

Q. Now, Dr. Bardwell, I believe the first component of the integration aspect is that the plaintiffs are suggesting in-service training programs for faculty and staff. Is the concept of in-service training programs also reflected in the [208] Board's proposal? A. Yes, sir, it is.

Q. And does the Board indicate what the function is of their in-service training program? A. (Nods affirmatively.)

Q. Now, would you describe those for us? A. Yes, they are essentially to instruct the faculty and staff in various teaching techniques for dealing with the disadvantaged and minority students; the cultural understanding and to improve attitudes and expectancies of teachers with regard to minority children and perhaps, most important of all are certain programs to help us recognize our own biases; our own prejudices. So these would be the purposes of the program of the faculty and staff in-service training.

Q. Now, has the Board also proposed the next component—their faculty and staff orientation program? A. They have.

Q. And what is involved there? A. These are orientation programs, faculty and staff orientation programs, are designed to familiarize the faculty with the buildings and facilities of the schools to which they would be assigned, certain special programs that are available at those schools, the materials, the resources, other facets of the building facilities and the programs at those schools. And, in addition, to familiarize the [209] faculty and staff with certain components of the community which that school would serve.

Q. Doctor, if I can return your attention to the in-service training program that you first described—in the past has the School District employed such in-service training? A. It's my understanding they have.

Mr. Ris: Just a moment. This is getting way beyond this man's competency in describing what the Board's plan is. And it's wholly improper—a wholly improper approach, and I object to it.

The Court: Well, he's not describing the Board's plan now, is he?

Mr. Ris: Well, I think that's the only justification. That's the tenor of his testimony; that he was familiar with the Board's plan as contained in the exhibit, which has been offered, and this is all that he has been asked. Now he has been asked to go beyond that.

The Court: Now he is describing the detail of the plaintiffs' integration plan.

Mr. Ris: Well, he was just now asked, what have they been doing in the past.

The Court: Well, he wants to know if they—if the Board has any experience in this.

Mr. Greiner: I can make the question more—

[210] The Court: I mean, in this kind of in-service training.

Mr. Ris: This man doesn't know. He hasn't been in—

The Court: Well, he can say he doesn't know.

Mr. Ris: But he's testifying from hearsay, is what he's doing.

The Court: Well, don't you think they have any experience along this line?

Mr. Ris: Well, I think any member of the public knows generally about it but I object to this man. It's beyond the question; beyond his knowledge; he's now just sounding out on various things that have been told to him or that he thinks he knows.

Mr. Greiner: I can withdraw the question and frame one that won't trouble him so much.

The Court: Well, it's not really a question of troubling counsel, although of course I think we ought to avoid anything that is going to raise the boiling point of anybody here too much.

Mr. Ris: Well, if he approves of certain portions of the Board's plan, although he has—all he has to do is say so. But now he's going into describing the next step here of how it compares with the past and so forth. And this was not a part of the plaintiffs' case. If they want to [211] propose any plan, why, all they have to do is—

The Court: That is an integral part of their plan, isn't it, this training program?

Mr. Ris: It may very well be for a proper person, but this man is not that expert.

Mr. Greiner: I'm sorry. Has the Court ruled on the objection? I'm willing to withdraw the question.

The Court: I think he can go ahead and describe what the plan is, at least. We're entitled to know that. I could read it, I suppose. But it might be of some help to have him outline it now and I don't see where that is any great amount of prejudice. Surely there would have to be a lot of preparation in anything as momentous as this in terms of training and personnel involved and preparation of the parents and the students as well. I mean, what you propose is a momentous program. So I think—I expect it would be proper to hear what's involved. That's all I'm doing.

Q. Doctor, do you have the question in mind?

The Court: What knowledge do you have as to what the Board has done on previous occasions in regard to training the personnel involved or the community?

The Witness: I'm aware from certain publications that they—the School Board has presented to the public and to ourselves certain in-service programs that have been instituted in the past. Our program here is merely what you [212] have before you—merely a conceptualization of—

The Court: What you're saying then is that the school administration is certainly competent to devise the details of a program of this kind to carry it out, is that right?

The Witness: I'm withholding judgment on that, sir. What I'm saying is that these are some of the ingredients we feel are necessary if the plan of integration is to be installed. And we have merely outlined this on Page 49.

The Court: Well, then, the objection was to what extent has the school administration done this in the past. Isn't that right?

Mr. Greiner: That's correct.

The Court: What's the object of it? Trying to show they will do it in the future if they did it in the past?

Mr. Greiner: Yes, and that—

The Court: And he says he is withholding judgment on that. So I guess we'll have to take him at his word. That kind of ends that question—that line of questioning. He still is doubtful.

Q. Dr. Bardwell, in connection with the Board's proposal for its implementation of Resolution 1520, 1524 and 1531, did those proposals contain a facet of faculty and staff in-service training and preparation? A. They did.

[213] Q. What work—were workshops held last summer for that purpose? A. They were.

Q. Now, do you know whether or not in the past, for example, in connection with the implementation of the resolutions, the attendance at those in-service programs was mandatory or voluntary? A. My understanding is that they were voluntary.

Mr. Ris: If the Court please, I move that be stricken.

The Court: Granted.

Mr. Ris: He obviously doesn't know.

Q. Do the plaintiffs proposals propose that these programs be voluntary or mandatory? A. Mandatory.

Q. Now, we've already covered the faculty and staff orientation program and—is that also a part of the Board's proposal directed to the Court? A. It is.

Q. Now, the next major facet regarding community involvement—again, what is the basic premise with respect to community involvement? A. The basic premise is that, in order to have an effective plan of desegregation, integration, that community involvement is an ingredient for the three-part phase of [214] this integration of the School District.

Q. Now, what types of programs do we propose to achieve in this community involvement? A. We are proposing that school and staff assignments be made quickly.

Mr. Ris: If the Court please, I'm going to again object to this. Because he is now going into planning, the administrative level of which he is not competent to do.

The Court: I wasn't paying any attention. I was reading the next section. But, proceed.

Mr. Greiner: Well, I can restate the question.

The Court: I can't rule on it if I don't know what it is. But I suppose it's of the same nature as the rest of them.

Mr. Ris: Well, he was now going into what the administration should do in the very near future and so forth. He's now asking about—going into detailed planning, you see, on community involvement.

The Court: Well, I don't suppose it will hurt us to hear what he has to say.

Q. What's one of the facets, Dr. Bardwell, which we propose for this community involvement? A. One of them is that the staff assignments, faculty assignments, be made quickly so that the persons involved will be in a position to know what those assignments are and—[215] at an early time so that planning can appropriately take place.

Q. So that teachers are—will know what schools they're going to be teaching? A. That's correct.

Q. Do teachers have some responsibility in the development of programs at the schools, curricula and so forth? A. It certainly should.

Q. So that this gives the most possible time for planning? A. It does.

Q. And what other types of community involvement programs are part of the plaintiffs' proposal? What about communications to the students and parents? A. It's important that parents and students be advised quickly and as early as possible what their assignments will be so the programs might be set up to acquaint the students, as well as the parents, as well as the various programs that are

going to be instituted in that school. To get familiar with certain of the resources at the school facilities. In other words, to make this transition as comfortable and as pleasant as possible.

The Court: Is it your assumption that there would be a final judgment here?

The Witness: Would be a what?

[216] The Court: A final judgment that everybody abide by and they could start their program—instruction and planning at once so as to be ready by September?

The Witness: That would be great, sir.

The Court: Well, that's a dream.

The Witness: It may be.

The Court: Because I anticipate that one or both litigants here will appeal this to the Supreme Court. If they get any kind of a ruling by September 1st, why, it would be pretty miraculous, I would think; a final ruling. But, anyway, the essence and thrust of what you're suggesting is the program, perhaps, and not the timetable, is that correct?

Mr. Greiner: That's correct, Your Honor. That is a problem we have faced ever since we instituted this action.

Q. Now, what about the use of volunteer or parent aides with respect to the integration program? A. We are proposing that paraprofessionals be used extensively and teacher aides and business aides and other ways in which professional people whose energies and talents can be taken advantage of by the School District itself. We are proposing that recruitment of people themselves be under-

taken and recognition given to some of the services that they can perform.

Q. Now, what about programs directed toward easing the tensions, the rumors that go around when you have this first [217] mixing of children in these schools? How do we propose that that be handled? A. We are suggesting that programs be sponsored to inform parents of the necessity for integrated education, to increase the understanding between parents who might have some misgivings about a program of integrated education. The same thing would apply to students, as well. We are suggesting also that a kind of ombudsman relationship be set up by the School District to receive complaints, a clearinghouse for problems that might arise in the process of such plans for it.

Q. Are we proposing that the currently existing school community relations office handle that job? A. Well, something that functions.

Q. Now, Doctor, I'd like to next call your attention to the general area of compensatory education programs. What, again, is the major premise of such compensatory education programs as proposed by the plaintiffs? A. Again, we feel that an important ingredient of desegregating the schools, and then integrating will require a substantial input of compensatory education as a package for successfully integrating the schools that are involved in this suit.

Q. Now, does that contemplate compensatory education in an integrated setting? [218] A. Yes, it does.

Q. Now, would these compensatory programs apply in general regardless of the plan of desegregation which might be adopted by the Court? In other words, is there

a general component? A. Yes, they would apply in general to all the plans.

Q. Now, what is the basis for these suggestions which we are putting forth with regard to these compensatory programs? Where do they come from? A. Most of these came from the School Board's suggestions in Plan—and in response to the Board Resolution 1562.

Q. Whereas, the Board's suggestions are not premised on first segregating, ours are, is that correct? A. That's correct.

Q. Now, what considerations have been given to availability of funds for the types of programs which the plaintiffs are contemplating proposing? A. The Board's plan —their plans have been analyzed with regard to the expenditure and—or allocation of various funds or various programs that have been proposed and we have taken those funds and have indicated and have concluded that the funds that the Board is willing to spend upon compensatory education alone would be quite sufficient for the plans that are proposed here.

Q. What are some of the items? What is the source of [219] these dollar amounts? A. These dollar amounts are taken directly from the plan developed in accordance with Resolution 1562 submitted by Superintendent Gilberts in his report to the Board of Education.

Q. So we are reallocating these amounts which the defendants have identified, is that correct? A. We are.

Q. Now, would you please identify for us some of these specific amounts? A. Yes, there are funds that have been allocated by the Board to the outdoor education in the amount of about $247,000. Cultural arts, $165,000, to illustrate. In addition to that, we find that certain moneys that are earmarked in the 1970 school year would be available

for implementing our program. For example, $160,000 for Complex 1. And $167,000 for Complex 2. And in-service training would be $201,000. These moneys would be available for our program. And, in fact, some of the special programs that have been proposed by the Board, moneys that have been allocated for that, would be available for our plan simply because the necessity for implementing some of these programs would no longer be required.

Q. Why not? A. Because we would be desegregating the schools.

[220] Q. In other words, some of these plans proposed by the defendants are for giving some sort of integrating experience to children, is that correct? A. I suppose you could say that.

Q. For example, that's one of the things that is talked about in the Ballerette program, is it not? A. That's right.

Q. And if the plaintiffs' plans are adopted, Dr. Bardwell, where will the child get his integrating experience? A. He would have to have it on a day-to-day basis, so this would be—there would be no way of him getting away from this whole business here of a paternalistic kind of desegregation which really doesn't exist under these plans.

Q. Now, then, Dr. Bardwell, what procedures have been suggested by the plaintiffs for measuring the efficacy of whatever plan is adopted by the Court?

The Court: What is paternalistic kind of desegregation?

The Witness: Oh, I suppose it's a nice word for simply saying tokenism.

The Court: Where does the paternalistic come in?

The Witness: Well, paternalistic in the sense of a generic term for simply saying one is skirting the issue.

The Court: I don't see that at all. I suppose there is a certain amount of paternalism in all of these [221] efforts in the sense that the family turns over the children to the school administration for the day. Isn't that right?

The Witness: You mean under our plan?

The Court: Under any plan. I mean, they relinquish a certain control when the child leaves the neighborhood, I suppose. Isn't that right?

The Witness: Right.

The Court: And there is a substitution, I expect, of official paternalism in any of these plans, isn't there?

The Witness: Well, I use this in the sense—

The Court: I think you used it in the sense that—in a critical sense.

The Witness: Yes, I did.

The Court: This is the type of word that defines something you don't like, I'm sure.

The Witness: Yes. I'm simply saying that the plans that we are proposing here face up to the problem of desegregated education.

The Court: Thus, this is not paternalism.

The Witness: Right.

The Court: Go ahead.

Q. Calling your attention, Doctor, then to the procedures which we are recommending for analysis of the efficacy of these programs, would you please just briefly describe the types of procedures and the reasons for them? [222] A. Yes. In order to make sure that the plaintiffs' desegrega-

tion programs are being effective and to provide for modification of these programs, a series of procedures are being suggested for evaluating that effectiveness. One of these being that the racial and ethnic composition of any school affected by the Court's order should not be allowed to depart from the city average by more than one standard deviation. There are other suggestions here for measuring the performance of students on standardized tests, and we are suggesting certain quality control programs and certain statistical programs to measure the effectiveness of the desegregation plans that are being proposed. We are also suggesting that the transportation patterns that are being effected under these plans be efficient and effective by suggesting the use of linear programming and other—certain other—a certain system analysis technique. We are suggesting, also, the use of costing principles and modern accounting be used to measure the effectiveness and to provide for modification of the compensatory programs that would be put in operation. These are detailed on 57 and 58.

Mr. Greiner: We have no further questions of Dr. Bardwell.

Cross-Examination by Mr. Ris:

Q. Dr. Bardwell, you have been referring to the [223] plaintiffs' memorandum for hearing on relief, at least paraphrasing certain portions of it, particularly to the latter part of your testimony. You actually prepared this memorandum, did you? A. Excuse me, sir?

Q. Did you prepare this memorandum? A. You mean this memorandum?

Q. Plaintiffs' memorandum for the hearing on relief to which you have been referring throughout your testimony. A. No, I prepared a substantial part of it.

Q. Who else prepared it? A. Dr. Klite.

Q. Who prepared the portion on community involvement, for example? A. I think it was Dr. Klite that prepared part of it and I prepared part of it.

Q. Who prepared the part on plaintiffs' plans for equalizing educational opportunity at Manual? A. What are you referring to? What page?

Q. Page 46, Plaintiffs' Exhibit 506. A. Oh, Manual High School?

Q. Yes, sir. A. Dr. Klite prepared that.

Q. Who prepared the other part? A. I did.

[224] Q. And then all of these plans are basically the product of you and Dr. Klite? A. Correct.

Q. And that is true for the entire memorandum filed with the Court; plaintiffs' memorandum for hearing on relief? A. Yes. That's not entirely true because—

Q. Well, you tell me what's true. That's why I'm asking. A. Well, it's a joint effort by us and if there—there might have been a first drafting or something and we would bounce certain ideas off the other members and—

Q. Other members of what? A. Other members.

Q. Of what? A. Mr. Barnes, Mr. Greiner, Dr. Klite and myself.

Q. The four of you then prepared this plan? A. That's correct.

Q. And so the four of you are the authors of this plan in this case? A. That's correct.

Q. Throughout your figures you have been referring to school capacity, and those—the rated capacity on the basis that we discussed rated capacity at the February hearing; generally 30 people per room? A. That's correct. And these capacities were figured [225] under the same capacities that were used in the report of pupil membership of

September, 1969, less the possible units or the temporary structures at those particular schools.

Q. And the figures did not take into consideration—the computer programming did not include any input with respect to actually the rated capacity along the lines Dr. Oberholtzer testified concerning? A. The standard that was used was that, if the capacity that is stated by the School Board published by the School Board of a certain amount, then that capacity in the linear program was within ten percent of that capacity.

Q. But you were present when Dr. Oberholtzer testified, were you not? A. I was.

Q. And you recall that there was testimony with respect to certain schools wherein they had a lower pupil-teacher ratio so that there was a lower number of students per room for specific education rooms, that in certain instances a school is fully utilized so far as the base is concerned but with a number substantially less than its rated capacity? Do you recall that testimony? A. Yes, but you're forgetting—

Q. You recall that testimony? A. I do.

Q. Now, did you, in your input computer programming [226] consider any such deviations in the actual use as compared to rated use? A. Yes, we did.

Q. What schools did you do that on? A. The rules that we used—because these schools would be desegregated—there would be no reason to consider one seat in a school any different than any other seat simply because the utilization capacity under the segregation of that would equate one—

Q. Dr. Bardwell, you have evaded my question. My question is, did you in the input consider any actual utili-

zation less than the rated capacity as presently exists? A. It was not necessary to do so.

Q. You didn't do it? A. Absolutely not.

Q. Now, if you would just listen to the question. Just don't argue with me and you can bring all your own theories forward. All I'm trying to get are facts as to what you did. Now, in connection with your transportation and the distances involved, did you consider the distances between one school, say the sending school, and the distance to the receiving school? A. That's correct.

Q. And if a child in the sending school was already living some miles further away from the sending school and in [227] a direction opposite that of the receiving school—that was not put in your input at all? A. No, it was not necessary to do that because the transportation plans that are now within the District in which I have indicated the average distance that the students that are now being transported to get to school itself—we have not put into the computer program the requirement or transportation schedules necessary to bring those students from outlying areas into these schools. This would be in addition to the mileages and costs of the existing program. But I might add—and I think it's worthwhile to add here that the schedule of transportation taking account of those students that are not now being transferred in, could be utilized more effectively, and the distances themselves would be somewhat shorter than simply adding the average number of miles under our plan, plus the average number of miles under the existing plan.

Q. In other words, you are saying there could be some judgments made? A. There certainly could.

Q. But your exhibits do not make those adjustments? A. They do not.

Q. That's all I trying to get at, Doctor. Also, in your pairing plan, you are considering that there are substantially the same number of students in [228] K-3 as in 4 through 6, is that correct? Do you have a breakdown on that? A. We did. We used your report of pupil membership giving the breakdown of the number of students in kindergarten through Grade 3 and 4 through 6, and very carefully calculated the necessary capacities to accommodate K through 3 and 4 through 6.

Q. I don't know whether that was in or not. Now, the exhibits pertaining to the actual transportation—how many would go from each school and so forth—are all those numbers of students practical in your opinion, Doctor, to send those as shown on the print-outs? A. Can you repeat your question?

Q. Is it practical to send the children in each and every instance as shown on your print-outs from one school to another? I'm not speaking theoretically. I'm talking about practically. Or, do you know? A. May I ask you to clarify what you mean by practical?

Q. For example, the program on Exhibit 501-C, transportation schedule for receiving Anglo students, you would send from Bradley, for example, 373 students. Now, you would only send one student to Mitchell. Is that practical? A. I see what you mean. Yes.

Q. So would you transport just one student from Bradley to Mitchell? [229] A. No.

Q. Isn't that what this says? A. Yes. The program itself and the transportation schedule comes out with raw information and then this is then—If one wanted to be exact, the transportation schedule that is involved, obviously certain adjustments which are practical ought to

be made in the plan of this sort so that if one, two, three and perhaps five students are to be sent from one school to another, it wouldn't make much sense to the expense of—

Q. That was the gist of my question. Now, also further look at Exhibit 501-C, which is the transportation schedule for sending and receiving minority students. Now, the very first item there—Bryant—it will send 262 students to the following—and there are two schools, is that correct?

The Court: What page are you on now?

Mr. Ris: This is Exhibit 501-C, Page 18.

Q. Do you have that, Doctor? A. I do.

Q. So you would transport out from Bryant these students? A. I think the same suggestion that was made before with regard to numbers, that there would have to be, I think, an adjustment here as to a minimum number to be transported [230] from any school. And actually, according to your Exhibit 501-B, on Page 15, there are only four Negroes in Bryant School at all, isn't that correct? A. 501-D?

Q. 501-B, as in baker. Page 15. A. I'm sorry.

The Court: Well, it only shows four Negroes, is that right?

Q. Is there any purpose—segregation purpose in sending Negroes from Bryant-Webster? A. No.

Q. Now, Fairmount, Exhibit 501-C, shows you would send out two. A. Right.

Q. And there are no Negroes in Fairmount according to 501-B. How does that happen? A. Well, in putting in the—putting this in the computer, there are certain round

values for the percentages and a tenth of a percent or something of that sort that you would put into the computer, certain kinds of—what might be called spurious, very small values, which you might attribute to School 1, while a white person or two white people, where those white children might not be there in the first place.

Q. And this is inherent in the computer programming? [231] A. No, it's not inherent in computer programming. If you say there are a hundred students at a school and you have 70.4 percent or 120 students in a school and you have 70.4 percent of one racial group, if you calculate those out you oftentimes get 32 and a half students. Well, there are no such things. They have to be rounded to the nearest number. Well, when certain figures like that are put into a computer, on a percentage basis, then the rounding out will oftentimes attribute to a school one person here, one person there, or it may be that the figure for the total number of Negro students at a school might be one, two, or three, and conceivably four students less than the enrollment at that school. This is part and parcel of the—

Q. Here at Fairmount there are no Negroes, though, according to your white chart, is that right? A. That's right. So, in other words, for example at Fairmount when the figures were put in the computer it actually rounds the figures off so the rounding percentage may come up to 99-percent Hispano or Anglo and the remaining number would be Negro. This is by subtraction.

Q. Are you suggesting that there are some Negro students at Fairmount that are not shown on 501-B? A. No. These print-outs—they reflect the—mainly the—

Q. The geographic proximity, is that right? [232] A. well, sir, these I think at best are approximations.

The Court: He means, what goes into the decision?

A. I think that would go into the decision, if this plan were adopted for example, would be a transportation schedule much like you have right before you, with practical adjustments to that plan for, let's say, sending only students whose total number exceeded five of a particular kind. So that, if transportation schedules called for, for example, receiving at Mitchell one student from Bradley, it wouldn't make much sense to stop a bus for one student to be dropped off at Mitchell.

The Court: Well, what are the ingredients of the computer decision? That's what I'm trying to get at. Do you understand this?

Mr. Ris: From a negative standpoint, I was trying to find out what it wasn't doing or what it was doing incorrectly since there are some figures here that are obviously ridiculous. You can't transport two Negro students out of Fairmount when there aren't any there.

The Court: Well, that's fairly obvious.

I would like to cut a little deeper here and find out what the computer is thinking about. That's all; I mean, when it yields these results.

The Witness: Information that was put in, Your Honor, indicated—

[233] The Court: Does it ever give a capricious or malicious decision?

The Witness: Sometimes it does. That's right. Hopefully we can control that.

The Court: Okay. What are the elements that it is seeking? Its first mission, of course, is, I take it, desegregation of a school.

The Witness: That's correct.

The Court: And then, secondly, integration.

The Witness: That's right.

The Court: Does it accomplish this task upon the basis of geographic—a basis of geographic proximity or expediency?

The Witness: It does.

The Court: Primarily?

The Witness: No, there are a number of ingredients here which I think are important.

The Court: That's what I want.

The Witness: And one is that into this program one of the inputs is that no school that would be involved in the program itself would have an Anglo composition that would depart from the city average by more than one standard deviation. That means that the lowest Anglo proportion in any one of the schools affected in this plan would be no less than 54 percent. The highest being 60 percent. In addition to that, [234] the capacity of each one of the schools that is involved in the plan would be utilized to within ten percent of its rated capacity. This means that no school would be utilized to less than 94 percent capacity and none of them would be utilized to more than 106 percent capacity.

The Court: Well, tell me this. Are you seeking in your desegregation effort and integration effort to get the middle-class students into these inferior schools?

The Witness: I'm glad you raised that question, sir.

The Court: In other words, I see that you are sending Traylor students to Elmwood, which is the worst building in the city, and to Fairview. I mean, is Traylor—Traylor, as I understand it, is probably the best facility in the whole city. What is the computer doing there?

The Witness: I wonder then if you would take a look at Exhibit 501-A. That gives us an idea of what would happen to the average achievement at each one of these schools if the transportation schedule that we have just indicated were put into effect.

And what it does here—the program did not take into account some of the aspects of increasing in achievement coming about simply from desegregation, but simply was a linear combination of the achievement scores of the students that would be transported, for example, when the various—[235] from the various schools into the various receiving schools for those students, and I think what is remarkable about this is that average achievement is rather uniform for all of the schools that would be involved in this plan which suggests that not only desegregation takes place on a racial basis, but desegregation also takes place on an equivalent basis, and the relationship between those factors is very highly correlated with the socioeconomic class. Thus, for example, in this particular exhibit we find that no school would have an average achievement even at its worst of less than 31 percent and this is in considerable contrast to what we now have of achievement scores varying all the way from 15

percent in the school program to some of the schools involved all the way to 73 percent, 75 percent, 80 percent.

Q. Dr. Bardwell, on this point, all you're doing is taking some low achievers from one school and putting them into these high-achiever schools and vice versa, right? A. Effectively, yes.

Q. And so that when you say you're making these schools more equal in achievement, percentages, average—whichever those may be—and the chart does not know what you're doing—is just moving people around so that the averages in each school is different not because of anybody having increased this achievement, but merely by getting new averages with pupils there, isn't that right? [236] A. By no means.

Q. Then what is this last column in 501? A. It essentially is what exists now without taking account of the increase in achievement coming about by desegregating the students into the schools that are indicated on this exhibit.

Q. That is your hypothesis as a result of this; that there is going to be an increase in all these schools? A. I think it is supported throughout the country.

The Court: But as of now, the average is just a result of mixing the low achievers with the high achievers?

The Witness: That's right.

By Mr. Ris:

Q. And that's all you show in any of your charts? A. We're preparing our case in the worst light.

Q. So you do not have any figures here to show what these achievers will be in, in say three years, five years or ten years? A. No.

Q. In fact, you don't have any figures—Your computer print-outs—do you have print-outs that would show that? A. Right.

Q. Now, I would refer you, please, Dr. Bardwell, expressly to the Manual plan, Exhibit 506. As I gather from [237] your testimony, your first alternative—what you're really seeking and asking the Court to do is to modify what the Court has already indicated is going to be a part of the permanent injunction? Correct? A. This would be one modification.

Q. Under Resolution 1520 and 1524? So you say the Court should not only reinstate as the Court has stated the permanent injunction on Part 1, but go beyond that? That, in essence, is your plan, is that correct? A. It would be.

Q. Now, have you considered the transportation problems for students at the high school level under your first alternative for Manual? A. No, we have not calculated any precise transportation schedules or any transportation distances that would be involved.

Q. Would your plans contemplate transporting senior high school students say from Fairmont Subdistrict to South High? A. We have no plans for transporting high school students.

Q. Now, as I look at your Exhibit 507, the map, is it correct that Washington High would have the one feeder junior high? And that would be Smiley? A. There would be one feeder junior high in that [238] particular high school district.

Q. And for Kennedy there would be none? A. Well,

that doesn't necessarily mean that there are the junior high school districts.

Q. This is under your plan, is what I'm asking? A. Yes.

Q. A junior high district—these are presently set out? A. That is right.

Q. At least no junior high located in the Kennedy area? A. That's right.

Q. And you would have three junior highs located in the Manual area; Cole, Morey and Byers, is that correct? A. Yes.

Q. And three junior highs in the North High area? A. Right.

Q. So either North or West—they would have one—One would have three junior highs and the other would have two junior highs, is that correct? A. Included in the geographical area, that's right.

Q. Again, may I go back just to the elementary school busing once more and our computer figures—is it possible from an economical and practical standpoint to set that up on the basis of bus capacity so that you wouldn't have maybe [239] eight kinds in one bus time and time again and— A. This information would have to be put into the computer and it would be so extensive so as to make it not practical to do so, and I think any kind of transportation plan we'd devise, based upon the outline we have prepared here, it would be a detailed analysis indicating whether or not—indicating an efficient way to do this would be to pick up, let's say a certain number of students at this school and at the same time going by another school in order to make effective use of a bus in order to get those students at the receiving school.

Q. Now, may I ask you this—

The Court: Are you talking about high schools now?

The Witness: No.

Q. So at the present time it would not be practical to computerize it on a busload basis, is that correct? A. Well, it's not practical for us. We don't have the manpower.

Q. But you understand what I'm asking? With the school reserves available to you? A. It is quite easy to do this.

Q. Could this also take into consideration under your theory, Dr. Bardwell, that the children who are beyond the walking distance to an elementary school and who are now bused because of that distance? [240] A. By all means.

Q. And they would be bused to that elementary school and another bus picks them up there? A. By no means. For example, some of the students that are bused into the outlying areas—we indicate a student is to be transferred from University to Park Hill—I don't know whether they are—but the transportation schedule would call for him to be put into the program when it's finalized that the students are bused into the University Park, they would then be put on the bus going to Park Hill.

Q. So from Southeast Denver it would take normally 26 minutes to get to University Park and you would just bus them further north for the additional time and distances involved? A. That's correct, and the total mileages involved would be considerably less than certain mileages now, yes. Some of them would be less.

Q. Would you give us an illustration? A. Yes. There are some students that are actually transferred from Sted-

man and Smith in which the transportation route is almost 12.4 miles.

Q. How would that lessen? A. Well, I illustrated—

Q. Wouldn't this still be in existence? A. Not necessarily, no.

[24] Q. You don't know that it wouldn't be in existence? It's a possibility under this arranging that some of it might be adjusted out? A. That's correct.

Q. Now, with respect to your boundary changes at the high school level—you said a block count would be required?

The Court: I think we'll take a recess now.

(Whereupon, the trial recessed at 11:00 a.m. and resumed at 11:15 a.m.)

By Mr. Ris:

Q. Dr. Bardwell, you referred to the necessity for block counts on redistricting the senior high schools. If you were going to do that that would require a block count throughout the city? A. Yes, that's right.

Q. Now, with regard to the—

The Court: You are now talking about Plan 1 of the senior high school redistricting?

Mr. Ris: Under Alternate 1 of the high school plan, yes, sir.

Q. And then after those block counts you would also have to make projections as to what movement there might be—there would be in the pupil population that— A. Yes, but I would suspect that one would not have to be that precise about the block counts to get an approximation [242] of

what the utilization of the capacity of each of these high schools would be. But, to be entirely precise about it, one would have to do that.

Q. Are there any other ways of doing it? A. Oh, yes. I think that there are attendance records, let's say, at the school that could be used and at the same time the 1960 census information which would give a rough indication of what kinds of population densities you would have in various parts of the city. But this would be at best a rough approximation.

Q. Now, with regard to the budgetary matters, you did not attempt to go back and go over the entire school budgeting to see what your proposed changes, what effect it would have, did you? You didn't go back to the proposed budget for 1970, or '71, for example, or the existing budget for 1969 and 1967 and go through it to determine what changes would be required in the budgets to effectuate your programs? A. We did not.

Q. So that the availablity or priority of funds shown on Pages 55 and 56 of the plan, the plaintiffs' plan, entitled Part 7, availability and priority of funds—that is just some rough figures you put together? A. They are merely a reflection of what you people had considered or the School Board had considered was to be feasible to allocate there.

[243] Q. You didn't go back and figure out what the full budgetary effect would be? A. We did not.

Q. Now, the outdoor education item, you show on Page 55 under this part of your plan you would just do away with that? A. Well, we feel that that has a lower priority than some of the other items within the budget for desegregating the schools and integrating them and we felt that that amount of money would be available for planning the more important purpose.

Q. But in 1970—the 1970 budget—there is $247,000 allocated for that and that would just—you would just withdraw that complete allocation?

The Court: Some of these are earmarked federal grants, aren't they? That couldn't be used for anything else.

The Witness: That may be true. Which of those funds are earmarked, I do not know.

The Court: Well, I don't know either, but I know at Manual and Cole they have special programs, so I have been told, and the sources of these funds are federal funds, as I understand it. Of course, these funds wouldn't be available for other uses, I assume. They wouldn't go back into the general fund.

The Witness: No, but there is the question of [244] whether or not, under a desegregation plan, whether or not the reason for the use of the funds under that kind of a plan makes just as much sense, let's say, within a desegregated setting than in the given setting where it is segregated. Whether or not the funds would still be applicable in that case perhaps is a question, but, it seems reasonable to suspect that those funds would be available under those circumstances as well.

The Court: Well, I don't think reason has anything to do with it. When you're dealing with the Health, Education and Welfare Department, I think they work in categories, probably. I mean, I have been given to understand that.

The Witness: Something that would have to be investigated, yes.

By Mr. Ris:

Q. Also, did you take into consideration to what extent this $247,000 budget for Ballerette in the outdoor education has already been committed? A. We have not.

Q. You did determine the cost for busing under your Exhibit 511, is that right? A. That's correct.

Q. Have you determined the cost for the in-service training that you recommended? A. No, we have not.

Q. Did you determine the cost for the staff and [245] faculty orientation you recommended? A. No, we have not.

Q. Do your figures consider the cost for compensatory education, as you recommended in the integrated setting? A. No, we have not.

Q. Did it consider the cost for the special programs at Manual and Cole? Or, would you just do away with all these special programs? A. We have not considered those costs there.

Q. Did you consider the cost of testing all pupils three times a year as you recommended in one portion of your plan? A. We have not.

Q. Did you consider the cost of a block count for redistricting the high schools? A. We have not.

Q. Did you consider the cost for the public relations for community acceptance? A. We have not.

Q. Did you consider the cost for capital expenditures for buses or for changes made in the—changes made necessary in the high school, particularly under your Plans 2 and 4? A. We have not.

Q. Did you consider whether the changes in the physical schools would be necessary; the size of the desks and seating [246] and the heights of the blackboards and so forth under Plan 2 and Plan 4? A. Would there be a change?

Q. You don't know that there would be a change? A. As far as we're concerned, we feel there would be no change.

Q. You think that the desks and seats for a first-grader are the same as those for a fourth-grader? A. Yes, sir.

Q. And for a sixth-grader? A. Yes, sir.

Q. And the height of the blackboard—they are all the same whether they are first-graders or sixth-graders? A. Yes. In fact, many of those rooms are already—are kindergarten through Grade 3.

Q. You don't know what changes would be necessary? A. No.

Q. You don't know that any such changes would be necessary? A. No.

Q. Well, then, your conclusion that you stated before that sufficient funds are available within the current budget to implement the plaintiffs' plans— that's not a correct statement? A. I wouldn't go so far as to say that because—

[247] Q. You told us about all these costs that you haven't even considered. How can you make that statement, Dr. Bardwell? A. That's correct, we have not considered the costs in detail, but we have nevertheless modeled those programs very much after the plan that has been presented by the School Board and we are merely contending that the funds that are made available under the proposed plans to implement Resolution 1562 would be also available for the plan that is being proposed here.

Q. But, nevertheless, despite the fact that you have not considered all of these, you will stand on your statement that all this could be done within the current budgetary items? A. That's correct.

Mr. Ris: That's all.

Redirect Examination by Mr. Greiner:

Q. Dr. Bardwell, you were asked a question about the source of some of the components of the plan and you identified for us the authors of the plan. But the sources were not limited to the authors. For example, one of the sources is the Board's own plan, is it not? A. By all means.

Q. Now, do you know whether or not under the Board's [248] current proposal as implemented for voluntary open enrollment, that some of the transportation under voluntary open enrollment requires less than, let's say, the best utilization in terms of the numbers of students being picked up and deposited at various schools? A. Well, any plan that is developed on an essentially haphazard or nonrandom basis—or a random basis like voluntary open enrollment, the chances are almost certain that it is not an optimum kind of transportation plan.

Q. Now, you mentioned that we didn't have the manpower to develop the detailed transportation schedule that would be involved. Does the School District have the transportation department? A. It does.

Q. And it is Dr. Olander's department, is that right? A. Yes.

Q. And do you have any idea of how long it would take his department to prepare the detailed plan of transportation, the actual bus schedules, if he worked hard? A. I don't know how long it would require.

Q. Are we talking about a couple of years? A. Well, I know that, for example, to develop the kinds of linear programming that was developed for our plans here, it is essentially my own work and the work of some students

that helped me write some of the programs, and this [249] effectively saved about three or four men working a couple of years by the use of the computer. Well the same kind of efficient use of manpower can be used by the School District itself and with appropriate input of information like that, allow the computer to take advantage of efficient use of manpower, and I suspect it might take—it's purely a guess on my part—a couple of men, oh, three or four men, four or five weeks.

Q. I suppose we can ask Mr. Olander about that. Now, Exhibit 507, which shows the general geographic outlines of the proposed redistricting of the senior high school areas, does Exhibit 507 purport to show anything about junior high school feeder relationships into those senior high schools? A. It does not.

Q. Now, Doctor, in the District today are there some junior high schools which in fact feed more than one senior high school? A. Yes, sir.

Q. So that is not a different concept? A. No problem at all.

Mr. Greiner: No further questions.

Mr. Ris: That's all.

The Court: I assume—I gather from what you said that on the elementary-high school program that you have advanced that you think that the Plan 2 is much preferable to [250] Plan 1, is that correct?

The Witness: Well, Your Honor, it depends upon one's point of view. In Plan 1, for example, and I think this is in response to an earlier question you made of me, that that plan minimizes the total amount of transportation for all students that would be involved.

The Court: This is the one in which you transported classes, complete classes and changed the character of the schools?

The Witness: That's right. Now, it minimizes the total transportation. And you see that there are about 8,000 students that are to be transported under that arrangement. In Plan 2 it increases the transportation that is involved and hence the cost, but it has some other advantages, Plan 2, because the assignment of students is automatic. The assignment of teachers would be automatic. And one would avoid the agonizing problem that would be presented in Plan 1 by what students are to be involved in the program. So, there are advantages.

The Court: Well, the plan wouldn't give you complete integration, anyway, would it?

The Witness: It would certainly give you complete integration for the 29 schools that are involved, yes, sir. And, in fact, the most efficient way that it could be done.

The Court: Let me see if I understand it. Doesn't [251] this contemplate moving, say kindergarten through the third grade to an Anglo school and vice versa? Or, moving the fourth, fifth and sixth grades of the receiving school to the sending school?

The Witness: That would be Plan 2. And that would of course, involve more students.

The Court: Then once they arrive where they would be, why, this would complete integration within each classroom, is that correct?

The Witness: That's right.

The Court: I mean, that's what you have contemplated?

The Witness: That's correct.

The Court: Turning to the high school proposition that you have submitted, I assume that from what you say that your alternative plan for making Manual a specialized school is not one you think is as good as the desegregation plan?

The Witness: No, it would not.

The Court: Well, of course, it would achieve integration, wouldn't it?

The Witness: The concept there would be to change the community image of Manual itself by turning it into a specialized school with attributes that would provide that school with a symbol of excellence, of the kind of education that all students would look to that school for the various kinds of programs.

[252] The Court: But you would still retain its general program as well?

The Witness: No, I would not.

The Court: Well, then, it would have to achieve integration then because those who wish to take a general high school course would have to go to another school—

The Witness: To the extent that that would take place, it's true. And to the extent that the students at Manual chose other schools for their high school education, to that extent the integration would be achieved.

The Court: Well, if they stayed at Manual they would have to take a particular course that would be offered there?

The Witness: That's right.

The Court: To be sure, they could take pre-professional courses, but the great emphasis would be on practical trades, wouldn't it?

The Witness: No, there would be some emphasis upon that, of course, but we would conceive that to change the image of Manual would be to implement certain programs that would be visionary. Would be innovative. And advanced training in engineering.

The Court: Well, what—in what respects does your program differ from that of the School Board?

The Witness: None at all, sir, except to provide [253] the option for those students that are at Manual to stay at Manual or to transfer to any other high school in the city.

The Court: Well, doesn't the School Board program contemplate that?

The Witness: I'm not certain that it does. I don't know.

The Court: But yours would be an absolute right to transfer?

The Witness: That's right. We want to guarantee that right.

The Court: Well, I suppose there are variations of that concept that could be applied here. I suppose that Cole could be utilized for example as a specialty school as well, couldn't it?

The Witness: It could.

The Court: A specialized school for the whole city?

The Witness: It could.

The Court: Those two schools are sort of symbols, it seems to me, of segregation. I mean, they seem to, for some reason to—to have that character.

The Witness: That's true.

* * * * *

[254] * * *

WILLIAM SMITH, a witness called by and on behalf of plaintiffs, having first been duly sworn, was examined and testfied as follows:

The Court: Please give us your name and address and occupation.

The Witness: William Smith, 3401 East 26th Avenue, Principal, Barrett Elementary School.

Direct Examination by Mr. Barnes:

Q. Mr. Smith, how long have you held this position? A. About eight and a half months.

Q. How long have you been employed by the Denver Public Schools? A. Fourteen years.

Q. What was your position immediately previous to your present position? A. I was the Assistant Principal at Gilpin School.

Q. What was the racial composition approximately of that school? A. Approximately 54 percent Hispano, 50—well, let's say 50/50 black and Hispano at Gilpin.

Q. In what other schools have you held positions in the Denver Public School system? [255] A. Well, I worked prior to going to Gilpin—I worked at Hallett two years; Barrett five years; Fairview three years.

Q. When were you notified that you would become principal of Barrett School? A. June of 1969.

Q. Did you know what the racial composition of the school was at that time? A. Yes, I did.

Q. What was it? A. Approximately 95 percent black.

Q. What steps did you take during the summer of 1969 to prepare new programs for Barrett School to begin in September? A. I went on vaction first of all and then I came back in July and I did talk to Dr. Gilberts about the second week of July and asked him if I might take over the building before the principals normally take the building, and he said yes, so I did officially take possession of the building and I did go into the building and start looking at records, pupil records and so forth.

Q. Did you design some new programs to be implemented in the fall? A. Yes, I did.

Q. Were these programs designed for an integrated [256] school? A. No, they were not.

Q. Did you request any additional funds for these programs? A. Other than just one set of books—I did ask for a set of books into new words, and that was granted.

Q. Before discussing the details of these programs with you, Mr. Smith, would you tell us how many children are being bused into Barrett this year as the result of this Court order? A. Approximately 300 youngsters, Anglo and black.

Q. Three hundred—315? Somewhere in that area? A. In that neighborhood, yes.

Q. How many children are within walking distance of Barrett this year? A. Approximately 98.

Q. What race are they? A. Predominantly black, Hispano, and that's about it. Black and Hispano.

Q. And the total number then is about 415? A. Four hundred fifteen, right.

Q. Do you know what the pupil population of Barrett

was the preceding year, 1968-69? A. Yes, from the semi-annual report, the pupil population, this was June of 1969, was 383 pupils at Barrett.

[257] Q. You have increased in size this year? A. That's right.

Q. How many teachers do you have at Barrett this year? A. Sixteen and a half.

Q. How does that compare with the previous year? A. We had nineteen.

Q. So you have more pupils and fewer teachers? A. That's right.

Q. The racial composition of Barrett this year under this Court order is what? A. Seventy-five percent Anglo, twenty percent black, five percent Hispano and Oriental.

Q. Is the racial composition, Anglo and non-Anglo, generally reflected in all of the classes of Barrett this year? A. Yes.

Q. When a new child comes to Barrett during the middle of the year or has come to Barrett this year, on what basis has that child been assigned? A. Well, in the office I have —let's call it a book, a register for each youngster of each classroom racially balanced. So that, if I receive an Anglo youngster, a boy, in the fourth grade, I know exactly what room he goes in. And that way you don't have a segregated classroom within an integrated school.

[258] Q. Does this result in the exact same pupil/teacher ratio in each class? A. You mean class size?

Q. Yes. A. The same class size. In our classes—the class sizes are different. One fourth-grade class may have 34, the other may have 28. The important thing is to have racially-balanced classrooms.

Q. Have you received complaints from teachers concerning the disproportionate size which you maintain in order to have racial balance? A. No.

Q. How many of your present teachers have requested transfer for next year? A. One, so far.

Q. What was the basis of that request? A. Well, the teacher was assigned as a music teacher and she knew very little about music so I made the transfer within the building and took a second-grade teacher and she agreed to teach the music and the new teacher taught second grade. And we made the transfer within the building.

Q. Is one teacher leaving the building, however? A. That would be the teacher that is leaving, yes, because the teacher that has the—that agreed to that—the fifth-grade music, she would like to have her room back. [259] And since she has seniority, she gets it back.

Q. Are these the same teachers who were teaching at Barrett in 1968-69 before you arrived? A. Yes.

Q. And— A. Except for the new ones that I received this year.

Q. Mr. Smith, you stated that you developed during the last summer some special programs. Are those programs now in effect? A. Yes, they are.

Q. Would you describe the high potential lab briefly? A. The high potential lab is a lab that we have set up for youngsters that have ability above that of the normal classroom work that is required. These labs are ungraded. We have fourth, fifth and sixth-graders working in the labs and they work in various areas—extended areas in the curriculum.

Q. How many children are in the high potential labs? A. Approximately 60.

Q. About how many hours a day do they spend in these classes? A. Well, it depends. A youngster may go in the high potential lab for one hour in the morning or maybe one hour in the morning and one hour in the afternoon.

Or the youngster may in two days a week, and we have some youngsters that may [260] go in three days a week. They don't go in there all the time. We have different programs set up in the high potential labs and it depends on the times that they require to go in.

Q. How do the children make up the time that they lose from the regular classes? A. Well, my philosophy is that if a child is truly high potential, then the things that they miss in the regular classroom, they can do at home for homework. And consequently they are excused from high potential lab five minues early and go to the regular classrooms and pick up the assignments that they miss and do it for their homework.

Q. Can you give us an example—one example of the curricula that might be offered, say, a fourth-grader in the mathematics class? A. All right. You mean, what we're offering now in the high potential labs?

Q. Just a quick example. A. All right. We offer creative writing, reading and geometry.

Q. Geometry that might be for what grade student? A. Well, it's ungraded, fourth, fifth and sixth. However, we have one third-grader in geometry now.

Q. Did you have to take over any new space in order to create these high potential labs? A. No.

[261] Q. Did you have to obtain any new materials in order to outfit these labs? A. Yes, we had to get a few books, and that's about it. It wasn't any big thing.

Q. Where did you get the teacher? A. The teacher was assigned. One of the teachers that we had assigned to the building.

Q. As part of the staff assignment to Barrett? A. Yes.

Q. How did you obtain her time? A. Well, if you want to call it differentiating staffing, scheduling—whenever the

IMC center—and the youngster—this is the library, and when the youngsters go into the library instead of having two teachers in there, then the teachers—the teacher that is relieved can be doing something else.

Q. So it was just more or less by making more efficient utilization of the staff you already have? A. Of staffing, right.

Q. Are the high potential labs integrated, Mr. Smith? A. Yes, they are.

Q. Have you received any favorable comments from parents concerning them? A. Yes, I have.

Q. Now, do you also have a program of learning labs? [262] A. Yes, we do.

Q. Can you describe them briefly? A. The learning lab—we have two, and these are for the—the word I like to use is inexperienced youngsters. Some people prefer to call them slow. I don't like the word slow. So I use inexperienced. These labs are set up for the youngster that is behind in reading or math programs.

Q. Approximately how many children participate in these? A. Eighty.

Q. Are they integrated as well? A. Those are integrated, yes.

Q. Where did you find the space for these? A. Well, we had a teachers' room upstairs that wasn't being used and so we put one lab in there. And, as I said, we only have sixteen teachers there and the teachers agreed that one faculty room was enough instead of two. So we have a lab in one teachers' room upstairs and then in the kindergarten room we partitioned the back part of it off and we have the other learning lab in that area.

Q. Does each teacher in each one of these labs have her own deck and blackboard and materials, et cetera? A. Yes.

Q. Where were you able to find those materials? A. Well, we had them around the building. We have the [263] portable blackboards similar to this one right over here, so we used them as a partition and set it off and made a classroom out of it.

Q. It's a question of efficient use of existing materials? A. We had the materials there, yes.

Q. What is the actual number of hours a child might spend in this learning lab? A. Now, this depends. It's based upon needs. If a youngster goes into a learning lab he may go in there two days a week, three days a week; maybe an hour a day, maybe an hour in the morning, maybe an hour in the afternoon. We have—we teach two different things, as I said, in the learning lab. We have reading and math and a youngster, may go in the morning for reading or he may have—we may have a youngster in in the afternoon for math, and it kind of depends.

Q. Is there any case in which a youngster might spend the whole day in such a lab? A. No.

Q. What might be the maximum? A couple of hours? A. I would say an hour a day, maybe three days a week.

Q. And the rest of his time is in the normal classes? A. In his regular classroom, right.

Q. What kinds of approval have you obtained from the school administration concerning these modifications of the [264] program? A. Well, I have the wholehearted approval from the administration and they said, go right ahead, and I wrote this thing up and in an instructional study and it was approved. A program modification.

Q. Have you been authorized to continue these programs next year? A. Yes.

Q. Have you had to request any additional money? A. No.

Q. Have you received any parents' comments about the learning lab kinds of program in addition to the high potential lab? A. The parents are very enthusiastic about both. The parents that I talked to are very happy with the situation and I haven't received any adverse comments about the labs.

Q. Have you received any requests from parents requesting to withdraw a child from either one of these labs? A. No.

Q. Or any requests from parents to reorganize the classes because they are integrated or not integrated? A. No.

Q. Mr. Smith, how do you organize the loading of the school buses after school? A. I have three teachers on duty at 3:20 and we line [265] the youngsters up at the doors and the buses are there and then they are ready to board the buses and leave.

Q. How long does it take? A. Five minutes.

Q. Did your teachers administer achievement tests throughout the school at the beginning of this year—the 1969 school year? A. Yes.

Q. Were the same tests administered in January, 1970? A. Yes.

Q. Have you had an opportunity to review the reports of the school scores on these two sets of tests? A. Yes, I have.

Q. Was a composite score for the whole school at each grade level reached after each battery of tests? A. Yes.

Q. How did the January tests compare with the September tests at each grade level? A. There was improvement in all areas. Not all, most areas. Improvement.

Q. Was it improvement that was equal to the three months they had been in the school? Or was it more than the three months that they had been in school? A. Well,

I would say it was generally three months' improvement. The average.

[266] Q. There was no evidence of retrogression? A. No.

Q. Of the tests that were given in January, it was the same test that was given in December, was it not? A. Yes.

Q. So the second test was a completely reliable indicator of your progress at Barrett? A. Not necessarily, if you use the same test twice. It could be.

Q. Children do become testwise? A. Yes.

Q. So the test is not completely a reliable indicator of what's going on? A. No.

Q. Have you administered any tests subsequent to January, 1970? A. Yes, the regular testing program that we have—we have the test in by April 17th this year.

Q. Have you received the results of those tests? A. No.

Q. Are they expected momentarily? A. I think so. Usually we get them in—

Q. Do you have any other better evidence that performance of children at Barrett is declined or improved? Teacher comments, or any kind of reliable evidence? [267] A. Now, will you rephrase that. Academically? Socially? What do you mean?

Q. Are we overlooking any other source of reliable evidence about the progress of Barrett pupils? A. I don't think so.

Q. Mr. Smith, do you have any evidence that forced busing has created hostility in the Barrett classrooms? A. In the classrooms?

Q. Yes. A. No.

Q. Do you have any evidence that forced busing has impeded achievements in any way in the Barrett classrooms? A. In the classrooms, no.

Q. Is there a Barrett PTA? A. Yes.

Q. Has the PTA made any formal expression of opinion about forced busing either to you or to the School Board? A. They have to me. They have been concerned about the busing.

Q. Have you planned any social functions through the PTA? A. Other than the executive board meetings, and I wouldn't call that a social function—the executive board meetings, we met one time and we met in the Barrett area zone and the next time we met at the Lowry zone area.

[268] Q. Are these meetings attended by both Anglos and Negroes? A. Yes.

Q. On the first day of school in September of 1969, when Barrett opened, was there any evidence of parental hostility about the busing expressed to you? A. Not hostility. Concern, I would say.

Q. Did you then meet with those parents? A. Yes, I did.

Q. And discuss the general situation of Barrett? A. Yes.

Q. Was there any incident of any significance, educationally, that occurred after that meeting that upset the program? A. No.

Q. What steps did you take during that few days preceding the opening of school and immediately thereafter to ease the transition? A. Sunday before Labor Day I went to the school and opened the building. This was so the parents could come over and look at the building and on Labor Day we were there all day to make sure that people wanting to see where the kids were going to school and see—and then we wanted to be there, too, and we did have—people would come in—parents would come in and we would take them through the [269] building on a tour of the gym and of the lunchroom and so forth.

Q. Was that program effective so far as you could tell? A. I thought it was.

Q. What did you do on the opening day of school? A. Other than registering kids, that was about the biggest thing.

Q. Did you have a coffee and doughnut program? A. Oh, yes, we did. We had coffee and doughnuts out in the hall so that when parents came in they could feel at ease, and this was rather difficult in that the school was integrated four days before we opened and we worked those four days trying to set up classes and all this stuff and it took a while, but we did get all the kids registered by 9:15—9:30 that morning. And I think it makes a—makes it a lot easier if the parents can come into a building and if there is a big long waiting line, they can have a cup of coffee and a doughnut while they're waiting.

Q. Who helped you put on the coffee and doughnuts? A. The former Barrett PTA came over and assisted.

Mr. Barnes: That's all we have.

Cross-Examination by Mr. Jackson:

Q. Mr. Smith, these programs that you have just been discussing regarding the coffee and doughnuts and the opening [270] of school—was this necessitated in your opinion solely because the school was to be integrated? Or was this your general approach for the opening of a new school for which you were a principal? A. I think this was my general approach. This was my first principalship and I would have done it.

Q. And it was really unrelated to the question of integration? A. Right.

Q. The programs which you have established at Barrett

—as I understand your testimony these are programs which you designed and developed almost simultaneously with your appointment at Barrett as principal, is that correct, or within a period of time after that? A. That's true.

Q. And I believe you testified that these programs were designed not for an integrated school but were designed for the school as you then knew it, is that correct? A. That's true.

Q. Is it fair to summarize these programs, Mr. Smith, as one principal's innovative approach to the problem of education today? A. Would you restate that?

Q. I say, is it fair to characterize these programs as one principal's innovative approach to the problems of [271] education today? A. I might say so, yes.

Q. As a matter of fact, the length of time that you have had to evaluate these programs is really insufficient to give you any definite guidelines as to their effectiveness, is this correct? A. That's true, yes.

Q. Now you mentioned the testing of the students and I believe you indicated that tests were given in September of 1969 and then in January of 1970? A. That's true.

Q. And were the children who were tested the same children in each case? A. We have such a large turnover in that many of the youngsters that attended Barrett are transients in nature by the fact that they are military, so that reason that I test in September is to find out exactly where the youngsters were as far as academics. Then, we knew who could go into the high potential labs and learning labs and so forth. We wanted to find out exactly where we were before we started. Three hundred brand-new children—it's kind of difficult to just start teaching. And I think the teachers realized this, too.

Q. So then I take it from your answer that the group then that was tested in January was not the same group

that [272] was tested in September? A. We had the same—basically, the same group but we had a lot of movement, too; people that had transferred out, not to other schools, but had received military transfers to other parts of the world.

Q. And these students had come from various backgrounds, from various school systems? A. Right.

Q. Some from Denver, I would imagine? A. And some from Denver.

Q. And some from out of state? A. Right.

Q. What was the nature of this test? Is this what we have variously referred to as the standardized test, or was that a teacher-made test? A. This was the Stanford Achievement Test.

Q. Which grade were you testing? A. Second through sixth.

Q. You tested four grades? A. Right.

Q. Did you test them in all of the standard subjects for the Stanford Achievement Test? A. Yes, we did.

Q. Did you have any opportunity to compare the level of a student's achievement as indicated by the September test [273] with any prior test of that student? A. For a few—it's one that had been tested in April of 1969 at other schools in Denver, but we received many youngsters from out of state and we didn't have the records.

Q. This movement that you just mentioned—does this create problems in terms of achievements of students in the schools? A. I don't think it creates a problem so far as achievement is concerned. It creates problems as far as getting a group of kids together and following them through. For example, if a youngster is in the building four months and then all of a sudden his father is trans-

ferred to Vietnam or someplace, it's very hard to do. It's very difficult. But, with the youngsters that have been in school at Montclair, Whiteman and Moore, you can kind of follow this along. This is much easier. But we have a great mobility.

Q. But don't you think it means any particular problems as far as the child—that child's achievement is concerned? A. No.

Q. Well, what generally speaking, Mr. Smith, is the experience level of your teaching staff? A. The average experience?

Q. Do you know? A. I would say eight years, the average.

[274] Q. Now, do you have any new teachers? A. Yes, we have four.

Q. By teacher, are you talking about new teachers in the Denver Public School system? A. Right.

Q. Based on your experience as a principal in Denver Public Schools system, do these teachers appear to be capable and competent as those with more experience? A. Yes.

Q. Are any of these new teachers presently engaged in either your high potential lab or your learning lab? A. Yes.

Q. And do you feel that they do an adequate job in those positions? A. Yes, especially the high potential lab, teacher experience is excellent.

Q. How do you select a child for entry into the high potential lab? A. This is done mainly by the teachers, the teachers in the regular classroom. You will have a youngster—for example, we have several that they can read a book so much faster than the other kids and they get bored so we take them and give them a trial basis in the high potential lab and usually they work out all right. We try

to stay away from test scores if we can. And in some cases we have— [275] well, in one case we have one youngster in the high potential lab and the same youngster is in the learning lab. He goes to high potential in math and then he is in the learning lab in reading.

Q. Do I understand that the high potential lab from your testimony is for fourth, fifth and sixth-grade students? A. Yes.

Q. And I believe I heard you testify, and I may be in error—but it caused me some concern that you had one third-grader student taking geometry in the high potential lab? A. That's right.

Q. How did he get it if it was for fourth, fifth and sixth-graders? A. Because it was on a basis of—this kid is so brilliant. He hasn't any business sitting in a third-grade class wasting his time, so we tried him in the high potential lab. So he does there a very good job.

Q. So then you consider your high potential lab at least theoretically speaking would be open to all student grades so that, if there were a case for it, your high potential lab as is presently constituted could function in this manner, is that correct? A. Right.

Q. Now, when a child goes into the high potential lab [276] he misses some courses that he would otherwise have in the—normally, let's say, if a fourth-grader goes in, he misses some courses he would normally have in the fourth grade curriculum, as I understand it? A. That's true.

Q. You mentioned specifically social studies, I believe and indicated that that child would be given homework assignments which he would then have to turn back in to his social studies teacher, is that correct? A. That's right.

Q. Is it always social studies that the child would miss

to go into the high potential lab? Or might it be various courses? A. No, because the high potential lab—it's set up in the afternoon. And the fourth, fifth and sixth-graders generally have social studies and science and art in the afternoon.

Q. What about the learning lab? Does the same thing obtain there, that a child going into the learning lab must miss some part of his regular classroom curriculum? A. That's true.

Q. And is there any uniformity again with the learning lab as there is with the high potential lab in terms of the class the child would miss? A. Well, generally the youngster going into the [277] learning lab will miss probably reading or math. And the philosophy is or the theory is that if he is behind in reading why, then why have him sit in the reading classroom and just sit there. It's better to pull him out of that classroom and put him in the learning lab until he is barely able to hold on to a regular classroom situation, and then we take him out of the learning lab and put him back into the regular classroom.

Q. How many students might be in any one of these learning labs at one—at any one time? A. I would say eight to fourteen.

Q. And this is one teacher for that? A. One teacher.

Q. I understand from your testimony that you have in the high potential labs, writing—creative writing, reading and geometry? A. That's true.

Q. Do you have any other courses? A. Not now, no.

Q. And in your learning lab you have reading and math? A. Reading and math.

Q. You also have a free period, do you not? A. We have a basic-choice period.

Q. And this is a period where you give each child [278]

in the school the opportunity to select one course that he can take during that period of time? A. Not each child. Each fourth, fifth and sixth-grader is given a choice of one subject that they would like to take from 12:45 until 1:30 each day.

Q. And this choice is made entirely by the student himself? A. By the students themselves. The parents have nothing to do with this.

Q. The parents don't get into the business at all? A. No.

Q. Now, have you made any specific requests to the administration for any increase in terms of teachers for the next school year in order to continue your program in this fashion? A. No, but I did make a request to the administration—if I could keep the teacher ratio I would be willing to take an additional 50 youngsters at Barrett School. Rather than lose teachers, I would rather have more kids. And we could handle it.

Q. You have, in effect, requested from the administration that they assign more students to your school, even though — A. Right.

Q. Do you know what the rated capacity of your school [279] is, Mr. Smith? A. I've got a sneaking suspicion and I'm going to guess. I'm going to say around 450.

Q. Now, at the present time you have somewhat less than 450 students, do you not? A. That's right.

Q. Are you utilizing all of the space at Barrett School at the present time and then some? A. In the rooms?

Q. Yes. A. Yes, we are using all of the space, all of the rooms.

Q. Would you say that you are underutilized? A. I don't think so.

Q. Even though you're not up to rated capacity? A. Yes.

Q. Just one other question. Mr. Smith, since this is an

innovative program, if you determined at the end of say two years that your program was not achieving those results that you hoped it would, I would assume you as an educator and principal would want complete freedom then to introduce new programs into school at that time, is that correct? A. I think that, if I found that it wasn't working, I would probably drop it, and this is one of the reasons I did write it up as a program modification, because I can't [280] prove it. There are a lot of—there are not a lot, but some people wanted to tailgate this program and I said I think it's educationally sound but I want to make sure before anybody else grabs part of the program because it might not be. And if I find that it's not a good educational program, then I will drop it and try something else.

Q. I'm going to have to retract my statement and ask you one other question. Did you mention that, so far as the loading of the buses, that you have them ready at 3:20 and that they are loaded then? Of course, if the bus doesn't happen to be there, then you can't do that, is that right? A. Then we've got a problem.

Mr. Jackson: No further questions.

The Court: The achievement levels of the minority children are substantially the same as—

The Witness: Your Honor, I can't say yes or no at this point. I don't have the test scores back yet. We did test the youngsters in September and I haven't received the final test scores back. I don't know. But, based upon the two tests that we gave, the same form test, in September and January, there was progress on both parts; both Anglo and blacks.

The Court: You said that the two special programs are fully integrated. I would assume from

that that the same percentages that are persuasive in the school are present [281] in the special programs?

The Witness: Yes, except in the high potential lab. We did not purposely balance the labs because we feel that the labs—that should be based upon need instead of color. But it so happens that in the learning labs they are fairly well racially balanced. In the high potential lab, I think we have, so far as black youngsters, two or three in the high potential lab. But we took it strictly on need and not on race. On just these two programs.

The Court: Thank you very much. You may be excused.

(Witness excused.)

Mr. Greiner: Your Honor, at this point, other than Dr. O'Reilly, who we plan to put on after the presentation of the Board's plans, the plaintiffs have nothing further to offer at this time.

* * * * *

[282] ROBERT D. GILBERTS, a witness called by and on behalf of defendants, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Ris:

Q. State your name and address, please. A. My name is Robert D. Gilberts, 3921 South Hillcrest Drive, Denver, Colorado.

Q. And your occupation and profession? A. Superintendent of Schools, Denver Public Schools.

Q. You have previously testified in this case last August? A. Yes.

Q. And your qualifications at that time have been adequately stated? A. I think so.

Q. And you have continued to be Superintendent of Schools since that date? A. Yes, sir.

Q. Have you since submitted your resignation to the Denver School Board? A. I have.

Q. Effective as of what date? A. September 1st, 1970.

Q. And at that time what new position will you assume? [283] A. Dean of the College of Education, University of Oregon.

Q. You also have a faculty rank of Professor of Education? A. Right.

Q. Dr. Gilberts, shortly after March 21, 1970, were you furnished with a full copy of the Court's memorandum opinion and order of that date? A. Yes, sir.

Q. Have you given much thought and study to the memorandum opinion and order? A. Yes, sir.

Q. And have you given particular study to that part of the memorandum and opinion and order that pertained to improving equality of education in certain desegregated schools? A. I have.

Q. In addition to your own personal study, have you also called on members of your staff? A. Yes, sir, I have; both central staff and the principals in the schools involved.

Q. Do you have certain staff members at the next echelon below you who have particularly given this substantial consideration? A. Yes, all of the affected departments in the central [284] offce staff have been involved one way or another.

Q. And those principal staff members—have they been in court during this entire hearing yesterday and today

pertaining to remedy? A. Most of them. Not all of them.

Q. Will you state who is here and their positions on your staff? A. Mr. Howard Johnson, the Deputy Superintendent. Dr. Armstrong, Assistant Superintendent for Planning. Mr. Olander, an Assistant Superintendent for Business Services; Dr. Keppe; Dr. Quincy, Director of Research, Planning and Budgeting. Mr. Harold Spetzler of the Personnel. Jerry Elledge was here some time ago. Dr. Beal in Research. There may be—they may have been other members here from time to time.

Q. All of these individuals have studied the particular problem at hand? A. Yes, sir.

Q. Have you conferred with all of these various individuals in—pertaining to the benefits of their advice and thinking as well? A. Yes, sir.

Q. With respect to the principals of the fifteen schools designated by the Court in its opinion and order of March 21, 1970, did you have occasion to confer with those individuals? [285] A. Yes, sir. My staff did it at greater length. As soon as the order was given to us by the Board to meet this plan, all of these principals were brought in, a review was made of what our objectives were. They were asked to submit their proposals, their suggestions. These were considered in conjunction with other suggestions from other staff and they were involved.

Q. Now, with respect to the initial meeting of these principals, each of them were furnished with appropriate portions of Part 3 of the Court's memorandum and order? A. Yes, sir.

Q. Were they asked to give this some thought and at a later date submit their own recommendations and suggestions? A. Yes, sir.

Q. Did these principals proceed accordingly? A. Yes, they did.

Q. Did you get a substantial amount of information back from these individuals on recommendations? A. Yes, sir.

Q. Subsequent to what you have just described with your own staff members and with the principals of the fifteen schools involved, did you then proceed to put together a proposed plan to be submitted to the Court in this case? A. Yes, sir, we did.

Q. Was that plan submitted to the Board of Education? [286] A. Yes, sir.

Q. And were some modifications or changes—was the plan approved by the Board? A. Yes, sir, it was.

Q. Were the attorneys directed to submit that to the Court? A. Yes, sir.

Q. The plan itself on the Court's bench has been marked as Exhibit B-A. Is that the plan which you then prepared, Dr. Gilberts? A. Yes, sir.

Q. I hand you what's been marked as Exhibit B-B. Is that a copy of the resolution of the Board of Education of Denver School District No. 1 to which we have previously referred? A. Yes, it is.

Q. Was that resolution adopted on May 6, 1970? A. Yes, sir.

Mr. Ris: We offer in evidence Exhibits B-A and B-B.

Mr. Greiner: No objection, Your Honor.

The Court: It will be received.

(Whereupon, Defendants' Exhibits B-A and B-B were received in evidence.)

Q. Dr. Gilberts, were you subsequently—I believe on Friday last week, which would have been May 9th, I believe [287] —furnished with a copy of the document entitled

Plaintiffs' Memorandum for the Hearing on Relief? A. Yes, I was.

Q. And within the limited time available, have you studied that as well? A. Yes, I have.

Q. Have you—have you had members of your administrative staff also review that particular document? And particularly the portions thereof within their respective specialties? A. Yes, I have.

Q. Have you been furnished their suggestions and advice? A. Yes, sir.

Q. Now, with respect to the plans in this particular case, whether it be Board plans or plaintiffs' plan, are there certain matters of rationale that you yourself think are of substantial importance that have to be considered as a basic foundation in evaluating or formulating such a plan? A. Yes, there are.

Q. With respect to the problem of low achievers among a group of students, children generally and particularly from the lower socioeconomic environment, concerning which there has been considerable testimony here, is that a problem that is peculiar to Denver? A. No, sir, it is not.

[288] Q. Is it a problem from your own reading, research experience in attending meetings and so forth, that is a very common problem in school districts, particularly of the larger sizes such as Denver? A. Yes, sir, it is, a very common problem.

Q. Is it a complex problem? A. Very complex problem.

Q. Can you state some of the causative factors that enter into this problem of low achievers, particularly on the basis of the disadvantaged children? A. Well, there are—

Mr. Greiner: Well, Your Honor, I object. It seems like that's a question which the Court has already

determined. I don't think the purpose of this hearing is to relitigate those questions.

Mr. Ris: I'm not attempting to relitigate, Your Honor. We are trying to get a basic rationale and foundation, the factors that Dr. Gilberts believes are of consequence in connection with a case in which there is a basis for the plan that he has proposed.

The Court: Overruled. He may answer.

A. Well, there are many different factors that are involved in the lack of achievement of these youngsters. There are factors related to causal background, certainly, of influence on which youngsters relate themselves to the kinds [289] of formal instructional process as conventionally offered in our schools. The problem of communication. A good many of these youngsters come from homes that are not verbal. The kinds of opportunities they have to prepare themselves to move into a verbally word-oriented instructed program is certainly a factor. The kinds of experience that these youngsters are provided with would have a great deal of influence in terms with their readiness to recognize some of the formal reading aspects. The matter of discipline—self-discipline in the classroom and in that kind of instructional setting is a major problem. There is the problem of health in some cases; youngsters not having had adequate nutrition over long periods of time which certainly has a great deal of influence over an individual's ability to learn. Dietary problems. Just generally health problems. Broken homes. Lack of parental interest. All of these factors certainly contribute to the problem. These are reinforced in many cases, not only by the home but by the community as well.

Q. Are you aware of the fact that there have been many

studies made of this particular problem? A. Yes, there have.

Q. And the thousands of people that have participated in these studies? A. Yes.

[290] Q. By whom have these studies been carried out over a period of time? A. Well, there certainly has been many, many studies carried out by colleges; universities; regional laboratories established by federal offices; other studies sponsored by the U.S. Office of Education; foundations; local school systems. I happen to belong to one of the larger cities of the country, the Great Cities Research Council. There have been many, many articles written and many, many research studies reported by them.

Q. Has any one person or any one group of persons or any one institution come up with a single answer to this complex problem? A. I'm not aware of any single answer to the problem that has been accepted widely in the field. There are those who feel very strongly that they have, as individuals, but as far as the field is concerned and I meet with superintendents from larger urban cities at least twice a year, and I'm not aware of any.

Q. Doctor, you heard the testimony today and yesterday concerning the plaintiffs' plan for proposed desegregation by mandatory cross-transportation as the first step. Now, based upon your study of that plan and the evidence you have heard here and based upon your own education and your own experience and your own knowledge of the Denver Public School [291] system, its pupils, its teachers, its staff, and all of the factors that must be taken into consideration here, do you have an opinion as to whether desegregation as proposed by the plaintiffs is an absolute and necessary first step? A. I see no evidence that would lead me to believe that this is an absolute truth. The fact is, if this is a

truth, then all the major cities in this country are beyond help. Certainly there have to be other ways of approaching the problems of educational deficiencies, because it is going to be a long time before integration as such can be applied in most of the major cities of this country. New York, Philadelphia, and other cities such as this.

Q. Are there other cities that are worse off educationally than Denver? A. I believe so.

Mr. Greiner: Objection, Your Honor. I believe we are concerned with the problems of Denver; not the problems of New York City.

The Court: Well, he is simply saying that—he's talking about the magnitude of the problem. He's just using it in that context. Clearly, we're not going to try to solve the problems of Philadelphia and New York.

Mr. Ris: I don't intend to.

The Court: Probably not solve the problems of Denver, either, but we're going to do our best.

[292] Q. Based upon your general background and education and experience and your knowledge of the Denver situation, including its local economy, the sociological factors present here in the schools, political and educational background of the pupils, what is the first and foremost change which might be made, in your opinion? A. I agree with Dr. Sullivan's comments that, if a—that some massive changes are necessary in an—in the entire form of education. I don't know if I would agree in terms of types of changes that he suggested, such as educational parks, but it seems to me, as I have looked at this city as a large institution, one of the first and foremost changes to recon-

struct the educational climate which is not going to be an easy task because this involves changing of attitudes and values and practices on the part of professional staff—certainly on the part of our students, on the part of the community, parents, and all of those who have some input into the educational process. Now, I think it's absolutely essential, changing this kind of climate at this time and I'm talking about those inputs, parents, community, et cetera, a positive kind of supported influence and supported posture with respect to the changes that are going on in the schools. In addition, of course, to changing that climate, which is, in and of itself, a very complex thing, and I'll talk about some of the things later on as I talk about the plan that I [293] think will go together to assist in that process.

It is necessary, of course, for us to look at new ways of approaching program differences; new ways of motivating youngsters in terms of the curricula itself. Again, we will talk about some of those changes. And I know that two of the principals here who have made some of these kinds of changes in the schools will talk about them, as well.

Q. Basically, so far as changing understandings and attitudes, is that more qualitative rather than quantitative? A. Yes, it is predominantly a qualitative change. However, I think it can be influenced significantly by some quantitative changes in which we operate.

Q. Can you break this change in attitudes down, item by item? You mentioned pupils; faculty; and community generally; parents and other members of the community. Will you give us just briefly what you have in mind with respect to pupils? A. Well, I think that probably the most significant factor in terms of pupils' attitudes are going to be —to get at first as early as possible the kinds of motivations that are provided by the home, the family. We have begun

working on preschool programs, educational programs designed for youngsters prior to the common age of entrance in our kindergartens. These programs are designed to work with parents in helping those parents assume a more positive role in terms of their youngsters' education. So this is one [294] element of changing the pupils' attitudes.

Q. Does your plan—part of your plan—is it intended to effectuate such changes? A. Yes.

Q. At pupil level? A. Yes, I didn't quite finish.

Q. Beg your pardon. Go ahead. A. It seems to me that another very important element is the format of the educational process itself. The question of relevancy of course is being raised by youth all across this country, at the college level recently, of course, in a very obvious way. The same thing occurs throughout our schools—throughout the entire City of Denver, as well. And I believe that there are some significant changes in the kinds of option that youngsters should be provided once the formal educational process begins, and we have in this plan, I think, identified some of the elements that should make a difference over a time in this direction.

Q. Now, can you proceed on, and in terms at this point discuss the matter of changes and changing of attitudes, understanding, as to staff and faculty? A. Well, this is going to be probably just as difficult a task in that professional educators have a great deal invested in current practice, and it's going to involve some rather substantial changes in the way in which we organize and [295] operate our schools; the roles that the professionals play in that process. It will have to be supported by some extremely well-defined in-service education programs which will allow those individuals to modify their behavior in these new

kinds of roles and new kinds of situations. I think that the entire matter of government, however, how decisions are made—the kinds of opportunities that the professional has to input at the local level where the problem is extremely important and in living, and that solution can be implemented and ultimately will effect a change in the way in which the institution relates to children.

Q. With respect to teachers, is there any objective—

The Court: I'd like to clarify something. I'm not sure that I understand what he's saying. When he talks about the kinds of opportunities—I suppose you mean the administrator has in carrying out a program? Is that what you're saying?

The Witness: I'm talking about the opportunity of the entire professional team—the opportunity that it has which includes the teachers as well as the administrators. I see the need for sufficient differentiation in the process of education so that the professional is being used as a professional. Let me give you an example, Your Honor, to make it a little more clearer.

In the process of reading we assume that the—that [296] most of the activities that are necessary for a child to read are to be conducted by a professional teacher. One of those activities is certainly the reading to a youngster to motivate that youngster to become interested in the process of reading. Also, to give him experience with words, with somebody else using the words. I believe that that process does not necessarily require the talents of a college graduate. I think designing a program certainly does; that some element of that may be there. But that

might very well be handled by somebody with less than professional training. An education by and large—we have used up a good bit of the professional talents of our teachers in some rather mundane functions in education, as I see it, leaving very little time for the professional planning and evaluation. The opportunity for professional teachers to deal individually with the youngsters, looking at their difficulties and trying to tailormake a program for them. So what I'm talking about is—it's creating an attitude change by allowing the professional to function more professionally in the setting.

Q. Now, as to the teachers themselves, are there any reorganization or any changes of planning and so forth—are there any problems that exist in the Denver Public Schools system that would have to be anticipated and considered? I'm thinking of seniority and so forth. A. Yes, we do have a relationship with our teachers in [297] which we are hopefully beginning at least to share some of the decision-making in our school system. We have negotiated with our teachers, making some decisions through that process. We also have a professional counsel in which we talk about any subject in our school system that is of interest to each of us. And certainly the teachers as a professional organization have a role to play in that process.

Q. And as a matter of fact, even though the Court may note the record—the DCTA is the Denver Classroom Teacher Association? A. Yes.

Q. And that is an independent organization? A. Yes, and it is the elected representative organization of the Denver teachers.

Q. In fact, during this present school year they went on strike for the first time in Denver Public Schools, is that correct? A. Yes, sir.

Q. Now, with regard to community acceptance, we have already had considerable testimony here, particularly by Dr. Sullivan, the community acceptance, change of attitudes and understanding of the community is important. Can you elaborate on this as that applies to the Denver Public Schools system? One, as to parents who are being affected by any changes and, two, by the community in general; non-parents. [298] A. I believe I mentioned the necessity of the support of the parents in order to assist youngsters to be receptive of the educational process. Throughout my twenty years of experience as a superintendent it has become pretty obvious that, without the support of the community parents involved, it's very difficult to make programs function well, whatever that program. Consequently, that understanding and that support is necessary, no matter what the change necessary is in terms of operation of our schools. A second very critical error is the need for understanding and supporting the fact that we rely upon the community's acceptance of what we do and how we function, and the financing of our schools. Without funds there is very little that we can do. Consequently, we are heavily dependent in this area in terms of bringing people along so they accept the kind of programs that we propose and are willing to support them financially.

Q. And is it this type of support that is very often referred to as political considerations in the operation of an administration of the school district? A. Yes.

Q. We have had several definitions during the course of this trial as to desegregation, particularly as compared to integration. Are you aware of that differentiation? A. Yes.

Q. Just so that there is no misunderstanding, we have [299] been referring to desegregation as a mere transfer of students; integration being psychological, emotional, philosophical acceptance. Now, keeping those two things in mind, insofar as attempting to desegregate or attempting to integrate, is there a substantial difference in what can be forced or not, in your opinion? A. Yes, certainly. Desegregation can be accomplished by fiat.

Q. What about integration? A. I think integration is a voluntary process of change in which—one, in which people reserve unto themselves—and I don't know how anyone can accomplish this except through the process of convincing people of its importance; of the necessity of their accepting this as a goal.

Q. Do you know of any plan that has been created by anyone in the country that can be used to be brought into a system such as Denver and put into operation on a mechanical basis that would take care of any of the equality of education of the achievement results that exist in some of our schools? A. Each city and each school system has a personality with individual characteristics of its own, and these have got to be considered on that basis.

Q. And have you considered the Denver situation expressly in arriving at your proposed solution? A. Yes, we have.

[300] Q. Now, your particular plan has been broken up into several parts, is that correct, Dr. Gilberts? A. Yes, it has.

Q. The introduction is more or less a summary, is it not? A. Yes.

Q. And the first major item is that of voluntary open enrollment, is that correct? A. Right.

Q. Now, during the previous hearing we have had con-

siderable testimony concerning the VOE, so we don't have to go into the details of it except that I wish you would summarize what is proposed in this particular plan with respect to voluntary open enrollment, which is an extension of what has been done in the past and how you think it will affect the situation generally, particularly with the educational opportunity. A. Well, it is really an extension of the previous plan which is the current voluntary open enrollment plan with the further provision of this element of it, that we would effectively guarantee space for any youngster who would like to attend school somewhere else in the city where the racial composition would be improved. We have, of course, before provided transportation for those youngsters under the other plan but substantially—the substantial difference [301] here is that we are guaranteeing space for these youngsters.

Q. And again, is the integrating effect of the VOE a continuing qualification of the plan? A. Yes, sir.

Q. And that is one of the intents of the plan? A. Yes.

Q. Again, without going into all of the detail, do the matters contained in Exhibit V-A under the caption of Plan for Raising Educational Achievements—is this substantially set forth, do you think, in planning in that regard? A. I'm sorry. I'm not sure I understand.

Q. Does that part of Exhibit V-A under the caption of Plan for Raising Educational Achievements substantially set forth the overall plan for the voluntary open enrollment and the expansion of it as you just detailed? A. Yes, it does.

Q. Is the guarantee of space, so far as the plan has been projected to this date, is that related to the fifteen schools designated in the school designations by the Court? A. Yes.

Q. Now, the next major item that you have taken up in the plan—that is a differential staffing and we have not had a great deal of testimony on it, but I wish you would describe what is meant in this context by the phrase differential staffing. [302] A. It's difficult to talk about differentiated staffing without really examining at the same time the kinds of modifications that would occur in the program which would be reflected in differentiated staffing. You cannot talk about differentiated staffing in a vacuum. It is merely a reflection of how one best deals with the educational task; defined by a given educational program, utilizing the concepts that I just discussed with the judge. It seems to me that an education—we have done a very poor job of examining carefully the elements of the educational task. Recently some new approaches to this particular problem have been taken in terms of planning, and budgeting systems and systems analysis and I'm sure there are other approaches to the problem as well, where we very carefully —as carefully as possible define what our behavior and the other objectives might be in our educational program and then very carefully look at what kinds of steps need to be designed to see that those goals are achieved and then break those steps down in some way of distributing the responsibility based upon the kinds of competencies that are necessary. Now, there are a number of differentiative staff plans around the city. By and large, they have not been developed on this basis. There are some that have been. But I think, as we develop our skill in examining the educational task and as we look at how we might redistribute the talents, the abilities, the competencies, we [303] will be able to identify effective systems of differentiating our staff. I think the differentiated staff has a major implication for both the instructional process, that is, what we teach kids

and how we teach them, as well as providing an extremely important motivational influence and opportunity for promotion and opportunity for input at a higher professional level for our teachers. We have an example of this—By the way, back in 159, where there is a field-tested differentiated staff program which has been operating I think about three or four or five years in Wisconsin—it began when I was there at Madison. The program was operated at Jamesville, Beloit. I was familiar with the Madison problems and personally familiar with the Jamesville plan, which is the beginning of looking at the problem of differentiated staffing.

Q. So this innovation of differentiated staffing or examination, I should say, is not peculiar to Denver? A. No.

Q. And is it being generally accepted in other school districts? A. Two weeks ago at the largest superintendents' meet in Vancouver, we were looking at the major trends in terms of educational change today and differentiated staffing was one of the early major ones. Early childhood changes as the second one. This is one of the major topics at least among those superintendents that were there.

[304] Q. Is there contemplated that this will have an effect on increasing the achievement levels of children, particularly in disadvantaged areas? A. We believe so.

Q. Now, continuing on with this portion of the plan pertaining to staffing, could you tell what you contemplate the plan to provide with respect to personnel assignment procedures? A. Well, you're talking about Page 6 now,—is this the item you're talking about?

Q. Page 53. A. In this section of the plan we discuss a number of activities that we think will be important in identifying people to teach in schools in the areas that are affected by this plan. We talk about elements of an in-

service program that we feel will be important in preparing them for service in this area of the city. And essentially limited to that.

Q. Is it part of the plan, also—does it also include assignment of teachers to bring about significantly more integration throughout the system? A. We have been moving on the process of increasing integration through our staff throughout the city—the entire city.

Q. And this is nothing new? I mean, this is a continuation [305] of what you have been doing? A. Yes, sir.

Q. Now, with respect to increasing experience of teachers in the disadvantaged schools and to provide for more stability of—the less mobility of those teachers, what is your plan? A. I feel that the concept of differentiated staffing has some implications if we begin to process in these schools in terms of attracting people with ability, and talent. I believe also that providing the necessary planning time for those kinds of programs and paying teachers for the time will also have an effect on that process. Under the staff stabilization part of the plan we talk about incentives that really provide as much—much more for the necessity of planning educational programs as attracting teachers. Both of these are important elements. But we feel that, given the opportunity to use these teachers who would have an interest in working in this kind of setting, and allowing for the changes that we describe in other parts of this plan, we will be able to attract the most competent teachers that we have into these programs.

Q. And for the additional planning time that would be required for these teachers, you tell us you do provide for additional compensation? A. Yes, sir.

[306] Q. How is that contemplated to be handled? A. On a pro rata basis, on the regular salary for an extended four weeks, I believe it was.

Q. Would that be four weeks during the summer? A. Four weeks during probably the month of August prior to the opening of school.

Q. Now, again, there is substantially more detail in that portion of your plan under general—the general designation of staffing that goes in more detail, is that correct? A. Yes, sir.

Q. Now, the next portion or the next section of the plan pertains to improved in-service training for staff and—Would you please elaborate on that, if you will? A. Well, if we're going to make some of the changes that are necessary in education that I have alluded to previously, it's going to be necessary to help teachers make the kind of accommodations that are necessary to these changes in educational programs. We have listed on Page 169 a number of activities that have already been conducted in the schools. Some fourteen different kinds of in-service training programs that are indicated there. We talk about the extension of these kinds of programs, plus the identity of other in-service programs relevant to the instructional process; relevant to attitudes and values held by our teachers and their ability [307] to relate to their students. We have talked about the utilization of the black educators and the Hispano educators to assist us in this process. We feel that the fifteen schools have problems which can be best ameliorated by the principal and staffing planning and that action at the local level, we intend to allocate moneys in our budgets for this process, and that in-service planning is really a part of the in-service process.

Q. An illustration of individual school planning such as Mr. Smith testified to today at Barrett? A. Yes, but extended much beyond what he was able to do with the resources we gave him.

Q. But you have a planning on a local level with respect to the fifteen schools? A. Right.

Q. And which would be geared to their particular problems in this subdistrict? A. Yes.

Q. And you contemplate increasing budgets toward those schools and for that purpose? A. Yes, sir.

Q. Is there anything else now on this in-service program that you would like to highlight? A. I think the planning element is probably one of the most significant, and into that planning process obviously [308] there would have to be input, the special knowledge and special talents for the preparation of these teachers.

Q. Dr. Gilberts, if you were to go into the entire detailed planning for in-service training, would it be practicable to do so and put it in this particular plan you submit to the Court? A. Yes, sir, because a good bit of what will probably be necessary in this area is in the process of development in a number of places in the country. There is a great deal of local planning involving people who are going to be affected by it that will be necessary. And this is something that will need to be worked out by not only other experts in the area but our own staff who will be involved in the process.

Q. And this takes time? A. Yes, sir.

Q. And development as it goes along? A. Right.

Q. So could it be spelled out by book, chapter and page insofar as this present plan is concerned, in detail, item by item? A. Certainly not in the time limits we have.

Q. Now, with respect to the next portion, the school complex concept—

The Court: Before we come to that, I think it might be well to elaborate on the actual curriculum or

changes [309] that are contemplated. I'm sure that you couldn't delineate all of them but what do you know now about possible programs? You said you were going to extend the length of service for the teachers involved. Would you also, for example, extend the school year for some students?

The Witness: Yes, sir. We do propose in here the extension of our summer school programs offering that opportunity to the students.

The Court: That would be a thirty-day period before school starts?

The Witness: Not necessarily. The summer school program for youngsters might be a later June through early August program. The timing has not been decided. This is our conventional summer school period. And I would assume that it might fall in that time, but it might not. It might be found advisable by the staffs to have this immediately preceding school. That's not been decided.

The Court: What kind of special courses are prescribed in connection with this kind of problem? What is the thinking of educators on this?

The Witness: At the present moment I think that probably one of the most significant areas in which we can proscribe some educational opportunities would probably exist at the preschool area. I was just—I have just received this week a communication here which is an educators' dispatch [310] to administrators in which they review a number of ideas that are presently relevant, I think, on education. For example, it says if you are wondering what preschool children are teaching cognizant psychologists today, you might find the following items interesting:

"One, the children of the poor often fail to succeed in school not because of genetic . . . but because they lack the right kinds of sensory stimulation in the early years.

"Two, traditional tests . . ."

Well, in the area of developing programs for preschool youngsters involving parents and so on, I think this is probably a very significant area in getting at some of the early deficiencies of these youngsters. Precisely how those would be designed and how they would be operating, I really don't know. I don't consider myself an expert as such in that area, but we do have and have had for the last year and a half or so people who have been working on programs in that area and we have begun to pilot test those programs.

The Court: These then would work on the basis of the Head Start programs, only they would be more elaborate, I suppose?

The Witness: Well, I think they would probably be somewhat different than the Head Start programs in that we would be organized for a much more specific objective and at [311] least what I observed in Head Start programs having been organized for—

The Court: Well, I suppose they would seek, however, to compensate for the lack of innate knowledge, so to speak, that the child has?

The Witness: Yes, sir. Now, then, I could go on through the entire curriculum and talk about all kinds of specific innovative programs, but I think you will hear Mr. Ward later talk about some things I consider to be particularly exciting in that school. I believe that the programs that he and his staff have

designed in that school to be some of the most exciting, disregarding the fact that the school is black; exciting ideas in education that I have seen anywhere in this country. I think they have tremendous potential for Manual and for other schools, as well, probably. I think that you heard Mr. Smith, of course, talk about some of the ideas he has. Mr. Morrison will talk about some things that are being done at the junior high school level. The whole area of educational program modification in the elementary schools is a very complex one. We have some programs identified in here that deal with bilingual education, which we are having some very good results with.

The people, the staff, are quite enthusiastic about the results. Mrs. Polvida (phonetic spelling), who is in one of our elementary schools, has an approach to teaching [312] youngsters coming from Hispano backgrounds, which was reported to the Board a week or two ago, and again, it's difficult to describe these programs without being there and feeling and seeing what goes on, but all of these kinds of ideas I believe have some tremendous implications for really substantive changes in the process of education. By and large, as one looks around the country and reads reviews of what has been conventionally identified as compensatory education programs, I call them coping programs. They really have not gotten at some of the fundamental issues that are obvious in dealing with members of some of our minority groups.

Today there are some new programs that are coming about that I think are a good deal more imaginative and really deal more precisely with the problem.

The old compensatory programs were largely more of the same. We just did more of our reading program; more of our mathematics. But the format in which this is presented, the climate that is created in the instructional setting was not effectively changed, and I think that climate is a tremendously important factor in learning, obviously.

By Mr. Ris:

Q. Well, skipping over to the section of early childhood, is it more detailed as to what has been done and what it proposes with respect to the youngsters at the elementary disadvantaged schools? A. Yes.

[313] Q. Is there anything more you wish to add to that particular section at this point, Dr. Gilberts? A. I don't really think so. I think I presented some of the things we would like to do in these programs that are in the process of development. I think they are going to have to have significant contributions to be made.

Q. Now, going then to the school complex concept, would you state what you contemplate in that and what effect it would have on the particular disadvantaged youngsters? A. Well, the idea of the complex has very broad implications, I believe. I have been superintendent of schools now in the school system with some 32 teachers, one with some 1,500 teachers, and a corresponding number of youngsters, and it has become quite apparent to me that the larger the institution becomes the more inflexible and immobile it is, that I believe from an operational or a government point of view in terms of both the way in which it affects the educational program and the way in which it relates to the community which will have to support new forms, new systems of organization and operation that have to be iden-

tified. There have been a number of them proposed around the country. The complex idea has been tried in slightly different forms in different school systems. But, basically what we're trying to do through the complex is, first of all, decentralize the decision-making process so that the [314] principals and teachers and community that are affected by those programs have some immediate and direct input into that process which I think is going to be very important in terms of the kinds of qualitative—again, interrelationships—that occur in that setting. The second portion or—another portion of this is how do we identify in addition to having to decentralize decision-making regulations with professional staff, and how do we involve them more effectively and how do we involve the community, and I mentioned, in addition—in the process of relating to the schools and institutions, hopefully improved communications between home and the school. This is certainly one of the major problems, especially in a large school system.

A third thing that we are trying to do within the complex is to find new ways of organizing and supporting services and special education programs for the youngsters that are contained within those complexes and this, of course, could cover an extremely wide range of programs from diagnostic services for youngsters with learning difficulties to cultural arts programs to student exchange programs. Well, we have not defined precisely the entire range of potential in this area. We have been planning during this year and before the year is out we hope to have identified through that planning process precisely what will be done in the complex. It does indicate where we are at this particular time. We hope to [315] involve effectively—more effectively the agencies that have input into the learn-

ing process, into the families that live in these areas where the complexes exist. Somehow to coordinate the services provided by welfare agencies and other agencies that presently are not coordinated in any effective way. I think that in the description of this portion of the plan it talks about other things which I don't know if you want me to go through point by point or—

Q. Well, if you have the basic portions, in the interest of time, I think we'll move on to the next portion.

The Court: I think what we ought to hear from you as to what you would contemplate that the local school would contribute and what this complex would contribute, in general at least.

The Witness: I think that, in a general way—I am not proposing that the complex remove from the local school the opportunity of program changes such as will be reported later here today. I think that sort of opportunity for internal changes within the local schools is certainly—certainly still has to exist. The complex does not replace that function. But in the complex there are a number of things, some of which I did allude to, and on Page 67 there are listed some advantages of the complex that we think can supplement what can be done in the local schools.

Q. What page, Dr. Gilberts? [316] A. Page 76. The first of these is that there are obviously potential patterns of pupil assignment for the total complex and to encourage multiethnic education within the expanded school neighborhood. The utilization of present school facilities in such a manner as to provide maximum educational benefits with

minimum cost. Unlike the educational park concept which would require the abandonment of the present school plan —and effectively utilizes most existing facilities in which the taxpayers have a large investment. Decentralization again of the administrative organization involvement— outstanding opportunities for economically providing supporting services to the individual schools.

Increased availability of staff and service personnel by minimizing the—

Q. Now, this particular concept then—the children would spend some portion of their time in the neighborhood school and some time in the complex? A. Yes, sir.

Q. And in a complex, of course, they would then meet in classes and other activities with children from other schools that were also in the complex? A. Those are possibilities, yes.

Q. When you refer to multiethnic education, there would be at least a mixing that would lead to some change in understanding and attitudes, as you discussed previously? [317] A. Yes, I would certainly hope that opportunity would be provided.

The Court: I still don't know what they will be studying in this center. Are they going to study science? Are they going to study art, music? We have been given to understand that these are going to be cultural expeditions which don't have any substance, and I think you ought to clarify that; if it does mean more than that. I mean, are they just going to take a trek out to look at some paintings, you know? Is that one thing? If you have science laboratories or something of that sort, where they can take chemistry or biology or physics, why, that would be another thing.

The Witness: These are all possibilities, Your Honor, but they have not been decided specifically for each of these. One of, we think, the important elements of the development of the complex is the involvement of the professional staff and the community in that process and they have not quite reached the point where they have identified the specific kinds of activities that will occur in these complexes. It could include all of the things that you mentioned. It could include things that may be —that maybe neither of us have even conceived at this particular time.

The Court: Well, then, I take it that this is sort of an untried method?

The Witness: Yes, sir. I think that it is.

[318] The Court: It's just not had very much experience.

The Witness: That's true. There has not. There are a number of school systems that are taking this concept, applying it slightly different, and Minneapolis is using it, a proposal was made in San Francisco for the use of it, and this is a—there is a complex in operation at the present moment differently conceived in Chicago. There is a complex or two in Los Angeles. Now, each of these has slightly different elements. But the basic purposes of the complex are the same. Oklahoma City, I think, has at least—I think temporarily adopted a desegregation plan which embodies this approach and this objective.

By Mr. Ris:

Q. Now, in this complex, Doctor, just to expand a bit more, each of your neighborhood schools would have its

own staff, its own principals and so forth, is that correct? A. Yes, sir.

Q. And then would there be a so-called super-principal or whatever you designate him to be or a senior principal over the entire complex? A. I think at the present moment the proposal—or at least what their thinking is about a coordinating principal would have the responsibility for coordinating the—certain elements of the program in the complex. That has not been decided, but there would be somebody with that responsibility.

[319] Q. Well, this program is probably set out more in detail in your large document, planning equality education, is it not? A. Yes, I think it was in a little more detail.

Mr. Greiner: Well, I object, Your Honor. Pardon me, Dr. Gilberts. I object. I don't believe the Board is saying that they are presenting Defendants' Exhibit—I think it's Exhibit E, Planning Equality Education, as a portion of their plan. I think that's Plan B-A as instituted.

Mr. Ris: That wasn't the question.

The Court: He says that some particular matter here has presented some detail in Exhibit D. That was the question.

Mr. Ris: That was the question. That's the whole point, Your Honor. Being that, if each one of these subsections was elaborated with every bit of detail, why, we would have volume after volume and not merely one volume that has been filed with the Court; just as a practical matter, you can't have every bit of detail—

The Court: I have no doubt that it is in more detail, Exhibit D. That's all he asks.

Q. So then, with respect to this decentralized planning that you have previously mentioned, you're not speaking of decentralizing—a decentralized plan such as—or, local boards of education such as in New York City and Brooklyn and so forth, are you? [320] A. No, sir.

Q. And decentralized planning in your complex and the various principals and your super-principal or whatever you're going to call him, and the teachers there, and to evaluate what is necessary or desirable for this particular community? A. Yes, together with community representation from each of the schools in the complex as well.

Q. By community representation, you mean parents or other members of the community? A. Yes.

Q. So, rather than bureaucratic directives from Washington, that you shall do this and do that, you have the availability of the complex and the general plan and the details implemented by the local individuals to satisfy the local needs? A. Yes, sir.

The Court: Now, what's the main objective here? To have more economic use of central facilities and central equipment? I mean, that you can't afford to duplicate in every school?

The Witness: I wouldn't say that's the main purpose, sir, but that's one of the purposes that will provide that. So far as I'm concerned, the main purpose is to get the schools in the local areas actively engaged in the process of evaluating their educational needs and designing programs that [321] they feel will meet these needs. I feel that process needs to involve the teachers and the principals in the communities within smaller areas than a total city. There are tremendous differences in a city this size to try to deal on some grand scale with

all of the difficulties in the large city that we have—that it has led us inevitably to the bureaucratic approach, standard applications of solutions. And that is not going to solve our problems.

The Court: Nor is its objective to bring about integration. Right?

The Witness: I believe that it will contribute to that.

The Court: Well, it's a by-product.

The Witness: Yes, sir, that's a part of it. That's another one of the elements. But it's not the element, it's one of the elements.

The Court: But I think that its real value is that it furnishes a local administrative—

The Witness: I think that's probably—

The Court: —influence.

The Witness: —in my mind, the primary importance of it. And I feel that, coming out of that kind of a setting we're going to have better decisions with respect to educational programming.

By Mr. Ris:

Q. With respect to that part of the [322] plan pertaining to special programs at Cole or Manual, do you care to discuss that or yield to the principals? A. I would prefer to have them do it.

Q. Now, with regard to special programs available under the Educational Achievement Act of Colorado, Senate Bill 174, can you tell us generally what that is all about? A. A year ago the State Legislature passed a bill, No. 174, which provided additional funds for schools in the state to develop exemplary programs for the improvement of education. The programs that are listed in this document are those programs that have been approved under that

bill. These programs are also programs that were presented to the Senate by our staff in support of continuing the provision of those funds, and I think were largely responsible for the continuance of that support. These programs are Fairview Elementary School, Baker, Cole Junior High School. At Cole, at least, I assume that Mr. Morrison will talk about that. Here at Fairview School in conjunction with personnel of the Elementary Department, they have developed a reading program that has been designed to capitalize in on the talents of both the teachers and pupils in the fields of science, arts, mechanics, sewing, Spanish language, cultural and oral communication. The program is an interest-motivated approach to improvement of educational achievement and assistance for youngsters in Grades 2 through 6, with emphasis on individualized [323] reading instruction. Now, the program sets aside ten classrooms as resource rooms or learning—with a wide variety of supplementary materials and equipment available for teacher and pupil use. It goes on to describe this program which meets in the morning for all pupils and Grades 2—

It is too early as yet to judge what the results are going to be but those who are involved in the program are quite enthusiastic. At Baker the bilingual program is involving the youngsters that—well, 85 percent of the Baker pupils are Hispano and 15 percent of these are bilingual. Sixty-seven percent read two or more years below their expectancy and this program is capitalizing upon the bilingual aspects of the backgrounds of these youngsters to again motivate them for better learning in their schools. These programs again are reported by those schools, the teachers, as being quite successful in motivating youngsters and a report was made to the Board here a week or two ago in which all the teachers were involved.

Robert D. Gilberts—for Defendants—Direct

Q. Do these results—are they used in connection with the other schools where similar problems exist? A. Yes. We will build into each of these programs an evaluation system which in time certainly will help us identify whether or not they have implications for better education. As we learn whether they do or not, we either will be dropping them or expanding them into other schools [324] where we think they have some relevancy.

Q. So it is at Fairview, for example—is that a test site then for good reading at the elementary level? A. Yes, sir.

Q. A pilot plan, so to speak? A. Yes, sir.

Q. And of which the favorable aspects of it then will be used elsewhere? A. Right.

Q. Is this a constant thing that is going on in the school system such as Denver? A. Yes, sir. There are many, many programs going on that are being evaluated and; if they appear to have value, they will be expanded or recommended for expansion in other schools.

Q. Is there anything else now under the Senate Bill 174 that you would like to emphasize? A. Well, the Baker and Cole program, assisting disadvantaged youths to improve their educational achievement, is a program which is again individualized working very closely with youngsters who have problems of accommodating to the school, the way in which it functions. We provide what is called crisis rooms where youngsters that have difficulties in school need to cool off some place and go and get assistance—the assistance they need academically or emotionally. We [325] have a couple of educational laboratories, a couple of extension centers, one for each school, where youngsters can have an aducational experience, not necessarily within the school itself, but in another location. And again, I think

that probably in the case of Cole, Principal Morrison will be able to describe it in more detail than I could.

Q. Now, the last section in the plan is entitled Instructional Guidelines—Innovative Practices. Will you please describe what is in this portion of the report? A. Well, these—these are a number of programs, some of which have been in practice for a while, where we have gotten some experience and have had some evaluation. Evaluation with others were very early in the planning stage and—the first one was a program from which was—which was financed under Title I, cultural understanding, where youngsters from various areas of the city were brought together in a program dealing with a number of different cultural arts such as drama, music, general arts, and so on, in an integrated setting. These programs have been in operation I believe now—probably three and a half years.

Q. Is that at the sixth-grade level? A. Yes.

Q. And is it contemplated to expand that? A. Yes, I think so. I think the program has been successful and should be expanded for all youngsters in the [326] school system. The metropolitan exchange program which is—which we have not really placed as much effort on as we would like, but by and large, programs that have been either developed locally within our schools or in suburban schools in which we have exchange students for differing periods of time.

Q. This is with other districts surrounding Denver? A. Yes, sir.

Q. Is that still in the embryonic stage, so to speak? A. Yes, due to a number of activities this year, we have not promoted it as much as we would like to. I think it has a great deal of potential here if we have the opportunity

to really begin pursuing it. This could be along the lines that Dr. Sullivan indicated in the Boston area or other kinds of exchange programs.

Q. Are the nature of the political setups as between districts—has that been done by agreement with each district in each case? A. Yes, sir. The outdoor education center on which is commonly called Ballerette—I believe that provides us an opportunity to really get at some rather significant changes in the process of education. This center is not purely a natural-science laboratory. It is an opportunity, I believe, for a multidisciplinary approach to education in a setting where youngsters can have practical experiences, [327] where we can provide for integration on a work-oriented basis. We see this as providing opportunity in vocational education. We plan to take some of the program elements out of the Outward Bound which we feel will have many implications for this site, and I think is probably another one of the most significant kinds of programs that we have identified. A great deal of work is left to be done in developing this program as well.

Q. Is this a phase of this, Dr. Gilberts, that you think will have a significant effect on the children who attend to give it an environment in the circumstances under which they are living for the time being to get the understanding and change of attitude that lend toward integration? A. Yes, I would think the programs we develop in this center should be of significant importance in promoting integration.

Q. Is that one of the objectives? A. Yes. We have already talked about expanded summer school programs. We certainly feel that an expansion in many areas is necessary here dealing with basic skills, innovative programs, and cultural arts, recreation, job training, work experience, such

things as that. We have an after-school program which is presently financed with federal funds. The Denver Public Schools open art centers which were planned to attract cross-cultural attendance by offering exemplary [328] instruction in fine and graphic arts. The Denver Public Schools after-hours program in recreation and vocational areas will be continued. And these programs make it possible for boys and girls and the faculty to participate in a valuable integrated activity.

Another program which is a joint program with the Jefferson County Schools is a metropolitan youth opportunity center which is a school which has been provided for youngsters that have dropped out of school, not completed their high school. They can either finish their academic programs for high school diplomas or work on vocational skills or an—a combination of both.

Q. Is this actually being done? A. One site is at Kalamath and just off Colfax. Another one is in Jefferson County. It's out past—it's out past the lake there. I can't think of the address of that, but the enrollment in that paricular school has skyrocketed in the last two years.

Q. Is this to bring kids together who dropped out back into the system? A. Yes. The educational center that is referred to here as a secondary center in which we hope to provide a fairly wide range of educational offerings, both vocational and academic, and will attract youngsters from all over the city. We see this center as not being a full-time enrollment [329] center for children, students at high school level, but part time, based upon the programs that they might elect. We believe that we can put together a program here which will attract youngsters from all over the city and will provide another opportunity for a broad range of social and economic and cultural backgrounds.

We are in the process of making some major changes in our area of vocational education in all schools, not just in this area, but I believe the opportunity to provide job skills at the junior high school level is quite important. We have a number of programs that have been developed, again, and I think Mr. Ward probably talked about the program—a program or two they have there. We have some cooperative educational programs that are presently undertaken by business and industry involving youngsters from all the high schools. I think these are important learning opportunities for youngsters. We have been working in the area of curriculum, on Page 157, in providing changes in our social studies and history classes dealing more adequately with the contributions of minorities. We have purchased books, films, film strips and a number of items to supplement these changes and have been encouraging and working with staff members to deal across the city with these issues. The item on intensified educational programs relates to compensatory programs that—some of which we have already talked about and others which will probably need to be [330] redesigned. The college-Manual High School project is one in which we have begun a relationship with the University of Northern Colorado, I guess it is now, in developing some programs at Manual and again I think Mr. Ward talked about these better than I. The last item, I believe, other promising innovations, really is a review of this program that I referred to earlier which has been field tested in Wisconsin and a number of different school systems and one which we feel will make contribution to looking at the problems of differentiated staffing and individualized instruction.

Q. All right, sir. Based upon your background, your experience, education, your knowledge of the whole situa-

tion here at the Denver Public Schools, do you have an opinion as to whether this program has the probability of success to improve the education in the schools as indicated by the Court?

Mr. Greiner: I object, Your Honor. I don't think there has been a proper foundation laid as a basis upon which the superintendent can tell this Court that these plans will in fact work or even have a probability of working.

Mr. Ris: That isn't the question.

Mr. Greiner: Well, I think there has to be some foundation for the superintendent's opinion.

The Court: Overruled. We will permit him to answer.

[331] A. Yes, sir. Based upon my experience and my reading in the area, I think they have the possibility of success.

Q. Do they have a probability of success? A. Yes, sir.

The Court: There's quite a difference, you know.

The Witness: Excuse me. Yes, sir, I'm sorry, I meant the probability.

The Court: In law.

Mr. Ris: A great difference.

Q. Now, I would like to refer to the plan as presented by the plaintiffs. As you indicated, you spent some time—

The Court: Before you get to that, this idea of a center or cluster—do you contemplate needing new building for this, I assume?

The Witness: I believe so, sir. However, we have the opportunity right off the bat at the cluster sur-

rounding Cheltenham, using the old facility, which is being vacated because of a new school that we're building there. I believe that some additional facilities will have to be provided at least in some locations for some elements of the program.

The Court: Where do you have facilities that you could use presently?

The Witness: Well, as I say, I think that the Cheltenham School right now, the vacated building will provide us with some facility there. There is no question but that, [332] as Denver goes on down the road there is going to have to be a bond issue passed and we're going to have to have additional facilities, and when that is done, assuming a provision will be made for additional space for programs that will be developed here—

The Court: A center of this kind or a campus would call for a good deal of ground and a substantial amount of space, wouldn't it?

The Witness: Not necessarily, sir. It depends upon the kinds of programs that are developed. I think that probably the space that would be required at least for the programs that we could envision at this point would not require a great deal of additional space.

The Court: Well, it's very vague as far as I'm concerned. I don't know where you would do this. I don't know how much time would be required to develop it. This is a long-term program that would take ten years to get off the ground.

The Witness: We hope to have it in operation next fall for some elements of Complex 1 and 2. We have been planning all this year. Those elements that are recommended to us by the planning group

we hope to have in operation next fall. I would assume that the planning process would continue and we would continue to develop the program. I would hope that certainly within several years we could have [333] a pretty well-developed program in these two schools. Now, if the concept has validity and I think some of these things are going to have to be tested and measured like any kind of an educational program, it seems to me the experience we have had in the planning of Complexes 1 and 2 should shorten the planning process for other complexes if we feel this is the direction we should go.

The Court: Well, then, you don't feel at this time that this would fill the bill, so to speak, as far as integration or improvement of the program as far as either one is concerned? In other words, at this point you would be experimenting and testing with this concept? Hoping that it would—

The Witness: I believe—my professional judgment is, after twenty years in this business, that this will make a difference. Now, that is different than having proved that. And I think that we are unfortunately in the position as educators that a good many of the things that we talk about are unproven. We've got to test them.

The Court: You wouldn't want to put all your eggs in one basket? You would want to try out a lot of other programs at the same time, I assume?

The Witness: Exactly. Right. If you will read this, you will find that there are many, many other kinds of approaches that are going to—that are going on at the [334] same time.

The Court: Okay. We will take a short recess now.

(Whereupon, the trial recessed at 3:20 p.m. and resumed at 3:40 p.m.)

By Mr. Ris:

Q. Dr. Gilberts, with respect to the plaintiffs' plan which you have heard explained this morning by Dr. Bardwell and the exhibits that were admitted into evidence, could you tell us your opinion with respect to that particular plan? A. Yes, sir. I think this plan is based upon some unproven assumptions. Dr. Coleman indicated that the perfect influence on achievements, academic achievements, was a factor of socioeconomic difference.

The Reporter: Your Honor, may I have that answer repeated?

The Court: The reporter is having a little trouble getting everything you say. I think the problem arises from the fact that both of you are reading, and when you do this you drop your head. I don't know how we can remedy this but I believe, if you would speak up a little and if the witness box were brought around a little bit or else we could swing it around—

(Colloquy not transcribed herein.)

A. As I was saying, Dr. Coleman has indicated that the perfect influence on academic achievement is a factor of [335] socioeconomic difference and not racial or ethnic consideration, and based upon my reading from this particular area the evidence is even a little thin on the matter of perfect influence in terms of academic achievement just based upon socioeconomic difference. I don't believe that I could in clear conscience as an educator recommend the

approaches that are proposed by the plaintiffs on the scale that they propose them at this time on the evidence that I'm aware of in the field.

This plan is a mathematical solution to a problem which has human dimensions. And I think that a good many of the human factors have been ignored. I think that human factors involving individual students as it relates to the continuity and enrollments, in other words, the moving along of the youngster through the schools with his friends and his neighbors has been ignored. It seems to me that there are some unrealistic recommendations in the plan in terms of numbers assigned to some of our schools, and I am not sure whether or not the kind of distribution that has been proposed here provides a balance throughout each of the grade levels. Certainly it does not take into consideration the need for teachers in terms of dealing more professionally with their responsibilities as teachers. I think that the parents and members of the community by and large have not been considered in terms of their relationship to the school or the community [336] support for the schools. It seems to me that the proposals at the junior high and senior high school levels could destroy some of the new programs which are being developed which I consider quite unique and exceptional in this country and you will hear of several of them this afternoon. Certainly they have indicated a need for some of the things that we have in our plan in terms of in-service and some programs such as this, and I certainly would concur that these are important. I have some concern as to whether and how one would be able to provide some of the compensatory programs which have been indicated as necessary and with expanded—an expanded pupil base, with these youngsters being placed in need of compensatory programs in many more schools in classes involving

many more youngsters. I think it's quite likely that this might not only be more—might not be only more expensive but it might even be more difficult to design.

The Court: Do you think there is some merit in the proposition that, if they are in an environment in which they must compete, that there is more incentive for them to follow up these compensatory programs so that they can compete?

The Witness: Well, what I am saying, Your Honor, here is—

The Court: In other words, the compensatory programs in the abstract seem to fail. I mean, the evidence [337] indicates that is not too effective over a long-term basis particularly; that the children, when they return to their environments or their home environments are inclined to forget what they have learned. Rather, they haven't assimilated to the point where they could use it. Doesn't that seem to be the basic weakness of this compensatory approach so far?

The Witness: I think that in general this may be true, but the same thing can be equally true and there is proof to substantiate the different points of view that the same thing could occur in an integrated setting. Now, it may not be—I'm not aware of any proof that would indicate it wouldn't be true, but—

The Court: Well, I just mention it in connection with your saying that the compensatory programs might fail—might fall by the wayside.

The Witness: No, what I said was—

The Court: —in this kind of— If you do proceed to integrate the schools, because the—I gathered

from what you said that there would be—an accelerated effort in the classroom, that it would just be about impossible for the person who was there to keep pace and also to take compensatory education. I mean, I sort of gleaned that from what you said.

The Witness: That wasn't what I was referring to, but that might be a problem as well, Your Honor. What I was [338] referring to was the distribution of the resources that would be necessary to provide the compensatory education and a much expanded base; pupil population base. Now, that's something which, of course, one wouldn't know until one designed the compensatory programs. But it would seem logical to me that that certainly—that certainly compensatory programs, if they're going to be effective in an integrated setting, would probably in some way involve more than just the youngsters that would be coming in, let's say from the area where compensation was necessary and that could provide, as I say, a problem in the economic distribution of the resources within the school system.

The Court: One other point that Dr. Sullivan made—that when you get a group of homogeneous origin together, that sort of brings out the worst rather than the best in them when they are all together.

The Witness: Certainly I wouldn't disagree with that.

The Court: Sort of like a convention of lawyers. Individually, they're great, but—individually they are, you know, very intelligent. But you get their group decision and it might not be too good. Some-

how or other the psychology of their all being together doesn't add to their wisdom. It sort of detracts from it, perhaps. The same might be true of other groups.

[339] The Witness: I wouldn't disagree absolutely and totally with that position, Your Honor, but I think there can be exceptions to it. I think perhaps it can be designed to change that particular attitude and that particular orientation in some of these schools. Again, I'll let you listen to some of these programs at Manual and Cole.

The Court: Also, isn't there sort of a degree of comfort when you have those you are accustomed to around you? You don't need to put forth extra effort and you don't do it. I mean, there is a tendency along that line, as human beings; and don't you think that these are sort of predicates for this?

The Witness: I think these things might be true. I don't think they necessarily are true. I think there can be circumstances where they are not true. And I think those circumstances can be designed into educational programs.

Now, I don't think, as I indicated earlier, that we have identified any pat solution to these problems, but it seems to me that there are some potentials in the areas that are now beginning to develop that may allow us to do that. For example, Your Honor, two years ago at Cole Junior High we had a problem which nearly caused us to close that school in terms of attitudes. The very thing you're talking about. Now, some two years later we have a situation that's quite different.

The Court: Was that when Mr. Morrison was installed?

[340] The Witness: Yes, sir. Now, this is an example in change in climates and attitudes after—or that reflected on the educational program. That sort of thing I believe could occur in these schools with the right kind of leadership; with the right kind of programs and so on.

The Court: But you look forward to this integration step as the only possible solution to avoid polarization of the races, do you not?

The Witness: Absolutely.

The Court: You don't want to have separate cultures, do you?

The Witness: Certainly not. I believe that integration can come in many different kinds of form. I don't think one can identify one way of doing it and say that that is the end, that's the only way it can be done; I think that integration can be accomplished—and I am talking now about the psychological, philosophical definition that has been described here. I think it can be aided by many kinds of activities, a good many of which will probably go on outside of the school through other institutions and through other kinds of activities. I think that integration is an essential. It's not important. It's an absolute necessity. It has to occur. That definition which is in this case. I would remind the judge that I did recommend—

The Court: Higher education has been integrated [341] since—oh, for twenty years.

The Witness: Right.

The Court: I suppose longer than that in most parts of the country, and everybody would feel that it was pretty ridiculous to have a Negro college and a white college in the North and West, wouldn't they?

The Witness: I think so, yes.

The Court: I mean they would just think it would be absurd.

The Witness: What I'd like to point out, Your Honor, is that I did recommend last spring a considerable amount of change affecting the—affecting literally thousands of youngsters in the school system which the Court sustained and at that time I indicated there were two reasons why I felt that was important: number one, to see whether or not that kind of a move in that area could in fact stem the tide of resegregation which was occurring in the northeast area of the city; secondly, to provide us a basis upon which to gain some more experience to see whether or not the claims for integration could in fact produce what is claimed for—

The Court: Well, has it been successful?

The Witness: I think, by and large, it has been. However, our evaluation that we are undertaking this year is not completely completed in terms of the evaluating measures that we're going to be using. I have—it seems to me that [342] it's going to take more than one year to really judge whether or not it's going to be effective.

The Court: For example, at Smiley which was a real testing ground—hasn't that been a successful experiment, by and large?

The Witness: As far as my subjective judgment—

The Court: Because there was more feeling and more resistance there perhaps than any other place.

The Witness: If we're talking about academic achievement and equating this with success in schools, then we have yet to see the evidence as to whether in fact it does or does not do it. I have some biases. I think, by and large, the operation of that school has been successful but I don't have the objective measurement upon which I could recommend we do this to the entire city at this time.

The Court: Oh, I see what you mean.

The Witness: This is my point.

The Court: I see what you mean on that. But the parents' attitude and so on in that area of the city I think were pretty much resistant to this movement and at this point they have settled down a good deal, have they not?

The Witness: I believe so. But I don't have much —as much information on that as I'd like to have.

The Court: You don't feel the pressure, I don't suppose, that you did.

[343] The Witness: Sir, I can't tell the difference between the pressure from one day to another. There is always pressure; all kinds of sources.

The Court: Well, that's the hazard of your occupation.

The Witness: Right.

The Court: From that particular source you don't—

The Witness: Yes. I have been receiving current pressure on problems at Smiley.

The Court: So you're not prepared to say that it's either successful or unsuccessful?

The Witness: No, sir. I think that a good deal of more careful evaluation in my subjective judgment at this point is indicated.

The Court: You wouldn't recommend it be abandoned at this point, I don't suppose?

The Witness: No, sir, I would not.

By Mr. Ris:

Q. In this regard again, you're speaking of—you still don't have any objective evidence from Smiley? A. Yes, sir.

Q. Are you speaking in terms of the testing results? A. Not only Smiley but all of the schools and all of the youngsters that were involved in this program.

Q. Or that Smiley—the fact that they were bused out [344] of the Smiley Subdistrict or into the Smiley Subdistrict? A. Right.

Q. Do you have any evidence at all from testing from these that there has been any improvement on those who were bused out? A. Not as yet.

Q. Is that what you mean by that, that you have no objective evidence? A. Yes, sir.

Q. Now, again getting back to what we discussed previously, before, is this the type of innovation or the type of thing that you say you recommended for that particular area on a testing basis, a trial basis? A. Yes, sir.

Q. And if it succeeds, then you will recommend it be expanded into other portions— A. Yes, sir.

Q. And—now, as to transportation, is transportation per se a problem with you, Dr. Gilberts, in busing? A. Yes.

Q. I'm not speaking of just the— A. Just general—

Q. General transportation? A. Yes, sir. This has been one of my major projects, I guess, through some twenty years of—well, seventeen years [345] of my experience.

Q. And the evidence previously has been in the trial that without any mandatory busing you're— you are already busing some 12,000 students. That was the figure as I remember, was it not? A. I believe that's correct.

Q. But that is considered by you to be a permanent thing that is desirable or was it a temporary transient thing to get more money? What is the background of that? A. Well, the background is that Denver has not had a bond issue since 1955 and we have tried to build buildings on a buy-as-you-go basis and I think the assumption has been all along that certainly space will ultimately be provided in areas where there is no space.

The Court: Is busing 12,000 students from these newly-annexed areas and distances beyond walking distances and so forth—has it been contemplated to be a permanent condition that you intend to leave there forever?

A. I don't believe it's been contemplated at this—that this—

Q. Again, just a temporary expedient until more funds are available? A. Yes, sir.

The Court: You hope it won't be a permanent fixture, I take it?

[346] The Witness: Yes, sir. I think that programs—that plan for transportation, especially in urban settings poses unique kinds of problems and probably ought to be minimized as much as possible.

Q. And then you—

The Court: Certainly not desirable, per se.

The Witness: That's right.

By Mr. Ris:

Q. Dr. Gilberts, as far as any specifics of the plan are concerned, is there anything specifically you wish to discuss with the Court in the matter of the critique here? A. I had one final point that I didn't get an opportunity to make. It seems to me that in this plan it proposes to eliminate some programs which in my judgment have a great deal of significance in terms of educational improvement in the future not only for this area but in general and we can't ignore our responsibilities for that improvement for all youngsters. We have had not as much time as I would like to review this plan, but I have had my staff go over it. I have read it myself—

The Court: You mean when they talk about utilizing funds that are devoted to particular programs that you now have—

The Witness: Yes, sir.

The Court: —you feel that the unbalance in the [347] programs—that the programs might be more valuable than the integration—the busing program?

The Witness: I consider them important things to be doing for the school system, looking at some of the specific concerns that members of the staff have identified, under proposed Plan 1, wherein twelve of the Court schools—designated by the exchanging students with seventeen predominantly Anglo schools—these are a few of the points that were raised that I think are significant.

By Mr. Ris:

Q. And with which you would agree? A. Yes.

Q. Go ahead. A. In some cases the number of pupils involved in busing from one school to another is negligible and Bradley will send only a small number, and this was discussed this morning, but the matter of adjusting individuals is a lot different than adjusting numbers. It's easy to say there are four kinds and, well, okay, we can accommodate them. But how do we identify—how do we make decisions when those are not the four we are going to take and we take eight somewhere else and so on. These are complicated human decisions to make, which cause great difficulty. It's much easier to do this on a computer than it is in the community. There is no assurance that the interchange of pupils will provide the necessary numbers of pupils at each grade level.

[348] Q. Can you elaborate a bit on that? What do you mean by that? A. Well, I'm assuming that the intent at least here was to integrate not only the school but each of the classrooms as was discussed yesterday. I can't tell—and my staff can't apparently tell from reading this whether or not that consideration has been taken into account. How do we go about—on Grades 1, 2, 3, 4, 5 and 6—that there is a reasonable distribution to produce the results that they have indicated? In order for me to quote, as outlined in the transportation schedule, an arbitrary method of selection must be designed. For example, if "geographical areas were used and annual adjustments . . . might be necessary, which could result in pupils attending several schools during at least the elementary program and probably beyond that." In other words, it could cause us to have to move youngsters about more than we would like. And "No. 7, rather than another item here—it not clear that we plan—how the

average achievement factors were determined." Consequently there is a question on the validity of the projected average achievements. Another item, in some cases these plans—this plan does not take into consideration the human element or the actual limitation which exists in the school. For example, Bryant-Webster has four Negro pupils, three of which are to be assigned, and here again we get into these difficult human kinds of problems to [349] deal with. A leveling of achievement scores of low-performance schools would be due to moving in high achieving pupils and moving out low-achieving pupils. The population shift rather than improved test scores of low-achieving pupils. The plan tends to mask the extremes of achievement without actually improving performance.

The Court: Well, at the outset that was explained that you couldn't expect any improvement in the low achievers as of the day that the exchange occurs.

The Witness: Maybe—it may be argued that the capacity of a school facility as reported by school authorities is not an accurate reflection of the school's ability to properly accommodate the educational programs and we discussed this one morning, as well, considering delivering and picking up of pupils, there would be the possibility of some kindergarten youngsters could be on the bus almost as long as they would be in class and consideration must be afforded the impact of this plan on the federal and state assistance.

Now, how do we redistribute them and reallocate them to provide the help that they were intended to provide?

On Plan 2, this involves the pairing of elementary schools. This plan requires additional expense—an

additional expense not considered by the plaintiffs, and there was mentioned this morning the modification of facilities. You can't take care of kindergarten, first, second and third-grade [350] youngsters in the exact kind of facilities that one would with the fourth, fifth and sixth grade. There are differences in certain appointments in the room that would have to be changed.

Q. Such as what? A. Well, a simple example would be the blackboard. We have youngsters that work on the board in the classroom. Primary youngsters—the board is much lower for them to reach than the older youngsters. Seating is a problem, of course, that could be accommodated by moving seating from one school to another, so that is not a particular big problem. But, sizes of bathroom facilities and such things as this pose a problem with primary youngsters. I think that some of the same concerns that I expressed in Plan 1 would probably apply in this one as well. And Plan 3 and Plan 4, here again, it's just a matter of expanding the application. Therefore, the problems aren't really changed.

The Court: How long would it take to implement this plan—a plan of this kind?

The Witness: Well, I think that Dr. Sullivan's estimate of two years is a fairly realistic one. It might take longer than that if we were to accomplish the objectives identified by each phase of this planning process, community acceptance and so forth and staff preparation, et cetera.

The Court: I'm not talking about this exact plan.

[351] The Witness: Well, any modification of it—

The Court: You might feed a few additional items into the computer, you know, in order to come up with—in order to introduce some human aspect. But, you said it would take two years to accomplish a program of this magnitude, you think.

The Witness: I would assume that Dr. Sullivan's estimate of time with his experience would be fairly accurate.

The Court: Do you think that there could be an integration program that would be more efficient, that would accomplish the same objectives and wouldn't require 6.5 miles each way of transportation, for example? Have you thought of it in that light?

The Witness: Yes, sir, I have. And I think the approach they have taken here in terms of efficiency by reducing—assuming they're shooting at the racial composition, they are probably as efficient a means of doing it, again in terms of numbers, distribution of kids, as you could come about. I can't think of any that would be simpler to apply, using this criteria of what they are proposing.

The Court: Does the staff agree with that?

The Witness: I believe so, so far as I'm aware.

The Court: Although, this cluster or campus idea would cut down substantially on transportation?

The Witness: It would, but it doesn't meet the [352] criteria that the plaintiffs have established in their plan. I think it meets other criteria that are more in—more important in my mind. And under that definition, under those criteria, then I think it will accomplish the end that we're looking for.

The senior high school level I would just comment that the boundary changes are not defined sufficiently

that one can absolutely be certain of the problem. But certainly it would cause attendance problems by elongating districts and so on. I would have some concern that it would certainly upset the factors that were involved in the initial resolution that the judge has sustained and I think this could pose a problem. Walking distances can be problems. The only students in the northeast tip of the city near Smith School would be more than two miles from their senior high school. It is not consistent with the fact that some present South students living near Washington Park, live nearly four miles from Manual. I believe you mentioned that—this morning, Your Honor—since numbers of pupils being transferred to Manual are not given, no comparisons can be made of the capacity of the high school involved, sending Anglo pupils from East to Manual and minority pupils to East, would increase proportions of minority pupils at East, was the thing I was mentioning. No plan is offered to ameliorate the resegreation which could occur at East. North High School was presently [353] overcapacity and transfers could cause some problems. And then I would reiterate that I think that some of the items that they have measured or identified as those things that could be conveniently left out of any kind of our planning in my judgment is not true. I don't believe that Denver can afford to ignore looking at those concepts and testing and evaluating them.

Q. Will the adoption of the plaintiffs' plan constitute a gamble, in your opinion, Dr. Gilbert? A. Yes, sir, I certainly think it would.

Q. As between the two plans, considering your background, your experience and the circumstances that exist in Denver, which plan do you think has the greater probability of success in improving education in the fifteen schools? A. I believe that what we have proposed would indicate better probability of success.

Mr. Ris: You may examine.

The Court: I'm not clear on your plan for eventual integration. How it would really take place. You said that this is the only solution eventually.

The Witness: Well, sir, the definition of integration used here in the case is that integration is a psychological, social, philosophical kind of process for individuals where individuals accept one another for themselves. With no bias exhibited as a result of race, color or creed, et cetera.

【354】 Now, it seems to me that there is a—this is a state of mind. That is, not necessarily a state of how one distributes within our society. Now, sir, if that is our end, if that is our ultimate end is to truly open our society so that all individuals can live and operate with that kind of philosophy, it seems to me there are many ways that we are going to go about doing that, not all of them are going to occur in the school. Certainly, they are going to occur in business. They are going to occur in oother governmental institutions. They are going to occur in our daily life, so I'm not saying that ultimately our society has to be totally desegregated, which is the physical aspects of the distributing of people of different ethnic and racial backgrounds, equally throughout our country. I'm not sure that has to be the end. I

think the free and—and the option to do that if one chooses to move where he pleases, live where he pleases, work where he pleases, is the ultimate end. I'm sorry. I don't necessarily accept the fact that we have got to have people distributed physically in that manner. Therefore, I say that the programs that we are proposing, carried out appropriately and developed appropriately, will contribute to producing that end result along with other things that I have mentioned.

The Court: But you don't have any plan or—I misunderstood you. I thought that you anticipated that [355] eventually this isolation of schoolchildren would be eliminated?

The Witness: Well, I think eventually it will and I think it will be eliminated on the basis of choice of the individuals involved. I'm not putting a time on the eventual—I don't know when that will be.

The Court: Very well.

Cross-examination by Mr. Greiner:

Q. Dr. Gilberts, I guess—unless I indicate otherwise, my questions are going to be directed to the fifteen schools which the Court has selected for relief in this case. Since the Court has selected the schools, Dr. Gilberts, what kind of examination has been made of those schools with regard to the conditions that obtained in those schools? What has your staff done? A. What do you mean by conditions? All factors involved in those schools?

Q. Well, now you already knew something about those schools. A. Exactly.

Q. A lot of the data is right in the Court's opinion of March 21st, is it not? A. Right.

Q. Now, we have heard during the course of the trial [356] for example a great deal of testimony primarily from Dr. Dobson—and I believe you were present when he testified—regarding the psychological environment of these segregated schools. Do you recall that testimony? A. Yes.

Q. Do you recall that it was Dr. Dobson's opinion that it was the schools themselves that caused the unequal educational opportunity that existed in the schools?

Is that right?

A. I'm sorry. I don't recall that. I don't recall him saying that.

The Court: Well, he wasn't here the last time.

Mr. Greiner: I believe—

The Court: He didn't hear him testify.

The Witness: Last summer I was here at the hearing.

Q. But you were not here this spring when Dr. Dobson testified? A. No, sir.

Q. Now, have you done anything to—

The Court: That's what he said, though, in effect.

Mr. Greiner: Yes.

Q. Have you done anything to study whether or not those psychological conditions, low student self-esteem, feelings of hopelessness, lack of experience with ever succeeding, no control over one's destiny, teacher attitudes which don't [357] expect the minority child to attain any level of meaningful achievement—have you done anything to check to see whether those factors do exist in these schools? A. Not on terms of any kind of basic research here in our school system. Certainly we have been reading

the literature that comes out and are aware of some of the feelings of various people in the profession, various professions, that these are factors.

Q. Now, I assume, Doctor, that an integral part of your plan would be to test the children in these integrated schools, since you're going to leave them there basically. Are you going to test them for these psychological attitudes? A. Yes, I think that certainly any plan of evaluation of any kind—any kind of an educational program would have to involve examining those elements.

Q. What tests are you going to use? A. I'm sorry. I'm not an expert in that particular area and couldn't identify what tests would be used.

Q. Where is that in your plan? A. I think we have allnded in the plan to evaluation systems. We have not talked about precise kinds of evaluation. Those are part of the plan in terms of future development.

Q. Who is going to do it? A. Well, I assume my own research and development department will have a fairly important role in that process. [358] The psychologists and the psychiatrists and social workers will probably have some input into that. I think we will use experts in the field of testing in these areas beyond our own staff. I would assume all these resources would be used.

Q. Has your staff ever done it before? A. I couldn't answer that. I don't know what individual members of my staff have done in this area.

Q. Now, as I recall, we've got about 9,000 minority children in these schools, Doctor. What would it cost to test those children? A. For what?

Q. For the presence or absence of these psychological attitudes? A. Well, again, I said I'm not an expert in this area. The forms of evaluation as I am aware of—some of

which could be very expensive if they are individually administered.

Q. Now, this is a part of your plan? A. I say, this would be a part of the plan.

Q. Well, is it or is it not? A. It is in the state it is right now, but it would be a part of the evaluation system that would be designed.

Q. And you agree it's an important factor? A. Sure.

[359] Q. Are you making a commitment that it will be —that it in fact will be done? A. Well, sir, I'm not able to make a commitment considering the fact I'm leaving here September 1st, but I think any responsible professional would see that it was a piece of the evaluation process.

Q. Where is the Board's commitment that this facet or program is going to in fact be undertaken? A. Well, the Board has accepted the fact that we're making this proposal a piece of which is evaluation, and I would assume that they would leave the professional judgment of what kind of evaluation that would be necessary to us. They usually do.

Q. Now, you have attempted to evaluate certain costs, that is, your plan for relief that these schools will entail. Can you point to one of those costs? A. Of evaluation?

Q. Yes. Where is the cost of this testing program reflected in your figures? A. Well, in the first place, this would be something which would be done in succeeding years. It wouldn't be done in this budget year and there is no identification of testing costs in here other than those funds which we provide in our budget for testing. I do not have that available, but there are funds that are used for tests and evaluation both in the [360] Department of Research and Development and Testing Services.

Q. You're not trying to— A. Excuse me. It's very difficult to make an estimate of the costs in the area of testing when one doesn't know what the total design of that testing process is going to be, which we don't. And I have just admitted that. It needs to be developed. Once it is developed, the estimate of cost can certainly be developed too.

Q. Well, before you can start solving some of these problems that exist in a minority school, you first have to find out whether or not the problems exist, don't you? A. I think we're quite aware of the problems that exist in the schools.

Q. Well, are some of the problems which I have described —do they exist? A. I think—yes, they do.

Q. Are you going to have to test to confirm the presence of those problems in the schools then? A. I think we're going to have to test probably more to see whether or not we have corrected them than whether they exist. I think they exist without a great deal of question. But we will probably have to do that to provide a research base, yes.

Q. Now, you're familiar with the literature, I take it, relating to these segregated schools, are you not? [361] A. Reasonably so.

Q. And you're aware of the fact that there is literature to the effect that these segregated schools simply reinforce all of the so-called cultural deprivation which the minority child brings to this segregated school? You're aware of that, are you not? A. Yes.

Q. Do you agree or disagree with that proposition? A. I think in the forms in which these schools have existed, this is true. I think there are ways, though, to have—ways of countering that within the school setting. And again I think you will hear about some of these later from members of our staff.

Q. Now, you're aware, Doctor, that when the plaintiffs talk about integration, they're talking about a concept which has as its premise the mixture of various racial and ethnic groups in the city in the schools? A. I thought the first step was desegregation and the second step was integration. Yes. If you mean in this context, I'm aware of it.

Q. As I understand it, when you talk about integration, there need be no mixing? It's simply a change of attitudes and elimination of racial prejudice? A. No, I think that each are needed.

Q. Well, when one reviews the plan that has been [362] submitted in response to the Court's request by the Board, I see references to integration. For example, in—this plan has embraced a program of voluntary open enrollment with space guaranteed, is that correct? A. Yes.

Q. And the heading of that is a plan for raising educational achievement, is that right, Page 16 of your plan? So I take it you feel there is some correlation between the integration that would follow from VOE and the raising of educational achievement, is that correct? A. I believe that that is sort of a general introductory statement.

Q. For the whole VOE program, right? A. Well, not only for that but for the rest of the plan as well.

Q. Well, it's under the VOE tab, isn't it? A. I realize that.

Q. Well, is that a misnomer? A. Well, as I recall in reading this it had implications for all of the elements of the plan and that may have been where the tab was put. I'm not sure.

Q. Well, is there a relationship between the VOE program as it applies to these fifteen schools and improving the educational opportunities of the minority children that participate in that program? [363] A. There may be.

Q. You're not sure? A. Not absolutely.

Q. So it's a gamble? A. Yes.

Q. But it's a gamble which you are recommending? A. Yes.

Q. Do you have any idea of the kinds of participation that you're going to get out of these fifteen minority schools? Have you made any kind of survey at all? A. Not as yet.

The Court: Do you have any predictions as to the extent to which this will be utilized if it is on a free—

The Witness: I think—

The Court: I don't like this descriptive phrase that you have here. It ought to be called free transfer program or something like that.

The Witness: We'll be glad to change it.

The Court: It would be a bit more descriptive.

The Witness: I think it probably would be. In this particular section my recollection is, and if I'm wrong somebody can correct me, that we have approximately 1,500 youngsters involved in the voluntary open enrollment plan right now.

By Mr. Greiner:

Q. In these fifteen schools? [364] A. No, in the entire city.

Q. How many in the fifteen schools? A. I'm sorry. I can't answer that. But to answer the Judge's question, this increased, as I recall, approximately 500 from the previous year and this increase was accomplished with what I would consider a very minimal amount of information and making the knowledge available to people that such an option was there. How much a concerted effort of informing people if they would choose to—what they would choose to do on

this option was available, what it would accomplish, I don't believe, Your Honor, I could honestly make an intelligent estimate.

The Court: But you do agree that it would have to be an organized effort through the PTA or some other citizens' group?

The Witness: I certainly think that kind of plan would enhance its chances of getting more youngsters, including the ones from the fifteen schools that Mr. Greiner is referring to.

By Mr. Greiner:

Q. Well, this kind of VOE that would guarantee space—that is a privilege that is restricted to the minority children in the fifteen schools, is it not? A. It is a specific provision for these fifteen schools. I don't believe, in operation, the limitations that existed in the previous plan have been a practical [365] problem. I think that, by and large, we have been able to accomodate all the pupils who have asked for such transfer. Now, there may be some exceptions.

Q. Well, then, is the space guaranteed in your mind? Is it going to contribute then substantially to the increased participation in VOE? A. I don't believe that it will contribute nearly as much as the matter of making the information available and so on. It may have an influence, possibly. I can't say how much.

Q. Now, as I understand it, if a minority child in one of these fifteen schools happened to pick an Anglo school which was at more than 100 percent of capacity, the child would be allowed to go into that school and presumably an Anglo child in that school would get bumped, is that right? A. No, I don't believe so.

Q. Well, what does space available guaranteed mean? A. Well, it means that they will be assured an enrollment. There are, as I recall, in the plan provision for three options, three choices, and within those three choices space will be provided.

Q. It's not an absolute— A. In the event that there is need, additional space could be provided for the school of mobilities, as you people had proposed. Certainly, the potential addition of space, [366] as we receive funds, I hope, for additional buildings, and there is also a possibility of extended days which allows some latitude in terms of enrollments and such things as this.

Q. Now, this is a program that is going to be implemented on September 1970, is it not? A. Right.

Q. Now, that's for a—for the budget year which has already been established, is it not? A. Right.

Q. Now, where is the money in the current budget coming from to fund the VOE program? A. You mean on—in terms of transportation?

Q. Yes, first. A. Well, I hope that there are funds in the transportation budget, what with adjustments of routes and so on, that will accommodate it. If there are not sufficient funds in there it will be necessary for the Board then to consider transfer of funds from other budgetary areas to take care of whatever the needs are.

Q. Do you have any idea at all, Dr. Gilberts, of how much participation you could stand under your current budget before such transfer of funds would be required? A. No, I do not.

Q. Now, as I understand it, then, the guarantee is just to guarantee that the child's first, second or third choice [367] will be accommodated, is that correct? A. Yes.

Q. There is no guarantee that his first choice is going to get accommodated? A. No.

Q. So it's a conditional guarantee, is that right? A. Yes, sir.

Q. And I take it that, if the Anglo school is over-capacity, then what you're going to do is simply increase the capacity of the Anglo school, is that correct? A. Well, either increase the capacity as I indicated by mobile units or look at modifications of the program itself and I suppose that is increasing the capacity, yes.

Q. Now, then, if you're talking about an Anglo school that is at your capacity limitations as you have established, for every 30 minority students that transfer into that school, if you go to—go the mobile-unit route, that is a capital cost of how much? Those mobiles aren't cheap, are they? A. No. I'm sorry. I would be guessing if I gave you the figure.

Q. Well, the figure is in evidence as to what the District has paid for mobiles? A. Yes, it is.

Q. And what it will cost to install them? A. Yes.

[368] Q. Now, what about additional construction? What provision do you have for additional construction in September of 1970, should it be found necessary? A. I believe that in January 1971 that the moneys that are available under the two-mill levy will become available for assignment by the Board of Education. There is also the possibility, of course, of increasing that two-mill levy to some other number of mills to meet our needs. Now, that can't be done until January. There is no way that we can, except by moving facilities, maybe—we already have mobility in the mobiles in the fall to make the additions.

Q. What kind of project could that two mills be used for? Any restriction on the use of that kind of money? A. Yes, there are. It needs to be used for new construction. I don't know—there are some restrictions, but it's generally new construction of equipment.

Q. Equipment? A. I believe so.

Q. Can it be used for compensatory education equipment? A. It could be used for any equipment, I believe.

Q. Can it be used for teacher training? A. No.

Q. Or for hardware? A. Capital expenditures.

Q. You're quite sure of that? [369] A. Yes.

Q. Then you mentioned increasing the two-mill levy. Is that a procedure whereby you go to the public with a proposed budget? A. No, sir.

Q. How do you increase the two-mill levy? A. The Board of Education has the authority to increase capital expenditures at its discretion.

Q. With no limits? A. I don't believe there is a legal limit. There is a practical political limit, I suppose.

Q. Why does the Board ever bother to have bond issues if the Board can just keep raising the mill levy? A. Because when one makes substantial capital expenditures, it's not a very sensible kind of economics to pay for those out of the immediate pay-as-you-go. The more appropriate approach is to amortize your costs over a longer period of time. This is the general reason the school systems across the entire country use bond issues.

Q. I see. So, bond issues provide for deferred payment? The increase in the two-mill levy is for immediate pay-as-you-go type of— A. Yes, sir.

Q. Now, the mobile units that you refer to on Page 5 of the summary of your plan, are those mobile units in [370] existence today? A. Some of them might be.

Q. You don't know? A. Well, for example, with some of the changes that could occur at some of the schools presently having mobile units—if students would transfer out of these schools they would be available. If they do not, they would not be available. Now, if there is a need

beyond the availability of them for whatever reason, then we would have to provide funds.

Q. Well, Dr. Gilberts, in assessing the amount of space currently available in what would be the Anglo receiving schools, would you tell us, for example, at the elementary level how many spaces are currently available on the basis of 1969 and 1970 enrollment? A. I'm sorry. I could not do that.

Q. There isn't even a thousand spaces, is there? A. This is based on rated capacity.

Q. Right. Well, aren't you using—when you say extending building capacity ten to fifteen percent, what kinds of capacity are you extending? Is that rated capacity? A. Yes.

Q. So you're using rated capacity, are you not? A. As a base, yes.

Q. Well, then, we're using the same basis. But you [371] couldn't tell me, based on rated capacity, how much space is available in those Anglo schools? A. Not without reference.

The Court: He might be able to compute it tonight and give it to you tomorrow.

Mr. Greiner: I think that might be helpful, Your Honor.

The Court: Very well. It might be helpful for me, too.

Mr. Ris: Do you have in mind what he wants?

The Witness: Yes.

The Court: This would be an estimate of how many pupils could actually be accommodated in a program of this kind.

Mr. Greiner: Before we had to look at construction or mobile units or some increase—

The Court: —before we at least have to look at new buildings. I don't know about—I say "we", maybe the School Board doesn't appreciate that. But certainly I think that it would be well to have some idea as to the number of students at every level who could be accommodated in a program of this kind.

The Witness: Yes, sir. I can provide that to you by tomorrow morning, I'm sure.

The Court: Very good.

By Mr. Greiner:

[372] Q. Now, Dr. Gilberts, I notice with regard to the Hallett School that Hallett was exempted from the benefits of this VOE program. Why was that? A. Because in the Hallett School we have a special program already under operation covered by resolutions this spring providing for an integrated school.

Q. Well, Hallett is not an integrated school, is it? It's not a predominantly Anglo school, is it? A. No.

Q. Pardon? A. No.

The Court: You mean there is some activity there, I guess. There is some movement at Hallett, at least, isn't there?

The Witness: I just can't recall right off the top of my head.

Q. My recollection is that Hallett has got about 35 percent Anglo enrollment. Would you agree with that? A. I'm not sure.

Q. Another thing I wasn't clear on, Dr. Gilberts—I take it that the new VOE program would apply to Manual High School, since Manual was one of the Court-designated schools, is that correct? A. Yes.

Q. So you would actually be transporting senior high [373] school students away from Manual? A. If they choose to go, yes.

Q. And the whole concept of this VOE with space guaranteed is one-way busing, is it not? It's busing the minority students away from minority schools? A. Not necessarily. A student from a predominantly Anglo school could volunteer to go to Manual.

Q. On a space-available guarantee? A. On the same criteria that it's guaranteed in the other districts.

Q. I understand, Dr. Gilberts, that there is some sort of a ceiling imposed by state law on increases in the schools' budgets of six percent from year to year? A. Some limited portions of the budget, yes.

Q. Now, what parts of the budget are exempted from that ceiling, Doctor? A. Well, those portions of the budget that relate to capital expenditures; those portions of the budget that relate to vocational education; those portions of the budget that relate to special programs. Well, roughly that equate with Title I programs of the federal program.

Q. Compensatory programs? A. Compensatory programs, right.

Q. Anything else that is exempted? A. I have missed something. I can't recall what it is. [374] I think those are substantially the ones that are excluded.

Q. Now, at Page 21 of the plan, Dr. Gilberts, I assume that you're talking now about the minority students in the schools. You say, "Few would deny that intensive programs can prepare students academically to meet the demands of our society". Now, to date, Doctor, I take it you would agree that those schools have not done the job of preparing students academically, those minority students, would you not? A. I don't think they have been done as well as they can and should.

Q. Well, these are schools that are all achieving at, I think, an average of about the 22nd percentile, is that right? A. Right.

Q. So those schools have failed so far, have they not? A. Those schools have not produced the results that we like to see. And that, of course, is a national phenomena. Again, youngsters from lower socioeconomic backgrounds have this reflected achievement in all schools throughout the entire country.

Q. Now, you say that also in this—in the same page that integration is the value which must be cherished as an objective, and I take it that there you're talking about your kind of integration, namely, attitudinal change, is that right? [375] A. I'm talking about the definition that has been used here. I think you used that, too, did you not?

Q. No, my kind of integration assumes a—a desegregation to start with. A. I'm sorry.

Q. Now, also on that same page, you say that tantamount to such a plan is the provision of leadership which will result in the deliberate improvement in the educational process, and result in the lasting integration of the Denver Public Schools. Now, what kind of integration are you talking about there? A. I think it is misused in that particular place.

Q. What are you talking about there? A. I'm talking about the kinds of integration that you have described here, promotion of mutual respect, understanding, elimination of unwarranted fears, and—

Q. What I'm talking about there is an integrated setting. A desegregated setting. Is that what you're talking about? A. I'm talking about this as a general condition within the community.

Q. I see. Well, is there any particular program in this

plan, Dr. Gilberts, other than the voluntary open enrollment that directly and immediately addresses itself to the elimination of the racialization that exists in these [376] fifteen schools? A. Not directly, as you have in your plan.

Q. What about indirectly? A. Yes, I think indirectly in terms of the kinds of programs we have designed or will design, in terms of opportunities for these youngsters to have experiences in an integrated setting by your definition, special programs and so on, the opportunities for these youngsters to develop a sense of self-importance, of self-direction, et cetera, within the schools due to programs or as a result of programs that can be developed, and I think these will contribute to my definition of integration.

Q. Dr. Gilberts, these problems that you have just described, the frustration, the lack of control over one's destiny— Now, those are all attitudes which have been known to exist in these minority schools for a number of years, isn't that right? This isn't a brand-new discovery, is it? A. Right.

Q. And for a number of years there has been a massive effort, particularly under Titles I and III of the federal act to remedy those deficiencies in those segregated schools, has there not? A. Yes, there is.

Q. Some $4 billion has been spent? [377] A. Yes.

Q. And yet those programs have not been successful? Would you agree with that? A. No, I would not agree with that. I think that is a generalization that is unwarranted by the evidence that's available. I think many of the programs have been successful. I think many of them have not. And I indicated in my earlier testimony that I felt a good many of those initial programs once created and—were what I called coping education rather than really compensatory education. I think there is the potential

of developing programs that will be more successful than many of those that have not been.

Q. Now, relating that feeling to these fifteen particular schools, what is the basis for that optimism? A. Well, I think a certain amount of experience which has accrued in the last few years in the process of looking at how we begin approaching educational change, is a part of it. I think the fact that there are some new ideas in terms of how we begin approaching this process of educational planning have some implications for it.

Q. What is the new idea? A. I think the new ideas that have not been applied in very good form, at least, throughout the country is the involvement of the people at the local level who have immediate knowledge of what the problems are in conjunction [378] with those people who have certain specific kinds of expertise. Many programs have been designed at a systemwide level, not taking into consideration variations of staff, facilities, commitments, et cetera, and I think this will make a difference.

Q. Is there any evidence that it will make a difference? A. There is at least as much evidence that it will make a difference as there is that your desegregation will make a difference.

Q. Is that right? A. I think so.

Q. Well, would you cite for me some studies, some data about the success of what you're proposing, Doctor? A. Well, I'm sorry that I can't cite specific ones because there is a great deal of literature available in this area. Some of it is fair, some of it is poor. Some of it is maybe better than fair. But I know that there have been research and studies that I have read and I'm sorry I can't cite them. And these are dealing with programs—programs dealing with compensatory in nature and that have shown success

in the evaluation. I wish I could be specific but I'm sorry I can't.

Q. You can't identify one of them? A. Not by citation, I cannot.

Q. Isn't there anybody on your staff that might be able to furnish evidence? [379] A. I'm not sure.

Q. Who on your staff concerns himself with evaluating the efficacy of compensatory educational programs? A. Well, there are right now two departments; one is the Department of Federal Programs—

Q. Who heads that up? A. Bob Hirsch.

Q. Who is the other person? A. The other department that has something to do with this is our Department of Research and Planning—the Budgeting, Research and Planning Department, Dr. Brizinsky (phonetic spelling).

Q. So perhaps Dr. Brizinsky or Mr. Hirsch—he was the other person? A. Yes.

Q. And Mr. Hirsch—perhaps he may be able to help you out on an indication of which of these new programs have been successful? A. Perhaps?

Q. Now, do you have any recollection as to the types of—I understand that you have a feeling that each school community, each school district has certain unique attributes, is that correct? A. Yes.

Q. I take it you also agree that each urban school [380] district has certain common characteristics with other urban school districts, is that right? A. Yes, certainly.

Q. Now, do you recall the kinds of school districts that these successful compensatory programs were tried out in? A. Well, I can think of one. Dr. Shepherd's work in St. Louis is—was one that I—and I can't cite the research, but I think that in that particular case in a midwestern large city there have been evidences of success. I think there

are other programs that probably are fairly representative of a cross-section of the largest cities across the country where individual programs have been evaluated as having been successful.

Q. Now, what do you mean by successful? What criteria do you use? A. Successful in terms of achieving the objectives that were established as the reasons for the program.

Q. Now, I take it some compensatory educational programs are not even directed, are they, at improving student achievement and particular skills? A. Yes.

Q. Is that correct? A. That's correct.

Q. In other words, not all compensatory programs are directed towards teaching minority children to read better, [381] are they? A. That's true.

Q. Or to understand mathematics better? A. That monopoly will be an outgrowth of most of them, I believe, though.

Q. Now, with regard to the area of improved achievement, is it your recollection that some of these successful compensatory programs have been successful in the area of improving achievement? A. It is my recollection that they are.

Q. Have other successes been in the psychological areas, is it your recollection? A. I can recall a few I have read about, yes.

Q. But I take it the basic thrust of this plan aside from this new program of open enrollment, the basic thrust is that the racialization that exists in these schools can be allowed to continue, yet the problems in those schools can be solved, is that right? A. I think the basic thrust in this plan is that we believe that through some of the changes here within the settings of those schools we can

make sufficient changes to improve achievements of these youngsters and in effect the other aspects as well; psychological solving of these things you were talking about.

Q. Segregated settings, racially isolated settings? [382] A. Yes.

Q. So you're going to create schools which are separate but equal? A. I'm not going to create them. I'm going to offer programs within these schools that I think will have an effect in my judgment.

Q. And they're going to be separate schools, aren't they? A. I'm not going to create them. They are separate schools.

Q. You're going to continue them, is that right? A. At this point in time there is no recommendation for distinguishing them.

Q. Well, I don't see even a prospective recommendation for discontinuing them in this program. A. There is none.

Q. Now, was the Board's approval of this plan unanimous at the Board meeting the other day? A. No, sir.

Q. What was the vote? A. Four to two.

Q. You said that you consulted with the fifteen principals in these schools, is that correct? A. They were brought in and worked with my staff.

Q. How long did that consultation take place? [383] A. I was not present so I can't tell you.

Q. You don't know whether it was a short meeting or a long meeting? A. No, I don't.

Q. Do you know who on your staff actually conducted those meetings? A. Dr. Keppe was primarily in charge and other members of his staff.

Q. Were the principals asked to give their views as to how some of these problems might be solved in their schools? A. Yes, I believe so.

Q. Was the question of desegregation of those schools

raised by any of the principals to your knowledge? A. I have not seen all of these individual and specific recommendations of the principals, so I really can't answer that.

Q. Was desegregation of those schools even one of the alternatives that was even considered in the discussion with the principals, to your knowledge? A. I have no knowledge of that.

Q. Did you seek the opinion of the principals as to whether desegregation in an integrated setting might be more effective than compensatory programs? A. I can't answer that either.

[384] Q. Now, again, as I understand it, you feel that one of the problems with the plaintiffs' plan is that it's ramming mixing down the throat of the community that is not yet willing to accept it, is that right? A. I indicated that I felt that the basic problem was that it is based on an assumption that I believe is inadequately proven at this particular point in time for the kind of application that you're recommending.

Q. But I take it that at least on some kind of scale, for example, when you formulated Resolutions 1520, 24 and 31, that you felt that there must have been some validity to that kind of an approach, is that correct? A. I think I explained that a little bit earlier. There are two basic reasons why I recommended that. One was to see whether or not it would have an effect on desegregation in an area of the city; in making, I think, greater efforts to try to stem the tide, and the second, to provide a broader base upon which to evaluate; whether or not that kind of integration really would make a difference academically.

Q. And there was a third reason. And that was the Board—that the Board actually directed you to prepare a plan which at least in part implemented the Noel Resolu-

tion? A. Yes, there was a Board direction; however, I would have provided it without that direction.

Q. Well, Resolutions 1524, 24 and 31 were not a part, [385] were they, of planning equality education? A. They were not in the specific form, but in planning equality education I indicated I felt it was important that we provide an opportunity here—or provide some kind of suggestions for stabilizing the enrollment in those schools in Northeast Denver. That was part of it. That was an outgrowth of that element—of that development of that element.

Q. A more specific plan than your original plan had contained? A. Yes.

Q. What are the programs which are now in existence, Dr. Gilberts, for evaluating the success of Resolutions 1520, 24 and 31? A. I'm sorry. I can't describe it in detail. My research department has worked them out with the assistance of some of the colleges—or one of the colleges or universities in this area and I'm sorry I can't give you details.

Q. Can you give us some of the general concepts that are being employed in that evaluation process? A. Well, I'm not sure it would be inclusive. Certainly the achievement aspects are an important part of it. I think the attitudinal aspects have importance, and I think that they are a part, but there may be others.

[386] Q. Now, there is some sort of testing being done this year to try to get the pulse of the attitudinal changes that are—that have been brought about by this program? A. I can't say for sure but I think probably so, and certainly I'm not looking at this as a one-year evaluation process. It's going to take longer than that.

Q. Well, when are you going to start evaluating? A. We have begun.

Q. Now, community support for a plan you have indicated is one of the major important components of any plan that is going to be successful, is that right? A. I believe community support in any public school system is extremely important.

Q. How do you get community support for a plan of desegregation and integration? A. Well, I suppose you would get support by proving to people this was an important thing to do; that it in fact achieved results, provide time for them to understand and accept, by and large, the tenets of that proposal.

Q. How long do you think that would take? A. Well, I suppose it would be quite different in different communities. And depending upon the kind of plan. But I just indicated to the judge recently that I thought that probably as Dr. Sullivan's suggestion, you have two years of concentrated effort, that would be possibly [387] realistic to apply that to the Denver system. Really, I don't know.

Q. Now, Doctor, where in this plan has the Board submitted their—a provision for even the beginning of that kind of effort to change community attitudes? A. As it relates to desegregation?

Q. Yes. A. Well, I think that the elements of evaluation and—not this plan but part of a provision of the plan which is in existence under the three resolutions you have talked about, is a place to begin developing some of the data I think that will be important if it proves out to be successful for selling it in the community.

Q. But there is nothing in this plan about that, is there? A. No, there is not.

Q. Now, there are multiple provisions here regarding in-service training of staff, for example? Now, are those provisions directed only at these fifteen schools? A. No.

Robert D. Gilberts—for Defendants—Cross

Q. What portions of them are directed towards solving some of the problems of these fifteen schools? A. Well, I think all of them have implications for solving some of the problems of these fifteen schools but [388] they also have implications for other schools than these fifteen schools.

Q. Dr. Gilberts, if I understand—this school district does not have an unlimited amount of money at its disposal, does it? A. No, it certainly doesn't.

Q. Well, is it necessary to correct the problems in these fifteen schools to implement district-wide programs? Isn't that a basically—basically a district-wide plan, a total concept of education for Denver? A. I think there are some things in the plans that have implications for the total systems. They grow out, by and large, of our planning quality education. We think it has implications both for these fifteen schools and the other school systems in our community. I don't know how you separate these ideas in saying that these are only relevant to fifteen schools. I think they have relevancy beyond that.

* * * * *

[394] * * *

By Mr. Greiner:

Q. Dr. Gilberts, you recall one of the questions that came up during your cross-examination yesterday was the question of how many spaces are available for the new open enrollment program. I have been handed a resume that reflects your understanding. Do you have a copy of that in front of you? A. Yes.

Q. I'd like to ask you a few questions about it. First of all, with regard to the spaces available on the basis of normal capacity at the elementary school level, that shows 878 spaces, is that correct? A. Yes.

Q. Now, of those 878 spaces, are they all in predominantly Anglo schools? Do you know? A. I think this includes all of the elementary schools in Denver. That's my understanding, at least.

Q. So that then would include the Court-designated schools? A. Yes.

Q. And would also include plaintiffs' target schools, these ten other schools? A. Yes.

Q. Now, a black child wouldn't be allowed to transfer [395] into any of those schools under your program, would he? A. No.

Q. So, as far as the availability of space for minority children is concerned, how would that 878 spaces be affected? Do you know? A. I have a modified sheet like you have here which is—which has removed the capacity available in the twelve Court schools, and that reduces the capacity at the elementary level— Shall I read these to you?

Q. Yes. A. At normal capacity it is reduced by 258, leaving 620. Ten percent is reduced by 1,019, leaving 5,363. And a plus 15 percent is reduced by 1,676 leaving a capacity of 7,457.

The Court: None of this makes any sense to either the record or me, you know, because I don't know what he's talking about; these figures.

Mr. Greiner: This goes to the question, Your Honor, of—

The Court: I know that, but he's reading from a document that we don't have before us, so we don't know what he's talking about.

Mr. Greiner: There is an extra copy we might have marked for identification.

The Court: We just don't know what these figures

[396] represent that he's reading, the various figures. I have the 878 reduced by the number of spaces that exist in the so-called Court schools.

Q. Leaving a balance of how many spaces? A. 620 spaces.

Mr. Greiner: Now, we have marked this piece of paper Exhibit 517.

Q. Is that right, Dr. Gilberts? A. Yes.

Q. So that subtraction that you have just made reflects the fact that the so-called Court-designated schools are not predominantly Anglo schools, is that correct? A. Yes.

Q. Now, there are other schools in the District at the elementary level that are also not predominantly Anglo, is that also correct? A. Right.

Q. For example, we have some 5,000 students in the so-called plaintiffs' target schools, is that right? A. Yes.

Q. Or about ten percent of the elementary school enrollment, is that right? A. I believe that's correct.

Q. So that, if we were to further reduce these capacity figures by subtracting other predominantly Anglo space, do [397] you have any idea as to how much of a further reduction would be required? A. I'm sorry. I don't have that information available and I would just be guessing.

Q. But, even just taking into consideration the Court-designated schools, the available space is brought down below the total number of minority students in the Court-designated schools. Isn't that right? A. Yes.

Q. Because there are about—some 9,000 minority children in these Court schools? A. True.

Q. Now, have you made a similar adjustment with re-

spect to the asserted available capacity of the junior high school level? A. Yes.

Q. What is that adjustment, please? A. The normal capacity reduced by 737, leaving 1,088. The plus ten percent is reduced to 3,048. The plus 15 percent is reduced to 4,029.

Q. Now, I take it then that those figures that you have just read me as being net figures, those figures still include capacity at Morey Junior High School, don't they? Because Morey is not a Court-designated school? A. I would assume that is true, but I don't know that [398] to be a fact.

Q. And Morey, of course, is not a predominantly Anglo Junior High School, is it? A. No, it is not.

Q. So perhaps there is a further reduction that would have to be made in that 4,000 figure, is that right? A. Possibly.

The Court: These figures are within the rated capacities of these schools?

The Witness: Sir, the rated capacity is defined as the capacity normal here and then the plus ten percent is adding a ten-percent factor onto that, and a fifteen-percent factor on that. The base is a normal capacity.

The Court: So these figures then contemplate that you're going to be using these schools substantially over capacity?

The Witness: Yes, sir. As we said yesterday, we felt that we would probably have to provide space through mobiles, possibly, to modify schedules to possibly add on to these buildings to produce the space that could possibly be necessary.

The Court: And you would do this with mobile units?

The Witness: It could be done.

The Court: Or whatever else you can muster, is that right?

[399] The Witness: Yes, sir. These ten and fifteen-percent capacities we feel we can operate with pretty much—pretty much within the existing facilities. If we went beyond this we would then probably have to begin providing additional space through adjustments in schedules or additional facilities.

The Court: This doesn't take into account possible double sessions?

The Witness: No, sir, this does not.

By Mr. Greiner:

Q. Dr. Gilberts, have you made a similar adjustment on Exhibit 517 with respect to the senior high schools? A. Yes, sir.

Q. And would you read those figures for us, please, the net figures? A. The capacity normal is a deficit here of 337 pupils over capacity, as I read this. This is adjusted to 478.

Q. Is that plus or minus? A. Minus, I assume; an additional minus of 141. The ten percent is 1,697, a minus of 297, leaving a capacity of 1,382. The plus fifteen percent is a minus 375 with an adjusted capacity of 2,311.

Q. Now, one other question with regard to these net figures, Dr. Gilberts. Do the net figures now reflect the [400] fact that some of these available spaces are currently being filled by students participating in the District's regular VOE program? A. Yes, I believe they do.

Q. They do? A. Yes.

Q. Now, one of the other questions—there was a question with respect to the description of the new VOE pro-

posal, Dr. Gilberts. We are assuming, and I'd like you to confirm this, that there is a racial balance condition being imposed under this special VOE program. Is that correct? A. There is a paragraph, I believe, where it mentions that we will try to keep a ratio of some sort. I don't believe it's defined precisely.

Q. But I am right in my assumption, am I not, that under the new VOE, a minority child couldn't transfer into a predominantly minority school? Is that right? A. That's correct.

Q. I'm going to be referring to the Board's plan, Dr. Gilberts. Do you have a copy of that in front of you? A. Yes, I do.

Q. Now, before we leave VOE, I assume that if a minority child transfers into a predominantly Anglo school that you feel that it will be necessary to undertake some programs in that receiving school in order to properly [401] prepare the school for the minority child, is that correct? A. Yes.

Q. And what kinds of programs do you conceive as being necessary in these Anglo receiving schools? A. I think essentially the same kinds of programs that are going to be necessary in those schools that are predominantly minority.

Q. Well, could you be a little more specific, please? A. I suppose the information that we have included under our in-service education, those areas would be covered. Those areas would include the nature of the minority community, the child and his problems, his strengths, his weaknesses in terms of our program, teaching techniques that it may be appropriate to be used with these youngsters. Certainly understanding of the cultural, social heritage of the groups that are brought into the school.

Q. So this is a program directed not only toward teachers in the Anglo receiving schools but it is also directed towards the Anglo students in the Anglo receiving schools, is that correct? A. Yes, it would have to be.

Q. And I take it that your description of what is to be done in the Hallett program receiving schools is a pretty accurate description of what you have in mind for all Anglo receiving schools, is that correct? [402] A. I'm not just sure exactly what you are—the one in the plan here that—or, which description are you talking about?

Q. As I recall, and correct me if I'm wrong, the proposal contemplates an allocation of certain of these minority schools. A. For in-service?

Q. For in-service, or for anything else, as I understand it. A. Planning.

Q. Additional salaries, for example, extended school year; that type of thing. A. Yes.

Q. I'm looking here now to see if I can find the exact place. Well, at any rate, you do talk about this—in this plan, what you're going to do with the Hallett program receiving schools, and as I recall the proposal it is to give the Hallett plan receiving schools approximately one-half as much aid in terms of dollars as that which is going to be directed towards the Court-designated schools, is that correct? A. I'm afraid you'll have to refer me to the place in the plan here that you're talking about.

Q. If you would look, please, at Page 66 of your plan, down towards the middle of the page, it reads: "Budget [403] allotments should be made to the schools which will receive the Hallett pupils at the same rate as that recommended for the twelve minority schools except that the time involved for the extended work year would only be one-half as long or a period of two additional work

weeks per year. It is estimated that the total cost for these receiving schools for this purpose would be $114,500." And that is the cost, I believe, for ten receiving schools—no, nine receiving schools, is that correct? A. I'm afraid I don't see where you're reading.

Q. Page 66. A. Yes, that's correct.

Q. So, if you divide nine into 114,500, you get somewhat over $12,000 per school, is that right, per receiving school? A. Yes, I presume you're correct.

Q. Now, you're going to have a multiplication, are you not, Dr. Gilberts, of Anglo receiving schools under the Board's concept of special open enrollment? A. I wish you would define what you mean by that a little more.

Q. Well, for example, there is not going to be any limitation placed—well, let's take an example. Approximately how many predominantly Anglo elementary schools do we have in the District? [404] A. I'm sorry. I don't have that figure right at hand.

Q. How many elementary schools do we have in the District? A. Eighty-six—87.

Q. And would you say that about half of those are predominantly Anglo? A. Yes.

Q. So let's say there are 42 predominantly Anglo schools. Now, under your program of special open enrollment, a minority child could transfer into any one of those 42 schools, is that correct? A. Correct.

Q. So it's possible that you may have 42 receiving schools that are going to require these special receiving school budget allocations, isn't that right? A. That's possible, but it seems to me that one would have to apply a little bit of judgment with respect to the nature and the size of the problem. If there are two or three youngsters transported into one of these receiving schools I doubt

very much that the investment there would have to be as great as it would in a school where substantial numbers of youngsters are transported.

Q. But you don't contest the fact that some sort of program is going to be required? [405] A. Yes.

Q. Even for one minority child? A. I think some kind of program, yes.

Q. So, actually, you have a potential for more receiving schools under your proposal of open enrollment than under the most comprehensive of the plaintiffs' plan? A. We already have that potential under the plan we presently have.

Q. Now, I'd like now to call your attention to Page 6 of the summary that is entitled Staff Stabilization. Now, over in the right-hand column there is a figure given for the estimated cost of 1970 under the voluntary incentive program of $633,000 per year. Out of that 633,000 how much of it is going to be spent for two of the items—or three of the items over here in the left-hand margin? For example, how much is going to be spent on superior materials? A. I'm afraid I couldn't define that at this point.

Q. How much is going to be spent on special programs? A. I can't define the precise costs in any one of those elements at this time.

Q. Now, if I understand, that $633,000 figure reflects the fact that in these twelve minority schools—there are fifteen minority schools designated by the Court—there are 633 teachers, is that right? A. Yes.

[406] Q. And it contemplates that each one of those teachers would receive an extra $1,000 per year for additional—for this additional four-week work period, is that correct? A. That's certainly a possibility.

Q. So it's one of the possibilities that all of this $633,000 is going to be—going to go toward teacher salaries?

at's one possibility, is that correct? A. It's a possibil-
, yes.

Q. Now, as I understand it, another possibility is up one-half of that amount, depending on a decision made the local school level, up to one-half of the amount uld be allocated for other purposes, is that correct? A. s.

Q. But any such allocation would automatically cut wn, would it not, the amount of funds available to pay chers for this extended work year? In other words, n can only—you can only use this $633,000 once, not ce? A. Certainly that would be true if it were spent some of the programs that are identified here.

Q. Well, for example, if money were spent on superior terials, it wouldn't be available for teacher compensa-n, would it? A. Right.

Q. And if money were spent on special programs, would 07] it also be available to pay teachers for their four-ek extended period? A. These special programs could olve teachers, yes. It could be available for extended ployment.

Q. How about pre-visitation to assigned schools? A. I nk that would be a matter of additional pay for chers.

Q. And the orientation program? A. That, too.

Q. So some of this is to pay teachers for the extra e? A. Right.

Q. Some of it is available for other resources. Now, s $633,000—is this to pay teachers only in the Court-signated schools? A. Yes, I believe that's correct, the y it was written in this proposal.

Q. And then you contemplate spending an additional 4,500 in the Hallett receiving schools, is that correct? Yes.

Q. And then we have also, I think, agreed that you're going to spend something like—we don't know how much—for the other Anglo receiving schools, is that correct? A. Yes.

Q. Now, the orientation program is a separate expense [408] under this itemization, is that correct, on Page 6? A. Yes.

The Court: What's your point? In that this is going to be expensive?

Mr. Greiner: Very, very expensive, Your Honor, and a lot more expensive.

The Court: You're not really worried about the costs here, are you? I mean, that's not a real problem? I mean, this is not a great issue from your standpoint?

Mr. Greiner: Well, not only I am not worried about the cost but evidently the defendants aren't worried about the costs, either, Your Honor.

Q. Now, this orientation program of $15,000, that's a thousand dollars per Court-designated school, is that correct? A. Right.

Q. Is it going to be necessary to have similar orientation programs in receiving schools? A. Again, I say this would depend upon the number of youngsters and individual—the individual school's evaluation of whether or not this would be necessary.

Q. Now, turning your attention to Page 7, differentiated staffing, I wonder if you could distinguish for me the difference in concept between that of a paraprofessional and a teacher aide. Is there a difference? [409] A. Well, I think there is no difference that one could identify that would hold true across the entire country. These terms

are used in a number of different ways in a number of different school systems.

Q. How are you using it? A. I would use the paraprofessional as somebody who has some specialized training. Let me give you an example. For example, an individual who had been trained as a technician in the use of audiovisual instruction materials would probably be a paraprofessional. I suppose that one could consider individuals who have had degrees in various academic areas who would assist teachers, work with them, as a paraprofessional and not a certified person—but somebody comes in as an aide to the teacher. I'm sure there are other kinds of positions.

Q. I think that clarifies the question. Now, in the implementation of your differentiated staffing program, and bearing in mind your current contracts with D.C.T.A., is differentiated staffing now entirely compatible with the current school district contract? Or, is some sort of negotiation and agreement of D.C.T.A. going to be necessary? A. I think that certainly some conference and involvement with the D.C.T.A. will be important. I think the Board has the authority to move in this direction if it chooses but obviously the professional organization has an interest.

[410] Q. So you wouldn't force this down the D.C.T.A.'s throat? A. My impression, I would not. We have discussed this over the last year or two and people I have talked with at least are interested in examining—

Q. Because, in essence, it's going to make the teacher's job a little easier, isn't it? A. I don't believe so. I don't think it would make it—I think it would make the teacher's job more difficult.

Q. By giving the teacher more assistance? A. No, by giving the teacher more responsibility in more difficult areas of professional—

Q. Now, with regard to, first of all, paraprofessionals and bearing in mind the character of the Court-designated schools, can you give us at least an estimate, Dr. Gilberts, of how many paraprofessionals are going to be required in these schools? A. No, I don't believe that I can. I did try to describe yesterday how I felt one would arrive at effective—an effective system for differentiating. If one were to take the model that is proposed in the—in back here, under those circumstances, I could give—

Q. That's all I want. A. —that's the kind of solution of the plan that we will be pursuing.

[411] Q. Well, if you were to apply this reference that you just made, how would you come out? A. Well, let me —I really don't believe that I can give you an intelligent estimate. Let me cite an example of where differentiated staffing is being used locally which you could examine, if you choose, in Cherry Creek where they have differentiated staffing in such a way as to staff the schools within the regular budget for elementary schools. Now, that's possible. It's been done.

Q. Do you think that's going to be feasible in these minority schools, Dr. Gilberts? A. I think within the budgetary limitations that we are proposing for these schools with existing support programs, yes.

Q. You might say that the Cherry Creek School District has a minimum number of minority pupils, is that correct? A. I certainly would agree with that.

Q. And as I understand it, this differentiated staffing concept, as you are proposing here, is somehow directly tailored to the problems of minority schools, is that correct? A. Right.

Q. So, is the Cherry Creek example really even relevant here, Doctor? A. Well, only relevant in that an existing

educational program was taken. The staff was differentiated to deal with [412] the educational task that was there within the budget already provided. We already have budgetary provisions in many of these schools that are in excess of many of the other schools in the city. And under this circumstance, I think it's quite likely that we could stay within it. Now, possibly—we won't know until we begin working with the problem.

Q. So the concept would be to remove numbers of professional teachers from these Court-designated schools and add paraprofessionals and teacher aides, is that correct? A. I don't know whether that would be true. It might be.

Q. Well, you would have to do that to stay within the current budgets? A. We already have aides in many of these schools.

Q. Do you have enough? A. No, we're proposing more.

Q. And do you have paraprofessionals in these Court-designated schools today? A. Very few.

Q. Now, one area that I couldn't find a description of on Page 7 is master teachers. And there is an allocation of $212,000 for master teachers. What does that figure represent? A. Well, this represents additional pay for additional responsibility for individuals who would assume leadership roles and instructional programs—I believe if you look at [413] the end of this proposal, the program which is on Page 159, it would give you a general idea of what is being referred to. On Page 160 it talks here about the unit leader, teachers, instructional aids, clerical aids. Now, these are arbitrary decisions with respect to how one differentiates. I am not sure that particular description is what ultimately would be the description used. You've got to keep in mind that we put this plan together in about a week. The complete development of some of these concepts

is going to take time. Many of the elements—nearly, if not all of the elements within this proposal were in certain stages of consideration. It's not possible for me at this point to even be assured that this is the kind of organizational structure that will be appropriate under differentiated staffing. This is what my staff recommended to me. I have a fairly sizable staff. Each of these elements, working on these plans that are in here—in this period of time it wasn't possible to work out the kinds of interrelationships, the kinds of definitions, the kinds of program descriptions we would like to have.

Q. Now, at Page 160, the diagram there that shows five of these unit leaders in the elementary school—that's the diagram of the model which Denver is going to follow, is that right? A. This is a diagram of a model that Denver is going to test.

[414] Q. So that there might be as many as 60 of these master teachers in the Court-designated schools? Twelve times five? A. I think that's entirely possible.

Q. And then you would allocate this $212,000 among those people? A. If there were that many and if that were an appropriate sum of money for the additional responsibility in time and employment, yes, that's probably what would be done. We wouldn't arrive at their salary—which, taking this amount and then dividing the number into it—I'm sure we would arrive at some more logical system than that.

Q. So it's not going to be a per capita distribution? A. I don't know.

Q. Now, I understand from Page 7 that in these minority schools you are not going to—the District overall is not going to need any more psychologists or social workers, is that correct? A. I don't think that decision has been made.

Q. Well, I see here that there is no provision budgetwise for hiring additional psychologists or social workers. A. I'm sure we have not reflected every consideration in what will have to be there in the future.

Q. Well, you infer by assigning these that you can meet these needs? [415] A. We think so.

Q. So you're not sure? A. No. No, we're not sure.

Q. Now, the extended work year at the bottom of Page 7 which is given as a $114,500 price tag, is that included in the $633,000 figure that we find on Page 6? Or is that in addition to it? A. It could be. It is not necessarily. If this plan were to operate in one of the schools that we're talking about, then certainly we wouldn't need two sums for extended school year.

Q. Now, turning your attention to the improved in-service training program, could you describe very briefly for the Court the kinds of in-service training programs that were developed for teachers and were attended by teachers last summer that related to the implementation of the resolutions? A. I'm not sure I can do this inclusively. There were several, I can remember. There was one conducted at Colorado College, I believe, which was an extension of the year before. Last summer there was a—

Q. Pardon me, Doctor. What was the subject of the session at Colorado College? A. I'm sorry. I can't recall exactly but it had to do with the cultural contributions of the minorities.

[416] Q. At Page 69 of your report there is a list. Perhaps that would refresh your recollection. A. Thank you. It doesn't indicate where these were held so it would be difficult for me to judge which one is which.

Q. But I take it, referring to the list on Page 69, Dr. Gilberts, that these are all in-service programs that really

relate quite directly, don't they, to the problems of teaching minority children? A. Yes, I think so.

Q. So the School District has already worked up a lot of things—a lot of this in-service training program, has it not? A. These you see listed, at least, yes.

Q. Now, in the past was a teacher's attendance at an in-service training program mandatory or voluntary? A. It was voluntary.

Q. And do you think, Dr. Gilberts, bearing in mind these special problems at these Court-designated schools, do you think it is reasonable to require that every teacher in those schools be required to attend these in-service training programs? A. Yes, I do.

Q. And is that contemplated in your plan? A. It would be, yes.

[417] Q. If you make such a requirement, do you also then get a concomitant obligation to pay the teacher or give the teacher time off to attend the program? A. Yes, and this is contemplated in the extended school year. Some of the provisions that are already reflected in the budget.

Q. So all teachers in the target schools are going to be required—in the Court schools are going to be required to attend these sessions, is that correct? A. Right.

Q. Now, in view of the achievement levels and the similarity of problems at such schools as the ten additional schools which the plaintiffs would like to see included in relief, would it also be a good idea to have the teachers in those schools attend this on a mandatory basis? A. Yes.

Q. And that, of course, would increase the cost of the program in terms of teacher time off, is that correct? A. Yes. And those also would—those will be things that will be required no matter what we do.

Robert D. Gilberts—for Defendants—Cross

Q. Now, you say that, for September of 1970—and I am on Page 8—that improved in-service training will be implementd to the extent of currently budgeted available funds. What does that mean in terms of dollars, Doctor? A. I'm sorry. I can't tell you what is left in that [418] fund for next fall.

Q. Do you have any idea? A. No, I don't.

Q. I take it that your estimate was that it would cost about $100,500 to fund a similar program in 1971, is that correct? A. I think this is a mistake. I think this was supposed to be $200,000, and somehow in the reproduction of this document, it was not changed.

Q. So that cost there should be $200,500? A. It should be $200,000, period.

Q. I see. All right. Now, Doctor, that contemplates mandatory participation by teachers in all of the Court-designated schools, is that correct? A. Yes, and other schools as well.

Q. Oh, and other schools as well? A. Right.

Q. So this is going to be a district-wide program? A. Yes.

Q. Does it contemplate that teachers in all of the Anglo receiving schools would also be required to attend these programs? A. Yes.

Q. And what estimate of that $200,000 do you allocate to that part of the program? [419] A. Well, in view of the fact that a good bit of these programs could be made available in the Court-designated schools during the additional time period that has been provided for employment, I would assume that most of this could be spent in that direction.

Q. Now, what about the human relations seminars and the workshops in the history and cultural aspects of minorities—how much is available this year for that program?

A. As I indicated to you, I'm not sure what's left in the budget and how much is committed to these programs.

Q. Can you give us a ball park figure? A. No.

Q. Can you assure us that there are sufficient funds to adequately run these programs? A. I don't believe that I could assure you of that at all. As a matter of fact, I'm sure in terms of what we contemplate in the succeeding years when we can budget for these funds, there are not enough funds to do what needs to be done.

Q. Now, programs directed toward the special problems of teaching disadvantaged pupils aren't scheduled to begin under this timetable until a year from this coming September, is that correct? A. Well, it appears that way on this schedule. It [420] doesn't make that much sense to me that that would be the case. I would assume that these would begin immediately after funds are available when we have budgeted for them.

Q. Now, the cooperative workshops put on by black educators and the Hispano teachers—that's a program that's already in existence, is it not? A. It is being contemplated for this fall.

Q. And this is a separate cost for that program? A. I think that's included in the amount of moneys in the in-service budget that we have included for this year.

Q. Now, I'd like to call your attention, Dr. Gilberts, to the school complex concept which is summarized on Page 9. First of all, you have in mind, I take it, the identity of the Court-designated schools, do you not? The Columbine, Bryant-Webster, Elmwood, Fairmount, Fairview, Greenlee, Hallett, Harrington, Mitchell, Smith, Stedman and Whittier. Now, as I understand it, it is your proposal to implement first, Elementary Complexes 1 and 2, is that correct? A. Yes, we are working on those this year.

Q. Now, how many schools are involved in Elementary Complex 1? A. One. Wait a minute—

Q. What's the total number? A. Not in Complex 1. One in Complex 2.

Q. I'm sorry. What's the total number of all kinds [421] of schools contained in Complex 1? A. Eleven.

Q. And of those eleven schools there is only one Court-designated school, isn't that right? A. Yes.

Q. And that's Hallett, is that correct? A. Right.

Q. Now, how does the implementation of Complex 1 in your view afford relief to any of the other schools which the Court has designated? Does it? A. Not in a direct way, but as I indicated yesterday, I believe that this concept has some important implications for all the schools in Denver. I believe that the things that we will learn out of the planning of these complexes will have some implications not only for the Court-designated schools but all the schools in the city.

Q. Now, when we turn to Elementary Complex 2, what is the total number of schools in that complex? A. Twelve, I believe.

Q. So in this complex—and there is only one Court-designated school in that complex, is that correct? A. True.

Q. So in the implementation of Complexes 1 and 2, you are dealing with 23 schools? A. Yes.

[422] Q. Only two of which are Court-designated schools? A. Exactly.

Q. Now, as I understand the complex theory, one of its premises is decentralization, is that correct? A. Yes.

Q. And you look to this committee of teachers, staff and local community representatives to sort of put the meat on the skeleton of the complex concept, is that correct? A.

Along with central office personnel and any kind of resources that they should ask for.

Q. Now, am I correct in my understanding, Dr. Gilberts, that these kinds of committees composed of teachers, staff, community representatives and so on, were in fact designated for Elementary Complexes 1 and 2 sometime last fall? They do exist, is that correct? A. The planning committee?

Q. Yes. A. Yes.

Q. When were they appointed? A. I'm sorry. I couldn't give you the exact time, but last fall I think is reasonably accurate.

Q. And they have been meeting and working continuously since then, have they not? A. I believe the heavy effort on this began probably in about December, but I could be mistaken.

[423] Q. And have you had any kinds of input or output from those committees? Are you familiar at all with what they have planned so far? A. Yes.

Q. How much integration has been planned so far in the schools of Complex 1, Dr. Gilberts? Do you understand what I mean? A. Yes. I'm sorry. I just couldn't be sure that any has been planned in terms of special programs. As I recall, and this is from recollection, I may have missed something—that in the complexes are some ideas that have been developed at this point. The instructional centers, diagnostic learning center approach, the cultural arts type program, all of these could provide for some integration within the programs.

Q. But that would go only to relieve the minority children of Hallett, isn't that right, in Complex 1? A. As far as the Court-designated schools, yes.

Q. As a matter of fact, Hallett is the subject already of a special program, is it not? A. Yes.

Q. Now, what about the input and output with regard to elementary Complex 2, Dr. Gilberts? What sort of integration is currently being provided for that complex? A. Essentially the same as in Complex 1 at this [424] point.

Q. In other words, none? A. Only through special programs.

Q. Now, Elementary Complex 5, the planning for which starts in January of 1971, and implementation in September of 1971—is that correct? A. Yes.

Q. In other words, this is another program that is a year off, is that right? A. Yes.

Q. Now, it contains some more of the Court-designated schools, does it not? A. Yes.

Q. For example, Columbine, Harrington, Mitchell, Smith and Stedman, is that right? A. Right.

Q. Now, as I go down that list of schools of Elementary Complex 5, Dr. Gilberts, am I right that those are all predominantly minority schools? A. Yes.

Q. Well, where do the children in the schools of Complex 5 get their integration experience? A. I wasn't aware that the Court ordered us to produce a plan of integration. The plan to improve educational quality in these schools. Therefore, that plan is not [425] necessarily aimed primarily at integration.

Q. Well, it's not aimed at all at integration, is it, Dr. Gilberts? A. In this particular case, if these are the only schools that will be involved, you are right.

The Court: Well, this Complex 1 and 2, I thought you said was put together long before I issued any judgment.

The Witness: Yes, sir. It began last fall—the planning began last fall.

The Court: So you were not offering this in response to any order that I issued?

The Witness: No, sir. But we certainly have been planning to improve the educational quality in these schools before you issued an order.

The Court: Well, I thought you just said now that you thought I was seeking to improve the quality of education and that is what this has to do with?

The Witness: No, I'm just showing that this is a response that we think will have an effect on that; that's already begun.

The Court: Well, then, your famous Exhibit 20, one of the important objects is to bring about some integration?

The Witness: Yes.

The Court: And you have just abandoned that in these two programs?

[426] The Witness: Not totally.

The Court: Well, it's just so minimal it doesn't amount to a thing. How do you explain that? I can't understand what your thinking is. What's the use of doing it if you're going to do it this way?

The Witness: Well, I first began my presentation yesterday—I said I felt that one of the major needs in education in terms of improving the quality of education, and this includes these schools and other schools as well, is to reconstruct the climate of the educational institution itself. Now, this is a good deal more than integration. This involves the kinds of programs that are developed.

The Court: True.

The Witness: It involves the kinds of input the staff has. It involves the kinds of attitudes the community has. It involves a host of things. One of which can be certainly desegregation. No question about that. Now, I believe—

The Court: Well, you wouldn't put a new system together that would perpetuate—

The Witness: Sir, we are not changing the schools that exist within the city in this complex. Possibly I didn't get that across. We are using the existing facilities that are presently there. We are not changing that. We are merely putting them together in an organizational structure [427] which I think will allow us to free up the educational process to do some of the things that I have been talking about. We're not changing the physical structure of the school system; merely the operational structure of it. Now, I think that's a significant requirement in the improvement of education and I think it's significant in all the schools of the city. That is my professional judgment.

The Court: Well, that may well be, but it makes very little contribution in this kind of setting. That's all I can say.

The Witness: Well, it doesn't make a contribution—

The Court: I mean, this is what we're concerned with. I submit that we are definitely concerned with these complaints of discrimination. I mean, that's what we have been trying here, I take it, for almost a year, off and on.

The Witness: Sir, if you look at the entire plan, there are all kinds of things that I feel will change

the educational climate. I thought in your decision you had asked that educational achievement be improved in these schools. That was the direction that I read in that. In my judgment the things we are talking about here will contribute to that end. Now, not this alone. I think this is only a piece of it. I think all of the other elements that we talked about will also contribute to it. I think when you have an opportunity this morning to listen to Mr. Ward and to Mr. [428] Morrison, our elementary principal, you will see some things that are going on that are qualitatively oriented to better education. I guess what I'm saying is that one can't assume that one can solve this problem by any one approach. You've got to use a very broad approach to changing the character of education. And certainly desegregation is only one of those.

The Court: Well, what I'm expressing really is that your whole cluster approach is described in Exhibit 20 was designed in response to a demand for integration and in this you say, "Well, you get the best of two worlds. You have a home school. At the same time you achieve this integrating experience in a campus atmosphere." These evidences would indicate to me that the thread that runs through all of his would be to bring about some kind of integration and either you didn't anticipate this at all or somebody put it in here without your knowledge or else you abandoned your former principles. That's all.

The Witness: There are some other schools in Complex 2 not identified by the Court that certainly will provide some integration in those cases. The

important schools that the Court has identified are only two, as is indicated here. But there are other schools in which this can occur.

By Mr. Greiner:

Q. Dr. Gilberts, Elementary Complex 5 [429] and the schools contained therein, those are the same schools that were put in Complex 5 in Exhibit 20, Planning Equality Education, is that correct? A. Yes.

Q. Now, is my recollection also correct, Dr. Gilberts, that when you originally drafted—or in Exhibit 20—actually I think it's Exhibit D, Planning Equality Education, that in Complex 5 you were going to leave the minority children in those schools for Grades K through 3? A. Yes.

Q. And then you were going to mandatorily transport them into Anglo schools, isn't that correct? A. That was my original recommendation.

Q. And you have abandoned that concept completely? A. I have not abandoned that concept.

Q. Well, it's not in the plan, is it? A. No, it's not.

Q. Well, does it continue to exist somewhere? A. No, it does not exist in any other way than my recommendations.

Q. So that concept has been abandoned, hasn't it? A. I don't believe it's been considered as a separate issue.

Q. Now turning your attention, Doctor, to early childhood education, as I understand it, the Head Start program [430] which centers upon three- and four-year-olds is now being conducted in 18 separate places in the city and encompasses about 600 children, is that correct? A. Yes.

Q. Now, which schools do these children go to? Do you have any idea? A. I couldn't recall that.

Q. In other words, this Head Start program is not specifically tailored in particular to teach children or to reach

children who are ultimately going to end up in these twelve minority elementary schools that the Court has designated? Isn't that right? A. These programs are tailored to youngsters that qualify under the Title I area of the city, which is determined by parental income and so on, I believe.

The Court: Where are you now?

Mr. Greiner: Page 10, Your Honor, of their plan.

Q. What is the Title I area of the city, Dr. Gilberts? Can you roughly describe it for us? A. Well, I think that, by and large, with the exception of south—part of a south central area, generally beginning with—well, with the dots you have following in that general area around that part of the city.

Q. Well, referring now to what has been designated in the Plaintiffs' Exhibit 415, which is a map of the school [431] district—for example, is Smedly in the Title I area? A. I believe so but I could not be absolutely certain.

Q. Bryant-Webster? A. Yes.

Q. Garden Place? A. Yes.

Q. Elyria? A. Yes.

Q. Swansea? A. Right.

Q. How about Harrington? A. Again I'm not sure but I think so.

Q. Somewhere here in the east is a divided—a dividing line, is that right? A. Yes.

Q. Do you know whether or not Stedman, Hallett or Smith are Title I schools? A. I believe so. I think there are some programs in those schools.

Q. Under Title I? A. Again I can't be absolutely certain.

Q. What about down in southwest—the southwest section here, Fairview, Greenlee? A. Yes.

Q. Elmwood? [432] A. Right.

Q. Fairmount? A. Yes.

Q. Now, as I understand it, Title I has an economic premise to it, doesn't it, Dr. Gilberts? A. Yes, sir.

Q. What is the economic premise? A. $3,000 income, as I recall.

Q. So there is a very high correlation, is there not, between these minority schools that we have just listed and low socioeconomic status? A. Yes.

Q. In fact, every one of those schools is low socioeconomically, is it not? A. Yes.

The Court: Now, the school facilities are not necessarily used for the Head Start program, are they?

The Witness: No, some are outside the school facilities.

The Court: They are just put in neighborhoods?

The Witness: Right.

The Court: That probably are involved in—they probably are involved in a particular school area, but, as I understand it, these are conducted in store buildings or whatever they have available, is that correct?

[433] The Witness: Yes.

By Mr. Greiner:

Q. Now, as I understood—is it your understanding, Dr. Gilberts, that these Head Start programs are directed throughout the geographic area that we have just been describing? A. In general, yes.

Q. Now, are there children, Dr. Gilberts, who qualify for Head Start but who can't be accommodated into the program? A. Yes.

Q. Can you give me any idea of how many children must be turned away each year under the current funding? A. Again, this would be a guess on my part. I can't give you that figure.

Q. Well, can you tell us if half the children who need it are getting it? A. No, I don't believe I could. I don't believe I could hazard that guess.

Q. Is there anybody on your staff that could?

The Court: I think we can take notice of the fact that there are many that are not getting it. I mean, do you need the exact number?

Mr. Greiner: No, I don't think so, Your Honor. I'd just like to get some idea.

The Court: I think it's a matter we can take judicial notice of; that it's not an adequate program in [434] terms of the demand.

The Witness: Yes, that's true.

By Mr. Greiner:

Q. Is that correct, Doctor? A. Yes.

Q. Now, there are 90 children currently participating in the early childhood educational centers, is that correct? A. Yes.

Q. And as I understand the marginal comments on Page 10, this is a program that is not funded by public funds at all? A. The early childhood education program is a pilot program and it is being funded by Denver Public Schools.

Q. Now, no federal funds, though? A. No federal funds.

Q. Is federal funding possible? A. Not unless we would get a special approval of this under Title I.

Q. Now, again, with only 90 children in the program, I

take it there is no doubt that there are many, many hundreds of children who might need this program but who are not getting it? A. Exactly. This is a pilot program. This is the first year we have operated it. It is an outgrowth of the committee that was—that was recognized in 1968, the design program.

Q. And the same is generally true, is it not, of the [435] follow-through program where you have only 370 children affected? A. Yes.

Q. And the other follow-through program, Garden Place and Gilpin, where you have 100 children? A. Yes.

Q. And then the national follow-through which is now a proposal—that would increase the coverage at Garden Place and Gilpin from 100 to 200 children, is that correct? A. Yes, I believe so.

Q. Now, what kind of expansion of coverage for Head Start, early childhood educational centers, follow-through —what do you contemplate in the way of expanded coverage? A. I believe that these programs, as I indicated yesterday, are going to be of extreme significance regardless of what kind of other programs go in this school system, and, as you have pointed out, these are by no means covering the needs in the city, and there will have to be substantial increase in funds for these programs.

Q. Now, do you have any information that indicates that these additional increased funds are in fact going to be available? A. No, sir. That will be an individual yearly budget problem.

Q. Now, you will recall that Dr. Sullivan mentioned [436] something about the $500 million which the President has allocated for desegregation and for the education of minority children. Does anywhere in your plan—do you reflect any of such moneys becoming available to Denver?

A. Only possibly in the educational center at the secondary level, and that is only a possibility. It has not been determined that that will be what we will apply for. As soon as we have more adequate guidelines which somebody informed the Court the other day are in the process of being developed, we will know what it is we can apply to.

Q. Yes. I believe it was Dr. Coleman who was talking about that; not Dr. Sullivan. A. Yes.

Q. Do you have any idea when these moneys would become available? A. It is my impression that the early funds will become available for next fall.

Q. And do you have any idea how much of those funds Denver might expect to receive? A. There is no way to know until we have programs designed, and that can't be done until guidelines are available, and it will be on an individual program basis.

Q. Now, I take it that you do not have a lot of personal knowledge about the particular programs that are going on at Manual, Baker or Cole, is that so? [437] A. Not nearly as extensively as Mr. Ward or Mr. Morrison would have.

Q. When did you first find out, Dr. Gilberts, about the kinds of programs that were being put on at Manual? A. Well, they began, really, the first year I was here.

Q. I'm asking you when you first became personally aware? A. I became personally aware of the beginning program—some of the things Mr. Ward was thinking about the first year I was here.

Q. And have you had occasion to visit these programs while they have been in operation? A. No, I have not.

Q. What about visitation at Baker or at Cole? A. I have been in the schools but not specifically for that program.

Q. So we will direct, then, our questions about those programs to those persons. Now, the Educational Achievement Act of Colorado—the Senate Bill 174, as described on Page 14, as I read Senate Bill 174, the funds allocated by the State Legislature were directed toward the improvement of reading, is that correct? A. Yes.

Q. Now, how many children in Fairview in this interest-motivating program—how many of the children in Fairview [438] participate directly in the Fairview program? Is every child in Fairview participating? A. This is Grades 2 through 6.

Q. And every child is participating? A. I believe so but I'm not absolutely certain of that.

Q. And how many children is that? A. I'm sorry. I don't have that figure.

Q. Fairview is one of these Court-designated schools, is it not? A. Yes, sir.

Q. Now, this program was implemented at Fairview when? A. Well, I believe it began in late or the middle of this year, and—the funds were not certain until after school had begun and after school had opened.

Q. Now, there are 825 children, I am told, at Fairview. And is it your impression that all 825 children are fully participating in this program? A. That is 825 in all grade levels?

Q. Yes. Total school population. A. Well, it wouldn't be that because there is just Grades 2 through 6.

Q. Do you know how many first-grade and kindergarten there is at Fairview? A. No, I don't.

Q. We're talking about some 500 children perhaps? [439] A. I don't know.

Q. Now, what is the new concept being employed at Fairview? How does the Fairview program differ from pro-

grams which you can characterize as coping programs? A. Well, I think that these programs are rather unique in the sense that they are very much individually—the youngsters are very much individually handled. They are dealing with high-interest areas. They are using the talents of teachers, I think, in a creative way. The staff at Fairview is using individualized reading instruction; multimedia communications; communication with the parents and home, in a way that I think is at least—or on this report is producing results that they are looking for.

Q. Now, Doctor, there is nothing new about the concept of ungraded classes, is there? A. No, there is not.

Q. There is nothing new about the concept of individualized teaching methods, is there? A. Well, I don't know. There is nothing new in the concept of it, I guess, but I think the application of it one may question.

Q. And multimedia communication, that just means using films and tape recorders and things such as that, isn't that right? A. In general, yes.

[440] Q. And that is something that's been going on for a long time, isn't it? A. Yes.

The Court: I don't suppose there is any guarantee you will come up with something brand-new in any of these programs. Are they effective? I expect that's what we're interested in.

The Witness: I think the manner in which they are put together and the way in which the staff has committed the program is extremely an important element of it, and that is dependent upon how the programs are developed and implemented in a large way.

By Mr. Greiner:

Q. Now, have you figured out a cost per child of the Fairview program? A. I have not, no.

Q. Well, you're spending $110,671. And, even if every child in the school, some 800 were in the program, that would be over a thousand dollars a child, would it not? A. On that basis, it would, yes.

Q. Or would it? No, it would be over—it would be over $120 a child, is that right? A. Right. I shouldn't agree with you so quick.

Q. I'm like Dr. Bardwell. My arithmetic isn't very good.

The Court: We'd better get a computer in here.

[441] Q. Is that a pretty expensive program, Doctor? A. No, sir, not for the problems that are involved with these youngsters.

Q. Well, that's in addition to the school's normal budget, is it not? A. Yes.

Q. And say, if there were 500 children in the program, that's about $200 per child, is that right? A. If there were 500, approximately, yes.

Q. Now, if you spent $200 per child every year for all of the 9,000 elementary minority children in the Court's schools, how much money is that? A. A lot of money. And if we don't, no matter what kind of program we have, we're not going to meet the problems that are before us. The city is going to have to do that in one form or another.

Q. Where is the money going to come from for these—this expensive program, Doctor? A. Well, by and large, under present conditions it's going to come from the property taxpayer, some support from the state and some from the federal government. And unless those other two forms,

federal and state support, are increased substantially, this city is going to be in the same kind of trouble that other major cities are across the country. But, as I said, I don't care what kind of program [442] you implement, these kinds of funds are going to be necessary.

Q. Now, as I understand it, Senate Bill 174 expires by its own terms after next school year, is that correct? A. Yes.

Q. So the source of this money, at least the current source of this money is going to disappear, is that right? A. Not necessarily. It might be extended.

Q. But we don't know that? A. That's right. That would not necessarily have any implication for these programs because these are funded as pilot programs; innovative programs, to test whether or not they have general application. It was not intended to finance those programs that will be generally applied throughout the school system. So, we have the financial problem, I'm sure.

Q. Now, do you have any idea how much the expenditure of these $110,000—how it was broken down between equipment and teachers? A. Well, on Page 136 there is a budget breakdown, approximately $30,000 for salaries and about $43,000 for supplies and materials. Equipment, another $28,000.

Q. Now, these are the same kinds of expenditures that would have to be made in each of these twelve Court-designated schools if this program were to be implemented, is that correct? [443] A. Yes.

Q. But you don't contemplate any expansion of that program out of Fairview next school year and into any of the other Court-designated schools? It's not in your plan? A. It's not in the plan. Whether it will be in our budget or not is a question yet to be determined. We are in the

process this year of completing our development, our long-range planning system, and this involves some of the things we have tried to do in a big hurry, but on a much more comprehensive and intensive basis than we could do in this period of time, and I am sure we will add a number of things that need to be included in that budget that are not included in this plan.

Q. Now, Dr. Gilberts, I asume that you have the—you have established some sort of a procedure for evaluating the effectiveness of the Fairview program, is that correct? A. I believe that an evaluation is one of the requirements of the plan.

Q. Now, what kind of objective criteria have been established as an objective of the Fairview program? A. I'm sorry. I have, as I explained before, a good many people on my staff who were responsible for literally hundreds of different programs in this school system. There is no way I can be familiar, sitting here off the top of my head, talking about those kinds of specifics; I just don't [444] have it available.

Q. So you don't have in mind what the particular objectives of the Fairview program are? A. Certainly the basic objective is to improve the youngsters' academic achievement in school through reading, as the bill implies.

Q. But you don't know what goal you set for yourself? A. I couldn't describe it precisely, no, not without reading the plan.

Q. Well, then—

The Court: Well, I take it that the whole mission of the program at Fairview is to improve the performance of these students, is that right?

The Witness: Yes, sir. Right. But I thought he was asking for a more precise definition of goals than that.

The Court: One of the faculty there wrote me a letter after the opinion telling me in some detail what they're doing there and saying that, if I'm going to be an expert, I ought to go down and see what's happening.

The Witness: Sir, I think that's a very good idea. I'd certainly like to invite you to see some of the programs in school.

The Court: You ought to visit some of them, too, I think.

The Witness: I think that would be very nice.

[445] The Court: Maybe we could do it together.

By Mr. Greiner:

Q. Dr. Gilberts, on Page 143 of the plan, we were talking about the innovative practices—it says the strenuous efforts are required to eliminate factors that result in a negative self-image of a child and a feeling of inferiority. Practices that underestimate the child's learning capacity. Now, is it true, Dr. Gilberts, that this kind of environment exists today in these minority schools? A. Yes, to some degree.

Q. Now, in the cultural arts program, as it's currently being run, you are spending $165,000 on the program, as I understand it, is that right? A. I believe that's correct.

Q. Now, we're on Page 15 of your plan. Now, last year can you tell me how many Anglo children participated in the cultural arts program? A. No, I can't.

Q. Can you give me the total number of children that participated in it? A. No, not off the top of my head.

Q. The cultural arts program is now being implemented only for 6th graders, is that right? A. Yes.

Q. And is there any—is every 6th grader in the school district participating? [446] A. No.

Q. How many 6th graders of the school district are participating? Can you give me even a rough proportion? A. It would be strictly a guess. Half. That's a guess.

Q. Now, one of the objectives of the cultural arts program, as I understand it, is to bring children of ethnic and racial groups together in an intercultural experience, is that correct? A. Yes.

Q. And this is a form of real integration—in other words, you have these different children there physically present, one with the other, is that right? A. Yes.

Q. Now, in the cultural arts program, when we look at one minority child's participation in it, how many hours of such integrated experience does he get out of the cultural arts program? A. I believe it's a week's participation; a week-long participation.

Q. For a full school day? A. No, because there is transportation involved. A large portion of the day, as I recall.

Q. So he gets maybe twenty to twenty-five hours of experience? [447] A. That's possible.

Q. And gets it in the 6th grade? A. Right.

Q. Now, the outdoor education center—the Ballerette program—as I understand, in order for the District to maintain its right to the development of Ballerette, it made a commitment that over a five-year period it had to invest a half million dollars in the site, is that correct? A. Correct.

Q. Through this current budget year, Dr. Gilberts, how much has been allocated to Ballerette, total? A. I'm sorry. Again I couldn't be—

The Court: During this current budget year, how much has been allocated to Ballerette? That's your question, is that right?

Mr. Greiner: I was thinking in the development of Ballerette—as it started a couple of budget years ago.

The Witness: Last year, I think, was the first year that we made our—that we budgeted our costs.

By Mr. Greiner:

Q. And for this current budget year, Page 15, that shows that there is $247,000 allocated, is that right? A. Right.

Q. Now, was some money allocated last budget year? A. Yes.

[448] The Court: This is what I can't recall.

Q. Can you give us a ball park figure on it? $100,000? A. Pardon?

Q. $100,000? A. A little over a hundred thousand. I guess it's a hundred and sixty or seventy thousand; thereabouts.

Q. So then this is the second budget year of the program and by the end of this budget year you will have allocated four hundred of the necessary five hundred thousand dollars, is that correct? A. No, sir. That's not necessarily correct because this $500,000 commitment was a capital expenditure commitment. These figures include operational costs and this is not a part—that does not respond to the needs of $500,000.

Q. It doesn't? A. No.

Q. What does? A. That portion of that figure and whatever portion of the estimated one hundred sixty or seventy thousand that was allocated for capital expendi-

tures on site development, buildings, et cetera, such things as these.

Q. For what other purpose is this money being used for? A. I'd have to see the budget. Part of it is for staff, planning staff, development, part of it is for educational programs that will be conducted. Essentially those other two [449] items.

Q. When is Ballerette going to open? A. Well, we hope to have some programs beginning this next fall. We had hoped that we could do it last fall but, due to some problems that occurred at that time, we didn't get it off the ground the way we expected.

Q. What is your time schedule for having Ballerette in full operation? A. I would say that it would be a minimum of five years and probably a fullblown operation, it could be more than that.

Q. Well, now, when it's in full operation—or let's say about five years from now, and with a frame of reference of a single given minority child, Doctor, in the operation of the Ballerette program, how often would that minority child get to Ballerette? A. Well, this is a guess and an estimate based upon a supposed program which is not designed and approved as yet. But I would say probably an opportunity in a regular program of at least twice, maybe three times during the school year for a period of a week or so. In addition to that—

Q. Pardon me. I will let you finish your answer, but that is three times in twelve years? A. Well, no, I don't believe it would be quite that. I would say probably three times within, say, six years of the [450]—well, it could be twelve years, yes. It could go lower than that.

Q. Please continue. I didn't mean to cut you off. A. There will be some other programs that will be special in

nature; vocation oriented, as we are presently contemplating, at least; resident opportunities for some youngsters to participate in the management and operation of that center. These would be fairly small numbers of pupils, but for the bulk of the pupil population, probably what I originally indicated.

Q. So then we are looking at the experiences which Ballerette offers to give minority children for these intercultural experiences—it really doesn't amount to much, does it, Doctor? A. Well, I think that the quality of the program will have something to do with how much it amounts to, if you're talking about—surely the time—it's not a great deal of time, twelve years.

Q. Now, what does the Metropolitan Youth Opportunity program do? A. Well, this is an institution that was developed primarily to recapture youngsters that had dropped out of school. It provides opportunities both in terms of academic offerings, allowing people to finish their high school education. It offers, also, some vocational offerings.

[451] Q. And that is to continue as presently constructed? A. We have some thoughts of expanding this operation into another location or two. Nothing is decided on that, as yet.

Q. Now, one of the other concepts described as individually-guided instruction—now, it is scheduled for implementation in 1971, is that correct? Looking again at Page 15. A. Yes. This would be as soon as our budget year is begun or we have the funds to finance it.

Q. Now, as I recall, the $200-per-school-year figure is based on the assumption of a given standard-sized school, is it not? A. Yes.

Q. How many classrooms was it? A. I'll have to refer to it.

The Court: This would be a counseling program, wouldn't it?

The Witness: Pardon?

The Court: Wouldn't this be a counseling program?

The Witness: Well, that would be a part of it, sir. It includes the entire instruction of the youngsters in the school, skills as well as that.

By Mr. Greiner:

Q. A 24-room school, Page 169? Now, applying that criteria to the Court-designated schools, [452] are some of those schools smaller than 24-room schools? A. Yes.

Q. How many of them? A. I'm sorry. I can't answer that.

Q. Well, have you made any attempt to tailor this budget allocation of these particular schools in terms of their size? A. No, I think it has taken the figure of 16,200 as the standard.

Q. So it may be a greater amount or it may be a smaller amount, depending on the size of the school? A. Yes.

Q. And it also depends on the number of teachers in the school, does it not? A. Yes.

Q. Because most of that money goes for some sort of additional teacher compensation, is that right? A. Yes.

Q. Now, is that teacher compensation money—is that the same as that master teacher figure that we have talked about earlier? A. It could be.

Q. But not necessarily? A. Not necessarily, but it could be, yes.

Q. On Page 157, under Programs to Build Understanding, [453] you're going to establish programs to build understanding of the contributions of Negroes, Hispanos,

and others to your common culture? And some of these programs have already been implemented. Now, how does that program work in a 90-percent Anglo school? A. Well, it has become part of our curriculum in social sciences primarily.

Q. But there aren't any real live Negroes or Hispano kids in that school, are there? A. No, we don't have any real live nuclear reactors in our schools either, but we study about them.

Q. So you teach human relations through book learning, is that right? A. I think you can develop an understanding of the contributions of these groups that way, yes.

Q. Do you think a little physical—bicultural physical presence, interreaction, might also be beneficial, Doctor? A. Yes.

Q. Now, the resolution that the Board of Education passed when it authorized the presentation of this plan in response to the directions of the Court, which is Defendants' Exhibit V-B, as I read that resolution, I get the definite impression that regardless of what the Court does, vis-a-vis relief in this case, the Board of Education is going to go ahead and implement that plan, anyway, is that right? [454] A. I don't know.

Q. Well, I'm looking for the language of the—

The Court: Really, I don't think he should be called upon to answer for the Board. If it says so, why, it does, I expect.

Q. Perhaps I misspoke, Dr. Gilberts. On Page 3 of the Board's plan being presented here—

Mr. Ris: The resolution speaks for itself, Your Honor, and I don't think Dr. Gilberts—

The Court: We will all agree that it says regardless of the outcome of this litigation this Board reaffirms its intent to continue improvement in the quality of education offered to all the children of Denver.

By Mr. Greiner:

Q. Now, Dr. Gilberts, as I understand it,—and we have gone through now most of the details of the Board's proposal, and we find that of the fifteen schools designated by the Court, we're going to have some special programs which already were in existence at Baker and Cole and Manual; that is, three schools. And at Fairview. That's four schools. Now, how many other of these fifteen Court-designated schools under this plan for the opening of school this coming fall are going to get something out of this plan? A. Well, as I indicated earlier, what we can do this fall is pretty well limited to the funds that have already [455] been budgeted.

The Court: What he's saying is, he is suggesting, I think, that this is merely a description of what you're now doing in the schools. It's not any—

The Witness: No, sir. It's not. I think when we talk about the increase in planning and in-service time, this is to a great—this is a great expansion beyond what we're doing right now. When we talk about some of the programs that we feel have implications for these schools, there obviously has to be a wider implementation in those plans in other schools. Differentiated staffing as a concept is certainly something that has implications for these schools. I believe I mentioned in-service—

The Court: Well, is that really what your inquiry was, Mr. Greiner?

Mr. Greiner: No, not really, Your Honor. What I wanted to try to determine was this plan as it is now being presented—I wanted to see exactly how it related to the Court-designated schools with regard to the opening of school next fall.

The Witness: It seems to me that anyone who has any understanding of the problems involved in getting at improvement in the quality of education would understand that one just does not snap one's fingers and expect those changes to occur automatically. There is a great deal of time in [456] development of programs, training of teachers, the implications of these programs. There is no way one can next fall move into—move these programs to the nature we have talked about here or what—or expect to implement them completely and totally and effectively. That can't be done. That's not the way schools operate, and it just isn't going to apply—

Q. Do you know how much time southern school boards, Dr. Gilberts, are being given by the courts to implement integration and desegregation programs these days?

• • • • •

Q. Dr. Gilberts, I take it that in these minority schools and the Court-designated schools that teachers in those schools have to spend a good deal of their time enforcing classroom discipline, is that correct? A. I don't think I could make that general statement.

Q. Do you have crisis rooms in Anglo schools? A. Not probably in the same definition that we have in some of

these schools, but I think we have some of the same kinds of problems.

Q. Now, as I understand it, you have resigned as Superintendent of Schools and a new superintendent will take [457] over September 1, 1970, is that correct? A. Right.

Q. Now, it's possible, is it not, Dr. Gilberts, that the new superintendent may not agree at all with your complex theory, is that right? A. It's possible. However, this is a matter of Board policy and the Board is committed to explore this idea, and I'm sure the new superintendent will do that.

Q. But there may be a lot of changes in concepts with the new superintendent, is that right? A. I don't think I could answer that.

Q. Now, as I understand it, it's the position of the defendants and it is your position that these minority children come into these minority schools with a lot of environmental and family background type of problems? Now, for example, the limited education of the parent is one, is that right? A. Yes.

Q. Now, what in this Board proposal, what particular program speaks to that deficiency? A. Well, I think there may be several that can. Certainly the early childhood educational program is aimed at that among other parental deficiencies the youngsters may have. It seems to me that as the complexes develop that there can be programs developed within those that would deal with this.

[458] Q. How does that relate to limited education of the parent? A. Well, I don't believe that there is anything we can do about limited education of the parents, but I think that we could offset some of the deficiencies that are a result of that by additional programs in schools.

Q. What about lack of reading materials in the home? A. Again, I think that some of the early childhood programs speak to that issue.

Q. Is anything in your program going to put reading materials in the minority child's home? A. Conceivably, yes.

Q. What about the problem of limited verbalization with the child? A. Again I think early childhood programs would have something to do with providing additional experience for the child in this area. I also believe that some of the new programs like the Fairview program and some others that are being used in the schools can provide for some assistance in that area.

Q. How about poor language patterns in the family? A. Again, I think these same programs may have some implication for those deficiencies.

Q. And a feeling of inadequacy by the parents? A. It's difficult to overcome that, but again, as I [459] say, I think some of the programs that we have identified may help offset some of those programs.

Q. The negative attitudes towards schooling by the parents? A. I think in this particular area the involvement of parents, the development of programs that are motivational, not only to kids but to the parents, can have quite a bit to do with the problem.

Q. Do you think these minority parents like desegregated schools, Dr. Gilberts? A. I don't think I could answer that.

Q. You can't? A. No, I don't think I could.

Q. You think minority parents prefer segregation over integration? A. I would say I don't believe I am in a position to answer for minority parents.

Q. What about small vocabulary on the part of the parents? A. Again, as I say, the programs that we are talking about will be designed to help offset some of those early deficiencies that the youngsters experience.

Q. How about the parents' distaste for reading, for conversation and for nonverbal outlets for frustration?

The Court: What page are you on?

Mr. Greiner: This is Mr. Manley's cross-examination [460] of Dr. Dodson, Your Honor, from the transcript of the summer preliminary injunction hearing.

Q. How about the parents' aversion to study or reflection? A. Again I respond the same way.

Q. And the absence or limited use of writing materials in the home? A. My response is the same.

Q. What about the broken family that this minority child comes from? A. I don't know any program that can compensate for those kinds of problems, totally.

Q. How about the absence of father figures? A. I believe again that there are some ways in which the school—if it approaches the child properly and provides motivation for him, can to some extent substitute for some of those problems.

Q. Well, I take it that you believe, don't you, that many of these minority children come into these schools with these kinds of problems that I have been describing? A. Yes.

Q. And I believe that you agree that not all of those kinds of problems can be solved by these programs that you are proposing, is that right? A. No, I'm sure that we can't solve all the problems.

[461] Q. Now, do you have any opinion, Dr. Gilberts, as to how an integrated school environment with a heterogeneous student body might help give these minority children some of these experiences, some of these role models, some of these feelings of self-confidence and expectancy to succeed? The Anglo children have those feelings, don't they? Some of them? A. Not all of them.

Q. Do you think that might make a valuable contribution to these minority students? A. I suppose to some of the youngsters it might. As I maintained before, I think there are some other ways of getting at those problems.

Mr. Greiner: We have no further questions.

Redirect Examination by Mr. Ris:

Q. Dr. Gilberts, do you know of any evidence that mandatory busing would provide for lack of reading materials at home? A. No, sir.

Q. Or would substitute for negative parents' attitude toward the schools? A. No, sir.

Q. Or would substitute or provide for the lack of the father figure at the home or these other things Mr. [462] Greiner was just talking about? A. No, sir.

Q. Dr. Gilberts, generally, there are how many schools in the system? A. 127.

Q. How many employees? A. 7,000, total.

Q. How many pupils? A. 96,000 plus.

Q. As superintendent, are you able to keep track of all of the various statistical figures? A. Unfortunately, no.

Q. And be personally familiar with every detail of every program that is going on, whether it be at Fairview or Cole or wherever it might be? A. No.

Q. Do you have men who do keep on top of the specifics? A. Quite a few of them.

Q. Major staff people here available? A. Yes, there are, but there are many more than these.

Q. One thing I neglected to ask you during your direct examination, — and so this would not particularly be in redirect, but if I may, did your staff analyze Plan 1 in the plaintiffs' proposal to determine how many buses would be required just as a proposal now—as the proposal now [463] stands? A. Yes.

Q. Additional buses? A. I believe that the estimate was that, if they did not duplicate the use of vehicles, just use the vehicles that were assigned to special areas, it would require 147 buses.

Q. Then did they further study to determine if—for the target schools and the hours and using a bus on more than one route—

The Court: How many buses in Plan 1?

The Witness: 147.

The Court: Additional?

The Witness: Additional, yes. By doing the things you have described, it would probably—and this is purely an estimate—we probably could get by with 65 additional buses.

By Mr. Ris:

Q. And this would necessitate in some schools having a starting time of eight o'clock and in other schools a starting time of nine o'clock? A. Or some similar arrangement.

Q. This would also necessitate, of course, additional drivers? A. Yes.

Q. Additional mechanics? A. Yes.

[464] Q. Additional parking space? A. Yes.

Q. Additional driver training? A. Yes.

Q. And a host of other allied matters? A. Yes.

Q. Now, through some of the testimony, Dr. Gilberts, there has been some indication that one of the problems that a minority child has is that he has a lack of sense of power or destiny as to what he can do and what he can't do and to what school he can go and to what school he cannot go. A. I believe that was testified to by Dr. Dodson last summer.

Q. And that one of the things that the—that voluntary open enrollment obviates is to the extent that parents—that the child or his parents for him can select another school? A. I would suppose some—

Q. Now, with respect to the Hallett program, that has been an exchange voluntary program, has it not? A. Yes.

Q. And with special emphasis given on that one school? A. Yes.

Q. On Page 40 of the Exhibit V-A, there is a chart. Does that chart reflect the changes that have occurred in the [465] participants? A. Yes.

Q. And does that chart reflect the Anglos who are bused into Hallett and the blacks that are bused out? A. It indicates the number of Anglos and Negroes in Hallett School.

Q. And does it show also the in and out numbers? A. Yes, it does.

Q. And have the numbers of Anglos coming into Hallett increased each year? A. Yes, it has.

Q. And what was it the first year? A. 76.

Q. What was the second year? A. 132.

Q. And how many whites are there this year? A. 290.

Q. Could you give us the same figures for those being bused out, the Negroes? A. In 1968 it was 634. In 1969 it was 575.

Robert D. Gilberts—for Defendants—Redirect

Q. Now, in preparing your plan, Dr. Gilberts, there has been submitted to the Court as Exhibit V-A—did you draw upon your past thinking or past experience as well as innovative things strictly pursuant to the Court's memorandum opinion of March 21? [466] A. Yes.

Q. So that everything in that plan is not brand-new and had never been considered before? A. No, it's not.

Q. Are there things in there that you considered before and had plans on which—but which had not been approved or accepted by the Board? A. Yes.

Q. So it's correct then that there is a compilation of a mass of experience to which was added additional items which you understood would be required in accordance with the Court's memorandum opinion? A. Yes, it was.

Q. And is any one portion of this plan intended to be an entity in itself? Or does it all have to be considered together.

Q. Do you have the Exhibit 517 before you? A. Yes.

Q. You indicated that the adjusted figure, ignoring the spaces in the twelve Court-designated elementary schools, that there would be 620 spaces available. Correct? A. Yes.

Q. In the elementary schools for transfer out of the twelve schools. Now, if you added the ten percent overcapacity [467] in the other elementary schools, what would be the figure? A. 5,363.

Q. Available spaces? A. Yes.

Q. And if it were 15 percent, how many available spaces in the other schools? A. 7,457.

The Court: Has that summary sheet been introduced into evidence?

Mr. Ris: I don't think it was ever offered.

The Court: I have not seen it.

Mr. Greiner: We would offer it.

Mr. Ris: We have no objections.

The Court: Very well, it will be received.

(Whereupon, Plaintiffs' Exhibit 517 was received in evidence.)

By Mr. Ris:

Q. Dr. Gilberts, as there were whites transferring out of those other schools—that would also make available additional space available? A. Yes, it would.

The Court: Do you think there is any reservoir of white students to be had to transfer voluntarily to black schools?

The Witness: I think there are some; it would be difficult to estimate.

[468] The Court: I'm sure you put on quite a drive in order to get this Hallett program off the ground.

The Witness: Yes, but that was in a very limited area in Southeast Denver and not really going beyond that area.

The Court: Is there any indications that you could get high school people to make this kind of a switch voluntarily? Do you anticipate there's going to be any sizable number of openings from this source?

The Witness: As I indicated, I feel that the program has to be promoted if it's going to be successful. People have to know about it. A year ago when the voluntary open enrollment plan began there was a considerable amount of interest at the senior high school level especially and I believe that, with continued emphasis in this area, that there probably

would be a substantial number of youngsters that would be interested.

The Court: But, anyhow, you're going to go forward on the assumption that you're going to have to accommodate these people with existing openings?

The Witness: Yes.

The Court: And create some more, if you need to, is that right?

The Witness: Yes, sir, if we need to.

By Mr. Ris:

Q. Now, with respect to the questions [469] that were asked you by Mr. Greiner on budgetary matters pertaining to in-service training, compensatory education and so forth—now, do you recall that Dr. Bardwell testified yesterday that in effect they would adopt some of these same programs as ancillary matters to their programs? A. Yes.

Q. Would the budgetary requirements be any different if they were part of the plaintiffs' plan as compared to part of the defendants' plan? A. I think that they might be higher. Because there would be more schools involved.

Q. Now, with regard to Complexes 1 and 2, are there in some of those schools involved in those complexes some Negroes and some Hispanos? A. Yes, there are.

Q. So when you take the groupings of the schools as a whole, there is a substantial mixture of races? A. Yes, I think there is.

Q. Now, Dr. Gilberts, yesterday in response to questions by the Court in regard to Northeast Denver and the schools that were affected by the temporary injunction, have there been any problems in connection with the transportation of pupils in the exchange of students—student personnel in the affected schools? A. Yes, there is.

[470] Q. Could you tell us what some of those problems have been? A. Well, the problems have largely concentrated to the junior high school level and they tend to fall into the areas of transportation, the moving of youngsters back and forth to schools. We have had quite a lot of difficulty in terms of behavior on our buses, on these routes. We have had quite a number of incidents that we have a file on in our office indicating difficulties in terms of human relations which we certainly hope to promote in these schools.

Q. Are you still talking now about—during the busing? A. No, I'm talking about in the school itself.

Q. What type of incident reports come to you in this connection? A. Well, usually incidents relating to relationships between whites and blacks in the schools involving all kinds of interpersonal relationships; fighting, et cetera.

Q. Have you had any communications from either pupils or the parents in connection with this? A. Quite a few. We have a rather thick file on it.

Q. With respect to the program itself or the results, I should say, you indicated yesterday it was too early to assess the results. A. Yes, sir.

Q. So objectively, as you indicated, this would be a [471] pilot program? And it was your thinking originally and objectively then, so far as academic results or achieving—achievement results—you still don't know? A. We have no results yet.

Q. So then, insofar as the actual operation, you have had various problems. So, there are some pluses and some minuses, is that correct? A. Yes.

Q. It's certainly not been exactly a Sunday school picnic, so to speak? A. No.

The Court: I suppose you would have the problems if you were busing them on a voluntary basis, too, wouldn't you?

The Witness: I don't believe that we would. We do bus some on a voluntary basis and my feeling is that the problems have been largely confined to those areas in which we have transported blocks of areas out into the schools at junior—at the junior high school level. Now, those buses may also include some voluntary pupils.

The Court: Why would it be different?

The Witness: Well, I think that there has been certainly some feeling on the part of those that were transported that this was not exactly what they wanted to do. I think that some of the youngsters found the environment hostile [472] where they found themselves. At least, in their minds. And the incidents that have occurred I suppose are fairly representative of the kinds of problems that are going on around the country. This problem is one which has been true in many other cities as well. I think, though, largely—probably it comes from the feeling of these youngsters being moved to schools that they were—that were not of their choice and at that level youngsters, junior high school youngsters are very volatile youngsters to begin with.

The Court: You mean both black and white students?

The Witness: Yes, all adolescent youngsters of this nature, the combination of these things has produced some problems.

The Court: Well, the problems wouldn't be different if you were mandatorily moving them to re-

lieve the overcrowding, I don't suppose. Wouldn't every element you mentioned be present in this kind of a situation, too?

The Witness: Yes, sir. I think that, if this were done for that reason too, you would have the same kinds of problems. Most of our busing for relief of overcrowding has been at the elementary level and not at the junior high school level.

By Mr. Ris:

Q. Have you had any increase in disciplinary problems in the classroom? A. Yes.

[473] Q. And can you give us some further elaboration on what the problems have been? A. Well, I had communications from various faculties in the city, reporting their reflections on the same kinds of incidents that I have referred to in a general way. That there have been concerns expressed on the part of the teachers as to how they are to handle—cope with the disciplinary problems that develop. Certainly a desire to make the experience successful, a sort of concern on their part as to how to react to these situations in a way that doesn't cause problems with other youngsters so far as discipline is concerned in the schools. I believe that generally covers the problem.

Mr. Ris: That's all. Thank you.

Recross-Examination by Mr. Greiner:

• • • • •

[478] • • •

Q. Now, you said that you would need a minimum of 67 additional school buses to implement Plan 1 of the plain-

tiffs' plan? A. That was Mr. Olander's estimate, at the lower limits, if we duplicated routes and dual use of the bus.

Q. And Plan 1 of the plaintiffs calls for the transportation of somewhat less than 9,000 school children at the elementary level. Do you recall that? [479] A. 8,380.

Q. And Plan 2 calls for the transportation of how many elementary school children? A. I have here 11,109.

Q. Now, under Plan 1 of the plaintiffs, we would be transporting less than 9,000 elementary children. If you have complete participation in the minority elementary schools of the limited open enrollment program, you would be transporting about 9,000 minority children into these Anglo schools, wouldn't you? A. I'm not sure of that figure but if that is the total number, that's the total potential, I suppose.

Q. So your capital requirement for buses would be exactly the same? A. The problems of transportation would be relatively the same.

Q. And the annual budget for the School District is what? About $100 million, Dr. Gilberts? A. Roughly.

Q. And buses cost about $9,000 apiece? A. Smaller units do. The larger ones are twelve, thirteen thousand.

Q. What does a smaller unit carry? A. Sixty-five passengers. The larger ones are seventy-five and up, as I recall.

[480] Q. So, if you had to buy 67 buses at $9,000, that's $603,000? Do you agree with that arithmetic? A. That arithmetic I think is right.

Q. That's about half of one percent of the School District's budget, is that correct? A. That's correct.

Mr. Greiner: No further questions.

Mr. Ris: That's all.

(Witness excused.)

Mr. Jackson: Call Mr. James Ward.

JAMES D. WARD, a witness called by and on behalf of defendants, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Jackson:

The Court: Please state your name, address and occupation.

The Witness: James D. Ward. I live at 2618 Adams Street. I'm the Principal of Denver Manual High School.

By Mr. Jackson:

Q. Mr. Ward, how long have you been Principal at Manual High School? A. I'm completing my fourth year.

Q. And how long have you been with the Denver Public Schools? A. Twenty-two years.

[481] Q. Immediately prior to your taking over the principalship at Manual, what was your assignment? A. Principal at Wyatt Elementary School.

Q. Was Manual your first senior high principalship? A. Right.

Q. What generally, Mr. Ward, is the racial and ethnic composition of the school student body at Manual? A. Out of the student body of 1,500 original registrations, perhaps 69 percent black; 27 percent Hispano, and the rest other.

Q. How would you generally describe the socioeconomic status of the area from which these students come to school? A. It would be low.

Q. For all students? A. A large majority.

Q. At the time you arrived at Manual in terms of curriculum then being offered at the school, did you find that it was the equivalent of the general curriculum then being offered at other Denver High Schools? A. Basically the same.

Q. And if we may refer to the traditional concept of a high school curriculum as the three R's type of program which is offered in most high schools, that's a program offered at Manual? A. Yes.

[482] Q. In addition to the regular high school curriculum there has been some testimony throughout this trial, and I'm certain that you have heard some of it as you have been seated in the courtroom these last two days about some special and specific programs which are presently under way at Manual. You have heard that testimony? A. Yes, sir.

Q. Mr. Ward, these programs are, as you are testifying, in addition to the regular academic programs at Manual? A. Yes.

Q. How did you first approach this question of devising or innovating new programs for Manual? A. Well, when I was assigned to Manual I took a look at the curriculum offerings and, knowing the economics of the area, some of the problems we were having in the East Side area, I felt that the basic traditional program at Manual was not meeting the needs of certain students, a significant number of students at Manual. And when we talked with business agencies about hiring Manual graduates, we were concerned about their opinions and we found that many of our kids were not—they were having to seek lower types of employment once they graduated from Manual. So we came up

with the idea that if we could establish what we would call a Head Start approach to do some—actually some training in the skills that were necessary to go into certain [483] fields, to do some changing in the academic disciplines that were offered to make them more relevant to students, perhaps we could do something with this problem.

Q. How did you identify these students in the first instance? A. I might explain the program at Manual is a three-phase program. It begins with sophomore orientation; juniors, we go into what we call a more in-depth program where the students then select the area that he wishes to go into, and then in the senior year we go into the co-op approach which is part time in school and part time on the job. We presented the program to the incoming sophomore class at the 9th grade level. We went over to the junior highs and talked to them and told them what it was. We had parent meetings to explain the program, letting parents know that it wasn't purely a vocational program; that there would be opportunity for students. We went into the program and explained to them that if they desired to go into college, they would possibly be required to go to a junior college because we would be taking time from the—they would be taking time from the regular program. It was purely on a voluntary basis from the standpoint of the kids. They were able to make the choice. If they wanted to go in. But at the sophomore level to have a chance to explore five or six areas before they went in, before they decided to go into the program. [484] It's not a track program. Students can either be in it or out of it. It's entirely up to the student.

Q. Backing up for just a minute, Mr. Ward, in terms of examining some of the problems which you faced when you came to Manual, you mentioned the problem of em-

ployer reluctance to employ Manual graduates. Were you also at that time aware of certain community resentment toward this school? A. Yes.

Q. Did you talk to students who had at that time either dropped out of school or ones that you could identify as being potential dropouts from school? A. Yes.

Q. Did you discuss with the students as well as the community some of the problems which they were experiencing with the school? A. Yes. May I add a statement here, please?

Q. Certainly. A. One of the concerns we had when we began this program at Manual was that the school would not be identified as a vocational school. We went to some length in attempting to explain this to both the parents and the students. In the initial program, in an attempt to get at the dropout problem—this was a program that we first attempted which was what we call a hard-core counseling program where we put additional counselors into the field to go out and work with kids who [485] had dropped out or who were potential dropouts. But one of the things we found, there was not a strong interest on the part of the kids to go back into basically the same program. And that they had desires and wants to learn something that they felt would be beneficial to them upon graduation. So the program that we began, which was, as we called it, the vocational skill program, was geared as a holding program, a program with holding power, attempting to keep kids interested in school and to humanize the school in the eyes of some students.

Q. Was this program which you started—had you identified students solely on the basis of their race and having particular problems? Or did this deal generally with all of the students at Manual at that time? A. No, we don't identify any by race.

Q. Were you concerned also with the academic achievement at Manual as measured by a standardized test score at that time? A. Yes.

Q. Did you consider this in terms of the establishment of your program? A. Yes. I personally looked at the academic achievement, one of the necessary ingredients is highly-motivated kids or at least motivated students. And, as far as I'm concerned, you don't get motivated students until they are [486] interested in school. And if we could put in programs where kids would be interested in it and stay in school and see the needs for going to school, then we can possibly look at a higher academic achievement record.

Q. And this is what you meant when you talked of making your school program more relevant to the students? A. Yes, sir.

Q. Now, in order to conserve a little time, Mr. Ward, your first effort was basically within the vocational skills program, was it not? A. Yes, sir.

Q. And could you explain to us generally the philosophy behind that program and some of its facets? A. Well, I'm sure those who read the report have read or at least understood that our basic philosophy at Manual is all education for career; that this is why kids go to school. To become effective in later life, to be able to be productive, and we have gone on this philosophy to point out that there are many levels for achievement, many ways kids can go, and we also attempted to use this approach to help the community take a look at vocations as not something dirty; that if you can't do it here, you do it there. We also built into our program the vocational programs more than what we call just the skill programs. For example, in trades we are more concerned than a hammer and saw program. We

devised [487] the program where we took two of the academics and put the teachers right into the trade programs. In other words, there is an English teacher and a math teacher right in the program working with the vocational teacher, with the carpenter, as a team. The job of these people is to find ways as they see the program to develop —to make changes in the offerings, in English and math and these kinds of things, to make it relevant to what the kids are actually learning in these particular areas.

We also assigned two of our strongest counselors into the academic program—into the vocational program, those who had vocational backgrounds and who could work with the kids, and their job, too, was to be involved in the total program. And this is one of the ways that we see education as being important in that you have to—you've got to get the teachers concerned with the discipline and should have some knowledge of—in the direction in which the kids are going.

We feel that some of the best and most effective counseling can be done by a counselor right in the shop, side by side with the kid, working. So, what we have attempted to do since is to build a strong academic program right with the vocational program. In other words, the kids don't go on the third floor to take their math. They take their math right there where it's meaningful, in the class.

Q. In terms of the staffing of your programs, were you [488] able to draw primarily on your existing faculty?

A. From the standpoint of the vocational teacher, yes, and the counselor and the teachers are involved in the academic —we had to go outside to get paraprofessionals. We actually hired carpenters and tradesmen right in the program on the faculty.

Q. This represents in reality a new approach to the edu-

actional process, does it not? A. Well, I think it was a new approach to the educational process at the high school.

Q. Are you aware of any similar approach taking place at any of the other Denver high schools? A. I think some are looking at programs like this and have expressed an interest, wanting to go into this area.

Q. Because of your experience with the program? A. I don't know whether you could say it was my experience with it. But I think we should—there are many positive things about the program, and I think if you can develop the program to meet the problems—I'm not concerned about programs just because they're programs. They have to be designed for some purpose as far as I'm concerned.

Q. When did you actually begin to implement your vocational skills program? A. I was at Manual one semester and began the second semester.

[489] Q. And did you start the entire program at that time? Or, was that one that was established in stages? A. We developed the basic program at that time.

Q. And could you tell us, please, and tell the Court some of the specific trades which are concerned in the vocational skills program? A. Well, we are concerned with what is known as the building trades which includes carpentry, plumbing, electrical work, bricklaying; some of the so-called gray areas like linoleum laying and things of these kinds. Everything that goes into the building trades. That's what we called the trades program. We have a program that is called power and transportation which deals with the beginning program in small motors and advancing to automotive motors and the introduction to diesel. We are looking at jet engines if we could find ways in the building to hold the noise in there. We are looking at cosmetology, which is an actual program, state-sanctioned program, for girls;

a program which is called HERO, which is home economics and related occupations, which takes in nurse's aides, takes in food preparation, sewing, different types of sewing, power sewing, commercial-type work. Machine metals, which is fabrication. Welding. Different types of welding. And we have what we call machine shop where they deal with the lathe and cutting-type machines.

Q. Do you have any present plans for an expansion or [490] adjustment in any of these programs? A. Yes, we are trying to build additional dimensions in these programs. For example, I just touched lightly on what we want to do more than skill training. We want to give kids as much knowledge about what goes into the total picture. An example was in the trades when we built a house. We actually built a house.

Q. Would you tell us about that, please? A. Well, my advice is, don't get into the house-building business. But we were concerned with—the kids were actually involved. All things that go into it. They establish their companies and we are strong believers in this, which is the experience and the kind of leadership and opportunities the kids have in school. It was the experience where the kids went down to the Urban Renewal and presented their plan for the use of the property. They had to go to the First National Bank and borrow $16,000 as construction money, and they had to listen to subcontractors and weigh bids with help, of course, to see what goes on. What they learned about property: How do you buy property? What are the zoning laws? Spending time in the Engineer's office; spending time in architectural offices downtown; finding the kind of house, the type of house they could build, and that would be attractive in the area. Then, having this experience, actually constructing the house. What it did to them in-

trinsically to see themselves building [491] something; and, the attitude of people in the areas while they are building something rather than tearing something down. These are many of the experiences and many of the values that we feel are important in these programs. On an extension, on one of the programs, the students in the metal shop will be making all of the bulletin boards for the Denver Public Schools. We have the contract now. This is a meaningful thing. Here the kids have a chance to establish a company, here they have a chance to really utilize the math and measure means and figuring out the cost of materials, and these kinds of experiences. The power and transportation program—we are now running a filling station in cooperation with Standard Oil Company. This gives them the introduction to small business. How do you buy? What is this thing called marketing? How do you figure out profits? And these things of experience. This is what we try to build into these vocational programs.

Q. Do the children who participate in the construction of the home and those who participate in the operation of the filling station receive instruction in the general academic areas? A. Yes. Here, again, the power and transportation—we build in a math and English person that worked right there in the shops with the kids. This is also done in the metals shop, cosmetology. No, there is a specific program for that [492] where young ladies have to be in the program 1,600 plus hours. They are there for clock hours a day and then they go to their regular subjects during the day. In the home economics, in the HERO program, the academics are not built into that program. The kids go to their regular program.

Q. And do you intend to continue these programs at Manual? A. If funding is available, yes.

Q. What observations have you been able to gather in terms of the success of these programs as it relates first to the students involved? A. I think we have seen changes in attitudes. To many kids, school is more human. They see means for school; how it can function as far as they are concerned. Academic achievement, I have not seen great gains in this area yet.

Q. Is it an area that you would normally see fantastic gains over short periods of time? A. No, it's something you hope for.

Q. What about the community acceptance of these programs and of the school? A. I think the community's acceptance has been positive. I think they, the community, some parts of the community feel that we are working with the kids to the best we can in trying to give them as many experiences as we possibly can. I might say what we are attempting to do in essence is developing [493] comprehensive high school, where there are many things for the kids to make selections to do.

Q. And I assume you are continually reevaluating these programs and learning as you experience their operation? A. The building committee right now, which is the teachers' evaluating program—those in the program and some of those out of the program—are attempting to evaluate to see what we need to put in and what we need to take out. Do we need to expand? Do we need to remove the program?

Q. Speaking of teachers, Mr. Ward, what generally is the experience level of your teaching staff at Manual? A. It's in that book there, I think. We have quite a few teachers—I'm satisfied with them.

Q. Do you feel that the new teachers are capable teachers in terms of being assimilated either into the District's aca-

demic program or into your vocational skills program? A. Yes. As a matter of fact, I'm a firm believer that the old teachers are the best teachers. I think some with young ideas who are coming in now with this changing society—I think many of those have a very fine idea—have fine ideas to put into the program.

Q. Following your experience with your vocational skills program, did you establish a new program in the pre-professional area? [494] A. Yes. I might point out that the vocational program runs in blocks of time. You can't do the laboratory-type program in a 45-minute period, so we've blocked this at three periods at a time. So we looked at the program to see what were the values of it, and there were some things that we saw that were interesting. We were introducing students to many areas that they were not familiar with, because many of our kids come from not-affluent backgrounds or homes. We saw also a value of our kids getting the experience of going out of the school and working with people, not basically school people. In other words, working with people from unions; working with people from businesses. And I think it's a reciprocal type of thing where people on the outside get a chance to take a look at the kids, too, and see—and have a chance to better understand how kids think. So we took a look at some other areas that are generally considered by society as basically professional areas. We were concerned about the number of youngsters who went to college and we started to examine some of their pursuits and we were concerned about large numbers going into areas like into the social studies areas; sociology, social work. These kinds of things. And also we looked at the results of a questionnaire that we put out for career day. Now, career day is where a lot of people come into the building from all

over, businesses and the broad community, and say what they think to kids and tell [495] them about opportunities. But, when we looked at the choices, we were a little bit alarmed that there were very few kids who wanted to listen to a doctor; very few wanted to listen to a lawyer; engineers. No takers. So we wondered, could we take a little piece out of the academic program. And we thought we could do it without disturbing the educational studies because kids can graduate from Denver Public Schools in two and a half years. They can get their requirements in. So we said, well, let's try to work at that semester time where we could use these experiences, credit these experiences as electives to the kids. And talked to the kids in—small groups of students about their interests in going to college; what they would like to take a look at. How they feel about the medical and the allied health fields. What do you know about engineering? Are you interested in seeing more about these things? In other words, attempting to expose them to these areas. So we selected the areas based on students' interest. One was the medical and allied health fields. One was engineering. One was elementary education. One was communications. We were concerned about minorities being in front of the camera, what goes on behind and how about being a technician or a photographer or running a camera, or writing, producing. We looked at the aviation—the area of aviation. I'm sure there was one other but I can't— So, we started working, meeting with the people concerned and the agencies, [496] schools, et cetera, talking to them about the program. How could you assist in setting up experience-type programs for our kids? But also letting them know that they had to be more than just to sit there and listen and watch. The kids had to get involved. Data processing was the other one.

So, we got a few takers. And in the medical program the C.U. Medical Center said, "Well, we would like to work with them." They got doctors to volunteer to lecture kids and to help them and set up experiments for them. The Denver University picked up the engineering program. The telephone company said, "We've got millions of dollars' worth of business machines. We would be very happy to work with the kids here."

Our own Channel 6 supplied the television area, the support from Channel 4 and Channel 7 were received. So rather than attempt to buy the equipment and put it in the schools we feel that these people have to have updated equipment—have the best, why, then why can't we go out and use theirs. So we bused the kids into these programs where all of them spent a period of time. We had some interesting results in it. I'm looking anxiously at the reports from the kids who are doing the medical research. They are studying tissues—scar tissue after operations. We feel this is very interesting kind of exploratory work for kids. They watch things like circumcision and heart transplants on dogs [497] and animals and these things, and from this we have a number of kids who have elected to go to college into the medical area. This is the purpose. We have one youngster who has received a scholarship already to the Denver University, going into the field of engineering, and we feel the experience he had there at the university in preengineering courses was perhaps one of the things.

Q. Did the students actually take courses at the University of Denver? A. Yes. They are right in there with engineering students—beginning engineering students.

Q. Your medical program—this is not a program run at the school, but at the University of Colorado Medical Center? A. Yes.

James D. Ward—for Defendants—Direct

Q. Your preeducational program, Mr. Ward—what basically does that provide? A. One of the concerns in colleges has been that black male students have not been interested in going into the field of specifically—education specifically at the elementary level, so we were concerned about how could we work into this area. So, we went to the Northern Colorado University, at Greeley, and worked with them on a program and we received cooperation from elementary principals in the area and our kids started what we call laboratory experience, [498] working with teachers in six elementary schools in the area. We did not want them to have experience like running off materials, marching the kids to the lavatory. We wanted to have them to have a chance to work with teachers, working with specific kinds of youngsters doing what we might call backyard counseling with them, helping with their reading problems in the classroom, assisting the social worker and working with the kids, counseling with youngsters. And we found —we had many letters from principals expressing pleasure in having this program because it did a lot to establish an image for some of the kids. The second semester they have been going, still at the elementary schools, but a professor comes down from the University of Northern Colorado and the kids were in a lecture course, general psychology or something like that, psychology courses, and they spent the last three days—the last week they were up on the campus at Greeley studying this to finish their work. This gave the kids a chance to look at Greeley, to talk to some of the professors about going to school there. We have a number that are going there and, of course, they received both high school credit and college credit towards it.

Q. In connection with the University of Northern Colorado, I think we're now, are we not, supposed to call it that? Is this a recent understanding in which you have finally been able to achieve with them? [499] A. Yes.

Q. Is this a basic program looking forward—as opposed to anything you have had going for any period of time? A. Yes.

Q. Do you have any advanced placement opportunities for your students in the college area again? A. Yes, we utilized this—here again, we utilize this time the kids have. We were concerned about this because when kids know they are graduating, they receive their hours—the last semester, and grades start to go down, and attitudes change and you have more kids getting in trouble with teachers because they're sort of fed up with it, you know, and they are through. So, to motivate these kids to go on, we developed with the Denver University a program where these kids could come out to be bused right out to D.U. and take college courses. Now, we were not talking about orientation courses. They were taught actually freshman courses. Some of the kids got in a two-year program—no, in the one-year program—some of them last year. So, the kids had 20 quarter hours ready to go before they had actually entered college. We were also working with Community College on the same basis, where the kids are bused there in the morning. These are limited programs. I think we have 27 going to D.U. and there's about 14 going out at Community College.

Q. There was some testimony at the February hearing, [500] Mr. Ward, regarding the percentage of Manual graduates going on to college, and I think perhaps they're talking about students now taking college courses. This would be an opportune time to straighten this out. What, gener-

ally speaking, last year, was the percentage of your graduates that actually went on to college? A. Fifty-one plus in the graduating class.

Q. This was not applications to college but was actually a matriculation into the college program? A. Yes.

Q. As part of your continuing program for the motivation of the students, have you developed a plan or have you a plan under consideration to continue your connection with the students once they leave Manual and enter college curriculum? A. Yes. We are very concerned about when our students leave because, with the kinds of support they get and which we feel is a very close support, we are concerned about when they leave us, the kinds of help that they will get. We understand that they have to be weaned sooner or later. But we worked out a program with the University of Colorado. We just experimented with that last semester, of sending one of our counselors up on the campus two or three days a week just to see how the kids are doing. It can be a home base; a reference point; where the kids need help, and perhaps, because of the vastness of the school don't know some of the [501] ways in which to go. So we are utilizing this approach. We are also calling back many of our students to make contributions back to the school in terms of ways they have been helped and ways that we could help other kids going on, too, so we could hold onto these kids as long as possible.

Q. In terms generally of the preprofessional type programs which we have been discussing, the premed, prelaw, preeducation, these programs—when were those instituted into the curriculum? A. We began on those programs beginning in the fall.

Q. Of last year? A. This school year. The fall of this school year.

Q. Now, you mentioned earlier in your testimony that having identified some of the problems which you felt existed in terms of the students at Manual when you arrived, one of the foremost problems apparently was in—the question of student motivation as far as school was concerned. As a result of your experience with these programs, have you any observations regarding the motivation of the students as a result of the institution of these programs? A. They definitley have holding power. We have kids that are staying in school. At the present time our enrollment is 1,380 kids, which is much higher than it has been in the past. This is one indication. The attitudes of students in terms of wanting to learn something. What kids talk about [502] now. I see in them having a much broader idea of what is happening; what is going on in the world. And through the opportunities that they have in making a go at it. You see these kinds of things.

Q. How about the reaction in the community, in the employers you mentioned? A. Well, this has been very—a very interesting experience for us, to see some changes in some people. Now, I don't want to be understood that we have changed the world out there. We haven't. But I think our employers are seeing minority students, specifically black students, in a little different light. They're seeing abilities that they didn't—that someone else told them they didn't have in the past. Many of the experiences have been very positive and many of the employers want to continue to go along with the program.

Q. What about the community support and recognition of the high school? A. Well, as I said before, I think the feeling of the community is positive. Still, you don't know what really is going on, but the experiences that we have had from the standpoint of parents, the community support that we have had, I think it's positive.

James D. Ward—for Defendants—Direct

Q. Is part of your program in reality an educational process for the entire community as well as for the students themselves? [503] A. We feel it is. And I think it's probably something that we should just briefly allude to at this time. The school in the community like Manual High School cannot necessarily operate like a school in many other kinds of communities. We are located in the community—in a community that a few years ago had a number of socializing agencies. But, as the community becomes older, people become more affluent. People become better off financially. They move from the area and the leadership is constantly drained from the area. And it's very difficult to get input from these people after they leave. Churches move out where the constituents are moving. The recreation centers, other kinds of socializing agencies move out where the people are. Consequently, it leaves the school in a difficult position, and the role of the school is different, I believe. I think the school has to do what it can to supplement those forces that move out. Probably Manual High School is utilizing more from the standpoint of community after school and on weekends than any other school in the city, because it has become the center. But the physical aspect is one, of course, that we can easily look at, easily see or identify. But one of the most difficult things is to attempt to develop a program, attempt to develop knowledge for kids, for people in the community, where they will be effective citizens in the community, politically, socially, and the school has a very difficult role to play. In other [504] words, it has to be more than an agency. We felt that one of the important things in this vocational program was to get the kids out into the community; get them away from there. Let them see something. Let them experience things. Let the majority of the community see kids can do something. This, in a sense is one of the re-

sponsibilities we felt we had to do. We are right now concerned about a program that we call the environmental design program. Can kids learn in a school like that to redevelop their own community? No one else is going to do it. Outsiders can't come in and rebuild it. It has to be redone by the people. Can kids who will be voting for something perhaps as the eighteen or nineteen-year-olds—and I would sure hate to see them voting for nothing. It seems to me they have—they ought to have some roots. They ought to have some belief or concern about their own community if they're going to be successful people. So I think the role of the school is, you can't wait for George to do it. We have to attempt to put it in. In our prelaw course, if kids don't desire to be lawyers, they at least learn something about law that affects them, you see. We can at least get some of these kinds of things done. And when we talk about law and order and things of this kind, maybe if they understood the law sometimes or how the law is supposed to be interpreted maybe they can see their own relationship to it.

Q. You started to mention one of the future programs [505] which you envision for Manual in the environmental design program. Would you tell us a little bit more about that, please.

The Court: I think we might break at this point for lunch. And we will take up at 2:00 p.m.

(Whereupon, the trial recessed at 12:28 p.m. and resumed at 2:08 p.m.)

By Mr. Jackson:

Q. Mr. Ward, prior to the break for lunch we were starting to discuss some of your future programs. I believe you

were preparing to discuss your program on environmental design. Would you explain that to the Court, please? A. Well, as we have looked at the—here again, the role of the school, what can the school do in providing educational programs, better education for kids? What can it do in helping to improve the social climate and also what can be done in terms of the political climate? And we, as I stated before, we were vitally concerned with what these seventeen, eighteen and nineteen-year-old young people who are citizens in our community, how can they look intelligently at the political picture in the community when it comes to voting? What can they look at as needs for the community, if they haven't any involvement in it? So we worked out a program with the architectural school, the University of Colorado, and with the Urban Renewal, and we are wondering if [506] young people who are in schools learn to work with many mediums, like clay and wood and metals and paper and so forth—are they creative enough to work with the guidance of engineers and architects to start working with larger areas? Can our kids redevelop blocks in the community? Can they build, design miniparks, and can they give suggestions for recreation centers and where houses should be and these things? We do this on a small scale within the school. Can we use the community then as a much larger learning laboratory? So, if funding is available in the fall we want to work in the summer to design the curriculum for this program and to work in this. We think it has some interesting dimensions for youth in terms of having a piece of the action in their own community, hoping that, if kids can get action programs like this going in the broad community in the Northeast, will families and other agencies in the community join in and see what can be done in the redevelopment.

Q. Do you also have plans for an outdoor education center? A. Yes, and I don't want this to be confused with the Ballerette program. We are concerned about the acquisition of a Job Corps Camp. In some areas these camps are declining in use, and we have asked assistance to obtain one of these camps that we would like to use for an extension of all programs. We would like to look at the possibility of taking [507] up youngsters, not only from Manual but from other parts of the city; kids who may be working on joint kinds of programs, to spend a few weeks at a time with their instructors, bringing in tutors from the University of Colorado and Greeley that would be with the kids on—to continue their educational programs. But we feel there is a lot to be gained from this kind of relationship and association. Also, our young people come from an urban setting. We feel that an exposure to some of the activities that we see more out in the open, in the mountains and plains and things where our kids don't have the chance to participate, and that we feel this would be a broad experience. Also, we wanted to use this as a training ground for our young people in the elementary education program where they can get some counseling and training and we could set up camping opportunities for the youngsters in the surrounding elementary schools and where kids could get the experience of providing a camp experience for the young people. We could also use many of the resources of our own young people in our home economics area and in our trades area to maintain the camp and to provide the maintenance-type facilities for the kids. It would be an extension of our regular program.

Q. And you have an airline cadet program that you are considering? A. Yes. We have looked—we have gone into the trades, building trades area and to other areas and we

realize that the [508] airline business is a huge business, and our kids ought be involved more into opportunities there. And United Air Lines is coming in the area with a huge plant in the Denver area where it will be increased. We talked to United Air Lines people—we talked them into working with us in a program that would be—we use the word "cadet"—because it would be a beginning program of learning and operating and working with the people in there and in the many, many jobs in the airline business. And we're talking about ticket agents; we're talking about hostesses; we're talking about stewards; we're talking about many of the kinds of jobs. It would also give us an opportunity to extend the training of these young people into the Community College, in the publication at the Denver University. We're working with Community College where, once they finish high school, to extend their training they could go into the Community College and their kids could either go on performing the skills to work in the airlines or it would give them a chance to go on to college. It would be an entry-type thing into college.

Q. If I could back up for just a minute, Mr. Ward. You mentioned the problems which you had experienced or which your students had experienced in the industry. At the time of the trades program did you have any particular problem either in setting up the program or finding union-type trades that would accept your students? [509] A. When we began the program, and when we made our first inquiry we were told that this would be foolish to attempt; to attempt to work with the unions, because they weren't interested in working with schools. And they want to have their own people do their own training. But we found that this was not necessarily so; that, if you can get anyone to listen to you, you would have a fifty-fifty chance of con-

vincing them that they can do something for you. So we went ahead and we utilized their people—called their coordinators—to help us develop the curriculum. I put them on the advisory committee. They wanted us to build tool boxes and sawhorses as training projects, but we ended up building a house. They will go along with you, I think, if you involve them. And we involved them on a participation level.

Q. Now, in addition to these preprofessional programs and your vocational skills programs, do you also have plans to develop a teacher resource program directed more towards the basic academic areas? A. Yes, we are concerned about this, and the direct effort here is in this thing called academic achievement. I'm concerned about using teachers who are educators to ride herd on kids in lunchrooms, and be on ground duties, and we feel this can be done with trained paraprofessionals. And since we are limited in the time that we can schedule a teacher in the classes and we feel rather than put a teacher [510] in that kind of duty, we could better utilize the teacher's talents to work in individualized construction programs. Briefly, the way we intend to do this—if we can get support to put paraprofessionals in the building under the supervision of a teacher or one of the officers, then students would have the opportunity to come from their scheduled study halls and the teachers would be on duty, not in the teacher's lounge, but on duty in certain rooms, certain places in the building utilizing what we call study materials and visual aid materials and resource materials that they have there to help kids. One of the kinds of things that we are concerned about is that juniors and seniors have difficulty many times in writing term papers and reports. Teachers would be available. We attempted to do this with remedial approach

to tutors from the neighboring universities, C.U., Denver University. But a tutor lacks something. Sometimes they lack philosophy of the school. Sometimes they lack some of the techniques that some teachers use, plus the fact we realize that just because someone wants to help you does not mean necessarily you want to receive their help. There has to be a relationship and we feel this kind of approach would help us develop a relationship between teachers and students.

Q. And this, again, is a program which you now have under consideration and are developing? A. For the fall, yes, sir.

[511] Q. Has it been possible, up to this moment, Mr. Ward, to gauge the impact which your relationship with the University of Northern Colorado will have on your program and on your school? A. Not just yet. There are many problems that have to be worked out. It's not an easy situation for a school—a public school to work with an institution of higher learning. There has to be some trust and confidence developed on both sides. But I think we have taken some significant steps. We have the advisory committee. We have interested people in the community that are attempting to work with the program. We have some teachers that are bending a little, both ways, to work it out, but at this point I couldn't say that we are ready to move in that direction.

Q. Does the same basic philosophy apply to all your programs, that your initial planning appears to be sound? Or is there still additional work that needs to be done in these areas? A. I would be the last one to say that everything is running smooth. We have many problems.

Q. But you feel generally that it holds some prospect for success in terms of the ideals that you have set for the

program? A. Philosophically, I think it's sound. Some programs have to be changed; a change in attitudes. But I think all [512] these things have to be taken into consideration, and with continued work we can develop it into a meaningful program.

Q. Do you think you have achieved some success at this point? A. I think so.

Mr. Jackson: You may examine.

Cross-Examination by Mr. Barnes:

Q. Mr. Ward, the vocational training program began about three and a half years ago, was that correct? A. Yes, sir.

Q. And you have about 1,380 students at Manual? A. In school now.

Q. About how many are involved in the vocational program? A. Oh, roughly 250—300.

Q. Somewhere between 15 and 20 percent? A. About that.

Q. Now, the students coming into Manual—the feeder school for Manual is Cole, is it not? A. One of them it is. It's the largest feeder school.

Q. What are the others? A. Morey Junior High School. A few from Smiley. Horace Mann.

Q. The majority of them come from Cole, do they not? A. The majority come from Cole.

[513] Q. And one of the problems, is it not, is that the children who do come from Cole are achieving in the 9th grade at the 20th percentile grade, is not that correct? A. I believe the figure is correct.

Q. It's about in that area? A. (Nods affirmatively.)

Q. So then they come in there already substantially behind academically? A. (Nods affirmatively.)

Q. And they may be reading technically two to three grade levels behind the citywide average, is that correct? A. Yes, sir. I think it's correct. I don't know specifically.

Q. But that's in the neighborhood, isn't it? A. Right.

Q. So they are having trouble with reading and they have a low percentile rating on their achievement score when they get there and as they go through Manual they take what's called the par test when they get to the end? A. Yes, sir.

Q. And do all of them pass that test? A. No, not all kids pass it.

Q. Can you give us some idea of what the percentages are on that? A. Probably Mr. Cavanaugh, who tested them, can probably [514] give you a better percentage. I'm not evading the question, sir. Some of them take it in summer school and some of them take it at Metro, but we attempt to give it as many times as possible and use our clinics—our par clinics to help them.

Q. Those are special training programs to try and get them through the par test? A. Yes.

Q. Those who get the par test—do all of those who pass the par test also graduate? A. That's basically true.

Q. Is it the same thing, that you get a certificate of graduation for passing the par test? Or do you have some further requirement? A. To pass the par examination and to secure the minimum number of hours for graduation, something like 150 hours, plus the required that's in here.

Q. So those who pass the par test, even fewer who actually get a certificate of graduation or diploma? A. Those who do pass the par test?

Q. Yes. We start off with a certain number who pass the par test, and then an even smaller number who get a

diploma, isn't that correct? A. I would say that would be true, sir. I feel accurate in saying that generally those who pass the par test graduate.

Q. You also have, do you not, at Manual, some special [515] education programs? A. Yes, sir.

Q. Can you tell us approximately how many students you have in special education? A. In special ed we have 60 students.

Q. Sixty out of 1,380? A. (Nods affirmatively.)

Q. Has there been a problem in the past of getting—I think you said there was—a problem of getting graduates from Manual or people with par certificates employed? A. Yes, it's a job we work at.

Q. And your vocational training program is geared primarily at that employment question, is it not? A. Certain kinds of employment, yes.

Q. It's not a substitute for the early academic failures, but rather it is created because of those failures, isn't it? A. Yes, and it's really a slushing program on the part of the student.

Q. When you put it together you took a poll of some of the businesses in the community to find out what their impression should be of the more relevant program? A. (Nods affirmatively.)

Q. Can you say audibly, so the record will pick it up, please? A. Yes. I'm sorry.

[516] Q. And you took a poll of students themselves? A. Yes, talked to students.

Q. So the choice of this vocational training program was in part based on the expectations of the community about employment of your graduates and expectations of the students themselves, was it not? A. But also student interest. I ought to point out that many students do not want

to go to college.

Q. Well, isn't it true that many students want to see that they have a job at the end of where they're going? Isn't that the problem? A. Yes.

Q. And those that somehow feel they're not going to be frustrated when they end up with all this education? A. Yes.

Q. So they're really trying to avoid the fear and isolation of not getting a job, aren't they? A. Yes.

Q. And the program is in part based therefore on the community expectations of what kind of jobs your graduates can get? It's aimed at that, is that correct? A. You've got me around in there someplace.

Q. Well, is it correct? A. I think it's right, yes.

Q. And the failure to get these other jobs— Well, [517] it's the acceptance of reality, isn't it, for these kids?

The Court: I suppose it's an acceptance of reality for everybody. I mean, to do the best you can.

The Witness: I would say yes.

Q. It's based on an acceptance of the past failures to get better jobs, isn't it? A. Yes.

* * * * *

[518] * * *

Q. You don't disagree, do you, Mr. Ward, that the— A. No.

Q. —that the peer group has an important influence on the classroom? A. Yes.

[519] Q. You do agree? A. Yes.

Q. And what aspect of the vocational training program would be continued if Manual were integrated? A. I would answer that question by saying I would continue,

cut back or increase any program that I felt met the needs of the kids in the school.

Q. Would you expect the needs to change if it were integrated? A. I don't know. I think we have some programs at Manual that many young people would like to take a look at.

Q. Turning your attention, Mr. Ward, to the pre-professional program, can you tell us specifically how many children are in the premedical program? A. Twenty-seven.

Q. In the law program? A. The law runs about 35. There's about 35.

Q. And you have an engineering program? A. Yes, 14 in engineering.

Q. And the education program? A. Fifty-two.

Q. And you have a social work program? Or, do you? A. No, sir.

Q. And you have communications? A. Communications, 15.

[520] Q. So you have somewhere— I'd better do my arithmetic. A. About 150, something like that.

Q. Let's say a hundred and fifty or so—somewhere around ten percent in these preprofessional programs? A. Yes, sir.

Q. And somewhere around fifteen to twenty percent in the vocational programs? A. I think we should say closer to twenty percent, I think.

* * * * *

[531] * * *

Q. Would you agree that a major part of the academic problem at segregated schools results from the failure of the peer group to present linguistic challenges to the minority student? A. I will agree that could be a part of it, yes.

Q. And isn't there a learning factor just in the terminology and the language that other students around one student might use that challenges that student to expand his own vocabulary and his own horizon? A. I'm sure it would affect him.

Q. Would it affect the academic performance of the student to be challenged in that way?

The Court: I don't think he has ever said that a [532] desegregation program might be useful or valuable. All he did was describe his program. And I don't think you're disparaging his efforts, either. But I just don't think we're getting anywhere. Maybe we are, but it just doesn't strike me that we are. What do you wish for him to admit to? I mean, do you want him to say that he could get more mileage out of an integrated setting? Why don't you ask him that if you do?

Q. Can you answer that question, Mr. Ward? A. What was the question?

The Court: Did you get that question?

The Witness: I got it.

The Court: I mean, that's what you're driving at, isn't it?

Mr. Barnes: Yes.

Q. Would you expect an integrated setting to produce higher academic achievement? A. I think it would have a definite effect on academic achievement, yes.

Q. And your classes at Manual are still 96-percent segregated, are they not? A. That's right.

Q. Are you familiar with the academic achievement—the

progress of academic achievement at Manual over the past three or four years? A. Am I familiar with it?

[533] Q. Yes. You're aware of the fact, are you not, that it has declined? A. That's right.

Q. Since 1965? A. Yes.

Q. And Manual was at the 34th percentile rate in 1965 and had fallen to 28 by 1968? A. I'm familiar with the figures, sir.

Q. Are they correct? A. I would have to say that they are correct, sir. They are based on the tests made of the kids.

[535] * * *

GEORGE MORRISON, JR., a witness called by and on behalf of defendants, having first been duly sworn, was examined and testified as follows:

[536] *Direct Examination by Mr. Jackson:*

The Court: Please give us your full name and address.

The Witness: George Morrison, Jr., 3055 Cherry Street, Denver, Colorado.

By Mr. Jackson:

Q. Mr. Morrison, what is your present occupation? A. Principal, Cole Junior High School, Denver, Colorado.

Q. And how long have you held that position? A. A year and a half in June.

Q. How long have you been employed by the Denver Public Schools? A. Sixteen years.

Q. And prior to your going to Cole a year and a half ago, where were you at that time? A. Principal of Wyatt Elementary School.

Q. Had you been principal of a junior high prior to your going to Cole? A. No.

Q. Mr. Morrison, I wonder if you would explain briefly for the Court and for counsel the situation as you found it at Cole when you arrived there a year and a half ago?

The Court: I wonder if you would bring your chair around a little bit so the reporter can hear you.

[537] A. I have a bad leg and I can't—

(Colloquy not transcribed herein.)

A. I would say that the situation at Cole in January of 1969 was one of turmoil, confusion and conflict. These terms as I use them are not necessarily in that sequence, but they had many problems that had been publicized in the newspapers and also by word of mouth where Cole was concerned and that is the type of situation that we run into. Students, teachers, the community, this type of thing. They just weren't together in their endeavors at all.

Q. The students looked upon the school more as a jail than they did a school? A. They used that term; that they were in prison. Of course, here again, this is youngsters' terminology. I think what they meant by that—they didn't have many opportunities to do some of the things that they thought they should be able to do as students.

Q. As a part of your analysis of—in your job, did you have occasion to consider then current achievement test scores of the students at Cole? A. Not immediately. Before the end of the school year I did get a chance to go over this information in regard to our students' achievement levels.

Q. Did you find that they were generally low? A. Yes, I did.

[538] Q. Mr. Morrison, do you feel that the test scores are indicators as such? Or do you figure that they are absolute measures of the students' ability? A. No, they're not absolute measures at all. There are too many intangibles that standardized tests do not measure. And also I'm not sure if standardized tests reflect the abilities of all of our youngsters because of the basic fact that they are standardized and they assume certain prerequisites, preclassifications on the part of the students, and I think many times we have found in order for us to determine how much progress students are making, that teacher-made tests are more effective.

Q. Are you at present utilizing teacher-made tests for your students? A. In part. We still use the standardized tests but we use teacher-made tests in terms of determining progress and areas in which we need to improve our instructional program.

Q. What specific efforts have you made, Mr. Morrison, to attempt to raise the achievement level or to make the educational practices at Cole since your arrival there? A. Well, the first thing I attempted to do was to sit down with our faculty and find out just what many of the problems were at Cole. I was very much concerned about teacher attitudes; also pupil attitudes. And the community attitudes. [539] All these things are an integral part of the total situation there at Cole. So we sat down with the teachers first of all and they had many problems and many demands that had been submitted to the central administration, and we took these one by one and tried to reconcile them. And then I talked with the students very frankly about their role there and their function there in the school

and in terms of "This is your school. We care about you." And I think this is something that many of the youngsters didn't feel prior to the change, that someone really cared about them and what they wanted to do, and their aspirations and this type of thing. And very frankly, I said to them that, if we're going to have a black school here, we're going to have a good black school. And we're going to have a good black school with the help and cooperation of everyone involved, meaning students, teachers, and everyone else. And once they got the feeling that this is the way things were going to move, then we began to sit down and talk with teachers about educational philosophies, exactly what is our purpose in the school where kids are concerned. What are we here for? Are we here to serve kids? Or are we here to go through the motions and draw a paycheck and this type of thing? And I tried to be very frank. I don't pull many punches when I'm talking to the individuals. I thought that it was a reciprocal responsibility of teachers and students, getting together, the role of the student in the [540] building, the role of the teacher. We all are a team and we have to work that way in order to be successful. And when the team isn't pulling in the same direction, we're not making any progress.

Q. What is the racial and ethnic composition of Cole Junior High, Mr. Morrison, at the present time? A. Cole is 72.1-percent black, 25-percent Hispano, 1.4 Anglo, 1.2 Asian, and .3-percent American Indian.

Q. And you came to Cole during the middle of an academic year, did you not, Mr. Morrison? A. Yes.

Q. And did you not have available to you then any additional time prior to the commencement of your job within which to make plans and programs? A. I certainly didn't.

Q. This was kind of—you are here one day and there the next, is that right? A. Yes.

Q. When were you able to institute new programs or new approaches to the educational process? A. September, 1969.

Q. And could you detail some of those for us, please. A. Well, before I do that, may I make another statement?

Q. Sure. A. I have been much concerned, in fact all my teaching [541] experience in Denver has been in the Manual area, and I have observed that what we have been doing with youngsters hasn't been successful. Our youngsters are going into high school, going into junior high with reading deficiencies, and two or three—even four years below grade levels. So I have had some ideas of what I would like to try. So I sat down with the faculty and the administrative staff and said, "What we have been doing hasn't been successful. So let's try something different; a different approach." And I can't say that these things are new because, as more learned educators than I will testify, there is not an awful lot new under the education process, the approach to it, that you can take.

So we decided that we would try to go to what we call a laboratory approach to education over at Cole in an attempt to give youngsters more opportunity for indivualized instruction and also in an attempt to give youngsters more actual experiences as opposed to vicarious experiences. So we started out in the area of reading because this is one area that we definitely are lacking in. And we went to the laboratory approach here. We set up what we call a reading laboratory on the third floor of our building for the staff of eight periods a day with teachers who have backgrounds in reading. Now, the key to this whole thing is, as I see it, that kids love to read what they want to read. And I'm not saying that black and brown kids are inferior in terms of [542] their ability to read, but I don't see much

sense in giving youngsters Dick and Jane to read in school when Dick and Jane actually have no relevance to these kids in this area. You see, these kids don't see their father getting up in the morning, putting on a business suit and taking a briefcase and kissing mother good-bye and getting into an automobile and going to work. They don't see mother going to bridge parties or having time to chat with the neighbors and this type of thing. You have to face things realistically with these kids. So let's get away from this approach and find out where these youngsters' interests are. And to me this is the key to teaching reading.

In reading, if we find youngsters' interest—and they are all interested in something—it might be auto mechanics; it might be cosmetology. They wouldn't call it cosmetology at their age, of course. Hair dressing is probably what they would call it. Automobiles. Anything. And then, we center these kids—these youngsters' reading around their interests now at Cole. And what we do, we identify these interests or interest, even, and then we try to get reading materials in these areas where the youngsters have expressed an interest and we go from there. Because, if a youngster wants to learn how to put an airplane together, if his interest is model airplanes, you give him model airplanes with all the parts. He has to do something to figure [543] out where those parts are, rather than trial and error. Because, if he breaks a part of that airplane, he is lost, and he—if he loses an essential part of the airplane. So he's going to try to figure out some words in those directions. All right. This kid is learning to read. He's improving his reading.

Now, when you centralize the youngster's ability and interest in reading around his own interests—and this has proven to be successful, we think, at Cole this year. And

we also approach it from another viewpoint. Many youngsters have a background—an inadequate background in reading because of lack of phonics. Now, we have tried the phonic system in the Manual area for many years. It was supposed to be so effective that every youngster who had a good background would know how to read. Well, that hasn't been necessarily true at all. So when we do find a deficiency in phonics we go back and we try to correct this deficiency and then immediately begin to capitalize on this idea of interest in reading. And I think that this has done more for our kids. We have kids who voluntarily go to the reading laboratories we have set up now. The old conception of the study hall is something else that we did away with at Cole. When I went to Cole many years ago, I did some things at study hall that were pretty wild for that day and age. And the same thing prevails today. Study hall, as a study hall, just does not [544] make too much sense to me. So we give youngsters the option of going to all of our laboratories on the voluntary basis to pick up additional help in areas in which they are deficient, the mathematics laboratory, the reading laboratory, the science laboratory, social science laboratory, and things like that. And we have found youngsters on their own going to these labs and picking up some additional help which in turn helps them to become more proficient in their academics.

Q. You discussed the reading laboratory. Will you tell us a little bit about the establishment of the mathematics laboratory? A. The mathematics laboratory is one that we're working on very hard to improve. We have machines, calculators and adding machines and things like that in the laboratory and, through the innovative and creativeness of our teachers we are able to assign youngsters to

the lab or else have them go voluntarily to figure out the problems through that manipulative process, of course, which they enjoy quite a bit. Basically, what we try to do here, we don't let the machines actually do the thinking for the youngsters. I think if it's one thing we have to get across to youngsters in school is the ability to think out your problems, whether they are right or wrong in terms of the outcome, but give it some thought, so the youngsters solve these problems and then they prove they are working by going to the math lab and [545] actually verifying the—on the machines what they have done. And if there is an error in their written work, then the machines show them that is—that the answer is incorrect. We go back and we think out—go through the thought processes. Where did I do so and so wrong? And then find their mistakes and they go back and check them. They are beginning to use slide rules in the mathematics laboratory. We're going to try to get them into IBM to see how other machinery works and this type of thing with these youngsters, and we are finding that many of our kids who were given homework assignments—there is no philosophy of mine that says homework has to be done at home. If a youngster wants to go up in the lab and work at school, we have it available for him, and he goes up there, and if he wants to go up there during the day, he can get help from teachers who are able to give him this opportunity to get some of these things done in school where I think the opportunity is greater than in many of our homes in our area.

Q. Have you also established a social science laboratory? A. Yes. This was established before I came to Cole and we have tried to improve it in terms of the addition of audiovisual equipment, soundproofing the room. We had

the room carpeted. We had one whole wall torn out and glass windows put in where we can operate between two rooms now without having to go all the way around through a door. We [546] can observe youngsters who are working at their own individual rates and their own individual ability levels, although we do emphasize that youngsters will try to improve their rate of speed and their efficiency in these labs. The social science lab is very popular. A youngster can tune in on his own lesson, using earphones and get all his directions. He can do the same thing with tape. Move right along. And we have teacher supervision there, at least two teachers in the lab.

Q. Going back for a moment, Mr. Morrison, to your reading laboratory—are there new programs which you started this year that were not specifically related to the laboratory approaches? For example, the 9th grade reading improvement and the 7th grade programs? A. Yes, the 9th grade reading improvement program—one of the things we've doing this year is that we're trying to use our students on a peer relationship with other students to help them in reading. We have some of our students tutoring other students. Here I think this gives a youngster a sense of pride, a sense of accomplishment. And it helps him to stand out and feel that "I have had some success." So much of our trouble in the schools and with youngsters in particular is that we never experience success, and I think it's a terrible shame that we tell youngsters so many times all the things that they cannot do. You're not good at this. You can't do this. Why don't you do better here? Instead of [547] capitalizing on the positive things that they can do. And we are working along this line with some of our students there in the building. Our 7th graders coming in have had a little bit more of the self-contained classroom

approach and many of them who are behind, we are working with them through the remedial-type programs in reading, based again here on their interest level and this type of thing.

Q. There is also in operation a science laboratory? A. Yes. I don't see much sense in a youngster reading a book about an experiment and saying, well, this is great. I'd rather have them get in there and try to do something on his own and experiment. This learning-by-doing theory that we have heard so much about in education for many years, we're trying to provide more opportunity for students at Cole to have actual experiences rather than these vicarious experiences that I mentioned before. That's where the pleasures—some of the pleasures of going to school come in, as I look at it. Kids like to be involved in things, and they should be involved. And if they make a mistake, okay, we made a mistake. Let's try it again. This is the type of philosophy we're trying to give our people and the same thing with our teachers. And it is very difficult for teachers to admit that "I'm wrong" sometimes in their classrooms, and I think it's an important—a more physcial thing when they do, and they say to the youngsters, well, okay. I didn't do this just [548] right. But I think that, if we try to solve our problems together, we will have a better success next time. And I think youngsters like to realize that teachers and principals and everybody else is human. We're not tin gods.

Q. Now, do you also have different approaches to certain of the other fields as well, and without going into detail on them, for example, the home economics, the industrial arts program? A. I think that in home economics programs, we talked about home economics, and it's normally something that is associated with girls. So we

started a boys' home economics program; boys' foods. Some of the fellows were very masculine, of course, and they didn't see the value of being around the building with an apron on, mixing foodstuffs in bowls and things like that. But that was back in September. You could hardly get them into an apron. Along about December, January, it wasn't uncommon to see these youngsters walking down the halls with their aprons on, saying, "I'm in the boys' foods class." We have tried to provide alternatives for youngsters in our program which I think is needed. I think, really, the alternatives are needed in the junior high school program. Many youngsters are adverse to taking physical education as such. Many of our young ladies are adverse to this. So we have tried to give some alternatives rather than saying, if you don't take P.E., then you're going [549] to be sent to the dean's office, or something like this, or you possibly will be suspended from school. Because it is my philosophy that youngsters belong in school and it is our job to provide adequate programs to keep them in school. Innovative programs. So we have the cadets, which is an auxiliary of the R.O.T.C. program at Manual for young ladies. For the young men, we have the R.O.T.C. program. We have gymnastics laboratory where they begin to become more proficient in the areas of tumbling, gymnastics, and this type of thing and we're trying to offer more and more alternatives. There are boys' cooking classes and thing like this so that youngsters have experiences that are meaningful.

Now, here's something else I want to bring out. That these just aren't off the top of my head. They are things that will be of a great deal of value to these youngsters, not only now but as a concomitant assist later on in life.

Q. Are there at present certain programs which you have instituted at Cole under what's been commonly referred to as the Senate Bill 174, Educational Achievement Act? A. Yes.

Q. Will you describe those programs? A. Well, that is a three-phase program and it takes into consideration the many different types and personalities of youngsters that we have at Cole. The first phase of it [550] is called the Crisis Room and it is designed for youngsters who are having troubles either of their own or of the teachers' making, period by period. Youngsters might come to school the first period and he gets along quite well. The second period he bugs the teacher or vice versa and gets into a little trouble. Now, heretofore, youngsters were being suspended from Cole and let out and they were out on the streets. And I think this is entirely wrong. We need to provide things to keep them in school. So this youngster will go to the Crisis Room. And he will stay there for one period or any part of that one period and he will receive academic instruction while he is there. Now, he might and he might not come back to that Crisis Room that day. If he can make it through the rest of the classes successfully, the more power to him. That's great. Now, the second type of youngster we have is one that might be able to tolerate the total program of the school for let's say three or four periods a day only. Well, the alternative is either to put him on a half-day schedule or else discourage him from coming to school at all. Well, we have another alternative and that is put him into the educational laboratory. And this program—he is given all of the academic areas that he would normally miss with the exception of physical education, home economics, and industrial arts. And music, of course. But, if it's an academic situation that he can't

compete with, then he goes to the educational [551] laboratory. Now, history has proven to us that the reason that most kids are bugged by the schools is because of tradition, that is to say, the traditional approach to educational problems. The structure, the pressures and things like this. And many youngsters just cannot endure these types of programs. But this is not to say that they cannot make it through school if somebody cares about them and wants to help them. So this program in the educational lab does this. It's an informal setting. They have chairs in there, they have all types of reading machines. They have a television set that is not always tuned to Channel 6, either, incidentally. It's tuned to other channels because many times what a youngster needs when he is in there is this type of—or this frame of mind, or some relaxation. And we try to counsel with youngsters. We try to provide them with opportunities to express themselves and tell us what's wrong so that we can help them. Now, I agree that a great many teachers don't have time for this, so the educational lab is there for that purpose. Then we have another type of youngster who has decided that school is just not for him. And he has either dropped out or he's a potential dropout. And in an attempt to get him back into school this youngster has said to me or someone in the building, "I just refuse to come to Cole Junior High School. This building just turns me off," so to speak. So we have an extension center. It is located at [552] 2563 Glenarm, and here we have a program that is built around a reading specialty as well as teachers who are very proficient in the areas of social science and mathematics. And these youngsters have —after we do a lot of screening, we do have consultation with the parents. We have visitation with the parents and with the youngsters and they go to the extension center

each day. Now we have around 21 youngsters registered to go to the extension center and of these 21, not one of these youngsters has had a successful experience in Cole. Many of them refuse to go to school at all. But now they are going to the extension center. They go there on their own. At first we accommodated them to a degree where we would even go by and help them to get there, but now we figured, "You have some responsibility in this matter yourself. So, if you're interested in what we're doing down here, you get down there on your own." And these youngsters are attending between 70 and 80 percent of the time. Now, here's another program or here's another way we're trying to help kids. The kids have something to say about some of these things. Not only in our main building but in our special programs. It isn't the type of program where we sit there and pour out all of our wisdom to kids and expect them to digest it and this type of thing. We try to get them involved. And if anything has made a difference at Cole—and we're not taking credit for any miracles at all because we have problems galore [553] at Cole right now—but if anything has made any difference over there I think it's the fact that kids feel that they are part of the situation and they can come in and talk to any of the administrative staff. They can come in and talk with their counselors and with teachers and some of this fear that was so rampant at Cole when I first went there on the part of teachers in terms of their attitudes with children has disappeared. You don't find teachers leaving in groups any more for example because that was the safest way out of the building. "Don't go out there by yourself. Go out there with somebody else." We don't see this any more. Teachers come and go freely and the youngsters seem to be even a little bit more relaxed in the building. People

are talking to them. And we're friendly with them. And they seem to have an idea that, well, maybe somebody does care enough about me to speak to me in the morning, anyhow, and if I'm having a problem, to take time to find out what it is. And I think these types of things have helped as well as these other programs that I mentioned earlier.

The Court: We will take our afternoon recess now.

(Whereupon, the trial recessed at 3:30 p.m. and resumed at 3:47 p.m.)

By Mr. Jackson:

Q. Mr. Morrison, we have been discussing programs which you instituted at Cole following your assignment there. Are there other programs which you are [554] presently considering for implementation next fall? A. Yes, there are. If funds are available, we would like to go into photographic darkroom programs, a darkroom with our industrial arts program, and we would like to obtain an IBM Varityper that we can use to help prepare our youngsters for this line of work. We have presently an offset press that we're using and a Varitype headliner in our printing shop, and I can see some real value here, not only for our youngsters at Cole but I could see youngsters from Manual coming back to Cole getting this experience. And if the funds are available we would like to certainly move along this line. We were also planning to work cooperatively with Manual next year in moving more of our students to Manual in the 9th grade into some of the programs that are existing there. We have what we call a biomedical program going on at Cole which is not a part of the regular curriculum, but is proving to be very interesting and important for youngsters who have designs

on getting to the area of medicine. This program is sponsored by Mrs. Shirley Carter of our school, who is a community aide. And we are able to work with hospitals in the summertime. We have youngsters going into hospitals working with doctors, technicians, this type of thing. And we would like to expand this. We would also like to go into a prelaw type program at Cole in terms of identifying youngsters who have an interest here.

[556] Q. Are you also considering expanding the language program? A. You mean the total language arts program?

Q. The foreign language program. A. The foreign language program, yes. We are able to work cooperatively with Manual here this year in sending some of our youngsters over there to take French. We didn't have the staff to do it at our own school, so we worked out a program with them and we hope to expand this into the area of Latin next year for those who are interested in the biomedical program, particularly, and in law as well.

Q. How about an expansion or an implementation of the work study program? A. The work study program we have found to be very helpful to our youngsters. It teaches them responsibility and we would like to expand this program. This is part of the ESEA funded program that we have now. We would certainly like to continue along that line. One thing that we're trying to do in our business education department which I think will prove to be meaningful to our youngsters is, instead of them typing letters out of old traditional books to fictitious companies and individuals—we are using these youngsters who have shown ability to work right within the building to help prepare masters, ditto masters, and this type of thing. They are learning how to do this work neatly and efficiently [557] for teach-

ers. And this type of thing of getting experience of doing many of the jobs that will help prepare them we hope for successful endeavors in the area of secretarial science.

Q. Mr. Morrison, have you been able at this point in view of the fact that these programs were instituted only last September to come to any conclusion as to whether or not the achievement levels have been materially affected by the institution of these programs? A. I have no hard data on it. I have what teachers have told me, what I have observed and what I have found out from talking with the youngsters in the building in terms of what do they think of some of the things we're trying over there. And we have found that from these sources we have been able to get some positive data verbally from these individuals. I think, also, the fact that we notice a decline in our discipline cases in the assistant principal's office and the dean's office, which is indicative of some meaningful things going on in classrooms.

Q. What generally is the composition of your teaching staff in terms of its experience level? A. We have, I think, around 22 to 23 teachers who are tenure teachers. We have around 53 who are either in the first, second or third year.

Q. How do you find the activities of these teachers in [558] their first, second or third year? A. I'm pleased to say that the group of new teachers that we received last September has been one of the most outstanding groups of new teachers I have ever had the experience to work with. They have seemed to come in and make the adjustment very well at Cole. They were for the most part new teachers. And I think their assignment was satisfactory to them from the way they are performing at Cole this year.

Q. Mr. Morrison, do you know at the present time, based upon the data available to you, what type of teacher turn-

over you will experience this next year? A. If every teacher gets his or her wish, that will be a total of 18; that is to say, either for sabbatical leave, maternity leave—of course, there you have no choice—or else transfer.

Q. Are there any who have requested transfer to other junior high schools? A. Not to my knowledge. The ones who have asked for transfers wish to go to senior high.

Q. None of your present junior personnel are trying to get out of Cole into another junior high, to your knowledge? A. Not to my knowledge, no.

Q. Now, Mr. Morrison, you described briefly earlier [559] in the testimony the situation briefly at Cole when you first arrived there. Does that same situation prevail today? A. Now, you mention—you mean in terms of—

Q. Community attitude and student attitude. A. I think that we have seen an improved attitude in the community. People that I visit and chat with on different occasions, and those who come into the building, the student attitude seems to be much more positive than it was when I first went to Cole. The teacher attitude seems to be much better. And I think that—well, there are just little things but perhaps to people outside of Cole these would sound very trivial, but this year we had a Christmas tree. Now, this doesn't sound like it would be something to anybody, but it was my understanding that they couldn't have a Christmas tree in the hall because the youngsters would tear it down and that type of thing. This year we got a tree, put it in the hall and the youngsters decorated it and almost defied anyone from going in there trying to damage the tree. This type of thing. The class of 1969, which was a pretty rough class—they had a lot of problems. I think that they had three principals in three years over there and this type of thing. But this class showed their feeling for

the school in that they left us an inlaid linoleum letter C that they designed themselves. It has the letter C in gold and the eagle on it and this type of thing, and they raised the money [560] for this and left it to the school last year before they left. I see other signs of pride in the youngsters at Cole. Some of our athletic leaders—fellows on our basketball team and football team—will actually go down the halls occasionally and tell other youngsters who are running or misbehaving, in their language, to just "cool it." We don't want this going on at Cole. Well, these are some early indications, I think, of some pride that they are developing in their school. And we like to think that it is their school and let them know that this is your school, to take care of it.

Q. Do you expect then that pride to carry over into their classroom work? A. Yes, I do. Unfortunately,—and I would like to see more of this pride carried over into the classroom work. I don't think that there is enough of it.

Mr. Jackson: Thank you. You may examine.

Cross-Examination by Mr. Barnes:

Q. Mr. Morrison, how much of the regular curriculum is left? Are there any standardized programs or regular textbooks and regular tests? How much is left? A. Not an awful lot. There are still some phases of the regular school program that we use but we're trying this new approach for the entire student body. I think that's the [561] best way to state it, and to actually find out what's effective and what isn't effective.

Q. I just want to focus on the reading, English aspects of your presentation and what is in Defendants' Exhibit V-A, which I think you probably wrote for the special program now being implemented at Cole Junior High. A. Yes.

Q. In reading laboratory, that is a voluntary program, is it? A. It's voluntary three periods a day and it can be used by a regular English class, English-reading classes the other periods of the day.

Q. Is it a supplement or a substitute for the regular reading classes? A. I would say it would be a supplement.

Q. So they are still required to take the regular reading class as well? A. Yes.

Q. How many students would you estimate participate in the reading laboratory in a given day? A. I would say one-half to three-quarters of all of our English classes.

Q. In the reading improvement program, that is an experimental program, is it not, a 9th-graders' program? A. May I refer to this just to make sure that we're [562] talking about the same thing?

Q. Yes, Page. 116. A. Yes, this program was set up in one English class because of the prohibitive cost. This activity is concept English or—the kit costs us nine dollars, I believe, a kit, and we were experimenting with about 40 youngsters with this. And this is a new concept in the approach to reading in that it differs from the SRA approach in that youngsters are able to move along at a more effective rate at their own level than they can with the SRA approach. And the reason we experimented with only 40 of these this year is because we didn't have any more money. But we are hoping that we will be able to get additional money to work with this because the teacher who is in charge of this is very high on it and he has shown me some results as far as the reading improvement is concerned with these youngsters that have been really outstanding.

Q. What is the total enrollment at Cole? A. 990.

Q. And of—you have 40 participants in this program. How many do you have in the special reading classes for

the 7th grade? That's 20 for each of four teachers? Or is it 20 altogether? A. Actually, all the youngsters in the 7th grade are in a reading program. And we hope to keep the numbers down [563] to around 20 so that the teachers can give these youngsters more individualized instruction.

Q. And the total of how many students, though, Mr. Morrison, in this program? A. I would say about 160.

Q. And is that all of the 7th grade or is that a portion? A. All the 7th graders have reading, but these are youngsters who are three to four grade levels below their normal grade level in reading.

Q. Now, as I understand it, all of the other programs in mathematics and social science and science would have been under way even without this Court's order and were not prepared specifically for this plan, is that correct A. Without this Court's order?

Q. Yes. These other programs are not conceived especially for this program, are they? A. No.

Q. They have been in effect for some time? A. Well, they went into effect last September. Are you speaking of the laboratories?

Q. I'm speaking of the social science laboratory and the science laboratory and the mathematics laboratory. A. Yes. Now, those went into effect with the exception of the social science laboratory last year. The social science [564] started a few years before that.

Q. And the other things you have listed in this plan: the art classes and the home economics and the music class, industrial arts, phys. ed., work study and extracurricular programs, business education—those are not seriously considered to be programs which will raise academic achievement, are they? A. I would certainly hope they would.

Q. Are those subjects tested under the achievement test?

There is no test— A. No, but if I may say, sir, I would like to state again that, here again, I don't like to measure youngsters only in terms of a standardized test. I don't believe that this is fair. I don't believe that it is really conclusive as to what the youngster is actually able to do. The standardized tests measure various areas of academic work, of course, but many youngsters who might excel in the areas of industrial arts, home economics and other programs—other areas, might not score so high on the standardized tests. But I wouldn't say that this isn't helping his academic progress. I wouldn't say that at all.

Q. The educational laboratory and the extension center are relatively new, aren't they? A. Yes. As far as the funding under Senate Bill 174.

Q. Doesn't that give you, together with the Crisis [565] Room and the special education programs, a total of four different kinds of programs where troubled students or difficult students are isolated by themselves? A. Well, I guess you could put it this way. I figured them with students with problems, really.

Q. And there are four different kinds of ways in which students with problems are put with other students with problems? A. Yes.

Q. So, as far as the peer group effect for those is concerned—for those students is concerned, with the Crisis Room, they are all students with discipline problems or something of that kind, isn't that right? A. Well, I wouldn't classify special education in that category at all. That's a program for the mentally retarded youngsters and I certainly wouldn't say they are all discipline problems. But the other three programs are designed specifically to help the alienated youth.

Q. Do you think that being in an integrated program

would help these students in any way? A. Well, yes, I think an integrated situation would help.

Q. And do you think that it would alleviate some of your problems if they were integrated programs at elementary level, for example?

[566] Mr. Jackson: I'm going to object to that, Your Honor. We're talking about programs specifically at Cole.

The Court: Well, he may not be able to answer, but maybe he can. You can try him out.

A. Well, I would think, yes. I think, if this thing is going to be effective it would have to start at an early age and not wait until junior high school to get going.

The Court: This wouldn't eliminate these other programs that you speak of, would it?

The Witness: No, I would certainly try to adapt these programs to any students that attend Cole Junior High School, because I think that they have some merit. And I think the approaches that we are trying to make here would benefit the students from any part of the City of Denver, yes, sir.

Mr. Barnes: I have nothing further.

Redirect Examination by Mr. Jackson:

Q. Mr. Morrison, the Crisis Room and the extension center—these are programs designed to keep children in school who would otherwise not be in school, is that true? A. That is very true, yes.

Q. And has the program demonstrated that it can function in that fashion? A. Yes, definitely.

[567] * * *

ALBERT C. REAMER, a witness called by and on behalf of defendants, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Jackson:

The Court: Give us your name and address, please.

The Witness: Albert C. Reamer, 1710 South Kearney.

By Mr. Jackson:

Q. Mr. Reamer, what is your present position? A. I'm Principal of Bryant-Webster Elementary School.

Q. How long have you held that position? A. I have had that position four years. I'm completing my fourth year now.

Q. How long have you been employed by the Denver Public Schools? A. Twenty-one years.

Q. Prior to your assignment at Bryant-Webster, what was your position? A. Assistant Principal, University Park, out by the [568] University of Denver, for three and a half years. Teacher assistant at Knapp for one-half year. Prior to that time, eight years as teacher at Asbury School, and prior to that time, five years as a teacher at Ashland School in North Denver.

Q. Mr. Reamer, what is the general racial composition of Bryant-Webster? A. The makeup is this: Hispano, 75½ percent; Anglo, 23.4 percent, as I recall, and a very small percent—less than one percent Negro and Asiatic.

Q. At the present time, are there any Negro students at Bryant-Webster? A. This is very difficult to say. There is one child who is half Hispano and half Negro this year.

Q. As principal of an elementary school, do you have oc-

casion to examine the achievement results of your students? A. Yes, I do.

Q. And could you characterize present achievement levels for the Court, please? Is it generally low? A. The performance level is below that of what we would expect by grade level reference. I think maybe this would be an indication. I would say at the 3rd grade, based on 1968 statistics, about half a year below where they belong, and at the 5th grade, somewhat near a year below from where we would expect the child to be by grade level.

Q. Mr. Reamer, during the period of time that you have [569] been principal of Bryant-Webster, what has been your experience with regard to the mobility rate of pupils? By that, I mean, does a child entering Bryant-Webster in the kindergarten or first grade generally continue through the 6th grade in Bryant-Webster? A. Well, we have problems—we have some children who continue right on through. Generally, as an overall statement, as I recall the facts, the turnover is about 34 percent a year. As a matter of information, I can recall one cumulative record that came across my desk recently where the child had been in 16 different schools. A 5th-grade child. So, we do have significant problems.

Q. Is this mobility factor—does it create any specific problems as far as the school is concerned? A. Yes, tremendous problems in terms of the school's ability to rally its forces and to bring effective education into focus for that youngster. Yes.

Q. After your assignment at Bryant-Webster, did you and your staff or the staff undertake any comprehensive type of study to determine what was available to you in terms of either altering the educational approach or by other new, innovative approaches, raising your achieve-

ment level? A. Yes, sir. This did happen. In the fall of 1968 and throughout the entire year, the entire staff undertook a very extensive study involving the cost of several thousand [570] dollars in terms of releasing teacher time, of having experts in the field come in and discuss the matter with us and this type of thing. As a result of this study, we did come up with a document in terms of what we felt we could do to help the youngsters in a better way.

Q. This was a study which took a little over a year to perform? A. Yes, it did.

Q. And again you started this in the fall of 1968? A. Correct.

Q. As a result of that study, Mr. Reamer, have you introduced any new programs or new approaches to the educational process at Bryant-Webster? A. Yes, sir, we have. I have taken the liberty this year to give continuous attention to the things that we called for in here. It is true, at the same time, inherent in this study were demands for financial needs and this type of thing and some limitations. However, just to give you some ideas of the things that we achieved, we did ask for a counselor. We did get a guidance counselor this year. We asked for and in our early education program we got one of these—one of the three programs.

Q. Would you explain that briefly to us, please? What this early education program is? A. Well, I think as a result of this study teachers, [571] principals and the community sensed the need to get at the problem of education and orientation as a start at a far earlier age with regard to the youngster. We sensed in the Head Start programs and other research available and in publications and whatnot that really this was a hopeful thing in the future. Actually, our program involves some 30 youngsters. They are not

housed in our school. They are housed at Remington Elementary School, due to the fact that we do not have sufficient space. But it is a problem that—I mean, it is a program that focuses on considerable involvement on the part of parents and the bringing in of highly-skilled teachers and aides to work with these youngsters.

Q. As a result of a child's participation either in the Head Start program or in the early education—early childhood education program, has experience shown you and your teachers that these children become identifiable in the kindergarten? A. Well, I was thinking just the other day the reference that the two kindergarten teachers in my building have made to this very subject area, and they said they could tell the children who had been in the Head Start programs. So I think, in terms of assessing it in terms of what they have said, there has been success in it and there can be success in it.

The Court: Is this a grant that you are working [572] under from Congress?

The Witness: No, this was a program financed by the Denver Public Schools; one of three programs.

Q. What other programs did you institute? A. One of the concerns, of course, had to do with pupil-teacher ratio and we were effective this year in reducing the pupil-teacher ratio by two pupils per classroom. Another significant one as far as I'm concerned had to do with the involvement of parents in the school. I personally believe this has been a great and critical loss in terms of large cities in America, having come from a small rural area in Colorado myself, I knew what the school meant to my family personally. Our involvement in it. I think in the city the size of Denver

here, this close attachment was not available. So therefore we were bent on programs of trying to confer with people in our school—a special means of parent-teacher conferences; the creation of a truly significant advisory committee that is run literally by the people in our community where they say anything they want to. I merely sit as a spectator in this. These kinds of things. I think involvement was one of the big areas we worked on. I think maybe another thing that we have accomplished, too, had to do with acting as the coordinating agency between other programs available to early childhood education, such as the Day Care Center under the Model City. We have been very close to that program [573] and we do meet in our building to coordinate that.

The Head Start people have come into our building and it's a three-pronged effort, and in these early education programs currently we are initiating the forward thrust, trying to bring all these elements together in the interest of children to be served.

Q. Are there any other new approaches which you have taken directly and specifically toward this question of your school's achievement that you have already instituted? A. Well, of course, the question of overcrowdedness. It probably is important to say that the school was built for 660 youngsters and we have been serving this year 750, and at one time well over 800. I did raise some basic questions of double sessions and these types of things. Our advisory committee did go down to the Board of Education and seek relief, and we are lucky in that at least we helped in some small measure the bringing in of a mobile unit in this area—in school this year. So that has lessened the pressures there. We felt that through our advisory council, through their efforts and the school's efforts, something happened in that field.

Q. Prior to the installation of mobile units, was the community given an opportunity to express its opinion on the question of double sessions or busing at Bryant-Webster? A. Yes, sir. This was a part of the plan. The problem [574] was faced up to in the fall of 1968 when we came back and found that we had a hundred more youngsters than we expected. I think, in part, this was due to the rearranging and the closing of some of the parochial schools. These youngsters were thrown off into public education.

Two alternatives on our—occurred to us in terms of how the school could meet the educational needs of these youngsters. We had talked with our advisory committee. Our PTA, we discussed this with them and other groups and the two alternatives were arrived at. One was busing and the other was double sessions. And we didn't know which one at the time. But they did go for the double-session program twelve to one. I think it involved about a hundred and twenty children and our returns were based on how the—probably 98 or 99, as I remember—eight of which said they did not want to bus.

Q. Now, in addition to the programs which you have presently instituted and—

The Court: What was the total vote?

The Witness: I'm just trying to recollect, Your Honor, but I think it was 98 who participated of the 120 people. Some didn't send them back.

The Court: In other words, you gave one vote to each family?

The Witness: Yes, each child who would—

The Court: And you have 120 in the school?

[575] The Witness: 120 who were affected by the—

The Court: Oh, this is your overflow?

The Witness: Yes, sir.

The Court: And you say they voted twelve to—

The Witness: Twelve to one, as I recall.

The Court: These were predominantly Hispano?

The Witness: Yes, sir. There are indications—I have lived among the Hispano people all my life in Northern Colorado. As a child, I have thinned beets with these kids. Have been poor with them. They are very—a very tight-knit family really and they feel very keenly about their children and I have heard expressions to our PTA against busing any number of times. I think maybe this whole question—

* * * * *

[576] * * *

The Court: Do you have any Spanish language program?

The Witness: Yes, sir, we do. In 5th and 6th grades.

The Court: And that's been very successful? I mean, is this—is there a great deal of interest in it?

[577] The Witness: We did an intensive study, sir, I guess maybe two years ago, and we were very interested to find out how many of our families and youngsters spoke Spanish. On a determination of a survey made with every third Hispano family made by another Hispano person, a community aide, we discovered that about eleven percent, as I recall, of our youngsters spoke Spanish yet and 66 per cent of our adults spoke it. And, oddly enough, one of our—one of the outcomes was that the adults were using it to keep secrets from kids. This would be a clear indication that the language—

The Court: Well, that figures, I would say.

The Witness: This is probably a clear indication that in another generation the language will be lost, unfortunately.

The Court: But has it been successful in the 5th and 6th grade programs that you have followed out? I mean, it's pretty young, I'm sure, but are they interested?

The Witness: I would say there is an interest, yes, sir.

The Court: More interest generated in a subject like this than other subjects?

The Witness: No, I wouldn't say that. Two years ago we had the option of letting the children and the parents choose whether youngsters would be involved in these programs, [578] and that year, two years ago, quite a number of the families decided not to do it. But this year we had an extremely competent person in the field who really wanted to do it and all children are involved this year. I would say it's successful.

* * * * *

[579] * * *

Q. How do these relate to the overall problem which you [580] indicated that you identified and that being the relatively low achievement? A. I think they have meaning. I think they have meaning in terms of self-identity that these youngsters have to acquire for themselves; how they feel about themselves. I think, for example, a new reading program, a newly-designed one that is designed just for us by our teachers can have a real impact. I think outgoing experiences in terms of many more field trips—one of the

things I neglected to say in here has had a greater impact for our children. This year we have practically doubled the number of excursions into the community and—as an outgoing, outreaching experience for the children.

Q. How do these programs relate to any increase in the achievement level? A. Well, we have said in here that we would sincerely hope that within two years we would hope to eliminate one-half of the deficiencies.

Q. Through these programs that you have been mentioning and the staff study which you have? A. It's a goal to shoot for.

Mr. Jackson: I have nothing further.

Cross-Examination by Mr. Greiner:

Q. Mr. Reamer, who authored that report that you keep [581] referring to? A. Is this the one that I spoke of with regard to the 34 pages on our study?

Q. Yes. A. This was put together by the teachers in our school.

Q. Did this advisory council that you had reference to play a part in the preparation of that report? A. Yes, the parents were involved in the process.

Q. Now, we have been told, Mr. Reamer, that the education of minority children is a very complex area. Would you agree? A. No question in my mind.

Q. And it's one that requires a great deal of specialization or special background and so on? A. I think that would be a fair statement, yes.

Q. Are the people on this advisory council—are they possessed of this kind of technical training? A. Well, this is the citizens and the patrons of the school—I don't know quite what you're driving at.

The Court: Well, the answer would be no, that they are not. They're not professional educators nor do they have any specialized training.

The Witness: Yes.

Q. Now, with regard to the faculty at Bryant-Webster, I understand you indicated it's a very stable faculty, is [582] that correct? A. Yes.

Q. What is your annual rate of turnover for all causes? A. Well, let's see. Let's go back three years. Three years ago it was 23 percent. At that time—I don't have the exact facts in front of me, but I think—23 percent involved five teachers; two for maternity leaves; two or one on retirement; and one or two resignations—

Q. What about two years ago? A. Two years ago, one or two teachers; I'm trying to think back and I think maternity may have been one of the reasons for one of them.

Q. Are you familiar with the educational background, experience and training that the teachers of your faculty have as members at Bryant-Webster? A. I have a fair understanding, yes, sir.

Q. How many of these teachers have ever engaged in special education programs directed toward the problem of educating minority children? A. A part of this study had to do with in-service programs, of bringing Daniel Valdez, a noted sociologist, from Metro State. Father Torres and some of the other people in the field who were helping us understand and comprehend the problems that we were dealing with. It was an in-service involvement.

[583] Q. Well, have you had that in-service program? A. Yes, sir, as we developed this.

Q. And it's finished now? A. It's finished now.

Q. And all the staff in fact have participated in it at Bryant-Webster? A. There were four teachers who did not choose to give study to it.

Q. What was the subject of that in-service program? What did the teachers learn in it? A. It had to do with the understanding of the cultural heritage of these youngsters. The history where these people come from, what their problems were, what their aspirations in life are. These kinds of things.

Q. What their aspirations in life are? A. Yes, sir.

Q. What does that mean? A. Well, what they aspire to; what they want to be; what they want to make out of their lives.

Q. Is it different than for other people? A. No, I don't think it is.

Q. So the program was—to say that its bounds were basically the same as far as the aspirations were concerned, is that right? A. I would say so.

[584] Q. Now, how many Hispano teachers do you have at Bryant-Webster? A. We have one surnamed Hispano teacher. She's an Anglo. Her husband is a teacher in Denver and he is Hispano.

Q. Now, Bryant-Webster in the past, Mr. Reamer, has added, has it not, a certain compensatory education program, one entitled Cultural Education? A. Yes, sir.

Q. And you have tried team teaching? A. On a very limited basis.

Q. And it was discontinued, is that correct? A. That's right.

Q. And you have tried study activities, is that correct? A. We're still doing those extensively.

Q. And cultural arts? A. Yes, sir.

Q. And lots of field trips? A. More so now.

Q. Trips into the community? A. Uh-huh.

Q. Individualized instruction? A. Uh-huh.

Q. Differentiated staffing? A. No, I think that is a never-never land. I'm not quite certain.

[585] Q. Is it? A. Yes, it's new and emerging and it's difficult for me to assess exactly what the—

Q. You use paraprofessionals? A. Yes, sir.

Q. You've got community aides? A. We have one community aide four hours a day. Teachers' aide, is what we call them.

Q. And you have tried counseling? A. This is our first year.

Q. This year? A. This year.

Q. Do you have a phychologist? A. We do have a school psychologist one-half day a week.

Q. You have lowered the parent-teacher ratio—or pupil-teacher ratio? A. Yes, sir.

The Court: That would be quite an undertaking.

Mr. Greiner: I'm sorry.

I didn't get the witness's response.

The Witness: Yes, sir, we did.

Q. You lowered the pupil-teacher ratio? A. Yes, and—

Q. From what to what? Over what time period? [586] A. It was lowered two pupils per classroom.

Q. What is it today? A. The pupil-teacher ratio? It fluctuates; give or take twenty children a building, due to the mobility, standing at about 24.5. You could have, of course, in the process—you may well understand that a certain—that certain teachers are counted who do not keep records until—it's strictly an accounting system. This

means that if you went in a schoolroom at Bryant-Webster you could well see 28, 27, 29 children.

Q. You're giving me an average and you're going over the range there, is that correct? A. Yes, sir, that's right.

Q. Well, did the parents at Bryant-Webster vote against busing? A. The parents at Bryant-Webster were involved in the decision, children coming out of kindergarten and into first grade voted on this issue in the fall of 1968.

Q. These were very young children, is that right? A. Yes, sir.

Q. Kids just entering first grade? A. Yes, sir.

Q. And that was the fall of 1968? A. Yes, sir.

Q. Before school started? [587] A. At the time, we didn't discover that.

Q. Until they all arrived at school? A. Until they got there and it was about two weeks after school started that the decision was made.

Q. Now, that vote then was taken, wasn't it, before the School District released the achievement data on the schools of this District? A. In the fall of 1968? I don't know when that—

Q. That was in October, November 1968. A. Uh-huh.

Q. So that the people voting about that question really didn't realize how comparatively bad Bryant-Webster was at that point, did they? A. They wouldn't have known these facts, no, sir.

Q. And the program that you have described, Mr. Reamer—these programs are—these are programs that are designed to—designed especially for a predominantly minority school? A. I would say by and large they are, yes, sir.

Q. If Bryant-Webster were integrated, could certain of those programs be continued for the benefit of the minority children? A. They could.

Q. In other words, the integration of Bryant-Webster wouldn't necessarily destroy the presence of those programs? A. No, sir.

[588] Q. Or their efficacy if they have any? A. Yes.

Q. Do you have any opinion as to whether it would help the scholastic achievements of Bryant-Webster children to integrate them with Anglo children of a higher socio-economic class? A. This is a very difficult question to assess. I think there could be some benefits.

Q. What kind of benefits do you foresee? A. Human understanding.

Q. Cultural? A. Cultural.

Q. How about language skills? A. Very possibly.

Q. How about vocabulary? A. Very possibly.

Q. Perhaps a more competitive atmosphere? A. That could be a by-product.

Q. So all the benefits just aren't in terms of cultural understanding, isn't that correct? A. Right.

Q. But there might be very significant benefits in that area, too? A. There could be.

Q. And that is an important area, isn't it? [589] A. Yes, it is.

* * * * *

[593] * * *

ROBERT O'REILLY, a witness called by and on behalf of plaintiffs as rebuttal testimony, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Greiner:

The Court: Give us your name and address, please, and occupation.

The Witness: My name is Robert O'Reilly. I am a psychologist and I live at 10 Alona Lane, Lockville, New York.

By Mr. Greiner:

Q. By whom are you currently employed? A. The New York State of Education Department.

Q. And what is your current position?

The Court: What's the organization.

The Witness: The New York State Education Department.

By Mr. Greiner:

Q. What is your current position? A. I am Chief of the Bureau of School and Cultural Research.

Q. How long have you held that position? A. I have had that position for a year and a half and a related position for an additional year and a half.

Q. And that was also with the same bureau? [594] A. The same bureau.

Q. Would you tell the Court just briefly what your educational background is? A. I have a Ph.D. in educational psychology and a Master's degree.

Q. From what school? A. From Cornell University. And I have a Master's degree in educational psychology and I have four years of teaching experience, including experience in teaching in a black school.

Q. Where was that? A. In Buffalo, New York.

Q. Now, what are your primary duties and responsibilities with the New York State Department of Education? A. Well, I direct and formulate research for other department units which serve all schools in the state at the elementary and secondary levels. I direct the programs designed to yield new educational programs in accord with the educational needs of the schools in the state, and I consult and design research programs relating to compen-

satory education in New York State, where we have expenditures of approximately $200 million in this area.

Q. These are programs— A. There is one more.

Q. I'm sorry. [595] A. I also provide the research basis for the formulation of state policy.

The Court: What?

The Witness: Relating to public school education.

The Court: Let's have it all again.

The Witness: That was the fourth. You want me to repeat that?

The Court: Yes.

The Witness: The last one is to provide—we are the research arm for the State Education Department, the regents of the State of New York; in questions of policy we provide the research basis in the form of reports and so on which relate to making major educational decisions at the state level.

Q. Did you also then make recommendations in the normal course of your duties to the regents of the State of New York? A. Yes.

Q. And this is educational policy for the entire state, is that correct? A. Yes.

The Court: Over the entire school system, at every level?

The Witness: Elementary and secondary and preschool.

By Mr. Greiner:

Q. That includes such urban areas as [596] New York City? A. Yes, more than half of our efforts are directed at New York City.

Q. Now, in the course of your work have you had occasion to direct a study of the efficacy of compensatory education programs at racially or other segregated schools within the State of New York? A. Yes, I have.

Q. Now, did you then study and evaluate compensatory education programs carried on both in New York State and throughout the United States? A. Yes.

Q. Approximately what time period was covered by the compensatory education programs which were studied? In other words, how long has compensatory education been going on? A. Well, the major effort of compensatory education began in 1965 with Title I, ESEA, but it goes back before that, to the late '50s when schools started to develop some of their own compensatory education programs, such as New York City developed a number of them at that particular time. It is at least ten years old. But actually, it can be traced back considerably further than that.

Q. Now, in the course of this study and evaluation, Dr. O'Reilly, how many compensatory education programs did you have cause to study? [597] A. We have effectively reviewed more than 1,200 programs.

Q. And these are programs both in New York State and nationally? A. Yes.

Q. And did these include compensatory education efforts in large urban areas such as Denver? A. Yes.

Q. And did it include the study of compensatory education programs carried on in segregated schools? A. That is typically where they are carried on. So, the answer would be yes.

Q. Now, what was the purpose of this study which you drafted? A. Well, the major purpose was to advise the regents of the State of New York who are responsible for formulating policy—educational policy for the whole state.

It was to advise them as to what was the best thing to do in relationship to the problems of the disadvantaged student in New York State, primarily Negroes and Puerto Ricans, and with respect to integration versus compensatory education.

Q. Now, at the conclusion of your study, Dr. O'Reilly, did you in fact make a recommendation to the regents of the State of New York? A. Yes, we did.

Q. And what was that recommendation?

[598] Mr. Ris: If the Court please, what was made to the regents of the State of New York I don't think is relevant here. I object for two reasons: one, insufficient foundation. He said he made some studies in the abstract. No evidence to show what he studied and how he studied it and what evidence he developed and analyzed, and secondly, what his recommendations were to the State of New York is not of any help to the School Board of the City and County of Denver.

The Court: Well, I suppose that, if he does describe the scope and extent and character of the work that he did, that he can express an opinion as an expert as to the value of this.

Mr. Ris: With a proper foundation, I think he can.

The Court: But I don't think that what he said in New York has any great evidentiary value in and of itself.

Mr. Greiner: Well, it simply points out—

The Court: I suppose he could be cross-examined on that.

Mr. Greiner: Certainly, because it does point out

what the nature and conclusion of this rather comprehensive study was, Your Honor.

The Court: Well, he can give us his opinion once the foundation is laid. It's like any other expert's.

Q. Now, you said that you have studied some 1,200 compensatory education programs. Would you give us some idea [599] of the procedure which was employed? A. Yes, we gathered studies from every major source. These are empirical research reports.

The Court: If you could just keep your voice up, you know—

A. We gathered studies from every major source. In the State Education Department we have an excellent setup for reviewing research all over the country and our interests in compensatory education programs were to see whether or not we might be able to find anything that might be useful in New York State, so our review was national. This is not a review in the state. This is a review that covers the whole country. One of the programs that we reviewed in some detail is Title I, ESEA, which is the major source of funds for compensatory education in the United States. One of the studies reviewed was based on an examination of 20,000 programs all over the nation, and from that 20,000 programs random selection of 1,000 programs was taken and these were then studied in detail. We have also reviewed programs like the Baniker Project in St. Louis, which I believe was referred to here the other day. We have studied major compensatory education programs in New York City.

Q. Does that include, for example, the Higher Horizons project? A. It was one of them.

[600] Q. And More Effective Schools projects? A. The More Effective Schools project—we have reviewed that but it's not in this report.

Q. And the All Day Neighborhood Schools project? A. Yes.

Q. Dr. O'Reilly, to your knowledge, is there any major compensatory education effort which has been carried on up to the point of your study which was not considered or reviewed? A. I don't believe that we have missed anything that is important.

Q. Now, at the conclusion of this study, then, you did make a recommendation to the regents of New York, is that correct? A. Yes.

Q. Was that based upon your opinion of the relative efficacy of the choice as to what is effective for teaching minority students? A. Yes, it was.

Q. And what was your opinion? A. Well, our opinion—

Mr. Ris: Just a moment, please, Doctor. The same objection, lack of foundation.

The Court: I don't know what he did. He says he reviewed them all. What did he study? That's the thing. I mean, how can we derive any value from his opinion unless we [601] know what type of thing he considered. Was he just reading narrative reports from these various sources? Or was he actually examining raw material—raw data? I mean, this is the type of thing I think we need in order to know whether his opinion has probative value.

Mr. Greiner: Thank you, Your Honor. We will proceed along that line.

Q. Dr. O'Reilly, what was the nature of the evaluation which you carried on? A. We reviewed in most cases orig-

inal sources, the actual research reports turned out by the people who manned the programs. These were educational researchers; psychologists; school districts; their bureaus of research who tendered reports. Some of them were done by national agencies like the American Institute for Research in California. In general, these are scientific reports, not narrative reports, not opinions, not ideas. This is what is considered empirical evidence in the field.

Q. Now, with regard to this empirical evidence, for example, did it include studies of achievement data related to these compensatory education programs? A. This is the major factor in studies in compensatory education programs.

Q. Can you describe for the Court what we are talking about in terms of achieving data? How was it evaluated? [602] A. Well, we are typically talking about standardized achievement tests which are generally accepted as measures of a student's achievement all over the United States.

Q. And what did this achievement data—was there some comparison made of the achievement of students before and after these programs? A. Yes, there are a lot of different ways in which comparisons are made. Some of the studies employed experimental groups who received compensatory education treatment and compared them with groups—well, in some instances with students who were in an integrated school without compensatory education. In other cases we have compensatory education compared to no compensatory education, comparable groups of students. And the usual indexes of achievement used in these studies are reading, mathematics, sometimes the studies go beyond that and give a more detailed account of the factors of the achievements that are being subjected to consideration.

Q. Now, Dr. Coleman in court the other day identified the nature of his study, which also included achievement data. In the course of your study did you also have cause to review Dr. Coleman's study? A. Yes, we reviewed Dr. Coleman's study and all major studies of racialization in the schools and formed these studies into a—well, we did a comprehensive review on these studies and came out with what are regarded as justifiable [603] generalizations relative to the efficacy of school integration in improving students' achievement.

Q. And this evaluation of achievement data—is this a typical component of each and every one of these evaluations? A. Yes. It is a major component.

Q. And a major objective of each of these compensatory education programs was what? A. The major objective is to generally improve educational development as measured by the standardized achievement tests.

Q. Now, did you also have any occasion to check the actual raw data upon which these reports which you evaluated were based? A. Yes. There are different levels of checking raw data. In evaluating reports like Coleman reports and reports like this one here—

Q. Racial isolation?* A. Racial isolation in the Public Schools. We did not focus to any great extent on the author's interpretation of the data but went directly to the appendices of the reports where the results of the analysis are given in tables and examined this and based our conclusions on these. We have also had occasion to examine the data—actual test data summarized, coming back from the schools in New York State, in which these are Title I schools where we expended—well, this year, we have been

* The parties have agreed to correct the transcript to read "Racial Isolation" instead of "racialization".

spending $180 million on Title I [604] programs. The data are grouped in accordance with where the schools are. They are all disadvantaged students. And from these we can tell whether they are segregated schools or whether they are not segregated schools in general. We have three years of data of this type in which we are able to look at what proportion of the students are below the 23rd percentile in these schools from year to year. I have examined these data for the New York State Education Department this year and a report on this and my conclusion was that the changes above and below—

Mr. Ris: If the Court please, now we're getting into the conclusion. I think we're still on foundation. So I will object to that.

The Court: Sustained.

Q. That's all right, Doctor. We will get to your conclusion in a moment.

Then I take it the nature of your evaluation of these compensatory education programs and the result contained in the study—I take it the study has been marked for identification as Plaintiffs' Exhibit 508, is that correct? A. That's correct.

Q. And the evaluation is contained in Exhibit 508. Are they just mere parodies then of the evaluations set forth in the evaluations which you studied of these plans? A. Would you ask that question again, please.

[605] Q. Well, in the course of your evaluation did you make an independent examination? A. Of these studies?

Q. Yes. A. Yes.

Mr. Greiner: Your Honor, at this time we would offer Exhibit 508.

Mr. Ris: May I voir dire the witness?

Robert O'Reilly—for Plaintiffs—Voir Dire

Voir Dire Examination by Mr. Ris:

Q. Dr. O'Reilly, is this the Bureau of School and Cultural Research? A. Yes.

Q. That you are director of? A. Yes.

Q. How many people do you have in that bureau? A. Well, we have, now, eight. We will be adding three, and we effectively have about 40 other people working for us.

Q. For a total of how many? A. Well, that would give us 62.

The Court: These are all psychologists?

The Witness: Primarily we work with people who —whom you would consider technicians. People who have certain kinds of specialized training. They may be [606] psychologists. They may be psycholinguists. Many different fields which can be considered under the rubric of psychology or related fields.

By Mr. Ris:

Q. What is the relationship of the New York State Department of Education to a local school district? A. Well, I'm not sure. You would have to be quite specific in asking me that question. The relationship is—the relationships are extremely complex.

Q. Well, does the New York Department of Education set policy for the New York City Public Schools System, for example? A. Yes.

Q. How do they do that? Do they hire the personnel? A. No, they don't hire their personnel, but—

Q. Do they establish the curriculum for the elementary schools? A. They do have an effect on the establishment of curricula.

Q. I didn't ask you that. I said, do they set— A. These questions really can't be answered in black and white terms.

Robert O'Reilly—for Plaintiffs—Voir Dire

Q. Well, you have been sitting through this trial, have you? A. Yes.

[607] Q. You know the general setup, I presume, from what—

The Court: They probably lay down general principles of policy, is that right?

The Witness: Yes, they do lay down general principles of policy.

The Court: But they don't seek to implement the details of the curriculum at every school, do they?

The Witness: No, but there is a general curriculum outline for the schools in New York State.

Q. This is recommended or is it required of the districts to follow? A. Some parts of it are required.

Q. And some parts are not required? A. They would be sort of in between being required.

The Court: What are your goals? Do you want to make everybody the same? You want the Spanish to all fit into this pattern? Do you want everybody to become part of the Great American Dream? Is this your object?

The Witness: No, sir.

The Court: Then how can you apply these things across the board willy-nilly?

The Witness: These are general. And there is considerable flexibility and latitude within the kind of control that the state exerts over the schools.

The Court: Well, you wouldn't recommend, though, [608] a similar standardizing of every single school in New York, would you?

The Witness: Not at all.

The Court: Doesn't it have to have its own character?

The Witness: I think perhaps maybe my response is being somewhat misunderstood at this point. The kinds of policy that have any direct effect on the schools are only relatively as gross as that you have so many years of English.

Mr. Ris: I'm sorry, Doctor. I can hardly hear you.

The Court: The kind of policy, he said, would be to require that you have so many years of English, for example. Is that correct?

The Witness: Yes, this is very broad and very general, and the way in which a particular program is conducted—the particular approach to education in school, is pretty much up to the school because—well, community control is also a very significant thing in New York State.

By Mr. Ris:

Q. Well, all of the public educational facilities then in New York State are not administered by the New York State Department of Education? A. Well, the New York State Department of Education is there to serve the schools.

Q. Provide them with research and advice? [609] A. Yes.

Q. And set minimum standards in certain areas? A. Yes.

Q. But the day-by-day, year-in-and-year-out implementation of the educational process is done by local boards and local administrations? A. Yes.

Q. Now, with regard to your particular work that you have been describing, do your people in your bureau actually go out into the various local districts and give tests to pupils? A. Yes, that includes me.

Q. Pardon? A. That includes me.

Q. That's in New York State? A. Yes.

Q. And do you also prepare the tests or do you use standardized tests prepared by other agencies or both? A. Well, both. We have a statewide testing program in which we administer tests of reading and mathematics to Grades 1, 3, 6 and 9. And I, myself, am now involved in the development of a testing program for Title I schools in which we are developing our own testing instruments.

Q. And then does your department actually take these test results back and correlate them and run them through [610] your computers, I presume? A. Yes.

Q. And is it down on a computerized basis now? A. Yes, it is.

Q. Now, with regard to studies that you make that are not in New York State, take St. Louis as an example, that you mentioned, and I personally know what the St. Louis study is. A. The Baniker program.

Q. All right. You say that you studied this report? A. Yes.

Q. And you have not been in St. Louis to examine the programs yourself, I don't suppose? A. No.

Q. Or to test the students? A. No.

Q. Or to review the test results in their raw form that have come back? A. No.

Q. That haven't been executed by the students? A. That's right. I haven't been there to do those.

Q. And this is a—this is typical of what you're talking about outside New York State? A. Yes.

Q. You don't go outside of New York State yourself [611] ordinarily? A. It's not typical.

Q. Nor members of your staff? A. That wouldn't be typical, either, but it does happen.

Q. I'm sure you go to meetings and conventions and things of that nature? A. No, some of our staff in the State

Education Department do go to other states around the country and other programs and actually look at the programs.

Q. But basically what your studies, insofar as these other programs outside of New York State—you're studying the reports made locally in the school district, for example, who haven't made their own studies? A. They may be made by local districts. They also may be prepared by consultants or they may be prepared by educational research or psychologists.

Q. And you're studying somebody else's studies then, is that right? A. Yes.

Q. And when you're talking about the Coleman report, you are studying the Coleman study? A. That's correct.

Q. And the various other studies—these 1,200 you mentioned—are they all outside of New York State? A. The 1,200?

[612] Q. Yes. A. Are they all outside New York State?

Q. Yes. A. No.

Q. How many are outside New York State? A. The largest proportion of the studies would be outside of New York State.

Q. And with respect to those studies, if you wanted to find out what they're doing in Missoula, Montana, you would ask them for their report of such studies as they had made? A. I might do that.

Q. You wouldn't ask them to send you all the raw data or analyses? A. Not usually.

Q. So that you then studied all the various studies and then made and submitted a report of your studies, is that correct? A. That's correct.

Q. And is the volume that he just offered on Exhibit 508 based on such a premise then as a study of studies? A. Not entirely.

Q. A substantial portion of it? A. Yes.

Mr. Ris: If the Court please, we again object, number one, that this is a study of studies and not a study [613] of raw data to arrive at his own conclusions, and, secondly, there is no showing that this has any relevancy to the Denver situation.

May I ask one more question?

By Mr. Ris:

Q. Have you been to Denver before to study the Denver system? A. No, but I do have a little bit of exposure to Denver before.

Q. What has been your exposure? A. I looked at a good deal of material before I came here for about a week.

Q. Submitted by plaintiffs' counsel? A. Yes.

Mr. Ris: That's all.

Direct Examination by Mr. Greiner (Cont'd):

Q. Dr. O'Reilly, this so-called study of studies, I believe you did say that you looked at the data that was compiled in each of those studies, is that correct? A. Yes.

Q. And you made an independent evaluation of that data? A. Yes, I did.

Mr. Greiner: We offer 508, Your Honor.

Mr. Ris: Same objection.

The Court: I think you ought to tell me what the [614] purpose of this offering is besides proving your thesis, of course. But what particular use do you want to make of it?

The Witness: In New York State—

The Court: I want him to tell me.

Mr. Greiner: Your Honor, it's really not offered in a testimonial manner but it does give a full indication of this man's in-depth consideration of compensatory education programs.

The Court: You're just offering it as a basis for his opinion?

Mr. Greiner: That's correct.

The Court: To qualify him?

Mr. Greiner: If you will recall, Dr. Coleman from the stand the other day called Exhibit 508 the most comprehensive study in existence of compensatory education.

The Court: Well, I'm going to reserve a ruling on this for a while. He can express his opinion. Go ahead.

By Mr. Greiner:

Q. Now, these study programs—

The Court: We may get confused if we have too many of these, too much of this.

Mr. Greiner: I guess we're always giving something to the Court to read.

The Court: This is a real hazard.

Q. Dr. O'Reilly, these compensatory education programs which you have studied and evaluated, I'd like for you to [615] describe some of the elements which they typically contain. For example, do they contain programs directed toward adding additional teaching staff to the segregated schools? A. That is a typical characteristic.

Q. And a low range of pupil-teacher ratios? A. Yes.

Q. The use of paraprofessionals? A. Yes.

Q. The use of teacher aides? A. Yes.

Q. Diagnostic laboratories to try to determine quickly what the deficiencies of the minority child were? A. There are some studies that have included that.

Q. Did it also include, typically, some sort of increased group counseling?

Mr. Ris: If the Court please, I don't think any of these have any evidentiary help and—he ought to just say some of these studies contained some of these things. Unless we know what studies contain what and what he is relying on—

The Court: Well, let's get to his conclusions. Then I think we can evaluate it thereafter. Go ahead.

Mr. Greiner: Well, Your Honor, the point of these questions, of course—

The Court: Go ahead. You do whatever your program is. We will check it out as you go along. You go ahead and [616] carry out your list as to what he considered and we will see what they look like.

Q. Did these programs also typically call for the addition of psychologists to the local school staff? A. Yes.

Q. Did they have programs directed toward cultural understanding? A. Yes.

Q. At below the teacher and student level? A. Yes.

Q. Were there programs directed towards improving the child's self-image? A. Yes.

Q. What about directed toward improving parental involvement in the educational process? A. This has been tried many times.

Q. And I assume that these programs also contained remedial efforts? A. Typically.

Q. And in such skilled areas as language and mathematics? A. Yes.

Q. And social science? A. Not social science.

Q. Were these programs directed towards objectives of trying to motivate the minority child? [617] A. Yes.

Q. Did they involve efforts to make the curriculum more relevant to the minority child? A. That is an implied assumption in most studies, that relevance is being increased.

Q. And were efforts also directed toward teaching teachers how to teach minority children? A. Yes.

Q. Did the evaluation include evaluation of the early childhood programs such as Head Start? A. Yes.

Q. Was tutoring also one of the methods adopted in these compensatory programs? A. Yes, it was.

Q. The use of multimedia teaching aids? A. You would find that in compensatory education programs, but it's a peripheral kind of surface component.

Q. Did it include such things as field trips designed to remove at least temporarily the minority child from his local environment? A. Yes, this has been tried both generally and in components of preschool programs and has also been a component of elementary programs and secondary programs.

Q. Now, after considering these compensatory programs, Dr. O'Reilly, did you come to a conclusion and view and [618] opinion as to the efficacy of these compensatory programs in these segregated schools? A. Yes.

Q. Does the efficacy insignificantly raise the minority child's achievement? A. Yes.

Q. What is that opinion?

Mr. Ris: Objection, lack of foundation again.

The Court: Overruled.

A. Our opinion is, after—

The Court: Whose opinion? Yours?

The Witness: My opinion, sir. Sorry.

My opinion is, after reviewing the studies and their results that there are no general practical effects accruing to students' educational development as a function of compensatory education programs which typically include these kinds of components.

The Court: Are you saying that the system based upon these components is valueless?

The Witness: Yes.

The Court: And the individual elements in it—in its totality has no value whatsoever?

The Witness: I don't think so. They constitute basically giving the minority, the disadvantaged—

The Court: Don't even the psychologists help at [619] the local level?

The Witness: No, not typically.

The Court: Amazing.

The Witness: I was going to say—you see, these things have already been done by the schools. They have been done for years. And what this really constitutes is giving the minority child more of what the schools already have. It's nothing particularly new about any of these things.

The Court: But none of it has any value?

The Witness: No, sir. Not only do I have this opinion but—

The Court: Are you saying it's not any value in combination with integration?

The Witness: There is no indication that these particular kinds of approaches would necessarily

work in an integrated setting. The evidence is just not generally available on that area on that question.

The Court: And it's valueless at every level?

The Witness: Equally valueless from a practical point of view, yes.

The Court: The lack of value is the same at every level?

The Witness: Basically, it has turned out that way. And perhaps I should define what I mean by practical value. We mean that—rather, I mean that the studies result in [620] differences as a function of compensatory education programs which would indicate that they have some potential in improving the—some real potential in improving educational development among minority students relative to those who don't get this kind of compensatory education. The gap between blacks and whites or Puerto Ricans and whites is just hardly affected or is not affected at all.

Q. Well, these programs then do not succeed in teaching a child to read?

The Witness: Generally not.

The Court: Or to express himself?

The Witness: I would have to qualify that, now. It's not minority students don't learn to read—it's the level of reading capability that they show. Typically the minority child is one to two years behind his age mates.

The Court: We've heard that before.

The Witness: Now, these programs just generally do not have much of an affect or a sense of affect on

the gap between whites and blacks or whites and Puerto Ricans or Mexican-Americans and whites.

The Court: Well, what about whites who are in the same condition?

The Witness: Under the same conditions? Most of the studies that we are talking about here that I reviewed have been done on minority students. Most typically whites [621] are not included. Although there are studies with whites in them. And—or they are included as parts of the group of disadvantaged children. That is more typical than anything else. We really couldn't say too much about the effects on whites.

The Court: Well, you recommend that, if they are integrated in these white schools, that they get any special attention?

A. Yes, sir, but I wouldn't go about it this way.

The Court: Pardon?

The Witness: I wouldn't go about it in this particular way. I would recommend special attention, yes.

The Court: In other words, you have some remedial plans, then?

The Witness: We have identified some tentatively that we feel have potential for—

The Court: But they have never proven themselves?

The Witness: They are experimental programs. They have not been tried with large numbers of students. We don't really know their potential nor how well they would operate in a broad-scale school sys-

tem. And the field really is—of compensatory education is really quite unsettled. For example, in the area of language development, we did a very intensive review—excuse me now. We did not do this review, but I have—a friend of mine in Syracuse University [622] who is an expert in the field of language development, and we commissioned him to carry out a detailed comprehensive review of compensatory education programs in the area of language development. As a result of this study which covers most of what is available in the field, we were not able to make any really strong recommendations about what ought to be tried in the schools. We were only able to say that—well, here's two or three programs which look like they might have some potential. But then a few weeks later we received a study on one of those programs and it had been validated and studied and tested out in a very small test setting with about 15 kids. Then another fellow tried the program out after a two-year period in the schools and we received that report after this report was written up and it turned out that when it was tried out in the schools it had no effect whatsoever.

So, what I'm trying to communicate to you, I guess, is that this is a very unsettled field. There are no hard and fast rules to go on. It's very unlikely that anybody is ever going to come up with a treatment that is going to be generally effective with minority students at all. What has to be done is basically many, many years of experimentation in which we slowly and carefully identify and develop specific programs designed for specific groups, specific minority groups. Because they differ so greatly.

The Court: Well, then, you're not recommending any [623] doctrinaire approach to this problem at all?

The Witness: No, sir. The work that has been done in the field doesn't allow it.

The Court: But you are convinced that there is no validity to anything that has been tried so far?

The Witness: Basically, what the schools have tried—

The Court: I just can't understand how you can be so sure that it can't be refined or developed.

The Witness: May I explain a little further? The studies in compensatory education can be divided into two groups. One group of studies in development of compensatory education have been those approaches that have been developed basically by school personnel. To some extent they may have been helped by consultants. But, as I mentioned before, what these studies boil down to generally is to give the kids, the minority kids, what the school already has; what it already knows how to do. This is not based on a detailed study of the psychological—

The Court: I don't agree with you at all.

The Witness: Pardon?

The Court: I don't agree with you at all. I would say a person-to-person approach to a child does proceed on a psychological thesis; that the kid has no promise, home. He has no figure to look to and he has got to find some substitutes. Where is he going to find them if he's in a completely impersonal [624] atmosphere of the survival of the fittest?

The Witness: Some of them will. There is no doubt about it.

The Court: What happens to others who are strangers, who are in an atmosphere in which they are inferior and they feel inferior? Where are they going to find some kind of consolation? Have you been through this? I have.

The Witness: I grew up in that situation.

The Court: Now, what does he do? He may fight his way through. It will take a few years. But he may not. The probabilities are that he will drop out and get a job, or worse. You don't think this is true?

The Witness: Well, sir—

The Court: I mean, psychologically, the school is taking over for the family in many instances. It has to. I know this is abhorrent to all of you. You just disregard it all at paternalism. But you can't. I mean, this is the fact of life. The church has fallen down somewhat. The family has collapsed, and there is not much left. And a kid has to relate to something, to an institution, and to people, doesn't he? Where is this substitute? So, you say there is no psychological foundation for this? There is no foundation in experience? That you can just substitute this competitive atmosphere? And this impersonal competitive atmosphere of the integrated school and let him sink or swim?

【625】 The Witness: I think the idea of competition in the integrated school has been overemphasized. That element is there. What I think may be emphasized more than anything else is the fact that the integrated school by itself represents an acceptance of other cultural groups because they are mixed together, because they are living together, working

together towards essentially the same goals. When students are separated in different schools, as they are in Denver Public Schools—

The Court: Well, that's a different matter. We're not talking about this.

The Witness: Well, I though you were—

The Court: Well, I'm talking about— We're not debating whether it's valuable to have them in an atmosphere that is integrated. What I'm questioning is your statement that the integrated setting can be just a substitute for everything else that we have ever learned.

The Witness: I wouldn't say that, sir.

The Court: Well, that is what's implied here. That this is a cure-all.

The Witness: It can help.

The Court: It can help?

The Witness: Yes.

The Court: That's all you're saying?

The Witness: That's all.

[626] Mr. Greiner: May I proceed, Your Honor?

By Mr. Greiner:

Q. Dr. O'Reilly, you stated that you studied some 1,200 different compensatory education programs in segregated schools. In the course of your study represented by Exhibit 508, did you also have occasion to analyze the results of integration programs? A. Yes.

Q. Now, did you have 1,200 integration programs to look at, Dr. Reilly? A. They are not that easy to find. We had the studies that I reviewed on integration cover about 40 individual studies and desegregation was initiated on a local district level. And then the major studies of existing

degrees of racialization in the schools, like the Coleman study, which includes this report, which includes a major re-analysis of the Coleman data.

Q. And that was Plaintiffs' Exhibit 27? A. Yes. And also includes a new study on integration done by Wilson and in Oakland, California.

Q. What was the basis of Wilson's study? A. Oakland, California, is a segregated school district which is somewhat similar to this particular district here, from what I know of both of them. And there are different degrees of racial and social isolation in the schools in Oakland, California.

[627] Q. Is there also integration in Oakland schools? A. When I say different degrees of it, this would mean that schools vary from being virtually segregated schools to schools that are partially integrated.

Q. What did Wilson study? A. Wilson studied the effect of segregation in the schools on achievement, on psychological development, and on delinquency.

Q. Now, with regard to these studies of programs of integration, for example, did you study the Berkeley program? A. Yes.

Q. That Dr. Sullivan has described to us? A. Yes.

Q. What other integration programs did you study? A. We had a program—several programs in Rochester, New York. Two or three programs in Syracuse, New York. The MEDCO project in New Haven, Connecticut. Several other small individual studies of desegregation in the schools.

Q. Now, did these studies also present you with, for example, comparative achievement data, comparing what were—comparing achievement data for minority students before and after, for example, integration? A. Yes.

Q. What did those data show? A. The individual studies generally tend to show that—

[628] Mr. Ris: I object. I'm sorry, Doctor. I object on the grounds of lack of foundation again.

The Court: Overruled.

A. The desegregation studies—these are the small individual studies where a school district has either been ordered to desegregate or at least primarily a school district where they desegregated by themselves, and the results generally show that the educational development of the desegregated minority students tends to be facilitated or tends to improve within a year or two after the desegregation experience is initiated.

Q. Now, is this improvement—can you compare or contrast the degree of improvement under the integration programs with that which you found under the compensatory education program? A. There are fewer studies available on this but there are five or six in which compensatory education has been compared with integration. And the results here tend to show that the integrated students perform at higher levels on achievement tests as compared to students in segregated schools receiving compensatory education.

The Court: This helps, I'm sure, the ideas, at least, of the better students.

The Witness: This is—there is quite a bit of variation, sir. Not everybody experiences or—

[629] The Court: I mean those who have better abilities.

The Witness: I don't believe the question has

been studied of students with different ability levels and who is most affected on it.

The Court: How about the dropout rate? Does it increase?

The Witness: The question of the dropout rate—there is really not that I'm aware of enough evidence on the dropout rate in desegregation studies at this particular point. A great many of them occurred at the elementary school level.

The Court: But there is no evidence as to whether it increases or not?

The Witness: But you could make an inference like this. The dropout rate is related to how well you do in school. If you fail miserably then you tend to drop out of school. Now, if, as the evidence indicates, integration has a facilitating effect on education achievement, this would tend to make—would tend to lower the rate of failure of minority group students. You would then predict from that that the dropout rate would be generally decreased.

The Court: Because they are competing with students who are one to two years ahead of them?

The Witness: More successfully, though.

The Court: Well, that is, the upper level of them, [630] but not necessarily the lower level? They get frustrated and start wearing black leather jackets? I mean, they can't do anything. Then they start acting out?

The Witness: Sir, that may happen to some students but the evidence from the studies, the big studies of integration like Coleman would indicate that the students have developed a more positive attitude towards school; that they begin to develop

a sense that what they are doing has some effect on their future, and I think in general that you could predict more positive effects on psychological development rather than educational development itself. They go hand in hand. If an individual begins to experience success in school then he begins to feel more positive about something.

The Court: Let me ask you this. Do you think the impersonal approach would be preferred, even at the elementary level?

The Witness: No, sir. I think it should be—

The Court: Sink or swim?

The Witness: No, I think it should be as personal as you can make it.

The Court: Well, then, you do have to baby them along to keep them in school and to keep them alive, don't you?

The Witness: I think you have to show basically that [631] you regard them as worthwhile human beings and that, if that kind of baby attitude of respect for a member of another minority group is there, then—

The Court: This means you have to really be geared for it because, if you get teachers who are petty, objectionable personal habits or appearances or things of that sort, or for the individual involved, it can have a traumatic effect?

The Witness: Well, the studies that I reviewed on desegregation didn't take any great pains to do anything really extensive in the school situation to prepare—

The Court: I get letters from these teachers. They say this is an impossible thing. I mean, I

probably shouldn't read them but I have. They say, "He runs down the hall. He can't understand why he should walk. He squirms in his seat." Pretty soon he drops out. But what I'm saying is they encounter oftentimes, I'm afraid, completely unsympathetic receptions.

The Witness: I'm sure there are people who are—

The Court: How are you going to combat this kind of thing? If it isn't on a personal approach, I mean?

The Witness: I agree with you that these represent problems.

The Court: They are formidable problems.

The Witness: Yes, but I think they can be handled.

[632] The Court: Well, then you are not saying that ipso facto that we can cure everything by simply—

The Witness: No, I'm not.

The Court:—by simply integrating the schools?

The Witness: No, I think you've got to take time to plan it. If you initiate the process, work at it as you go along, try to develop a school in which you have a multi-cultural atmosphere in which mutual respect is possible among the students, I think, you know, these things are required. There are things that have to be done with teachers; things that have to be done with students. There is a great deal that can be done with students and they are—particularly at the elementary school level. The easy things to do are the least expensive.

The Court: Well, what I'm really leading up

to—I suppose that there may be some value in these remedial efforts after all?

The Witness: In a certain context, sir.

The Court: Right.

Proceed.

Excuse me, Mr. Greiner.

By Mr. Greiner:

Q. Dr. O'Reilly, you have also reviewed the plaintiffs' plans for relief in this case, have you not? A. Yes, I have.

[633] Q. Dr. O'Reilly, do the plaintiffs' plans contemplate simply throwing the blacks and whites together and letting the blacks sink or swim? A. No, they do not.

Q. And have there really been, for example,—the Berkeley program which Dr. Sullivan described to the Court the other day—now, in Berkeley they attempted to change teacher attitudes, did they not? A. Yes.

Q. And had programs of cultural understanding, minority history? A. Yes.

Q. And they had programs directed towards helping the teacher to cope with some of the peculiar problems of the minority child, is that right? A. Yes.

Q. Now, these programs were continued in Berkeley, were they not, in an integrated setting? A. Yes, they were.

Q. And is Berkeley one of the success stories of integration in the United States? A. It's probably the most well known at this point.

Mr. Greiner: We have no further question, Your Honor.

Robert O'Reilly—for Plaintiffs—Cross

[634] *Cross-Examination by Mr. Ris:*

Q. Are compensatory education programs in progress in New York City at the present time, this school year? A. Yes, they are.

Q. And throughout New York State? A. Yes, they are.

Q. And in—are there such programs evaluated yearly in New York State? A. Yes.

Q. Insofar as federal government participation and funding is concerned, are evaluations submitted to federal agencies annually? A. Yes, they are.

Q. Requests for funding for the following years are based upon those studies? A. Funding in Title I, ESEA, is virtually automatic. It depends on how many disadvantaged students are in the school of your state.

Q. Is it contemplated in New York State that these programs will continue next year? A. Yes, but it's not contemplated about how much longer it's going to last.

Q. But they are going to be continued next year? A. So far.

Q. And that has been determined by those who make the [635] policies? A. Yes, it has.

Q. How much was spent during or contemplated to be spent during the school year 1969 and '70 in New York State compensatory programs? A. This year, Title I, ESEA, was about $170 million and the state's assistance from local state tax money was about $52 million for urban educational programs which are directed toward the disadvantaged children.

Q. And how much was spent during—or will be spent before the end of this current school year on programs other than Title I? A. Well, we have $7million for integration programs. The state provides money for desegregation, for busing and so on.

Q. I'm asking about compensatory purposes. A. That's considered compensatory.

Q. That has been considered compensatory, also? A. Yes.

Q. All right. A. We have some more, if you would like to know them.

Q. Some more dollar expenditures? A. Yes.

Q. What are they? A. We have $3 million, prekindergarten program.

[636] Q. Do you know what has been budgeted for next year throughout the state? A. Roughly.

Q. What is it? A. I think the Title I, ESEA, program is $183 million. Urban education will be exactly the same as before; it is 52 million— Excuse me. I said seven million for integration. It's three million. The prekindergarten program has been reduced from seven million requested to three million. And that would constitute the major efforts for the state.

Q. Now, with respect to the studies you made of the studies on desegregation in the various school districts, could you give us any statistics either numerically or percentagewise as to which of those desegregation plans were voluntary as contrasted to mandatory? A. The desegregation programs?

Q. Yes, sir. A. What do you mean by voluntary versus mandatory?

Q. Well, whether the desegregation plans were on a voluntary basis of the students or the parents requested transfer, or whether—such as under the Denver VOE which you have heard while you have been in court, or whether they are mandatory comparable to Plan 1 or Plan 2 submitted by the plaintiffs here. A. The decisions to desegregate the

schools are really [637] not typically made at the community level. They are made as a function of the arrangements between school boards or is directly a decision between school boards or, in the case in New York State, we have some instances where in one case where a school superintendent led the battle in a very peculiar way and desegregated the whole school system in White Plains, New York.

The Court: Where was that located?

The Witness: White Plains.

The Court: We have heard about White Plains quite a bit.

A. We have other instances where the Commissioner of Education in New York State has ordered schools to desegregate and they have consequently desegregated. Some of these being actions brought by the N.A.A.C.P.

Q. Have you correlated whether these were mandatory or voluntary? A. No, we haven't, because the mandatory versus voluntary concept is just not—it isn't—this isn't a mandatory or voluntary— It's a very—an extremely complex thing.

Q. But you made no study of that? That's my question. A. No.

Q. To what extent, Doctor, are you segregated in New York City? [638] A. New York City is very highly segregated. There have been some few programs in New York City, school pairing, for example, where some sort of pilot program of integration has occurred. But New York City is—the problem there is extraordinarily complex in terms of size; 1.2 million kids in New York City, and 55 percent of them are Negro and Puerto Ricans and they live in areas in the city where there just aren't any white kids.

Q. And so I take it that you're using remedial approaches there? A. That's exactly what is being tried and where the complexity of the problem is as bad as it is in that particular place and where there hasn't been any legal action at this point—

The Court: In Harlem, for example, do all the students have to go to school in Harlem who live there?

The Witness: They have to go to school.

The Court: In Harlem?

The Witness: Yes.

The Court: Do you move any of them out?

The Witness: No. Typically, in New York City, students aren't really—the neighborhood school concept is still viable there.

The Court: Would this be true in other boroughs? All of the boroughs of New York City?

[639] The Witness: Basically.

The Court: Well, then, when you get out, do you have any other place where you have integrated?

The Witness: Yes.

The Court: Where?

The Witness: Rochester had some pilot integration programs which have encouraged a lot of people. Syracuse has had some pilot integration programs that have encouraged people. The White Plains—the one I already mentioned. And this moves on in different places in the state to desegregate local cities. A good example of that is Rochester, in which they are still, you know, this movement has been going on in Rochester for a considerable period of time. They haven't achieved success yet but I'm sure they will continue to work.

The Court: Well, is there any city in the United States or in the Northwest, the Middle West, East, where they have a complete program of integration?

The Witness: Integration program?

The Court: From your studies have you found any?

The Witness: No cities that I am aware of at this particular time have an extensive integration program in which they have integrated the whole city. But I can't recall the details now of other places, but I do recall that there are some movements on at some places in the country for a [640] program that may affect large numbers of students.

The Court: We have read about some of them recently.

The Witness: Yes.

The Court: But, so far, it has not been accomplished or really tried out on any broad scale anyplace.

The Witness: Well, the broadest-scaled one, in which the program has been studied reasonably well —in fact, quite well in terms of most of the studies, is Sullivan's program in Berkeley, which is—well, a city of 100,000.

The Court: But, Boston apparently hasn't done it, really.

The Witness: No.

The Court: They've got a voluntary program up there. That's what I assumed from what he said.

The Witness: Yes.

By Mr. Ris:

Q. Dr. O'Reilly, in White Plains, wasn't the technique there used to close one black school and transport the children then to other schools? A. As I recall, that was a technique.

Q. Now, with regard to school desegregation, I believe the title of your work is Racial and Class Isolation. And throughout your work you lay great stress upon the social class of minorities, do you not? A. Yes.

[641] Q. So it is not merely the color that you're primarily concerned with in your conclusions—it's a matter of social class? A. Doesn't make any difference.

Q. It doesn't? You don't have social class even in the minorities? A. In places—let's see, from the data I have examined in Denver on the economical levels, there is a little bit—this is a little bit old data—

Q. 1960 data? A. Yes, but from what I have heard from talking to other people, you know, it's not, you know, the greatest kind of basis for this kind of thing. Denver is probably very much like Oakland. In fact, it may even be more so in terms of the correlation between race and social class, in which case, if you desegregate the schools, you automatically bring out the condition that Dr. Coleman talked about.

Q. So are you acquainted with the Northeast section of Denver? A. I think that's what I—I guess that's the area I saw, over by Manual High School. I'm not sure of the directions.

The Court: This has been called the core city area in this trial.

The Witness: Over by Manual High School?

[642] The Court: Yes. It's part of it.
The Witness: That's what I saw.

Q. How long have you been in Denver? A. Since Sunday night.

Q. Have you ever been here before? A. No.

Q. Well, in your work you do agree that you stated that school desegregation is no panacea leading to disappearance of the existing education gap existing between members of the advanced majority student population and disadvantaged minority students? A. Yes, I said that because I basically agree with what Judge Doyle has said, and that is that integration should be accompanied by additional efforts.

Q. You say under certain conditions school desegregation may result and work—

The Court: Where are you reading from?
Mr. Ris: I'm reading from Page 3.
The Court: We haven't progressed that far. I think we'll take a short recess.

(Whereupon, the trial recessed at 10:50 a.m. and resumed at 11:06 a.m.)

By Mr. Ris:

Q. Dr. O'Reilly, I have had a request from some spectators here that, if you would please raise your voice a bit, they would appreciate it. They can't hear [643] you back there.

The Witness: I'll do my best.

Q. Referring to Page 39 of your work, Dr. O'Reilly, it says, "Examination of current guidelines for school deseg-

regation indicates a failure to give adequate emphasis to the importance of social class consideration in planning integrated schools." And you have said, "Guidelines have focused on the concept of racial balance with result in ambiguous . . ."

Must the social class of the students both being transported into a school and the social class of the students that are already there be coordinated, then, in some manner? A. Yes, they should.

The Court: Are you still on Page 3?

Mr. Ris: Beg your pardon, Your Honor. This is Page 39.

The Court: Are you finished with Page 3? Did you ask him about this statement, "There is no panacea . . ."?

Mr. Ris: I'll come back to that, if I may. This again goes to the social class matter that I asked him about before.

The Witness: Yes. I'll explain that. As you will remember, as I remember, anyway, from Dr. Coleman's testimony, he talked about social class being a primary consideration. Now, what I have done in my report is to translate that into [644] arranging a condition for the poor integration. This is one of the initial conditions. The basic idea there is to make sure that the school ends up as a predominantly middle-class school which, from what I know about Denver, seems to be generally possible. The other conditions are—the other basic condition is that the school also reflects somewhat the ethnic composition of the community, but there can be certain variations there. In other words, the particular pro-

portions, they should never be low. But there is a range of variation in which you can work and the criteria there in a plan for a well-integrated school is to insure that there is enough representation so that the different ethnic groups in the community are well represented in the school and can interact with each other. A school in which you have like four or five blacks, you know—it is not an integrated school under a criterion like that; or, if an area like Denver—it would mean that you would do your best to represent not the blacks and the whites, but the Hispanos.

Q. So when you're talking about social class, are you using the same criteria as Dr. Coleman did when he talked about socioeconomic class? A. Yes, but I have added an additional condition which relates social class and race. Because there is not just one objective for integration, not just entirely the objective of improving educational achievements. An additional [645] objective—and this is related to—

The Court: What you're saying is that the middle class and the upper middle class in the integrated school ought to be predominant? I mean, if they're going to exert any influence?

The Witness: Yes.

By Mr. Ris:

Q. So social class must be considered and not merely numbers of blacks, numbers of whites, numbers of Hispanos. Right? A. Yes, in most cases the consideration of the racial or the ethnic factor is automatically a consideration of the social class factor.

The Court: I don't see what you are—I'm still not certain as to what your goal is. It's to make the minority group more articulate and more knowledgeable as to what's going on in society? What the values are of the kinds of society we have?

The Witness: Well, that's certainly part of it, sir. But I think to be articulate as I can about it there are two basic goals. One of them if ignored represents, I think, a tremendous danger to this society in which we live. And that is the isolation of groups of students in schools.

The Court: Well, then, you're trying to develop a single culture, is that right?

The Witness: No, sir. I think that's what we have; [646]is a predominant kind of subrogating culture which feels pretty indifferent about other cultures. The plans that we have discussed with respect to integration take into account the representation of each culture in the school so that the school becomes multicultural and not homogeneous culture. In fact, I think this is one of the conditions for the success for integration programs, which isn't really all that hard to get at; is to recognize the contributions of the groups that are existing in school, and this apparently is recognized in the Board's plan. However, that plan does not bring together people, and it assumes by reading a book or something, that that will develop. But I think that's quite doubtful.

The Court: Well, what influence, then, does the so-called middle class or upper middle class—what great contribution do they make, do you think, to integrated settings?

The Witness: I think part of the contribution is the exposure of the minority group student to a more different level of language, a more complex level of language, a more abstract use of language which is more typical of middle-class Anglos. But it is not necessarily untypical of middle-class blacks. It is a function of social class. Another contribution, I think, that is made by the integrated program is that when you do mix students together, particularly if you start when they are young at the elementary school, you create an opportunity for mutual respect between cultures and [647] this kind of thing is really the direct reverse of the segregated school where these segregated students must obviously conclude from the fact that they are alone that, since he is segregated, he must be regarded as inferior. So this certainly removes that source of feeling of inferiority, low self-esteem.

The Court: Brings about insight and perhaps understanding between the groups, you're saying?

The Witness: Yes, I think mutual respect.

The Court: Anything else?

The Witness: Yes. Irrespective of social class, not—I'm not necessarily speaking of Denver now, that is, the correlation between what I'm about to say in Denver is up to some other people to judge.

Mr. Ris: I'm sorry, Dr. O'Reilly. I can hardly hear you.

The Witness: The question was, are there any other things that occur as a function of the social class composition of the school in the integrated school. When you group lower-class students together, predominantly lower-class students together,

you tend to get generally a higher level of disorder, a generally lower level of academic motivation, and the approaches to instruction to typically include even small groups are very, very susceptible to the influence of the group, and if the predominant aspect of the group is in [648] disorder, not caring about the school, not caring about achievement and so on, this has a highly interfering affect on the effectiveness of instruction. It cuts down on the efficiency of a teacher; cuts down on information transmitted. There are additional effects, too, that have been stated which I have stated in my report and other reports have, too, on the teacher. Teachers come to regard the students as being incapable, and there are indications that they actually regard them as inferior. Possibly culturally inferior. That is even an assumption in some compensatory education programs. These attitudes of teachers are highly negative and from my point of view as a psychologist can exert damaging effects on an individual's psychological development. All of this is much more likely in a school which consists primarily of poor students from a single culture or from an instance like this where you have two cultures or like in New York City where we have Puerto Rican students and Negro students who are primarily segregated from the whites. So there are psychological effects.

Wilson's report is one of the ones, I think, that gives us one of the indications of the danger to social development represented by the segregated school. For example, after accounting for family background, father absences, individual social class, he found that it was the extent to which the school was

segregated which appeared to [649] cause the frequency of juvenile delinquency among Negro adolescents. And that, if those students went to upper-middle-class schools where the education environment was different, that they were less likely to become delinquents and their effect was twice as great for blacks as it was for whites. And that is understandable because there are a lot more blacks in segregated schools than in integrated schools.

The Court: You heard Mr. Ward testify yesterday? He said that he has great concern for the black student who has not fared well on the achievement tests but who, nevertheless, has great ability, probably, if he can be discovered and it is brought out.

The Witness: Yes. I remember him saying that.

The Court: This is a person who is apt to be lost if somebody doesn't take an interest in him and develop him. What is he going to do in an integrated atmosphere?

The Witness: Sir, a person's educational development particularly at the junior high school and high school level is less determined by his parents than by his peers.

The Court: At junior high school?

The Witness: Yes, among the ethnic minority, the effect of the peer group is twice as great as it is for whites. This has been brought out in Coleman's study. Also been brought out in Wilson's study.

The Court: That's because the parental influences [650] are declining as you get to that age?

The Witness: Possibly. It's also because of relative deprivation in terms of the qualities of one's family background that these students are more responsive to qualitative differences in school.

The Court: As to what?

The Witness: They are more responsive. You take the disadvantaged Negro student and put him in an atmosphere in which the environmental quality of that atmosphere has been increased, the extent to which he will improve is more rapid and greater than the general effect on white students put in that same environment. Now, this is a definite finding of integration studies and Coleman study and the Wilson study in Oakland, California. Now, put in the context of what I said about the peer group, if you segregate students in schools like this, the peer group's influence is primarily negative, and this is a time of their lives when they are most susceptible to that influence. So long as you continue racially-isolated schools and the pattern I see in this particular case is isolation from elementary through secondary, you have virtually programmed the student into something that, through his adulthood and possibly into juvenile delinquency certainly an increase in the level of social acts displayed by these minority students. And it's predictable. My opinion on this is that we know enough about this so that, if we do [651] this, that these are the likely effects, and we therefore have to take responsibility for it.

By Mr. Ris:

Q. But if we have a school with highly-motivated teachers, with greater empathy with these minority students, you would say they wouldn't progress? A. Would you repeat the question?

Q. If you had a school in which there are highly-moti-

vated teachers, with greater emphathy for these disadvantaged students—Let's take Manual High School. A. I can't generalize on the basis of Manual High School.

Q. So you think Manual is not providing anything for them that hasn't been provided for these children before, from what you have heard from Principal Ward yesterday? A. From my reading of the Board's plan, I don't think there is any hard evidence which would indicate from my point of view, as a person in this field, as an educational researcher, when I read this plan on Manual High School, when I read the language of the Board—

Q. I'm asking about Mr. Ward's testimony yesterday. Do you think what he is doing is being done without any substantial benefit to those children? A. I don't think you can judge from what a person has to say about his opinions. Teachers typically and school administrators typically think what they're doing is great.

[652] The Court: I wish you would keep your voice up, please. The reporter is having difficulty hearing you. Speak as if you're making a speech, you know, to a large group.

The Witness: Yes, sir.

Teachers and school administrators—

The Court: You want the people in the back benches to hear every single word you say.

The Witness: Teachers and school administrators where their opinions of the effects of programs have been evaluated, are typically positive, but when we look at the programs they are typically negative.

Q. I see. So, in the case of Manual, you just look at the program and not with the results then? A. We look at the—

Q. Unless they were on standardized achievement test scores? A. That's not the only thing I would look at.

Q. What else would you look at in Manual? A. I would look at, for example, students' opinions. I would look at how many of these students go to college as compared to how many went to college before the program was started. There are many, many indicators of the effectiveness of the school that are not necessarily achievement test data. I wouldn't rely on a single indicator. That would be an [653] evaluation of the program.

Q. Then all these 1,200 programs in compensatory education which you relied on, you were relying there on standard achievement test scores, were you not? A. No, sir. Most of these programs include several indicators of effectiveness.

Q. What other tests? A. Sometimes they include psychological tests.

Q. How many of the 1,200? A. Well, that would be extremely difficult to say at this point.

Q. Go ahead. What other tests? A. Let's take Head Start, for example. Head Start included a measure of self-concept. How the individual felt about himself, and also included a measure of the student's attitude towards education, towards school.

Q. These were subjective things from the three and four-year-olds? A. Sometimes they are subjective. Sometimes they are relatively objective, in which the student is given a questionnaire.

Q. Let me ask you this. In going back to Page 3 of your report, you say—and you can state if this is correct—"However, knowledge of the process of integration is not yet so complete nor is what is known of the process so systematically [654] applied that any startling changes

in educational development should generally become evident in desegregate minority group students." It that your opinion today? A. It certainly is, but I would like to qualify that opinion, if I may. That is a preliminary statement preceding my analysis of the conditions that are likely to make desegregation—the integration program effective. For example, if it were started at the elementary level it is much more likely to be successful than at the secondary level. And there are other conditions that I indicate in there and basically the proposition that I am making there is that people have to plan and work this thing out in accordance with what is known about the process in order to make it effective. That statement also communicates that we can do a much better job with integration than we have done before because of what we do now with it and, if we continue to work on it and continue to integrate the schools, that we will know more about it and be able to do a better job yet.

Q. Page 20, did you make this statement: "It is evident from the results of all studies reviewed that the achievement levels of disadvantaged minority group students still remain substantially below that of the advantaged whites . . . in schools."

The question is, what that your statement? A. Yes. May I qualify that?

[655] Q. Well, may I ask you if that is your statement? A. Yes.

Q. Now, basically, what you're talking about again here is achievement levels of the minority who were transferred to another school? Right? A. Yes.

Q. And right down the line, all of your reports indicate that the minority students and disadvantaged students, when they are moved into the integrated setting, generally

remain behind? They never do catch up, isn't that correct? A. Oh, I don't think the latter part of that statement is correct.

Q. Well, Page 27. You said, "Even though the studies often indicate superior achievement on the part of the integrated Negro student, it must still be noted that the integrated Negro students generally remain behind achievements . . . displayed by white majority." A. Yes, but you said they always remain behind, and—

Q. Well, generally?

Mr. Greiner: If the witness would be allowed to finish his response, Your Honor—

The Court: Yes.

Go ahead, Doctor.

A. There aren't enough studies at this particular time on desegregation in which the process has been initated on [656] a district level that have gone over a long enough period of time, and that have been, you know, effectively planned from my point of view, that would indicate whether we can wipe out that difference. We just don't know yet. We do know that—

Q. With respect to the—to Page 36, did you make this statement: "Despite the appearance of superiority of the integration approach . . . it is evident that in the Berkeley study that the disadvantaged Negroes, even when they are in an integrated setting, achieved at considerably lower levels than more advantaged whites." A. Really, the same statement. We did—I did make that statement.

Q. So, merely by integration in and of itself, you're not going to cure all evils? A. No, but it's relative to compensatory education.

Q. But generally, as to the ultimate fact of the evidence—the evidence is just not sufficiently conclusive or there haven't been enough analyses to know what its effect is? A. That's not true.

Mr. Ris: That's all.

Mr. Greiner: We have no further questions of Dr. O'Reilly, Your Honor.

The Court: Where do you think the Spanish-origin or [657] Spanish-speaking people fit into this desegregation program? Have you made any particular studies along this line?

The Witness: The only really big study available on the effects of integration on the Mexican-Americans is the Coleman report and that report shows the effect of integration is as large or larger—maybe slightly larger on their achievement levels in school as it is for Negroes, which would indicate that there are expectations in relationship to how well the Negro is going to do in an integrated setting and how well the Mexican-American is going to do in that setting, should be roughly the same.

The Court: Well, I take it that, in view of what you say, that you feel that there is value in having an ideal integrated setting, in having a mixture of Negroes and Mexicans, as well as Anglos, is that correct?

The Witness: Yes, sir. And I feel that is really—surely dictated by a multicultural region like Denver or other regions where there are more than two ethnic groups.

The Court: Have you conducted any studies as to whether this integration affects the so-called su-

perior group? Does it lower their standards, their levels of achievement?

The Witness: Now, I have rather reviewed studies of principals and I think, if this is what you're asking, principals' attitudes, school administrators' and teachers' attitudes in relationship to the question of, did integration [658] lower the standards of the school? With very few exceptions, the opinions of these people are in the districts where desegregation had occurred, have been positive, and in some instances—it's not infrequent—that they felt the program had enriched them and had a better program than they had before with a greater variety.

The Court: These are general approaches, I take it? The individual problems you are not concerned with?

The Witness: With individuals?

The Court: Individual desegregation problems. I noted in going over the plans of the plaintiffs' program that they will pair the best facility in town with the worst. Would this be desirable? They will take the newest facility in town and they will bus them to the oldest facility in town because of geographic proximity.

The Witness: It could be, but I would have no problem about the two schools.

The Court: Well, the latter is the lowest in achievement, probably, that you could imagine; 20th percentile.

The Witness: Well, if the two schools end up—if they are both predominantly middle-class, as a function of this transfer, you would predict that they would both work out pretty well. In no cases do we have any—

The Court: Is there any adjustment period?

The Witness: Well, sir, the studies that we have [659] got don't indicate that the general approach to school integration has involved any extensive planning. They have taken a relatively short period of time. They haven't done any tremendous amount of work at their school to prepare for it. Most of what they did, they did as they went along.

The Court: You mean in the South?

The Witness: No, I'm talking about the studies that I have reported in here in Chapters 5 and 6.

The Court: These are pilot programs, though, that you're talking about?

The Witness: Yes, and most of them were initiated—well, some were in preparation, but it's not extensive. They did not make extensive changes in the school program. They didn't send the teachers to school for any lengthy period of time nor were their in-service training programs particularly lengthy. In some cases they did almost nothing and in some cases the results almost tend to be positive.

The Court: Would you at least recommend that these exchanges be worked out on a carefully-planned basis and not be the result of computer print-outs?

The Witness: Well, I think the computer-print-out-type orientation that we have seen here is fine for planning, you know, how are you going to mix the students in the schools. But then the human element must come in there. I think that you can do this in a matter of a few months in terms of [660] preparation that the rest of the effort should

be devoted toward working with it as you go. Because some schools just—they typically don't have the kinds of funds; the kinds of additions to the program that they can make, to go all-out on this. But they can make efforts from studies I have reviewed that can work and, you know, it isn't all that extensive, what has been done. Particularly, if you do it at the elementary level. It's a lot less of a problem there than potentially—with the opportunity once these kids have learned to interact, it's much easier to do when you're younger and when you are less rigid. Desegregation can then continue as the students move up.

The Court: What about this specialty school? What about the value of that? That has been recommended by both sides, really, by the plaintiffs as an alternative and the defendants as a proposal, in regard to Manual High? Have you studied this type of thing?

The Witness: I'm not sure I'm familiar with the concept involved here, specialty school.

The Court: Well, it would be geared to training people from the intercity in particular trades and—or in particular occupations.

The Witness: A job-oriented program?

The Court: In part. But also it would have, as I understand it—it would be devoted to preprofessional [661] training, premedic, prelaw, and preengineering, for example, and programs for college preparatory training as well. In addition, specialized courses in such things as cosmetology and building construction; all this kind of thing. And perhaps plumbing. I don't know. Plumbing isn't a bad job nowadays.

The Witness: No, it pays pretty well. Well, I think if the school expands its organization and allows people to go into other kinds of things that may be more suited to their particular needs, that is basically a good idea and a good approach.

The Court: Well, they're doing this at both Manual and Cole. They're making more or less specialized schools out of them and programs they have never done before. This is in self-defense.

The Witness: Well, this kind of thing really goes back over a hundred years. In a situation like this, why, where mostly black and Hispano students are getting that kind of program and whites are getting another kind of program—and you have a system where grouping occurs into special programs from the elementary on up through the secondary level, it finally ends up in vocational training. And amounts to, in my opinion, programming students into basically lower occupations than the whites are programmed into. The whites are programmed into another environment. And, you know, I [662] don't know whether this is planned this way, that is my feeling.

The Court: This is a danger, you say?

The Witness: I think it's a very clear danger.

The Court: But the program they have prepared would be for this school to be a citywide school so as to eliminate its segregated character. And turn it into a specialty school that would accommodate people from every—

The Witness: It could work out that way.

The Court: Anybody else want to ask anything?

Mr. Greiner: Nothing further from us, Your Honor.

Cross-Examination by Mr. Ris (Cont'd):

Q. Dr. O'Reilly, you previously testified that you recognize the significance of community support in any operation of the school system, did you not? A. Yes.

Q. Dr. Sullivan discussed that the other day. You heard his testimony? A. No, I did not hear Dr. Sullivan's testimony but I have read his book and that is his opinion.

Q. Weren't you here when he testified? A. No.

Q. I'm sorry. I thought you were.

The Witness: No, I had some homework to do.

[663] Q. Well, he testified that it took him two years to get things lined up in Berkeley to go into a desegregation plan other than their original pilot plan. A. He is a pioneer.

Q. Pardon? A. He's a pioneer.

Q. Well, he was working with the community. He had the feel of the community and he said it would take a minimum of that time, and that community is a lot smaller than Denver, isn't it? A. Did he say that it would take a minimum of that amount of time in Denver?

Q. That was the testimony as I remember.

The Court: Well, he said this: that you can't completely disregard community acceptance as a factor; that you've got to educate the people who are making the sacrifice, not only them, but all making sacrifices in a way. The people who are allegedly getting the benefit. They all want to be educated so that they have some motivation for this and some spirit for it if it's going to succeed. I gleaned this from remarks; that you can't just leave it up to the forces

of nature or you might run into trouble. I thought he conducted a community education program.

By Mr. Ris:

Q. With regard to an expression of your opinion that this could be done in a couple of months or a [664] few months, I believe your phrase was, you don't know of any experience of any community the size of Denver, with the problems of Denver, that has done this, have you? A. No, but I don't think you can lay down and—

Q. Then you are just—

Mr. Greiner: Could the witness be allowed to finish his response, Your Honor?

The Court: Sure. Go ahead, if you've got something else to say.

A. Yes. First of all, Dr. Sullivan is a pioneer in the field and he worked out many of the techniques for gaining community support in the school. They exist now. It takes a lot of time to work those out. Just to work out the procedures, not to get them going. Now, those procedures, those plans, that experience now exists. The people can take advantage of that. I don't see why it has to take two years.

Q. You think you could take the Berkeley experience and come to Denver and do the Denver job in a couple of months? A. I really couldn't tell that, but I do think that the timetable certainly has been shortened as a result of the things that are now available.

Q. And what other community the size of Denver has used the Berkeley plan to cut down the time? [665] A. I don't know of any other community.

Mr. Ris: That's all.

Mr. Greiner: Nothing further, Your Honor.

The Court: Do you have anything else that you wish to add? We have been picking your brain here. Maybe you've got something we haven't probed.

The Witness: No, sir. I think I have talked enough, and I'm kind of run down a little bit.

The Court: Well, we will be glad to hear you if you think there is.

The Witness: There is one thing I might add that would be—

The Court: Keep your voice up, though.

The Witness: In this particular book that has been offered into evidence with the Court—

The Court: We will take that in evidence. That's 508. I doin't guarantee we will get through all of it.

(Whereupon, Plaintiffs' Exhibit 508 was received in evidence.)

The Witness: There is a chapter in there which I wrote on planning the desegregated schools. Some of the considerations that have to be made and so on. This might be a —of particular interest if this is the kind of thing that happens in Denver, which I don't know what it is. But there are other sources, too, that can be very helpful [666] in planning desegregate programs in the schools. This is one offering here. There are lots of other things available. We do have a lot of information from research, from what people have done in integrating schools that enhance the chances of achieving a successful integration program in other places. They don't

apply necessarily directly and can't be transferred, you know, just like that. But certainly they can be helpful. I think that's all I would have to add.

The Court: Anything else?

By Mr. Ris:

Q. Have you prepared such a plan for any city? A. No, I haven't prepared such a plan.

Mr. Ris: Thank you.

Redirect Examination by Mr. Greiner:

Q. Would you like to? A. I'd love to.

The Court: Well, good luck to you.

(Witness excused.)

Mr. Greiner: Your Honor, the plaintiffs rest at this point.

RICHARD KLEIN, individually and on behalf of JANET KLEIN, a minor; MR. AND MRS. FRANK RUPERT, individually and on behalf of MICHAEL RUPERT and SCOTT RUPERT,

Intervening Defendants.

THIS CAUSE, having been tried on its merits before the Court, and the Court having made and filed its Memorandum Opinion and Order dated March 21, 1970, and its Decision re Plan or Remedy dated May 21, 1970, and having therein made its Findings of Fact and Conclusions of Law:

IT IS HEREBY ORDERED, ADJUDGED AND DECREED as follows:

A. The Preliminary Injunction of this Court entered August 14, 1969, shall continue in full force and effect until September 1, 1970.

B. Effective September 1, 1970, the Preliminary Injunction shall be and is hereby amended as follows:

1. Resolution 1520 of the Board of Education of School District No. 1 in the City and County of Denver and State of Colorado, insofar as it applies to East High School, and Resolution 1524 insofar as it applies to Cole Junior High School, are hereby included in said Injunction;

2. The Board may permit pupils entering their senior year of high school in September of 1970, and who reside in the senior high school attendance areas changed by Resolution 1520 to have the option of attending the senior high schools of the attendance area in which they continue to reside or the senior high school which they attended at the close of the 1969-70 school year;

3. Pupils who reside in the attendance areas detached from Cole Junior High School and made a part of the attendance areas of Byers, Kunsmiller, Rishel, and Kepner Junior High Schools by Resolution 1524, and who are currently enrolled in other junior high schools under the District's voluntary transfer plan may continue attending the junior high school which they attended at the close of the 1969-70 school year;

4. All that portion of the area described in paragraph 1 of Resolution 1524 as detached from Smiley Junior High School attendance area and made a part of the Merrill Junior High School attendance area which lies east of Colorado Boulevard shall be made a part of the Byers Junior High School attendance area instead of Merrill Junior High School attendance area;

5. The area described in Resolution 1531 as detached from Park Hill Elementary School and made a part of

the Steck Elementary School attendance area, beginning September 1, 1970, shall be made a part of the Ellsworth Elementary School attendance area instead of the Steck Elementary School attendance area; and

6. All pupils residing in the attendance areas changed by the implementation of Resolutions 1520, 1524 and 1531 hereunder shall not be eligible for the District's voluntary open enrollment program.

C. As so amended, said Injunction shall become permanent on September 1, 1970, and continue in full force and effect until and unless otherwise modified by this Court.

IT IS FURTHER ORDERED, ADJUDGED AND DECREED that Defendant School District shall:

A. Continue its program of voluntary open enrollment as an interim measure between now and the fall of 1971; except that it shall be modified in accordance with the Defendants' proposed plan, Exhibit "V-A", and shall guarantee space in predominantly Anglo schools for all Negro and Hispano pupils in the 17 Court-designated schools commencing January 1, 1971, with transportation provided for by the District to all participants.

B. Commencing in September, 1970, implement the compensatory education programs described in its Exhibit "V-A" which, as a minimum, shall include the following:

1. Integration of teachers and administrative staff;
2. Encouragement and incentive to place skilled and experienced teachers and administrators in the core city schools;
3. Use of teacher aides and paraprofessionals;

4. Human relations training for all School District employees;

5. Inservice training on both district-wide and individual school bases;

6. Extended work years for certain teachers on a voluntary basis;

7. Programs under Senate Bill 174;

8. Early childhood programs such as Head Start and Follow Through;

9. Classes in Negro and Hispano culture and history; and

10. Spanish language training.

Those programs which are already in effect should be continued in the 1970-71 school year, with any modifications which the Board deems necessary in order to carry out this Order.

C. Desegregate grades one though six of the 14 Court-designated elementary schools, as follows:

1. Seven of such elementary schools shall be desegregated by September, 1971;

2. The remaining seven of such elementary schools shall be desegregated by September of 1972.

Desegregation shall mean that each of said schools shall have an Anglo pupil composition in excess of 50 percent.

D. Desegregate Baker Junior High School as follows:

1. Substantial progress shall be made in desegregating Baker Junior High School by the fall of 1971, along the lines set forth above for elementary schools.

2. Desegregation of Baker Junior High School shall be completed by the beginning of the school year in the fall of 1972.

E. Desegregate Cole Junior High School along the lines set forth above for Baker Junior High School or, in the alternative, establish Cole Junior High School as an open school for special education and other special programs now in effect or which the Board may wish to put into effect in the future by the school year beginning in the fall of 1971, at the option of the Board of Education.

In the event the Board chooses the second alternative, the Cole Junior High School subdistrict boundaries established for the year 1969-70, shall remain in effect but pupils living therein may transfer to other junior high schools within the school district on a space-guaranteed basis without regard to the effect on the racial composition of Cole Junior High School.

F. Establish Manual High School as an open school for the continuance and expansion of the vocational and pre-professional training programs which have been instituted by the principal, the faculty and staff. The Board shall retain the present subdistrict boundaries of Manual High School but pupils living therein may transfer to other senior high schools within the school district on a space-guaranteed basis without regard to the effect on the racial composition of Manual High School.

G. Between now and the beginning of school in the fall of 1971 and continuing through the fall of 1972, the Board shall institute an intensive program of education within the community, teaching staff and administration orienting teachers in the field of minority cultures and how effectively

to deal with minority children in an integrated environment and educating the community as to the educational benefits and values to be derived from desegregation and integration.

IT IS FURTHER ORDERED, ADJUDGED AND DECREED that this shall constitute a Final Judgment in the case and shall be entered as such provided, however, the Court shall retain jurisdiction for the purpose of supervising its implementation and modifying its provisions as may be necessary from time to time. In any event, there being no further substantive matter to decide there is no just cause for delay and the entire matter can now be appealed.

DATED at Denver, Colorado this 8th day of June, 1970.

Plaintiffs' Notice of Appeal
(Cross-Appeal)
(Filed June 24, 1970)

Notice is hereby given that all plaintiffs herein hereby appeal to the United States Court of Appeals for the Tenth Circuit from that portion of the final judgment entered in this action on the 11th day of June, 1970, relating to:

1. The Court's failure to grant relief to those schools whose combined Negro and Hispano enrollment was in excess of 70%;
2. The Court's failure to find that the attendance area boundaries of certain schools were intentionally gerrymandered to isolate and confine Negro and Hispano children and that such acts constitute *de-jure* segregation;
3. The Court's failure to find that the neighborhood school system is unconstitutional where it in fact produces segregated schools, regardless of the intent of the Board;
4. The Court's failure to require that all desegregation and integration be accomplished by September, 1971.

Decision by Court of Appeals: 10th Circuit on Motion for Stay, etc.
Nos. 336-70 and 337-70

(Filed March 26, 1971)

MARCH TERM—MARCH 26, 1971

Before Honorable John C. Pickett, Honorable Delmas C. Hill and Honorable Oliver Seth, Circuit Judges

---

WILFRED KEYES, *et al.*,

Plaintiffs,
Appellees in No. 336-70
Appellants in No. 337-70

v.

SCHOOL DISTRICT No. 1,
Denver, Colorado, *et al.*,

Defendants,
Appellants in No. 336-70
Appellees in No. 337-70

Heretofore, and on March 2, 1971 the Defendants, Appellants-Appellees, School District No. 1, Denver, Colorado, et al., filed a motion for a stay of the final decree and judgment of the United States District Court for the District of Colorado entered in the captioned cases. A response on behalf of Plaintiffs, Appellees-Appellants, Wilfred Keyes, et al., was requested by the Court and such response has now been filed.

The Court, after considering the motion and response, determines that because of events which have occurred

since July 28, 1970, when this Court denied a similar motion for stay, the motion should now be granted.

As urged in the motion, at the time the cases were submitted upon their merits the Court indicated a desire to reach an early decision in the cases on the merits and it was felt by the members of the Court that, because of the anticipated early decision, a stay was not necessary. Thereafter, the United States Supreme Court announced that it would hear oral arguments on October 12, 1970 in *Swann* v. *Charlotte-Mecklenburg Board of Education*, No. 281, and several other school desegregation cases. Such arguments were heard and this Court then determined that a decision in the captioned cases should be withheld until this Court had the benefit of the anticipated Supreme Court decisions in the *Swann* and combined cases. Decision in these have not been announced.

By reason of the fact that the original decree provided three steps in the Plan for desegregation of Denver Public Schools, step one has been carried out; the School District is about to finalize the implementation of step two; and we are convinced that it would be unfair to the School District to compel it to take further steps in the implementation of the total plan until this Court and the party litigants have the benefit of the United States Supreme Court decisions in the *Swann* and combined desegregation cases, above mentioned, which are expected to be announced in the near future.

Therefore, the requested stay is granted until further order of this Court, and all further proceedings pertaining to such portions of the plan as have not heretofore been implemented, shall be, and the same hereby are, stayed.

This stay is prospective only in its application and it shall not require the undoing of any steps of implementation which have heretofore been taken to carry out the orders of the United States District Court for the District of Colorado herein.

Deputy Clerk

Decision by U. S. Supreme Court on Stay, etc.

SUPREME COURT OF THE UNITED STATES

WASHINGTON, D.C.

(April 26, 1971)

No. ..... WILFRED KEYES v. SCHOOL DISTRICT NUMBER ONE, DENVER, COLORADO

PER CURIAM

The sole basis for the Tenth Circuit's action in granting the stay of the District Court's order in this case was the view "that it would be unfair to the School District to compel it to take further steps in the implementation of the total plan until (the Tenth Circuit) and the party litigants have the benefit of the United States Supreme Court decisions in the *Swann* and combined desegregation cases. . . ."

The decisions in those cases having now been announced, it is proper to vacate the stay and remit the matter to the Court of Appeals freed of its earlier speculation as to the bearing of our decision in the *Swann* cases.

We, of course, intimate no views upon the merits of the underlying issues.

Mr. Justice White took no part in the consideration or decision of this matter.

Decision by Court of Appeals for "Clarification of Opinion"

(Filed August 30, 1971)

JULY TERM—AUGUST 17, 1971

Before Honorable John C. Pickett, Honorable Delmas C. Hill and Honorable Oliver Seth, Circuit Judges

Nos. 336-70 and 337-70

WILFRED KEYES, etc., *et al.*,

Plaintiffs-Appellees,

v.

SCHOOL DISTRICT NUMBER ONE, DENVER, Colorado, *et al.*,

Defendants, Appellants,

and

MR. AND MRS. DOUGLAS BARNETT, etc., *et al.*,

Intervening Defendants.

Appellees-plaintiffs in the captioned appeal have filed what they denominate as a "Motion For Clarification Of Opinion." As pointed out in that motion, both the Trial Court and this Court have determined the Hallett and Stedman schools to be *de jure* segregated schools. Under authority of our opinion, immediate steps should be taken to formulate and carry out a plan of desegregation for such schools. We do not deem this action to be a proper function of an Appellate Court.

Decision by Court of Appeals for "Clarification of Opinion

The authority of the Trial Court to hear these matters and to determine the proper relief to be granted is clearly set out in the last sentence of our opinion.

DENVER PUBLIC SCHOOLS POLICY 5100

Subject: Equality of Educational Opportunity

Reference: Minutes of the Board of Education, May 6, 1964.

1. POLICY

"This Board of Education recognizes that all children within the District, regardless of racial or ethnic backgrounds, are equally entitled to the benefits of good education and that to secure such benefits the needs and aspirations of all children must be considered.

Barriers of prejudice, discrimination, and of ignorance impede equality. Individuals, schools, and community need to work together to help to overcome these barriers. Equality of educational opportunity can be achieved most readily when school and community provide conditions which enable each child to develop to his full potential.

Because individuals differ greatly in their backgrounds, their capacities, and their motivations, equality of educational opportunity must not be conceived as the same opportunity for each person; that is, for example, as schools with the same curriculum, guidance, and instruction.

The continuation of neighborhood schools has resulted in the concentration of some minority racial and ethnic groups in some schools. Reduction of such concentration and the establishment of more heterogeneous or diverse groups in schools is desirable to achieve equality of educational opportunity. This does not mean the abandonment

of the neighborhood school principle, but rather the incorporation of changes or adaptations which result in a more diverse or heterogeneous racial and ethnic school population, both for pupils and for school employees.

The individual group contributions of ethnic and racial minorities, as well as those of the majority, must become increasingly notable in the school through educational opportunities in human and intercultural relations, both for pupils and for school employees.

Finally, this Board recognizes that full realization of equality of educational opportunity involves programs which include some tried and some untried practices."

2. EFFECTIVE DATE. This policy is effective on May 6, 1964.

Plaintiffs' Exhibit 2

(Resolution Number 1490)

Part I

Policy 5100, Denver Public Schools, recognizes that the continuation of neighborhood schools has resulted in the concentration of some minority racial and ethnic groups in some schools and that a reduction of such concentration and the establishment of an intergrated school population is desirable to achieve equality of educational opportunity.

Therefore, in order to implement Policy 5100, the Board of Education hereby directs the Superintendent to submit to the Board of Education as soon as possible, but no later than September 30, 1968, a comprehensive plan for the integration of the Denver Public Schools. Such plan then to be considered by the Board, the Staff and the community and, with such refinements as may be required, shall be considered for adoption no later than December 31, 1968.

Part II

1. The Board of Education is faced with a serious social crisis. We believe a majority of citizens of Denver have confidence in the ability of this Board to meet the complex, difficult and controversial issues involved in this crisis. However, the Board is aware of wide and deep distrust of its motives and actions by certain racial and ethnic groups, and individuals within those groups. It is accused of injustice, of perpetuating, without concern, the educational and social evils occurring with de facto segregation in schools. These groups have been promised much by society in general. Repeated failures of performance have alienated good friends, have created wide distrust of motives and have created an atmosphere where responsible leadership

and concerned citizen support are being lost to the schools and to the community. We are increasingly aware of feelings of antagonism, of isolation, of hopelessness, of deep and unyielding bitterness, real and intense. These feelings are strongly held and are not subject to easy communication to those who do not have a similar background. The Board now states that its policy will be to eliminate distrust of its motives and performance by the minority community.

2. Also, the Board is aware of a different and widespread community distrust of Board motives and actions. This is evidenced by a substantial credibility gap, based on the fears of many citizens that their freedom of choice of home location and concurrent school selection is or will be threatened by proposed Board actions, particularly actions in the solution of the educational problems of de facto minority ethnic and racial segregation. The words "bussing", or "reverse bussing" (meaning the transportation of white children into minority populated schools), express the undefined fears of large numbers of Denver citizens that somehow the Board and its policies threaten deeply felt sensibilities. Here there is abroad in Denver a degree of distrust that is frightening in its intensity and has many ramifications. Expressions of such feelings are frequently prefaced by express denials of prejudice, racial or otherwise, and the Board accepts such denials at face value and as evidence of the existence of good will towards the minority communities of Denver. The Board recognizes that the voluntary support of citizens who presently hold such views is necessary to the proper functioning of the school system.

3. A third source of distrust of Board motives and performance is that body of citizens of all races, including many whites, who recognize and accept that segregated education

is harmful to both minority and majority children and who now insist that the Board increase its efforts to eliminate the educational evils of de facto segregation. The Board has obviously failed to convince these people that its past actions, and particularly the recent approval of major junior high school construction and the proposed voluntary movement of elementary minority pupils represent good faith efforts in this area. The confidence of these citizens must be restored and the Board proposes to seek their active support.

4. A fourth force presently apparent and widely communicated to the Board is a reluctance throughout the city to see the tax load—primarily the real estate tax load—increased in any degree. In this area, the Board has apparently failed to communicate to the community the validity of the financial needs of the District. Increased State aid, if and when forthcoming, will be welcome but realistically can do little to reduce the real estate tax levy and will; in the long run, create a further class of concerned taxpayers to whom the function, purpose, method and objectives of the school system must be explained and whose understanding of such matters must be obtained. The Board states that its policy is and will be to foster such understanding.

5. The death of Dr. Martin Luther King has focused the attention of concerned people of good will upon the deep and festering injustices of modern urban existence with its contradictions of opportunity and achievement, in an America dedicated, at least in theory, to the equality of opportunity for all men. Particularly in the area of public education, Dr. King's death has caused thoughtful persons of all races, particularly whites, to reassess beliefs long

and dearly held and to question the pace of change and even its direction.

A. The Board is resolved to act as a unifying agency for Denver in these times. To this end, it requests the Superintendent in implementation of the purposes of Resolution No. 1490 and in response to the community concerns stated above, to include within the plan required by Resolution No. 1490, or to submit separately but at the earliest practical time or times, a further plan, or a series of plans, including specific timetables, to accomplish the following:

1. The reduction of concentrations of minority racial and/or ethnic groups in schools and the integration of school populations.

2. The actual existence of equality of educational program in all schools, regardless of location, including, without limitation, faculty quality, training, experience and attitude, course offerings, equipment and facilities.

3. The active participation in programs within the metropolitan Denver area to establish more diverse or heterogeneous racial and/or ethnic school populations.

4. The emphasis at all instructional levels of the individual and group contributions of ethnic and racial minorities.

5. The maximum involvement, consistent with maintenance requirements, of the school plant in the community activities of the Denver metropolitan area, to commence during the forthcoming summer.

6. Human relations and sensitivity training for all teaching and administrative personnel and assurance that

personnel recruitment and assignment policies are consistent with the realities of our multiracial and multiethnic world.

7. The establishment of citizen community support to accomplish the widest possible community understanding of the aims, purposes, motives and affairs of the School District.

B. To consider, among such other factors as appear proper, the following:

1. The use of transportation and the degree to which transportation should be mandatory or voluntary.
2. The desirability of temporary or permanent closing of certain schools.
3. The existence of community attitudes and opinions.
4. The requirement for all children of course offerings in minority group cultural, historical, social and economic contributions to our society and of qualified minority group member teachers.
5. The development of "magnet" or "laboratory" schools in core areas, including attendance policies for such schools.
6. The use of community resources and resource people.
7. The availability to all children at all levels of textbooks and other instructional materials which fairly and favorably represent minority groups and individuals.
8. The availability for use by persons in all parts of the the District of school facilities for extracurricular educational, recreational and community purposes.

Plaintiffs' Exhibit 2

9. The feasibility of some form of extended school year.

10. The degree to which present vocational, technical and job oriented course offerings meet the needs of the children of this District.

11. The active extension of intercultural and interracial experiences for children, including the expansion of the cultural art center program and similar programs.

C. The Board is impelled by a sense of urgency in these matters. To this end, it has requested the Superintendent to submit his plan responsive to Part I of this resolution within the periods therein provided. The plans required by Part II should be submitted as and when prepared for Board and public consideration and for adoption at the earliest possible time. As an example only, plans for the fullest use of school facilities for community summer programs are obviously needed now. Also, preliminary plans for community organizations can properly be expected shortly. In any event, the Board requests the Superintendent to present plans responsive to Part II of this resolution not later than the regular meeting of the Board in September 1968 and periodically thereafter until complete plans are forthcoming.

INTRODUCTION

THE PROBLEM

The Special Study Committee on Equality of Educational Opportunity is pleased to submit this Report and Recommendations. It was charged to study and report on the present status of educational opportunity in the Denver Public Schools, with attention to racial and ethnic factors, and to make recommendations. This it has done. The Committee's report is presented to the Board of Education and through the Board to the people of the Denver community in the hope that its findings and recommendations will be accepted in the constructive spirit in which they are made.

The members of the Committee brought with them the diverse attitudes of various segments of the total Denver community—geographic, ethnic, racial, economic—ranging from pride in the status quo and objection to any change, through various shades of interest without particular opinion, to feelings that real inadequacies exist, with strong desires for change. Over the period of its work, however, and when facts were fully known and freely discussed, the Committee has gradually found substantial areas of agreement as to principles, findings and recommendations. The extent of agreement within and by a group as diverse as this suggests that when facts are known and freely considered, with mutual respect for apparently conflicting attitudes, solutions can be found to sensitive problems which at first seem insoluble. In this the Committee sees reason to expect substantial acceptance of its report by the total Denver community. The approach must be, however, on a level of mutual trust and mutual respect; agreements of substance and purpose can be had only when each group admits the existence of a position other than its own. Happily, in the

Committee's experience, this did occur. Hopefully, in the public consideration of this report, it will also occur.

The Denver community has pride in its schools. There is pride in its programs for meeting the needs of the most able and ambitious; in its programs for the college bound; in the achievements of the "average" pupil who is motivated toward school accomplishments; in the programs for pupils who are physically handicapped; in the programs for pupils of limited ability (although the need is greater than the teachers and facilities available); in the broad offerings of Opportunity School to help adults in search of training and retraining; and in the national reputation of the Denver system as a forerunner in education.

There is also public concern. There is general concern about overcrowding; concern over the needs of pupils not truly interested in academic pursuits; concern about dropouts; concern for the adequacy of opportunity offered to the brilliant student; concern, widely found, that somehow, through the work of the Committee or otherwise, the rights of members of the majority culture freely to live and associate as they wish and to send their children to schools in their own community were in jeopardy; concern that Denver's residential patterns, however caused, result in unequal educational opportunity for minority children, particularly the Negro racial minority and the Spanish surnamed cultural minority.

It is with this last area of concern that the Committee, because of its charge, has been primarily concerned. There are two separate but interwoven problems. One is the problem of the education of the urban disadvantaged child; the other, the problem of the effect of racial segregation on the educational process. They are not the same problem but because of an apparent correlation of proportionately large numbers of minority racial (Negro) and ethnic

(Spanish-American) groups with the other factors which create the class of urban disadvantaged, the two are generally linked. Care must be taken not to confuse available solutions.

In common with every large city in America, Denver has an appreciable number of citizens who, by virtue of the nature of their lives and their environment, probably, under present conditions, will never be able to compete and to succeed in accordance with the standards of the dominant urban middle class culture, although they may have been entirely adequate and successful in their former, often rural, environment. Experience elsewhere would indicate that unless present trends are reversed, this group will increase numerically and will form a caste whose adult members tend to be permanently uneducated, unemployed and unemployable. Not only does this create a financial drain on the entire community, but it represents a tragic loss in human potential and productivity. These people differ totally among themselves in background and heritage but when exposed to the urban, mechanized, automated and competitive society of a metropolitan center, develop certain similar characteristics. They live crowded into the area of lowest real estate values; they lack skills with which to compete and the skills they have are no longer of value; they lack the ability to achieve according to the standards of the dominant culture; they lack motivation for traditional education; they lack satisfaction from personal achievement; they are the last hired and first fired; they are in short, disadvantaged.

In Denver, as in other northern cities, the urban disadvantaged group is made up of all races and ethnic backgrounds. A large part are Negroes from the rural South, who arrive unskilled, partially educated, burdened by traditions of legal inequality and unable to compete success-

fully. In common with most Negroes, they have experienced subtle or overt acts of discrimination throughout their lifetimes, with inevitable damage to the self image in both adults and children. While they have been exposed to the cultural background and standards of the majority, they have not realized its benefits and to them the principles of democracy may be far from its practices.

Perhaps a greater number of the urban disadvantaged are the Spanish surnamed from New Mexico and southern Colorado, brought to the area first as miners and agricultural workers and forced into the city by the closing of the mines, the seasonal nature of agricultural work and the increased mechanization of farms. These people and their ancestors have lived for more than three centuries in the small villages in the valleys and mountains of the upper Rio Grande. They bring to Denver value patterns and cultural characteristics which often interfere with adjustment to urban life and the values now dominant in an urban competitive society. For example, goals based upon the concept that worth depends upon the accumulation of property or money have little meaning to a people whose traditional and most valued characteristic is that of sharing with others what they may acquire.

The urban disadvantaged most frequently move to the older sections of town, where race, ethnic identity, language barriers, lack of motivation factors, lower educational standards, lack of skills and chronic unemployment combine to create a "culture of poverty" from which escape becomes most difficult. A child of whatever racial or ethnic background in such a culture, without fault of his own, usually adapts to the value characteristics of his neighborhood. While these value concepts are not generally the accepted values of the middle class majority culture, they do have strengths and characteristics upon which much can be built.

Plaintiffs' Exhibit 20

However, the public schools, basically reflecting the interest of the majority culture, have established standards, methods, vocabulary and procedures based upon the experiences and value characteristics of that culture, and with these the urban disadvantaged child cannot achieve. Predictably, unless the educational system to which this child is inducted recognizes and compensates for the factors which since his birth have affected him, he will inevitably be behind when he enters the system, will get further behind as he attempts to progress through it, will achieve significantly less from it, and in a disturbingly high percentage of instances will never complete the secondary educational program. Because of the Committee's particular charge and because of the high incidence of minority racial and ethnic composition in the urban disadvantaged in Denver, this report will necessarily deal at some length with the problems of this group.

Entirely apart from the problem of the disadvantaged child, there is in Denver real possibility of unequal educational opportunity because of the existence of clusters of minority racial (Negro) and ethnic (Spanish surnamed) groups within the city.

In a "neighborhood" school system one inevitable result of concentrations of races and ethnic groups because of housing patterns is concentrations of children in the schools into the same groups. There is abundant authority to the effect that such "de facto" separation in schools may result in educational inequalities, and there is in Denver wide belief among the racial and ethnic minorities that the schools to which their children go are in some way unequal. In addition, however, there is the fact that there is not available to many children (perhaps a majority of the total school population, regardless of race or ethnic background) the democratic experience of education with members of

other races and groups with which they will have to live and compete. The responsibility to eliminate or reduce this result where possible and to compensate for it where elimination is not possible by the removal of prejudice (whether based on color, ethnic or religious background, false values, or any other cause) must be the responsibility of the school to its pupils. This report will suggest ways in which this may be done.

Denver retains two major assets: Effective leadership still within the community and a framework of public opinion which has not yet polarized into opposite camps. These assets have been lost to other cities to the east and west where similar problems have existed and have not been met firmly and openly. So far, perhaps because of the relative smallness of the numbers involved, or perhaps because of the initiative taken by various local groups, there has not yet been the massive flight to the suburbs which has so often occurred and is now occurring in other major population centers. This has resulted in the retention within metropolitan Denver of responsible leadership in all of the various groups which make up the population of the City. Also, while areas of tension exist, the people of Denver are still communicating. There is time in which to find and apply reasonable solutions.

The Committee hopes that what follows will be of help in reminding Denver that while it has a fine school system it also has problems, in common with all other large urban areas, the solution of which must be accepted as the responsibility of the total community. As a functioning part of the total community, the schools will have a part to play.

THE COMMITTEE

The Special Study Committee on Equality of Educational Opportunity in the Denver Public Schools was created by resolution of the Board of Education on June 27, 1962.

Plaintiffs' Exhibit 20

Members of the Committee were selected by the Board from more than 500 names submitted by interested citizens and organizations and were formally appointed on November 7, 1962.

Formation of the Committee stemmed from proposals included in the School Administration's February 1962 Report to the Board on Pupil Population, School Boundaries, Pupil Transportation, and School Buildings to construct a new junior high school at 32nd and Colorado Boulevard and to continue certain optional boundary lines in the East-Manual high school area. Because the population which lives within the boundaries proposed for the school at 32nd and Colorado Boulevard is predominantly Negro, these proposals led to statements by some citizens that any such action by the Board would constitute "de facto" segregation of pupils and that this was forbidden under the United States and Colorado constitutions.

At several of its meetings in March, April and May, 1962, the Board of Education was urged to consider racial-ethnic factors in determining school boundaries, in locating new schools, and in other aspects of school operation. In addition, other evidence had reached the Board that throughout certain areas of Denver there was public concern over the educational opportunity offered to pupils of minority racial and ethnic groups. Appointment of a special study committee to include citizens of the community, was urged by groups representing many segments of the community, not only those immediately affected.

In creating the Special Study Committee, the Board of Education affirmed in its resolution that "all children within the District, regardless of racial or ethnic background, are equally entitled to the benefits of good education, and that to secure such benefits, the needs and aspiration of all children must be considered."

Plaintiffs' Exhibit 20

The Committee was charged to "study and report on the present status of educational opportunity in the Denver Public Schools, with attention to racial and ethnic factors in the areas of curriculum, instruction and guidance; pupils and personnel; buildings, equipment, libraries and supplies, administration and organization; school-community relations, and to recommend improvements in any or all of such specific areas."

The Committee which made this study and prepared this report was composed of a chairman, two vice-chairmen, three residents, not employed by the Denver Public Schools, from each of the eight high school areas of the District, and six professional staff members from the Denver Public Schools.

The members of the Committee, in addition to geographic diversity, also brought with them attitudes of the varied racial, ethnic, cultural and economic groups which form the total Denver community.

In the course of its study, the Committee invited all school employees and any interested organizations and citizens to write suggestions and comments relative to its area of inquiry. Nearly 200 letters were received and thoughtfully considered. Interviews were conducted with administrative personnel, with principals, teachers and non-teaching personnel, with parents, students and interested citizens. Elementary, junior and senior high schools were visited (including classroom visits) in all six general areas of the Denver school system. Reports from other cities where similar surveys had been conducted were studied. Consultants in the field, from Denver and from other parts of the country, spoke to and counseled with the Committee as a whole and with small groups. The school curriculum, its modifications, current pilot projects in instruction, text-

books and teaching materials and equipment were studied. Pertinent data in many areas were gathered and analyzed by the Committee. Open meetings were held in the eight high school districts in Denver, at which in excess of 2300 citizens expressed their views. A professional opinion research firm was employed to obtain information on community attitudes toward the schools. A summary of this report will be found commencing on Page 38 of the Appendix. Twenty-five meetings of the full Committee were held; 30 meetings of the steering committee were held; 132 meetings of individual subcommittees were held (not including countless interviews by individual members); and 87 visits in 62 different schools were made.

The Planning Services Department of the Denver Public Schools divides the school district into six areas. To compare data the same six areas have been used by the Committee. It must be noted that these area boundaries are based on elementary school districts so that, while junior and senior high schools are included in the areas where they are located geographically, such schools may draw pupils from beyond the area in which they are situated. Page (1) of the Appendix shows a map of these six areas and a detailed description of them commences at Page (9) of the Appendix.

The Committee is deeply grateful to the Denver Public Library and to the very many individuals and organizations who so unselfishly made available their help and counsel, without which this report would not have been possible.

In this area of the Committee's investigation, it has reviewed the principle of the "neighborhood" school and its application in the Denver school system; the method by which fixed but not unchangeable boundaries are established; the existence of optional areas of attendance; the

transfer of pupils; and the use of pupil transportation at School District expense.

BOUNDARIES — As used in this report, the "neighborhood school" is a school which is more or less centrally located within an area bounded by definite lines which children within that area are expected to attend. The report will discuss the policies which in the past have governed the establishment of school boundaries and the location of schools in Denver and will suggest additional policies which now are applicable. However, the basic principle of neighborhood schools is the prescribing of a clearly defined *geographic* area, determined by considerations which best serve the interests of all of the pupil population. The neighborhood school principle should not, however, be used to freeze school boundaries and changing conditions will require periodic review and revision of established boundaries.

The Committee generally endorses the application of the neighborhood school concept in the organization of the Denver school system, not because it is traditional in the American school system or because it has been adhered to in the past in Denver but because in the Committee's opinion an objective evaluation of the benefits and predictable results outweigh deficiencies when compared with other methods of assigning pupils to schools. Among such benefits are rational distribution of the school population, convenience to the child in getting to and from the school, a close home and school relationship between parents and teachers, placement of pupils in relation to maximum use of school plants.

The Committee is fully aware that the composition of the school population within any attendance areas tends to be

homogeneous in all American cities, and its investigations confirm that in Denver this occurs in a substantial number of individual school areas, particularly at the elementary level. In approving the continued adherence to the neighborhood school principle, the Committee emphasizes that it should never be used deliberately as a device to contain or restrict any ethnic or racial group.

In administering the allocation of pupils to schools under a neighborhood school plan, it is axiomatic that the reasons and policies which dictate how boundaries are drawn and maintained are all important. The Denver Board of Education has no written policy governing the setting of boundaries; however, the Committee was given the following unofficial summary of rules and procedures which currently govern decisions regarding boundaries and which are apparently well known to and followed by those charged with this duty:

There is every evidence that these rules and procedures have been followed carefully and without prejudice in the granting of transfers. Approvals are granted only where exceptional circumstances, within these rules, permit an exception to the principle that each student should attend his own neighborhood school. Once such a transfer has been approved, the circumstances are reviewed annually to verify that the condition which resulted in transfer still applies.

During 1963, 122 transfers to a school other than the one in the district in which they live were approved for elementary school pupils (less than 2/10 of one per cent of the total pupils); 29 for junior and senior high school students (less than 7/100 of one per cent of the total pupils).

The Committee finds itself generally in accord with the rules governing pupil transfer which are being followed by Denver school administrators. It recognizes fully the need

for keeping tight control of any exceptions to the rules which govern the administration of the neighborhood school principle.

Nevertheless, there appears to be a possibility of continuing firm control of transfers while permitting a flexibility of individual choice.

The open enrollment plan as recommended would provide that at stated intervals (probably annually toward the close of the school year in the Denver system) all schools would be reviewed to determine their student population as compared with their student capacity. Those schools having a previously stated percentage (90% is working well in Detroit) of population to capacity would be declared as open schools. Such a plan of open enrollment has been used in other communities, with reported success.

The names and location of the open schools would be publicized widely before the end of the current school year, giving the number of enrollments outside its own boundaries which would be permitted for each school. Children from any place within the Denver School District would be permitted to request enrollment in those schools, with acceptance on a first-come, first-served basis. Such transfers would be permitted for each school until its previously established quota had been met, or until a previously announced date in the new school year had been reached.

Under this type of transfer, and this type only, no reason for the requested transfer would be expected or required. Students taking advantage of this open enrollment would be required to furnish their own transportation.

Recommendation On Pupil Transfers

The Board of Education should supplement its present transfer policy by the adoption of a plan of limited open

enrollment generally in accordance with the procedures discussed above. The plan adopted by the school system in Detroit is suggested as a model.

TRANSPORTATION OF STUDENTS

At the present time, students are transported at District expense only under certain circumstances.

The extent of transportation of students in the current year, together with the reasons for such transportation, is given in the following summary. Except for students at Boettcher School, no high school students are transported:

Reason	No. Elementary Pupils	No. Junior High Pupils
From overcrowded schools to those with available capacity	183	0
From newly annexed areas which do not have any schools	1,552	436
From Lowry Field	331	129
From within own school sub-district where required traveling distance (possibly allowing for unusual safety hazards) is over ¾ mile for elementary pupils or 1½ miles for junior high pupils	1,493	3,270
To Boettcher School	102	59 (senior high pupils included)

The Committee believes that the transportation of students is sometimes necessary but is never desirable because, among other disadvantages, it involves considerable added costs, inconveniences to pupils and parents, particularly in emergency or illness, inability of the pupil to enter into extra-curricular activities, and difficulty in promoting close contacts with parents.

Plaintiffs' Exhibit 20

Transportation of pupils for the sole purpose of integrating school populations is regarded by the Committee as impractical.

RECOMMENDATION ON PUPIL TRANSPORTATION

Transportation of pupils should be regarded as an expedient rather than as a solution to problems, including the problem of racial imbalance in the schools.

OPTIONAL AREAS

Optional Areas are defined as specific geographic areas in which the students who reside therein have a free choice to attend either one or the other of two schools designated to serve such area. The Committee finds that optional areas, once established for whatever reason, have a tendency to continue after the reasons which caused them to be formed cease to exist. In recent years, however, existing optional areas have been reduced and at the present time, after the boundary changes which were made effective in September, 1962, only the following optional areas remain:

A. *High Schools**

Manual-North, Manual-East (two areas), East-Washington

B. *Junior High Schools***

Smiley-Cole

---

* Appendix page 7. Map of Senior High School Boundaries and Optional Areas.

** Appendix page 6. Map of Junior High School Boundaries and Optional Areas.

Plaintiffs' Exhibit 20

C. *Elementary Schools****

Columbine-Harrington, Park Hill-Stedman, Lincoln-McKinley

The advantages of establishing fixed geographic areas for all schools have been discussed and are recognized by the Committee, subject only to the adoption of a limited open enrollment policy and the continuation of the transfer policies now in effect. The use of optional areas forms no part of rational administration of the system for fixing boundaries which the Committee has recommended.

RECOMMENDATION ON OPTIONAL AREAS

All optional areas should be fully eliminated at the earliest possible date.

* * * * *

2. The Board should adopt a written policy recognizing that the Denver school system necessarily deals with pupils of different racial, ethnic, economic and cultural backgrounds. To accomplish equality in the application of the education process, sensitivity to, and the practice of, good human relations at all levels is required.

3. The administration should formulate by the end of the current school year a program of inservice human relations training, making use of applicable and available resources, both in the community and from outside.

4. All teachers and all other school personnel should complete such program without delay, with priority

*** Appendix Map 1. Six Areas Based on Elementary School Boundaries.

to be given to personnel assigned to schools containing substantial numbers of culturally disadvantaged pupils.

5. The administration should continue to cooperate with universities and colleges in promoting seminars in the field of human relations for teachers and other school personnel. These seminars should include materials drawn from intergroup relations, sociology, anthropology, psychology and other behavioral sciences.

ASSIGNMENT AND TRANSFER OF TEACHERS

Teachers employed by the Denver Public Schools are on probationary status for the first three years. After three years of successful experience, teachers achieve tenure status. During the probationary period the teacher's services are appraised twice each year, and if during this period a teacher is found to be unsatisfactory, he is "counseled out" and the usual result is that such teachers leave at the end of two years. The administration does not assure any particular assignment and reserves its prerogative to place the new teacher where it deems advisable.

Changes of assignment (transfers) are now governed by Policy 1617A effective April 1, 1963 (Appendix pages 31-34).

The Committee has seen no evidence that the administration has made any effort to appeal to qualified teachers to consider assignment or transfer to schools in areas largely populated by culturally disadvantaged children. It does appear that the percentage of teachers on probationary status in such schools may be higher than the percentage of such teachers in other areas.*

---

* Appendix page 35, Study of Teacher Status—Elementary and Secondary Schools.

Plaintiffs' Exhibit 20

In the earlier part of this section of its report, the Committee has discussed various means to make more effective the educational process in schools largely attended by culturally disadvantaged children. These practices (small class sizes, use of teacher aides, reduction in administrative duties and human relations training) appear to the Committee to be incentives which should be used to implement the challenge to professional teachers to succeed in such assignment, so as to induce qualified teachers to seek assignment to such schools. An affirmative recognition of the value of such service by the Board and the administration would also help.

While precise statistics are not available, the Committee believes that almost all of Denver Negro teachers were initially assigned to schools having a high proportion of Negro students. A few have been transferred to other schools. There is now at least one Negro teacher in each senior high school except for Manual which has eleven. Nine out of thirteen junior high schools have one or more Negro teachers, and Cole has thirty-three. One or two Negro teachers have been placed in each of seven elementary schools other than those which contain large numbers of Negro children.*

Spanish surname teachers are fewer in number than Negro teachers and the housing pattern of people of Spanish-American background is more dispersed. However, it does appear that relatively few Spanish surnamed teachers have been assigned to areas where there are few or no residents with Spanish-American background.

As a result of its interviews the Committee is convinced that race has been relevant in the assignment of teachers.

---

*Appendix page 36, Estimate of Distribution of Teachers of Minority Background.

Plaintiffs' Exhibit 20

It appears that the administration has been extremely reluctant to place Negro and Spanish-American teachers in predominantly white schools because of concern with a possible lack of acceptance on the part of a white neighborhood and a realistic assessment of the possible lack of support by some principals and faculties.

The Committee also has found evidence that some teachers are assigned and transferred without regard for their training for the particular grade. Because secondary teaching calls for certain definite skills and elementary teaching for others, the teaching process at all levels can suffer from this practice. This would be particularly true in the education of culturally disadvantaged children.

Recommendations As To Teacher Assignment and Transfer

1. The Board of Education should establish and enforce a policy that qualified teachers of minority background will be assigned throughout the system.
2. The constructive policy of the Superintendent's office in establishing written transfer policies should be continued.
3. All transfer policies should be reviewed annually by the Board and by the administration.
4. School principals should communicate with the particular administrative official who actually makes assignment decisions in regard to transfer and assignment of teachers into and out of their schools. Teachers should be encouraged to undertake the same type of conference with such administrator. Principals, however, should not have final authority to accept or reject any teacher assignment or transfer.

Plaintiffs' Exhibit 20

5. After a transitional period during which the other recommendations of this Committee are implemented, particularly with respect to training in human relations, no teacher (probationary or permanent) should be assigned to teach in a school containing substantial numbers of culturally disadvantaged children unless his preparation, experience, and/or personal qualifications demonstrate the probability that he will be successful in teaching culturally disadvantaged children.

6. A systematic program should be established by the administration to encourage teachers to teach in schools attended by culturally disadvantaged children and to emphasize affirmatively the personal rewards and satisfactions gained by teachers who work in such schools.

7. In policy statements adopted by the Board and by the administration, it should be made clear that teacher preference as to assignment is subordinate to other criteria and that each qualified teacher in the system is expected to be able to teach and to be prepared to teach in any school where the administration thinks he can be most effective.

8. Teachers should be assigned or transferred to the elementary or secondary schools with major consideration given to their qualifications for teaching at a certain level.

9. So that this will not be used as an excuse for careless placement or perpetuation of assignments contrary to these recommendations, the residence of a teacher should have nothing to do with his assignment except in unusual cases.

No. .....

WILFRED KEYES, *et al.*,

Petitioners,

vs.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, *et al.*

PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

Petitioners respectfully pray that a writ of certiorari issue to review the judgment and opinion of the United States Court of Appeals for the Tenth Circuit entered in this matter on June 11, 1971.

Opinions Below

The June 11, 1971 opinion of the Court of Appeals, whose judgment is herein sought to be reviewed, is reported at 445 F.2d 990 and is reprinted in the separate Appendix to this Petition, pp. 122a-158a. The prior opinions of the United States District Court for the District of Colorado, also reprinted in the Appendix, are reported as follows: (1) July 31, 1969, granting petitioners' motion for preliminary injunction, 303 F. Supp. 279 (Appendix, pp. 1a-19a); (2) August 14, 1969, on remand to make preliminary injunction more specific and consider applicability of portion of Civil

Plaintiffs' Exhibit 20

(Map)

(See Opposite)

Rights Act of 1964, 303 F. Supp. 289 (Appendix, pp. 20a-43a); (3) March 21, 1970, opinion on merits granting permanent injunction, 313 F. Supp. 61 (Appendix, pp. 44a-98a); and (4) May 21, 1970, opinion on relief or remedy, 313 F. Supp. 90 (Appendix, pp. 99a-121a).

Jurisdiction

The judgment of the Court of Appeals was entered June 11, 1971. On September 8, 1971, Mr. Justice Marshall entered an order extending the time for the filing of this petition to and including October 9, 1971. The jurisdiction of this Court is invoked pursuant to 28 U.S.C. §1254(1).

Constitutional and Statutory Provisions Involved

This case involves the first section of the Fourteenth Amendment to the Constitution of the United States, which provides as follows:

> All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Question Presented

Whether school authorities who have over several decades created and aggravated school segregation and minimized school integration, and whose policies and practices systematically afford white students greater educational oppor-

tunities than black or Spanish-surnamed students attending segregated schools, must take all possible affirmative steps to eliminate segregation throughout their school system and otherwise equalize educational opportunity.

Statement of the Case

This is a school desegregation action brought by Denver schoolchildren and their parents on June 19, 1969 pursuant to 42 U.S.C. §1983 and 28 U.S.C. §1343(3) and (4). While the litigation followed a newly elected school board's cancellation of a partial desegregation plan adopted by the predecessor board, the complaint sought the complete desegregation of the Denver public school system and provision of equal educational opportunities to all Denver schoolchildren.[1]

The Denver School District

The respondent school district is coterminus with the City and County of Denver, Colorado. During the 1968-69 school year—immediately preceding this lawsuit and prior to implementation of the preliminary injunction (303 F. Supp. 279, 289)—the school district operated 118 schools[2] serving 96,577 children. Denver students include significant

---

[1] Petitioners' Complaint alleged, *inter alia* (First Count, Second Cause of Action) (emphasis supplied):

> B. By the following described acts, *among others*, defendants and/or their predecessors have over the years and are at present deliberately and purposefully attempting to create, foster and maintain racial and ethnic segregation within the School District; . . .
>
> C. These various actions of said defendants have effected in the School District a significant segregation of pupils by race and ethnicity. . . .

[2] Nine senior high schools, 17 junior high schools and 92 elementary schools.

numbers of Negro (12.0-15.2%) and Spanish-surnamed (15.2-23.1%) children.[3]

During the 1968-69 school year (prior to this suit) there was substantial segregation of students in the Denver public schools, as shown by the following table:

Students Attending Schools:	*White Students*		*Black Students*		*Spanish-surnamed Students*	
	No.	*%*	*No.*	*%*	*No.*	*%*
0-25.0% white	1778	2.8%	10110	74.2%	6174	31.6%
25.1-50.0% white	2931	4.6%	797	5.8%	3885	19.9%
50.1-75.0% white	12075	19.0%	1848	13.6%	5469	28.0%
75.1-100% white	46635	73.5%	877	6.4%	4001	20.5%
	63419		13632		19529	

The Evidence

This pattern of segregated schooling had persisted for a considerable time in Denver.[4] Much of the evidence demon-

[3] The following table shows the distribution of Denver schoolchildren by race and grade level:

	White		*Negro*		*Spanish-surnamed**	
	No.	*%*	*No.*	*%*	*No.*	*%*
Sr. High (10-12)	14,852	72.8	2,442	12.0	3,091	15.2
Jr. High (7-9)	14,855	68.8	2,898	13.4	3,858	17.8
Elementary (K-6)	33,678	61.7	8,304	15.2	12,594	23.1

* Statistics include children of "Other" races in this category; such children constitute 1% of total student enrollment in school district.

[4] Perception of the problem led previous school boards to appoint two committees to recommend solutions, see n. 8 *infra*, and to adopt the plan to desegregate several Denver schools which was annulled by the new board on June 9, 1969 and then reinstated by the district court's preliminary injunction. The district court's order was itself vacated by the United States Court of Appeals for the Tenth Circuit and subsequently reinstated by order of Mr. Justice Brennan. *See Keyes* v. *School Dist. No. 1, Denver*, 396 U.S. 1215 (1969).

strated Denver's use of the now familiar galaxy of techniques by which boards and administrators have sought to preserve school segregation.

Prior to 1950, almost every secondary school and several elementary schools in Denver had "mandatory" attendance zones immediately surrounding them and larger "optional zones" between them; students living in an "optional zone" were permitted to attend either school serving it (PX 20 at p. A-12).[5] While there are no records in evidence showing the use made of this device prior to 1950, thereafter it caused continued attendance of minority-race students at predominantly minority-race schools and avoidance of such schools by white students (H. 63, 78, 112-14; PX 401, 406).

Before 1950, the black and Spanish-surnamed population of Denver generally occupied older portions of the central city.[6] Negroes were concentrated in a well-defined area surrounding the "Five Points," 303 F. Supp. at 282, Appendix at p. 4a. Most of the public schools located within this area were predominantly, if not completely, Negro. *Ibid.* Virtually all of the city's Negro high school students attended Manual High School although their numbers were small enough that the high school was not majority-black; the school also enrolled many Spanish-surnamed students but at that time was the only high school in the Denver

[6] Prior to this Court's decisions in *Shelley* v. *Kraemer*, 334 U.S. 1 (1948) and *Barrows* v. *Jackson*, 346 U.S. 249 (1953), Colorado courts enforced racially restrictive covenants. *E.g.*, *Chandler* v. *Ziegler*, 88 Colo. 1 (1930); *Steward* v. *Cronan*, 105 Colo. 393 (1940).

school system with a minority of white students (H. 78, PX 401).

At the same time and until at least 1964, it was the policy of the Denver school authorities to assign black and Spanish-surnamed teachers to the schools in which black and Spanish-surnamed students were concentrated.[7] The result was that while no school had a majority of black or Spanish-surnamed teachers, almost all of these teachers were concentrated in a few schools, while most schools had no minority-race teachers (H. 2011-14). This concentration in fact continued through the 1968-69 school year just prior to the institution of this suit (PX 254, 256, 258).

Following 1950, Denver's population increased markedly. Undeveloped areas were settled and new territory added to the city by a large number of annexations. Schools were constructed in these areas; they opened as and have remained virtually entirely white. Both the Spanish-surnamed and black communities expanded, the latter along a narrow corridor eastward from the "Five Points" area. 303 F. Supp. at 282, Appendix at p. 4a.

Respondents' school construction policies traced these patterns and accelerated the isolation of students into racially identifiable schools: In 1953 the system replaced Manual High School—already minority-white and enrolling almost all of the city's Negro high school students—with a new facility located two blocks away, serving the

---

[7] The school district defended this policy, despite its segregation of school faculties, on the ground that it furnished successful "role models" for minority race students to emulate (H. 2013-14). The district court found, however, that the system's faculty assignment policies were generated by a fear that the white community would not accept the placement of minority-race teachers in white schools, 303 F. Supp. at 284, Appendix at p. 9a-10a. On appeal, the Tenth Circuit ignored this finding and instead accepted the school district's justification. 445 F.2d at 1007, Appendix at p. 150a.

same mandatory attendance area and limited in size to serve only the black and Spanish-surnamed students in that area or anticipated to be added thereto by population growth (H. 78, 296; PX 401). In 1960 the Barrett Elementary School was built in a black neighborhood at the extreme eastern edge of the Negro residential area but its size was restricted and its boundaries manipulated—its easternmost boundary ran along its playground—to conform to existing residential patterns and insure that it would be a black school from its opening (303 F. Supp. at 282; Appendix at p. 5a). The Manual and Barrett sites were selected and constructed over the opposition of representatives of the black community.[8]

Changes in attendance areas of Denver public schools, for the ostensible purpose of relieving overcrowding at various schools, also resulted in maintaining or exacerbating segregations: In 1952, optional areas were instituted between an overcrowded, increasingly black elementary school (Columbine) and adjacent, underutilized, totally white facilities (Harrington and Stedman)—relieving the overcrowding slightly by permitting the white students at Columbine to withdraw (H. 106-07, 112-14; PX 406). In 1956 overcrowding at East High necessitated adding part of the Manual-East optional area to the mandatory zone for a still-under-capacity Manual. However, the change in-

[8] Similar opposition to the announced 1962 plan to build a junior high school at the Barrett site, in fact, led to the appointment of the first of two committees to investigate "the present status of educational opportunity in the Denver Public Schools, with attention to racial and ethnic factors. . . ." That committee, reporting in 1964, "criticized the Board's establishing of school boundaries so as to perpetuate the existing de facto segregation 'and its resultant inequality in the educational opportunity offered'." 303 F. Supp. at 283, Appendix at p. 6a. The second group made its report in 1967 and "noticed the intensified segregation in the northeast schools and recommended that there be no more schools constructed in northwest Denver." *Ibid.*

corporated only the established black residential portion of the optional area (H. 291, 296) although enlarging the Manual High zone still more would have better utilized both schools' capacity, made better use of public transportation lines (which ran directly from the remaining optional area to Manual) and also resulted in desegregation (H. 281-86). A change similar in operation and effect was made the same year between the two feeder junior high schools for Manual and East: Cole (black)[9] and Smiley (white), respectively. Both proposals were resisted before the school board by representatives of the black community because they would segregate.[10] Similarly, in 1962 and 1964, boundary changes for Stedman Elementary School (where Negro enrollment was increasing) were made, purportedly to relieve overcrowding. But only predominantly white areas of the Stedman zone were shifted to white schools; alternative rezoning plans which would both have avoided concentration of black students at Stedman as well as have relieved its capacity problem were rejected (303 F. Supp. at 285, Appendix at p. 11a). Finally, Boulevard Elementary School was turned into a school enrolling a majority of Spanish-surnamed students in 1961 when, in

---

[9] As in the case of Manual, Cole enrolled almost all of the school system's black junior high school students at this time.

[10] The school district had previously constructed an addition to relieve overcrowding at Smiley in 1952 rather than adjust its boundary with Cole, which was then underutilized (PX 215, 215A). The same thing occurred in 1958 when Smiley was again enlarged (PX 215).

Overcrowding at East High School was relieved by the construction of a new George Washington High School in 1960, while Manual remained underutilized (PX 210). The new George Washington High attendance boundaries took only whites from East (PH 547-49; PX 20, Map No. 7). In 1964 the adjustment in the East-George Washington boundary, supposedly made to create a more heterogeneous school population at George Washington (PH 547-49), took 200 white students and only 9 black students from East (PX 585-86).

response to a decrease in capacity caused by the demolition of an older section of the facility, a white portion of its attendance area was transferred to the adjacent and overwhelmingly white Brown Elementary School (H. 115-26).

There were also boundary alterations apparently unrelated to any pressing capacity problems. For example, in 1962 all optional zones surrounding Morey Junior High School were eliminated. White portions of the former optional zones between Morey and Byers, to its south,[11] were added to the Byers zone; black areas between Cole[12] or Baker[13] (to the north) and Morey were added to Morey, resulting in the immediate transformation of the school enrollment from majority- to minority-white (313 F. Supp. at 71-72, Appendix at pp. 63a-64a). Similarly, Anglo areas were transferred from Hallett to Phillips in 1962 and 1964; in the latter year, this was accompanied by the transfer of a black area from Stedman to Hallett (PX 75, 76). Again, the effect was to accelerate and emphasize the rapid transformation of Hallett into a racially isolated minority school.

When Denver first utilized mobile classrooms in 1964, 28 of 29 such portable buildings were located in the increasingly black Park Hill area,[14] where they effectively contained an expanding black population (303 F. Supp. at 285; Appendix at p. 11a). At the same time, overcrowding in other (but predominantly white) schools in Denver was met by school board transportation of students—sometimes

---

[11] At this time Byers was an all-white junior high school while Morey, prior to the changes discussed in text, was predominantly white.

[12] See n. 9 *supra*.

[13] Baker was predominantly white but with a significant minority-race enrollment.

[14] The remaining portable was placed at a school attended by a majority of Spanish-surnamed students (PX 101).

across the width of the school district—to other (white) schools where capacity was available (P.H. 540-41)[15] despite somewhat closer available capacity at (predominantly minority) schools in the central or core city (P.H. 544). The school district's excuse for busing whites to only white schools was its desire to maintain low pupil-teacher ratios at minority schools in order to offer compensatory programs; its explanation for the creation of extra capacity for black students in black Park Hill schools by the addition of portables was that black parents surveyed at the time preferred it to one-way busing back to the core city area (H. 479-81).

Finally, when in 1964 the district eliminated all optional attendance zones (in accordance with the recommendation of the committee investigating educational opportunity for minority students, see n.8 *supra*, which found that optional areas intensified segregation), it substituted a "limited open enrollment" policy. The only limit of this policy was the availability of space in the various schools; it was the equivalent of free choice and under it Denver permitted wholesale minority-to-majority transfers until it was finally repealed in 1969 (H. 126-32; PX 99, 100).

The result was a school system marked by intense racial and ethnic separation.[16] The proof also demonstrated to the satisfaction of the district court that the Denver public schools were also systematically disadvantaging their black

---

[15] Much of the overcrowding was due to annexations of additional areas contiguous to existing schools. But, even after new schools were constructed in the annexed territory, the space in the former receiving schools was not used to accommodate—and integrate—the overcrowding in the Park Hill schools. Thus, whereas prior to the construction of the Traylor Elementary School, some 400 white students were bused across the district to the University Park School, after Traylor was completed, only 36 Park Hill students were transferred to University Park (PH. 543).

[16] *Cf.* p. 4 *supra*.

and Spanish-surnamed students educationally. Most of these students attended all- or predominantly minority schools which lacked various tangible measures of educational quality. The facilities themselves were generally among the oldest and smallest in the district, the faculty generally had less teaching experience in the system than faculties at white schools, and the faculty turnover rates at these schools were highest (303 F. Supp. at 284-85; 313 F. Supp. at 79-80; Appendix at pp. 9a-10a; 80a-81a). At the same time, various objective measures of educational attainment indicated that the students in these schools were suffering: they had higher dropout rates and consistently (and drastically) lower mean achievement test scores than other schools. Finally, expert testimony offered by plaintiffs explained these results not just in terms of the tangible differences among the schools, but the intangible effects of school board policies—such as the concentration of the less-experienced minority-race teachers in these schools—as well: low pupil and teacher morale, feelings of isolation and inferiority affecting motivation, etc.

The Rulings Below

The district court ruled, 303 F. Supp. 279, 289, Appendix, pp. 1a, 20a, that the respondents had acted unconstitutionally in cancelling their prior desegregation plan, and that schools in the northeast Denver (Park Hill) area which would have been affected by the plan were segregated because of the school district's "segregation policy." The court, therefore, preliminarily enjoined respondents to implement the terms of their original plan, as originally scheduled, commencing with the 1969-70 school year.[17, 18]

---

[17] However, the district court stated explicitly that the school board could still adopt and implement another plan "embodying the underlying principles" of the withdrawn plan, if it so desired.

[18] See n. 4 *supra*.

These findings were carried forward in the district court's opinion on permanent relief, 313 F. Supp. 61, Appendix, p. 44a. However, as to other Denver schools, the district court ruled that there had been no sufficient showing of a segregation policy, although the court admitted that "[a]s to these schools, *the result* is about the same as it would have been had the administration pursued discriminatory policies. . . ." 313 F. Supp. at 73; Appendix at pp. 66a-67a (emphasis supplied). The same practices regarding school construction, boundary changes, additions to existing schools, minority teacher assignments, optional areas and open enrollment which led the court to conclude that a "segregation policy" was enforced in the Park Hill area were nevertheless viewed by the district court, in their application to other Denver schools, as isolated individual occurrences not demonstrative of a pattern nor indicative of any policy.

The Court of Appeals agreed with the district court both as to segregation policy in Park Hill and as to the lack thereof affecting other Denver schools. 445 F.2d at 990-1002, 1005-07; Appendix, pp. 122a-139a, 147a-150a.

The district court also found that schools which had in excess of 70% black or 70% Spanish-surnamed student enrollments[19] were failing to offer their students educational opportunities equal to those afforded white students in other Denver public schools. 313 F. Supp. at 83, Appendix at p. 89a. Both because the court concluded that the segregated character of the school was the basic (but not exclusive) cause of this unequal offering, 313 F. Supp. at 81, Appendix at pp. 86a-87a, and also because the court found (after a further hearing on the question of remedy alone) that *desegregation* was an *essential* element of any adequate

[19] Some in the Park Hill area and some not.

remedy for these conditions, 313 F. Supp. at 96-97, Appendix at p. 112a, the district court enjoined respondents to desegregate and otherwise equalize the educational offering at these schools.

The Court of Appeals apparently expressed no disagreement with the district court's *findings*, but balked at approving its order because to do so would, it said, amount to requiring desegregation of schools which the district court found had not been segregated by official policy. This, said the Court of Appeals, would require that it overrule *Downs* v. *Board of Educ. of Kansas City* 336 F.2d 988 (10th Cir. 1964), *cert. denied*, 380 U.S. 914 (1965), and it declined to do so.[20]

[20] The Court of Appeals accepted the lower court's finding that leaving the schools segregated would mean continued lack of educational opportunities for their students, as well as the finding that to achieve equal opportunities would require desegregation as well as compensatory programs (both of which the district court ordered). But it then held that since desegregation alone would not suffice, it should not be required at all. (445 F.2d at 1004, Appendix at p. 144a).

REASONS FOR GRANTING THE WRIT

I.

Certiorari Should Be Granted to Resolve Conflicts in Principle Among the Lower Courts.

The issue in this case is not *de facto* versus *de jure* segregation.[21] Whatever the term "de facto" may mean, this case involves a school district in which segregation has been brought about by regular, systematic and deliberate choice of the school authorities.

This is the first case of this sort before this Court from an area where officially required segregation was not previously authorized by statute. *Cf. Gomperts* v. *Chase*, No. A-245 (September 10, 1971) (Mr. Justice Douglas, Circuit Justice). But the lower courts have had a significant amount of litigation involving segregation imposed by government —but not by State law. *E.g., Taylor* v. *Board of Educ. of New Rochelle*, 191 F. Supp. 181 (S.D.N.Y.), *appeal dismissed*, 288 F.2d 600 (2d Cir.), 195 F. Supp. 231 (S.D.N.Y.), *aff'd* 294 F.2d 36 (2d Cir.), *cert. denied*, 368 U.S. 940 (1961); *Clemons* v. *Board of Educ. of Hillsboro*, 288 F.2d 853 (6th Cir.), *cert. denied*, 350 U.S. 1006 (1956); *Spangler* v. *Pasadena City Bd. of Educ.*, 311 F. Supp. 501 (C.D. Cal. 1970); *Davis* v. *School Dist. of Pontiac*, 309 F. Supp. 734 (E.D. Mich. 1970), *aff'd* 443 F.2d 573 (6th Cir. 1971); *Bradley* v. *Milliken*, 433 F.2d 897 (6th Cir. 1970), 438 F.2d 945 (6th Cir. 1971), Civ. No. 35257 (E.D. Mich., September 27, 1971); *Johnson* v. *San Francisco Unified School Dist.*, Civ. No. C-70-1331 SAW (N.D. Cal., July 9, 1971), *stay denied sub nom. Guey Heung Lee* v. *Johnson*, —— U.S. ——, No. A-203 (August 25, 1971) (Mr. Justice Douglas, Circuit Justice);

---

[21] In *Swann*, this Court referred to "so-called 'de facto segregation.'" 402 U.S. at 17.

Soria v. *Oxnard School Dist.*, 328 F. Supp. 155 (C.D. Cal. 1971); *Oliver* v. *Kalamazoo Bd. of Educ.*, No. K88-71 (W.D. Mich., August 19, 1971) (oral opinion), *aff'd*, No. 71-1700 (6th Cir., August 30, 1971); *cf. United States* v. *Board of School Comm'rs of Indianapolis*, Civ. No. IP-68-C-225 (S.D. Ind., August 18, 1971).

Such cases are, of course, different from the so-called "de facto" suits. *See Bell* v. *School of Gary*, 324 F.2d 209 (7th Cir. 1963), *cert. denied*, 377 U.S. 924 (1964); *Deal* v. *Cincinnati Bd. of Educ.*, 369 F.2d 55 (6th Cir. 1966), *cert. denied*, 389 U.S. 847 (1967); *cf. Downs* v. *Board of Educ. of Kansas City*, 336 F.2d 988 (10th Cir. 1964), *cert. denied*, 380 U.S. 914 (1965).[23]

The cases in which the lower courts have determined that a school district has maintained a policy of segregation should be governed by the same rules, regardless of geography or the source of the official segregation, as cases where the initial source was State law. But there is a division among the lower courts; and this is reflected in

---

[23] These suits involved a variety of different claims—including, in some of them, a claim not raised here and expressly reserved in *Swann* (402 U.S. at 23): "whether a showing that school segregation is a consequence of other types of state action, without *any* discriminatory action by the school authorities, is a constitutional violation requiring remedial action by a school desegregation decree" (emphasis supplied). The reference in text is to that claim, rejected by the Courts of Appeals, and not to the factual claims—also rejected on the records in those cases—that a segregation policy was enforced by the school board.

We submit parenthetically that *Bell* and *Downs*, which involved the disestablishment of relatively recent prior state-imposed dual school structures, would probably have been decided differently in light of *Green* v. *County School Bd. of New Kent County*, 391 U.S. 430 (1968) and *Swann*. *Compare Bell* v. *School City of Gary*, 324 F.2d 209 (7th Cir. 1963) *with United States* v. *Board of School Comm'rs of Indianapolis*, Civ. No. IP-68-C-225 (S.D. Ind., August 18, 1971); *compare Downs* v. *Board of Educ. of Kansas City*, 336 F.2d 988 (10th Cir. 1964) *with United States* v. *Board of Educ., Tulsa*, 429 F.2d 1253 (10th Cir. 1970).

the opinions of the courts below in this case, applying different rules to different geographical parts of the same school system. Whereas this Court and the lower courts require desegregation throughout a southern school district where segregation was imposed by law (even though it persists only in certain portions of that district), the lower courts here (and in some other places) have confined desegregation to discrete areas where particular segregating deeds have been uncovered and identified.[13]

Consideration of the Park Hill area schools separately from the rest of the Denver school system resulted from the lower courts' insistence that petitioners demonstrate a segregating act at every school in order to justify relief.

---

[13] A similar position has been taken by some lower courts in interpreting *Swann's* directive that "[t]he court[s] should scrutinize such [remaining black] schools, and the burden upon the school authorities will be to satisfy the court that their racial composition is not the result of present or past discriminatory action on their part." 402 U.S. at 26. See, e.g., *Mapp* v. *Board of Educ. of Chattanooga*, Civ. No. 3564 (E.D. Tenn., July 26, 1971); *Calhoun* v. *Cook*, Civ. No. 6298 (N.D. Ga., July 28, 1971). But we do not understand *Swann* to require a complex sociohistorical analysis of residential patterns by district courts in order to determine the relative impact of segregated schools' influence upon segregated housing patterns, and segregated housing patterns' influence upon school segregation. If that were indeed necessary, there would be no need of the presumption against one-race schools which *Swann* announces—and announces precisely for the reason that the school-related and other influences upon housing patterns in a school district cannot be neatly separated and evaluated as independent causal factors. The inquiry is whether the effects and vestiges of segregation were ever disestablished with the thoroughness required by the remedial principles announced in *Swann;* if not, then all remaining vestiges must be eliminated. We submit that the District Court stated the correct rules in *Mannings:*

> There is no evidence of any substantiality in the record supporting the position that segregation in Hillsborough County is attributable in any measurable degree to voluntary housing patterns or other factors unaffected by school board activity. As indicated earlier, the record makes plain that prior to and since 1954 certain schools in Hillsborough County have been

This narrow focus facilitated compartmentalized consideration of different areas of the district.[24] But the court's concern should have been school authorities' actions anywhere in the district creating or maintaining racial and ethnic segregation. As the Court of Appeals for the Sixth Circuit said—correctly, we submit—in reviewing a similar case, *Davis* v. *School Dist. of Pontiac*, 443 F.2d 573, —— (6th Cir. 1971), *aff'g* 309 F. Supp. 734 (E.D. Mich. 1970):

> We observe, as did the District Court, that school location and attendance boundary line decisions, for the past 15 years, more often than not tended to perpetuate segregation. Attempted justification of those decisions in terms of proximity of school buildings, their ca-

---

set aside for black students and others for white students. With exceptions these schools remain racially identifiable. Over the years defendants have submitted numerous plans for desegregation, not one of which has altered the naked fact that most blacks attend schools which are inordinately black whereas most whites attend schools in which there are no blacks or only miniscule numbers of blacks. The Court has been unable to locate a single instance in the record where defendants took positive steps to end segregation at a black school and thereafter segregation returned fortuitously. Indeed, no serious attempt has ever been made to eliminate the many black schools. Based on experience, the Court concludes that what resegregation there has been is a consequence of the continued existence of schools identifiable as white or black.

Mannings v. *Board of Public Instruction of Hillsborough County*, Civ. No. 3554-T (M.D. Fla., May 11, 1971) (slip opinion at p. 39).

Where a policy of segregation is established for which the constitutionally required corrective action has not been taken, the presumption against one-race schools is not rebutted by a claim that, independent of the discriminatory school board action, other factors might have produced the segregated situation.

[24] Just as in *Davis* v. *Board of School Comm'rs of Mobile*, 402 U.S. 33 (1971), this Court indicated that the scope of the inquiry into remedy should be system-wide, so we submit should the scope of the inquiry into the matter of constitutional violation be system-wide.

pacity, and safety of access routes requires inconsistent applications of these criteria. Although, as the District Court stated, each decision considered alone might not compel the conclusion that the Board of Education intended to foster segregation, taken together, they support the conclusion that a purposeful pattern of racial discrimination has existed in the Pontiac school system for at least 15 years.

Accord, United States v. *School Dist. No. 151*, 286 F. Supp. 786 (N.D. Ill. 1967), *aff'd* 404 F.2d 1125 (7th Cir. 1968), *on remand*, 301 F. Supp. 201 (N.D. Ill. 1969), *aff'd* 432 F.2d 1147 (7th Cir. 1970), *cert. denied*, 402 U.S. 943 (1971); *Taylor* v. *Board of Educ. of New Rochelle, supra.*

In finding actionable segregation in the Park Hill schools, the courts below applied the rule declared in *Brewer* v. *School Bd. of Norfolk, Virginia*, 397 F.2d 37 (4th Cir. 1968), enforced in, for example, *Davis* v. *School Dist. of Pontiac, Michigan*, 309 F. Supp. 734 (E.D. Mich. 1970),[25] and accepted by this Court in *Swann*, 402 U.S. at 7, 20-21, that school officials may not through school construction and the drawing of attendance boundaries which follow racial residential patterns, create segregated schools. Erroneously, however, the lower courts did not apply that rule when they considered other Denver schools, but excused segregatory acts on the grounds that they were "remote in time" and that intervening population shifts, not such acts, resulted in the present racially or ethnically identifiable status of affected schools. 313 F. Supp. at 75, 445 F.2d at 1006, Appendix at pp. 71a-72a, 148a-149a. *Cf. Calhoun* v. *Cook, supra.* While population shifts are of course a factor, so also are the school authorities' dis-

[25] See, *e.g.*, *United States* v. *Board of Educ., Tulsa*, 429 F.2d 1253 (10th Cir. 1970).

criminatory practices, see *Indianapolis, supra*—and no court is equipped to make (nor are litigants equipped to present a sufficient basis for) the fine sociological judgment as to the relative influence of the two factors upon the present racial complexion of a school.[26]

During the 1950-1960 period, the school district was locating and constructing new schools on the expanding periphery of the district, away from black population centers, and thus providing easy refuge for white students who desired to avoid attendance at the minority schools the district was helping to create. When both aspects of the policy are considered, we think it hard to imagine that the school district's segregatory acts did not play a role, perhaps the major role, in creating the existing segregated schools in Denver.

The courts below also excused segregation in the Denver core city area because they held that while the *effect* was clear, petitioners had failed to prove *intent*. 313 F. Supp.

---

[26] As the district court in the Detroit (*Bradley* v. *Milliken*) case recently put it:

> We recognize that causation in the case before us is both several and comparative. The principal causes undeniably have been population movement and housing patterns, but state and local governmental actions, including school board actions, have played a substantial role in promoting segregation. . . .
>
> 6. Pupil racial segregation in the Detroit Public School System and the residential racial segregation resulting primarily from public and private racial discrimination are interdependent phenomena. The affirmative obligation of the defendant Board has been and is to adopt and implement pupil assignment practices and policies that compensate for and avoid incorporation into the school system the effects of residential racial segregation. The Board's building upon housing segregation violates the Fourteenth Amendment. See, *Davis* v. *Sch. Dist. of Pontiac, supra*, and authorities there noted.

Bradley v. *Milliken*, Civ. No. 35257 (E.D. Mich., September 27, 1971) (typewritten opinion at pp. 22, 24).

at 75, Appendix at p. 71a, 445 F.2d at 1006, Appendix at p. 149a. See Petition for Writ of Certiorari, *Wright* v. *Council of the City of Emporia*, O.T. 1970, No. 70-188. This is an obvious failure to apply the traditionally stringent equal protection doctrine that the state must justify, by showing a compelling interest,[37] conditions amount to racial classifications, regardless of intent. *Loving* v. *Virginia*, 388 U.S. 1 (1967); *Kennedy Park Homes Ass'n, Inc.* v. *City of Lackawanna*, 436 F.2d 108 (2d Cir. 1970) (per Mr. Justice Clark), *cert. denied*, 401 U.S. 1010 (1971); *Hawkins* v. *Town of Shaw*, 437 F.2d 1286 (5th Cir. 1971) (*rehearing en banc granted*); *Jackson* v. *Godwin*, 400 F.2d 529 (5th Cir. 1969); *Lee* v. *Macon County Bd. of Educ.*, No. 30154 (5th Cir., June 29, 1971); *Stout* v. *Jefferson County Bd. of Educ.*, No. 29886 and 30387 (5th Cir., July 16, 1971). No specific intent was required by the courts below in finding that respondents had caused the Park Hill area segregation.

Finally, we submit, and in clear contradiction to established law, the Court of Appeals chose to ignore (despite F.R. Civ. P., Rule 52) the deliberate pattern and policy of the school district, continuing until at least 1964, of assigning minority race teachers to schools in which minority students were concentrated because it gave minority students role models to emulate. 445 F.2d at 1007, Appendix at p. 150a. Other courts have long rejected any such proposed educational justification for unconstitutional segregation. *E.g.*, *Dove* v. *Parham*, 282 F.2d 256, 258 (8th Cir. 1960). And it is clear that such faculty assignment practices are violative of the Fourteenth Amendment. *Swann*, *supra*, 402 U.S. at 18; *Bradley* v. *School Bd. of Richmond*,

---

[37] We doubt that any such interest exists to justify segregation in the public schools. *Brown* v. *Board of Educ.*, 347 U.S. 483 (1954). *Compare* 445 F.2d at 1006, Appendix at p. 148.

382 U.S. 103 (1965); *Rogers* v. *Paul*, 382 U.S. 198 (1965); *Green* v. *County School Bd.*, 391 U.S. 430, 435 (1968). Indeed, a school district's faculty assignment policies are a reliable indication of its overall policy goals since there can be no independent justification (such as that claimed for "neighborhood schools") for a pattern of racial assignments, all teachers being subject to assignment by the district at its discretion. *See, e.g., United States* v. *School Dist. No. 151, supra; Davis* v. *School Dist. of Pontiac, supra; Meredith* v. *Fair*, 305 F.2d 360 (5th Cir.), *cert. denied*, 371 U.S. 828 (1962).

The simultaneous application of contradictory standards by the courts below leads to anomalous results. Thus, for example, both Manual and Barrett were built in black neighborhoods at the extreme eastern edges of their mandatory attendance zones, which zones were drawn so as to exclude white residential areas. Barrett Elementary School opened all black; Manual High (a larger facility) enrolled nearly all the city's black high school students and was the only minority-white school in Denver when it opened. Yet the tests of intent, remoteness and intervening cause, and popular consensus, were deemed relevant only to Manual but not to Barrett.

To desegregate a few schools but leave others as they are, against the background of segregation brought about by the school authorities, will do nothing to assuage the difficulty. Instead, this partial solution, like the partial solutions of free choice and limited rezoning, will result only in further impaction of the existing segregation. *Mannings* v. *Board of Public Instruction of Hillsborough County, supra*, n. 23.[21]

---

[21] See, *e.g.*, *Racial Isolation in the Public Schools*, A Report of the U. S. Commission on Civil Rights (1967); *Report of the National Advisory Committee on Civil Disorders* (1968); Coleman, *Equality of Educational Opportunity* (1966).

The courts below limited the remedy by applying to the same lawsuit conflicting rulings of other courts which have passed upon similar matters. Thus this case is affected more than any other by those conflicts, which should be resolved by this Court in order to establish a uniform approach to school desegregation, North and South.

II.

Other Inequalities in the System, Coupled with Racial Segregation, Provide Further Reason for Requiring the Only Workable Remedy: Racial Integration.

Moreover, here the harm of segregation is compounded by educational inequality of other sorts. The district court found that the educational opportunities available to minority race students relegated to predominantly minority schools in Denver were far below the general level of education in the district. The court applied traditional equal protection analysis and found this practice created a racial classification of students in Denver for which no compelling justification could be demonstrated. Therefore, the court required both desegregation and provision of special programs at these schools in order to equalize educational opportunity for their students. The district court took this step not on the basis of any untested assumptions but after careful consideration of the testimony offered by the parties at a hearing directed toward establishing the appropriate remedy for the constitutional deprivation.

The Court of Appeals reversed this part of the district court's order. We think the Court of Appeals misconstrued the basis of the district court's ruling, but, moreover, its own opinion drains the concept of equal educational opportunity (recognized by this Court in *Brown*) of its meaning by declaring segregation-related inequalities irremediable

in the federal courts unless that segregation is proved to have been caused *entirely* by school authorities.

We have argued above that both the Court of Appeals and the district court applied erroneous legal principles in ascertaining the existence and extent of state-imposed segregation in the Denver public schools, and what remedy must follow. If we are correct, then the schools which were ordered desegregated by the district court because they were failing to offer an equal educational opportunity must be desegregated anyway. We believe, however, that irrespective of the Court's conclusion on that subject, the district court's order—that tangible inequalities should be remedied by desegregation—was otherwise proper and should have been affirmed.

The district court's finding of unequal educational opportunity rested upon petitioner's demonstration that (a) there were certain tangible, measurable differences in the school system's allocation of resources to predominantly minority schools, e.g., teacher experience differentials in favor of white schools and generally older and smaller facilities at minority schools; (b) there were as well tangible, measurable differences in educational outcome measures between the same two groups of schools, e.g., characteristically lower achievement test scores and higher pupil dropout rates at minority schools and a progressive regression in the academic progress of the minority child from lower to higher grade levels in the minority schools; and (c) the weight of expert opinion was that measured differences in educational outcomes of the sort found in Denver were not the result of differences in innate ability but of the composition of the student body at predominantly minority schools. Petitioners' expert witnesses[21]

[21] Dr. Dan Dodson, Dr. Neil Sullivan, Dr. James Coleman and Dr. Robert O'Reilly.

testified at length about the *intangible*[30] educational disadvantages which result from racially concentrated minority group schools. In sum, petitioners' expert witnesses testified that the observed inequalities were due to factors *within the control of the school system*, including the composition of the student bodies at various schools.

The district court concluded that no compelling justification for the systematic deprivation of educational opportunity[31] to minority race students[32] had been

---

[30] The testimony was undisputed that segregation produces feelings of isolation, inferiority and powerlessness in the minority children; produces low academic expectancy among teachers which then becomes a self-fulfilling prophecy of low achievement; produces low morale among both pupils and teachers, and a high rate of teacher turnover as most teachers sought to escape these schools at the first opportunity.

[31] Petitioners have never claimed nor did the district court's decision in any way rest upon some notion that educational opportunity was solely related to, or demonstrated by, an equivalent performance by every student. Obviously students will have, on an individual basis, different aptitudes and will perform, ideally, to the full extent of their varying capabilities. What is significant about the tangible measures of output here, such as achievement test scores, is two things. *First*, they establish a consistent and systematic differential between white schools and minority schools of such magnitude as to vitiate any suggestions that the observed pattern is merely the result of the interplay of different individual capacities. *Cf. Stell* v. *Savannah-Chatham Board of Education*, 318 F.2d 425 (5th Cir. 1963), 333 F.2d 55 (5th Cir. 1964). *Second*, they confirm the testimony of petitioners' expert witnesses that such segregated schools characteristically produce educationally undesirable effects upon the children and the teachers and can be expected to adversely affect the educational opportunity afforded the students.

[32] The "70%" limitation of the district court as well as his refusal to require relief to schools which had less than 30% white students but also less than 70% black or 70% Spanish-surnamed students, were of the court's own fashioning. Although petitioners raised the combined minority-race school issue on appeal to the Tenth Circuit, that court did not pass upon it and a remand for that purpose upon disposition of this cause upon this Petition would be appropriate.

shown,[33] and the court, therefore, ordered corrective measures—including desegregation (which petitioners' expert witnesses had testified was essential if the major cause of the inequality—segregated schools—was to be eliminated).

Thus, the district court's order gave substance to the constitutional guarantee of equal educational opportunity. *Cf. McLaurin* v. *Oklahoma State Regents*, 339 U.S. 637 (1950); *Sweatt* v. *Painter*, 339 U.S. 629 (1950); *Sipuel* v. *Board of Regents*, 332 U.S. 631 (1948); *Missouri ex rel. Gaines* v. *Canada*, 305 U.S. 337 (1938). The Court of Appeals, however, imposed a purely extraneous limitation upon this remedy for a constitutional deprivation. To some extent, the Court of Appeals' ruling is based upon a misconstruction of the district court's ruling but, even accepting its reading of the lower court opinions, the Court of Appeals has plainly held that there is no remedy for the unconstitutional deprivation of educational opportunity to minority race students if execution of that remedy would conflict with a school system's adherence to the "neighborhood school" assignment policy.

On either ground, the decision is wrong and ought to be reviewed by this Court because of the national implications of a ruling that the Constitution provides no remedy for the racially unequal provision of education by the state.[34]

Memorandum Opinion and Order

William E. Doyle, District Judge

I. Jurisdiction

This is before us on a motion for temporary injunction. Examination of the complaint reveals that jurisdiction is invoked by reason of Title 28 U.S.C. § 1343 (3) (4), which authorizes the Court to entertain suits which seek to redress injuries resulting from violations of the Constitution of the United States. Although the Declaratory Judgment Act has been invoked, this does not of itself confer any independent jurisdiction. The Civil Rights Act is also drawn into play, Title 42 U.S.C. §§ 1983, 1985. It is alleged that the State of Colorado, acting through its agents, violated plaintiffs' constitutional rights. By reason of the allega-

tions of the complaint and the facts which have been presented, it is determined that there is subject matter jurisdiction to hear the cause.

The plaintiffs, who are school children, allege through their parents that their rights have been violated and continue to be violated through acts that have been described. Consequently, they are aggrieved persons. There is no dispute about their identity or their interest in the case, nor is there any question raised as to the propriety of a class action on behalf of all persons similarly situated. Consequently, there does not appear to be any problem about jurisdiction, personal or subject matter, to entertain the cause. Both sides have conceded that it is a matter that needs immediate attention and that it should be disposed of without delay.

II. The Issues

The pleadings describe alleged injuries resulting from the plaintiffs having been subjected to unequal treatment with respect to their right to an education. They seek to enjoin the implementation of a resolution of the School Board passed on June 9th of this year which would have rescinded previous resolutions which had made some effort to mitigate or reduce segregation which allegedly had existed in schools in the northeast part of Denver. The defendants deny that there has been any actionable segregation. Although no answer has been filed, they maintain that segregation, if any, exists by reason of maintaining neighborhood schools and natural migration, and that no action on their part has brought this about or intensified it. Basically, this is the issue which has been tried here, and has been tried rather extensively.

Opinion of District Court of July 31, 1969

The complaint herein contains several causes of action and counts. At this stage of the proceedings we are concerned only with the first cause of action and the counts which are related to it. All of these allegations pertain to the rescission of School Board Resolutions 1520, 1524 and 1531, which resolutions made changes in the attendance areas of certain high schools, junior high schools and elementary schools in northeast Denver, and undertook to desegregate these schools, all of which had become or were becoming predominantly Negro schools. It is alleged that on June 9, 1969, the newly elected School Board, by motion, rescinded all three resolutions. The complaint alleges that the action of the Board was in violation of the plaintiffs' Constitutional rights—the Fourteenth Amendment—and seeks a decree reinstating Resolutions 1520, 1524 and 1531.

The motion for preliminary injunction which is now before us seeks to enjoin the implementation of Board Resolution 1533 which would adopt and follow the policy which would carry out the practices which existed prior to the Board's adoption of Resolutions 1520, 1524 and 1531. The temporary injunction seeks maintenance of the status quo and, specifically, an order enjoining the School Board from modifying the purchase order for school buses, destroying documents relating or pertaining to the implementation of Resolutions 1520, 1524 and 1531 and, thirdly, from taking any action or making any communications to faculty, staff, parents or students during the pendency of the suit which would make it impossible or more difficult to proceed with the implementation of Resolutions 1520, 1524 and 1531. The defendants have not filed an answer. However, at the hearing they denied that any of their acts were invalid and generally maintained that they had made good faith efforts to integrate the schools in question to the extent that it was

possible to do so considering the geographic circumstances. They further maintained that the segregation, if any, was merely de facto growing out of the neighborhood character of the schools, and that the acts of the School Board do not amount to actionable or de jure segregation.

III. The Evidence of the Case

Attention at this hearing has focused primarily on the schools in northeast Denver, and particularly on the area which is commonly called Park Hill. The alleged segregated schools, elementary and junior high schools in this area, have acquired their character as such during the past ten years. The primary reason for this has been the migration of the Negro community eastward from a confined community surrounding what is commonly called "Five Points." Before 1950 the Negroes all lived in a community bounded roughly by 20th Avenue on the south, 20th Street on the west, York Street on the east and 38th Avenue on the north. The schools in this area were, and are now, largely Negro schools. However, we are not presently concerned with the validity of this condition. During this period the Negro population was relatively small, and this condition had developed over a long period of time. However, by 1960 and, indeed, at the present time this population is sizable. As the population has expanded the move has been to the east, first to Colorado Boulevard, a natural dividing line, and later beyond Colorado Boulevard, but within a narrow corridor—more or less fixed north-south boundaries. The migration caused these areas to become substantially Negro and segregated.

The trend of the population was apparent long before the migration of the Negro population eastward to Colorado Boulevard was completed. Notwithstanding this fact, the

Barrett Elementary School was built in the late 1950's for the purpose of serving a residential area west of the school, which area was destined in a short time to become populated by Negro families. When this school was completed and opened, its population was predominantly Negro. In a few years it became overwhelmingly Negro in its composition.

In the early 1960's Colorado Boulevard was somewhat of a dividing line and the area east of Colorado was for the most part Anglo. Thus Stedman School, which was a few blocks east of Colorado Boulevard, was almost entirely Anglo, while Barrett was predominantly Negro. The migration soon continued across Colorado Boulevard and within a very short time not only was the Stedman School predominantly Negro, the other elementary schools in that area, including Hallett at 2950 Jasmine Street, Smith at 3590 Jasmine Street and Phillips at 6550 East 21st Avenue (to a lesser degree) were also predominantly Negro. The single junior high school, Smiley, at 2540 Holly Street, also became predominantly Negro. Since these students attend East High School, this development threatened to result in East becoming a Negro school as well.

It is noteworthy that notwithstanding that Barrett and Stedman Schools were close to one another, no effort was made by the School Board to incorporate any part of the Stedman district into Barrett. The latter had been constructed as a small school tailored to accommodate the segregated population west of Colorado Boulevard only. None of Stedman's overcrowded white population were diverted to Barrett, and, of course, none of the Barrett students were diverted to the white Stedman.

It is also noteworthy that Negro children who had, prior to the construction of Barrett, attended Park Hill School

which had been substantially integrated, were, after the opening of Barrett, required to attend the latter school thus further assuring that Barrett would be black and Park Hill predominantly white.

Notwithstanding the Barrett experience, a recommendation was made in 1962 to construct a junior high school at 32nd and Colorado Boulevard near the Barrett School. This project was rejected after much debate and following public protest that it would be a racially segregated junior high school.

After this junior high school experience, a Special Study Committee on Equality of Educational Opportunity in the Denver Public Schools was created. Its mission was to "study and report on the present status of educational opportunity in the Denver Public Schools, with attention to racial and ethnic factors in the areas of curriculum, instruction and guidance; pupils and personnel; buildings, equipment, libraries and supplies, administration and organization; school-community relations, and to recommend improvements in any or all of such specific areas." The report of the Committee criticized the Board's establishing of school boundaries so as to perpetuate existing de facto segregation "and its resultant inequality in the educational opportunity offered." It recommended that the Board policy consider racial, ethnic and socioeconomic factors in establishing boundaries and locating new schools so as to minimize the effects of de facto segregation. It also recommended that boundaries be set so that the neighborhood established represent a heterogeneous school community.[1]

---

[1] In consideration of school-community relations, the Report stated:

> In its study of the Denver community, the Committee finds that de facto segregation exists in Denver, especially in re-

Following the finding of the Study Committee Report, the Board adopted Policy 5100 which called for changes or adaptations which would result in a more diverse or heterogeneous racial and ethnic school population. However, during the years following the adoption of Policy 5100, although there was debate, there was no effective effort in the way of implementation. Finally, another Study Committee was appointed for the purpose of examining existing conditions and recommending specific procedures and guidelines to be taken. At this time there was a proposal to build an addition to the Hallett School and, indeed, it was built over the protest that it would result in intensified segregation. The final report of the second Study Committee was filed on February 23, 1967. The report of the Committee also noticed the intensified segregation in the northeast schools and recommended that there be no more schools constructed in northeast Denver. Finally, on May 16, 1968, the Board adopted the so-called Noel Resolution. This noted that the continuance of neighborhood schools had resulted in the concentration of minority and ethnic groups and

---

gard to Negro citizens. Even though the Denver Public Schools have not created this pattern of residential segregation, the concentration of certain racial and ethnic groups in certain parts of the city does impose on the schools the same community pattern of de facto segregation.

The Committee agrees with the statement of the U.S. Supreme Court in 1954 in Brown v. Board of Education that segregated education is inherently unequal education. The Committee further believes that this community pattern of racial and ethnic concentration which produces racially and ethnically concentrated schools adversely affects equal educational opportunity. It further strongly believes that both school and community have a responsibility to minimize the effects of segregation if the principles of the *Declaration of Independence* and the *Constitution* are to be a reality growing out of the daily living experience of all children in the Denver community.

called for the establishment of an integrated school population so as to achieve equality of educational opportunity.

On or about January 30, 1969, following the presentation of a plan of integration by the superintendent of schools, the Board adopted Resolution 1520 which made changes in attendance areas of certain secondary schools in the school district, and on March 20, 1969, Resolution 1524, also having to do with secondary schools and junior high schools, was adopted. Resolution 1531, on the other hand, sought to change attendance areas of the elementary schools. In essence, each of these resolutions sought to reverse the segregation trend in some of the segregated schools by boundary changes which would have resulted, had they become effective, in segregated schools becoming predominantly white. It sought to spread the Negro populations of these schools to numerous other schools, thereby achieving what has been described as racial balance in all of them so that their predominantly Negro populations would become roughly 20 percent and white students from other areas would produce an Anglo population in each school of about 80 percent. At least preliminary efforts had been made by the superintendent and his staff to implement these resolutions. However, on June 9, 1969, following a School Board election and a change in the composition of the Board, the resolutions were rescinded following what was regarded as a voter mandate. Two new Board members were elected and two who had supported the integration policies were defeated. The rescission was by specific motions, and there followed a new Resolution, 1533, which undertook to restore the old order.

IV. Additional Findings

The important facts adduced at the hearing deserve special mention as circumstances which serve to show clear

patterns of segregation reinforced by official action, and which also show knowing and purposeful conduct.

1. All of the actions of the School Board here under consideration occurred during the last ten years. Thus, they took place long after the decision of the Supreme Court in Brown v. Board of Education of Topeka, 347 U.S. 483, 74 S.Ct. 686, 98 L.Ed. 873 (1954).

2. The School Board Study Committee of 1964 and 1968 warned the members of the Board concerning the segregation trends and strongly recommended measures which would avoid or remedy these conditions. The recommendations contained in the 1964 report[2] were, for the most part, ignored, and this led to the appointment of a second implementation Committee which once again was positive and specific in its recommendations.

3. During the entire decade there was regular debate and although resolutions were adopted, no effective action occurred, and many of the actions which were taken had the effect of intensifying rather than alleviating the segregation problem.

4. *Assignment of Teachers.* Schools with predominantly minority student populations were shown to be staffed by a greater proportion of teachers on probationary status, teachers with less than ten years experience and minority group teachers than were schools with a predominantly Anglo student population.[3]

The Board has been reluctant to place Negro and Hispano teachers in white schools because of concern over a possible

[2] Plaintiffs' Exhibit 20.
[3] Plaintiffs' Exhibits 92, 93, 94, 96, 8-G, 8-F, 9-G, 9-H.

lack of acceptance by the white community and because of a fear of lack of support by some faculties and principals.[4] The Special Study Committee on Equality of Educational Opportunity in the Denver Public Schools (March 1, 1964) recommended that minority teachers be assigned throughout the system. This recommendation was never adopted by the Board.

By established Board policy (Policy No. 1617A) seniority of service is given consideration in making transfers, and teachers on probationary status are not to be transferred except in unusual situations. Thus, teachers on probation or with less seniority became entrenched in the minority schools where they currently serve.

This tendency to concentrate minority teachers in minority schools has helped to seal off these schools as permanent segregated schools.

5. *Establishment of Barrett School.* Plaintiffs' Exhibits 40 and 41 show that Barrett was opened in a segregated area in 1960; that it was located with conscious knowledge that it would be a segregated school; that it has remained segregated to the present date; and that the school would have been desegregated under Resolution 1531. At the time Barrett was built Stedman School, in a predominantly white area, and located a few blocks east of Barrett, was operating at approximately 20 percent over capacity. Yet Barrett was built as a relatively small school and was not utilized to relieve the conditions at Stedman.

6. *Boundary Changes.* In 1962, Superintendent Oberholtzer recommended certain boundary changes to the Board. The Board refused to adopt a change which would

[4] Plaintiffs' Exhibit 20, Pg. D-13.

have affected the overcrowded conditions at Stedman. The failure to make this proposed change tended to "aggravate and intensify the containment of the Negro population in Stedman at that time."[5] Those boundary changes which were made pertained to areas with Negro populations of less than 3 percent. Other boundary changes not only failed to alleviate Negro concentration; they added to it. In some instances the changes resulted in transfer of white students to white schools.

7. *Concentration in Existing Schools.* In June 1965, the Board considered the addition of eight classrooms at Hallett School. Hallett was at the time overcrowded and had a predominantly Negro student population. Objection was made to the additions on the grounds that they would increase segregation at Hallett.[6] The Board nevertheless proceeded with the additional classrooms. The additions were built despite Paragraph 1b (6) of Board Policy No. 1222C and Paragraph 4 of Policy No. 5100, which provided that ethnic and racial characteristics of a school population should be considered in determining boundaries and that steps should be taken to achieve more heterogeneous school populations.

8. *Mobile Classrooms.* The building of 28 mobile units in the Park Hill area in 1964 (at the time there were only 29 such units in all of Denver) resulted in a further concentration of Negro enrollment in Park Hill schools. The retention of these units on a more or less permanent basis tended to continue this concentration and segregation.

---

[5] Transcript, Pp. 180-81.

[6] Transcript, Pg. 37.

9. *Effect of Resolutions 1520, 1524 and 1531.* Had the rescinded resolutions been implemented, Dr. Bardwell estimated (based on 1968 enrollment figures) that the "segregation index" in senior high schools would have decreased from 50 to 28; that the index in junior high schools would have decreased from 65 to 35; and that the decrease in the index for elementary schools would have been from 60 to 43 which, he testified, would approximately result in desegregation of elementary schools.

10. The above noted Board actions must be considered in the light of the trend toward increased segregation in northeast Denver schools (for example, between 1960 and 1966 Stedman increased from 4 percent Negro to 89 percent Negro; in that same period Hallett increased from 1 percent Negro to 75 percent Negro).

11. The climactic and culminative act of the Board was the June 9 rescission of Resolutions 1520, 1524 and 1531. Four members of the Board voted to rescind the resolutions and adopted Resolution 1533, which embraced policies in derogation of the previous policies as expressed in the mentioned resolutions. The majority of the Board (Board members Voorhees, Noel and Amesse voted against it) acted officially to reject the integration effort and to restore and perpetuate segregation in the area. Although this was carried out in response to what was called a voter mandate, there can be no gainsaying the purpose and effect of the action as one designed to segregate.

We do not find that the purpose here included malicious or odious intent. At the same time, it was action which was taken with knowledge of the consequences, and the consequences were not merely possible, they were substantially

certain. Under such conditions the action is unquestionably wilful.[7]

V. The Applicable Law

The foundation stone in any case involving discrimination in public schools is the Constitution of the United States and, in particular, the Equal Protection Clause of the Fourteenth Amendment to the Constitution. That Clause, in guaranteeing to every citizen the equal protection of the laws, forbids state action which results in unreasonable classifications and deprivations. It prohibits arbitrary classifications which bear no rational relation to any valid governmental purpose.

The history of modern case law dealing with the invalid discrimination resulting from school segregation dates from 1954, the year in which the Supreme Court handed down Brown v. Board of Ed., 347 U.S. 483, 74 S.Ct. 686. The Supreme Court there held that segregation in public schools violated the Equal Protection Clause. However, the case certainly went much further than this. The Court plainly stated that segregated schools are incapable of providing quality education and also said that the effect of segregation in the school system was to place an indelible stamp of inferiority on those Negro children who were compelled to attend "Negro" schools. Thus, the clear import of the *Brown* decision is that neither a state nor its agencies may establish, maintain or lend support to a system of segregated public education. Furthermore, if the state or any of its agencies prior to or after *Brown* take any action which creates or furthers segregation, a positive duty arises to remove the effects of such de jure segregation.

---

[7] Restatement of Torts, § 500, comments f and g at 1296 (1934).

Admittedly, the facts of the case at bar are different from *Brown*, but the legal implications of the *Brown* case are fully applicable here. These legal implications have been considered in two opinions of our Court of Appeals. The first of these cases, Downs v. Board of Ed., 336 F.2d 988 (10th Cir., 1964), dealt with the Kansas City school system. Until 1951 this school system had been segregated by law and, at the time that *Brown* was decided, the schools remained substantially segregated. Thereafter, the school board took affirmative steps to alleviate the situation created by the prior policy of segregated schools. The trial court found that the board had acted in good faith to remove segregation in the school system and that the minimum requirements of *Brown* had been met. The board had also undertaken to change certain school district boundaries and these changes had the effect of aggravating segregation in at least one of the city's junior high schools. The trial court held that the board's action did not violate the Fourteenth Amendment since the boundary change was made in good faith and not for the purpose of promoting or maintaining segregation.

In affirming the district court, the Court of Appeals laid down guiding principles to be applied in future cases. It distinguished two factual situations: (1) Where the school board takes affirmative action which has the effect of promoting or maintaining segregation; and (2) Where because of population shifts and housing patterns certain schools have become segregated—so-called de facto segregation. As to the former, the Court said that it must appear that the board's action not only resulted in aggravating segregation, but also that the board acted purposefully with this object in mind. As to the latter, the Court said that the better rule was that there is no affirmative duty to integrate

races in the public schools.[1] The trial court in *Downs* had found that the school board in that case had made a good faith attempt to conform to the law. The Circuit Court was reluctant to overturn these findings since the district court had heard the evidence.

In Board of Ed. of Oklahoma City Public Schools, etc. v. Dowell, 375 F.2d 158 (10th Cir. 1967), the Tenth Circuit Court of Appeals affirmed the decision of the District Court of Oklahoma, which Court had ordered the school board of Oklahoma City to undertake a plan for desegregation, which plan had been formulated by experts appointed by the Court. Thus, in reality it was the Court's plan. Prior to *Brown* the Oklahoma City school system was segregated pursuant to constitutional and statutory mandate. Both the

---

[1] Whether the Court would now give broad effect to this is, of course, irrelevant in the present case, but in view of later developments in the law, the question arises as to whether it would say the same thing today since the cases which it cited in support of this proposition have been largely overruled. Thus, in United States v. Jefferson County Bd. of Ed., 380 F.2d 385 (5th Cir. 1967) (en banc), the Fifth Circuit Court of Appeals overruled four of the opinions cited in support of the statement in *Downs* that "the better rule is that although the Fourteenth Amendment prohibits segregation, it does not command integration of the races in the public schools * * *." (Evers v. Jackson Municipal Separate School Dist., 328 F.2d 408 (5th Cir. 1964); Stell v. Savannah-Chatham County Bd. of Ed., 333 F.2d 55 (5th Cir. 1964); Boson v. Rippy, 285 F.2d 43 (5th Cir. 1960); and Avery v. Wichita Falls Independent School Dist., 241 F.2d 230 (5th Cir. 1956)). The *Jefferson County* opinion states:

> The Court holds that boards and officials administering public schools in this circuit have the affirmative duty under the Fourteenth Amendment to bring about an integrated, unitary school system in which there are no Negro schools and no white schools—just schools. Expressions in our earlier opinions distinguishing between integration and desegregation must yield to this affirmative duty we now recognize. (Footnotes omitted).

380 F.2d at 389.

trial court and the Tenth Circuit read the *Brown* decision as requiring affirmative action to remove segregation which had been purposefully caused by prior actions of the school board. The opinion by Judge Hill saw nothing new in a court of equity taking positive steps to integrate the schools.

It is sufficient to say that we are not here faced with the kind of simple or innocent de facto segregation which was found to exist in *Downs*. We have seen that during the ten year period preceding the passage of Resolutions 1520, 1524 and 1531, the Denver School Board has carried out a segregation policy. To maintain, encourage and continue segregation in the public schools in the face of the clear mandates of Brown v. Board of Ed. cannot be considered innocent. The many cases decided subsequent to *Brown*, including our own Circuit's Board of Ed. v. Dowell, impose an affirmative duty on the School Board to take positive steps to remove that segregation *which has developed as a result of its prior affirmative acts*. In response to this duty, the Denver School Board passed Resolutions 1520, 1524 and 1531. In light of *Brown* and *Dowell*, the effort of the Board to renounce this constitutional duty by rescission must be rejected as arbitrary state legislative action.

The defendants have alluded to the fact that Resolution 1533 represents the will of the people, and that any action taken by this Court which would adversely affect the Resolution would frustrate that will. But as we have seen Brown v. Board of Ed. and all of the subsequent cases hold that equal protection of the laws is synonymous with the *right* to equal educational opportunities and that segregated schools can never provide that equality. The constitutional protections afforded by the Bill of Rights and the Fourteenth Amendment were designed to protect fundamental

rights, not only of the majority but of minorities as well, even against the will of the majority. The effort to accommodate community sentiment or the wishes of a majority of voters, although usually valid and desirable, cannot justify abandonment of our Constitution. Reitman v. Mulkey, 387 U.S. 369, 87 S.Ct. 1627, 18 L.Ed.2d 830 (1967);[9] Lucas v. Forty-Fourth General Assembly, 377 U.S. 713, 84 S.Ct. 1459, 12 L.Ed.2d 632 (1964).

It is to be emphasized finally that this present case, except for the presence of clear evidence of purpose manifested by the precipitate rescission, is by no means novel. The right to equality in education has, since *Brown*, become recognized as a sensitive constitutional right. Courts throughout the country have taken positive, affirmative steps in order to uphold these rights. In our own Circuit, both the *Downs* and *Dowell* opinions have clearly identified and explained the governing legal principles. In other jurisdictions, United States Courts have granted broad affirmative relief in such situations, including orders requiring the adoption of detailed plans for segregation.[10]

---

[9] In this case, the Supreme Court struck down a California constitutional amendment on the ground that it was not merely a repeal of a positive action encouraging integration, but that the rejection, in effect, authorized discrimination by turning back to the conditions which existed prior to its adoption. It thus encouraged and in a significant way involved the state in racial discrimination contrary to the Fourteenth Amendment. Hence, it was not an exhibition of complete neutrality.

[10] *See, e.g.*, United States v. School Dist. 151, 286 F.Supp. 786 (N.D.Ill.), *aff'd.*, 404 F.2d 1125 (7th Cir. 1968); Coppedge v. Franklin County Bd. of Ed., 273 F.Supp. 289 (E.D.N.Car.), *aff'd.*, 394 F.2d 410 (4th Cir. 1968); Hobson v. Hansen, 269 F.Supp. 401 (D.D.C. 1967), *aff'd sub nom.*, Smuck v. Hobson, 408 F.2d 175 (D.C.Cir. 1969); Blocker v. Board of Ed., 226 F.Supp. 208 (E.D. N.Y. 1964); Taylor v. Board of Ed., 191 F.Supp. 181 (S.D.N.Y.), *aff'd.*, 294 F.2d 36 (2d Cir. 1961).

In the present case, this Court has held only that the Denver School Board may not constitutionally take action which perpetuates segregation, and so it sets no new precedent.

In determining that the plaintiffs are entitled to the preliminary relief sought, we are not to be understood as holding that Resolutions 1520, 1524 and 1531 are exclusive. It is true that the case is extraordinary in that there are only two plans presented, one calling for integration and one for segregation. The status quo has the effect of restoring the integration plan. However, the Board is by no means precluded from adopting some other plan embodying the underlying principles of Resolutions 1520, 1524 and 1531.

VI. Conclusion

Under the Fourteenth Amendment the plaintiffs, as citizens of the United States, have the right to be protected from official action of state officers which deprives them of equal protection of the laws by segregating them because of their race. The denial of an equal right to education is a deprivation which infringes this constitutional guarantee. The precipitate and unstudied action of four of the members of the Board rescinding and nullifying the school integration plan, which plan had been adopted after almost ten years of debate and study, and the adoption in its place of a substitute plan which would have had the effect of

---

In our own Circuit, sweeping plans for desegregation were formulated by the United States District Court for the Western District of Oklahoma on its own initiative after the school board failed to act, and these plans were approved by the Court of Appeals. Dowell v. School Board of Oklahoma City Public Schools, 244 F.Supp. 971 (W.D.Okl.), *aff'd.*, 375 F.2d 158 (10th Cir. 1967).

In *Hobson*, Circuit Judge Wright, sitting by assignment in District Court, adopted an intricate and detailed integration plan.

perpetuating school segregation, had not only a chilling effect upon their rights; it had a freezing effect. Under the law of the case, we have no alternative. The action taken must be ruled unconstitutional, and the proposed action must be enjoined.

The case is a proper one for injunctive relief because (1) Plaintiffs have no adequate remedy at law; (2) Plaintiffs would suffer irreparable injury if relief were denied; and (3) Plaintiffs will probably succeed at trial, at least on the cause of action under consideration.

The motion for preliminary injunction is granted.

Opinion of District Court of August 14, 1969

UNITED STATES DISTRICT COURT

D. Colorado

Civ. A. No. C-1499

Aug. 14, 1969.

Wilfred Keyes, individually and on behalf of Christi Keyes, a minor, *et al.*,

Plaintiffs,

—v.—

School District Number One, Denver, Colorado, *et al.*,

Defendants.

Supplemental Findings, Conclusions and Temporary Injunction

William E. Doyle, District Judge.

This case is before the Court following remand issued by the United States Court of Appeals for the Tenth Circuit on August 7, 1969. In its opinion the Court of Appeals (1) questioned the sufficiency in terms of specificity of our injunctive order, and (2) directed that this Court consider Title IV, § 407(a) of the 1964 Civil Rights Act, 42 U.S.C. § 2000c-6(a).

A hearing was held on August 7, 1969. The Court, having heard the arguments, does hereby issue a more specific injunctive order. The question of the applicability of the above mentioned statute will be considered in a supplemental opinion. Also, the following supplemental findings

are added to the oral findings of fact given from the bench on July 23, 1969, and the formal findings of fact contained in this Court's opinion issued on the 31st day of July, 1969. The findings hereinafter set forth are directed to the schools which received particular attention at the trial. These findings undertake to describe the special circumstances surrounding these particular schools, and the conclusions which are to be drawn from these findings.

Findings of Fact

Barrett Elementary School (Located at East 29th Avenue and Jackson Street.)

1. Barrett Elementary School was opened in 1960. At that time its student body was 89.6 percent Negro. Presently the racial composition of Barrett is virtually 100 percent minority students (93% Negro, 7% Hispano). Thus, from the time of its establishment until the present Barrett has always been a segregated school.

2. The average percentage of Negro teachers in elementary schools in School District No. 1 as of September 1968 was 8.5 percent. In Barrett school the percentage of Negro teachers is 52.6 percent. This concentration of Negro teachers in a "Negro" school has further contributed to the categorization of Barrett as a segregated school.

3. Between 1950 and 1960 the Negro population, which previously had been concentrated in an area known as "Five Points" began to expand to the east. By 1960 it had moved up to Colorado Boulevard, a natural dividing line. This trend of population was apparent long before the migra-

tion of the Negro population eastward to Colorado Boulevard was completed. With full knowledge of this population trend and the fact that Barrett would be a segregated school from the time of its establishment, the Board proceeded with and carried into effect the plans for the building of that school.

4. At the time that Barrett was built, the School Board created the eastern boundary of the Barrett district along Colorado Boulevard. Thus, the eastern boundary of Barrett school district was made coterminous with the eastern boundary of Negro population movement at that time. This insured the character of Barrett as a segregated school.

5. When Barrett was built, Stedman Elementary School, in a predominantly white area east of Colorado Boulevard a few blocks from the Barrett site, was operating at approximately 20 percent over capacity. Had the eastern boundary of the Barrett district been set to the east of Colorado Boulevard, it would have resulted in some integration of Barrett, while alleviating somewhat the overcrowded conditions at Stedman. By establishing Colorado Boulevard as the eastern boundary of the Barrett district, the Board declined to utilize Barrett to achieve these salutary effects. Furthermore, Barrett was built as a relatively small school (capacity 450) which further prevented its use to relieve overcrowded conditions in the neighboring "white" Stedman. Thus, Barrett was built and opened as a segregated school.

6. In light of the facts as they existed in 1960, there can be no doubt that the positive acts of the Board in establish-

ing Barrett and defining its boundaries were the proximate cause of the segregated condition which has existed in that school since its creation, which condition exists at present.

7. The action by the Board with respect to the creation of Barrett school was taken with knowledge of the consequences, and these consequences were not merely possible, they were substantially certain. Under such conditions we find that the Board acted purposefully to create and maintain segregation at Barrett.

8. The Board maintained the segregated condition which it had created at Barrett by failing to take any action to correct it between 1960 and 1969. On April 24, 1969, the Board passed Resolution 1531 (operative September 1969) which would have desegregated Barrett by altering school district boundaries. Prior to the passage of Resolution 1531, Barrett was 93 percent Negro and 7 percent Hispano. The racial composition in that school subsequent to implementation of 1531 would have been 73 percent Anglo, 24 percent Negro, 3 percent Hispano.

9. On June 9, 1969, the Board, by a 4 to 3 vote, rescinded Resolution 1531 and thereby reaffirmed its prior policy of maintaining and perpetuating segregation at Barrett. Although this was carried out in response to what was called a voter mandate in a school board election, there can be no doubt that the purpose and effect of the action was segregation.

Stedman Elementary School (This school is located at East 29th Avenue and Dexter Street, approximately 8 blocks east of Barrett Elementary School.)

Opinion of District Court of August 14, 1969

1. Stedman Elementary School was in 1960 a predominantly "white" school, the student body being only 4 percent Negro. However, as a result of Negro population trends and rigid adherence to school boundaries by the Board, by 1962 Stedman was 50-65 percent Negro.

2. In 1962 and for several years prior thereto, Stedman had been overcrowded. Although Stedman could not be considered a segregated school at that time, it was clear by virtue of area population movement that it would become segregated in the near future if immediate steps were not taken to alleviate the overcrowding and stabilize the racial composition. Seven boundary changes were proposed in 1962, three of which would have relieved overcrowding at Stedman by placing the overflow in Smith, Hallett, and Park Hill, each of which was predominantly Anglo at that time. The Board rejected the three Stedman proposals, adopting the other four which pertained to areas with Negro populations of less than three percent. By refusing to pass the proposed boundary changes for Stedman, overcrowding was perpetuated and Negro students at that school were prevented from attending nearby "Anglo" schools.

3. By 1963 Stedman was only 18.6 percent Anglo and was still overcrowded. In 1964, the Board adopted several boundary changes, two of which had the immediate effect of aggravating the segregated situation at Stedman by transferring predominantly Anglo portions of the Stedman district to other "white" schools in the area. First, a predominantly "white" portion of the Stedman zone was detached to Hallett. Second, the Park Hill-Stedman optional zone was transferred to Park Hill. This area was

approximately 96 percent Anglo, and represented that part of the Stedman district with the lowest Negro population. These changes did not significantly reduce overcrowding at Stedman. Rather, they tended to further segregate Stedman by removing the option open to many Anglo students to attend Stedman and preventing Negro students at that school from attending the predominantly Anglo schools in Park Hill.

4. Between May 1964 and May 1965, four mobile units were placed at Stedman to relieve the overcrowded conditions. This, like the previous actions of the Board with respect to school boundaries in the Stedman district, had the effect of preserving the Anglo character of certain Park Hill schools and the segregated status of Stedman.

5. As of 1968, Stedman was 94.6 percent Negro and 3.9 percent Anglo. On April 24, 1969, the School Board passed Resolution 1531 which was designed to alleviate the containment of Negro students in Stedman which had resulted from the Board's conscious efforts to preserve the Anglo character of other Park Hill schools. While 1531 would not have substantially reduced the *percentage* of Negro students at Stedman, it did provide that an additional 120 Negro children were to be transported from Stedman to predominantly Anglo schools (prior to this time 286 Stedman students were being bussed to Force, Schenck, and Dension schools). This would have provided an additional outlet for Negro children at Stedman, enabling them to attend a racially integrated school, and at the same time would have removed the need for the four mobile units. This was designed to relieve and mitigate the intense segregation condition at Stedman as well as to relieve overcrowding.

6. On June 9, 1969, the School Board repealed Resolution 1531. The natural and probable consequence of the Board's action was to continue the containment of Negro students at Stedman and to reassign Negro children who would have attended an integrated school under Resolution 1531 to the segregated Stedman.

7. The actions of the Board with respect to boundary changes, installation of mobile units and repeal of Resolution 1531 shows a continuous affirmative policy designed to isolate Negro children at Stedman and to thereby preserve the "white" character of other Park Hill schools.

Park Hill and Philips Elementary Schools (Park Hill is located at 5050 East 19th Avenue, which is approximately 8 blocks south and 6 blocks east of Barrett. Philips is located at 6550 East 21st Avenue, which is 7 blocks south and 25 blocks east of Barrett.)

1. In 1960 both Park Hill and Philips Elementary Schools were overwhelmingly Anglo in racial composition. Despite continued Negro population movement into these school districts, Park Hill and Philips presently continue to have a majority of Anglos in the student body. This characteristic of both schools is due at least in part to the efforts of the Board to prevent the use of Park Hill and especially Philips to relieve the overcrowding at Stedman.

2. By 1968 the racial composition of Park Hill was 71.0 percent Anglo. 23.2 percent Negro and 3.9 percent Hispano. The racial composition of Philips was 55.3 percent Anglo, 36.6 percent Negro and 5.2 percent Hispano. The prob-

able result of maintaining rigid school boundaries in these districts combined with the present trend of Negro population movement would be the transition of Philips and Park Hill into substantially segregated schools.

3. On April 24, 1969, the Board passed Resolution 1531 which would have stabilized the racial composition of these two schools (Park Hill would have been stabilized at 79 percent Anglo, 13 percent Negro, 8 percent Hispano; Philips would have been stabilized at 70 percent Anglo, 22 percent Negro, 8 percent Hispano), by a system of transporting some 70 students at Park Hill to Steele and Steck Elementary Schools and 80 students from Philips to Ashley and Palmer Elementary Schools. Also, 80 students would be transported to Philips from Palmer and Montclair Elementary Schools. Resolution 1531 recognized the interrelationship between Philips and Park Hill schools and Stedman, Barrett and Hallett. Thus, even though Philips and Park Hill were not segregated as of 1969, the Board felt that effective desegregation could take place at Barrett, Stedman and Hallett only if other Park Hill area schools were included in a total plan.

4. The School Board repealed Resolution 1531 on June 9, 1969. The effect of this action was to restore the original boundaries in the Park Hill and Philips districts, the probable result of which would be a gradual increase of Negro students into Park Hill and Philips schools ultimately approaching a segregated situation. Furthermore, by repeal of 1531 Park Hill and Philips would be reestablished as buffers against the influx of Negro children into other Anglo schools in the Park Hill area. Stedman, Barrett and Hallett would be returned to their status as over-

crowded, segregated schools with no effective outlet provided into predominantly Anglo schools such as Ashley and Palmer.

5. In light of the natural and probable segregative consequences of removing the stabilizing effect of Resolution 1531 on Park Hill and Philips and reestablishing the original district boundaries, the Board must be regarded as having acted with a purpose of approving those consequences.

6. These boundary changes for Park Hill and Philips are necessary to the success of the entire plan called for in Resolution 1531.

Hallett Elementary School (Hallett is located at 2950 Jasmine Street, 20 blocks east of Barrett.)

1. The Negro enrollment at Hallett Elementary School has increased from approximately one percent in 1960 to 90 percent in 1968.

2. In 1962 several boundary changes in the Park Hill elementary school districts were proposed and all but three were adopted by the Board. One of the three boundary proposals considered but not adopted would have detached part of the Stedman district to Hallett. At that time Stedman was 50-65 percent Negro and was overcrowded, whereas Hallett was operating under capacity and was approximately 85-95 percent Anglo. The adoption of this boundary change would have relieved some overcrowding at Stedman while increasing Negro enrollment at Hallett. By refusing to adopt the change, Negro students were confined in an overcrowded, segregated school and were denied the opportunity of attending an integrated school.

3. One of the 1962 boundary changes which was adopted assigned the Hallett-Philips optional zone to Philips. This reassigned zone was predominantly Anglo and Philips was at this time virtually 100 percent Anglo. There was no problem of overcrowding at either Hallett or Philips. All that was accomplished was the moving of Anglo students from a school district which would gradually become predominantly Negro to one which has remained predominantly Anglo.

4. By 1964 Hallett was 68.5 percent Anglo. A boundary change in that year detached a predominantly Anglo area from the Stedman district to Hallett, and detached an 80 percent Anglo area from Hallett to Philips. This latter area constituted the section of highest Anglo concentration in the Hallett district. After the 1964 boundary changes, Hallett was only 41.5 percent Anglo. This decrease in Anglo enrollment was due in part to the transfer of the predominantly "white" portion of Hallett's attendance area to Philips.

5. In 1965 four mobile units were constructed at Hallett. Shortly thereafter the Board also approved the construction of additional classrooms. At this time Hallett was approximately 75 percent Negro. The effect of the mobile units and additional classrooms was to solidify segregation at Hallett increasing its capacity to absorb the additional influx of Negro population into the area.

6. Resolution 1531, adopted by the Board on April 24, 1969, provided that the Superintendent develop and institute plans to make Hallett a demonstration integrated school by use of voluntary transfer of pupils. The pro-

posed plan would have transferred 500 Anglo students to Hallett while transporting 500 Hallett pupils to predominantly Anglo schools. This would have decreased the Negro concentration at Hallett from approximately 90 percent to about 40 percent.

7. Resolution 1533, passed by the Board after the rescission of Resolution 1531, also provides for a "voluntary exchange plan" for Hallett. Although this latter resolution does not refer to the purpose of integration, as did Resolution 1531, its intention seems to be substantially similar to that of 1531 with regard to the Hallett situation.

Smiley Junior High School (Smiley is located at 2540 Holly Street.)

1. In 1968 Smiley Junior High School was 23.6 percent Anglo, 71.6 percent Negro and 3.7 percent Hispano. The elementary school feeders for Smiley are Hallett (10.1 percent Anglo, 84.4 percent Negro, 3.7 percent Hispano); Park Hill (71 percent Anglo, 23.2 percent Negro, 3.9 percent Hispano); Smith (2.8 percent Anglo, 94.9 percent Negro, 1.6 percent Hispano); Philips (55.3 percent Anglo, 36.6 percent Negro, 5.2 percent Hispano); Stedman (3.9 percent Anglo, 92.4 percent Negro, 2.9 percent Hispano); Ashley (85.8 percent Anglo, 6.4 percent Negro, 5.8 percent Hispano); and Harrington (5.0 percent Anglo, 77.7 percent Negro, 15.2 percent Hispano). Because of Negro population movement into this area, it is substantially certain that continuance of the boundaries as reestablished by repeal of Resolutions 1520 and 1524 will result in Smiley becoming almost completely Negro in the future.

2. Smiley has the second highest number of minority teachers of any junior high school in the city. There are 23 Negro and Hispano teachers at Smiley, while no other junior high school, with the exception of Cole, has more than six teachers from racial minority groups.

3. In light of the racial composition of the Smiley student body and faculty in 1968, the racial composition of the Smiley feeders, and Negro population movement into the area, we find that in 1968 Smiley was a segregated school.

4. In 1969 the School Board undertook to correct the segregated situation at Smiley by the adoption of Resolutions 1520 and 1524. These Resolutions were designed to desegregate Smiley by a substantial alteration of junior high school boundary lines. Had the Resolutions been implemented, the racial composition of Smiley would have been 72 percent Anglo, 23 percent Negro, and 5 percent Hispano.

5. On June 9, 1969, the Board repealed Resolutions 1520 and 1524. The effect of this repeal was to reestablish Smiley as a segregated school by affirmative Board action. At the time of the repeal, it was certain that such action would perpetuate the racial composition of Smiley at over 75 percent minority and that future Negro population movement would ultimately increase this percentage. Thus, the Board acted with full knowledge of exactly what the consequences of the repeal would be. We, therefore, find that the action of the Board in rescinding Resolutions 1520 and 1524 was wilful as to its effect on Smiley.

East High School (East is located at 1545 Detroit Street.)

1. Before passage of Resolution 1520, East High School was approximately 54 percent Anglo, 40 percent Negro and 7 percent Hispano. Resolution 1520 would have reduced the racial minority enrollment at East to 32 percent. Neither before nor after the passage of 1520 could East be considered a segregated school.

2. The boundary changes embodied in Resolutions 1520, 1524, and 1531 would have indirectly affected the racial composition of East through changes in East's feeder schools. Rescission of these Resolutions might, through the feeder system, result in a segregated situation at East in the future.

SUMMARY OF FINDINGS

All of the elementary schools discussed in the supplemental findings set forth above are located in the Park Hill area. There is a high degree of interrelationship among these schools, so that any action by the Board affecting the racial composition of one would almost certainly have an effect on the others. Furthermore, since all of these elementary schools operate as feeders for Smiley Junior High School (with the exception of Barrett), any factors affecting the racial composition of the elementary schools will also have a similar effect on Smiley. It is significant to note that Board actions between 1960 and 1969, such as the 1962 and 1964 boundary changes, dealt with the entire Park Hill area and had some effect on each school in that section of the city. Thus, the Board itself has continuously recognized the interrelationship of schools in northeast Denver.

Opinion of District Court of August 14, 1969

Between 1960 and 1969 the Board's policies with respect to these northeast Denver schools show an undeviating purpose to isolate Negro students first in Barrett, and later in Stedman and Hallett while preserving the Anglo character of schools such as Philips and Park Hill. The ultimate effect of the Board's actions and policies in the face of a steady influx of Negro families into the area was to create and maintain segregated situations at Barrett, Stedman, and Hallett which ultimately led to a substantially segregated situation at Smiley.

In adopting Resolutions 1520, 1524 and 1531, the Board recognized its constitutional responsibility to desegregate schools in northeast Denver. These Resolutions were adopted by a five to two majority following the recommendations of both the Special Study Committee created in 1962 and a second committee created in 1966, and recommendations contained in the report of Dr. Gilberts and the Board staff submitted in October 1968. The reports of the 1962 and 1966 committees made clear that the continued rigid adherence to the established school boundary lines had led to segregation in several Park Hill schools. These Resolutions constituted legitimate legislative action designed to remove the segregation in Park Hill schools by means which were both moderate and reasonable in light of existing conditions.

Resolutions 1520, 1524, and 1531 were designed to relieve segregation in Barrett, Stedman, Hallett and Smiley by altering school district boundaries. Among other things these Resolutions would have transferred heavily concentrated Negro portions of the Barrett, Park Hill, Philips and Smiley districts to predominantly Anglo schools, while transporting a substantial number of Anglo students to the segregated schools. Segregation at Hallett and Sted-

man was to be relieved by a vigorous policy of voluntary bussing. Although at the time these Resolutions were passed Philips and Park Hill schools were not segregated, the Board recognized that they were key elements in dealing with the interrelated situation in northeast Denver and that any overall scheme for desegregating Barrett, Hallett, Stedman and Smiley would necessarily require affirmative action with respect to Park Hill and Phillips.

On June 9, 1969, the Board rescinded Resolutions 1520, 1524 and 1531. This action was taken with little study and was not justified in terms of educational opportunity, educational quality or other legitimate factors. The only stated purpose for the rescission was that of keeping faith with the will of the majority of the electorate.

The effect of the rescission was to restore and perpetuate the status quo as it existed in northeast Denver prior to the passage of Resolutions 1520, 1524 and 1531. This status quo was one of segregation at Barrett, Hallett, Stedman and Smiley. As a replacement for proposals embodied in Resolutions 1520, 1524, and 1531, the Board adopted Resolution 1533 which in essence provides for desegregation on a voluntary basis, a program which has been unsuccessful and which furnishes little promise.

Conclusions of Law

1. The policies and actions of the Board prior to the adoption of Resolutions 1520, 1524 and 1531, which conduct is specifically described in the foregoing findings, constitute de jure segregation.

2. The adoption of Resolutions 1520, 1524 and 1531 was a bona fide attempt of the Board to recognize the constitutional rights of the persons affected by the prior segregation.

3. The rescission of Resolutions 1520, 1524 and 1531 was a legislative act which had for its purpose restoration of the old status quo and was designed to perpetuate segregation in the affected area. This act in and of itself was an act of de jure segregation. It was unconstitutional and void.

4. Section 407(a) of the Civil Rights Act of 1964, Title 42 U.S.C. § 2000c-6(a) has been fully considered. It does not apply to a private civil rights action asserting violation of the Constitution. A supplemental opinion will expound the reasons in support of this conclusion.

PRELIMINARY INJUNCTION

This matter having come on for hearing upon remand by the Court of Appeals for the Tenth Circuit on the motion of plaintiffs for a preliminary injunction, and the Court having heard the testimony of the witnesses, having reviewed and considered the exhibits in evidence herein, and having heard the statements of counsel:

The Court finds that:

1. The Court has jurisdiction over the subject matter of this action under 28 U.S.C. Sections 1343(3) and 1343(4). This is a civil action authorized by law and arising under Title 42 U.S.C. Section 1983 and the Fourteenth Amendment of the Constitution of the United States;

2. The Court has jurisdiction over the parties herein;

3. Plaintiffs and the classes which they represent have no adequate remedy at law;

4. Unless this preliminary injunction issues, plaintiffs and the classes which they represent will suffer irreparable injury;

5. Plaintiffs and their classes have demonstrated a reasonable probability that they will ultimately prevail upon a full trial of the merits herein.

Based upon the foregoing findings together with those contained in the opinion heretofore rendered it is

Ordered, adjudged and decreed that the motion for a temporary injunction should be and the same is hereby granted to the following extent:

The defendants, their agents and servants are enjoined and restrained, during the pendency of this action, from any conduct which would modify the status quo as it existed prior to June 9, 1969, in respect to acquisition of equipment, destruction or relocation of documents, writings and memoranda, and are further enjoined and restrained from implementing Resolution 1533, insofar as that Resolution is an integral part of the rescission of Resolutions 1520, 1524 and 1531, and would seek to restore the segregated conditions which existed prior to the adoption of Resolutions 1520, 1524 and 1531.

The defendants, their agents and servants are further ordered to make effective the following integration policies:

Resolution 1520 insofar as it applies to Smiley Junior High School (specifically, paragraphs six and seven of the boundary changes embodied in the said Resolution 1520);

Resolution 1524 insofar as it applies to Smiley Junior High School (specifically, paragraphs one through nine, inclusive, of the boundary changes embodied in Resolution 1524) (paragraphs eight and nine being necessary to the desegregation of Smiley Junior High School). Paragraphs A, B, C, and D of Resolution 1524, which deal with Cole

Junior High School, are not here considered, but nothing herein contained is intended to prevent the implementation of those boundary changes. Ruling on these changes is reserved until the trial.

Resolution 1531 insofar as it applies to boundary changes concerning Barrett, Park Hill and Philips Elementary Schools, and insofar as it directs the Superintendent to establish Hallett Elementary School as a demonstration integrated school through voluntary transportation and to continue the practice of transporting students from Stedman Elementary School to relieve overcrowding and to permit the removal of mobile classroom units at that school.

Resolutions 1520, 1524 and 1531 do not expressly call for compulsory transportation; however, the Board has had for many years and now has a policy of transporting students who live a certain distance from their schools. Such transportation is probably necessary in order to carry out this decree, but nothing in this order shall be construed to require the Board to use such transportation if it can be dispensed with.

Nothing in this order shall prevent the School Board from proposing and submitting to this Court any other plan for integration.

Rulings concerning East High School and Cole Junior High School are hereby reserved pending consideration of this action at the trial on the merits.

This temporary injunction shall continue during the pendency of this suit and until the action is tried on its merits.

Opinion of District Court of August 14, 1969

OPINION AS TO APPLICABILITY OF SECTION 407(a) OF THE CIVIL RIGHTS ACT OF 1964

The Court of Appeals for the Tenth Circuit has remanded this case in part for this Court's prior determination of the applicability and effect of Section 407(a) of the Civil Rights Act of 1964 (42 U.S.C. § 2000c-6(a)), which Section contains the following proviso:

> provided that nothing herein shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school district to another in order to achieve such racial balance, or otherwise enlarge the existing power of the court to insure compliance with constitutional standards.

We have considered the arguments of counsel, both oral and in briefs. We conclude that the above proviso does not limit the power of this Court to direct the School Board to implement Resolutions 1520, 1524 and 1531 to the extent ordered.

Section 407(a) refers to actions brought by the Attorney General of the United States under the authority granted him by that Section. The proviso appears in this context, and thus on its face does not apply to a case such as this, which is not brought by the Attorney General. Defendants call our attention to a comment made by then Senator Humphrey during Congressional debate on the Act to the effect that the proviso applies to the entire 1964 Civil Rights Act. Assuming that construction to be correct, the instant

case is not brought under the 1964 Civil Rights Act but rather under 28 U.S.C. § 1343 and 42 U.S.C. § 1983.

The legislative history of Section 407 (a) indicates that the proviso meant only that Congress was not taking a position on the question of the propriety of transportation to achieve racial balance in a case of *de facto* segregation. *See* United States v. Jefferson County Bd. of Ed., 372 F.2d 836, 880 (5th Cir. 1966), *aff'd on rehearing with order modified*, 380 F.2d 385 (5th Cir. 1967) (en banc).

We have concluded that the instant case is one in which the Board has actively contributed to the segregated conditions found to exist. The act applies, if at all, to a *de facto* segregation situation. The Court of Appeals for the Seventh Circuit made this distinction in United States v. School District 151 of Cook County, Illinois, 404 F.2d 1125 (7th Cir. 1968), where it was held that the proviso in Section 407(a) had no application where transportation was "not done to achieve racial balance, although that may be a result, but to counteract the legacy left by the Board's history of discrimination." 404 F.2d at 1130. Counteracting a legacy is precisely what the order in the instant case is intended to do.

The language of the proviso indicates that its purpose was to prevent the implication that Section 407(a) enlarged the powers of the federal courts. The proviso states that the Section grants a court no power to order transportation to achieve racial balance, nor does the Section "otherwise enlarge the existing power of the court to insure compliance with constitutional standards." The equitable powers of the courts in directing compliance with constitutional mandates exist independent of the 1964 Civil Rights Act. United States v. Jefferson County Bd. of Ed., 372 F.2d 836,

880 (5th Cir. 1966). The proviso merely explains that Section 407(a) is not to be construed to enlarge the powers of the courts; it does not limit those powers.

It would be inconsistent to construe the proviso as a limitation on the power of the courts to correct a deprivation of rights which Section 407(a) itself is intended to remedy. The Congressional policy behind the 1964 Act should not be diluted by such a construction.

In United States v. School District 151 of Cook County, Illinois, 286 F.Supp. 786 (N.D.Ill.1968), the district court considered the instant question and concluded:

> That provision of 42 U.S.C. § 2000c-6 which withholds from the courts the power to require transportation of pupils to overcome racial imbalance in public schools must be construed to relate to so-called de facto or adventitious segregation. It is inapplicable where, as here, the existing segregation of pupils and teachers is inseparable from the practices and policies of the defendants. 286 F.Supp. at 799.

In affirming this construction of the statute the Court of Appeals for the Seventh Circuit used the following strong language:

> Defendants next contend that they have no constitutional duty to bus pupils, in the District, to achieve a racial balance. It is true that 42 U.S.C. § 2000c-6 withholds power from officials and courts of the United States to order transportation of pupils from one school to another for the purpose of achieving racial balance. However, this question is not before us. Although we recognize that past residential segregation itself, in the District, severely unbalanced racially the

school population, the district court's judgment is directed at the unlawful segregation of Negro pupils from their White counterparts which is a direct result of the Board's discriminatory action. Therefore, the district court's order is directed at eliminating the school segregation that it found to be unconstitutional, by means of a plan which to some extent will distribute pupils throughout the District, presumably by bus. This is not done to achieve racial balance, although that may be a result, but to counteract the legacy left by the Board's history of discrimination.

The Constitution forbids the enforcement by the Illinois School District of segregation of Negroes from Whites merely because they are Negroes. The congressional withholding of the power of courts in Section 2000c-6 cannot be interpreted to frustrate the constitutional prohibition. The order here does not direct that a mere imbalance of Negro and White pupils be corrected. It is based on findings of unconstitutional, purposeful segregation of Negroes, and it directs defendants to adopt a plan to eliminate segregation and refrain from the unlawful conduct that produced it. United States v. School District 151 of Cook County, Illinois, 404 F.2d 1125, 1130 (7th Cir. 1968).

Judge Wisdom, writing for the Court of Appeals for the Fifth Circuit in the *Jefferson County* case, also considered the applicability of the statute to a *de jure* case and determined that it did not apply.

The above are the sum total of court decisions on the subject. However, they dispel any doubt as to its applicability.

We add that in reevaluating the case in light of the statute and in reconsidering Resolutions 1520, 1524 and 1531, we determined that the effort in 1520 to desegregate East High School was not within the ambit of a preliminary injunction either because of the statute or for the equally good reason that the evidence as of now fails to disclose a condition at East which merits a preliminary injunction.

Opinion of District Court of March 21, 1970

UNITED STATES DISTRICT COURT

D. Colorado

Civ. A. No. C-1499

March 21, 1970

Wilfred Keyes, individually and on behalf of Christi Keyes, a minor, *et al.*,

Plaintiffs,

v.

School District Number One, Denver, Colorado, the Board of Education, School District Number One, Denver, Colorado, William C. Berge, individually and as President, Board of Education, School District Number One, Denver, Colorado, Stephen J. Knight, Jr., individually and as Vice President, Board of Education, School District Number One, Denver, Colorado, James C. Perrill, Frank K. Southworth, John H. Amesse, James D. Voorhees, Jr., and Rachel B. Noel, individually and as members, Board of Education, School District Number One, Denver, Colorado; Robert D. Gilberts, individually and as Superintendent of Schools, School District Number One, Denver, Colorado,

Defendants.

Mr. and Mrs. Douglas Barnett, individually and on behalf of Jade Barnett, a minor, *et al.*,

Intervening Defendants.

Memorandum Opinion and Order

William E. Doyle, District Judge.

This is an action in which plaintiffs, parents of children attending Denver Public Schools, sue individually and on

behalf of their minor children. It is also brought on behalf of a class and has proceeded as a Rule 23 class action.

The complaint contains numerous causes of action and counts, but essentially it is complained that

(1) The Board of Education for School District No. One, Denver, unconstitutionally rescinded certain resolutions which were designed to desegregate specific schools within the District;

(2) The named defendants have created and/or maintained segregated student bodies and faculties in many of the schools in School District No. One;

(3) The said School District has provided an unequal educational opportunity to students attending segregated schools within the District.

Plaintiffs pray for a declaratory judgment that the above acts are unconstitutional and also seek broad injunctive relief prohibiting the defendants from continuing their prior policies and requiring them to remove the effects of their unconstitutional acts.

In July 1969, an extensive trial was had on plaintiffs' motion for a preliminary injunction as to their first claim for relief, which claim alleged that the rescission of the remedial School Board Resolutions 1520, 1524 and 1531 was an unconstitutional act. This Court held that this attempted rescission was in fact unconstitutional, and ordered that specified portions of Resolutions 1520, 1524 and 1531 be effectuated pending full trial on the merits. Keyes v. School District No. 1, Denver, Colorado, 303 F.Supp. 279 (D.Colo.), Supplemental Findings and Conclusions, 303 F.Supp. 289 (D.Colo. 1969).

In February 1970, the case was tried on its merits. The plaintiffs, the defendants and the intervening defendants were fully heard. This was a trial which continued for fourteen trial days. It produced over 2,000 pages of testimony and several hundred exhibits. Thus, the case has been fully tried with the exception of submission by the parties of tangible plans. This phase of the case was deferred pending decision on the issues involving alleged discrimination.

Plaintiffs' first claim for relief deals solely with the purpose and effect of the rescission of Resolutions 1520, 1524 and 1531. Plaintiffs' second claim for relief consists of three counts.[1] The first count of the second claim alleges that the Board of Education has purposely created and/or maintained racial segregation in certain schools within the District through boundary changes, school site selection and the maintenance of the neighborhood school policy. The second count alleges that the segregated schools within the District are grossly inferior and provide an unequal educational opportunity for minority students; that these schools do not even meet the separate but equal standard of Plessy v. Ferguson and that the Board is obligated to remedy this inequality regardless of its cause.

Finally, plaintiffs contend that several schools were created and/or maintained as segregated schools by actions of the Board, and that regardless of purpose or intent these acts are unconstitutional. We will deal first with the schools which were the subject of the preliminary hearing, considering the explanatory evidence offered at trial. Secondly, we will consider the evidence which has been offered relative

---

[1] The plaintiffs' fourth count of the second claim for relief, based upon maintenance of a "track system," has been abandoned.

to segregation and discriminatory educational opportunity in the core city schools and, finally, we will discuss possible remedies.

I.

Plaintiffs' first claim for relief alleges that the rescission of School Board Resolutions 1520, 1524 and 1531 was unconstitutional because its purpose and effect was to perpetuate racial segregation in the affected schools. This claim for relief was the subject of the hearing on plaintiffs' motion for preliminary injunction.

Resolutions 1520, 1524 and 1531, promulgated in 1969, were designed to relieve segregation and the tendency toward segregation in schools located in the Park Hill area of Northeast Denver. These schools include Barrett, Stedman, Hallett, Smith, Phillips and Park Hill Elementary Schools; Smiley and Cole Junior High Schools; and East High School.

The evidence presented at the preliminary hearing has been fully incorporated in the present record. We deem it unnecessary to describe it in detail since it is fully set forth in 303 F.Supp. 279, 289. A recap will, however, serve to bring those proceedings into context.

Prior to 1950, the Negro population of Denver was concentrated in a portion of the city known as "Five Points," which is located west of Park Hill. Beginning in 1950, the Negro population began an eastward migration which, by 1960, had reached Colorado Boulevard, a natural dividing line. Since 1960, this migration has extended east of Colorado Boulevard into Park Hill. It is the acts of the defendants, taken in the face of this population movement, which plaintiffs contend created the *de jure* segregation complained of in the first claim for relief.

Barrett Elementary School was opened in 1960 at East 29th Avenue between Jackson Street and Colorado Boulevard. The site selected for Barrett, along with the size of the school and its established boundary lines insured that it would be a segregated school from the date of its opening.[1] From these and other facts, we concluded at the preliminary hearing, and we now affirm that holding, that the School Board intended to create Barrett as a segregated school and prevent Negro children from attending the predominantly Anglo schools east of Colorado Boulevard.

At trial (on the merits) defendants attempted to justify Barrett on the ground that until 1964 the Board maintained a racially neutral policy. Racial and ethnic data were not maintained by the District, and race was not considered as a factor in any decision. Defendants further stated that (1) the Barrett site had been owned by the District since 1949 and a school was needed in that general vicinity; (2) Colorado Boulevard was established as the eastern boundary of the Barrett attendance zone because it was a six lane highway and would have been a safety hazard were children required to cross it; and (3) Barrett was built relatively small because its main function was to relieve overcrowding in existing schools rather than to accommodate any significant projected increase in area population.

The above factors fail to provide a basis for inferring that a justifiably rational purpose existed for the action taken with respect to Barrett. *First*, the District owned other sites east of Colorado Boulevard.[2] Had a school been

---

[1] When Barrett opened in 1960, its student body was 89.6 percent Negro.

[2] Dr. Oberholtzer testified that at the time Barrett was built, the School District also owned sites at 35th and Dahlia and 36th and Jasmine (Tr. pg. 2084).

built on one of these sites, it would have not only served the Barrett area, it would also have been integrated. *Second*, the fact that in 1960 many elementary school subdistricts included areas on both sides of busy thoroughfares indicates that safety was not a primary factor in setting school boundaries.[4] *Third*, because of Barrett's small size and the location of its subdistrict boundaries, Barrett relieved overcrowding only at the two predominantly Negro elementary schools west of Colorado Boulevard while affording no relief to the overcrowded Anglo Stedman elementary school eight blocks east of the Barrett site. *Finally*, at the time the decision to build Barrett at 29th and Jackson was made public, a large portion of the Negro community opposed the plan on the ground that Barrett would clearly be a segregated school. This opposition was made known to the Board, and, thus, the School Board cannot now claim that it was uninformed as to the racial consequences of its decisions. Indeed, at that time it was the view of the school administration that it was precluded from taking action which would have an integrating effect.

Between 1960 and 1965, several boundary changes were made in the Park Hill area and mobile units were employed

---

[4] For example, in 1960, the attendance areas of the following elementary schools included areas on both sides of the indicated thoroughfares: Teller and Steck (Colorado Blvd.); Albion, Park Hill, Teller, Stevens, Wyman, Emerson, Evans, Greenlee, Cheltenham, and Colfax (Colfax Ave.); Crofton and Ebert (Broadway); Columbian, Cheltenham, Eagleton and Barnum (Federal Blvd.). Furthermore, it was the policy of the Board to place an elementary school at the center of its attendance area wherever possible. This policy was clearly ignored in the case of Barrett.

in some Park Hill schools to relieve overcrowding.[5] The effect of these various acts on the racial composition of Park Hill schools was identical. Each tended to isolate and concentrate Negro students in those schools which had become segregated in the wake of Negro population influx into Park Hill while maintaining for as long as possible the Anglo status of those Park Hill schools which still remained predominantly white. From this uniform pattern we concluded that the School Board knew the consequences and intended or at least approved of the resultant racial concentrations. We find nothing in the evidence presented at the trial which detracts from this conclusion.

As noted in our former opinion, in 1962 a Special Study Committee on Equality of Educational Opportunity in the Denver Public Schools (Voorhees Committee) was created. Following a thorough study, the Committee recommended that the School Board consider racial, ethnic and socio-economic factors in establishing boundaries and locating new schools, and that boundaries be set so as to establish heterogeneous school communities. Pursuant to this recommendation, the Board adopted Policy 5100, which called for changes or adaptations which would result in a more diverse or heterogeneous racial and ethnic school population.

A second study committee (Berge Committee) was established in 1966 to examine the policies of the Board with respect to the location of new schools in Northeast Denver and to suggest changes which would lead to integration of

---

[5] The 1962 and 1964 boundary changes affected Stedman, Hallett, and Phillips schools. Mobile units were added to Stedman in 1964 and 1965 and to Hallett in 1965. For a more complete discussion as to the consequences of these boundary changes and mobile units see our opinions on plaintiffs' motion for preliminary injunction, reported at 303 F.Supp. 279 and 303 F.Supp. 289.

student population in Denver schools. This committee recommended that no new schools be built in Northeast Denver; that a cultural arts center be established which would be attended by students from various schools on a half-day basis once or twice a week; that educational centers be created; and that a superior school program be initiated for Smiley and Baker junior high schools.

After more than six years of studying and discussing these committee reports and recommendations, the Board in 1968 passed the "Noel Resolution" (Resolution 1490). The "Noel Resolution" noted that Policy 5100 recognized that continuation of neighborhood schools had resulted in the concentration of minority racial and ethnic groups in some schools within the District and that these schools provided an unequal educational opportunity. The Resolution directed the Superintendent of Schools to submit to the Board a comprehensive plan for the integration of the Denver Public Schools.

Pursuant to the "Noel Resolution's" directive, the Superintendent submitted a report entitled "Planning Quality Education—A Proposal for Integrating the Denver Public Schools." Between January and April 1969, the Board studied the Superintendent's report and passed three resolutions—1520, 1524 and 1531. These Resolutions were the product of intense study and discussion and were developed only after considering some fourteen alternative plans. Basically, their purpose was to eliminate segregation in the Negro schools in Park Hill while stabilizing the racial composition of schools in transition. Thus, these Resolutions constituted the first acts of departure from the Board's prior undeviating policy of refusing to take any positive

action which would bring about integration of the Park Hill schools.[6]

In May 1969, a School Board election was held. Much of the campaign revolved around Resolutions 1520, 1524 and 1531, especially those portions which called for mandatory bussing to relieve segregation. The two candidates who had pledged to rescind Resolutions 1520, 1524 and 1531 were elected. On June 9, 1969, the three Resolutions were rescinded and in their stead the Board passed Resolution 1533, which sought to achieve desegregation on a voluntary basis.[7] The rescissions were effectuated with little study and were justified only as a response to the community sentiment expressed in the School Board election.

We concluded at the hearing on preliminary injunction that the adoption of Resolutions 1520, 1524 and 1531 was a "bona fide attempt of the Board to recognize the constitutional rights of the persons affected by the prior segregation." 303 F.Supp. at 295. We further concluded, on the other hand, that the act of the Board repudiating these salutary policies was a legislative act and one of *de jure* segregation.

> The rescission of Resolutions 1520, 1524 and 1531 was a legislative act which had for its purpose restoration

---

[6] To be sure, the Board had adopted statements of policy, such as Policy 5100, suggesting that it had abandoned its prior philosophy. However, Resolutions 1520, 1524 and 1531 marked the first time the Board had backed up earlier policy statements with affirmative action.

[7] Resolution 1533 provided for a voluntary exchange program at Hallett Elementary School on a reciprocal basis, i. e., a volunteering pupil from Hallett could transfer to another school *if* a pupil from that school would volunteer to attend Hallett. The Resolution also called for the transfer of 120 Stedman students, on a voluntary basis, to other elementary schools where space was available.

of the old status quo and was designed to perpetuate segregation in the affected area. This act in and of itself was an act of de jure segregation. It was unconstitutional and void. 303 F.Supp. at 295.

At trial defendants claimed that the three Resolutions had not been implemented at the time of the rescission, and thus in effect that no rights had ever vested under them. Yet the only apparent purpose of the rescission was to maintain a segregated condition at those schools which, but for the rescission, would have been afforded considerable relief. True, the resolutions had not been carried out, but extensive preparations were in progress. In any event, this cannot be made to turn on any property right analogy. Plaintiffs were deprived of a right to seek and possibly to attain equality.

Our preliminary injunction ordered full implementation of Resolutions 1520, 1524 and 1531, except to the extent that the Resolutions apply to East High School and Cole Junior High School. We now hold that the rescission as it applied to East and Cole was also unconstitutional. The School Board recognized that East High School contained growing numbers of minority pupils and that this rapid advance toward segregation threatened the high quality of education which had always been characteristic of East High School. It was, therefore, considered desirable to reduce the number of minority students at East and to stabilize the racial composition therein.[8] Although East may not now be a segregated school, it is unquestionably a

[8] Prior to the passage of Resolution 1520 the racial composition at East was approximately 54 percent Anglo, 40 percent Negro and 7 percent Hispano. The effect of the resolution would be to reduce minority enrollment at East to 32 percent.

school in transition. Left alone it will quickly become segregated. The School Board, with the passage of Resolution 1520, was administering preventive justice. It was making a reasonable and good faith effort to prevent East from becoming a segregated school.

Even though the racial composition at Cole Junior High School was not significantly changed by Resolution 1524, the Resolution did reduce the pupil membership at that school by 275 students. The purpose of this change was to decrease the pupil-teacher ratio at Cole and to make room for a number of special programs to be instituted there. This was also a good faith effort by the Board to improve the quality of education at the predominantly Negro Cole. The action of the Board in aborting and frustrating this effort cannot stand.

We conclude then that the effect of the rescission of Resolution 1520 at East High was to allow the trend toward segregation at East to continue unabated. The rescission of Resolution 1524 as applied to Cole Junior High was an action taken which had the effect of frustrating an effort at Cole which at least constituted a start toward ultimate improvement in the quality of the educational effort there. It perhaps looked to ultimate desegregation. We must hold then that this frustration of the Board plan which had for its purpose relief of the effects of segregation at Cole was unlawful. Resolutions 1520 and 1524, as they apply to East and Cole, should be implemented.

In reaching the above conclusion, we have very carefully considered both the majority and minority opinions in the now famous Supreme Court decision of Reitman v. Mulkey, 387 U.S. 369, 87 S.Ct. 1627, 18 L.Ed.2d 830 (1967), and have concluded that both opinions fully support the position which we have taken.

It will be recalled that *Mulkey*, like the case at bar, had to do with the repeal of legislative acts which recognized rights guaranteed by the equal protection clause of the Fourteenth Amendment. These were in the form of California statutes prohibiting the denial by individuals of the right to be free and equal regardless of race. The plaintiffs were tenants in apartment buildings, who were denied accommodations. By initiative a constitutional amendment, Proposition 14, was adopted. This seemingly innocuous provision guaranteed to everyone unlimited right to decline to sell or rent his property in his uncontrolled discretion. Thus, Proposition 14, or Article I, Section 26, effectively repealed the statute relied on by plaintiff.

The Supreme Court struck down the California amendment adopted by popular vote and did so despite its neutral visage. The Court held that it had the effect of involving the state in "private racial discriminations to an unconstitutional degree." The majority opinion of Mr. Justice White, in concluding that this was discriminatory state action, said:

> None of these cases squarely controls the case we now have before us. But they do illustrate the range of situations in which discriminatory state action has been identified. They do exemplify the necessity for a court to assess the potential impact of official action in determining whether the State has significantly involved itself with invidious discriminations. Here we are dealing with a provision which does not just repeal an existing law forbidding private racial discriminations. Section 26 was intended to authorize, and does authorize, racial discrimination in the housing market. The right to discriminate is now one of the basic policies of the State. The California Supreme Court be-

lieves that the section will significantly encourage and involve the State in private discriminations. We have been presented with no persuasive considerations indicating that these judgments should be overturned. 387 U.S. at 380-381, 87 S.Ct. at 1634.

Our case is like *Mulkey* in that it also involves repeal or rescission of a previous enactment which extended and upheld non-discriminatory rights. Our case is stronger than *Mulkey* in that there the statute was brought to bear on private transactions. Here, on the other hand, there can be no question about whether it is the state which is discriminating.

The sole basis for the dissenting opinion of Justice Harlan was that the constitutional provision was not state action; that it was merely a proclamation of state neutrality in transactions private in nature. The opinion of Mr. Justice Harlan states:

> In the case at hand California, acting through the initiative and referendum, has decided to remain 'neutral' in the realm of private discrimination affecting the sale or rental of private residential property; in such transactions private owners are now free to act in a discriminatory manner previously forbidden to them. In short, all that has happened is that California has effected a *pro tanto* repeal of its prior statutes forbidding private discrimination. This runs no more afoul of the Fourteenth Amendment than would have California's failure to pass any such antidiscrimination statutes in the first instance. The fact that such repeal was also accompanied by a constitutional prohibition against future enactment of such laws by the California

Legislature cannot well be thought to affect, from a federal constitutional standpoint, the validity of what California has done. The Fourteenth Amendment does not reach such state constitutional action any more than it does a simple legislative repeal of legislation forbidding private discrimination. 387 U.S. at 389, 87 S.Ct. at 1638.

It cannot be argued in the case at bar that the legislative action of the School Board was neutral. The Board specifically repudiated measures which had been adopted for the purpose of providing a measure of equal opportunity to plaintiffs and others. The School Board action was, to say the least, not neutral and the causal relation between the School Board action and the injuries is direct. We find and conclude then that *Mulkey* not only supports our position, it is a compelling authority in support of the conclusion which we have reached. It is so closely analogous that we would be remiss if we failed to follow it.

II.

The evidentiary as well as the legal approach to the remaining schools is quite different from that which has been outlined above. For one thing, the concentrations of minorities occurred at an earlier date and, in some instances, prior to the *Brown* decision by the Supreme Court. Community attitudes were different, including the attitudes of the School Board members. Furthermore, the transitions were much more gradual and less perceptible than they were in the Park Hill schools.

Still another distinguishing point is that we do not here have legislative action similar to the rescission of Resolutions 1520, 1524 and 1531.

The first count of plaintiffs' second claim for relief alleges that *de jure* segregation exists at Manual High School; Cole Junior High School; Morey Junior High School; Boulevard Elementary School; Columbine Elementary School and Harrington Elementary School as a result of School Board action designed to isolate Negro and Hispano children in the above schools. Furthermore, plaintiffs claim that this intentional isolation of minority children aggravated or produced the segregated condition of the schools in question.

In support of their allegations, plaintiffs have offered boundary changes and other acts on the part of the School Board as constituting *de jure* segregation.

Before discussing the acts which are relied on, one other factor needs to be mentioned. In some of the schools there are concentrations of Hispanos as well as Negroes. Plaintiffs would place them all in one category and utilize the total number as establishing the segregated character of the school. This is often an oversimplification (certainly if relief is to be granted in a school, the Hispano should receive the same benefit as the Negro.) The plaintiffs have accomplished this by using the name "Anglo" to describe the white community. However, the Hispanos have a wholly different origin, and the problems applicable to them are often different.

One of the things which the Hispano has in common with the Negro is economic and cultural deprivation and discrimination. However, whether it is permissible to add the numbers of the two groups together and lump them into a single minority category for purposes of classification as a segregated school remains a problem and a question.

It would seem then that to the extent that Hispanos, as a group, are isolated in concentrated numbers, a school in

which this has occurred is to be regarded as a segregated school, either *de facto* or *de jure*.

We turn now to a consideration of the evidence offered by plaintiffs regarding boundary changes and elimination of optional areas, which evidence is presented in support of their argument that *de jure* segregation exists in the affected schools. Our comments and legal conclusions will follow.

1. *New Manual High School* (Location: 1700 East 28th Avenue. Present Racial Composition: 60.2 percent Negro, 27.5 percent Hispano, 8.2 percent Anglo)

Both the old and the new Manual were and are located in the older part of the city. This is an area which has long been occupied by the Negroes and is now partly occupied by the Hispanos as well. In the very earliest days of Denver it probably had no racial or ethnic character, and before the Negroes it was in all likelihood occupied by laboring people of various national origins.

The Negro movement has always been eastward because this has been the only open corridor, and this continues to be the case. Plaintiffs' big complaint is that the school was built in this old location and was thus earmarked for minority occupants. However, we have to be mindful of the evidence that it was opened in 1953 at a time prior to Brown v. Board of Education, 347 U.S. 483, 74 S.Ct. 686, 98 L.Ed. 873 (1954), and we are told that this location had the consent of the people in the neighborhood. At that time there was much less concern about minority concentration. The community concern was with the nature and character of the new facility. In any event, the new Manual High School had the same attendance boundaries as the old. The eastern boundary of the mandatory Manual attendance zone was be-

tween Williams and High Streets, just one-half block east of the school site.[9]

In 1953, Manual was operating under its capacity, while East High School, to the southeast, was filled to capacity.[10] Although data is not available as to the 1953 Hispano enrollment at Manual, we know that in 1949-50 this figure was 23.5 percent. The Negro enrollment at Manual in 1953 was 35 percent. We can infer, therefore, that when new Manual opened in 1953, it was a minority school if Negroes and Hispanos are aggregated. Nearby East High School was predominantly Anglo, with a Negro enrollment of only two percent.

By 1956, Manual High School was 42 percent Negro. Whereas in 1953 the Williams-High boundary of the Manual attendance zone was approximately co-terminus with the easternmost point of Negro population movement, by 1956 the Negro population had expanded eastward to roughly York Street. In January 1956, the school administration recommended that the Manual boundary be moved east to York Street, thus including a portion of the former East-

---

[9] The new Manual attendance area was irregularly shaped with its northern boundary at the city limits, its western boundary at the Platte River, and its southern boundary at 17th Avenue. Only the eastern boundary, between Williams and High Streets, is relevant for the purposes of this case.

[10] The capacity utilization of a school is a function of school size and number of students. Plaintiffs have computed school capacity by using the figure of 30 students per room multiplied by the number of rooms in the school. Defendants contend that this is unrealistic, because at lower achieving schools the student-teacher ratio has been reduced, so that, for example, 25 students per room may constitute capacity. Throughout this opinion, the lower achieving schools will be considered undercapacity only where the degree of undercapacity as represented by plaintiffs' data is so great that it cannot be explained purely in terms of a lower teacher-pupil ratio.

Manual optional zone.[11] This proposed boundary, therefore, coincided with the eastern movement of Negro population in that area.

The 1956 Manual boundary change was resisted by some members of the Negro community on the ground that it would serve to contain Negro students living between Williams and York at Manual by cutting off their prior option to attend East. This concern was communicated to the School Board at a series of public meetings. The school administration justified the change on the basis of the overcrowding at East and the underutilization at Manual. Manual had sufficient capacity to accommodate more students than those to be transferred under the proposed boundary change. It was, therefore, suggested that the Board move the Manual boundary east to Colorado Boulevard. This would have embraced a predominantly Anglo neighborhood. Such a move would not only have further alleviated overcrowding at East, but would also have had some integrating effect at Manual. How much we do not know. It would not have substantially changed its character, and the integrating effect would have been temporary, only because in a few years this neighborhood became Negro.

2. *Cole Junior High School* (Location: 3240 Humboldt Street. Present Racial Composition: 72.1 percent Negro; 25.0 percent Hispano; 1.4 percent Anglo)

In 1952, the eastern boundary of Cole Junior High was four blocks east of the school, between High and Race Streets.[12] At this time Cole was undercapacity while

---

[11] East High School, at this time, had a Negro enrollment of one percent.

[12] Although there is no direct evidence of the racial composition of Cole in 1952, we may infer that it was a predominantly minority school at that time from the fact that in 1946-47 its racial composition was 43 percent Anglo; 21 percent Negro; 29 percent Hispano and 7 percent "Mongolian." By 1952 the Negro enrollment at Cole had increased to 30 percent.

Smiley Junior High, a predominantly Anglo school a short distance east of Cole, was overcapacity by approximately 300 students. Although the empty space at Cole would have been utilized to alleviate overcrowding at Smiley, this course of action was not taken.[13] Instead, the school administration determined to construct an addition at Smiley.

In 1956, a boundary change was proposed whereby the eastern boundary of Cole would be extended to York Street, thus transferring part of the Cole-Smiley optional zone to Cole.[14] This proposed change was criticized by members of the Negro community on the ground that its tendency was to preclude Negro students who were living between Race and York Streets from attending Smiley and would force them to attend Cole, which, by this time, was rapidly becoming a segregated school. Nevertheless, the Cole-Smiley boundary proposal was adopted. After the shift in the Cole boundary, Smiley remained overcapacity while Cole was substantially undercapacity.

In 1958, another addition was built at Smiley. As in 1952, this action was taken notwithstanding that empty spaces were available at Cole.

In March 1969, the School Board adopted Resolution 1524, which called for the reduction of student population at Cole. This action was designed to improve the educational opportunity offered to those students remaining at Cole,

---

[13] This would presumably have entailed the transfer of Anglo students at Smiley to the predominantly minority Cole.

[14] This 1956 boundary change was allegedly made in response to the building of Hill Junior High School. However, the Hill attendance zone was carved out of the Smiley, Morey and Gove attendance zones and Cole did not play a significant part in the creation of the Hill area. It is also apparent that the Cole-Smiley boundary change of 1956 paralleled the Manual-East change of that same year, and the objections of many Negro leaders were the same with respect to both of these changes.

while making room for special education programs for low achieving students. Resolution 1524 was rescinded in June 1969.[15]

3. *Morey Junior High School* (Location: 840 East 14th Avenue. Present Racial Composition: 52.4 percent Negro; 26.8 percent Anglo; 18.6 percent Hispano)

The racial composition of Morey Junior High School in 1961 was between 65 and 80 percent Anglo. Morey was surrounded on four sides by optional zones. In 1962, the School Board adopted boundary changes which eliminated all but one of the Morey optional zones.[16] After this en-

---

[15] We have determined in part I of this opinion that the rescission of Resolution 1524 was unconstitutional and that Resolution 1524 should be effectuated with respect to Cole. In this part of the opinion we are concerned only with whether further relief is warranted with reference to Cole.

[16] The 1962 changes involved transferring the Morey-Hill optional zone to Hill; the Morey-Byers optional zone to Byers; the Morey-Cole optional zone to Morey; and the Baker-Morey optional zone to Morey. The racial composition of each of these areas, as reflected by 1960 census tract data, is roughly as follows:

A. Morey-Hill optional zone—0 to 3 percent Negro, 0 to 3 percent Hispano

B. Morey-Byers optional zone—0 to 3 percent Negro, 0 to 3 percent Hispano

C. Morey-Cole optional zone—10 percent to over 50.1 percent Negro (with the larger portion over 50.1 percent Negro), 3.1 to 10 percent Hispano

D. Baker-Morey optional zone—0 to 3 percent Negro, 10.1 to 25 percent Hispano

Also, a portion of the Cole Junior High mandatory zone was transferred to Morey, the racial composition of this area being over 50.1 percent Negro and 3.1 to 10 percent Hispano.

A particularly strong protest with respect to the above boundary changes was voiced by parents of Anglo children living between 6th and 8th Avenues in a mandatory Morey attendance zone. They asserted that these changes would transform Morey into a minority school. In response to this protest the School Board also transferred this area between 6th and 8th Avenues to Byers, a predominantly Anglo junior high school.

actment became effective, the estimated Anglo enrollment at Morey declined to between 45 and 49 percent. Thus, the 1962 Morey boundary changes were largely responsible for the transformation of Morey from a predominantly Anglo school in 1961 to a predominantly minority school in 1962.

The defendants' testimony was to the effect that these changes were made in order to better utilize the capacities of Hill, Byers and Baker junior high schools. The testimony also showed that at that time Cole Junior High School, which was then predominantly Negro, was overcapacity and Morey was the most convenient school available for the purpose of accomplishing the objective. The effect, of course, was to relieve somewhat the concentration of Negroes at Cole, while substantially increasing the number of Negroes at Morey.

Undoubtedly, it is possible that the Board could have worked out a more equitable distribution, but it cannot be said that this was carried out with the design and for the purpose of causing Morey to become a minority school. The Board could not have escaped criticism for the plaintiffs if it had continued the concentration of Negroes at Cole rather than transferring them to Morey.

4. *Boulevard Elementary School* (Location: 2351 Federal Boulevard. Present Racial Composition: 68.1 percent Hispano, 29.9 percent Anglo)

In 1961, Boulevard Elementary School was undercapacity and its racial composition was 59 percent Anglo and 40 percent Hispano. Brown Elementary School, five blocks west of Boulevard, was operating at approximately full capacity and was 98 percent Anglo. Ashland Elementary School, northeast of Boulevard, was operating at its capacity and was 61 percent Anglo and 37 percent Hispano. The razing of a portion of Boulevard resulted in a de-

crease in that school's capacity, requiring the administration to adjust the Boulevard boundaries. The western portion of the Boulevard subdistrict was transferred to Brown and the southwest part of the Ashland attendance zone was assigned to Boulevard. As a result of these boundary alterations, the Hispano population of Boulevard was increased to 60 percent while reducing the Anglo enrollment to 39 percent, thus transforming Boulevard from a predominantly Anglo to a predominantly Hispano school. The school administration denied that this decision had any racial or ethnic character, maintaining that it was a matter of necessity because of the age and condition of the building destroyed.

5. *Columbine Elementary School* (Location: 2545 East 28th Avenue. Present Racial Composition: 97.2 percent Negro; 2.2 percent Hispano; .6 percent Anglo)

In 1951, Columbine Elementary School was overcapacity and its Negro enrollment was 24 percent. Harrington Elementary was slightly overcapacity and had no Negro students. Stedman Elementary School, which has been considered in part I of this opinion, at 29th and Dexter, was operating slightly under its capacity and also had no Negro students.

Three optional zones were established around Columbine in 1952—Columbine-Harrington; Columbine-Mitchell; and Columbine-Stedman. The asserted purpose of this action was to relieve overcrowding at Columbine. However, since both Harrington and Stedman were operating at approximately their capacity prior to the creation of the optional zones, the effect of the administration's action was to slightly decrease overcrowding at Columbine while creating an overcrowded situation at Harrington and Stedman. Furthermore, a study of the racial composition of

these schools one year after the creation of the optional zones indicated that the options were apparently employed by Anglo students as a means of escaping from Columbine to the almost totally Anglo Harrington and Stedman.[17]

Before considering the legal consequences of the above discussed actions of the School Board, there are some other facts which should be mentioned. Former Superintendent Oberholtzer testified at great length to the fact that the administration, including the Board, followed a policy of strict neutrality as far as segregation or integration was concerned. Indeed, Superintendent Oberholtzer stated that even after the decision in Brown v. Board of Education, *supra*, he was of the opinion that it was not permissible for him to classify Negroes as such, even for the purpose of bringing about integration. Thus, it was his belief that he was committed to maintaining the status quo in the schools. Other members of the Board also denied vigorously that they had ever been motivated by either an intention or desire to discriminate. Their testimony was that the boundary changes and their other actions were taken in order to utilize school capacities and carry out the neighborhood school concept.

In examining the boundary changes and removal of optional zones in connection with the several schools which are discussed above, we do not find any wilful or malicious actions on the part of the Board or the administration (in relationship to elementary schools). As to these schools, the result is about the same as it would have been had the

---

[17] Between 1951 and 1952, the Negro enrollment at Columbine jumped from 24 percent to 31 percent, while there was no significant increase in Negro enrollment at either Harrington or Stedman. Between 1952 and 1955, the Negro enrollment at Columbine increased 38 percent.

administration pursued discriminatory policies, since the Negroes and, to an extent the Hispanos as well, always seem to end up in isolation. The substantial factor in this condition is twofold: First, a failure on the part of the Board or of the administration to take any action having an integrating effect, and secondly, deeply established housing patterns which have existed for a long period of time and which have been taken for granted.

It should also be kept in mind that prior to Brown v. Board of Education, *supra*, it was apparently taken for granted by everybody that the status quo, as far as the Negroes were concerned, should not be disturbed because this was the desire of the majority of the community. Time and again the Board members testified to the fact that in making decisions they held hearings and finally bowed to the community sentiment. Thus, they say they did not intend to segregate or refuse to integrate. They just found the consensus and followed it.

Under the present state of the law, particularly in the Tenth Circuit, a condition such as we have described above does not dictate the conclusion that this is *de jure* segregation which calls for an all-out effort to desegregate. It is more like *de facto* segregation, with respect to which the rule is that the court cannot order desegregation in order to provide a better balance.

It is to be emphasized here that the Board has not refused to admit any student at any time because of racial or ethnic origin. It simply requires everyone to go to his neighborhood school unless it is necessary to bus him to relieve overcrowding.

From the cases, we gleaned the following principles as essentials of *de jure* segregation:

(1) The State, or more specifically, the school administration, must have taken some action with a purpose to segregate;

(2) this action must have in fact created or aggravated segregation at the school or schools in question;

(3) a current condition of segregation must exist; and

(4) there must be a causal connection between the acts of the school administration complained of and the current condition of segregation.

The first of the above requirements actually consists of two elements—state action and a purpose to segregate. It seems unnecessary to elaborate on the element of state action at this time, since plaintiffs here emphasize only affirmative official acts.

The important distinguishing factor between *de facto* and *de jure* segregation is purpose to segregate. *See, e. g.*, Board of Education, etc. v. Dowell, 375 F.2d 158 (10th Cir. 1967), cert. denied, 387 U.S. 931, 87 S.Ct. 2054, 18 L. Ed.2d 993 (1967); Downs v. Board of Education of Kansas City, 336 F.2d 988 (10th Cir. 1964), cert. denied, 380 U.S. 914, 85 S.Ct. 898, 13 L.Ed.2d 800 (1965). As the Court of Appeals for the Tenth Circuit stated in *Dowell, supra*:

> In Downs the trial court found the plan was not being used to deprive students of their Constitutional rights and here the trial court, in substance, found to the contrary. It is still the rule in this Circuit and elsewhere that neighborhood school attendance policies, when impartially maintained and administered, do not violate any fundamental Constitutional principle or deprive certain classes of individuals of their Constitutional rights. 375 F.2d at 166.

Segregative purpose may be overt, as in the dual system maintained in some states prior to Brown v. Board of Education, *supra*, or it may be covert, in which case purpose normally must be proved by circumstantial evidence. In order to satisfy this element of purpose, the intent to segregate need not be the sole motive for a school district's action; it need only be one of several factors which motivated the school administration. Thus, regardless of how this purpose is manifested, it is clear that:

> the constitutional rights of children not to be discriminated against in school admission on grounds of race or color * * * can neither be nullified openly and directly by state legislators or state executive or judicial officers, nor nullified indirectly by them through evasive schemes for segregation whether attempted "geniously or ingenuously" Cooper v. Aaron, 358 U.S. 1, 17, 78 S.Ct. 1401, 1409, 3 L.Ed.2d 5, 19 (1958).

The second requirement, assuming purposeful state action, is that the act or acts must have resulted in or substantially aggravated segregation. A threshold problem here is a definition of "segregation." This term connotes first and foremost a very heavy concentration of a minority group within the school in question. Once you have a predominantly minority school population, other factors come into consideration. For example, the racial and ethnic composition of faculty and staff, *e.g.*, Bradley v. School Board, 382 U.S. 103, 86 S.Ct. 224, 15 L.Ed.2d 187 (1965); Hobson v. Hansen, 269 F.Supp. 401, 502 (D.D.C. 1967), aff'd. *sub nom.*, Smuck v. Hobson, 132 U.S.App.D.C. 372, 408 F.2d 175 (1969); the equality of educational opportunity offered at the school; and the community and administration attitudes toward the school.

The third requirement, that a condition of segregation presently exists, recognizes the fact that the term "*de jure* segregation" speaks in present terms. In other words, if a past condition of segregation has been remedied, either through positive state action or through the natural course of events, there is, of course, no present injury justifying equitable relief.

The final and most important element in this case is that of a causal relationship between the discriminatory action complained of and the current condition of segregation in the school or schools involved. Thus, it would be inequitable to conclude *de jure* segregation exists where a *de jure* act had no more than a trifling effect on the end result which produced the condition.[18] In such a case no relief can be granted, for it is not the duty of a court of equity to punish a school board for all past sins, but rather to afford a remedy only where past sins have resulted in present injury.

This necessity of a causal connection between present injury and past discriminatory acts was recognized in Hobson v. Hansen, *supra*. Prior to 1954 the District of Columbia schools had been segregated by law. In 1954 a neighborhood policy was adopted in the District. At the time the *Hobson* case was instituted, substantial desegregation had not been achieved. Plaintiffs, therefore, contended

---

[18] Although past discriminatory acts may not be a substantial factor contributing to present segregation, they may nevertheless be probative on the issue of the segregative purpose of other discriminatory acts which are in fact a substantial factor in causing a present segregated situation. Thus, in part I of this opinion, we discussed the building of Barrett, boundary changes and the use of mobile units as they relate to the purpose for the rescission of Resolutions 1520, 1524 and 1531.

that the effects of the dual system still remained and that they were entitled to relief. Judge Wright held that the dual system was insignificant as a cause of the present segregation:

> This suit was begun 12 years after the institution of the neighborhood school policy, * * *. Many concurrent causes have combined with the Board's 1954 decisions in the evolution of present reality. If the segregation in the District's schools is not currently objectionable under either an independent *de facto* or *de jure* rationale, it would be very difficult to strike it down merely because the neighborhood school policy failed to produce sufficient integration when it replaced an overt *de jure* system 13 years ago. 269 F.Supp. at 495.

So also in our case, the complained of acts are remote in time and do not loom large when assessing fault or cause. The impact of the housing patterns and neighborhood population movement stand out as the actual culprits.

Plaintiffs have argued that the construction of the new Manual in 1953 at the old site virtually insured its segregated character and that this act, as well as the Manual and Cole boundary changes, together with the Smiley additions at a time when Cole was undercapacity, are acts of *de jure* segregation. Quite apart from the cause element which will be discussed further below, it cannot be said that the acts were clearly racially motivated. One would have to labor hard in order to come up with this conclusion.

It can, however, be concluded that the segregation (or racial concentration) which presently exists at Manual and Cole, except insofar as Cole was affected by Resolution 1524 and its rescission as explained above in part I, is not *de jure*. How much of an impact the Board's decisions at

the time had on minority concentrations we do not know. We do know that much of the concentration occurred long after these decisions were made. For example, the Negro population at Cole and Manual increased over 20 percent between 1963 and 1968, and the only contribution which the Board could have made to that resulted from inaction. An essential requisite of a violation of the equal protection clause of the Constitution in the present context is positive legislative or administrative state action which discriminates on account of race, and which produces the condition complained of. The instant situation then cannot be placed at the administration doorstep; if cause or fault has to be ascertained it is that of the community as a whole in imposing, in various ways, housing restraints.

Similarly, it is doubtful whether the 1952 boundary change at Columbine can now be classified as a *de jure* act. To be sure, it increased the minority concentration at Columbine; yet there is a dearth of evidence that this was accompanied by a purpose to segregate rather than a purpose to eliminate double sessions, which was also a result of the change. In any event, as in the case of Manual and Cole, this act appears in restrospect to have had little to do with the present minority population at Columbine. Between 1953, the year following the Columbine boundary modification, and 1969, the percentage of Negro enrollment at the school more than doubled. Even the 1960 census tract data shows that almost the entire Columbine subdistrict was in an area with over 50.1 percent Negro population. It is not conceivable then that this 1952 boundary change, the immediate effects of which were relatively insignificant, could be a current cause of segregation at Columbine.

The Boulevard boundary change of 1962 was necessitated by the legitimate need to reduce pupil enrollment due to

the razing of a portion of the school. Furthermore, there is absolutely no evidence presented, other than the fact of the 1962 change, upon which to base a finding that the School District was motivated by an intent to segregate Hispano students at Boulevard Elementary School.

The removal of the Morey Junior High School optional zones in 1962 did have the effect of increasing the concentration of minority students at that school. It also had the salutary effect of relieving the concentration of Negro students at Cole, a result consistent with defendants' claim that it was carrying out a racially neutral policy. Both the desirable and undesirable consequences of the 1962 changes appear to have been by-products of a general redistribution. In view of that, it would strain both the facts and law to say that the administration acted with an unlawful purpose or design in this instance.

Moreover, whether Morey is presently a segregated school remains a question. To so categorize it requires the lumping together of all non-Anglo groups. The current racial composition at Morey is 52.4 percent Negro, 26.8 percent Anglo, 18.6 percent Hispano. Over 80 percent of the classroom teachers at Morey are Anglo. Morey is unquestionably racially imbalanced, is in transition and will offer a concentration problem unless the Board acts to stabilize it.

Plaintiffs' further claim is that the neighborhood school policy itself has been maintained by the School Board for the purpose and with the effect of segregating minority pupils to the degree that it is unconstitutional. They rely on the rulings of our Court of Appeals that the deliberate use of a neighborhood school system to perpetuate segregation is unlawful. Board of Education, etc. v. Dowell, 375 F.2d 158 (10th Cir. 1967), cert. denied, 387 U.S. 931, 87

S.Ct. 2054, 18 L.Ed.2d 993 (1967); Downs v. Board of Education, 336 F.2d 988 (10th Cir. 1964), cert. denied, 380 U.S. 914, 85 S.Ct. 898, 13 L.Ed.2d 800 (1965). What we have said above regarding boundary changes disposes of this contention. There is no comprehensive policy apparent other than the negative approach which has been described which could be considered in this context. The Board's eye-closing and head-burying is not the kind of conduct which the Circuit Court had in mind in *Dowell* and *Downs*.

Finally, the third count of plaintiffs' second claim for relief urges us to adopt a rule of law that a neighborhood school policy may in and of itself create and/or maintain unconstitutional segregation, even if the adoption of such a policy is motivated by legitimate factors. Plaintiffs' argument in essence is that the neighborhood school system is unconstitutional if it produces segregation in fact. We recognize that some courts have moved along this line.[19] However, the law in our Circuit, as enunciated in *Downs* and *Dowell, supra*, is that a neighborhood school policy, even if it produces concentration, is not *per se* unlawful if:

> it is carried out in good faith and is not used as a mask to further and perpetuate racial discrimination. Board of Education, etc. v. Dowell, 375 F.2d 158, 166 (10th Cir. 1967).

The United States Supreme Court has not yet ruled on this question, and we are here subject to the strong pronouncements of our Circuit Court. Under these decisions

---

[19] Hobson v. Hansen, 269 F.Supp. 401 (D.D.C.1967), *sub nom.*, Smuck v. Hobson, 132 U.S.App.D.C. 372, 408 F.2d 175 (1969); Barksdale v. Springfield School Committee, 237 F.Supp. 543 (D. Mass.1965), vacated, 348 F.2d 261 (1st Cir. 1965); Blocker v. Board of Education, 226 F.Supp. 208 (E.D.N.Y.1964); Branche v. Board of Education, 204 F.Supp. 150 (E.D.N.Y.1962).

plaintiffs are not entitled to relief merely upon proof that *de facto* segregation exists at certain schools within the School District.[20]

In summary then, we must reject the plaintiffs' contentions that they are entitled to affirmative relief because of the above mentioned boundary changes and elimination of optional zones. We hold that the evidence is insufficient to establish *de jure* segregation.

III.

The third count of plaintiffs' second claim for relief alleges that defendants are maintaining certain schools within the District which provide an unequal educational opportunity for the students attending them; that these are segregated schools;[21] and that, therefore, the students at these schools are being denied the equal protection of the law. The plaintiffs seek relief for a large number of schools at every level and in various conditions of racial concentration. These include Barret, Boulevard, Bryant-Webster, Columbine, Crofton, Ebert, Elmwood, Fairmont, Fairview, Garden Place, Gilpin, Greenlee, Hallett, Harrington, Mitchell, Smith, Stedman, Whittier, Wyatt and Wyman Elementary Schools; Baker, Cole, Morey and Smiley Junior High Schools; and East, Manual and West High Schools.[22]

---

[20] There is no discernible difference in result between the *de facto* and *de jure* varieties. Both produce the same obnoxious results, but the Supreme Court has so far given its attention to the more serious problem of dual schools.

[21] Plaintiffs contend that where, as here, it is claimed that schools provide an unequal educational opportunity, it is irrelevant whether the schools in question are *de jure* or *de facto* segregated. This point is discussed later in this section.

[22] These schools were selected by plaintiffs through use of probability theory. Thus, they claim that if all children were picked at

In addition to the charge that all these schools are segregated,[23] plaintiffs maintain these are inferior schools and that racial concentration produces the inferiority. They use several indicia to establish the inferiority and inequality. All of these schools, they say, have (1) low average scholastic achievement; (2) less experienced teachers; (3) higher rates of teacher turnover; (4) higher dropout rates; and (5) older buildings and smaller sites.

Extensive and detailed evidence has been presented establishing the inferiority of plaintiffs' target schools. Some of these have high concentrations of either Negroes or Hispanos. Others are substantial, but at the same time relatively marginal in this regard.

It is clear that there is a relationship between racial concentration and inferiority in achievement and low standards and consequently low morale. However, our mission is to determine inequality based upon race or ethnic origin, we cannot undertake to cure all other ills which we might encounter here. The plaintiffs, of course, believe that all injustices ever encountered should be rooted out. Tentatively, at least, we have determined that for the present purpose a concentration of either Negro or Hispano

---

random to attend each school in the District, the probability that the present racial composition would result at each of the above schools is phenomenally low. We do note that the schools selected through this procedure are generally those with the highest concentration of minority students in the District.

[23] Some of the above schools (Barrett, Smiley and East) have been considered, and full relief has been granted, in part I of this opinion. However, since these schools (with the exception of East) were clearly segregated before this suit was instituted, the statistical data on the educational opportunity provided by them prior to their desegregation has some relevance in creating an overall picture as to the effect of segregation on educational opportunity, and hence it is included in the findings of fact which follow.

students in the general area of 70 to 75 percent is a concentrated school likely to produce the kind of inferiority which we are here concerned with.

In the columnar list below, the elementary, junior and senior high schools with respect to which the plaintiffs have presented evidence are shown. It is to be noted that some of these schools are subject to the findings and conclusions contained in part I of this opinion, but they are nevertheless included here because of their racial concentrations, if not in every instance their educational inferiority.

ELEMENTARY SCHOOLS

School	Anglo (%)	Negro (%)	Hispano (%)
*Barrett	67.0	30.5	1.4
Boulevard	29.9	.5	68.1
Bryant-Webster	23.3	.5	75.5
Columbine	.6	97.2	2.2
Crofton	7.3	38.4	51.5
Ebert	10.6	34.6	52.4
Elmwood	7.9	00.0	91.6
Fairmont	19.8	00.0	79.9
Fairview	7.0	8.2	83.2
Garden Place	17.0	17.2	64.7
Gilpin	3.2	36.4	59.4
Greenlee	17.0	9.0	73.0
Hallett	38.2	58.4	2.6

JUNIOR HIGH SCHOOLS

School	Anglo (%)	Negro (%)	Hispano (%)
Baker	11.6	6.7	81.4
Cole	1.4	72.1	25.0
Morey	26.8	52.4	18.6
*Smiley	61.2	30.4	6.9

*Barrett and Smiley have been integrated by the preliminary injunction.

SENIOR HIGH SCHOOLS

School	Anglo (%)	Negro (%)	Hispano (%)
East	50.1	39.9	7.4
West	56.6	9.0	34.0
Manual	8.2	60.2	27.5

Based on the rule of thumb adopted above, we are here primarily concerned with the following schools: Bryant-Webster, Columbine, Elmwood, Fairmont, Fairview, Greenlee, Hallett, Harrington, Mitchell, Smith, Stedman and Whittier Elementary Schools; Baker and Cole Junior High Schools; and Manual High School.

A. *Achievement*

Plaintiffs' evidence establishes that the scholastic achievement in the above schools is significantly lower than in the other schools in the city. To evidence this, they point to the 1968 Stanford Achievement Test results, which results are designed to measure the achievement level of each pupil in specific scholastic areas, such as spelling, arithmetic, and science. Achievement data for elementary, junior and senior high schools appears in Appendix I.

At the elementary school level, these Stanford Tests results are reported in terms of grade level scores for the third and fifth grades in May 1968. Since May 1 marks the approximate date at which the eighth month of school begins, we are told that a third grade student should be achieving at a 3.8 level at this time, while a fifth grade student should be achieving at a 5.8 level.

We find that in May 1968, the children in the third grade at the segregated schools in question achieved at a grade level of approximately 2.96, and accordingly, were almost one full year below the level at which they should have been achieving. With respect to all 91 schools in the District in 1968, the average median grade level was 3.57, or approximately six months above the achievement level of the schools listed above.

Similarly, the average achievement among fifth grade students at the 12 segregated elementary schools was 4.30. All fifth graders in the District averaged 5.22, which is almost a full year ahead of the 12 segregated schools.

The data with respect to junior high schools, also shown in Appendix I, is based upon the May 1968 Stanford Achievement Tests, and is reported in terms of percentile scores (no grade placement scores were available for junior or senior high schools). A percentile score shows the percentage of pupils nationally whose scores are below the given percentile. For example, if a student's percentile score on a given test is 75, then 75 percent of the students in his grade nationally have scored lower on that test. Similarly, 25 percent of the students taking the test have scored higher.

The average percentile score for all ninth graders on all tests administered is 53.8. However, the two segregated junior high schools (Baker and Cole) achieved at an aver-

age percentile score of only 28.2. This is some 29 percentiles below the average percentile score among all ninth graders. It is interesting to note that the highest average percentile score of the two segregated junior high schools is lower than the lowest average percentile score at any of the other junior high schools in the city.

Senior high school data is based upon tests given in May 1968, to all eleventh grade students in the District, and, like the junior high school data, these scores are reported in terms of average median percentile.

The average median percentile score for all high schools at the eleventh grade level was 52. For Manual, the only minority concentrated high school, the average percentile score was 30. Thus, at the eleventh grade level Manual achievement was some 22 percentiles lower than the high school average for the city, and 70 percent of all students nationally performed better than the median at Manual.

B. *Teacher Experience*

Faculty experience is an important factor in determining the educational opportunity offered at a particular school, and plaintiffs have produced evidence which shows the percentage of faculty at a given school with (1) no years of prior Denver Public School experience; (2) probationary status (0-3 years of experience); and (3) 10 or more years experience. Teacher experience data for elementary, junior and senior high schools appears in Appendix II. At the elementary school level plaintiffs have compiled teacher experience data for their 20 target schools and 20 selected schools with high Anglo enrollment. We have here selected only those schools out of plaintiffs' list of target schools which we find to be segregated, and have compared teacher experience in them with teacher experience in plaintiffs' selected Anglo schools.

The evidence establishes that in the 12 segregated elementary schools in 1968, 23.9 percent of the teachers had no previous DPS experience, 48.6 percent were on probation and 17.4 percent had 10 or more years experience. In contrast, in the 20 selected Anglo schools, only 9.8 percent of the faculty had no previous experience, 25.6 percent were on probation and 47.1 percent—nearly half—had 10 or more years of experience. Of the 12 segregated elementary schools, only one—Bryant-Webster—had a higher percentage of teachers with 10 or more years experience than teachers with no experience or on probation, while sixteen of the 20 Anglo schools had more teachers with 10 or more years experience than non-experienced or probationary teachers.

As to junior high schools, plaintiffs have introduced teacher experience data on all junior high schools in existence in 1968 (see Appendix II). This evidence establishes that the segregated schools have more probationary and non-experienced teachers and fewer teachers with 10 or more years experience than the selected Anglo schools.

The data with respect to senior high schools is similar to that on junior high schools. As was the case with the junior high schools, there are more high school teachers with no or little experience and fewer with over 10 years at Manual than in other senior high schools.

C. *Teacher Turnover*

The effect of teacher turnover on the quality of educational opportunity is twofold. First, a high teacher turnover rate tends to have a disorganizing effect on the school in question. Furthermore, and more important, the teacher turnover rate in a particular school significantly affects the experience of the faculty at that school. In the present

case, plaintiffs have established that the present policy with respect to teacher transfers has the effect of creating a much higher turnover rate at predominantly minority schools than at predominantly Anglo schools. This in turn results in more faculty vacancies at these minority schools and the assignment to them of new teachers with little or no Denver Public School experience.

Denver Public Schools Policy 1617A deals with transfers for faculty. On or about April 20 of each year, the Assistant Superintendent for Personnel Services posts in each school a list of teaching vacancies to be filled the following school year. Those teachers who wish to transfer to schools with vacancies submit an application. Although the principal criterion for determining whether to grant an application for transfer is "whether the request will result in the best educational program for the School District," one of the major considerations for filling vacancies is seniority. Thus, teachers with the most seniority are normally given preference in making transfers. This transfer policy is embodied in an Agreement between School District Number One and the Denver Classroom Teachers Association.

This policy results in the more experienced teachers at minority schools transferring out of those schools when vacancies are opened at predominantly Anglo schools, with the resulting vacancies being filled by inexperienced teachers.

D. *Pupil Dropout Rates*

Plaintiffs' evidence as to dropout rates in junior and senior high schools[24] is set forth in terms of projected and

[24] Since, by law, it is mandatory that children attend school until the age of 16, there are no figures as to dropout rate with respect to elementary schools.

annual dropout rates. The annual dropout rate merely indicates the percentage of students who leave school during a given year. The projected dropout rate for a given year reflects the percentage of students beginning at a particular school who will drop out before graduation (see Appendix III).

The evidence tends to indicate that, generally, the dropout rate is higher at the two segregated junior high schools (Baker and Cole) and Manual Senior High School than at the other schools in the District.

E. *Building Facilities*

Plaintiffs have introduced evidence in an attempt to show a disparity in the age of school buildings and the size of school sites between predominantly minority and predominantly Anglo schools. We would agree that, in most general terms, this disparity exists. However, we do not think that the age of a building and site size are, in and of themselves, substantial factors affecting the educational opportunity offered at a given school. However, we do recognize that in schools which are segregated, have less experienced teachers and produce generally low achieving students, the fact that the physical plant is old may aggravate the aura of inferiority which surrounds the school.

The above material summarizes plaintiffs' evidence and our findings as to the objective indicia of inequality at the schools for which they seek relief. Although plaintiffs claim that factors such as inexperienced faculty tend to contribute to the inferior educational opportunity provided at these schools, their main argument is that the segregation which exists at many of these schools makes a major contribution to this inferiority.

Dr. Dodson, a professor of education at New York University, who has for the past 15 years studied the relationship between the scholastic performance of minority children and segregated schools, testified that a segregated school adversely affects a Negro child's ability to achieve. He indicated that studies show that by the time a school becomes segregated, it is looked upon by the whole community as being inferior.

At this point, the Negro community does not consider the segregated school as a legitimate institution for social and economic advancement. Since the students do not feel that the school is an effective aid in achieving their goal—acceptance and integration into the mainstream of American life—they are not motivated to learn. Furthermore, since the parents of these Negro students have similar feelings with respect to the segregated school, they do not attempt to motivate their children to learn. Teachers assigned to these schools are generally dissatisfied and try to escape as soon as possible. Furthermore, teachers expect low achievement from students at segregated schools, and thus do little to stimulate higher performance.

The defendants do not acknowledge that segregated schools per se produce lower achievement and an inferior educational opportunity. They point to other factors, such as home and community environment, socioeconomic status of the family, and the educational background of the parents as the major causes of inferior achievement. We do not disagree that these factors are relevant, but we cannot ignore the overwhelming evidence to the effect that isolation or segregation per se is a substantial factor in producing unequal educational opportunity.

The first study of the equality of educational opportunity in the Denver Public Schools conducted by the Voorhees

Committee recognized this. In its 1964 report to the Board of Education this Committee stated that

> In a "neighborhood" school system one inevitable result of concentrations of races and ethnic groups because of housing patterns is concentrations of children in the schools into the same groups. There is abundant authority to the effect that "de facto" separation in schools may result in educational inequalities, and there is in Denver wide belief among the racial and ethnic minorities that the schools to which their children go are in some way unequal. In addition, however, there is the fact that there is not available to many children (perhaps a majority of the total school population, regardless of race or ethnic background) the democratic experience of education with members of other races and groups with which they will have to live and compete. The responsibility to eliminate or reduce this result where possible and to compensate for it where elimination is not possible by the removal of prejudice (whether based on color, ethnic or religious background, false values, or any other cause) must be the responsibility of the school to its pupils. Voorhees Committee Report, pp. 6-7.

The Committee also said:

> In 1954 the United States Supreme Court stated that segregated education is inherently unequal education. There was then and is now ample authority for such a statement. While the Court in that instance was concerned with segregation established by law, the Committee is persuaded that the same statement can correctly be made where de facto segregation of minor-

ity races occurs because of other factors, the most obvious of which is a pattern of housing restriction. The Committee feels that in adhering without obvious deviation to the principle of establishing school boundaries without regard to racial or ethnic background, the Board and the administration have concurred, perhaps inadvertently, in the perpetuation of existing de facto segregation and its resultant inequalities in the educational opportunities offered. Voorhees Committee Report, pg. A-5.

As a result of the Voorhees Report, the School Board, on May 6, 1964, adopted Policy 5100 providing that henceforth the school administration would maintain statistical data on the racial and ethnic composition of students in the Denver Public Schools. In adopting the philosophy of the Voorhees Report the Board said:

> The continuation of neighborhood schools has resulted in the concentration of some minority racial and ethnic groups in some schools. Reduction of such concentration and the establishment of heterogeneous or diverse groups in schools is desirable to achieve equality of educational opportunity.

In 1966 the School Board again created a committee to investigate inequality of educational opportunity due to racial concentration in schools (the Berge Committee). The Committee's report is replete with references to the inferior education which results from segregation.

When we consider the evidence in this case in light of the statements in Brown v. Board of Education that segregated schools are inherently unequal, we must conclude that segregation, regardless of its cause, is a major factor in

producing inferior schools and unequal educational opportunity.

The equal protection clause of the Fourteenth Amendment prohibits any state from denying to any person the equal protection of the laws. Simply stated, a state may not treat persons differently without a legitimate reason for doing so. In the area of economic regulation the courts grant broad leeway to the states in creating classes of individuals and treating them differently. All that need be shown is a minimal justification in terms of a legitimate state interest for the inequality of treatment.

The courts, however, have jealously guarded the rights of disadvantaged groups such as the poor or minorities, and have held that where state action, even if non-discriminatory on its face, results in the unequal treatment of the poor or a minority group as a class, the action is unconstitutional unless the state provides a substantial justification in terms of legitimate state interest. See, *e. g.*, Griffin v. Illinois, 351 U.S. 12, 18 n. 11, 76 S.Ct. 585, 100 L.Ed. 891 (1956); Douglas v. California, 372 U.S. 353, 83 S.Ct. 814, 9 L.Ed.2d 811 (1963).[25] This general principle of consti-

[25] Under a claim for relief based upon separate-but-unequal school facilities, purpose or intent to discriminate is not a necessary factor. Where state action results in unequal treatment of the poor or minority groups, it is no defense that the state action was not taken with a purpose to injuriously affect only the poor or minorities as a class. *See* Griffin v. Illinois, 351 U.S. 12, 76 S.Ct. 585, 100 L.Ed. 891 (1956). *See also* Hobson v. Hansen, 269 F.Supp. 401, 497 (1967), which states:

> The complaint that analytically no violation of equal protection vests unless the inequalities stem from a deliberately discriminatory plan is simply false. Whatever the law was once, it is a testament to our maturing concept of equality that, with the help of Supreme Court decisions in the last decade, we now firmly recognize that the arbitrary quality of thoughtlessness can be as disastrous and unfair to private rights and the public interest as the perversity of a willful scheme.

tutional law is fully applicable to school segregation cases. The present state of the law is that separate educational facilities (of the *de facto* variety) may be maintained, but a fundamental and absolute requisite is that these shall be equal. Once it is found that these separate facilities are unequal in the quality of education provided, there arises a substantial probability that a constitutional violation exists. This probability becomes almost conclusive where minority groups are relegated to the inferior schools. As Judge Wright stated in Hobson v. Hansen, *supra*:

> Theoretically, therefore, purely irrational inequalities even between two schools in a culturally homogeneous, uniformly white suburb would raise a real constitutional question. But in cases not involving Negroes or the poor, courts will hesitate to enforce the separate-but-equal rule rigorously. * * * But the law is too deeply committed to the real, not merely theoretical (and present, not deferred) equality of the Negro's educational experience to compromise its diligence * * * when cases raise the rights of the Negro poor. 269 F.Supp. at 497.

As Judge Wright further pointed out in the *Hobson* case, *de facto* segregation today stands in the same position as did *de jure* segregation prior to Brown v. Board of Education. Under the old *Plessy* doctrine (Plessy v. Ferguson, 163 U.S. 537, 16 S.Ct. 1138, 41 L.Ed. 256 (1896)) a school board was under no constitutional duty to abandon dual school systems created by law so long as all schools were equal in terms of the educational opportunity offered. Today, a school board is not constitutionally required to integrate schools which have become segregated because of the effect of racial housing patterns on the neighborhood

school system. However, if the school board chooses not to take positive steps to alleviate *de facto* segregation, it must at a minimum insure that its schools offer an equal educational opportunity.

The evidence in the case at bar establishes, and we do find and conclude, that an equal educational opportunity is not being provided at the subject segregated schools within the District.[26] (See page 78, *supra*, for a list of these schools.) The evidence establishes this beyond doubt. Many factors contribute to the inferior status of these schools, but the predominant one appears to be the enforced isolation imposed in the name of neighborhood schools and housing patterns.[27] It strikes one as incongruous that the community of Denver would tolerate schools which are inferior in quality.

---

[26] This, of course, does not mean that we condemn in any way the leadership and educational efforts of the administration and faculty of these schools. Principals and teachers alike have put forth an outstanding effort to cope with the educational problems in their schools. However, until the underlying causes of these problems are removed, the work of these individuals can never be fully successful.

[27] We thus have a situation very similar to that found in Barksdale v. Springfield School Committee, 237 F.Supp. 543 (1965), vacated, 348 F.2d 261 (1st Cir. 1965). In that case Judge Sweeney found that *de facto* segregation was contributing to inequality of educational opportunity at the schools complained of. He then granted relief, not upon a theory that the School Board had an affirmative duty to remedy racial imbalance, but rather because the Constitution requires a School Board to provide equal educational opportunities for all children within the system.

IV.

Discussion of Remedies

A. *The Northeast Denver Schools*

Our preliminary injunction decree dealt largely with the Park Hill schools and, in effect, specifically enforced Resolutions 1520, 1524 and 1531, with the exception of that part of the resolution having to do with East Denver High School and that part having to do with Cole Junior High School.

In part I of this opinion we have determined that the plaintiffs are entitled to full relief in accordance with the Resolutions and are also entitled to have the East and Cole resolutions implemented in the final judgment. Inasmuch as we have concluded that the preliminary injunction should be made final, an appropriate form of judgment can be prepared to cover this. The preliminary order will remain in effect for the remainder of this year, and the present judgment will take effect in September 1970.

B. *A Program of Improvement*

Although we have concluded that there is not *de jure* segregation in the so-called core city schools,[91a] we have found and concluded that there is a denial of equal opportunity for education in these schools. We have found and concluded that the achievement level in these schools is markedly lower and dropout rates are high; and that there has been a concentration of minority and inexperienced teachers.

How to remedy this condition, that is how to extend to the plaintiffs equal educational opportunity, poses a seri-

[91a] That is, the segregated schools referred to in part III above.

ous and difficult problem, and we do not here present any cure-all. One obvious answer, of course, is that these schools must be renovated as educational institutions. The stress here is not on the inferiority of the buildings, and, indeed, they are oftentimes older and less attractive. Rather, the emphasis is on improving these as educational institutions. One obvious equalizing factor would be to have faculty members who are as competent as the faculty members at Anglo schools.

At the present time, teachers with seniority can select the superior schools and they do so. When these transfers occur a degrading effect on the school which they leave necessarily results. All concerned are reminded that theirs is a less desirable school. It may be that the administration will have to adopt a rule which prohibits these optional transfers by faculty members. These schools are entitled to at least their fair share of the most competent teachers. The administration may have to assign their very best teachers even if premium salaries have to be paid in order to accomplish this.

It is also clear from the evidence that the remedial or special education programs which have been carried on in these schools have not resulted in any significant improvement and so other methods are indicated. It does not fill the bill to merely apply for a federal grant and reduce the teacher-pupil ratio.

Above all, these schools need pride and spirit so that the participants, teachers and pupils, will feel that they are part of a meaningful effort. Certainly a first step in instilling this is to provide them with leadership—dedicated personnel plus the tools to carry out programs. Whether this objective is possible cannot be determined until a genuine good faith effort is forthcoming. In Superintendent

Gilberts and his staff the Board has access to experts who are capable of formulating such a program. Obviously this Court does not have this expertise, but it anticipates hearing from experts, including the Board staff.

C. *Compulsory Transportation*

The evidence in this case shows that neither the plaintiffs nor the defendants nor other interested parties are in favor of bussing as such. It is, however, conceded to be a necessity where integration is ordered, and it would appear to be the only way to implement the Resolutions (1520, 1524 and 1531) and to carry out Part I of this opinion.

In connection with equalizing the educational opportunity, it is not so clear that compulsory transportation is the answer. To be sure, if the children could go to school together on a natural basis, it would undoubtedly provide the most effective antidote for the inferiority. However, setting up an artificial and extensive system of bussing which compels cross-movement and which is not supported by either side has some tendency to undermine the program from the start.

There is a dearth of law in connection with the remedy applicable to equalizing the educational opportunity, and compulsory integration is not yet at least the prescribed remedy. However, it is conceivable that this could become the only effective remedy as a matter of law, and it conceivably could become recognized as a matter of constitutional law. Nevertheless, at this writing, the fashioning of a remedy is a process of weighing and balancing the equities.

From the intervenors and from other sources at the trial, the difficulties and vicissitudes of mandatory bussing have been presented. One persuasive point arises from the

proof of the plaintiffs. Their evidence establishing the inferiority of the subject schools is so convincing that it raises a serious equitable question about subjecting any pupils, minority or majority, to them. It would be imposing a *sanction* on pupils from good schools—a sanction for an offense which they did not commit.

D. *Voluntary Transfer Policy*

We have a single suggestion apart from improvement and that is a system of genuine voluntary transfer out of inferior schools to good schools. This would be a matter of right without the need for securing a reciprocal transfer from an Anglo school to a minority school. Persons desiring this immediate improvement of their educational opportunity could get it, and the District would, in accordance with its present policy based on distance, be required to furnish transportation. Moreover, the Board would be *required* to furnish space for these students. On the other hand, pupils attending the better schools would not be *compelled* to transfer to the core city schools.[21] They could do so if they wished.

Our suggestion recognizes that there are members of the minority groups who are not enthusiastic about compulsory bussing. These parents have the same apprehensions as the majority parents about sending their children into unknown conditions, and perhaps into hostile atmospheres. At the same time, in many instances, they have the same hopes and aspirations for their children as do members of the majority and are willing to make the sacrifice in order to improve the educational opportunity for them.

---

[21] This would not, of course, apply to students subject to part I of this opinion and the integration Resolutions because actual inte-

Arguably, at least, this method satisfies the Constitution in that it recognizes the right of every student and makes that right available to him without forcing it on him. Comments of the litigants on this will be considered at a further hearing.

E. *Voluntary Open Enrollment*

As to the voluntary open enrollment policy of the School Board, certainly they should be free to pursue and develop this to the nth degree. Their position at the trial was that this would ultimately produce integration. One questions whether it would, but if it can be operated successfully, the Board should be encouraged to carry it out. It should be noted, however, that this is neither "voluntary" nor is it "open" because it requires that there be spaces available in the transferee school or that there be an exchange program. It seems clear to us that there would be few participants in an exchange program with the core city schools. It seems highly unlikely that students would elect to go to these schools from white neighborhoods and so it is questionable whether any integration would be achieved in a substantial way from this program. On the other hand, the method selected above has no such "catch" in it.

It is contemplated that any decree which is finally promulgated here will not be effective until next fall. On the other hand, the preliminary injunction heretofore entered would continue for the remainder of this school year until next September when the final judgment would be effective. This opinion does not purport to be a judgment for the purpose of appeal. Final judgment will be entered after a meeting with counsel which hopefully can be carried out within the next 30 days.

Opinion of District Court of May 21, 1970

UNITED STATES DISTRICT COURT

D. Colorado

Civ. A. No. C-1499

May 21, 1970

Wilfred Keyes, individually and on behalf of Christi Keyes, a minor, *et al.*,

Plaintiffs,

v.

School District Number One, Denver, Colorado, the Board of Education, School District Number One, Denver, Colorado, William C. Berge, individually and as President, Board of Education, School District Number One, Denver, Colorado, Stephen J. Knight, Jr., individually and as Vice President, Board of Education, School District Number One, Denver, Colorado, James C. Perrill, Frank K. Southworth, John H. Amesse, James D. Voorhees, Jr., and Rachel B. Noel, individually and as members, Board of Education, School District Number One, Denver, Colorado, Robert D. Gilberts, individually and as Superintendent of Schools, School District Number One, Denver, Colorado,

Defendants.

Decision Re Plan or Remedy

William E. Doyle, District Judge.

It is to be recalled that this suit, which has been previously before the Court, was instituted as a class action by

Negro and Hispano public school students and their parents. Plaintiffs complained that there was de jure segregation in many of the schools in School District Number One, Denver, Colorado, and that an unequal educational opportunity was being provided in the segregated schools within the District. On March 21, 1970, after approximately three weeks of trial, this Court handed down a memorandum opinion and order finding that certain schools, elementary, junior high and a high school within an area of Denver known as Park Hill, and also some 15 schools within the core city, were segregated. It was also concluded that our temporary injunction entered in August 1969, finding a condition of de jure segregation in certain schools resulting from the Denver Board of Education's action rescinding Resolutions 1520, 1524 and 1531, which had been designed to have an integrating effect on Park Hill schools, must be made permanent. We ordered full implementation of these Resolutions. D.C., 313 F. Supp. 61.

A further determination was that certain schools within the core city were segregated as the result of housing patterns and the neighborhood school system; that this constituted de facto segregation and was not unconstitutional per se. A corollary finding and conclusion was that the segregated core city schools in question were providing an unequal education opportunity to minority groups as evidenced by low achievement and morale. The causes of this inferiority were held to be the segregated condition, together with concentration of minority teachers, low teacher experience and high teacher turnover in each of the schools. We stated that:

> The present state of the law is that separate educational facilities (of the *de facto* variety) may be maintained, but a fundamental and absolute requisite is that

these shall be equal. Once it is found that these separate facilities are unequal in the quality of education provided, there arises a substantial probability that a constitutional violation exists. This probability becomes almost conclusive where minority groups are relegated to the inferior schools. 313 F.Supp. at 83.

We thus concluded that the School District had violated the equal protection clause of the Fourteenth Amendment by maintaining and operating schools which deprived the recipients of an equal educational opportunity. Both plaintiffs and defendants were asked to submit plans to remedy the inequality found to exist.

The cause is then presently before us for the purpose of fashioning a remedy which hopefully will establish equality of educational opportunity in the Court designated segregated schools.

Both plaintiffs and defendants have submitted lengthy plans for improving educational opportunity and many of the foremost authorities on this subject, both with respect to the Denver area and nationwide, have been called upon to testify.

I.

Description of Plans

Plaintiffs' proposed plan involves a three-step process for raising achievement and equalizing educational opportunity. The first step is desegregation, or the elimination of racial isolation of minority students through cross-transportation of pupils. Plaintiffs have concentrated on this phase of the program and the plans for desegregation are, for the most part, the product of computer analysis. The second phase involves integration, which the plaintiffs define

as the educational process of promoting mutual respect and understanding among students, teachers and the community. The final portion of the plaintiffs' plan suggests a system of compensatory education programs, carried out in an integrated environment, designed to equalize achievement.

At the outset we note that plaintiffs urge that the Court should reconsider certain schools which plaintiffs consider "target" schools, but which the Court found not to be *segregated* inferior schools. Plaintiffs call attention to the fact that two schools, namely Elyria and Smedley, are not only inferior in terms of achievement, but also meet the guideline set by the Court that the school contain at least 70 to 75 percent Negro *or* Hispano students. Furthermore, plaintiffs ask us to reconsider at least nine other schools which have a *combined* minority population of over 70 percent.[1] Failure to include Elyria and Smedley Schools was due to oversight. These must now be included in a plan for relief. We have concluded that none of the plans are wholly suitable and that a carefully tailored plan consisting of parts of the submitted ideas should be adopted. Nevertheless, a brief description of the plaintiffs' and defendants' proposals will furnish some understanding of the problem and of this order.

Plaintiffs propose *four* alternative plans for desegregation of elementary schools. The first of these desegregates the Court designated elementary schools by a system of cross-bussing. The total number of schools involved would be 29; the total number of students to be transported would be 8,380; the average miles traveled per student one-

[1] We concluded in our March 21 opinion that it was not appropriate to place Negroes and Hispanos in one category to arrive at a minority population of over 70 percent. 313 F.Supp. at 69.

way would be 6.4; the minimum Anglo enrollment at any school designated by the Court would total 54 percent.

The second proposed alternative plan calls for enrolling only pupils in grades 4-6 in the 12 Court designated elementary schools. Each of these schools would be paired with one or more Anglo schools which would be used only for grades K-3. This plan would involve 31 schools; 11,109 students would be transported; the average number of miles traveled per student one-way would be 6.3; minimum Anglo enrollment at the Court designated schools would be 51 percent.

Plan three is similar to plan one except that it would include all of plaintiffs' target elementary schools rather than just the Court designated elementary schools. It would, of course, require a much greater transportation effort involving as it does numerous schools which the Court has not included.

Plan four is similar to plan two, except that all of plaintiffs' target schools are provided with relief.

Alternative plans are submitted by plaintiffs for desegregating junior high schools. The *first* of these would desegregate Cole Junior High School by reassigning to Cole some 1,038 students already being bussed to Thomas Jefferson and John F. Kennedy. Also, students now being bussed to Cole would be bussed instead to Thomas Jefferson and John F. Kennedy. This plan would increase Anglo enrollment at Cole to 66 percent. The second alternative plan would desegregate not only Cole, but also Horace Mann, Lake, Morey and Baker Junior High Schools by a system of cross-bussing similar to that involved in the first alternative plan.

Plaintiffs also propose alternative programs for equalizing educational opportunity at Manual High School. *First*,

they recommend alteration of the school attendance boundaries of Manual, East and South, to create long narrow north-south corridors for each of the above schools. This would result in many Anglo students from south Denver attending Manual. As a *second* alternative, the plaintiffs suggest that Manual be made an open school which could be attended by any student in the District and which would specialize in vocational and pre-professional training. This plan is essentially the same as that proposed by the Board with respect to Manual.

Finally, plaintiffs have suggested several programs which would aid in creating cultural understanding and respect as well as programs for equalizing educational opportunity through compensatory education. These include faculty and staff inservice training and orientation, programs for community involvement, use of paraprofessionals, tutorial systems, individualized instruction, increased pre-school training and others which are very similar to the School Board's suggestions, except that under plaintiffs' plan, desegregation constitutes an essential first step.

The defendants' program for equalizing educational opportunity in the Court designated schools is basically one of compensatory education, with little emphasis on desegregation. Defendants offer some opportunity for mixing of the races, in that pupils at the fifteen Court designated schools could transfer to a school of their choice on a space guaranteed basis with transportation provided by the District, if the transfer will improve racial balance. This is similar to our suggestion in the March 21, 1970 opinion and it differs from the earlier School Board VOE program since the availability of space at a receiving school is not a precondition to transfer.

The remaining of defendants' offerings deal with various forms of compensatory education. Its first section outlines proposals for staffing. There would be encouragement and incentives to induce good teachers to work at the core city schools by extension of the school year and increased teacher compensation. An effort would be made to integrate teaching and administrative staffs. Teacher aides and paraprofessionals would be employed so that teacher time could be utilized more efficiently, there would be human relations training for all school district employees, and teachers would receive instruction in preparation for assignment to target schools.

Educational complexes, as described in the plan, are currently in preparation. A complex would include a basic neighborhood school with special programs at other schools in the cluster. Subjects, activities and services offered at the complex would be oriented to the requirements of the community in which the complex is located.

Defendants' plan also recognizes the importance of the early development of a child, and the need to reach minority children at an early stage. Programs such as Head Start now being used would continue. Those programs currently in use deal with children from three years old to the first grade in certain areas of the city, and a proposed National Follow Through program will work with children through the third grade.

Defendants' plan also describes special programs currently in progress or proposed for Cole Junior High School and Manual High School. The efforts at Cole include the use of laboratory approaches in all academic areas; use of inservice training; use of tutors and student aides; increased counseling efforts; a work-study program; and an extension center and a "crisis room" to be used with stu-

dents who do not adjust well to a regular classroom setting and are potential dropouts or subjects for suspension from school. The programs at Manual include extensive vocational skills and pre-professional courses and advanced placement opportunities.

At present, funds are available under Colorado Senate Bill 174 for children whose reading skills are two or more years below their grade level. Current S.B. 174 financed programs are in effect at Fairview Elementary School, and Baker and Cole Junior High Schools. State appropriations are expected to permit the continuation of these programs.

Finally, defendants list a number of innovative practices. These would emphasize the active, rather than passive elements of learning, recognizing that pupils will vary in their rate of learning based on their ability, background and other factors; efforts would be made to avoid practices which might degrade the child, such as underestimating his ability or denigrating his background or family (no matter how subtly or unconsciously done); and an effort would be made to supply an attractive climate for learning —attractive buildings and classrooms, good interpersonal relationships between parents, pupils and teachers, excursions into places of greater interest and so forth are all contemplated in this type of program.

II.

The Testimony

The crucial *factual* issue considered was whether compensatory education alone in a segregated setting is capable of bringing about the necessary equalizing effects or whether desegregation and integration are essential to im-

proving the schools in question and providing equality. The evidence of both parties has been directed to this question.

Plaintiffs' evidence focused directly on the proposition that desegregation is essential in improving the quality of educational opportunity in the Court designated schools and that compensatory programs of the type proposed by the defendants cannot work in a segregated setting.

Dr. James Coleman, professor of social relations at Johns Hopkins University and author of the Coleman Report on equality of educational opportunity, testified that isolation of children from low socioeconomic families creates an atmosphere which inevitably results in an inferior educational opportunity. Dr. Coleman stated that a child's ability to learn is significantly affected by the educational stimulation provided by his family. Since Negro and Hispano children from low socioeconomic families are typically not provided with this stimulation, a compensating stimulation must be provided by the peer group in the school. Where all children in the school come from families with similar low socioeconomic status, the negative effect produced by family background is reinforced rather than alleviated. Dr. Coleman testified that although a racially isolated school is not inferior *per se*, it will inevitably provide an unequal educational opportunity where the racial or ethnic isolation involves a homogeneous student body all from uneducated and deprived backgrounds.

Dr. Neil Sullivan, who is now Commissioner of the Massachusetts State Board of Education and who installed the Berkeley desegregation plan in Berkeley, California, testified that in his opinion it was racial segregation itself, rather than isolation of children from low socioeconomic families, which caused the inferiority of educational op-

portunity. Dr. Sullivan stated that Berkeley had attempted to improve racially segregated schools by massive programs of compensatory education including lowering the teacher-pupil ratio, improving equipment and materials, and instituting cultural enrichment programs. These programs had little effect on student achievement. It was Dr. Sullivan's expert opinion that any effort at compensatory education must be correlated with desegregation if it is to achieve positive results. He also stated that a program of desegregation similar to that used in Berkeley required two years of preparation and planning.

Dr. Sullivan's testimony was reinforced by the testimony of Dr. Robert O'Reilly. Dr. O'Reilly, the assistant director of research and evaluation for the New York State Department of Education, has made the most extensive study of compensatory education programs on a national scale currently available. He explained that most compensatory programs include such items as lowering teacher-pupil ratio, use of paraprofessionals, inservice teacher and staff training programs, individualized tutoring and cultural enrichment courses. He concluded from this study that compensatory education carried on in a segregated atmosphere had little or no effect on raising achievement. Dr. Sullivan conceded desegregation in and of itself is not a cure-all, but is an essential step in improving educational opportunity and that compensatory programs are important and probably useful, but only if conducted in a desegregated setting.

The main witness for the defendants was Dr. Robert Gilberts, Superintendent of Schools for School District Number One. Dr. Gilberts explained the defendants' proposed plan and offered a critique of the plaintiffs' suggested program. He stated that low achievement among children in

the Court designated schools was the result of a number of factors, including home situation, lack of discipline, absence of stimulation by parents, and verbal deficiencies resulting from the families' limited vocabulary. Although Dr. Gilberts was the developer of Resolutions 1520, 1524 and 1531, designed to desegregate schools in Park Hill, he indicated that this was merely a pilot project. He maintained that there is no affirmative evidence that desegregation would aid in providing an equal educational opportunity for minority children. Furthermore, Dr. Gilberts expressed doubt that desegregation could be successful without broad community support.[3]

The defendants' plan, as explained by Dr. Gilberts, is designed to reconstruct the educational climate by such programs as differential staffing, improved inservice training for teachers and staff, special innovative programs of vocational and preprofessional training at Manual High School and to some extent at Cole Junior High School, and increasing the number of experienced teachers at the Court designated schools. A program similar to the present Voluntary Open Enrollment would be instituted, but with a guaranteed open space provision so that any student in the district might transfer to another school with transportation provided by the District if the transfer would improve the racial balance of both receiving and sending schools. Within the next two years a portion of the "complex system" will be initiated in Denver. Dr. Gilberts admitted, however, that only the new VOE program was specifically designed to provide some measure of desegregation. For the most part the defendants' programs are to be carried out in a substantially segregated setting.

---

[3] We agree that community support is essential, but this, of course, requires a community education program—indeed a campaign.

Defendants also called Messrs. Ward, Morrison and Rehmer, the Principals of Manual High School, Cole Junior High School and Bryant-Webster Elementary School, respectively.

Mr. Ward testified that he had initiated several innovative programs at Manual since becoming Principal. These included work-study vocational training in areas such as building trades, metal work, power and transportation and home economics. He also testified that pre-professional studies were instituted. These are designed to familiarize pupils with occupational fields such as law, medicine, education and engineering. Although there was no evidence that these innovative programs improved the academic achievement of Manual students, Mr. Ward stated that they had intensified interest among students in remaining in school.

Mr. Morrison has also begun certain innovative programs at Cole Junior High School. These include the use of laboratory approaches in all academic areas, tutors and student aides, work-study programs and the "crisis room" and extension center. He testified that these approaches have succeeded in restoring student and community confidence in the school. The result of these programs on academic achievement has not yet been determined. It does appear though that Cole Junior High is now being used as a specialty school.

Mr. Rehmer has instituted new programs at Bryant-Webster which are basically compensatory in nature, and have achieved some success in reviving student interest. This is a predominantly Spanish elementary school in which compensatory reading and some Spanish oriented programs have been stressed.

Finally, these Principals agreed that their programs could be carried out in an integrated setting and that

desegregation of their schools would substantially improve the educational opportunity for their students.

III.

Issues of Law

Before discussing our determinations of fact we must mention that there are present herein two novel questions of law.

The *first* of these is discussed in the memorandum opinion and order of March 21, 1970. This is the question whether a condition of de facto segregation is to be remedied in the same manner as a condition of de jure segregation. We found at the trial that the schools in question became segregated as a result of neighborhood housing patterns—at least that this was the substantial factor in producing the result. It was not caused by positive law or as a result of official action. In the present state of the law, particularly in this the Tenth Circuit, we were of the opinion that desegregation could not be decreed in these circumstances. Undoubtedly this question will receive attention in higher courts at the behest of one or both of the parties and we do not pursue it.

The *second* question is one of both law and fact, but is predominantly to be determined from the evidence. It is whether in a setting of grossly inferior minority schools, compensatory education—improvement of the minority schools, together with a free transfer policy such as that suggested in the March 21, 1970 opinion—constitutes a constitutionally acceptable remedy or whether in order to in truth improve the schools and to thus satisfy the requirements of the Constitution, it is necessary to prescribe and implement also a program of desegregation and inte-

gration. We have concluded after hearing the evidence that the only feasible and constitutionally acceptable program—the only program which furnishes anything approaching substantial equality—is a system of desegregation and integration which provides compensatory education in an integrated environment. We have, however, delayed its being carried into effect for one year (for part of the program) and for two years (for the remainder). We have directed the adoption of an interim program such as that suggested in the March 21, 1970 opinion.

IV.

Findings and Guidelines

1. The overwhelming evidence in this case supports the finding and determination which we now make that improvement in the quality of education in the minority school can only be brought about by a program of desegregation and integration. This is the positive conclusion of Doctors Coleman, Sullivan and O'Reilly, all of whom are authorities in the field. Their opinions are supported by extensive, comprehensive, in depth studies and, in some instances, actual experience in the field.

2. The evidence clearly establishes that the segregated setting stifles and frustrates the learning process. One of the expert witnesses made the matter clear when he said that the isolation of any group develops a homogeneous mass which brings out the worst in the individual members and establishes a low standard of achievement. When, in addition, the group is from a socioeconomic group which is deficient, the bad results are intensified. Add to this the minority factor with the attendant lack of pride and

hope, and the task of raising achievement levels becomes insurmountable. The minority citizens are products, in many instances, of parents who received inferior educations and hence the home environment which is looked to for many fundamental sources of learning and knowledge yields virtually no educational value. Thus, the only hope for raising the level of these students and for providing them the equal education which the Constitution guarantees is to bring them into contact with classroom associates who can contribute to the learning process; it is now clear that the quality and effectiveness of the education process is dependent on the presence within the classroom of knowledgeable fellow students.

3. To seek to carry out a compensatory education program within minority schools without simultaneously developing a program of desegregation and integration has been unsuccessful. Experience has shown that money spent in these programs has failed to produce results and has been, therefore, wasted. The ideal approach, and that which offers maximum promise of success, is a program of desegregation and integration coupled with compensatory education. Desegregation in and of itself cannot achieve the objective of improving the quality of the education in schools. It must be carried out in an atmosphere of comprehensive education and preparation of teachers, pupils, parents and the community. It also must be coupled with an intense and massive compensatory education program for the students if it is to be successful.

4. A system of free transfer to designated Anglo or white schools of minority groups furnishes a minimal, but at the same time an insufficient, fulfillment of the consti-

tutional rights of the persons involved. True, such a method furnishes some relief to the individuals who choose to exercise it, but here again it promises little unless it is accompanied by a careful, painstaking program of compensatory education because here, without the support, the individual is alone in an environment which is much more difficult and competitive than either the segregated or integrated one. It should be used then as an interim measure. It will serve to minimize the deprivation during the period of planning and preparation for a permanent system.

5. As a prelude to a program of integration, the Court designated minority schools must be drastically improved. The inequity implicit in sending majority students to a grossly inferior school was noted in our March 21, 1970 opinion. Substantial correction of these conditions is, therefore, a necessity.

V.

Provisions of the Plan

In our opinion of March 21, 1970, we recognized the underlying constitutional basis for this decision, which is that a state or its subdivision may not constitutionally maintain any program which treats members of minority groups unequally as compared with other groups. It makes no difference that the system may appear to be equal on its face, if its operation in fact results in unequal treatment. Further, when a court finds that such inequality of treatment exists, it is constitutionally bound to provide a remedy which will wipe out the inequality "root and branch."

Having found, in accordance with the overwhelming weight of the evidence, that the racial isolation of Negro and Hispano children which exists in the fifteen schools designated in this Court's opinion of March 21, 1970, to-

gether with Elyria and Smedley Elementary Schools, is the primary factor producing inequality of educational opportunity at those schools and that this inequality can be remedied only through a combined program of desegregation, together with a massive program of compensatory education, and having further concluded that neither the plans submitted by plaintiffs nor those of defendants are wholly satisfactory, we, therefore, now delineate the guidelines of the plan which, based on the evidence and the law, satisfies the Constitution and, at the same time, holds some promise of acceptance and success.

A. *Summary*

The plan calls for desegregation of the Court designated elementary schools (grades 1 through 6) including Smedley and Elyria Schools. Part of this is to be accomplished on or before September 1, 1971, and the remainder is to be carried out not later than September 1, 1972. The detailed plan, including the exchanges which will be necessary, is not adopted now because it is believed that further study must be made. Baker Junior High School is also to be desegregated. A substantial part of the desegregation program must be completed on or before September 1, 1971, and complete desegregation and integration is to be accomplished on or before September 1, 1972.

Cole Junior High is also to be desegregated and integrated on or before the same dates applicable to Baker. This can be accomplished by making Cole a specialty school if the Board of Education determines that this is more feasible.

Manual High School is to become a specialized City high school which will offer pre-professional and particular college preparation courses. It will also offer, in accordance

with the Board's plan, a variety of work-study programs designed to develop talent in arts and trades.

The compensatory education program and the free transfer programs of the Board are also part of the plan.

B. *Elementary Schools*

At least 50 percent of the Court designated elementary schools, grades 1 through 6, including Elyria and Smedley Elementary Schools, must be desegregated by fall of 1971.

Complete desegregation of all Court designated elementary schools, grades 1 through 6 must be accomplished by the beginning of school in the fall of 1972. We consider complete desegregation fulfilling the constitutional requirement to be accomplished when each of the above schools has an Anglo composition in excess of 50 percent. Although it is probably not constitutionally required, the desirability of having the minority student population in each of these schools apportioned equally between Negro and Hispano children is apparent.

Because the plaintiffs and the School District have the expertise necessary for devising a system of school redistricting and transportation to achieve the result set forth above, we leave these details to them. But we stress that the details of the scheme must be carefully examined and checked, having in mind that the program is a human one. While the computers can be useful in such an effort, their results must be checked with care to prevent unnecessary burden to the persons involved. The final details will be subject to review by the Court. We have, of course, been reluctant to decree mandatory transportation, and it should be avoided to the extent possible.

C. *Junior High Schools*

Substantial progress must be made in desegregating Baker Junior High School by fall of 1971. Complete desegregation of Baker Junior High School along the lines set forth above for elementary schools must be effectuated by the beginning of the school year in the fall of 1972.

Cole Junior High School. The Board is directed to adopt one of two alternative plans. First, the Board of Education may desegregate Cole. If this alternative is adopted, substantial progress must be made in desegregating Cole by fall of 1971, with complete desegregation of Cole Junior High by the beginning of the school year in the fall of 1972. The second alternative is to establish Cole by fall of 1971 as an open school for special education and other special programs now in effect or which the School Board may wish to put into effect in the future. Under this second alternative, those students who would have attended Cole in the 1971-72 school year, but who do not wish to participate in the special programs offered at Cole, may transfer with a guarantee of space to another junior high school. It should be open to students from other parts of the City in furtherance of the special programs. A basic assumption is that the desegregation and integration policies here enunciated will be accomplished regardless of which scheme is adopted for Cole.

D. *Manual High School*

We approve and order implementation of the plans set forth by the defendants and plaintiffs for establishing Manual as an open school for the continuation and *expansion* of the vocational and pre-professional training programs which have been instituted by the Principal, the faculty and staff.

If this program develops and transforms Manual to an outstanding institution capable of attracting and accommodating students from the entire City, an integration program would be superfluous.

E. *Preparation*

Between now and the beginning of school in fall 1971, and continuing through fall of 1972, an intensive program of education must be carried out within the community and the school system in preparation for desegregation and integration. This should include at least a program for orienting teachers in the field of minority cultures and problems and how to effectively deal with minority children in an integrated environment. A similar program should be undertaken for staff and administrators. It will also be necessary to educate the community as to the educational benefits and values, not only for the children but also for the community, to be derived from desegregation and integration.

F. *Free Transfer*

Between now and the fall of 1971, *as an interim measure only*, we approve the Board of Education's program for VOE with a guaranteed space provision, and it shall be so implemented with respect to all Court designated schools including Elyria and Smedley Elementary Schools.

G. *Compensatory Education*

We approve of the Board's plans for compensatory education programs for minority children. At a minimum these programs should include:

1. Integration of teachers and administrative staff;

2. Encouragement and incentive to place skilled and experienced teachers and administrators in the core city schools;

3. Use of teacher aides and paraprofessionals;

4. Human relations training for all School District employees;

5. Inservice training on both district-wide and individual school bases;

6. Extended school years;

7. Programs under Senate Bill 174;

8. Early childhood programs such as Head Start and Follow Through;

9. Classes in Negro and Hispano culture and history; and

10. Spanish language training.

All of the above programs, including several others, are now included in the defendants' plan. These programs for compensatory education are to be initiated for the 1970-71 school year. Those programs which are already in effect should be continued in the 1970-71 school year, with any modifications which the Board of Education deems necessary in order to carry out this order.

VI.

Concluding Remarks

We are mindful that the task of the School District is a difficult and complex one. Constitutional standards must, of course, be met at the earliest feasible time, but a program which is too hastily conceived and developed could fail to

achieve its goals. In view of the essential preparation and planning which must go into a program of this magnitude, it is felt that a two year period within which to accomplish desegregation and integration is reasonable, particularly in light of the fact that the plan calls for substantial progress to be made during the year 1971-72.

We have noted the desirability (even though it is not constitutionally mandated) of having both Negroes and Hispanos in the desegregated schools on as close to an equal basis as possible. If integration and desegregation are to have the maximum salutary effect, it would seem to follow that school children be exposed to all racial and ethnic groups which make up the larger community in which they live. True integration is not likely to occur in Denver if Negroes and Hispanos are separated in the public educational system, no matter how innocently the separation has come about.

It is also to be noted that only grades 1 through 6 of the elementary schools are covered in the Court's plan. Kindergarten students are excluded. In the present de facto segregation circumstances in which the effort is improvement, we assume that we have some discretion. Although it may have some value to desegregate children at that early age, it must be kept in mind that their school day is shorter than that of the older children. Mandatory transportation, which may well be necessary to effectuate much of the Court's plan, seems impractical. It seems preferable to wait until that child is on a schedule more closely aligned with that of the other students at his school. Furthermore, because of the tender years of the kindergartners, it appears somewhat dubious whether the value to be gained is sufficient to justify placing these infants in this extraordinary setting.

Finally, we cannot predict with any degree of certainty how successful the free transfer or open enrollment program will be. However, the evidence at the hearing was not encouraging. On the other hand, it may surprise us. Indeed, there is no assurance that the program here prescribed will fully succeed. Its success will depend in large part on the effort which is expended and on the spirit in which the endeavor is carried out.

All adjudications in the case have now been completed and a final judgment can be entered. The remaining detail is a matter requiring the closest scrutiny and study which will require many months. There being no further substantive matter to decide, there is no just cause for delay and the entire matter can now be appealed.

Opinion of Court of Appeals of June 11, 1971

UNITED STATES COURT OF APPEALS

TENTH CIRCUIT

MAY, 1971, TERM

No. 336-70

WILFRED KEYES, *et al.*,

Plaintiffs-Appellees,

v.

SCHOOL DISTRICT No. 1, Denver, Colorado, *et al.*,

Defendants-Appellants.

No. 337-70—(Cross-appeal)

WILFRED KEYES, *et al.*,

Plaintiffs-Appellants,

v.

SCHOOL DISTRICT No. 1, Denver, Colorado, *et al.*,

Defendants-Appellees.

APPEAL FROM THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF COLORADO

(District Court No. C-1499)

Gordon G. Greiner, Denver, Colorado (Conrad K. Harper, New York, New York, on the brief), for Keyes, et al.

William K. Ris, Denver, Colorado (Benjamin L. Craig and Michael H. Jackson, Denver, Colorado, on the brief), for School District No. 1, et al.

Before PICKETT, HILL and SETH, United States Circuit Judges.

HILL, Circuit Judge.

This is a suit in which the parents of children attending Denver Public Schools sued individually, on behalf of their minor children, and on behalf of classes of persons similarly situated, to remedy the alleged segregated condition of certain Denver schools and the effects of that condition. The School District, the present Board of Education and its Superintendent were all named as defendants. The action was brought under 42 U.S.C. §§ 1983, 1985, 28 U.S.C. § 1343(3), (4), and the Fourteenth Amendment of the United States Constitution seeking to enjoin defendants from maintaining, requiring, continuing, encouraging and facilitating separation of children and faculty on the basis of race, and further from unequally allocating resources, services, facilities and plant on the basis of race. Declaratory relief was also sought under 28 U.S.C. § 2201. On appeal, defendants appear as appellants and cross-appellees, and plaintiffs appear as appellees and cross-appellants.

The reported background is extensive. In July, 1969, appellees' motion for preliminary injunction was granted in an opinion found at 303 F.Supp. 279. The motion sought to enjoin the rescission of Resolutions 1520, 1524 and 1531. The preliminary injunction was appealed and was remanded by this court for further findings and consideration of additional questions. Thereafter, the preliminary injunction was supplemented and modified at 303 F.Supp.

289. The decision on the merits is recorded at 313 F.Supp. 61, and the remedies are set forth in an opinion at 313 F.Supp. 90.

The complaint set out two separate causes of action. The first cause contained six counts, all of which pertained to rescission of School Board Resolutions 1520, 1524 and 1531. Therein the plaintiffs alleged that these Resolutions were an attempt by the School Board to desegregate and integrate the public schools of Northeast Denver, and that the rescission of these resolutions was unconstitutional because the purpose and effect was to perpetuate racial segregation in the affected schools. In connection with this cause of action, plaintiffs urge that the rescission of the Board Resolutions constituted affirmative state action resulting in de jure segregation in the schools affected thereby. The second cause of action contained three counts that are pertinent here. The first count, in effect, alleged that through affirmative acts the defendants and their predecessors deliberately and purposely created and maintained racial and ethnic segregation in the so-called "core" area schools within the district. The second count, in effect, alleged that the defendants had purposely maintained inferior schools by their method of allocation to these schools, and such practice has caused those schools to be substantially inferior to other schools within the district with predominantly Anglo students. The effect of such practice, plaintiffs urged, denied the minority students an equal educational opportunity in violation of the equal protection clause of the Fourteenth Amendment. The third count was an attack upon the school district's neighborhood school policy. They urge such policy to be unconstitutional because it results in segregated education.

In substance, the trial court found and concluded as to the first claim that the named schools in Northeast Denver were segregated by affirmative state action. In its findings, the trial court noted specific instances of boundary gerrymandering, construction of a new school and classrooms, minority-to-majority transfers, and excessive use of mobile classroom units in this section of the district, all of which amount to unconstitutional state segregation. In addition, it was held that the adoption of Resolutions 1520, 1524 and 1531 was a bona fide attempt by the Board to recognize the constitutional rights of the students affected by prior segregation, and that the act of repudiating these Resolutions was unconstitutional state action resulting in de jure segregation. As to the second claim, on the first count, the court found that the acts complained of in the core area were not racially inspired, and accordingly the allegations of de jure segregation were not accepted. On the second count, the court found that although the core area schools were not segregated by state action, fifteen designated schools should be granted relief because it was demonstrated that they were offering their pupils an unequal educational opportunity in violation of the Fourteenth Amendment equal protection clause. Upon findings that the Denver neighborhood school policy had been constitutionally maintained under the standards set forth in Board of Education of Oklahoma City v. Dowell, 375 F.2d 158 (10th Cir. 1967), and Downs v. Board of Education of Kansas City, 336 F.2d 988 (10th Cir. 1964), relief on the third count was denied.

On appeal in No. 336-70, appellants attack the findings and conclusions as to the first claim and the second count of the second claim. In the cross-appeal, No. 337-70, the Keyes class urge error in the findings and conclusions regarding the first and third counts of the second claim.

Appellants' initial argument in No. 336-70 makes a two-fold attack on the findings and conclusions regarding the existence of de jure segregation in the schools located in Denver's Northeast sector. First, it is contended that under a proper application of the law, the evidence will not support a finding of de jure segregation. Second, appellants argue that the act of rescinding Resolutions 1520, 1524 and 1531 was not an act of de jure segregation.

A complete understanding and resolution of the issues presented by appellants requires a survey of the events which preceded the Board's action in rescinding the three Resolutions. In the Denver Public School System, there are 92 elementary schools, 16 junior high schools, and 9 senior high schools.[1] There has never been a law in Colorado requiring separate educational facilities for different races. The policy to which the School Board has consistently adhered is the neighborhood school plan. The goal is a centrally located school which children living within the boundary lines must attend. Although the Board has no written policy governing the setting of attendance boundaries, several factors have apparently been employed. Among these are current school population in an attendance area, estimated growth of pupil population, the size of the school, distance to be traveled, and the existence of natural

[1] The overall racial and ethnic composition of Denver Public Schools as of 1968-69 was as follows:

Educational Level	Total Students	% Anglo	% Negro	% Hispano
Elementary	54,576	61.7	15.2	22.0
Junior High	18,576	64.0	15.5	17.0
Senior High	23,425	76.1	10.4	9.0
Totals	96,577	70.7	12.7	15.8

boundaries.[3] The Board also attempts to draw junior high school and senior high school boundary lines so that all students transferring from a given school will continue their education together.

On several occasions during the 1960's, the Board formed committees to study the equality of educational opportunities being provided within the system. In 1962, the Voorhees Committee was assigned the onerous task. That group recognized that in a school district where there are concentrations of minority racial and ethnic groups, the result of a neighborhood school system may be unequal educational opportunities. Therefore, they recommended that the School board consider racial, ethnic and socio-economic factors in establishing boundaries and locating new schools in order to create heterogeneous school communities. The recommendations were apparently ignored.

Thereafter, in May, 1964, the Board passed Policy 5100 which also recognized that the neighborhood school plan resulted in the concentration of some minority racial and ethnic groups in certain schools. Rather than abandon the neighborhood school concept, however, the Board decided to incorporate "changes or adaptations which result in a more diverse or heterogeneous racial and ethnic school population, both for pupils and for school employees." But nothing of substance was accomplished.

In 1966, the Berge Committee was formed to examine Board policies with regard to the location of schools in Northeast Denver and to suggest changes which would lead to integration of Denver students. This committee

[3] Report and Recommendations to the Board of Education School District Number One Denver, Colorado, by a Special Study on Equality of Educational Opportunity in the Denver Public Schools (March 1, 1964), pp. A-1 to A-6.

recommended that no new schools be built in Northeast Denver; that a cultural arts center be established for student use; that educational centers be created; and that superior educational programs be initiated for Smiley and Baker Junior High Schools. Again, the recommendations were not effected.

In 1968, the Board passed the Noel resolution which again formally recognized the problem of concentrated racial and ethnic minority school populations in Northeast Denver and the possibility of resulting unequal educational opportunities. The resolution directed the Superintendent of Schools to submit to the Board a comprehensive plan for integrating the Denver Schools. A plan was submitted, and after a four-month study, Resolutions 1520, 1524 and 1531 were passed. In essence, each of these resolutions sought to spread the Negro populations of these schools to numerous schools by boundary changes, thereby achieving what has been described as racial balance in all of them so that their predominantly Negro populations would become roughly 20% and white students from other areas would produce an Anglo population in each school of about 80%. Resolution 1520 made changes in attendance areas of secondary schools; Resolution 1524 dealt with both secondary schools and junior high schools; and Resolution 1531 changed attendance areas of the elementary schools.

However, before full implementation of the Resolutions could be accomplished, a Board election was held. Two candidates who promised to rescind the Resolutions were elected, and thereafter the Board did rescind Resolutions 1520, 1524 and 1531. In their place, Resolution 1533 was passed which basically provided for a voluntary exchange program between the Northeast elementary schools and other elementary schools of the district. Shortly thereafter, this suit was initiated.

The schools of concern to this argument are located in Northeast Denver in what is generally referred to as the Park Hill area. The schools are: East High School, Smiley and Cole Junior High Schools, Barrett, Stedman, Hallett, Park Hill and Philips Elementary Schools. Prior to 1950, the Negro population was centered in the Five Points area, near the northwest corner of City Park. Since 1940, the Negro population has steadily increased from 8,000 to 15,000 in 1950, to 30,000 in 1960, and to approximately 45,000 by 1966. The residential movement reflecting this growth has been eastward, down a "corridor" which has fairly well defined north-south boundaries. In the early 1950's, York Street (some 16 blocks west of Colorado Boulevard) was the east boundary of the residential expansion. Ten years later, the movement had reached and crossed Colorado Boulevard to a limited degree, and now the corridor of Negro residences extends from the Five Points area to the eastern city limits. The schools of concern are in and adjacent to this narrow strip of Negro residences.

Barrett Elementary is located one block west of Colorado Boulevard in the heart of the Negro community. When it opened in 1960, the attendance lines were drawn to coincide almost precisely with the then eastern boundary of the Negro residential movement—Colorado Boulevard. When the school was being planned in 1958 and the sites for construction were being considered, the area west of Colorado Boulevard was already predominantly Negro; by 1960, when the school opened, the racial composition of the neighborhood which it was to serve was reflected in the 89.6% Negro student enrollment. In 1970, the racial and ethnic composition of the school was approximately 93% Negro, 7% Hispano.

In addition, Barrett was built to accommodate only 450 students, a factor which manifestly precluded its use to

substantially relieve the overcrowded conditions at adjacent schools. In 1960, Stedman (then predominantly Anglo), which was eight blocks due east of Barrett, was well over its intended capacity. Rather than constructing a larger physical plant at Barrett to accommodate part of Stedman's overflow, Barrett's size was restricted to serve only those pupils west of Colorado Boulevard.

The trial court held that "the positive acts of the Board in establishing Barrett and defining its boundaries were the proximate cause of the segregated condition which has existed in that school since its creation, which condition exists at present. . . . The action of the Board . . . was taken with knowledge of the consequences, and these consequences were not merely possible, they were substantially certain. And under such conditions we find that the Board acted purposefully to create and maintain segregation at Barrett." 303 F. Supp. at 290-91.

In 1960, Stedman was 96% Anglo, 4% Negro and was 20% above capacity. By 1962, it was 35 to 50% Anglo and 50 to 65% Negro. In 1963, it was 87.4% Negro and 18.6% Anglo, and still overcrowded. By 1968, this school was 94.6% Negro and 3.9% Anglo. Stedman is eight blocks due east of Barrett, and in 1960 the residential trend all but insured that in a few years it would be predominantly Negro. In 1962, three boundary changes were proposed to the Board which would have transferred students from Stedman to Smith, Hallett and Park Hill, each of which was predominantly Anglo. These three proposals were refused by the Board. In 1964, the Board made two boundary changes which affected Stedman: (1) a predominantly Anglo section of Stedman's school zone was detached to Hallett, and (2) the Park Hill—Stedman optional zone (96% Anglo) was transferred to Park Hill.

To facilitate an expanding population at Stedman, which was overwhelmingly Negro, mobile units were erected.

The trial court held: "The actions of the Board with respect to boundary changes, installation of mobile units and repeal of Resolution 1531 shows a continuous affirmative policy designed to isolate Negro children at Stedman and to thereby preserve the 'white' character of other Park Hill schools." 303 F. Supp. at 292.

In 1960, Park Hill and Philips Elementary Schools were predominantly Anglo. In 1968, Park Hill was 71% Anglo, 23.2% Negro and 3.8% Hispano; Philips was 55.3% Anglo, 36.6% Negro and 5.2% Hispano. Notwithstanding the Negro movement into this area, these two schools have continued a majority of Anglos in the student body.

The court stated: "In light of the natural and probable segregative consequences of removing the stabilizing effect of Resolution 1531 on Park Hill and Philips and re-establishing the original district boundaries, the Board must be regarded as having acted with a purpose of approving those consequences." 303 F. Supp. at 292-93.

In 1960, Hallett Elementary was 99% Anglo; in 1968 it was 90% Negro, 10% Anglo. The school is about 12 blocks due east of Stedman. When the Stedman boundary changes were considered in 1962, Hallett was under capacity and was 80 to 95% Anglo. The results of the boundary changes, had they occurred, would have brought Hallett up to capacity and would have had an integrative effect on the latter school. The 1964 Stedman boundary change that sent the predominantly Anglo section of Stedman to Hallett resulted in a 80% Anglo section of Hallett's attendance area being transferred to Philips. The effect of the Hallett to Philips transfer was a reduction in Anglo pupils at Hallett from 68.5 to 41.5%. By 1965, when four mobile

units were built and additional classrooms constructed, Hallett was 75% Negro.

The court said: "The effect of the mobile units and additional classrooms was to solidify segregation at Hallett, increasing its capacity to absorb the additional influx of Negro population into the area." 303 F. Supp. at 293.

The feeder schools for Smiley Junior High School are Hallett, Park Hill, Smith, Philips, Stedman, Ashley and Harrington. By the established residential trend, Smiley will soon be all Negro. In 1968 there were 23.6% Anglo, 71.6% Negro and 3.7% Hispano, and there were 23 minority teachers. Only one other school in the entire Denver system, Cole Junior High, had more than six minority teachers. The court held: "The effect of this repeal [of Resolutions 1520 and 1524] was to re-establish Smiley as a segregated school by affirmative Board action. At the time of the repeal, it was certain that such action would perpetuate the racial composition of Smiley at over 75% minority and that future Negro population movement would ultimately increase this percentage. . . . We, therefore, find that the action of the Board in rescinding Resolutions 1520 and 1524 was wilful as to its effect on Smiley." 303 F. Supp. at 294.

In 1969, East High School was 54% Anglo, 40% Negro and 7% Hispano. The court held that neither before nor after the passage of Resolution 1520 could East be considered segregated. But "[r]escission of these resolutions might, through the feeder system, result in a segregated situation at East in the future." 303 F. Supp. at 294. In the opinion at 313 F. Supp. 61, 68, the trial court extended its findings of de jure segregation to East High and Cole Junior High: "The effect of the rescission of Resolution 1520 at East High was to allow the trend toward segre-

gation . . . to continue unabated. The rescission of Resolution 1524 as applied to Cole Junior High was an action taken which had the effect of frustrating an effort at Cole which at least constituted a start toward ultimate improvement in the quality of the educational opportunity there. . . . We must hold then that this frustraion of the Board plan which had for its purpose relief of the effects of segregation at Cole were unlawful."

Thus the issue is whether, under applicable constitutional principles, the Board has acted with regard to the Park Hill area schools in a manner which violates appellees' Fourteenth Amendment rights. This controversy was tried to the district court without a jury. On the basis of the testimony and exhibits produced at that trial, the court made findings of fact and conclusions of law. To the extent that appellants' or cross-appellants' arguments rest upon a relitigation or reassessment of factual matters, Rule 52 F.R.Civ.P. 28 U.S.C. requires us to defer to the findings of the trial court unless we are satisfied that they are clearly erroneous. Mitchell v. Texas Gulf Sulphur, —— F2d —— (10th Cir. 1971); Fireman's Fund Insurance Company v. S.E.K. Construction Company, Inc., —— F.2d —— (10th Cir. 1970).

We begin with the fundamental principle that state imposed racial segregation in public schools is inherently unequal and violative of the equal protection clause. Swann v. Charlotte-Mecklenburg Board of Education, —— U.S. —— (1971); Brown v. Board of Education, 347 U.S. 483 (1954); Downs v. Board of Education of Kansas City, 336 F.2d 988 (1964). This Fourteenth Amendment prohibition against racial discrimination in public schools is not limited to the action of state legislatures, but applies with equal force to any agency of the state taking such

action. Cooper v. Aaron, 358 U.S. 1 (1958). And we can perceive no rational explanation why state imposed segregation of the sort condemned in Brown should be distinguished from racial segregation intentionally created and maintained through gerrymandering, building selection and student transfers. Taylor v. Board of Education of City School District of New Rochelle, 294 F.2d 36 (2nd Cir. 1961).

Appellants maintain that although a racial imbalance does exist in the Park Hill area schools, it is justifiable under their neighborhood school policy which has been and is now operated with total neutrality regarding race. It is true that the rule of the Circuit is that neighborhood school plans, when impartially maintained and administered, do not violate constitutional rights even though the result of such plans is racial imbalance. United States v. Board of Education of Tulsa County, 429 F.2d 1253 (10th Cir. 1970); Board of Education of Oklahoma City v. Dowell, 375 F.2d 158 (10th Cir. 1967); Downs v. Board of Education of Kansas City, supra. However, when a board of education embarks on a course of conduct which is motivated by purposeful desire to perpetuate and maintain a racially segregated school, the constitutional rights of those students confined within that segregated establishment have been violated.

The evidence supports the trial court's findings regarding Barrett Elementary School. When construction of new schools in predominantly Negro neighborhoods is based on rational, neutral criteria, segregative intent will not be inferred. Deal v. Cincinnati Board of Education, 369 F.2d 55 (6th Cir. 1966); Sealy v. Department of Public Instruction of Pennsylvania, 252 F.2d 898 (3rd Cir. 1958); Craggett v. Board of Education of Cleveland, 234 F.Supp.

381 (N.D. Ohio 1964); Henry v. Godsell, 165 F.Supp. 87 (E.D.Mich. 1958). Conversely, if the criteria asserted as justification for the construction and designation of attendance lines are a sham or subterfuge to foster segregation, odious intent may be inferred. Here there is sufficient evidence to support segregative intent.

The school was admittedly built in an area of increasing school population with the stated purpose of relieving overcrowded conditions at nearby schools. But the size of the school belies its intended purpose. Although Negro students transferred from nearby schools, with a large segment of Negro children formerly bussed to Park Hill being transferred to Barrett, none of the Anglos from overcrowded Stedman, eight blocks away, were transferred to Barrett. And in point of fact, the small physical plant at Barrett did little to relieve the overcrowded conditions in nearby elementary schools since even after 1960 every adjacent elementary school continued to operate over its intended capacity.[3] The only school which now approached its actual intended capacity was Park Hill, which was predominantly Anglo. This is an unjustifiable non sequitur. The site upon which the building was constructed could have handled a significantly larger facility which would have had long range effects on the overcrowded conditions of the area. Instead, for obscure reasons, the building was

---

[3]

School	Capacity '59	Capacity '60	Enrollment '59	Enrollment '60	% of Capacity '59	% of Capacity '60
Columbine	780	780	901	884	116	113
Harrington	450	450	690	546	153	121
Park Hill	660	630	859	650	130	103
Stedman	630	630	687	698	109	111
Barrett	—	450	—	507	—	113

designed to hold only 450 pupils when the adjacent elementary schools in 1959 already had an excess pupil population of 617.

Although the use of Colorado Boulevard under other circumstances could prove to be a valid exercise of Board discretion, it cannot be justified under the facts here. The Board admits that other elementary school attendance areas are intersected by major traffic thoroughfares, and that in at least one instance an elevated crossing was built to facilitate pupil safety. Thus it was not an immutable boundary which absolutely precluded the extension of attendance lines. On the whole, when viewing the reason asserted by the Board for the construction of Barrett, in light of the actual results obtained, we cannot find clear error in the district court's finding that the size of the school and the location of its attendance boundaries reflected a purposeful intent to build and maintain a Negro school.

We are likewise compelled to support the findings of the trial court regarding the manipulation of boundaries and the use of mobile classroom units within the Park Hill area. These acts, found the trial court, "tend to isolate and concentrate Negro students in those schools which become segregated in the wake of Negro population influx into Park Hill while maintaining for as long as possible the Anglo status of those Park Hill schools which still remained predominantly white." 313 F.Supp at 65.

The Board's refusal to alter the Stedman attendance area in 1962 was not an affirmative act which equates with de jure segregation. The evidence reflects that the proposals would have assigned Stedman students to Smith, Hallett and Park Hill Elementary Schools. Although the racial composition of each of these schools was predominantly Anglo in 1962, Park Hill was well over capacity,

Hallett was slightly over capacity, and Smith was just under capacity. But more important, the residential areas which were to be part of the transfer contained less than 5% Negroes. Thus by making those alterations in attendance zones, Stedman would have lost Anglo pupils to the other schools. There can be no racial overtones attributed to the Board's refusal in 1962 to make the requested Stedman transfers.

However, we have found no evidence, nor have appellants referred us to data, which rebuts or justifies the 1962 Hallett to Philips transfer. Both schools were predominantly Anglo at the time, but Hallett was in a transition stage going from 85 to 95% Anglo in 1962 to 41.5% Anglo in 1964, and to 90% Negro in 1969. The students which were sent to Philips were in the former Hallett-Philips optional zone and were virtually 100% Anglo. The trial court held that the only thing accomplished by the rezoning was the moving of Anglo students from a school district which would gradually become predominantly Negro to one which has remained predominantly Anglo. The evidence does not contradict that analysis.

The other boundary alteration that gave rise to the trial court's finding of gerrymandering of attendance zones in the Park Hill area occurred in 1964. In 1963, Hallett was 68.5% Anglo, Philips was approximately 98% Anglo; Stedman was about 19% Anglo, and Park Hill was over 95% Anglo. The first change transferred a predominantly Anglo portion out of Stedman to Hallett. Second, the Park Hill-Stedman optional zone, which was virtually all Anglo, was transferred to Park Hill. Third, a predominantly Anglo section of the Hallett district was transferred to Philips. A predominantly Anglo section of Stedman's district was sent further east to Hallett. In 1964, Hallett was reduced

to 41.5% Anglo, Philips was roughly 82% Anglo; Stedman was about 15% Anglo, Park Hill was about 90% Anglo.

Although there is a sharp conflict between the parties as to whose testimony and what data should be credited, there is evidence in the record to support the trial court's determination that these were segregative acts taken with knowledge of the effect they would have. The trend is clear that as the Negro population expanded into new neighborhoods, the predominantly Anglo clusters were transferred, by the Board, to one of the remaining predominantly Anglo schools. Smiley Junior High was deemed to be a segregated school because of the racial composition of its students and its faculty. In addition, it appears that Anglo students were permitted to transfer to predominantly Anglo schools even though they lived in the Smiley attendance area. The findings of the trial court, plus the additional effects of allowing Anglos to transfer out of Smiley, are supported by evidence of record and must be sustained.

At this point we pause to acknowledge that the problems facing the school board of any metropolitan city are varied and difficult. The complexities of managing a large school district such as Denver's in a manner which provides equal educational treatment for all students are manifestly made more difficult when, through circumstances often beyond their control, a single racial group settles in a particular neighborhood. Even so, the perplexities of the task cannot be used to justify abdication of constitutional responsibilities.

When a community experiences a steady and ascertainable expansion of Negro population resulting in a new and larger "Negro community", the school board must exercise extreme caution and diligence to prevent racial isolation in those schools. When new buildings are built, new class-

rooms added, attendance areas drawn, and teachers assigned, the board must guard against any acts which reflect anything less than absolutely neutral criteria for making the decisions. The facts as outlined above simply do not mirror the kind of impartiality imposed upon a board which adheres to a neighborhood school plan. *Cf.* Downs v. Board of Education of Kansas City, supra. In sum, there is ample evidence in the record to sustain the trial court's findings that race was made the basis for school districting with the purpose and effect of producing substantially segregated schools in the Park Hill area. This conduct clearly violates the Fourteenth Amendment and the rules we have heretofore laid down in the Downs and Dowell cases. *See* Taylor v. Board of Education of City School District of New Rochelle, 191 F. Supp. 181 (S.D.N.Y. 1961); 195 F. Supp. 231 (S.D.N.Y. 1961); *aff'd* 294 F.2d 36 (2nd Cir. 1961).

The second portion of appellants' first argument urges that the trial court erred in concluding that the act of rescinding Resolutions 1520, 1524 and 1531 was an act of de jure segregation in and of itself. It is their position that this was a valid exercise of the Board's legislative powers; that there was no segregative effect; and that there were no underlying segregative motivations.

Since we have sustained the findings regarding state imposed segregation in the Park Hill area schools, it is unnecessary to further decide whether the rescission of Resolutions 1520, 1524 and 1531 was also an act of de jure segregation. It is sufficient to say that the Board's adoption of those resolutions was responsive to its constitutional duty to desegregate the named schools and the trial court was within its powers in designating those Resolutions as the best solution to a difficult situation. Although the alternative plan proposed in Resolution 1533 is not totally devoid

of merit, a realistic appraisal of voluntary transfer plans has shown that they simply do not fulfill the constitutional mandate of dismantling segregated schools. In fact, the voluntary transfer plans previously employed in Denver have had a minimal effect on the segregated status of the Park Hill area schools. In sum, we conclude that the trial court properly refused to accept Resolution 1533 as a workable solution. Once state imposed segregation is found, trial courts are to employ their broad equitable powers to insure full and immediate desegregation. *See* Brown v. Board of Education, 349 U.S. 294 (1955). The implementation of Resolutions 1520, 1524 and 1531 comports with that duty and holds great promise in achieving that goal. (See Appendix I)

Appellants' second argument relates to the older core area of the city which is populated predominantly by Negroes and Hispanos. Appellees alleged in the trial court that the schools in this area were also segregated by unlawful state action. The trial court refused this plea, and it is the subject of the cross-appeal to be discussed below. However, in addition, appellees urged that a number of these same schools were offering their students an unequal educational opportunity, thus denying them their Fourteenth Amendment right to equal protection. The contention is premised on the assertion that when compared to the other schools in the district, the core area schools were offering inferior education.

The trial court preliminarily resolved that of the 27 schools allegedly offering a sub-standard education, only those with 70 to 75% concentration of either Negro or Hispano students would likely produce cognizable in-

feriority. 313 F. Supp. at 77. The schools so designated were:

School	*Anglo (%)*	*Negro (%)*	*Hispano (%)*
Bryant-Webster*	23.3	.5	75.5
Columbine*	.6	97.2	2.2

*Elementary **Jr. High ***Sr. High

Ultimately the trial court did conclude that these designated schools were providing an education inferior to that being offered in the other Denver schools. 313 F.Supp. at 97-99. The relief decreed varied as to each level, but generally provided that the twelve designated elementary schools, including Elyria and Smedley, are to be integrated with an Anglo composition in excess of 50%. One-half of these schools were to be desegregated and integrated by the fall of 1971, and the remainder must be desegregated and integrated by fall of 1972. Baker Junior High is to be similarly desegregated and integrated by fall of 1971. As to Cole Junior High, it could either be desegregated and integrated as are the elementary schools by fall of

1972, or it could be made the center for essential district-wide programs. Manual High is to be operated as a district-wide school for the continuation and expansion of its vocational and pre-professional programs.

Specifically, the court found (1) that on the basis of 1968 Stanford Achievement Test results, the scholastic achievement in each of the designated schools was significantly lower than in the other schools in the district; (2) that during 1968 in the designated schools there were more teachers without prior experience, more teachers on probation (zero to three years of experience), and fewer teachers with ten or more years teaching experience than in the selected Anglo schools; (3) that because of Board policy which allows intrasystem teacher transfers on the basis of seniority, the more experienced teachers transferred out of predominantly minority schools at the earliest opportunity; (4) that there are more pupil drop-outs in the junior high and senior high schools in the designated schools; and (5) that the size and age of the school building do not of themselves affect the educational opportunity at a given school, but smaller and older buildings may aggravate an aura of inferiority.

The second portion of the finding that the designated schools offer an unequal educational opportunity is premised on the conclusion that "segregation, regardless of its cause, is a major factor in producing inferior schools and unequal educational opportunity." 313 F.Supp. at 82.

Preliminarily it is necessary to determine whether a school which is found to be constitutionally maintained as a neighborhood school might violate the Fourteenth Amendment by otherwise providing an unequal educational opportunity. The district court concluded that whereas the Constitution allows separate facilities for races when

their existence is not state imposed, the Fourteenth Amendment will not tolerate inequality within those schools. Although the concept is developed through a series of analogized equal protection cases, *e.g.*, Griffin v. Illinois, 351 U.S. 12 (1956); Douglas v. California, 372 U.S. 353 (1963), it would appear that this is but a restatement of what Brown v. Board of Education, 347 U.S. 483, 493 (1954) said years ago: "Such an opportunity [of education], where the state has undertaken to provide it, is a right which must be made available to all on equal terms."

For the moment we perceive no valid reason why the constitutional rights of school children would not be violated by an education which is sub-standard when compared to other schools within that same district, provided the state has acted to cause the harm without substantial justification in terms of legitimate state interest. If we allow the consignment of minority races to separate schools, the minimum the Constitution will tolerate is that from their objectively measurable aspects, these schools must be conducted on a basis of real equality, at least until any inequalities are adequately justified. Hobson v. Hansen, 269 F.Supp. 401 (D.D.C. 1967), *modified sub nom.* Smuck v. Hobson, 408 F.2d 175 (D.C.Cir. 1969).

The trial court's opinion, 313 F.Supp. at 81, 82, 83, leaves little doubt that the finding of unequal educational opportunity in the designated schools pivots on the conclusion that segregated schools, whatever the cause, per se produce lower achievement and an inferior educational opportunity. The quality of teachers in any school is manifestly one of the factors which affects the quality of schooling being offered. And the evidence of the case supports the finding that the teacher experience in the designated core area schools is less than that which exists in other Denver

schools. However, we cannot conclude from that one factor—as indeed neither could the trial court—that inferior schooling is being offered. Pupil dropout rates and low scholastic achievement are indicative of a flaw in the system, but as indicated by appellees' experts, even a completely integrated setting does not resolve these problems if the schooling is not directed to the specialized needs of children coming from low socio-economic and minority racial and ethnic backgrounds. Thus it is not the proffered objective indicia of inferiority which causes the substandard academic performance of these children, but a curriculum which is allegedly not tailored to their educational and social needs.

As stated in the first instance then, the trial court's findings stand or fall on the power of federal courts to resolve educational difficulties arising from circumstances outside the ambit of state action. It was recognized that the law in this Circuit is that a neighborhood school policy is constitutionally acceptable, even though it results in racially concentrated schools, provided the plan is not used as a veil to further perpetuate racial discrimination. 313 F.Supp. at 71. In the course of explicating this rule and holding that the core area school policy was constitutionally maintained, the trial court rejected the notion that a neighborhood school system is unconstitutional if it produces segregation in fact. However, then, in the final analysis, the finding that an unequal educational opportunity exists in the designated core schools must rest squarely on the premise that Denver's neighborhood school policy is violative of the Fourteenth Amendment because it permits segregation in fact. This undermines our holdings in the Tulsa, Downs and Dowell cases and cannot be accepted under the existing law of this Circuit.

We cannot dispute the welter of evidence offered in the instant case and recited in the opinion of other cases that segregation in fact may create an inferior educational atmosphere. Appellees observe that several of the federal district courts across the land have indicated that because of the resulting deficiencies, the federal courts should play a role in correcting the system. Davis v. School District of the City of Pontiac, 309 F.Supp. 734 (E.D.Mich. 1970); United States v. School District 151 of Cook County, Illinois, 286 F.Supp. 786 (N.D.Ill. 1968); Hobson v. Hansen, 269 F.Supp. 401 (D.D.C. 1967); Blocker v. Board of Education of Manhassett, New York, 226 F.Supp. 208 (E.D.N.Y. 1964); Branche v. Board of Education of the Town of Hempstead, 204 F.Supp. 150 (E.D.N.Y. 1962); and Jackson v. Pasadena City School District, 382 P.2d 878 (S.C.Cal. 1963). However, the impact of such statements is diminished by indications in the Hobson, Blocker, Branche, Cook County, Pontiac, and Jackson cases that the racial imbalance resulted from racially motivated conduct.

Our reluctance to embark on such a course stems not from a desire to ignore a very serious educational and social ill, but from the firm conviction that we are without power to do so. Downs v. Board of Education, 336 F.2d at 998. Before the power of the federal courts may be invoked in this kind of case, a constitutional deprivation must be shown. Brown v. Board of Education, 347 U.S. 483, 493-95 (1954) held that when a state segregates children in public schools solely on the basis of race, the Fourteenth Amendment rights of the segregated children are violated. We never construed Brown to prohibit racially imbalanced schools provided they are established and maintained on racially neutral criteria, and neither have other circuits considering the issue. Deal v. Cincinnati

Board of Education, 369 F.2d 55 (6th Cir. 1966); 419 F.2d 1387 (1969); Springfield School Committee v. Barksdale, 348 F.2d 261 (1st Cir. 1965); Bell v. School City of Gary, Indiana, 324 F.2d 209 (7th Cir. 1963). Unable to locate a firm foundation upon which to build a constitutional deprivation, we are compelled to abstain from enforcing the trial judge's plan to desegregate and integrate the court designated core area schools.

Although the Board is no longer required by court order to correct the situation in the core area schools, we are reassured by the Board's passage of Resolution 1562 that the efforts made thus far will be only the beginning of a new effort to relieve the problems of those schools. In Resolution 1562, the Board has resolved that regardless of the final outcome of this litigation, it intends to improve the quality of education offered in the system. And it specifically directs the Superintendent and his staff to devise a comprehensive plan "directed toward raising the educational achievement levels at the schools specified by the District Court in its opinion." The salutary potential of such a program cannot be minimized, and the Board is to be commended for its initiative. Because of the significance of the Resolution, it is set out in full in Appendix II.

Appellants have also urged that mandatory bussing of students from the core area schools is neither compelled by the Constitution nor allowed by the Civil Rights Act, 42 U.S.C. § 2000c-6(a)(2). Although the disposition of the issue regarding the status of segregation in the core area schools obviates the necessity of deciding that issue, it is perfectly clear to us that where state imposed segregation exists, as it does in the Park Hill area, bussing is one of the tools at the trial court's disposal to alleviate the condition. It cannot be gainsaid that bussing is not the panacea

of segregation. But, after considering all the alternatives, if the trial court determines that the benefits outweigh the detriments, it is within its power to require bussing. Swann v. Charlotte-Mecklenburg Board of Education —— U.S. —— (1971).

The cross-appeal is first directed at the core schools which the district court refused to label as segregated by state action. At the outset, cross-appellants argue that they were required to labor under an erroneous burden of proof, and that the degree of justification for permitting racially imbalanced schools to exist was too low. The law of this Circuit guides us to approve the trial court's manner of handling the contested issues.

With the knowledge that we have said that neighborhood schools may be tolerated under the Constitution, it would be incongruous to require the Denver School Board to prove the non-existence of a secret, illicit, segregatory intent. It was indicated in the Tulsa case that neighborhood school plans are constitutionally suspect when attendance zones are superficially imposed upon racially defined neighborhoods, and when school construction preserves rather than eliminates the racial homogeny of given schools. United States v. Board of Education of Tulsa County, 429 F.2d at 1258-59. But that case dealt with a school system which had previously operated under a state law requiring segregation of races in public education. As in all disestablishment cases where a former dual system attempts to dismantle its segregated schools, the burden was on the Tulsa School Board to show that they had undertaken to accomplish a unitary public school system. Such an onerous burden does not fall on school boards who have not been proved to have acted with segregatory intent. Cross-appellants' reliance on United States v. School District 151 of Cook County, Illinois, 286 F. Supp. 786 (N.D.

Ill. 1968), aff'd 404 F.2d 1125 (7th Cir. 1968), is misplaced for the same reasons set out above. In that case, the court was likewise dealing with a school district which was segregated by unlawful state action.

Where, as here, the system is not a dual one, and where no type of state imposed segregation has previously been established, the burden is on plaintiff to prove by a preponderance of evidence that the racial imbalance exists and that it was caused by intentional state action. Once a prima facie case is made, the defendants have the burden of going forward with the evidence. Hobson v. Hansen, 269 F. Supp. at 429. They may attack the allegations of segregatory intent, causation and/or defend on the grounds of justification in terms of legitimate state interests. But the initial burden of proving unconstitutional segregation remains on plaintiffs. Once plaintiffs prove state imposed segregation, justification for such discrimination must be in terms of positive social interests which are protected or advanced. The trial court held that cross-appellants failed in their burden of proving (1) a racially discriminatory purpose and (2) a causal relationship between the acts complained of and the racial imbalance admittedly existing in those schools.

The evidence in this case is voluminous, and we have attempted to carefully scrutinize it. Thorough review reflects that cross-appellants have introduced some evidence which tends to support their assertions. However, there is also evidence of record which supports the findings of the trial court, so under Rule 52 F.R.Civ.P. 28 U.S.C., we must affirm. It must be remembered that we do not review this record de novo but can reverse fact findings only upon *clear* error. That kind of mistake is not extant here. The background of the allegedly unlawful acts and the

trial court's analysis of the Board's discriminatory intent and/or causation, with which we agree in each instance, follows.

The New Manual High School was constructed in 1953, just two blocks from old Manual High School. Through the years, from 1927 to 1950, Manual High had enrolled lessening numbers of Anglo students until in 1953, the school was less than 40% Anglo, about 35% Negro, and about 25% Hispano. The attendance zone for New Manual was the same as it had been for Manual, opening at about 66⅔% capacity. Cross-appellants contend that the construction of New Manual at its present location insured its segregated character, and that this act was equivalent to state imposed segregation. The trial court refused this argument on two grounds: First, that the decision to build New Manual on its present site was not racially motivated, and, second, that state action was not the cause of the current racial imbalance. 313 F. Supp. at 75.

In 1956 the Board adopted boundary changes which directly affected Manual High School (42% Negro) and Cole Junior High School (40% Negro). A portion of the Manual—East High optional attendance area was converted to a mandatory Manual attendance zone, and a portion of the Cole—Smiley Junior High optional attendance area was made a mandatory Cole attendance zone. The new mandatory zones were coterminus with the approximate eastern boundary of the Negro residential movement. Again the trial court held that cross-appellants had failed to establish that the boundary changes were racialy motivated or that those alterations caused the current racial imbalance. 313 F. Supp. 75.

In 1962 the Board adopted boundary changes which eliminated the optional attendance zones on three sides of Morey Junior High School. The changes involved trans-

ferring the Morey-Hill optional zone to Hill Junior High; the Morey-Byers optional zone to Byers Junior High; the Morey-Cole optional zone to Morey Junior High; and the Baker-Morey optional zone to Morey. Morey is located on the south side of the Cole attendance area and declined from 71% Anglo in 1961 to 45% Anglo in 1962. The trial court found, however, that despite the apparent segregatory effect at Morey, the concentration of Negroes at Cole was relieved, and the facilities at Hill, Byers and Baker Junior High Schools were better utilized. Thus, although on the surface the alterations appear to be racially inspired, there is evidence to sustain the trial court's finding that the changes were not carried out with the design and for the purpose of causing Morey to become a minority school. 313 F. Supp. at 72.

Cross-appellants have also alluded to other factors which they urge are probative of segregatory intent, i.e., faculty and staff assignments, obfuscation of minority achievement data, and double standards in dealing with overcrowding. Although minority teachers were usually located in the core area or Park Hill area schools, the Board's reason for doing so was not reflective of segregative desires. It operated on the prevailing educational theory of the day, the Negro pupils related more thoroughly with Negro teachers. The rationale was that the image of a successful, well educated Negro at the head of the class provided the best kind of motivation for Negro children and that in turn the Negro teacher had a greater understanding for the Negro pupil's educational and social problems. Although the validity of that theory is under severe attack today, we do not agree that the results of its past application infer segregatory intent. In response to new educational theories, the Denver public school system has today assigned Negro teachers to schools throughout the system

and has reduced the percentages of Negro teachers in the predominantly minority schools.

We are unable to see how the evidence regarding the obfuscation of minority achievement data relates to the Board's alleged segregative intent. And although cross-appellants urge that a double standard was used to deal with overcrowded conditions, the trial court's reluctance to premise segregatory intent on that basis is supported by the record. The evidence reflects that the bussing of Anglo students was caused by the city's annexation of residential areas that did not have school buildings. Hence the school children in these annexed areas were transported to the nearest school where space was available. The premise of alleging a double standard in the treatment of races is resultingly non-existent.

The remainder of the issues designated in the cross-appeal have either been disposed of or made irrelevant by preceding parts of this opinion.

The Final Judgment and Decree of the trial court is affirmed in all respects except that part pertaining to the core area or court designated schools, and particularly the legal determination by the court that such schools were maintained in violation of the Fourteenth Amendment because of the unequal educational opportunity afforded, this issue having been presented by the Second Count of the Second Cause of Action contained in the complaint. In that respect only, the judgment is reversed. The case is accordingly remanded for the implementation of the plan in accordance with this opinion. The trial court is directed to retain jurisdiction of the case for the purpose of supervising the implementation of the plan, with full power to change, alter or amend the plan in the interest of justice and to carry out the objective of the litigation as reflected by this opinion.

APPENDIX I

RACIAL AND ETHNIC COMPOSITION OF SUBJECT SCHOOLS WITH RESPECT TO USE OF RESOLUTIONS 1520, 1524 AND 1531

If Resolution 1520 is used:[1]

APPENDIX II

WHEREAS, this Board of Education, in common with other boards of education in urban areas in this country, has before it the extremely difficult task of providing relevant and effective education to children of infinitely varied backgrounds and abilities; and

WHEREAS, this Board of Education is concerned about all the children of Denver and is constantly searching for ways and means to improve the quality of education offered to them; and

WHEREAS, this Board of Education has, as an interim measure, adopted various plans and approaches toward the improvement of the quality of education offered to the children of Denver, including voluntary open enrollment with transportation provided; and

WHEREAS, the intervention of a lawsuit in the United States District Court has prevented this interim measure from achieving its full potential; and

WHEREAS, that Court in its Memorandum Opinion dated March 21, 1970, has found that certain schools of this School District show average pupil achievement below the city-wide average achievement of pupils; and

WHEREAS, this Board is, and has been, aware of these differences in average pupil achievement among the various schools and has been attempting to set educational policy which will permit the professional staff of this School District to devise and employ new methods of education designed to improve achievement in all schools including those with low achievement averages, by such means as early childhood education, intensified reading programs, cultural

arts centers, outdoor education centers, school clusters or complexes, in-service education, modification and expansion of curricular offerings, and other promising ideas; and

WHEREAS, the United States District Court now has invited this Board to devise and present to it a plan designed to improve the achievement of pupils in certain of its schools;

NOW, THEREFORE, IT IS RESOLVED by this Board of Education that, regardless of the final outcome of the litigation, this Board reaffirms its intent to continue improvement in the quality of education offered to all of the children of Denver, and it hereby directs the Superintendent and his staff to devise a plan directed toward raising the educational achievement levels at the schools specified by the District Court in its opinion. This plan shall be a pilot program which shall include consideration of the following:

1. Differentiated staffing;
2. Increasing the level of faculty experience and decreasing faculty turnover;
3. Increased and improved inservice training for staff;
4. Voluntary open enrollment as opposed to mandatory transfers for pupils;
5. The school complex concept which will focus on decentralized decision-making, community and parent involvement, new educational programs and agency cooperation;
6. Early childhood education;
7. Special programs now being implemented at Cole Junior High School and Manual High School;

8. Special programs available under the Educational Achievement Act of Colorado (Senate Bill 174);

9. Other promising educational innovations.

The plan shall be feasible and within the financial ability of the District, and include a timetable for implementation.

Such a plan shall be submitted to the Board on or before May 6, 1970.

Judgment of Court of Appeals

May Term—June 11, 1971

Before Honorable John C. Pickett, Honorable Delmas C. Hill and Honorable Oliver Seth, Circuit Judges.

No. 336-70

Wilfred Keyes, *et al.*,

Plaintiffs-Appellees,

v.

School District No. 1, Denver, Colorado, *et al.*,

Defendants-Appellants.

No. 337-70

(Cross-appeal)

Wilfred Keyes, *et al.*,

Plaintiffs-Appellants,

v.

School District No. 1, Denver, Colorado, *et al.*,

Defendants-Appellees.

These causes came on to be heard on the record on appeal from the United States District Court for the District of Colorado, and were argued by counsel.

On consideration whereof, it is ordered that the judgment of said court is affirmed in all respects except that part

pertaining to the core area or court designated schools, and particularly the legal determination by the court that such schools were maintained in violation of the Fourteenth Amendment because of the unequal educational opportunity afforded, this issue having been presented by the Second Count of the Second Cause of Action contained in the complaint. In that respect only, the judgment is reversed. The case is accordingly remanded for the implementation of the plan in accordance with this opinion. The trial court is directed to retain jurisdiction of the case for the purpose of supervising the implementation of the plan, with full power to change, alter or amend the plan in the interest of justice and to carry out the objective of the litigation as reflected by the opinion of this Court.

WILFRED KEYES, et al.,

Petitioners,

vs.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, et al.,

Respondents.

ON PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

BRIEF FOR RESPONDENTS IN OPPOSITION

OPINIONS BELOW

The opinions below are as set forth in the Appendices to the petition herein and in respondents' conditional cross petition No. 71-572.

QUESTION PRESENTED

The question stated by petitioners is not stated in terms of the findings of fact in this case. In addition, petitioners have improperly combined the issues of their two separate causes of action into one question in an attempt to

create an issue of unconstitutional deprivation as to the whole, whereas none exists as to that part of the judgment petitioners seek to have this Court review.

STATEMENT OF THE CASE

Petitioners' statement of this case distorts the actual facts as found by the district court after preliminary hearing and a lengthy trial. Petitioners make certain selective references to evidence offered by them, as the basis for their legal arguments and theories even though the district court resolved conflicts as to such evidence in favor of the respondents. Hence respondents are obliged to restate the case in terms of the findings of fact made by the trial court as gleaned from its several opinions. References are to the opinions below printed in the appendix to petitioners' petition.

INTRODUCTION

The complaint contained two separate causes of action. The first cause of action alleged *de jure* racial segregation in certain of the schools in northeast Denver and sought desegregation thereof. The district court found *de jure* racial segregation existed as to three elementary schools and one junior high school and granted the relief sought. The Court of Appeals affirmed.

The second cause of action alleged *de jure* racial segregation and a denial of equal educational opportunity in other schools in Denver and sought desegregation of all of Denver's schools. The district court found no *de jure* racial segregation but did find a denial of equal educational opportunity in 17 schools which were *de facto* segregated. The Court of Appeals affirmed the finding of no *de jure* racial segregation and concluded that there was no unconstitutional deprivation of equal educational opportunity.

The foregoing findings must be considered in light of the number of schools in the Denver system comprised of 92 elementary, 17 junior high and 9 high schools totaling 118 schools.

School District No. 1 was created by Article XX of the Constitution of Colorado in 1902. It has never maintained separate educational facilities for different races. Pupils in the Denver School System are assigned to schools on the basis of their residence. School attendance areas are established for each school based upon the so-called neighborhood school policy.

> "It is to be emphasized here that the Board has not refused to admit any student at any time because of racial or ethnic origin. It simply requires everyone to go to his neighborhood school unless it is necessary to bus him to relieve overcrowding." (67a)

FINDINGS AND CONCLUSIONS OF THE DISTRICT COURT

(a) *Demographic Characteristics of Denver's Negro Population*

Prior to 1950, the Negro population in Denver was concentrated in an area located in the north central part of Denver (4a, 47a). (See generally map, appendix). No records of the racial composition of the schools serving this area were kept. The schools located in this area were largely, but not entirely, Negro. The Negro population was relatively small and the concentration in that area had developed over a long period of time. There is no finding that any acts of the school district caused or contributed to this situation as it existed in 1950 (4a).

Beginning in 1950 the Negro population experienced a substantial growth and moved eastward very rapidly so that by 1960 the Negro population was sizable and had expanded across Colorado Boulevard into the western portion of a residential area known as Park Hill. In the 1960's the Negro migration continued rapidly eastward across the northern portion of Park Hill, changing the population of that area to substantially Negro (4a, 47a).

(b) *Construction of New Schools*

Of all the new schools built by the Denver school district since the end of World War II (Denver spent over 100 million dollars in school construction during that time), the petitioners complain of only two. The first, Barrett Elementary School, completed in 1960, was treated in their first cause of action. The district court found that it was created as a segregated school and this was affirmed by the Court of Appeals (49a). It has been desegregated.

The other school, the replacement of Manual High School in 1953, before *Brown I.*,[1] was treated in the second cause of action. The new school was built on the old building's grounds, and served exactly the same attendance area (59a). The district court affirmatively found that no racial motivation or segregative effect was present in the replacement of this school (61a, 71a). This was affirmed on appeal (149a).

(c) *Changes in School Attendance Areas*

As to the first cause of action, the district court found that four minor boundary changes (one in 1962 and three in 1964) at two Park Hill elementary schools (Stedman and Hallett) and the use of mobile units at one of them, constituted *de jure* segregation (50a). This was affirmed by the

[1] *Brown v. Board of Education*, 347 U.S. 483 (1954)

Court of Appeals (136a) and the district court has ordered desegregation. No similar findings were made as to any of the other 116 schools in the system.

In their second cause of action, petitioners claimed that boundary changes with respect to two other elementary schools (Columbine in 1952 and Boulevard in 1962) and three secondary schools (Manual High and Cole Junior High in 1956 and Morey Junior High in 1962) also contributed to Negro concentrations in those schools. But the district court found that there was no racial motivation in the changes (71a, 72a and 73a), that no racial segregation resulted (72a, 73a), and was unable to find, in the case of Morey Junior High, that the school was ever segregated (73a). The district court summarized by concluding ". . . [w]e must reject the plaintiffs' contentions that they are entitled to affirmative relief because of the above-mentioned boundary changes and elimination of optional zones. We hold that the evidence is insufficient to establish *de jure* segregation." (75a)

The findings of the district court negate the statements in petitioners' statement of the case and in their statement of the question presented that the school district created and aggravated racial segregation throughout the entire school system.

(d) *Other Claims of Segregation*

There were no findings by the district court that either the "optional zones" or "limited open enrollment" had the effect of minority-to-majority transfers or any other segregative effect. It should be noted that limited open enrollment was superseded in 1968 by "Voluntary Open Enrollment" which authorized transfers with transportation furnished by the district if the transfer had an integrative effect in both sending and receiving schools. (109a, 118a)

(e) *Findings Regarding Educational Opportunity*

As to some 17 schools located mainly in the central area of Denver and having the largest concentrations of Negro (9 schools) or Spanish surnamed (8 schools) pupils (77a, 78a), the district court found that an "equal educational opportunity" was not being provided, based on the conclusion that racial or ethnic "isolation or segregation *per se*" (84a), "regardless of cause" (86a), was a substantial factor which produced low median pupil achievement scores. However, the district court also found that other relevant factors constituting major causes of inferior achievement were "home and community environment, socioeconomic status of the family, and educational background of the parents" (84a).

ARGUMENT

I. THERE IS NO CONFLICT IN THE DECISIONS.

This case does not involve a racially segregated school system created or aggravated by the defendants. The district court found it was not. Petitioners' statements to the contrary are not correct as has been demonstrated in the statement of the case.

Racial imbalance in the Denver school system simply was not caused or brought about by any actions of the school district, except, under the findings of the district court, as to 3 of 92 elementary schools and, derivatively, one of 17 junior high schools, all of which were located in northeast Denver and were involved in the first cause of action. The district court has decreed desegregation of each of such schools and petitioners do not claim error with respect thereto (99a-121a, A3-A8 in Appendix to conditional cross petition). Petitioners themselves elected to treat the schools of northeast Denver separately in the first cause of action of the complaint and they achieved the remedy sought thereunder.

No cases have been cited holding that facts such as those found by the district court in this case constitutionally require desegregation of the *entire* district. Therefore, there can be no conflict in lower court decisions.

As to the second cause of action dealing with schools in the core area of the city, the district court expressly found that "there is no comprehensive policy" of segregating pupils by race on the part of the Denver school district (74a).

Petitioners incorrectly suggest that this case bears some resemblance to the Pontiac case (*Davis vs. School District of City of Pontiac*, 309 F.Supp. 734), where system-wide racial balancing was ordered. But in the Pontiac case the district court, after acknowledging *"that a Board of Education has no affirmative duty to eliminate segregation where it has done nothing to create it,"* (emphasis supplied) went on affirmatively to find, as a fact, that the board of education intentionally acted to create and perpetuate segregation throughout the school system and was, therefore, guilty of *de jure* segregation as to the *entire* system (309 F.Supp. 741,2). That court then concluded that the school officials had an obligation to overcome the effects of such *de jure* segregation, and ordered the desegregation of the *entire* school system. The Court of Appeals (6th Cir.) reviewed the findings of fact and concluded that "the findings of purposeful segregation by the school district" were supported by substantial evidence and affirmed (443 F.2d 573). The Pontiac case thus rested on the same principles applied in this case, although the Pontiac case differs profoundly in the facts as found by the respective district courts to the extent of the *de jure* segregation found to exist. Indeed, as to the violation and remedy, the Denver case more closely resembles another case cited by petitioners,[2] where one school within the school district was found to have been segregated

[2] *Taylor v. Board of Education of New Rochelle*, 294 F.2d 36 (2d cir), cert. den., 368 U.S. 940 (1961)

by school authorities and where the remedy was to desegregate that school.

Nor do the district court's findings as to assignment of Negro teachers help petitioners. The only specific findings of disproportionate assignment of Negro teachers were with respect to two of the four schools found to be *de jure* segregated, namely, Barrett with 52.6% Negro (21a) and Smiley with 23 Negro teachers out of 98 (Def. Exh. S, 31a). This does not constitute segregation of faculty and staff in the Denver system.

To accept petitioners' contentions, this Court would have to extend the district court's findings of *de jure* segregation far beyond the four schools found to be so affected. Thus, petitioners attack the district court's findings that there was no *de jure* segregative action by the school district with respect to five other schools in the north central part of the city (71a-72a), findings which were sustained by the Court of Appeals (148a-149a). Petitioners do not assert that such findings of the district court were clearly erroneous, or that the Court of Appeals erred in sustaining them. Nevertheless, petitioners complain that the district court "excused segregatory acts" on the grounds of remoteness, intervening causes, and lack of intent (Petition pp. 18,19). The district court did not "excuse" any acts of the district, but found no acts constituting *de jure* segregation as to such schools (67a). Such racial imbalance as existed was found by the district court to have resulted from housing patterns (71a). There was no finding that such housing patterns resulted from any public or private discrimination.

Petitioners have not demonstrated a conflict in the decisions of the lower courts on facts such as found by the district court and affirmed by the Court of Appeals. Futher, the decision of the Court of Appeals is consistent with the

recent pronouncements of this Court.[3] Therefore, petitioners have failed to present a ground for review by this Court on the basis of conflict.

II. THE COURT OF APPEALS DID NOT ERR IN HOLDING THAT FEDERAL COURTS HAVE NO POWER TO REMEDY A SITUATION NOT CAUSED BY STATE ACTION.

In their reason numbered II, petitioners contend that the Court of Appeals erred in reversing the trial court's ruling that the Constitution is violated by a combination of comparatively low median achievement test scores and racial imbalance in 17 of Denver's 118 schools even though it had expressly found that such conditions were not caused by state action.

Alleged error is not a sufficient basis to grant certiorari under Rule 19.1(b) of the rules of this Court and the petition should be denied for this reason alone.

In any event, the decision of the Court of Appeals on this question is correct and in accord with the decisions of this Court.

It is clear that the district court relied on so-called *de facto* segregation as the major factor contributing to "unequal educational opportunity".[4]

---

[3]"Absent a constitutional violation there would be no basis for judicially ordering assignment of pupils on a racial basis." *Swann vs. Charlotte-Mecklenburg Board of Education*, 402 U.S. 1, 27

[4]Throughout the trial of this case and its appeals, petitioners and the district court have used the terms "segregation" and "equal educational opportunity" generally and without defining them. Segregation implies deliberate state action setting persons apart from each other on the basis of race unless modified by the term *"de facto"* which indicates the absence of state action. The term "equal educational opportunity" was employed by this Court in *Brown* and in the context of that case, this Court said at 347 U.S. 483, 492:

> "In these days, it is doubtful that any child may reasonably be expected to succeed in life if he is denied the opportunity

The district court rejected plaintiffs' contention that the neighborhood school system is unconstitutional if it results in segregation in fact (74a). Yet it concluded that segregation, regardless of its cause, is a major factor in producing unequal educational opportunity and hence is unconstitutional (86a-87a).

This circular reasoning was met squarely by the Court of Appeals:

> "Preliminarily it is necessary to determine whether a school which is found to be constitutionally maintained as a neighborhood school might violate the Fourteenth Amendment by otherwise providing an unequal educational opportunity. The district court concluded that whereas the Constitution allows separate facilities for races when their existence is not state imposed, the Fourteenth Amendment will not tolerate inequality within those schools. Although the concept is developed through a series of analogized equal protection cases, e.g., Griffin v. Illinois, 351 U.S. 12 (1956); Douglas v. California, 372 U.S. 353 (1963), it would appear that this is but a restatement of what Brown v. Board of Education, 347 U.S. 483, 493 (1954) said years ago: 'Such an opportunity [of education], where the state has undertaken to provide it, is a right which

---

of an education. Such an opportunity where the state has undertaken to provide it, is a right which must be made available to all on equal terms."

Thus it appears clear that the term "equal educational opportunity" as used in *Brown* means that no child should be denied access to the public schools solely on the basis of his race. In other words the opportunity to get an education must be made available by states to all equally without regard to race. Respondents are not aware of any decision of this Court extending the meaning of that term. Yet petitioners employ the term as though it means equal educational result.

must be made available to all on equal terms.'" (142a)

* * *

"The trial court's opinion, 313 F.Supp. at 81, 82, 83, leaves little doubt that the finding of unequal educational opportunity in the designated schools pivots on the conclusion that segregated schools, whatever the cause, per se produce lower achievement and an inferior educational opportunity." (143a)

The Court of Appeals quite correctly observed that federal courts have no power to resolve educational difficulties arising from circumstances outside the ambit of state action and held that:

"Before the power of the federal courts may be invoked, in this kind of case, a constitutional deprivation must be shown. Brown v. Board of Education, 347 U.S. 483, 493-95 (1954) held that when a state segregates children in public schools solely on the basis of race, the Fourteenth Amendment rights of segregated children are violated. We never construed Brown to prohibit racially imbalanced schools provided they are established and maintained on racially neutral criteria, and neither have other circuits considering the issue. Deal v. Cincinnati Board of Education, 369 F.2d 55 (6th Cir. 1966); 419 F.2d 1387 (1969); Springfield School Committee v. Barksdale, 348 F.2d 261 (1st Cir. 1965); Bell v. School City of Gary, Indiana, 324 F.2d 209 (7th Cir. 1963)." (145a-146a)

The Sixth Circuit had occasion recently to consider whether the law has been changed by the decisions of this Court[5] since Brown:

[5] *Deal v. Cincinnati Board of Education*, 419 F.2d 1387, (6th Cir. 1969), cert. den. ____ U.S. ____ (1971)

"Appellants petitioned the Supreme Court for certiorari in the first appeal and it was denied. Certiorari was also denied in *Downs* and *Bell, supra*. The denial of certiorari in the present case ought to constitute our opinion in the first appeal as the law of the case, but appellants contend that the law has been changed by the recent decisions of the Supreme Court in *Green* v. *County School Bd. of New Kent County*, 391 U.S. 430 (1968); *Raney* v. *Bd. of Educ. of Gould School District*, 391 U.S. 443 (1968); *Monroe* v. *Bd. of Comm'rs. of the City of Jackson*, 391 U.S. 450 (1968).

"In our opinion, these three decisions did not change any law applicable to our case and appellants' reliance on them is misplaced. The gist of the holdings in these cases was that in desegregating a dual school system, a plan utilizing 'freedom of choice' or a variant 'free transfer' is not an end in itself and would be discarded where it did not bring about the desired result.

"On the other hand, our case involves the operation of a long-established unitary non-racial school system—just schools where Negro as well as white children may attend in the district of their residence. There is not an *iota* of evidence in this record where any of the plaintiffs or any of the class which they represent was denied admission to a school in the district of his residence."

This is precisely the finding of fact by the district court in the case at bar:

"It is to be emphasized here that the Board has not refused to admit any student at any time be-

cause of racial or ethnic origin. It simply requires everyone to go to his neighborhood school unless it is necessary to bus him to relieve overcrowding." (67a)

This Court has recently considered its *Brown* decision in *Swann* v. *Charlotte-Mecklenburg Board of Education*, 402 U.S. 1 (1971):

> "We granted certiorari in this case to review important issues as to the duties of school authorities and the scope of powers of federal courts under this Court's mandates to eliminate racially separate public schools established and maintained by state action. *Brown v. Board of Education*, 347 U.S. 483 (1954) (*Brown I*).
>
> "This case and those argued with it arose in states having a long history of maintaining two sets of schools in a single school system deliberately operated to carry out a governmental policy to separate pupils in schools solely on the basis of race. That was what *Brown v. Board of Education* was all about." 402 U.S. 1, 5-6.

In defining the scope of the remedial power of federal courts in such cases, this Court stated in *Swann* that:

> ". . . [J]udicial powers may be exercised only on the basis of a constitutional violation. Remedial judicial authority does not put judges automatically in the shoes of school authorities whose powers are plenary." 402 U.S. 1 at 16.

As an example, this Court stated that school authorities might well decide that there should be racial balance in every school in a district as a matter of educational policy and pointed out that, absent a constitutional violation, such

would not be within the authority of a federal court. 402 U.S. 1 at 16.

This review of the basic principles of separation of constitutional powers is appropriate here as the district judge in his zeal to do something about educational problems that have plagued educators for many years has exceeded his authority by acting in an area where no constitutional violation exists. The Court of Appeals recognized this excess of jurisdiction and corrected it (146a).

The holding of the Court of Appeals in this case that the neighborhood school policy is constitutionally acceptable, even though it results in racially concentrated schools, provided that the plan is not used as a veil to perpetuate racial discrimination, is given support by other language in *Swann*: "All things being equal, with no history of discrimination, it might well be desirable to assign pupils to schools nearest their homes." 402 U.S. 1 at p. 28. Denver has never maintained a dual school system. Denver's neighborhood school policy was in effect long before there was any racial imbalance in its schools, (59a), and thus was never utilized as a tool to perpetuate racial segregation. In sum, Denver's neighborhood school policy was and is racially neutral (66a) and racially neutral policies of local governments do not violate the Constitution* even if they result, as in this case, in some racial imbalance.

III. THIS CASE HAS NO SIGNIFICANT NATIONAL IMPLICATIONS.

Petitioners conclude their reasons for granting certiorari by stating that on either of the grounds discussed by them, the decision of the Court of Appeals is wrong and that the case should be reviewed because of its national implications without stating what these implications might be. Certainly,

*This Court recently applied this same rule in a case involving alleged discrimination in low-rent public housing. *James v. Valtierra, et al.*, ____ U.S. ____ (1971).

the national implications of federal judicial entry into the field of determining educational policy would be significant, but as this case now stands, the Court of Appeals has corrected this excess of jurisdiction leaving the problem of operating public schools throughout the nation where the Constitution intended—in the legislative and executive branches of government and not in the judicial branch. No significant national implications resulted when this Court declined to review other similar holdings.[7]

These cases have no significant national implications largely because they turn on their own facts which are vastly different in different areas of the country and vary from district to district. No useful purpose would be served by this Court's reiterating the elementary rule of constitutional law that absent a violation of the Constitution, federal courts are powerless to deal with educational problems.

Events Subsequent to the Issuance of the Court of Appeals Opinion on June 11, 1971 64

Summary of Argument 65

ARGUMENT—

I. Racial Segregation in the Denver School System Violates the Fourteenth Amendment and Should Be Remedied by a Comprehensive System-Wide Desegregation Plan 68

Introduction 68

PAGE

A. Denver's Unconstitutional Ten Year Policy of Racial Segregation Necessitates a Requirement for System-wide School Desegregation 71

B. Unlawful Segregation in Denver Is Even More Extensive Than the Courts Below Recognized 79

C. Petitioners Proved a Prima Facie Case of Unlawful Racial Segregation, But the Courts Below Incorrectly Defined the Burden of Proving Constitutionality Actionable School Segregation 87

II. Denver's Systematic Disparate and Discriminatory Educational Treatment of Minorities Violates Equal Protection and Entitles Petitioners to System-Wide Relief 92

A. Denver's Disparate, Unequal Treatment of Minorities in the Provision of Public Education Violates Equal Protection 93

1. The Evidence and Findings Below Demonstrate That in Denver Minority Children Were Consciously Treated Differently and Discriminatorily by Respondents' Policies and Practices When Compared to Anglo Children 93

2. The Trial Court's Determination of Violation Resulted From the Proper Application of Equal Protection Principles 105

PAGE

B. The Remedy Formulated by the District Court for the Provision of Equal Educational Opportunity Was Fully Supported by the Record and Within the Bounds of Proper Judicial Discretion 116

C. The Remedy Should Have Been Extended to All of the District's Predominantly Minority, Inferior Schools 121

III. Considered Together the Proven Racial Segregation and the Proven Inequality of Educational Opportunity in Denver Require a System-Wide Remedial Approach 125

CONCLUSION 126

OCTOBER TERM, 1971

No. 71-507

WILFRED KEYES, *et al.*,

Petitioners,

—v.—

SCHOOL DISTRICT NO. 1, Denver, Colorado, *et al.*

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

BRIEF FOR PETITIONERS

Opinions Below

The principal opinions of the courts below are as follows:

1. Opinion of District Court granting preliminary injunction, July 31, 1969, reported at 303 F. Supp. 279 (App. to Pet. for Cert. 1a-19a).

2. Opinion of District Court making supplemental findings and conclusions, August 14, 1969, reported at 303 F. Supp. 289 (App. to Pet. for Cert. 20a-43a).

3. Opinions of District Court on merits, March 21, 1970, reported at 313 F. Supp. 61 (App. to Pet. for Cert. 44a-98a).

4. Opinion of District Court on remedy, May 21, 1970, reported at 313 F. Supp. 90 (App. to Pet. for Cert. 99a-121a), and final decree June 11, 1970, unreported (A. 1970a).

5. Opinion of Court of Appeals, June 11, 1971, reported at 445 F.2d 990 (App. to Pet. for Cert. 122a-158a).

Other opinions filed in this case are as follows:

6. Opinion of Court of Appeals vacating preliminary injunction, August 5, 1969, unreported (A. 455a).

7. Opinion of Court of Appeals staying preliminary injunction, August 27, 1969, unreported (A. 459a).

8. Opinion of Mr. Justice Brennan as Acting Circuit Justice reinstating preliminary injunction, August 29, 1969, reported at 396 U.S. 1215 (A. 464a).

9. Opinion of Court of Appeals on motion to amend stay, September 15, 1969, unreported (A. 467a).

10. Opinion of District Court denying Motions to Dismiss, October 17, 1969, unreported (A. 475a).

11. Opinion of Court of Appeals granting stay, March 26, 1971, unreported (A. 1981a).

12. Per curiam Order of Supreme Court of the United States vacating stay, April 26, 1971, reported at 402 U.S. 182 (A. 1984a).

13. Opinion by Court of Appeals on Motion for Clarification, August 30, 1971, unreported (A. 1987a).

Jurisdiction

The judgment of the Court of Appeals was entered June 11, 1971 (App. to Pet. for Cert. 159a-160a). On September 8, 1971, Mr. Justice Marshall granted an extension of time for filing the petition for certiorari to and including October 9, 1971. The Petition for Writ of Certiorari was filed October 8, 1971, and granted January 17, 1972 (A. 1988a). The jurisdiction of this Court is invoked pursuant to 28 U.S.C. §1254(1).

Constitutional Provision Involved

This case involves the Equal Protection Clause of the Fourteenth Amendment to the Constitution of the United States.

Questions Presented

Whether petitioners are entitled to obtain system-wide relief to desegregate the Denver public schools because:

1. The district court's findings that "during the ten year period preceding . . . [1969] . . . the Denver School Board has carried out a segregation policy" (303 F. Supp. at 287), establish that the deprivation of constitutional rights of black pupils in Denver is so substantial and systemic as to require the use of remedial doctrines applied to dual systems created by segregation statutes.

2. The district court erred in ruling segregation to be "innocent" and lawful in certain schools serving Denver's older black neighborhood—including particularly Manual Training High School—because the court applied incorrect legal standards and perspectives in making its decision on intent to segregate and the causes of segregation.

3. The court below erred in holding that the sole criterion of constitutionally actionable racial segregation was segregationist intent judged by the narrow test whether decisions of the school board resulting in racial separation could conjecturally be explained by any conceivable non-racial explanation.

4. The Denver public schools have denied equal protection of the laws to students assigned to a number of predominantly Black and Hispano schools where there is manifestly an inequality in educational opportunity, both from the standpoint of the input resources placed in the schools by the school board and the educational achievement of the pupils.

Statement

I. *Introduction.*

This suit was commenced June 19, 1969, by petitioners, the parents of eleven children attending the Denver public schools, who seek injunctive and declaratory relief to remedy racial segregation of children and faculty and racial discrimination in the district's provision of public education. A. 3a. The complaint alleged that the district's practices violated the Equal Protection Clause of the Four-

teenth Amendment to the Constitution of the United States, and invoked the civil rights jurisdiction of the United States District Court for the District of Colorado. 28 U.S.C. §1343, 42 U.S.C. §1983. A. 4a. Plaintiffs asked for "a comprehensive plan for the school district as a whole" to remove segregation and afford equal opportunity. A. 32a.

After extensive litigation, the district court concluded that the school district had indeed violated petitioners' constitutional rights by various racially discriminatory practices, including deliberate segregation of black from white pupils in certain schools, and operation of a number of schools attended by Negro or Hispano[1] pupils where there was a serious and systematic denial of a chance for an equal education to pupils of these minority groups.

The district court first entered a preliminary injunction requiring the board to implement three resolutions it passed and rescinded prior to the lawsuit which were intended to begin desegregation of certain black schools in northeast Denver and to stabilize others in danger of be-

---

[1] We adopt the term "Hispano" as it is customary in the school district and used throughout the record. A Colorado Department of Education publication explains the usage in this manner:

> "And as for a name for the people of this Latin heritage to go by, it has not yet been agreed upon. The term 'Hispano' is popular in their intellectual circles today. The late Jack Guinn, a staff writer for the *Denver Post*, quoted Dr. Daniel T. Valdes, historian and professor of sociology in Denver's Metropolitan State College, on the subject:
>
> > 'Hispano is a cultural term accurately applied to people of and from Spain, Mexico and Cuba, and any other country with a Spanish heritage. It avoids the confusion of hyphenated words, such as Spanish-American and Mexican-American, which are sometimes resented.'"
>
> COLORADO DEPARTMENT OF EDUCATION, HUMAN RELATIONS IN COLORADO, A HISTORICAL RECORD, 203 (1968).

Similarly, Caucasians or whites are often referred to in the record as "Anglos."

coming segregated. The preliminary injunction took effect in September 1969, after the order was twice vacated by the Tenth Circuit and ultimately reinstated by Mr. Justice Brennan as Acting Circuit Justice. *Keyes* v. *School District No. One*, 396 U.S. 1215 (1969).

In May 1970, the district court entered a final decree requiring a variety of remedies to redress the constitutional violations. The opinion on the merits reaffirmed the earlier findings of certain deliberate segregation practices and policies, but held that plaintiffs had failed to prove segregationist purpose and effect with respect to other schools not dealt with in the preliminary injunction hearing. The court also found that defendant board had failed to provide equal educational opportunity to students at a number of predominantly Negro and Hispano schools and that this denied equal protection. The trial court formulated a varied remedial plan, including (a) making permanent the temporary injunction, (b) desegregating 17 minority schools by such techniques as redistricting, transportation, specialty schools, and free transfer programs, and (c) ordering various "compensatory education" programs to improve the quality of education offered to minority students.

On appeal by the school board the Tenth Circuit affirmed in part and reversed in part. It affirmed the relief originally granted in the temporary injunction, and some additional measures relating to the northeast part of the City, upholding the trial court's findings that the school board engaged in an unconstitutional policy of deliberate racial segregation with respect to certain schools. However, the appeals court reversed the finding that there was a denial of equal protection by unequal treatment of minorities in predominantly Negro and Hispano schools, and set aside the relief requiring desegregation and educational

improvement programs for minority students not covered by the board's three 1969 desegregation resolutions enforced by the preliminary injunction. The court of appeals also rejected plaintiffs' appeal seeking the desegregation of nine other minority schools not covered by the district court's order.

II. *The Denver School District.*

During the 1968-69 school term, School District No. 1, which serves Denver, operated 119 schools with 96,580[3] pupils.[2] The principal minority groups are Negroes (14%) and Hispanos (20%); a more detailed breakdown of the attendance pattern appears below.[4] The system employed

---

[1] There were 92 elementary schools, 15 junior high schools, 2 junior-senior high schools, and 7 senior high schools for a total of 116 regular schools. In addition, the board operated an Opportunity School, a Metropolitan Youth Education Center, and an Aircraft Training Facility. See DX-HK, p. 26, A. 2158a.

4,443 classroom teachers, including 7% Negroes and 1.9% Hispanos.[5] The city covers 98.4 square miles, including substantial areas annexed in the last thirty years.[6] The school budget for 1968-69 was more than $91.5 million dollars.[7] The district is governed by an elected board of seven members.

III. *The Pattern of Racial Segregation.*

A. Pupils.

At the outset of this case Denver schools were characterized by an intense pattern of isolation of black pupils from white pupils and an intense concentration of black teachers in schools with black pupils. Nearly three-fifths of the Negro pupils attend schools which are less than 10% Anglo, and nearly 4/5ths were in schools less than 30% Anglo:[8]

The pattern of pupil segregation existed at all levels. At the elementary level where 92 schools serve comparatively smaller neighborhoods than at the secondary level, the pattern was particularly intense. Two-thirds of the black elementary pupils attended ten schools,[9] all of which had less than 10 percent Anglo pupils; indeed, one-third were in schools with less than 1% Anglo populations. More than four-fifths of the black elementary children at-

[9] The ten schools with less than 10% Anglo students in 1968-69 were: (less than 1%)—Barrett, Columbine, Mitchell and Whittier (less than 10%)—Crofton, Gilpin, Harrington, Smith, Stedman and Wyatt. Crofton, Gilpin and Wyatt had Hispano majorities and substantial numbers of black pupils.

tended schools less than 20 percent Anglo. The table in note 9 shows the breakdown.[10]

Black junior high pupils were concentrated at Cole, Morey and Smiley. More than four-fifths of the black junior high pupils (2423 out of 2893 or 83.7%) attended these three schools with 4 percent of the Anglo population.

The remaining 470 black students were scattered among 14 other junior high schools with 95.6% of the Anglos.

At the high school level blacks were concentrated in Manual Training High School and East High School which served 91% of all black high school pupils and 10% of Anglo pupils. Out of a total of 2,442 black high school pupils there were 1,200 (49.1%) at Manual, the only predominantly minority high school. Manual had 78 Anglo and 300 Hispano pupils. Another 1,039 black pupils attended East High School (53.7% Anglo). The remaining 203 black pupils were scattered in 7 predominantly Anglo high schools with 13,365 Anglos.

B. Teachers.

Negro classroom teachers have been assigned in those schools where black pupils are concentrated. The District Court found that this concentration results from a deliberate school district policy of assigning black teachers to teach black children. 303 F. Supp at 284-285. In 1964, the Voorhees Committee, appointed by the Board to study the school system, reported this policy and urged its abandonment:

> While precise statistics are not available, the Committee believes that almost all of Denver Negro teachers were initially assigned to schools having a high proportion of Negro students. A few have been transferred to other schools. There is now at least one Negro teacher in each senior high school except for Manual which has eleven. Nine out of thirteen junior high schools have one or more Negro teachers, and Cole has thirty-three. One or two Negro teachers have been placed in each of seven elementary schools other than those which contain large numbers of Negro children.
>
> Spanish surname teachers are fewer in number than Negro teachers and the housing pattern of people of Spanish-American background is more dispersed. However, it does appear that relatively few Spanish surnamed teachers have been assigned to areas where there are few or no residents with Spanish-American background.
>
> As a result of its interviews the Committee is convinced that race has been relevant in the assignment of teachers. It appears that the administration has been extremely reluctant to place Negro and Spanish-American teachers in predominantly white schools because of concern with a possible lack of acceptance on

the part of a white neighborhood and a realistic assessment of the possible lack of support by some principals and faculties.

* * *

Recommendations as to Teacher Assignment and Transfer

1. The Board of Education should establish and enforce a policy that qualified teachers of minority background will be assigned throughout the system. A. 2015a-2016a.

Former Superintendent Oberholtzer confirmed that the racial policy was deliberate and he defended it on the ground that Negro teachers should be assigned to schools with concentrations of Negro pupils for whom they would have "immediate empathy" and for whom they would be "role-models". A. 1352a. In 1964 there were about 15 schools with Negro teachers, all located in the central part of the City. A. 1165a. By 1969-70, Negro teachers had been assigned to many more schools, but a disproportionate concentration remained in the schools with most of the black pupils.

In 1969-70 at the elementary level, with 193 Negro elementary teachers, 91 were concentrated in 9 schools, each of which had less than 10% Anglo pupils,[11] and 121 (62%) were in schools with less than 20% Anglo pupils.[12] At the junior high level, 60 of 87 black teachers, or 68%, were

[11] Thus, 91 or 47% of the black elementary teachers are assigned to Barrett, Columbine, Mitchell, Whittier, Gilpin, Harrington, Smith, Stedman and Wyatt. The only school with less than 10% Anglo pupils which has no Negro teacher is Crofton, a predominantly Hispano school. See PX 244, 245, 275, 276, 304, 305; A. 2055a; A. 2057a; A. 2075a; A. 2076a; A. 2081a; A. 2082a.

[12] *Ibid.* See Ebert, Elmwood, Fairmount, Fairview, Garden Place, Greenlee and Hallett schools (each with 10-19% Anglo pupils) with a total of 30 black teachers.

assigned to the three schools—Cole, Morey and Smiley—serving four-fifths of the black junior high pupils. Among senior high school pupils 25 of the 44 black teachers are assigned to Manual Training High School, the only predominantly minority high school in the district. Adding the six black teachers at East High School to those at Manual, we find 31 of the 44 black teachers (70%) at the two high schools attended by nine-tenths of the black high school students. The district judge concluded that the "tendency to concentrate minority teachers in minority schools has helped to seal off these schools as permanent segregated schools." 303 F. Supp. at 284-285.

IV. *Pupil Assignment Policies and Practices.*

The largest portion of the record relates to the pupil assignment practices of the Denver school authorities. The courts below made detailed findings on this subject. We undertake to summarize the major findings and evidence.

A. General policies and practices.

The district court found that the Denver school system had carried out a segregation policy for a ten year period prior to the filing of this lawsuit. Judge Doyle wrote:

> We have seen that during the ten year period preceding the passage of Resolutions 1520, 1524 and 1531, the Denver School Board has carried out a segregation policy. To maintain, encourage and continue segregation in the public schools in the face of the clear mandates of Brown v. Board of Education cannot be considered innocent. 303 F. Supp. 279.

Judge Doyle found that the "climactic and culminative act of the Board was the June 9 rescission of Resolutions 1520, 1524 and 1531" and "there can be no gainsaying the

purpose and effect of the action as one designed to segregate." 303 F. Supp. at 285.

The ten year period of undeviating and uniform conduct to concentrate the growing Negro population in separate schools in northeast Denver and to keep other schools white is detailed in the opinions below. See 303 F. Supp. at 284-286, 290-295; 313 F. Supp. at 64-69; 445 F.2d at 996-1002. Judge Doyle sums it up:

> Between 1960 and 1969 the Board's policies with respect to these Northeast Denver schools show an undeviating purpose to isolate Negro students first in Barrett, and later in Stedman and Hallett while preserving the Anglo character of schools such as Philips and Park Hill. The ultimate effect of the Board's actions and policies in the face of a steady influx of Negro families into the area was to create and maintain segregated situations at Barrett, Stedman, and Hallett which ultimately led to a substantially segregated situation at Smiley. 303 F. Supp. at 294-295.

During part of the period the board was carrying out its "undeviating purpose" to segregate Negro pupils, it claimed to operate under a color-blind neighborhood assignment policy. Indeed, the former Superintendent, Dr. Oberholtzer, thought that Colorado's constitutional prohibition against racial classifications of school children actually prevented him from adopting any policy designed to further integration or relieve the concentration of Negroes in certain schools. A. 1370a-1371a. At the same time that the school system was deliberately establishing segregated schools, the "view of the school administration [was] that it was precluded from taking action which would have an integrating effect". 313 F. Supp. 65.

Community protests in 1962 by black and civil rights groups over a plan to build an all-black junior high school

in northeast Denver on the same site with Barrett led the board to form the Special Study Committee on Equality of Educational Opportunity in the Denver Public Schools (sometimes called the Voorhees Committee) which issued a report in 1964. PX 20; excerpts at A. 1997a-2020a. The 1964 report criticized the board's school boundary policies as perpetuating racial isolation, as well as the policy of concentrating minority faculties in minority schools. The committee concluded that segregated schools resulted in inequality in educational opportunity and recommended a policy of considering racial and ethnic factors in setting boundaries to minimize segregation and establish heterogeneous schools. The school board adopted such a position —Policy 5100 (PX 1; A. 1989a)—and then did nothing to implement the policy. 303 F. Supp. at 283. "Nothing of substance was accomplished". 445 F.2d at 996. The 1966 Berge Committee (PX 21) appointed by the board also suggested changes to lead to integration, but "Again, the recommendations were not effected". 445 F.2d at 996.

In May 1968 the board by a 5-2 vote adopted the Noel Resolution (Res. 1490, PX 2, A. 1991a), proposed by Mrs. Rachel Noel, its only black member, directing the superintendent to prepare a "comprehensive plan for the integration of the Denver Public Schools," for adoption no later than December 31, 1968. Superintendent Gilberts presented a plan in October 1968. DX-D; excerpts at A. 2128a. Eventually Dr. Gilberts proposed and the board adopted three resolutions relating to school segregation: Res. 1520 (Jan. 30, 1969), PX 3, A. 42a; Res. 1524 (Mar. 20, 1969), PX 4, A. 49a; and Res. 1531 (Apr. 24, 1969), PX 5, A. 60a. The three resolutions constituted a modest and tentative step to deal with segregation. Resolution 1531 was aimed at 2 black schools in northeast Denver (Barrett and Stedman) and two nearby Anglo schools (Park Hill and Philips). It desegregated Barrett by changing boundaries and transporting students to and from white schools. It left

Stedman with the same predominantly black percentage but reassigned about 120 blacks to white schools permitting the removal of 4 mobile classrooms from Stedman. The resolution also made boundary changes and used transportation to stabilize Philips and Park Hill as Anglo majority schools. The resolution also sought to integrate Hallett by promoting voluntary exchanges with white schools, a program started by a group of white parents in January 1969.

Resolutions 1520 and 1524 proposed to desegregate Smiley Junior High by boundary changes, and sought to prevent East High School from becoming segregated by other boundary changes. Finally, Resolution 1524 reassigned some 200 pupils from the majority black Cole Junior High to other schools, reducing the number attending this school, which would nevertheless remain only 1% Anglo. Despite the modest objectives of this pilot desegregation program, Judge Doyle found that the passage of these resolutions "constituted the first acts of departure from the Board's prior undeviating policy of refusing to take any positive action which would bring about integration of the Park Hill schools". 313 F. Supp. at 66.

However, on June 9, 1969, the board, its membership changed by an election in which integration was the principal campaign issue (A. 1087a), rescinded the three resolutions. The rescission by a 4-3 vote, over the opposition of the superintendent (A. 241a) occurred as soon as the new board members took office. Judge Doyle, after analyzing the effect of rescission on each of the affected schools, concluded that the only purpose of rescission was the perpetuation of segregation:

> This action was taken with little study and was not justified in terms of educational opportunity, educational quality or other legitimate factors. The only stated purpose for the rescission was that of keeping faith with the will of the majority of the electorate.

> The effect of the rescission was to restore and perpetuate the status quo as it existed in northeast Denver prior to the passage of Resolutions 1520, 1524 and 1531. This status quo was one of segregation at Barrett, Hallett, Stedman and Smiley. 303 F. Supp. at 295.

Although the main focus of the resolutions was aimed at only eight minority schools (Barrett, Stedman, Hallett, Park Hill, Philips, Smiley, Cole and East) they nevertheless involved 37.6% of all black students in the school system. Smiley and Cole enrolled 68.9% of black junior high students. East had 42% of black high school pupils. A chart showing the effect of the implementation of rescission of the resolutions on the attendance pattern of these schools, plus the 23 other schools involved in receiving transferred students under the three resolutions, is attached to the Tenth Circuit's opinion. See 445 F.2d at 1008. We point out in footnote 13 below the relation of the schools found to be deliberately segregated to the system as a whole.[13]

---

[13] The board was found guilty of intentional segregationist acts of one kind or another with respect to the schools listed below. (As to Cole and East the conclusion rests on the rescission of Resolutions 1520 and 1524).

PUPILS—1968-1969

(continued)

B. The Manner in Which School Authorities' Decisions Have Determined the Racial Composition of Schools.

The record indicates the variety of decisions by which school authorities control the racial composition of schools in Denver. This control over racial composition has been purposefully exercised, according to the findings below, even during periods when the board asserted it was color-blind in such matters. The control appears in routine decision-making at the administration level, and in major and minor decisions by the elected school board.

It should be noted that there has been substantial continuity in administrative control of the Denver system for many years. Dr. Oberholtzer served as Superintendent from 1947-1967. A. 1300. The present Superintendent Howard Johnson (1970 to date) served as Deputy Supt. during Oberholtzer's tenure and remained in that position during Supt. Gilberts' tenure (1967-1970). Mr. Johnson was responsible for teacher placement and attendance boundaries during the years involved in the lawsuit. A. 256a-257a.

The findings below relate to decisions about such things as (1) the location of new schools and additions to schools, (2) the size of schools, (3) the utilization of schools, (4) the drawing of school attendance boundaries, (5) the use of optional zones, (6) the use of transfer plans, (7) the

---

The total black school enrollment in 1968 was:

Elementary	8297
Jr. High	2893
Sr. High	2442

Thus the above-mentioned schools included:

Elementary	— 25.36% of all black elem. pupils
Jr. High	— 68.99% of all black Jr. High pupils
Sr. High	— 42.55% of all black Sr. High pupils
Total	— 37.69% of all black pupils

Source: PX 242, 243, 273, 274, 302, 303; A. 2050a; A. 2053a; A. 2072a; A. 2074a; A. 2078a; A. 2080a.

use of mobile classrooms, (8) the maintenance of transportation programs, (9) the composition of school faculties, (10) the differing educational programs offered at schools.

The record in this case shows that where race was an issue each type of decision was invariably made in Denver so that the *result* was racial segregation. For a decade before the suit was filed the court found they were made for the *purpose* of segregating. Yet the courts below found the system guilty of unlawful segregation practices only in those cases where the asserted justification for action was shown to be "a sham or subterfuge to foster segregation." 445 F.2d at 1000. Wherever the board could show *any* "rational neutral criteria segregative intent will not be inferred." *Id.* Indeed, the district court refused to find unlawful segregation in cases where it thought "the result is about the same as it would have been had the administration pursued discriminatory policies, since the Negroes, and to an extent the Hispanos as well, always seem to end up in isolation." 313 F. Supp. at 73. But, even with this strict burden of proof, which petitioners protest as too onerous, the Denver system was found to have engaged in a decade-long segregation policy affecting a substantial portion of the black community.

1. *Assigning Faculty by Race.*

As described at pp. 11-13 above, the school district admitted to a long time practice of assigning minority teachers to schools with minority children. The District Judge found that this practice "helped to seal off these schools as permanent segregated schools." 303 F. Supp. at 284-85. He also found that the reason for the practice was racial prejudice or more precisely that the reluctance to place minority teachers in white schools was because of

"concern over a possible lack of acceptance by the white community and because of a fear of lack of support by some faculties and principals." 303 F. Supp. 284.

The findings of unlawful segregation at Barrett (52.6% Negro teachers) and Smiley Jr. High (23% Negro teachers) were expressly related to the faculty assignments by race. 303 F. Supp. at 290, 294. Schools where black teachers were concentrated in heavily disproportionate numbers were invariably schools where black pupils were concentrated. See PX 318, A. 2083a; PX 258, A. 2059a; and DX-DG, A. 2146a, showing percentage of Negro teachers 1964-1968 in elementary schools with faculties 20% or more Negro. The percentage of black teachers at Barrett, Hallett, Smiley and Cole was actually greater in 1967 and 1968 than it was five years earlier when the board announced a policy of assigning minority teachers outside minority schools. A. 337a-38a.

The policy of assigning minority teachers to minority schools was in effect when Dr. Oberholtzer became superintendent in 1947 and continued in following years.[14] During the period when the board said it thought itself legally bound to be "color blind" in pupil assignments it nevertheless continued assigning black teachers to schools with black pupils. The board's policy was that a teacher's residence should have nothing to do with the teacher's school assignment, nor was it a reason for granting teacher transfers. A. 285a.

Negro principals were also assigned only to minority schools. The Voorhees Committee reported in 1964:

---

[14] The first Negro teacher in Denver was hired at Whittier Elementary school in 1934. From 1934 to 1944 there were never more than five Negro teachers in the system and all were assigned to Whittier. By 1954 there were 43 Negro teachers in the system all assigned to minority schools. See PX 410, A. 2106a.

"At present, Denver's two Negro principals two Spanish-American assistant principals, one Negro assistant principal and one Negro teacher-assistant are assigned to schools in minority neighborhoods. (Two Negro coordinators and one Japanese-American assistant principal are not so assigned.) The Committee sees no acceptable reason why administrators with minority background should continue to be assigned to schools where minority students predominate." PX 20, pp. D-17-18.

2. *Size and Location of School Buildings; Additions to Buildings; Capacity Utilization; Mobile Classrooms.*

The racial composition of schools in the system was determined by interrelated decisions about such matters as the location of new schools, the construction of added space at existing schools by new permanent or mobile classrooms, and decisions to overcrowd[15] or under-utilize existing school capacities. For example, the district court found that Barrett elementary school was built in a particular location "with conscious knowledge that it would be a segregated school." 303 F. Supp. at 285. Barrett was built as a small school on a large site with its size designed to fit the number of black pupils in the area without providing any room for pupils from an overcrowded white school a few blocks away:

"At the time Barrett was built Stedman School, in a predominantly white area, and located a few blocks east of Barrett, was operating at approximately 20 percent over capacity. Yet Barrett was built as a

[15] Sometimes the decision would be made to use double sessions in a school to keep the children in their neighborhood. A. 1180a. Sometimes the school day was "extended" to increase capacity. A. 375a.

relatively small school and was not utilized to relieve the conditions at Stedman." 303 F. Supp. at 285.

Manual Training High School was built in 1953 as the smallest high school in the city (it still is) to accommodate the predominantly Black and Hispano population in the central city area. A. 1404a. It was admittedly designed to serve the minority community as Dr. Oberholtzer, then Superintendent, testified:

Q. Now, first of all, with respect to the building of new Manual, it's true, is it not, Doctor, that Manual High School today is the smallest high school in the district? A. It is the smallest senior high school, yes.

Q. And it was at the time it was built, also, was it not? A. I believe it was, yes.

Q. Why was Manual built so small, Doctor? A. Are you talking about new Manual or old?

Q. New Manual. A. The new Manual was built in the same general location as the old Manual and substantially the same attendance area. That was the reason.

Q. It was built to serve a particular community? A. The community in that area, yes.

Q. What was the composition of that community, Doctor? A. Negro and Anglo, largely; some Hispano.

Q. Well, you recall, do you not, Doctor, that as early as, I believe it's 1950-1951, that Manual was already a predominantly minority school, do you not, about 40 percent black, 35 percent Hispano, 25 percent Anglo? A. Somewhere in that neighborhood.

Q. And I assume that that neighborhood that new Manual was to serve wasn't getting any whiter between, say, 1951 and '53 when new Manual was opened? A. No.

Q. It was becoming blacker, was it not? A. There was some tendency, yes, to that.

Q. Well, it's true, isn't it, that when the new Manual opened, Doctor, it only had 77 Anglos in it?

Mr. Brega: Your Honor, I object to this line of testimony. In 1953—that was prior to Brown and at that time the law in the country was separate but equal. That was all right. If that were the case in Denver, that would not have been unconstitutional at that time. I think it's moot and not relevant to the the issues.

The Court: Well, I think that we have been permitting inquiry into the history of this for various purposes. So we will not draw the line at this point.

The Witness: Would you repeat the question, please?

Mr. Greiner: Would the reporter read it, please?

(Question read by the reporter.)

A. I do not recall that figure.

(A. 1404a-1405a.)

In 1949, 76% of Denver's Negro high school students (278 of 363) attended old Manual High School; by 1956, 84% of them (541 of 641) attended new Manual. A. 499a-500a; PX 401. A school board publication makes it clear that new Manual was designed to be a predominantly minority school to replace the old school of the same name PX 356, A. 2086a, "The New Manual":

"Some Basic Problems to Be Faced
In Planning a New Manual

There was little doubt when it became known that Manual would be on the "must" list of the new buildings that Manual could not be just a high school cut

from a general pattern. Manual is different. The college preparatory function of a high school is not the first consideration in Manual although it has not been neglected for those boys and girls who do go to college. For roughly three-fourths of the student body college is virtually an impossibility.

The usual problems faced by youth are sharpened for the many Manual boys and girls who are members of minority groups. Since 1926 the Anglo population at Manual has dropped from over eighty per cent to about forty-one per cent; the Negro population has gone from ten to twenty-seven per cent; the Spanish-American figure has risen from less than one per cent to twenty-three and one-half per cent; and the Oriental has gone from seven-tenths of one per cent to eight per cent. These boys and girls have needs which the school must meet in order to prepare them for effective participation in the community. The chart following shows the changing racial distribution in Manual."

The district court's decision about plaintiffs' complaint that Manual was "earmarked for minority occupants" was that "we have to be mindful of the evidence that it was opened in 1953 at a time prior to Brown v. Board of Education . . . , and we are told that this location had the consent of the people in the neighborhood." 313 F. Supp. at 69-70. The court said: "At that time there was much less concern about minority concentration." 313 F. Supp. at 70.

Control of racial composition by decisions as to capacity utilization is also illustrated by Manual which was operated under capacity from the time of its opening in 1953, although nearby East High School with only 2% Negro enrollment was "filled to capacity." 313 F. Supp. at 70.

School capacities were controlled by adding mobile classrooms to expand some crowded buildings. This became a

general practice in northeast Denver where there was a large migration of blacks in the 1960's and 28 mobile classrooms were erected to accommodate the black pupils.[16] Mobile classrooms were used almost exclusively at black schools in the northeast Denver area. A. 106a. Capacities at Stedman and Smith were systematically controlled by the periodic addition of mobile units to contain the blacks in the area.

Mobile units and new classrooms were added to Hallett beginning in 1965 to "solidify segregation."[17] Mobile units were added to Smith with similar results.[18]

3. *Transportation Policies.*

Denver has used its transportation system as an alternate means of dealing with the lack or shortage of facilities in particular neighborhoods, and this has necessarily had an impact on the racial composition of schools. The established policy was to make free transportation available to elementary pupils who lived more than a mile from their assigned schools. A. 1188a. In 1968 the school system sup-

---

[16] "The building of 28 mobile units in the Park Hill area in 1964 (at the time there were only 29 such units in all of Denver) resulted in a further concentration of Negro enrollment in Park Hill schools. The retention of these units on a more or less permanent basis tended to continue this concentration and segregation." 303 F. Supp. at 285. See PX 101; PX 73, 74.

[17] "In 1965 four mobile units were constructed at Hallett. Shortly thereafter, the Board also approved the construction of additional classrooms. At this time Hallett was approximately 75 percent Negro. The effect of the mobile units and additional classrooms was to solidify segregation at Hallett increasing its capacity to absorb the additional influx of Negro population into the area." 303 F. Supp. 293.

[18] When the school became overcrowded Smith parents were offered a choice between adding mobile units at Smith or being bussed possibly back to black core city schools. A. 691a-694a, 696a-697a.

plied transportation to 1184 Negro and Hispano children (6% of minority elementary children) and 4,369 Anglo children (about 13% of Anglo elementary children). A. 775a. In 1969-70 the Superintendent said about 12,000 pupils were bussed and that the board's "pay-as-you-go" policy for financing new construction necessitated much of the busing in newly annexed areas. A. 1755a.

Basically in southeast and southwest Denver, Anglo pupils in newly annexed areas of the city were bussed to the nearest Anglo school which had available capacity.[19] A. 1183a-1184a. Before the lawsuit, no Anglo students were bussed to any predominantly minority schools. A. 1203a. The school administration policy was not to bus pupils into schools classified as the poverty area, target area or culturally deprived area under federal programs. A. 1205a-1206a.

Plaintiffs' Exhibits 390-A and 390-B are large maps (described in testimony at A. 767a-775a) which show that the school system bussed numbers of Anglo students past under-utilized minority schools.

Anglo pupils were bussed as far as ten miles before the lawsuit, some of the longest distances being from Southwest Denver to Asbury, University Park, Steele and Cory. A. 375a. Exhibit 390 shows that in many cases students who were being transported were not being taken to the nearest school which had capacity to absorb them. One of the more striking examples of this was the transportation in 1967 and 1968 of junior high school children from the Montbello area to Lake Junior High School. These children who live in the northeasternmost corner of the city were being transported past Cole Junior High School,

[19] The District did not employ mobile units to increase the capacity of schools which were even closer to the annexed areas. PX 101.

which was under-utilized, to the western edge of the city. PX 426. The Montbello children were predominantly Anglo, and Cole's membership was predominantly Negro. In this case a neighborhood or distance principle was not enforced.

Judge Doyle noted that the three 1969 resolutions contemplated the use of transportation facilities to promote desegregation. In ordering that the three resolutions be implemented he noted that "the board has had for many years and now has a policy of transporting students who live a certain distance from their schools," and thus transportation was "probably necessary in order to carry out this decree, but nothing in this order shall be construed to require the Board to use such transportation if it can be dispensed with." 303 F. Supp. at 296.

The court's final decree requiring integration of various schools contemplated that detailed plans about such matters as transportation requirements would be submitted to the court at a later date. In fact, the board did submit various transportation plans in considerable detail at a hearing which occurred in May 1971 while the case was pending on appeal.[20]

---

[20] The transcript of this hearing commencing May 14, 1971 was not before the court of appeals because it took place while the appeal was under advisement. However the transcript has been lodged with the Clerk of this Court so that the Court may have access to all available materials about the case which may be relevant. Judge Doyle concluded that the board's Plan C as modified by the suggestions of plaintiffs' counsel should be adopted. May 1971 Tr. p. 445. The original Plan C would have required transportation for an estimated 3,919 pupils to desegregate the seven minority elementary schools in the first year of the plan. The estimated cost was $828.80 per day or about 21 cents per child per day. (See Report, Alternative Plans for Implementation of United States District Court Orders Stated in the Final Decree of June 8, 1970, Denver Public Schools, March 17, 1971, p. 51.)

4. *Establishing and Changing School Attendance Areas.*

The general practice in Denver was to hold public hearings and have formal board action only on secondary attendance boundaries and to permit the administrative staff to fix elementary school attendance areas or sub-districts without public hearings or detailed board attention. A. 117a; A. 901a. An important but unexplained exception to this general practice was the fact that various elementary boundaries in northeast Denver involved in the court's finding of deliberate segregation during the 1960's were set by the school board. A. 173a; 303 F. Supp. at 291. One consequence of the staff making elementary school zone changes is that many such changes did not appear in minutes of the school board, and for the years prior to 1960 only a few maps were still available at the time of the trial. A. 842a. Thus the parties engaged in attempting to reconstruct boundary maps for years prior to about 1960, except for the 1956-57 boundary changes. A. 842a-857a; 481a-484a.

The district court's findings of deliberate fixing of boundary lines for the purpose of segregating Negroes from whites related to (1) the original boundaries set when Barrett was opened in 1959 (303 F. Supp. at 290; PX 40, 41; A. 2021a; A. 2022a); (2) 1962 and 1964 boundary decisions affecting Stedman (303 F. Supp. at 291; PX 50, 53, 70, 71; A. 2024a; A. 2026a; A. 2028a; A. 2030a); (3) various actions during the 1960's maintaining Park Hill and Philips as Anglo schools (303 F. Supp. at 292); (4) 1962 boundary

---

By the 1970-71 school year the system was transporting 12,500 pupils daily on 134 school buses, including busing of handicapped pupils, pupils in newly annexed areas, pupils more than one mile from elementary schools or more than two miles from junior high schools, pupils in crowded areas, pupils under the court orders of 1969 and 1970 and pupils on instructional excursions (*Id.* at 6-7).

decisions relating to Hallett-Philips and 1964 decisions relating to Stedman-Hallett and Hallett-Philips (303 F. Supp. 293); (5) rescission of the 1969 proposed boundary changes for Smiley and East (303 F. Supp. 294).

Plaintiffs offered evidence trying to prove discrimination in the fixing of various other boundaries which is summarized in the district court opinion at the pages indicated hereinafter: (1) original boundaries between New Manual and East High schools 1953, and changes in 1956 (313 F. Supp. at 69-70, 75); (2) Cole and Smiley Jr. High schools boundary change in 1956 (similar to Manual-East change at same time; 313 F. Supp. 70-71, 75); (3) Cole, Morey and Byers junior high school changes in 1962 (313 F. Supp. 71-72, 76); (4) Boulevard school boundary change 1961 (313 F. Supp. at 72, 76) and Columbine zone changes 1962 (313 F. Supp. at 72-73, 75-76). We summarize the evidence as to Manual, Cole and Columbine.

Manual. The eastern boundary of Manual in 1953 was set one-half block from the building. PX 203; Map of Manual Boundaries 1955; A. 2044a. It coincided with the easternmost Negro residence. As the Negroes moved eastward, the Manual boundaries were changed with them to embrace the Negroes as part of the mandatory Manual area where theretofore the area had been in an optional Manual-East zone. PX 204, Map of 1956 Manual Boundaries, A. 2046a. There was widespread concern in the Negro community about the segregationist effects of the proposed 1956 Manual changes, and Mr. Lorenzo Traylor, a black official of the Urban League, organized meetings with schools officials and community groups to protest the changes but had no success. His testimony about the Manual changes and the Cole boundary changes in 1956 shows very plainly that the boundary changes followed the black population migration eastward, that the school of-

ficials were made aware of this and that they declined to adopt alternative proposals that would have worked to integrate Manual and Cole. A. 580a-599a. In summary:

1. When the new Manual was built, its eastern boundary was only one-half block from the school, approximating the location of the Negro population.

2. The eastern boundary of Manual was moved eastward to York Street in 1956 commensurate with the Negro population movement.

3. This 1956 change occurred after widespread community concern that it would be a segregatory change.

4. During the relevant period Manual was always under-utilized and no rational justification for this boundary change on the basis of capacity utilization exists. PX 210, A. 2048a.

Cole. In 1952 Cole was under capacity and predominantly black and Hispano while Smiley to the east was overcrowded and still an Anglo school. PX 215, 215A. Rather than shift the boundaries to relieve overcrowding at Smiley by adding whites to Cole, the board built additional classrooms at Smiley. 313 F. Supp. at 71. In 1956 as the black community moved eastward the Cole boundary was shifted to follow them, the boundary change being the same as that described previously for Manual in 1956. *Id.;* PX 211, 211A, 211B. Again in 1958 another addition was built at Smiley notwithstanding that Cole still had empty spaces. *Id.;* PX 215, 215A. These changes were opposed by the black community, and Mr. Traylor of the Urban League offered the board boundary proposals which would have the effect of integrating the schools to no avail. A. 580a-599a. PX 333, A. 2118a. This was during the period when the board asserted that it was not lawful for it to consider

race for the purpose of integrating students. A. 1370a-1371a.

Columbine. The board established a series of optional zones around Columbine in 1951 which increased the Negro enrollment because it set up options which "were apparently employed by Anglo students as a means of escaping from Columbine to the almost totally Anglo Harrington and Stedman." 313 F. Supp. at 72-73; PX 406, 407. Although the asserted purpose was to relieve overcrowding at Columbine the court found that actually "the effect of the administration's action was to slightly decrease overcrowding at Columbine while creating an overcrowded situation at Harrington and Stedman." 313 F. Supp. at 72.

5. *Optional Zones and Transfer Devices.*

The board has employed a variety of devices which have enabled parents to choose schools so as to achieve racial separation. Optional zones located in the border areas of mixed racial population between white and black schools functioned as an effective device to accommodate segregationist sentiment among the public. The two optional zones between East and Manual defined the racially mixed neighborhoods, and as soon as a neighborhood became all black it was shifted from an optional zone to a mandatory part of the Manual zone—Traylor testimony at A. 580a-592a; PX 203, 204; A 2044a; A. 2046a.

The use of optional areas for whites to escape black students at Columbine is discussed in the preceding section. The Cole-Smiley optional zone was identical to the Manual-East optional area. A. 502a-503a; PX 211, 211A, 212, 212A.

The Voorhees Committee Report denounced the board's use of optional areas and recommended that the board im-

mediately stop the practice "at the earliest possible date." PX 20, pages A-12 to A-13; A. 2013a. The report stated that the "use of optional areas forms no part in rational administration of the system for fixing boundaries which the Committee has recommended" *Id.* After this report the board eliminated the last optional zones in 1964 (A. 1347a), but in September 1964 instituted a Limited Open Enrollment (LOE) program which gave pupils freedom of choice to transfer out of the schools in their attendance zone to certain schools which were designated as open to LOE transfers. A. 299a; 304a.

Under LOE a student could transfer to any school where openings were listed as available but the student had to furnish his own transportation. There were in 1968 only 365 LOE spaces open at the elementary level. A. 541a; PX 87, 89, 90; A. 2032a; A. 2034a; A. 2036a. No priority was given to transfers that would promote integration nor was there any prohibition against transfers that would tend to promote segregation. Plaintiffs' evidence showed that the LOE program involved only about 267 elementary students out of 50,000 (A. 538a). It had negligible effect toward integration—a maximum of 29 pupils—while an estimated 58 to 77 white pupils left black schools to attend white schools. A. 538a; PX 99, 100. Plaintiffs showed that 10 Anglo schools which were under-capacity and receiving Anglo pupils by bus were not on the list reporting LOE openings. A. 539a-540a; PX 89, A. 2034a. Seven predominantly minority schools with an overall Anglo percentage of only 12 percent contained over 55 percent of the available LOE spaces (203 of the 365 elementary openings in the district). A. 541a; PX 90, A. 2036a. Although objective data shows that the white schools had space available, the principals were not reporting space as open for LOE purposes. PX 89, A. 2034a; PX 87, A. 2032a.

The Voluntary Open Enrollment (VOE) program adopted in the fall of 1968 and implemented in January 1969 was offered as an integration program. Shortly after the Board announced the program a group of white parents formed the idea of targeting Hallett school as a black school which might be integrated if a sufficient number of whites could be organized to volunteer to transfer in and an equivalent number of blacks could be organized to transfer out. A. 665a-683a. Their initial efforts were rebuffed by Deputy Supt. (now Supt.) Howard Johnson, who stated they had no duty to *promote* the VOE program but merely to make it available. A. 675a. Later in Resolution 1531 (April 1969) the board endorsed the idea of making Hallett a "demonstration integrated school as of September 1969, by use of voluntary transfer". A. 68a. After an intensive summer recruitment program (A. 687a-691a), VOE helped to change Hallett from 84% black in 1968 (Anglo pupils—76, black 634, Hispano 41) to 58.4% black in 1969-70 (Anglo pupils 290, black—444, Hispano—22). About 1500 pupils were involved in the VOE program in the entire city. A. 1769a. At the relief hearing in May 1970 the board offered its VOE program as the sole remedy to achieve integration. Judge Doyle, while permitting the VOE program to continue, refused to permit the Board to limit its integration program to this one technique.

6. *Curriculum, Level of Instruction and the Atmosphere of Segregated Schools.*

Manual Training High School was planned prior to 1953 to offer a curriculum designed for minority and other low income students. See *supra* pp. 23-24. Manual was planned as a lower caste school to meet the "special needs" of lower income and minority pupils about whom it was noted that "Fewer pupils got to college," "Fewer take college preparatory subjects," "More go to work immediately" and

"More go into unskilled and semiskilled labor." PX 356; A. 2086a. Such prophecies of course have a way of becoming self-fulfilling, and people who want to avoid the mold will try to avoid the school. Robert O'Reilly, one of plaintiffs' expert witnesses called this sort of thing "programming students into basically lower occupations than the whites are programmed into." A. 1964a.[21]

The community perception of Manual and its feeder school Cole Junior High was negative. The feeling in the black community was that Manual was a substandard school and that the quality schools were in other parts of the City according to George Brown, a black State legislator and former local newsman covering education subjects. A. 865a. The dropout rate was high and "even the name had its negative connotation" he said. A. 865a. Manual's black principal was aware of the community resentment toward the school and of the reluctance of employers to hire Manual graduates. A. 1847a. He attempted many program innovations, but acknowledged that Manual students scored in the 34th percentile in 1965 and had slipped to the 28th percentile by 1968 on standard achievement tests. A. 1874a.

---

[21] The Court: Well, they're doing this at both Manual and Cole. They're making more or less specialized schools out of them and programs they have never done before. This is in self-defense.

The Witness: Well, this kind of thing really goes back over a hundred years. In a situation like this, why, where mostly black and Hispano students are getting that kind of program and whites are getting another kind of program—and you have a system where grouping occurs into special programs from the elementary on up through the secondary level, it finally ends up in vocational training. And amounts to, in my opinion, programming students into basically lower occupations than the whites are programmed into. The whites are programmed into another environment. And, you know, I don't know whether this is planned this way, that is my feeling.

The Court: This is a danger, you say?

The Witness: I think it's a very clear danger.

The principal of Cole Junior High School took office in January 1969 and found what he described as "turmoil, confusion and conflict". A. 1875a. The school had severe discipline problems and had three principals in three years. A. 1891a.

Judge Doyle, after hearing days of testimony, said of Manual and Cole:

> "Those two schools are sort of symbols, it seems to me, of segregation. I mean, they seem to, for some reason to—to have that character." A. 1687a.

Professor Dan Dodson described the problem of such schools in these terms:

> " . . . But I think that the point of takeoff would be that the school itself is reflective of the broader society or the dominant power arrangement of the community, and that when it comes to dealing with the children of minority, it has a problem of adjusting its programs that are designed for a majority to serve minority children for very definite reasons. Usually it is a teacher who is less experienced; usually it is a school that is older and so on. Usually it is a school by the time it becomes segregated that is looked upon by the whole community as being inferior. And when it is looked upon as being inferior this does make it indeed so, because you can't keep up the morale of the teachers nor the children, nor you can't keep up the expectations for performance and achievement in the schools. Teachers feel less privileged when they are sent there to teach and escape as quickly as they can. More than this, they come to look at these children as being less worthy and of whom less is expected. Consequently there has developed what's called the self-fulfilling prophesies; that because nothing is expected, no standards are held. And consequently the person comes

to fulfill the prophesy that you had of him in the beginning. Some evidence of this is that the differences are not this great between children when they first come to school between the majority and the minority, and that with each succeeding year these children of the minority tend to fall further behind. The alternative that I would pose to the position that the trauma resides—or the limitation reside in the pre-school experience, is that all this combines to teach these children of the minority that they are powerless people and consequently as all people tend to do when they feel powerless, they resign in apathy and that the limitations to learning is not in their cognitive apparatus nor abilities nor in the lack of pre-school stimulation, but resides instead in the apathy that stems from a pervasive powerlessness and impotence in the community.

A. 1473a-1474a.

Judge Doyle made findings about the interrelationship of these intangible factors which tend to label a school and reinforce the image of a school as a segregated institution:

At this point, the Negro community does not consider the segregated school as a legitimate institution for social and economic advancement. Since the students do not feel that the school is an effective aid in achieving their goal—acceptance and integration into the mainstream of American life—they are not motivated to learn. Furthermore, since the parents of these Negro students have similar feelings with respect to the segregated school, they do not attempt to motivate their children to learn. Teachers assigned to these schools are generally dissatisfied and try to escape as soon as possible. Furthermore, teachers expect low achievement from students at segregated schools,

and thus do little to stimulate higher performance. 313 F. Supp. at 81.

V. *Denver's Segregated Minority Schools Afford Their Minority Students an Educational Opportunity Inferior to That Afforded by Predominately Anglo Schools in the District.*

The evidence below demonstrated convincingly and the trial court found, as a matter of fact, that certain of Denver's segregated schools afforded an unequal and inferior educational opportunity to their minority students.

Much of the evidence covered September, 1963 through May, 1969, just prior to the lawsuit. However, there is ample basis for concluding that this inequality of opportunity has existed for so long as there have been segregated schools in Denver.

All of Denver's segregated[11] minority schools shared cer-

---

[11] Plaintiffs' evidence and exhibits concentrated on comparing groups of Minority and Anglo schools selected on the basis of probability anlaysis (A. 701a-707a). Essentially the schools which had the greatest deviation from the district's overall ethnic compositions were selected. The schools compared were 21 Anglo elementary schools with 20 minority elementary schools, 4 Anglo Junior Highs with 4 Minority Junior Highs, and 3 Anglo Senior Highs with 3 Minority Senior Highs. (Two of the "minority" senior highs actually had slight Anglo majorities of 53-54 percent.)

All of these minority schools reflected the same deficiencies in teacher experience, teacher turnover, age of buildings, drop-out rates and low achievement.

In its opinion of March 21, 1970, in determining whether a school was "segregated" the trial court adopted a standard whereby a school had to have a Negro or Hispano enrollment of approximately 70% before it would be considered "segregated." Out of the 20 elementary schools identified by plainitffs, twelve met the court's standard. In addition, two additional elementary schools, Smedley and Elyria, based upon 1969 data, met the court's standard and were added to the court's list of "segregated" schools in its May 21, 1970, opinion. These 14 schools will be referred to herein as the "court-designated" elementary schools.

In discussing the statistics regarding the inferior schools, for the sake of consistence as to the referenced schools, we will generally

tain common characteristics reflecting their inferiority. These schools, when compared to predominately Anglo schools possessed none of the attributes necessary to learning or to the development of self respect and confidence in the minority children.

These deficiencies and disparities were tangible and intangible, objective and subjective, and included educational inputs as well as educational results. Much of the objective, tangible evidence of this inferiority came from the school district's own records and reports. In addition, several of this country's leading experts[22] testified as to the intangible, subjective characteristics of the environment of these segregated schools which tend to impede and destroy the academic progress as well as the self development of the minority children.

The record demonstrates that all of these characteristics inhere in the segregated school, regardless of how it became segregated. In combination they create a school and

---

be referring to a group of 22 elementary schools: Boulevard, Bryant-Webster, Columbine, Crofton, Ebert, Elmwood, Elyria, Fairmont, Fairview, Garden Place, Gilpin, Greenlee, Hallett, Harrington, Mitchell, Smedley, Smith, Stedman, Swansea, Whittier, Wyatt and Wyman. At the junior high school level: Morey, Baker, Cole and Smiley; at the senior high school level: East, West and Manual.

Of the four junior high schools identified by plaintiffs, Morey did not meet the standard; of the three senior high schools, only Manual was found by the trial court to be segregated.

[22] Dr. Dan W. Dodson, Professor of Education, New York University; Dr. James Coleman, Professor of Social Relations, Johns Hopkins University, Director of the survey for the United States Commissioner of Education on equality of educational opportunity, which was published as "Equality of Educational Opportunity," PX 500; Dr. Neil Sullivan, Secretary, Massachusetts State Board of Education, former Superintendent of Schools, Berkeley, California; Dr. Robert O'Reilly, Chief, Bureau of School and Cultural Research, New York State Department of Education, author of "Racial and Social Class Isolation in the Public School," PX 506.

an educational environment which is inherently unequal and which seems programmed to produce the failure which results.

A. The Segregated Schools Have Homogeneous, Low Social Class Composition Which Deprive the Minority Children of an Important Element of Learning, a Heterogeneous Peer Group.

One of the most important educational attributes of a school is the peer group with whom the student attends school. The segregated school brings together children, most of whom are poor, who come from so-called deprived home environments, and whose parents have a relatively low level of education and employment.[24]

National studies[25] have demonstrated that this social class composition of the school is a more important source of learning than the teachers themselves.[26] Children learn as much or more from their peers than from the academic curriculum of the schools. The school with a heterogeneous social class composition, particularly one which is predominately middle class, offers the most advantageous learning environment to *all* of its pupils, both minority and majority.[27] Dr. Coleman made it clear that his research was concerned with the impact of other children upon a child's performance rather than the influence of that child's own background upon his performance. A. 1536a.

When this homogeneous low social class is combined with racially identifiable, isolated schools, the education oppor-

---

[27] Coleman, A. 1535a; RH Tr. 74-75.

tunity afforded by the school is destined to be inferior. The district court, in discussing this evidence, stated as follows:

> Since Negro and Hispano children from low socio-economic families are typically not provided with this stimulation, a compensating stimulation must be provided by the peer group in the school. Where all children in the school come from families with similar low socioeconomic status, the negative effect produced by family background is reinforced rather than alleviated. 313 F. Supp. at 94.

B. The Quality, Experience and Stability of the Teaching Staffs at the Segregated Schools Are Significantly Inferior to That of Denver's Predominantly Anglo Schools.

The quality of education at a school is next most affected by the quality, experience and stability of its teaching staffs.[32]

1. *Teacher Experience.*

When compared to city-wide averages, the segregated minority elementary, junior and senior high schools over the years have had significantly higher percentages of teachers with no prior teaching experience in the Denver public schools.[33] These schools also had significantly higher percentages of probationary teachers,[34] while teachers with

[33] PX 247, 260, 262, 263 (A. 2060a) as to elementary schools; PX 278, 291, 293, 294 as to junior high schools; PX 307, 320, 322, 323 as to senior high schools. Bardwell, A. 732a, 737a-738a, 742a-744a.

[34] Teachers with less than 3 years' experience in the Denver Public Schools. Compare PX 247 with PX 260, PX 278 with PX 291, PX 307 with PX 320.

ten or more years experience shunned these schools, preferring the predominantly Anglo schools.[21]

When the comparison of teacher experience was with the averages for the predominantly Anglo schools rather than the district average, the disparities were even greater:[22]

Percentages of Teachers with No Prior Denver Public Schools Experience, 1968[23]

	Average
22 Minority Elementary Schools	22.4%
20 Anglo Elementary Schools	9.8%
Total District	15.9%

The pattern was repeated at both the junior and senior high school level:

---

[21] *Ibid.*

[22] Bardwell, A. 725a-745a.

[23] PX 260, PX 262. The disparity was as great in prior years:

Percentages of Teachers With No Prior Denver Public Schools Experience

	1964	*1965*	*1966*	*1967*
22 Minority	13.7	10.7	15.8	20.9
20 Anglo	6.2	4.8	9.5	6.9
District	11.3	8.6	13.9	16.2

Source: PX 263, 264 (A. 2062a), 265 (A. 2064a), 266 (A. 2066a).

Percentages of Teachers With No Prior Denver Public Schools Experience, 1968[34]

Junior High Schools	*Average*
4 Minority	34.8%
2 Anglo	15.3%
District	21.1%
Senior High Schools	
3 Minority	16.3%
3 Anglo	7.4%
District	10.3%

The trial court found that: "Faculty experience is an important factor in determining the educational opportunity offered at a particular school . . ." 313 F. Supp. at 79. Teacher salaries in Denver were based on the teacher's level of experience; the greater the experience the higher the salary. A. 1249. For example, salaries ranged from $6,300 to $9,900 for teachers with an A.B. degree. DX-HK, pp. 36-37. Salaries were an important allocation of the District's resources, accounting for some 69% of the total District budget. DX-HK, p. 17. Because of their higher concentration of experienced teachers, the predominately Anglo schools received a disproportionate share of these resources.

2. *Teacher Turnover.*

Because the District's policies on teacher transfers between schools were premised on seniority, the high turnover of teachers in the minority schools created more vacancies typically filled by new teachers. 313 F. Supp. at 80.

---

[34] PX 291, 293, 294, 295, 296, 297 as to junior high schools. PX 320, 322, 323, 324, 325, 326 as to senior high schools.

The trial court held:

> The effect of teacher turnover on the quality of educational opportunity is twofold. First, a high teacher turnover rate tends to have a disorganizing effect on the school in question. Furthermore, and most important, the teacher turnover rate in a particular school significantly affects the experience of the faculty at that school. 313 F. Supp. at 80.

The trial court also recognized the destructive psychological impact of this high turnover on students, and its contribution to the aura of inferiority which prevails in the segregated school. 313 F. Supp. 81.

3. *Teacher Attitudes.*

The teachers in the minority schools are often afflicted with attitudes and expectancies which contribute to the inferiority of the educational opportunity.[35] The trial court recognized this factor:

> Teachers assigned to these schools are generally dissatisfied and try to escape as soon as possible. Furthermore teachers expect low achievement from students at segregated schools, and thus do little to stimulate higher performance. 313 F. Supp. at 81.

The matter of expectancy then becomes a self-fulfilling prophecy of failure.[36]

---

[35] Dodson, A. 1473a.

[36] PX 27, pp. 93-100, 104-106; Dodson, A. 1473a.

C. Inequality of Facilities.

The trial court found that in general the segregated schools occupied older buildings and smaller sites.[37] 313 F. Supp. at 80-81. Dr. Dan Dodson testified that where minorities were relegated to these outdated, older facilities, "it stands as a symbol of their impotence in the community," it was a "place of less choice, and you go there only because you're not able to require that you be allowed to go someplace else." A. 1494a. The court concluded that, standing alone, such disparities were not substantial factors with respect to the educational quality of the school, but found that it did have a cumulative adverse impact:

> However, we do recognize that in schools which are segregated, have less experienced teachers and produce generally low achieving students, the fact that the physical plant is old may aggravate the aura of the inferiority which surrounds the school. 313 F. Supp. 81.

D. The Inferiority of the Segregated Schools Is Also Demonstrated by the Drastically Low Level of Academic Achievement Which They Produce.

The trial court's findings of the poor scholastic performance in the segregated schools concentrated on results of tests administered during the 1967-68 school year. 313 F. Supp. at 78-79, 86. The school district's own witnesses acknowledged that the results were typical, and that achievement data from earlier tests would disclose the same disparities.[38]

---

[37] PX 268, 269, 270 (A. 2068a), 271 (A. 2070a) as to elementary schools; PX 298, 299, 300, 300-A for junior high schools; PX 327, 328, 329, 330, senior high schools; Dodson, A. 1494a.

[38] Oberholtzer, A. 1437a-1439a; Cavanaugh, A. 643a, 654a; PX 377, 378; A. 2098a; A. 2100a.

The trial court considered only schools which were approximately in excess of either 70% Negro or 70% Hispano, resulting in findings relating to 14 elementary, 2 junior and 1 senior high school. The evidence disclosed the same low level of achievement, teacher experience, etc. at Morey Junior High School and at 8 other elementary schools[39] whose combined Negro *and* Hispano enrollments ranged from 70% to as high as 98% in 1968.[40] However, the trial court refused to find such schools to be "segregated," and ordered no relief for them. 313 F. Supp. 77; 313 F. Supp. at 92.

With regard to the 14 elementary schools which the trial court did find to be both segregated and inferior, in 1968, at the third grade their mean achievement level was a half year behind the district average.[41] The disparity was of course greater when the minority schools were compared to a group of 20 predominately Anglo schools, whose mean achievement level was more than one and one-third years ahead of the minority students.[42]

By the fifth grade the minority students were nearly 2.2 grade levels behind students in the selected predominately Anglo schools:[43]

[41] Grade level 2.97 compared with the 3.57 district average.

[42] PX 377 (A. 2098a), 380 (A. 2102a), 381 (A. 2104a), 382. The Anglo schools were at the 4.34 grade level.

[43] PX 376-R, 380, 381; A. 2096a; A. 2102a; A. 2104a.

	Grade Level Score 5th Grade
Minority Schools	4.30
District Average	5.22
Predominately Anglo Schools	6.45

Achievement at the ninth grade level is expressed as a percentile score based on national averages.[44] The trial court found that the district-wide average at the ninth grade was percentile 53.8; the two minority schools, Baker and Cole, were 25.6 percentiles behind at 28.2.[45] 313 F. Supp. at 79. Principal Morrison testified that out of approximately 325 seventh graders at Cole, 160 of them were reading three to four grade levels below normal. A. 1894a.

Similarly, the segregated senior high school, Manual, was achieving at the 30th percentile while the district-wide eleventh grade level was the 52nd percentile. 313 F. Supp. at 79.

Another characteristic of the impact of the segregated schools is the progressive regression in achievement as the minority child proceeds through the grades. This regression is illustrated in Exhibit 382, based upon test results in 1969. At the second grade the gap in achievement between selected Anglo and minority schools is not quite one full grade; by the third grade this gap has increased to 1.41; in fourth grade, to 1.86; by the fifth to 2.10. The average minority achievement in the fifth grade, which should

---

[44] Thus at the 50th percentile one-half of those tested nationally scored above and one-half below that level; at the 75th percentile 75% of those tested scored below that level.

[45] Morey was at the 29th percentile. PX 83.

be at grade level of 5.6 is only at 4.42, while the children in the predominantly Anglo schools are achieving at a level of 6.53. The longer the minority child stays in the segregated school the further behind he gets, even though he "passes" progressively from grade to grade.[46]

E. Most of Denver's Minority Children Attend the Inferior Schools.

Exhibit 374 identifies 45 elementary schools achieving at or below the 40th percentile in the fifth grade, 1968. Over 86% of the District's Negro elementary school children and over 78% of the Hispano children attend these schools,[47] a total of 17,024 minority children. In contrast, Exhibit 375 identifies 22 schools achieving at or above the 60th percentile. While over 40% of the Anglo children in the District attend these schools, only 4% of the Negro and Hispano children attend them.

F. The Fact of the Inequality Has Been Known for Years by the School Administration.

Two committees appointed by the Board, one reporting to 1964 and the other in 1967, each recognized the inequality and concluded that there was a close relationship between the concentration of minority students and inequality of educational opportunity.[48] The 1964 Report noted:

---

[46] PX 380 (A. 2102a), 381 (A.2104a), 382; Klite, A. 555a-556a; Dodson, A. 1473a-74a; Dodson, PH Tr. 311-313.

[47] PX 376-R, A. 2096a; Klite, A. 553a-554a. In the 1968-69 school year the 22 minority elementary schools contained 79.5% of the District's black elementary children (6,597) and 46.6% of Hispano children (5,858), but only 5.4% of the Anglo children (1,815). The 30 elementary school achieving at or below the 30th percentile contain 60.5% of the black children (5,022), 63.6% of the Hispano (7,989) and 12.5% of the Anglo children (4,205). See also, PX 241; Bardwell, A. 704a-706a.

[48] PX 20, A. 2003a; PX 21.

> There is abundant authority to the effect that "de facto" separation in schools may result in educational inequalities, and there is in Denver wide belief among the racial and ethnic minorities that the schools to which their children go are in some way unequal. 313 F. Supp. at 81.[49]

That the committee was able to discern this inequality is noteworthy, for the members were given none of the data on teacher experience, teacher turnover, drop-out rates or achievement on an individual school basis which led the trial court to its factual findings of inequality. Of course, the school administration reviewed the test results annually, and knew of the disparities.[50]

However, it was not until October of 1968, shortly after a new superintendent replaced a 20-year incumbent, that the school administration first made public comparative school achievement scores on a school-by-school basis.[51] Prior to that time not even board members had been furnished with this data. The revealed disparities had a strong impact on the attitudes of some members of the Board of Education with regard to the availability of equal educational opportunity in the minority schools. Board member Voorhees concluded "something was wrong" in the way minority children were treated in the system:

> I suppose what crystallized this change more than anything was the release by the Superintendent sometime last fall, I believe, of some test scores—comparative

[51] Cavanaugh, A. 637a-638a. According to Mr. Cavanaugh the underlying reason for the prior policy against publishing comparative data was that such comparisons "would be detrimental to the esprit de corps." A. 638a.

test scores which indicated to me a direct correlation between concentration of poor children, minority children, and low achievement as compared to other schools where these conditions were not present. A. 145a.

For the first time the minority community could see what they had suspected all along—the clear inferiority of their schools.

C. The School Administration Obfuscated the Poor Achievement Results at Minority Schools.

Prior to 1968 the school administration had been less than candid about achievement levels in the minority schools. Their written reports, distributed to teachers and parents often described dismal results in glowing terms.[52]

The 1956 test results for 6th grade pupils at predominantly-Hispano Fairview Elementary School showed most students performing poorly and nearly 2 or more years below grade level. But in their 1956 report on these test results sent to Fairview parents and faculty the school administration stated: "The 1956 test results indicate a good consistent program of instruction at Fairview school. . . . The faculty should be pleased with these achievements."

Similarly dismal achievement results were experienced that year at predominately-Negro Wyatt Elementary School, but the report concluded that: "The faculty should be well pleased with these achievements." The record reflects numerous other examples of this pattern of reporting about minority schools.

The school administration's gloss also covered poor achievement at the junior high school level. In 1956, Cole Junior High School, predominately Negro, was achieving at the 21st composite percentile at 9th grade and below

[52] PX 379; Klite, A. 559a-562a.

expectation.[45] In spite of this poor performance, the school administration at Cole summed up the situation as follows: ". . . the general picture of this group is very similar to that of the group tested in 1953. In both years, pupils at all levels evidenced satisfactory achievements in the subject-matter area. The faculty should be pleased with these accomplishments." [46]

In 1958, 9th grade students at Cole on similar tests achieved at the 20th composite percentile, 5 points below expectation and 30 points below the national norm. Yet, the district's report to parents and faculty declared: "Two-thirds of the scores indicated on the accompanying chart fall at or about expectancy, a fact that indicates that the majority of 9th grade pupils at Cole Junior High School are making very satisfactory academic progress in the various areas measured by these tests." [47]

H. The District Established Low Achievement Standards for the Segregated Schools.

The reason for these accolades lies in another pernicious practice of the school administration, the establishment of levels of expected performance. Based upon the inter-quartile distribution of I.Q. scores for the class in the school,[48] the District set up low achievement expectancies for each of the minority schools.[49] This expectancy was

---

[45] At predominately-Anglo Merrill, 9th graders were achieving at the 82nd composite percentile, 10 points above expectancy. The administration's summary for Merrill paralleled that of Cole: ". . . the faculty should be pleased with these attainments."

[46] Klite, A. 556a-559a; PX 379.

[47] PX 379.

[48] Cavanaugh, A. 635a-636a; Klite, A. 545a; 559a-562a.

[49] In the fourteen court-designated elementary schools, at the 5th grade level the school administration uniformly established the expectancy at the 23rd percentile. Thus 77% of the children tested

for failure. Officially excused for substandard academic performance the teachers in the minority schools could rest assured that the failure was not their fault; according to the District's standards it was not a failure at all.[44] The

---

nationally achieved above this level. Only one of these schools actually achieved above the 30th percentile. In 1968 the median results were as follows:

	Fifth Grade 1968	
School	*Expectancy Percentile*	*Score Percentile*
Bryant-Webster	23rd	22nd
Columbine	23rd	19th
Elmwood	23rd	28th
Elyria	23rd	23rd
Fairmont	23rd	14th
Fairview	23rd	18th
Greenlee	23rd	17th
Hallett	23rd	32nd
Harrington	23rd	15th
Mitchell	23rd	12th
Smedley	23rd	19th
Smith	23rd	30th
Stedman	23rd	28th
Whittier	23rd	19th

For 9th graders at Baker and Cole in 1968 the overall median expectancy was the 25th percentile; at Morey, the 27th percentile; at Smiley, the 36th percentile.

For 11th graders at East High School the overall median expectancy was the 40th percentile; at West High School, the 33rd percentile; at Manual, the 21st percentile. As to Manual the school administration commented:

> "Eleventh grade pupils at Manual High School have achieved very commendable levels of academic accomplishment compared with expectancy. Even though the level of expectancy for these pupils is below national norms, they have, nevertheless, consistently achieved above the levels of expected achievement. It can be noted that Manual pupils achieved either at or above their expectancy on twenty-nine of thirty checkpoints. It is apparent that a good instructional program as well as effective pupil learning occur at Manual."

That year the actual median achievement level at Manual was the 29th percentile. PX 379.

[44] PX 379; Dodson, PH Tr. 313-314.

district's achievement reports emphasized test results in terms of expectancy rather than the grade equivalent which described the level where the children ordinarily would have been expected to perform. Often the expectancy was one or more grades below the grade equivalent. As noted above, the students and parents were reassured that the children were measuring up to their expectancy." With no comparable data readily available to them, minority parents had no way of finding out about the drastically low expectancies established for their children.

Mrs. Rachel Noel, only Negro to ever serve on the Board, recounted her experience with lower academic standards when at the fifth grade her daughter was transferred from predominantly-Anglo Park Hill Elementary School to predominantly-Negro Barrett when it opened in 1960. She noticed that her daughter had little homework and was losing interest at Barrett. Her daughter explained that she was being taught in the fifth grade at Barrett what she had already had in the fourth grade at Park Hill:

> "And I went to school and I talked to the teachers—to her teacher and I talked to the principal and—as a parent, trying to find out what it was. I sat in on the classes. And I wanted to see what it was. And to the best of my judgment and certainly my great concern based on her statements to me—it seemed that she was not getting what she should have gotten and what she would have gotten at Park Hill since she was having the same thing over in the fifth grade as she had had in the fourth." A. 87a.

Thus it was common, and still is, for minority children to be passed from grade to grade although falling farther and farther behind; entering first junior and then senior

---

" PX 379.

high school with little hope that their academic performance would see them graduate from high school. As the school district observed when it was planning new Manual, the curriculum there had to reflect the fact that few if any Manual graduates would go on to college.[60] That expectancy had been established when the children entered elementary school. The prophecy was fulfilled.

I. Drop-Out Rates are Highest In the Segregated Schools.

Little wonder that the so-called drop-out rate for these minority secondary schools is so high.[61] In 1968 the prospects of finishing Manual High School for a minority child entering Cole Junior High School in the 7th grade were less than 23%; a child entering Morey Junior High School was even less likely to be graduated: only 18 out of every 100 would finish at East High School. The prospects of the combination of Baker Junior High School and West High School were little better: only 32 out of 100 would be graduated. A. 98a. Thus the system continuously creates another generation of future minority parents with a low level of education, and the cycle begins again.

J. The Trial Court Determined that a Cause of the Inequality was the Segregated Condition of the Schools.

The trial court found, as a matter of fact that the segregated schools were offering unequal and inferior educational opportunities to minority children. The trial court went on to find, as a matter of fact, that a cause of the inequality was the segregated condition of the school:[63]

---

[60] PX 356: "For roughly three-fourths of the student body, college is virtually an impossibility." A. 961a.

[61] PX 400, 400-A; Bardwell, A. 776a-781a.

[63] Dodson, A. 1472a-1477a; PX 20, pp. 1-8, D-1-D-11 A. 1999a-2004a; A. 2008a-09a; PX 27; Dodson, PH Tr. 308-10; 312-315; 338-39.

"... [W]e cannot ignore the overwhelming evidence to the effect that isolation or segregation per se is a substantial factor in producing unequal educational opportunity." 313 F. Supp. at 81.

"When we consider the evidence in this case in light of the statements in *Brown* v. *Board of Education* that segregated schools are inherently unequal, we must conclude that segregation, regardless of its cause, is a major factor in producing inferior schools and unequal educational opportunity." 313 F. Supp. at 82.

"... Once it is found that these separate facilities are unequal in the quality of education provided, there arises a substantial probability that a constitutional violation exists." 313 F. Supp. at 83.

Finally:

"The evidence in the case at bar establishes, and we do find and conclude that an equal educational opportunity is not being provided at the subject segregated schools within the District. . . . The evidence establishes this beyond any doubt. Many factors contribute to the inferior status of these schools, but the predominant one appears to be the enforced isolation imposed in the name of neighborhood schools and housing patterns." 313 F. Supp. at 83.

In reaching this conclusion the trial court rejected the respondents' position that the inequality was in fact attributable to factors beyond their control, such as home environment, nutrition, educational level of parents, etc.[11]

---

[11] Dodson, PH Tr. 339-43. Dr. Dodson characterized such excuses as being akin to "infant damnation", cliches which the majority community uses to excuse the failure to educate the minority child. PH Tr. 343-44.

K. The Respondents' Own Policies Resulted In Creating the Inequality of Opportunity.

While the respondents sought to put the responsibility for failure upon the minority children,[64] it is clear that many of the factors present in these schools which contribute to their inferiority are directly attributable to the policies and practices of the school administration.

The low level of teacher experience in these schools is the direct result of the respondents' policies regarding teacher assignment and teacher transfers.[65]

The high rate of teacher turnover in these schools is directly attributable to the respondents' teacher transfer policy.[66]

The teacher assignment policies for minority teachers, principals and assistant principals, concentrating them in minority schools, reinforced the image of those schools as segregated and inferior.[67]

The establishment of a low academic expectancy for the minority schools both created and reinforced the teachers' low expectancies, and became a self-fulfilling prophecy. The respondents' combined policies of failing to report comparative test data, the dissemination of misleading reports of test results and the passing of the children from grade to grade sought to justify the continuation of existing student assignment policies while at the same time dispelling the idea that there was a need for change.

[67] Johnson, A. 336a-38a; Oberholtzer, A. 1352a-53a, A. 1393a-97a; 303 F. Supp. 284-85.

Last, but by no means least, the respondents' adherence to the neighborhood school pupil assignment policy in the face of segregated neighborhood residential patterns knowingly continued to assign minority children to unequal schools.[44] As Judge Doyle said "It strikes one as incongruous that the community of Denver would tolerate schools which are inferior in quality." 313 F. Supp. at 83.

The trial court had abundant evidence to find the respondents responsible for the inequality of educational opportunity offered to Denver's minority students.

The Trial Court's Conclusions as to the Appropriate Remedy for the Inequality of Educational Opportunity.

After concluding that the inequality of educational opportunity violated the Fourteenth Amendment, the trial court next addressed itself to the issue of remedy. For this purpose an extensive separate hearing was commenced in May, 1970, at which the parties presented opposing plans for relief. Respondents advocated a remedy premised upon compensatory education, leaving the schools segregated. Petitioners' plans were premised upon three components: desegregation, integration and compensatory programs in a desegregated setting.

The trial court defined the issue before it as follows:

> The crucial *factual* issue considered was whether compensatory education alone in a segregated setting is capable of bringing about the necessary equalizing effects or whether desegregation and integration are essential to improving the schools in question and providing equality. The evidence of both parties has been directed to this question. 313 F. Supp. at 94.

---

[44] PX 20, p. A-5 (A. 2003a); Oberholtzer, A. 1402a-03a, A. 1406a-07a, A. 1413a-14a; Perrill, A. 1088a-90a.

The trial court, after considering the evidence presented, resolved this issue in favor of the remedial components presented by petitioners:

> We have concluded after hearing the evidence that the only feasible and constitutionally acceptable program —the only program which furnishes anything approaching substantial equality—is a system of desegregation and integration which provides compensatory education in an integrated environment. 313 F. Supp. at 96.

In support of this conclusion were the following findings by the court:

1. The evidence was "overwhelming" that equality "can only be brought about by a program of desegregation and integration. 313 F. Supp. at 96."

2. "... [T]he segregated setting stifles and frustrates the learning process," and deprives the minority students of the benefits of a heterogeneous group of fellow students. 313 F. Supp. at 96-97.[70]

3. Compensatory programs, both nationally and in Denver's segregated schools have been uniformly unsuccessful, and the programs espoused by the respondents showed no greater promise. 313 F. Supp. at 97.[71]

---

[69] Dodson, A. 1472a-74a; Sullivan, A. 1570a-71a; A. 1573a-80a; A. 1585a-87a; A. 1598a-1600a; Coleman, A. 1531a-37a, A. 1539a-44a, A. 1551a-52a; RH Tr. 74-75; O'Reilly, A. 1935a-41a, A. 1950a-55a.

[70] *Ibid.*

[71] O'Reilly, A. 1910a-35a; Reamer, A. 1905a-10a; Ward, A. 1853a; A. 1868a-69a, A. 1873a-74a, Morrison, A. 1890a, A. 1893a-94a; Gilberts, A. 1817a-18a, A. 1822a, A. 1827a-29a, A. 1831a-34a.

The evidence at the hearing on relief centered upon the issue of whether, standing alone, compensatory education programs in the court-designated schools would raise the quality of the educational opportunity which they offered. Petitioners' experts uniformly asserted that these compensatory programs carried out in segregated settings had failed to significantly affect or improve achievement levels of the minority children.

Dr. James Coleman stated that studies of the effects of these compensatory programs "have not been very encouraging with regard to their effects." A. 1537a. Coleman summed up the weakness of these programs as follows:

> I think that the major problem with compensatory programs is that it's much more difficult and, if possible, much more expensive to introduce such environmental changes in the child's environment, not only within the classroom but outside the classroom when the actual social environment that he experiences in the sense of other children he talks to remains homogeneous with his past. A. 1543a.

The practical experience of Dr. Neil Sullivan while Superintendent of Schools at Berkeley, California, confirmed the thesis of the ineffectiveness of compensatory programs in segregated settings.

For four years prior to the institution of the desegregation of Berkeley's schools the district had attempted to improve the segregated schools, nearly doubling the tax rate "in order to have many, many millions of dollars to pour into these black schools." Emphasis was placed on lowering class size, new electronic equipment and materials, the use of para-professionals, cultural enrichment programs, and programs designed to build the minority child's

self-esteem. As Sullivan said: "You name it and we tried it." A. 1577a. Despite these efforts the programs "had no effect" upon minority achievement, and "overall there was retrogression in all the black schools in achievement." A. 1578a. Sullivan reached the conclusion that the best compensatory education program was integration. A. 1576a.

Dr. Sullivan also testified as to how integration in Berkeley solved many of the problems of teacher turnover and low teacher experience. Teachers enjoyed teaching in an integrated school and stayed with the system. A. 1585a. Classroom discipline problems which had inhered in the segregated black schools were greatly alleviated. A. 1586a. Integration had no adverse effect upon Anglo achievement and unlike the experience with compensatory programs, minority achievement improved.

Dr. Robert O'Reilly also presented evidence about the lack of efficacy of compensatory programs in segregated settings. O'Reilly was Chief of the Bureau of School and Cultural Research for the New York State Education Department, and as such had directed a study of the efficacy of segregated compensatory programs throughout the United States. More than 1,200 different programs had been reviewed and evaluated. The results of these comprehensive evaluations were published in 1970, appearing in the record here as PX 508, "Racial And Social Class Isolation in the Schools."

The respondents' proposals for compensatory education then before the trial court included elements such as additional teaching staff, lowering of teacher-pupil ratios, use of paraprofessionals and teachers' aides, diagnostic laboratories, group counseling, use of staff psychologists, cultural understanding programs, programs directed toward improving the child's self-image, increasing parental in-

volvement, remedial reading and mathematics, programs designed to motivate minority children and to make the curriculum more relevant, use of multimedia teaching aids, field trips and differentiated staffing.

O'Reilly testified that the 1,200 programs he had studied typically had these elements; that there was really nothing new or innovative about the respondents' proposal. Further, it was his opinion that segregated compensatory programs did not raise minority achievement:

> My opinion is, after reviewing the studies and their results that there are no general practical effects accruing to students' educational development as a function of compensatory education programs which typically include these kinds of components. A. 1929a.

O'Reilly had also studied and evaluated the effects of integration upon minority achievement. Based upon analysis of some forty integration programs, it was his opinion that integration improved minority achievement. While not recommending any "doctrinaire approach," [72] and stating that integration was not a "cure-all," [73] O'Reilly concluded:

> . . . [T]he results generally show that the educational development of the desegregated minority students tends to be facilitated or tends to improve within a year or two after the desegregation experience is initiated. A. 1937a.

Comparing the effect of segregated compensatory programs with integration,

---

[72] A. 1933a.

[73] A. 1935a.

> . . . [T]he results here tend to show that the integrated students perform at higher levels on achievement tests as compared to students in segregated schools receiving compensatory education. A. 1937a.

The principals at three minority schools, Greenlee Elementary, Cole Junior High and Manual, had testified that they believed compensatory programs in their schools were effective. O'Reilly dismissed this attitude as being typical:

> I don't think you can judge [the effectiveness of these programs] from what a person has to say about his opinions. Teachers typically and school administrators typically think what they're doing is great. A. 1956a.

This opinion was borne out by Denver's experience with compensatory programs. None of them had any demonstrable effect upon minority achievement. Mr. Ward, principal at Manual, described the programs he had established beginning in September, 1966, when he became principal.[74] While he was enthusiastic about these programs[75] he admitted that during this period the level of academic achievement at Manual declined from the 34th percentile in 1965 to the 28th percentile in 1968.[76]

In its opinion of May 21, 1970 (313 F. Supp. 90), the trial court did not decree a specific remedy or plan for implementation, but rather established guidelines which the detailed plan would have to meet. These included desegregation of 7 of the 14 court-designated elementary

---

[74] A. 1845a-1853a.

[75] A. 1853a.

[76] A. 1874a.

schools in September, 1971; desegregation of the remaining 7 schools in September, 1972; desegregation of Baker and Cole Junior High Schools commencing in September, 1971, with implementation to be completed by the following September. By September, 1972, Manual Senior High School was to be transformed into a city-wide open school with offerings emphasizing vocational education and pre-professional training. 313 F. Supp. at 97-99.

In addition to desegregation the trial court's guidelines included integrative programs directed to the attitudes of teachers, parents and children; orientation in the fields of minority cultures, teaching programs relating to minority children in an integrated environment and community education about the educational benefits of the desegregation program. Finally, the court accepted the compensatory programs recommended by respondents, but in the setting of integrated rather than segregated schools. 313 F. Supp. at 99.

Events Subsequent to the Trial Court's Opinion of May 21, 1970.

The details of the plans necessary to implement the desegregation called for in the guidelines was left for the parties to mutually resolve. By March, 1971, the board drew up six alternate plans for desegregation of 7 of the fourteen designated elementary schools. Each of the six plans used a different combination of minority schools; each also used a different group and quantity of predominantly Anglo receiving schools. All six plans were based on the concept of satellite zoning, whereby portions of the minority schools' attendance areas were carved up and assigned to Anglo schools. After a series of public meetings the board later selected one of these, "Plan B," for presentation to the court.

At the secondary level the board proposed to desegregate Baker, and to make both Cole and Manual "magnet schools."

All of the proposals were represented to be workable, reasonable, and within the financial and administrative capabilities of the school district. The board also represented that it could implement their proposals by the September, 1971 deadline established by the court.

Being unable to agree with most of the board's proposals, the petitioners developed several alternate pairing proposals for the desegregation of the fourteen minority elementary schools, pairing them with quality predominantly Anglo schools. At the secondary level petitioners developed proposals for the desegregation of both Baker and Cole. Petitioners adopted the magnet concept for Manual.

In May 1971, a second relief hearing was held, and the opposing plans were presented. At the close of the hearing the court selected a plaintiffs' modification of one of the board's six alternate elementary plans, and adopted the board's proposals for Baker, Cole and Manual.[11] All of these plans were to be implemented in September, 1971.

A few weeks later, the issuance of the opinion of the court of appeals on June 11, 1971, nullified the implementation of these remedial orders. 445 F.2d 990.

---

[11] No appeal was prosecuted from the oral order of the trial court at the close of the second relief hearing, and no review of that proceeding is sought in this Court. The original transcript of that hearing has been filed with the Clerk of the Court.

Events Subsequent to the Issuance of the Court of Appeals Opinion on June 11, 1971.

While not relevant to the issues here, for the sake of completeness we will relate the other judicial action which took place following the Court of Appeals decision.

That decision affirmed the trial court's conclusion that the Hallett and Stedman elementary schools had been intentionally segregated by the board. Those schools received no relief under that portion of the trial court's orders which were affirmed by the Tenth Circuit, as they were not included in Resolution 1531. On June 23, 1971 petitioners requested the trial court to order respondents to file a desegregation plan for Hallett and Stedman to be implemented with schools' opening in September, 1971. Respondents opposed this motion, and the trial court on July 28 denied it without prejudice, stating that it was unclear from the decision whether such relief was contemplated by the Court of Appeals. On August 2 petitioners filed a "motion seeking clarification" of this question, and on August 30 the Court of Appeals issued an order stating that such desegregation relief would be appropriate and directing the trial court to hear the matter "and determine the proper relief to be granted." A. 1986-87a.

At the trial court's hearing on September 8, 1971 the court selected plans for Hallett and Stedman and ordered them to be implemented by November 8, 1971. The order was reduced to writing and entered on September 28, 1971. Thereafter, respondents' notice of appeal was voluntarily dismissed when pursuant to stipulation the order was modified and implementation rescheduled. The new order, entered October 19, 1971, was implemented at the beginning of the second semester in January, 1972.

Summary of Argument

Petitioners are seeking a district-wide plan of relief for segregation and inequality of educational opportunity in School District No. 1. In support of this relief, petitioners contend as follows:

I.

A. That the findings of the trial court as to a ten-year segregation policy affecting a substantial part of the Denver system, which findings were affirmed below, justify and necessitate a plan of relief which is not limited to the few schools which were most recently and overtly affected by this policy. While the courts below thus restricted the remedy, it should be extended to the entire Denver District. Only system-wide relief promises to effectively remedy the effects of the past discriminatory policy and to prevent its reoccurrence in the future, particularly where the District's segregatory practices in the past have been carried on covertly under the cover of a racially-neutral, "color blind" neighborhood school policy.

B. The courts below employed erroneous notions of petitioners' burden of proof on the issue of purposeful segregation by not requiring that respondents justify their segregatory actions by showing them necessary to achieve a compelling, nonracial state objective. If this proper standard had been applied, the record here required a finding of even more purposeful segregating action than was found by the courts below. The courts below erred and saddled peitioners with an impossible burden of proof by taking as excuse or justification for segregatory effects any merely *rational* nonracial excuse which respondents offered. This error was particularly palpable as applied to the evidence of boundary changes increasing the attendance areas of Cole Junior High School and Manual Train-

ing High School to include and coincide with the areas of most recent Negro neighborhood expansion. Similarly, the courts below ignored the record as well as common experience by refusing to give effect to the impact of schools decisions upon the racial composition of affected neighborhoods, thus allowing later neighborhood segregation to excuse prior segregatory acts because there was no direct and immediate causal relationship. The court below also ignored the impact of faculty segregation practices.

C. Where the school authorities have been found guilty of intentional segregation as to some actions, other actions having a similar segregatory result should not be clothed with any presumption of legitimacy but rather should be considered prima facie illegal unless justified by the showing of a nonracial compelling state interest. Had the courts below employed this test it would have compelled a finding of more pervasive segregation throughout the system, further justifying the necessity for district-wide relief.

II.

With regard to the unequal educational opportunity systematically being provided to Denver's minority students, the trial court properly held such deprivation to constitute denial of equal protection and fashioned an appropriate remedy for it, in light of the evidence and the traditional powers and duties of a court of equity. While the remedy was proper, it was improper to withhold it from other minority schools displaying the same inequalities and inferiority as those to which the trial court extended relief.

In reversing, the appellate court misconceived the standards of equal protection which applied, requiring a show-

ing that the State had deprived minorities of equal educational opportunity intentionally, that is to say, with odious intent, whereas all that is required is a showing that state action has resulted in a racial discrimination. If not justified by compelling state interest, the racial discrimination will deny equal protection. Furthermore, the appellate court's inability to find that the inequality was the result of any state action was derived from ignoring the variety of decisions made by the school administrators which contributed to the inequality of opportunity in and the inferiority of these minority schools. The Tenth Circuit also either rejected the trial court's evidentiary findings as to the cause of the inequality in violation of the "clearly erroneous" standard of Rule 52(a), or it incorrectly concluded that the district court had employed a *per se* rule of equating segregation with inequality, whereas Judge Doyle's finding was essentially factual and fully supported by the evidence.

III.

Finally, the combination of the two constitutional violations found by the trial court should be remedied together in a comprehensive, district-wide plan.

ARGUMENT

I.

Racial Segregation in the Denver School System Violates the Fourteenth Amendment and Should Be Remedied by a Comprehensive System-Wide Desegregation Plan.

Introduction

This case presents the situation of covert racial segregation practiced by state officials in violation of the state's own laws[18] as well as this Court's ruling that "racial discrimination in public education is unconstitutional." *Brown* v. *Board of Education*, 347 U.S. 483 (1954) (*Brown I*), and 349 U.S. 294 (1955) (*Brown II*). Colorado law lends no support to a practice of racial segregation or discrimination. Indeed, Colorado's Supreme Court held in 1927 that a Denver practice of excluding black students from school programs at Manual High School and Morey Junior High violated state law. *Jones* v. *Newlon*, 81 Colo. 25, 253 Pac. 386 (1927). At the time of *Brown*, Denver had no fully developed "dual system" of entirely separate schools for blacks and whites but black pupils in Denver were concentrated in a few schools.[19] The Superintendent

---

[18] An example of similar violations soon after *Brown* is *Clemons* v. *Board of Education of Hillsboro*, 228 F.2d 853 (6th Cir. 1956).

[19] The most complete data in the record about the pre-*Brown* distribution of pupils in Denver by race is data for the 1946-47 school year. PX-336, A. 2084a. There were only 1,832 Negroes (3.6%) in a school system of 50,999 regular daytime pupils. Nevertheless, the concentration of Negroes in three elementary schools, one junior high and one senior high was severe. Whittier Elementary School was 90% black and enrolled 50% of the black elementary students in Denver. It was the first, and until 1944 the only school to have any black teachers. A. 2106a, PX-410. Mitchell had 13% and Gilpin had 12% of the black elementary

of Schools concluded, despite this racial concentration, that the *Brown* decision "did not apply to us" (A. 1400a) but only applied to "separate school systems for the Negro and the Anglo. A. 1310a. Superintendent Oberholtzer took the view that no racial statistics should be maintained (A. 1399a), and that it violated the Colorado Constitution to take any action to relieve the concentration of Negroes in Negro schools. A. 1370a. It never occurred to the Superintendent to inquire whether the practice of assigning minority teachers to minority pupil schools violated the state or federal Constitution.[10] But see *Swann* v. *Board of Education*, 402 U.S. 1, 18 (1971); *United States* v. *Montgomery County Board of Education*, 399 U.S. 225 (1969); *Bradley* v. *School Board*, 382 U.S. 103 (1969); *Rogers* v. *Paul*, 382 U.S. 198 (1969).

Notwithstanding the board's denials of racial motivation and vigorous defense to the charge, the district court concluded that the Denver authorities "carried out a segregation policy" during a ten year period up until the filing of this lawsuit in 1969. 303 F. Supp. at 287. The findings of deliberate acts designed to accomplish racial segregation, which were affirmed on appeal, are all the more remarkable considering the strict burden of proof

---

students; both latter schools were predominantly minority (Hispano and black) schools. Cole Junior High was 20% black and enrolled 88% of the blacks in Denver junior high schools. Manual Training High was 23.4% black and 86% of the blacks at the high school level attended this one school.

[10] Article IX, Section 8 of the Colorado Constitution provides: "Section 8. Religious test and race discrimination forbidden—sectarian tenets.—No religious test or qualification shall ever be required of any person as a condition of admission into any public educational institution of the state, either as a teacher or student; and no teacher or student of any such institution shall ever be required to attend or participate in any religious service whatever. No sectarian tenets or doctrines shall ever be taught in the public schools, nor shall any distinction or classification of pupils be made on account of race or color."

placed on plaintiffs by the courts below which decided that only a showing that board action was a sham or subterfuge and that no rational criteria could support a given board action would suffice to establish sufficient circumstantial evidence to prove an intent to segregate.

The courts below regarded this deliberate policy of segregation carried out by official acts of local school officials as a plain violation of *Brown*. That result is consistent with the view of other courts which have condemned segregation resulting from covert policies of administrative officers and local school boards as unconstitutional in a growing body of decisions.[31] This Court has several times taken note of the policies of resistance and evasion of *Brown* which developed in southern states in the years since 1954. *Cooper* v. *Aaron*, 358 U.S. 1 (1958); *Griffin* v. *School Board*, 377 U.S. 218 (1964); *Swann* v. *Board of Education*, 402 U.S. 1, 13 (1971). The pattern of covert racial discrimination in the Denver schools revealed by this record merits equally vigorous condemnation.

[31] *Taylor* v. *Board of Education of New Rochelle*, 191 F. Supp. 181 (S.D.N.Y. 1961), *appeal dismissed*, 288 F.2d 600 (2nd Cir. 1961), 195 F. Supp. 231 (S.D.N.Y. 1961), *aff'd*, 294 F.2d 36 (2nd Cir. 1961), *cert. denied*, 368 U.S. 940 (1961); *Clemons* v. *Board of Education of Hillsboro, Ohio*, 228 F.2d 853 (6th Cir. 1956), *cert. denied*, 350 U.S. 1006 (1956); *Davis* v. *School District of City of Pontiac*, 309 F. Supp. 734 (E.D. Mich. 1970), *aff'd* 443 F.2d 573 (6th Cir. 1971), *cert. denied*, 404 U.S. 913 (1971); *Bradley* v. *Milliken*, 433 F.2d 897 (6th Cir. 1970), 438 F.2d 945 (6th Cir. 1971), —— F. Supp. —— (E.D. Mich. Sept. 1971); *United States* v. *School Dist. No. 151*, 286 F. Supp. 786 (N.D. Ill. 1967), *affirmed*, 404 F.2d 1125 (7th Cir. 1968), *on remand*, 301 F. Supp. 201 (N.D. Ill. 1969), *affirmed*, 432 F.2d 1147 (7th Cir. 1970), *cert. denied*, 402 U.S. 943 (1971); *United States* v. *Board of School Commissioners of Indianapolis*, 332 F. Supp. 665 (S.D. Ind. 1971); *Spangler* v. *Pasadena City Board of Education*, 311 F. Supp. 501 (C.D. Cal. 1970).

In Part I-A of this Brief, we submit that the district court's findings of various acts of unlawful segregation which were affirmed on appeal are sufficient to require that Denver be dealt with as a segregated school system and require that the courts in the exercise of their remedial function provide system-wide relief and not merely relief limited to certain individual school situations.

In Part I-B we urge that the unlawful segregation practices in Denver were even more extensive than the courts below found and that findings that segregation at some schools was not unlawful were based on the application of wrong legal standards and perspectives.

In Part I-C we suggest that where intent to segregate has been demonstrated as to some of the board's actions, other decisions whose effect is segregatory should be presumptively unlawful unless supported by a compelling nonracial justification and not merely an available nonracial explanation.

A. Denver's Unconstitutional Ten Year Policy of Racial Segregation Necessitates a Requirement for System-wide School Desegregation.

The district court found that the Denver officials had carried out a ten year policy of racial segregation in the Denver schools. Although the principal findings related mainly to eight schools, the findings establish systemic discrimination which affected the entire black school population. Racial discrimination in the assignment of black teachers was shown to have been system-wide and to have been the policy[22] since the first black teacher was hired in 1934 (PX 410, A. 2106a). The eight schools upon which the district court focused the findings of unlawful discrimination enrolled 5,139 black children, more than a

[22] See Statement *supra*, pp. 11-13, 19-21.

third of the black children in the City, including one-fourth of black elementary children, over two-thirds of the black junior high pupils and two-fifths of black high school pupils.[33] Thus, the findings of deliberate manipulations to accomplish segregation do not pertain to an isolated or trivial fragment of the system. Rather, they relate to a substantial part of the black community including the community where black population growth was concentrated and where there was thus the most opportunity for discrimination during recent years.

The findings of discrimination relate to all of the mechanisms by which the system controlled pupil assignment. Racial segregation was the hidden motive of Denver school officials and their undeviating policy when they made decisions affecting the Northeast Denver schools about such matters as size and location of new buildings and additions to buildings, capacity utilization, location of mobile classrooms, transportation policies, attendance area boundary decisions, optional zones and transfer policies. See Statement, *supra* at pp. 13-37; see also Argument II, *infra* at 93-101.

The interrelation of assignment practices at various schools is an obvious and established fact. As a former board president who testified for the defendants put it, "Once you change the boundary of any one school, it is affecting all the schools and so we had a concern about all of these changes." A. 951a-952a. It is equally obvious that a practice of concentrating blacks in certain schools by structuring the pupil assignment process with racial considerations has a reciprocal effect of keeping other schools all white. Furthermore, such a policy is aimed at Negroes as a racial group and not merely at particular

---

[33] See footnote 13, *supra*, p. 17.

Negroes. Discrimination in Denver was against blacks as a group although it was manifested in different ways against blacks in different situations. The ten year segregation policy was effective everywhere in Denver that it was needed to accomplish segregation. In Park Hill where blacks were moving into white neighborhoods in the 1960's the segregation policy was most overt and visible. Naturally it was less visible where schools were already segregated, and nothing new needed to be done to keep them segregated.

Plaintiffs have sought system-wide relief from the filing of the complaint which asked that the board (A. 31a-32a):

> . . . be required to submit . . . a comprehensive plan for the School District as a whole, and for each school therein where such condition exists, which will effectively:
>
> (i) Remove the segregation and separation of school children by race and ethnicity within and among such schools;

The piecemeal approach of trying to cure segregation at only those schools where there is proof of a deliberate policy of segregation and leaving other schools segregated is plainly inappropriate where the segregation is a part of a policy which inevitably affects all students and schools, white or black, either directly or indirectly. Such a piecemeal approach might be appropriate if an act of deliberate discrimination was truly isolated and unconnected with the rest of a school system. But the district court's findings of a segregationist *policy* negate any such notion in Denver.

The rescission of the three 1969 desegregation proposals which would have changed attendance patterns at schools

attended by one-third[24] of the children in Denver was the "climactic and culminative act" of the board's segregation actions and there was "no gainsaying the purpose and effect of the action as one designed to segregate." 308 F. Supp. at 285. The district court found that the rescission of Resolutions 1520, 1524 and 1531 was an action of deliberate racial segregation entirely unrelated to any nonracial considerations, done in haste, without study, without any nonracial educational justification, and over the opposition of the school superintendent. Judge Doyle wrote:

> The rescission of Resolutions 1520, 1524 and 1531 was a legislative act which had for its purpose restoration of the old status quo and was designed to perpetuate segregation in the affected area. This act in and of itself was an act of de jure segregation. It was unconstitutional and void. 303 F. Supp. at 295.

The rescission of the three resolutions demonstrates a general policy of segregation affecting schools in every part of Denver which would have been involved in the desegregation effort planned by the Superintendent and were left segregated by the rescission.

Petitioners do not read the district court's final decision on the merits as rejecting the idea of system-wide relief. To be sure the court held that plaintiffs failed to prove deliberate discrimination as to certain schools in regard to boundary changes and optional zones. But the court simultaneously ordered desegregation of those and other schools on another theory—the inequality theory discussed in Part III of the opinion (313 F. Supp. at 77,

---

[24] See chart at 445 F.2d 1008-1009, which indicates that 31,767 pupils would have attended the schools involved in Resolutions 1520, 1524 and 1531 if they were implemented.

et seq.)—and thus had no need to decide whether desegregation of those same schools might not be required to remedy the effects of the board's general policy of discrimination or prevent it from being carried forward in the future.

We submit that it ought to be entirely obvious that school segregation resulting from shams, subterfuges and surreptitious practices can only be rooted out and prevented if equity courts approach the problem of eliminating the effects of past discrimination and preventing future discrimination with a view to the practicalities of the situation. It has long been accepted that it is necessary to adopt a pragmatic approach to eleminating dual systems created by state laws because of the problems courts have encountered in enforcement of the *Brown* decision. See, *e.g., Green* v. *County School Board*, 391 U.S. 430, 438, n. 4 (1968); *Swann* v. *Board of Education*, 402 U.S. 1, 26 (1971). A fortiori there is need for a similarly practical view and for remedial action extending beyond the narrow area of proven violations in the case of a school district with a history of segregation by underhanded subterfuges. There might once have been some room for assumptions that dual school systems would generally obey *Brown* with good faith efforts, but there is by definition no basis for any such assumptions about a school district which has been found guilty of deliberate violations of *Brown* by covert segregation practices.

In the *Green* case, the Court cites precedents in voting rights, labor law and anti-trust cases as supporting the duty of an equity court to "eliminate discriminatory effects of the past as well as bar like discrimination in the future." *Green, supra*, 391 U.S. at 438, n. 4. Similarly well-established remedial principles support the notion that an equity court ought to attempt a remedy for school segregation

created by sham and subterfuge which looks beyond the particular cases of proven illicit activity.

In enforcing the anti-trust laws the federal courts have, because of practical necessities of enforcement, ranged beyond the narrow area of proven violations and where necessary enjoined licit as well as illicit conduct in order to enforce the law. See, *e.g.*, *United States Gypsum Co.* v. *National Gypsum Co.*, 352 U.S. 457 (1957); *United States* v. *Bausch & Lomb Optical Co.*, 321 U.S. 707, 724 (1944); *United States* v. *U.S. Gypsum Co.*, 340 U.S. 76 (1950); *International Salt Co.* v. *United States*, 332 U.S. 392 (1947); *Los Angeles Local 626* v. *United States*, 371 U.S. 94 (1962); *United States* v. *Aluminum Company of America*, 148 F.2d 416 (2nd Cir. 1945) (opinion by Judge Learned Hand).

The practical necessity of a district-wide approach to school segregation in Denver stems from various aspects of the situation. One aspect is the presence in the school system of the large Hispano minority group. It is necessary to avoid a remedy for segregation against blacks which disadvantages Hispano. The problem is obvious considering the fact that the dominant Anglo community can remain separated from blacks either by keeping blacks in all-black schools or keeping them in Black-Hispano schools. The current existence of a number of Black-Hispano schools where the pattern of inequality of educational opportunity is identical to that in all black schools is discussed below in Part II-C. A piecemeal approach to correcting the constitutional violations caused by deliberate discrimination might either aggravate the segregation of blacks and Hispanos or lead to the segregation of Hispanos in all-Hispano schools.

Another problem of a remedy without a system-wide perspective is to avoid steps which tend to create or encourage white citizens to change their schools to remain

segregated. Planning with a system-wide perspective can attempt to deal fairly with all groups and segments in the community and attempt to insure that any remedy is one with some chance of permanent impact.

Covert segregation practices in the past have obviously set in motion community responses. On the simplest level where a school is designated as a black school this may often cause various types of responses by whites to avoid the school thus designed as a black school. Furthermore, the systematic segregation of blacks in schools outside the older black areas demonstrates to blacks living in the older core areas the futility of seeking to escape school segregation by moving. Mrs. Palicia Lewis, a black parent, testified about her family's move from the predominantly minority Ebert in the central city to the Smith area in Northeast Denver at a time when Smith was integrated. As Smith became crowded and predominantly black, she and other Smith parents were offered the choice of accepting mobile classrooms at Smith to contain the new black pupils moving into the area or being bussed—possibly back to Ebert from which she had just moved. A. 691a-697a. The Northeast Denver segregation policy inevitably affected black people in the core city area. It gave them a signal that they would be in segregated schools no matter where they lived in Denver.

Only a systematic approach involving many schools can undertake to eliminate the racial identifiability of a few schools. See, for example, the large number of Anglo schools involved in the Resolution 1531 (A. 60a) plan to desegregate a few black schools. We should also point out that the fact that Resolutions 1520, 1524 and 1531 did not address the entire school system, reflects only that when the board was planning for integration it did so on a step-by-step basis. The board's Noel Resolution contemplated

"a comprehensive plan for the integration of the Denver Public Schools" (A. 1991a), and Superintendent Gilberts' responsive submission "Planning Quality Education" (DX-D; excerpts at A. 2128a, *et seq.*) envisioned an approach which would comprehensively address the problems of the entire school district. Resolutions 1520, 1524 and 1531 were the first three beginning steps in the overall process of designing a plan for integrating the Denver schools. A. 227a-239a.

Moreover, a system-wide approach is necessary in view of the need for a desegregation plan which also operates to relieve the problems of inequality in the provisions of resources to minority schools (see Argument II, *infra*). Such problems as high teacher turnover and low teacher experience in segregated schools as well as the concentration of minority teachers in minority schools are all problems which suggest that a district-wide remedial plan is necessary and appropriate.

We submit that the court of appeals erred in reversing those parts of the district court's final decree which did not relate specifically to schools where there was a finding of deliberate illicit acts. A rule of law limiting the remedy for school segregation to only those schools in a system where specific illicit acts are proved is so impractical as to promise no real reform of segregated situations. Such a limited remedy is comparable to the long-rejected arguments in dual school systems that courts were empowered only to grant relief to individual named plaintiffs who sued for admission to specific white schools. If such a rule of law had prevailed, segregation would still be the way of life in southern school systems. That dual systems have been considerably alleviated is due to the practical approach mandated by *Green* v. *County School Board*, 391 U.S. 430 (1968). Only a similar practical approach

can have any appreciable impact on segregation accomplished by surreptitious and underhanded practices.

B. Unlawful Segregation in Denver Is Even More Extensive Than the Courts Below Recognized.

The decisions of the courts below actually understate the extent of the unlawful racial segregation shown on this record to have been accomplished by decisions of the Denver school authorities. The courts below erred by giving the wrong legal significance to discriminatory acts of the board which occurred prior to the *Brown* decision, and also by excusing some discriminatory actions on the ground that plaintiffs failed to show that the past discriminatory conduct was the cause of present segregated patterns.

Plaintiffs' position is not based on a challenge to the particulars of the district court's fact finding. Rather, we challenge a few of the mixed factual and legal conclusions (or middle level facts) which are determinative of the constitutional issue. We invoke the principle that this Court makes its own independent examination of a record to insure that federal rights are not lost because of distorted fact-finding, or fact-finding influenced or induced by erroneous principles of law. *Haynes* v. *Washington*, 373 U.S. 503, 515-517 (1963); *Spano* v. *New York*, 360 U.S. 315, 316 (1959); *Stein* v. *New York*, 346 U.S. 156, 181 (1953).[11] We submit that such legal errors plainly affected the decision that certain segregation in Denver was lawful.

---

[11] See *Oyama* v. *California*, 332 U.S. 633, 636 (1948):

> "In approaching cases, such as this one, in which federal constitutional rights are asserted, it is incumbent on us to inquire not merely whether those rights have been denied in express terms, but also whether they have been denied in substance and effect. We must review independently both the legal issues and those factual matters with which they are commingled."

Manual Training High School is the capstone of Denver's segregated pattern. The evidence that New Manual was earmarked for black students when it was opened in 1953 is overwhelming. It comes from the mouths and documents of the school officials. See, *e.g.*, PX-356; excerpts at A. 2086a. See Statement, *supra*, pp. 22-24. Former Superintendent Oberholtzer's testimony about the planning for New Manual makes the point:

> Q. Was there any doubt in your mind that, when new Manual opened, Doctor, it would be predominantly minority in its composition? A. It appeared to be so at that time, yes.
>
> • • • •
>
> Q. Now, did you consider what might happen to the racial composition of new Manual in the event you had built it larger, for example, during the planning stages for new [2030] Manual? A. Racial factors and ethnic factors were not a part of our consideration in the construction or location of schools.
>
> Q. And I take it your answer is the same with regard to a possible change in the boundary between what has been that for old Manual and that for new Manual? A. I would give you the same answer.
>
> Q. Well, you're not telling me, are you, Doctor, that you were in fact, when you built Manual, building a separate but equal school, are you? A. I don't know the import of this question.
>
> The Court: What he's asking you is, just so I think you will be aware, is whether this was built to be a Negro school and planned as such, although you were determined, undoubtedly, to give it equal facilities. That's the essence of what he's asking you.
>
> Mr. Greiner: That's correct.

A. We were again building a school to house the children of that particular area, and there was, as you have said, a high percentage of Negro pupils in that area, yes.

Q. Well, for example, the whole curriculum at Manual was tailored, was it not, for these minority students? A. It was tailored to the students who were attending [2031] that school, yes.

Q. And those were minority students. You don't deny that, do you? A. No, I'm not denying it. (A. 1406a-1407a).

See also similar testimony at A. 1404a-1405a.

The evidence about the subsequent boundary changes at Manual, about the optional zones, about the capacity utilization of Manual and East and about the curriculum at Manual "tailored for minority students" is all set out in great detail in other parts of this Brief and will not be repeated here. See pp. 22-24, 29-30, 31, 33-35 *supra*. Manual has at all relevant times been *the* black high school in Denver.[46]

The district court's ruling on plaintiffs' contentions about Manual was that (1) it was opened prior to the *Brown* decision, the location had the consent of the people in the neighborhood and at that time there was "much less concern about minority concentration" (313 F. Supp.

---

[46] In 1946-47, Old Manual had 86% of the City's black high school students and in 1968-69 it enrolled 49% of the black high school students. In 1947-48 the black students were 2.9% of the high school population in the District and the black students at Manual were 23% of the total. In 1968-69, black students were 12% of the high school population and the black students at Manual were 76% of the total. See PX 336, A. 2084a and PX 302, A. 2078a. In 1949, Manual became the first Denver high school to have a Negro teacher. PX 410, A. 2106a. In 1968-69, Manual had 25 of the 44 Negro high school teachers. PX 275, A. 2075a.

at 69-70); and (2) the 1956 boundary changes at Manual cut off the option of some blacks at Manual to attend East and was resisted by the black community which proposed changes that would integrate Manual, but this integration "would have been temporary only because in a few years this neighborhood became Negro" 313 F. Supp. at 70. The court made no finding that the decisions about locating Manual or changing its boundaries were rational, neutral or legitimate. It merely said plaintiffs did not show the "acts were clearly racially motivated" and that much of the black population concentration in the area occurred in later years between 1963 and 1968.

The district court restated the first point listed above elsewhere in the opinion:

> It should also be kept in mind that prior to Brown v. Board of Education, *supra*, it was apparently taken for granted by everybody that the status quo, as far as the Negroes were concerned, should not be disturbed because this was the desire of the majority of the community. Time and again the Board members testified to the fact that in making decisions they held hearings and finally bowed to the community sentiment. Thus, they say they did not intend to segregate or refuse to integrate. They just found the consensus and followed it. 313 F. Supp. at 73.

We believe that this repeated reference by the court to the acceptance of racial decisions and racial concentration of Negroes in schools prior to *Brown* represented a confused and incorrect approach to the problem presented.[87] The district court should have sought to determine whether the board intentionally made racial decisions and discriminated.

---

[87] This aspect of the decision below is discussed in Comment, 48 Denver L. J. 417 (1972).

Instead, the court seems satisfied that the board did not intentionally violate the "law of the land" prior to *Brown* when "there was much less concern about minority concentration." 313 F. Supp. at 70. This kind of approach would not even have desegregated a southern dual system.

The district court's finding of no racial motivation with regard to the establishment of Manual is explicable only in terms of this kind of legal error. The trial court reached precisely the opposite conclusion on substantially similar—perhaps weaker—facts with respect to the 1959 establishment of Barrett. The establishment of Barrett was seen by the trial court as plainly unlawful because it occurred after the *Brown* decision. See 303 F. Supp. at 284-285. The establishment of Barrett may have been more blameworthy than the establishment of Manual because one occurred before and the other after *Brown*. But both cases involved the establishment of a school designed to fit a racial population group and planned to be segregated. Both are in "the classic pattern of building schools specifically intended for Negro or white students." *Swann* v. *Board of Education*, 402 U.S. 1, 21 (1971). Both are equally unlawful under *Brown*.

The district court's other point about Manual boundary decisions not causing segregation reflects another error of law. It seems clear that there was no rational neutral justification for the 1956 Manual-East boundary changes and the district court found none. (The same boundary changes applied to Cole and Smiley Junior High Schools and the board's explanation in that case that it was related to the new Hill Junior High School was found by the district court to be false. 313 F. Supp. at 71, n. 14.) The district court found that the Manual boundaries followed the black population and that alternatives proposed by the

black community but rejected by the board would have alleviated crowding at East while desegregating Manual. 313 F. Supp. at 70. However, the court found that assigning a white neighborhood to the Manual zone would have had an integrating effect at Manual but it "would have been temporary only because in a few years this neighborhood became Negro." 313 F. Supp. at 70.

The court's reasoning ignores the effect of such boundary decisions and decisions to designate a school as black on neighborhood residential patterns. Schools decisions change neighborhoods. This Court pointed out in *Swann* v. *Board of Education*, 402 U.S. 1, 21 (1972), the interrelationship between school establishment decisions and neighborhood patterns, and that a segregation policy "may well promote segregated residential patterns which, when combined with 'neighborhood zoning', further lock the school system into the mold of separation of the races."

The United States Commission on Civil Rights has observed the same relationship. PX-27, Racial Isolation in the Public Schools, A Report of the U. S. Commission on Civil Rights, 1967. Plaintiffs' expert Dr. Dodson testified about the phenomenon of school policies being a major cause of housing segregation:

> . . . I would also say that policies of schools become a factor, too. I was in a case in Little Rock, Arkansas, in the federal court on desegregation and here the board's policy of ringing off their school and the next one to it as the neighborhood expanded as being black schools and so on, meant that the housing arrangement —the schools' policies created segregated patterns within the city itself and was the major contribution to the segregation within the residential pattern of living. A. 1505a

See also A. 1490a-1491a. The experience of various black Denver residents who testified at the trial confirmed aspects of the interrelationship between school segregation and housing segregation.[28] A policy of establishing segregated schools in neighborhoods where blacks move in, does more than encourage whites to move out—the familiar white flight pattern. Such segregation also demonstrates to blacks that wherever they move they will be segregated and tends to further impact segregation in established black residential areas.

This relationship is also the answer to the district court's reliance on the fact that the Negro population at Manual and Cole increased over 20 percent between 1963 and 1968 —long after the boundary changes and during a period when the board was engaged only in inaction with respect to those schools. Cole and Manual were firmly established and identified as the secondary schools in Denver for Negroes as early as 1947 when blacks were still in the minority (PX 336, A. 2084a). The decisions in 1956 insured that they would become *predominantly* Negro as well as have a *concentration* of Negroes. It can be no defense for the board's discriminatory action in 1956 that this process did not culminate in a majority Negro school for a number of years. It is enough that the likely effect of

---

[28] See testimony of Mrs. Palicia Lewis, A. 691a-697a; testimony of Senator George Brown, A. 871a-876a; testimony of Mrs. Rachel Noel, A. 85a-88a. As we have described above in the text at p. 77 Mrs. Lewis found that moving out of the core city to an integrated area provided only temporary integration, since the board offered a choice of accepting mobile units at the integrated schools—which tended to segregate it—or accepting busing back to the core city. Senator Brown found that his move to a white area, followed by other blacks, was accompanied by a board decision removing the option of his children to attend a white school and including them in the mandatory area of Manual and Cole. Mrs. Rachel Noel found that living in the area where her child was bused to Anglo schools in Park Hill provided only temporary integration as Barrett School was constructed with the result her child was resegregated.

the board's discrimination would be to set such a process in motion and that there is no showing *by the board* that current segregation is not the product of its past discrimination. *Cf. Swann* v. *Board of Education*, 402 U.S. 1, 26 (1971).

Finally, of course, the position that a nonracial integrative step of adding Northeast Denver areas, which were then Anglo, to Manual in 1956 would have been futile, ignores the district court's other findings about what did occur in Park Hill. The very school areas which might have been added to Manual to integrate it are the same Northeast Denver areas—the corridor of black population movement to the east, served by such schools as Barrett, Stedman and Hallett. These are the very areas where other discriminatory action by the board occurred. We can only speculate about what pattern the black population movement in Northeast Denver would have taken if there had been no policy of racial containment and separation in the school system. But surely any uncertainty in this regard must be resolved against the discriminators. It is the board's burden to prove that its discriminatory action did not have the intended effect and cause the existing segregated situation. The district court's decision misplaced the burden of proof on the issue of the cause of segregation. It should have followed a rule similar to that in *Swann* v. *Board of Education*, 402 U.S. 1, 26 (1971), which places the burden on school boards dismantling dual systems to show that any schools that are substantially disproportionate in their racial composition are not the result of present or past discriminatory action on their part. A similar burden ought to be placed on a school board shown to have engaged in some covert segregating with respect to each and every act of discrimination.

Another pervasive error by the court of appeals is the fact that the court gives no weight to the fact that the

Denver system engaged in a policy of assigning minority teachers only to minority schools for many years, and continued up to the time of the lawsuit to concentrate minority teachers in schools with minority pupils. Faculty segregation is an obvious means by which the white and black schools were identified as such. Courts have used the fact of a pattern of racial discrimination in teacher assignment as a telling point in showing an identification of some schools as black schools. *Swann* v. *Board of Education*, 402 U.S. 1, 18 (1971); see, e.g., *Spangler* v. *Pasadena Board of Education*, 311 F. Supp. 501, 513-517 (C.D. Cal. 1970); *Davis* v. *School District of Pontiac*, 309 F. Supp. 734, 743-744 (E.D. Mich. 1970), *affirmed*, 433 F.2d 573 (6th Cir. 1971), *cert. denied*, 404 U.S. 913 (1971); *United States* v. *School District 151*, 301 F. Supp. 201, 228 (N.D. Ill. 1969), *aff'd*, 432 F.2d 1147 (7th Cir. 1970), *cert. denied*, 402 U.S. 943 (1971). The Tenth Circuit's excusing of faculty assignments by race, because it was based on "the prevailing educational theory of the day that Negro pupils related more thoroughly with Negro teachers,"[49] simply does not alter the fact that the practice served to racially identify the schools. The appeals court reasoning also ignores the trial court's finding that the faculty assignment policy was based on resistance of whites to minority teachers in white schools. 303 F. Supp. at 284-285.

C. Petitioners Proved a Prima Facie Case of Unlawful Racial Segregation, But the Courts Below Incorrectly Defined the Burden of Proving Constitutionally Actionable School Segregation.

As this Court recognized in *Swann* v. *Board of Education*, 402 U.S. 1, it is school officials who by their decisions about a variety of matters control the racial composition of the schools:

---

[49] 445 F.2d at 1007.

> The construction of new schools and closing of old ones is one of the most important functions of local school authorities and one of the most complex. They must decide questions of location and capacity in light of population growth, finances, land values, site availability, through an almost endless list of factors to be considered. *The result of this will be a decision which, when combined with one technique or another of student assignment, will determine the racial composition of the student body in each school in the system.* Over the long run, the consequences of the choices will be far reaching. People gravitate toward school facilities, just as schools are located in response to the needs of people. The location of schools may thus influence the patterns of residential development of a metropolitan area and have important impact on composition of inner-city neighborhoods. 402 U.S. at 20-21; emphasis added.

The record in the Denver case illustrates the general proposition recognized in *Swann* that the multiplicity of decisions made in planning and operating school systems have racial effects—and that those racial effects are generally predictable. The Denver record shows also that the board has achieved one uniform result by its actions; they have minimized integration and maximized the separation of black pupils from white pupils. We urge that this proved a prima facie case of unconstitutional segregation. It is entirely unworldly to suppose that a board which has been caught making a number of decisions which are explicable only as subterfuge for racial segregation (See Part I-A, *supra*) made all of its other decisions in a color-blind fashion. The fact is that the district court did not find more instances of discrimination simply because whenever there was more than one possible explanation for a decision, the

district court gave the board credit for the nonracial ones. But obviously the board was consistently discriminating; the difference from decision to decision is only that, as to some, they could get away with discriminating by reason of the availability of possible nonracial explanations. As complex as school system management is, a school board can almost always find a post-facto justification for its decisions on some rational basis. It is amazing that petitioners were able to establish a few cases of discrimination so blatant, and school management so distorted by racial considerations that the board could not present any convincing rational explanation. Plaintiffs will seldom, perhaps never, be able to make such a showing for every school in a system with a covert segregation policy.

We submit that at least in a case where the court has found some racially discriminatory factors and practices in a system, and there is a general pattern of racial separation consistent with discrimination, the burden must shift to the school authorities to explain the segregation not merely by the availability of some rational explanation, but by a compelling state interest, which could not be served by less segregatory practices.[39]

In many other types of race discrimination cases—such as, for example, jury discrimination cases—it is accepted doctrine that a certain type of showing of discriminatory results is sufficient to shift the burden to a defendant to establish some compelling state interest sufficiently substantial to negate the presumption of discrimination. Whatever may be the precise type of showing of such proof needed in a school case where there is no proof of intent, certainly in a case like Denver where the fact of segregatory

[39] See Dimond, *School Segregation in the North: There is but One Constitution*, 7 Harvard Civil Rights-Civil Liberties Law Review 1 (1972).

intent has been found, then the burden of proof ought to shift to the defendants to explain conduct having a discriminatory result consistent with the pattern of intentional discrimination already found.

The court of appeals' response to plaintiffs' argument was that it would be incongruous to require the school board to prove the non-existence of an illicit intent and that in southern school disestablishment cases there was merely a burden to show conversion to a unitary system. 445 F.2d at 1005. The court said that such an "onerous burden does not fall on school boards who have not been proved to have acted with segregatory intent." *Ibid.* In the first place, this ignores that Denver *was found to have had segregatory intent.* In the second place, it fails to focus on the burden which plaintiffs' prima facie case would place on the board which would be the burden of showing a compelling state interest justifying the segregatory result rather than a burden of proving some secret state of mind.

The board might attempt to satisfy the burden of rebutting a prima facie case by various showings including reference to its neighborhood school policy. But the neighborhood school policy is certainly not an automatic justification for segregation, considering the impact of school segregation on neighborhood segregation and other factors. *Swann* v. *Board of Education*, 402 U.S. 1 (1971).

School board decisions constantly define the neighborhood served by any school. The range of opportunities for control by various mechanisms has been demonstrated on this record and described in the Statement, *supra* at pp. 18, *et seq.* With such a broad range of controls and the readily availability of *post facto* explanations for segregation, a rule which focuses the test of constitutionally actionable

segregation on proving that conduct is a sham to hide illicit motives, will not go far to remedy the evil of covert school segregation. Such an approach fails to recognize that "patterns of racial discrimination are entrenched throughout this country," that "all school segregation is largely traceable to such racial discrimination," and that "dominant white majorities everywhere are hostile to association with blacks, especially in schools and residential neighborhoods." Dimond, *School Segregation in the North: There Is But One Constitution*, 7 Harvard Civil Rights-Civil Liberties Law Review 1, 4-5 (1972). The record in this case discloses that no compelling state interest was present to justify the pervasive pattern of segregation in Denver. There certainly was no showing of any justification for the complained of acts at Manual High School and Cole Junior High—the pivotal black schools in the core city area—and the district court found none. A conclusion that segregation was also actionable at Manual and Cole[91] ought inevitably to lead to system-wide relief because these important schools have a history of a feeder relationship with the all-black elementary schools in the core city area. Beyond these particulars the proof of a prima facie case of covert discrimination should place on the school board the same burden *Swann* places on a board which asserts it has dismantled a dual system. The board should bear the burden of justifying racially disproportionate schools. Denver school officials have the means

[91] It is of course true that segregation at Cole was found actionable by the district court because of the recission of the 1969 resolutions. The court of appeals affirms relief aimed at desegregating Cole even though it is not clear what its theory is since its opinion states the court does not reach the issue of whether the recission was unconstitutional. 445 F.2d 999, 1002. This points up the inconsistent results which are inevitable under a piecemeal approach to a system-wide problem. Also, finding segregation actionable at Cole and lawful at Manual produces an incongruous and anomalous result which ignores the historic relationship of these two schools.

readily available to desegregate every school in the system. This can be accomplished by the same type of control of the racial composition of schools which has brought about the present segregated system. The board made no showing to justify maintaining the segregated system created in Denver by racially discriminatory actions of public officials.

II.

Denver's Systematic Disparate and Discriminatory Educational Treatment of Minorities Violates Equal Protection and Entitles Petitioners to System-Wide Relief.

The record in this case discloses a continuous disregard of the known result of respondents' education policy and practices—the unequal provision of educational opportunity to Denver's minority children.

In Part II-A-1 of this Brief we submit that the evidence and the findings of the respondents' system-wide and continuously disparate treatment of minorities in the effectuation of educational policies and practices, resulting in what amounts to a segregated and unequal educational caste system for Negroes and Hispanos violates the Equal Protection Clause.

In Part II-A-2 of this Brief we assert that the trial court's conclusion of equal protection violation was clearly correct under the law. In reversing, we respectfully urge that the Tenth Circuit misconstrued the basis of the trial court's conclusions, and more importantly, erred in its perceptions of the standards of equal protection appropriate to this case. The result of these errors, we maintain, is to wrongly deny the equal protection of the laws to Denver's black and Hispano school children by condoning, in the name of "neighborhood schools" the continuous, unequal provision of public education to them.

In Part II-B of this Brief, we support the trial court's remedial aproach to these educational disparities as being well within the bounds of proper judicial discretion and equitably appropriate to eliminate the violation prospectively while attempting to cure the injury already inflicted.

In Part II-C of this Brief we contend that while the trial court's remedy was proper, it was improperly withheld from certain other predominantly minority schools equally afflicted with inequality, and urge that relief be extended to these schools.

A. Denver's Disparate, Unequal Treatment of Minorities in the Provision of Public Education Violates Equal Protection.

1. *The Evidence and Findings Below Demonstrate That in Denver Minority Children Were Consciously Treated Differently and Discriminatorily by Respondents' Policies and Practices When Compared to Anglo Children.*

The record is replete with a panoply of actions and decisions of the District wherein racial considerations resulted in the disparate educational treatment of minority children. To summarize:

The following educationally-relevant matters were wholly within the control of respondents:

(1) The initial assignment of minority teachers.—The minority schools always ended up with concentrations of minority teachers; in the face of announced contrary policy from 1964 on concentration in some minority schools actually increased.[11] Thus the assignment of Negro teachers to Anglo schools was treated differently than their assignment to Negro schools or the assignment of Anglo teachers to any

[11] See pp. 11-12; 19-20, *supra*.

school. The accelerated dispersal of minority teachers to Anglo schools coincided with the bringing of this lawsuit.[93]

(2) The initial assignment of teachers.—The administration was aware of the level of teacher inexperience in the minority schools; it purported to hire only teachers ready and willing to serve in the core city schools; of the teachers new to the Denver system, they asserted that a high proportion came with experience from other systems.[94] But respondents failed to show, although they had recourse to records which could have demonstrated, if true, that these teachers with prior experience were assigned to the minority schools.

(3) The transfer of teachers between schools.—While the administration had the power to initiate, approve or disapprove requests for transfer on the grounds that they were not in the best interests of the District, they never exercised this power to improve the quality of faculty in the minority schools.[96]

(4) Teacher turnover.—In 1966 the District abandoned the only policy then in existence which helped alleviate turnover in the minority schools—the policy that new teachers were expected to serve their 3-year probationary period in the school to which they were initially assigned.[96] The administration also abstained from any effort directed toward encouraging teachers to stay in the minority schools.[97] It was content to let nature take its course.

[96] PX 26; DX-E; Johnson, A. 320a-21a.
[97] Johnson, A. 320a-21a.

(5) Achievement expectancies.—The administration established low expectancies for the minority children at these schools and then both concealed and praised the expected poor results of this prophecy, while it established high expectancies for Anglo schools.[98]

(6) Performance and course content standards.—The administration at least condoned if not encouraged lower standards of performance and course content in the minority schools.[99]

(7) Career expectancy.—The administration acted upon and enforced an expectancy that minority children would not be going on to higher education, thus directing them into semi-skilled vocational education and out of college preparatory courses.[100]

(8) Location of schools, boundary changes.—While in selecting the site of schools exclusively for Anglos, the administration and the board were guided only by educational considerations, where race was a factor educational considerations were subordinated to political pressures and majority will. Similarly, boundary changes were influenced by racial and political considerations rather than the consistent application of such neutral criteria as building capacity, distance, availability of transportation, growth projections, etc. When faced with choices between integration and segregation, the board, knowing in advance what the result would be, "searched" for the consensus and then followed

it.[101] That public hearings were not intended to develop operative facts is demonstrated by Mr. Traylor's testimony about the board's intransigence about the facts of the administration's Manual and Cole boundary change proposals in 1956.[102]

(9) Transportation of students and deployment of mobile units.—When Anglos were brought into the District by annexation, the District did not take the nearest existing school and add mobile units to it to accommodate these children, but rather, transported them clear across town to other Anglo schools with available space, often directly past minority schools with available space. However, where minority enrollment increased within the attendance area of an existing minority school, these minority children were not accommodated by being transported to these Anglo schools where space was available, but rather, were consistently confined in mobile units at the nearest existing minority school.[103] When new Anglo schools were opened creating spaces in the former Anglo receiving schools, minority students were kept in these mobile units rather than being transported to the Anglo receiving schools—all of these events occurred after February, 1966[104] when the board officially endorsed transportation to relieve overcrowding.[105]

(10) Transporting students.—When Anglos were transported to receiving schools, either to relieve over-

crowding or to furnish new students with a school, each receiving school was filled to rated capacity or more before the next was utilized. In the few instances when minority students were transported they were brought into each Anglo receiving school in very small numbers, completely unrelated and disproportionate to the number of openings at the Anglo school.[106]

(11) The "Neighborhood School Policy."—Before the minorities began their expansion out of the core city there were so many attendance options available to students through optional zones and permissive transfer policies as to cast doubt as to whether there was a policy of "neighborhood schools." Optional zones were not considered by the administration as controlling devices for capacity utilization, but rather, as a politic acquiescence in parental choice.[107] Yet these zones persisted, particularly in transition areas such as between Cole and Smiley, Manual and East, until finally publicly denounced by the Voorhees Report. But they were immediately replaced in 1964 by LOE which accommodated white flight just as expeditiously.[108] When VOE was finally implemented in January, 1969, LOE was not cancelled; students enrolled in the LOE program were allowed to continue, and some are still continuing today.[109]

[108] See pp. 32-33, *supra.*

[109] Thus a hypothetical Anglo child living in the Smith Elementary district in 1968 could have transferred to all-white Fallis and gone into and remained in that predominately Anglo system of feeder schools, Fallis, Place Junior High and George Washington High.

(12) School capacity.—The administration applied different capacity criteria, depending upon whether the school was predominately Anglo or predominately minority. Under this policy, Anglo schools were not considered overcapacity until their enrollments exceeded 120% of rated capacity, whereas minority schools were considered fully utilized when at less than 80% capacity.[110] It was this double standard which the administration used to justify busing Anglos past minority schools which were under their rated capacity.[111] The double standard also was employed in the administration's rejection of using available space in minority schools to relieve adjacent overcrowded Anglo schools.[112] The capstone of its employment was the building of Anglo schools in new areas while ignoring space in existing minority schools, thus further entrenching segregation in both schools and neighborhoods.[113]

(13) "Long range" and "short range" planning.—The administration inconsistently applied planning criteria when race was a consideration. The respondents' defense of their decisions regarding the 1956 boundary changes at Cole and Manual are entirely inconsistent with the criteria they employed to justify the size and attendance boundaries of Barrett.

Mrs. Lois Johnson[114] stated that in 1955 adminis-

[113] PX 273, 346, 347; Bardwell, A. 757a-65a.

[114] It may be recalled that Mrs. Johnson served on the board from 1951 through 1963; in 1962 and 1963 she was the President of the Board. A. 896a.

tration projections were that Manual and Cole, both then substantially under capacity, would not reach their capacity until 1960. In contrast, the projections showed that both East and Smiley, then already at capacity, would be at nearly 170% of capacity by 1960. According to Mrs. Johnson the District was strapped for funds and "[W]e were in a very difficult situation to have enough classrooms for all the incoming children." A. 900a. Nevertheless, in refusing to move the Cole and Manual boundaries to accommodate the expected overcrowding at Smiley and East the board consciously refused to utilize the space available at Cole and Manual, *rejecting* the alternative as being too short term.

Yet, when Barrett was being considered the population was also growing just east, across Colorado Boulevard. Rather than reflect the long-term projections by making Barrett large enough to accommodate the increase, the board here *embraced* a short-term solution,[115] consciously building for only the immediate needs of the small Barrett "neighborhood," and refusing to accommodate Anglos overcrowded in adjacent Stedman.

In these two instances, both occurring in a span of but two years, the board was willing to use totally inconsistent criteria. Only the *result* is consistent: the avoidance of sending Anglo children to Negro schools. As Mrs. Johnson put it: "We were not building with integration as our idea, of course." A. 937a.

(14) Adherence to "Neighborhood Schools."—The respondents maintain that throughout the twenty-two year period preceding this suit, they were simply

[115] Mrs. Johnson, A. 912a.

administering a neutral "color blind" policy of neighborhood schools. We will ignore arguendo the doubt which the combination of the thirteen factors discussed above must cast on that contention.

Taking the assertion at face value, the school administration, with the political complicity of the board, has continued to insist upon neighborhood schools imposed upon segregated housing patterns, even though it was consciously aware of

—the racial results in the schools created by the policy;[116]

—the inferiority of these schools, whether measured by inputs or results;[117]

—the increase in the number of inferior schools and in the number of minority children exposed to and confined in them;[118]

—the failure of segregated compensatory programs to improve the schools.[119]

While acknowledging that historically public education in Denver and throughout the United States has taken (white) children from low socioeconomic areas, whose parents were disadvantaged and managed to provide them with an education, the respondents point to these same factors as imposing a nearly absolute barrier to the education of Negroes and Hispanos. It is clear that the school administration's perceptions of and attitudes toward Negroes and Hispanos is different than toward Anglos. This point was made perfectly in the following exchange between Mr. Ris and Dr. Dodson during cross-examination:

[119] See pp. 61-62, *supra*.

Q. Now, with regard to the handicap, a child coming from a family in a neighborhood and a lower socioeconomic status, you wouldn't deny that those children are handicapped as compared to me, would you, before they ever get into [2221] school? A. I would deny that the experience that they have brought with them, the experience through which they have come by the time they are of school age, has so impaired their sensory mechanisms that they do not have the capacity to acquire and organize, experience in ways comparable to what you or I might have done at a comparable stage of our lives. I would be planting corn in East Texas today if teachers had seen the low socioeconomic status kid and the limitations of him and his inability to learn because he didn't have all these things and had believed them.

Q. You aren't alone in the courtroom in that regard. . . . A. 1498a.

The district's control and implementation of the policies enumerated above always achieved some result which discriminated against Denver's minority students; the major results were that these children were assigned to and then confined in racially identifiable, isolated, inferior schools; educationally relevant matters such as teacher assignments, location of new schools and boundary changes were saddled with educationally irrelevant considerations such as the will of the majority community and its racial prejudices; the perception of the minority student as somehow different, and the establishment of lower standards and expectations for him created an educational caste system.

Even standing alone this discriminatory, conscious difference in respondent's policies, practices, attitudes and perceptions relating to the education of minority children

for over twenty years constitutes a clear denial of equal protection based upon race and ethnicity, for it is exactly the type of invidious, disadvantaging discrimination at which the Fourteenth Amendment was directed. This distinctive and disparate racial treatment would violate equal protection even if the minorities were somehow able to overcome these obstacles and obtain educational results equal to Anglos: the creation of obstacles in and of itself denies equal protection.

But where as here the evidence and the trial court's findings demonstrate that these obstacles in fact adversely affect the quality of education of minority children as measured by the educational result—low achievement and high dropout rates—the denial of equal protection is manifest.

Not only did the racially-disparate treatment of the matters enumerated above create obstacles for minority students which were not imposed upon Anglos seeking effective education, but these obstacles actually resulted in the denial of an equal educational opportunity by the creation and perpetuation of inferior schools for Negroes and Hispanos.

At the trial the inferiority of these schools was established by every conceivable means, some of which have already been alluded to above: traditional tangible educational inputs such as teacher experience and stability of teaching staff; administration-established expectancies as to the level of achievement and administration acceptance and condonation of the resulting low achievement; the age of school facilities.[130]

---

[130] Evidence of the inequality of a less traditional input, a socio-economically heterogeneous peer group in the school, was also considered and found to be inferior in these schools.

The inferiority extended to such intangible factors as the attitudes of the entire community, as well as of the minority community and the teachers and students in the schools, attitudes created by the segregated, racially identifiable character of the schools. The school's racial isolation also created feelings of low self esteem, political impotence, isolation and inferiority, both in the minority children and their parents.

Finally, the inferiority was reflected in the ultimate educational product of the Denver Public Schools, the minorities' drastically low level of academic achievement and cruelly high level of dropouts.

The expert testimony concluded that the above factors demonstrated that these schools were affording an unequal educational opportunity to minority children, and that the primary reason for the inequality was the segregated, racially-isolated and racially identifiable condition of the school.[121] It was the segregated condition of the school which made it a place of "less choice" for parents, students and teachers, and "a symbol" of inferiority and impotency for the minority community. It was looked upon by the whole community as being inferior, and "this makes it indeed so." [122]

Thus, petitioners' evidence of *violation* of the Equal Protection Clause was directed toward the factual establishment of three matters:

(1) The fact that an inequality existed between the educational opportunities[123] offered to Denver's mi-

---

[121] See pp. 33-37, *supra*.

[122] Dodson, A. 1478a.

[123] Petitioners have never claimed nor did the district court's decision in any way rest upon some notion that educational opportunity was solely related to, or demonstrated by, an equivalent performance by every student. Obviously students will have, on an

nority students when contrasted with that offered to majority students;

(2) The fact that the respondents' actions were the responsible cause of the inequality;

(3) The fact that less discriminatory means were reasonably available to respondents in their provision of educational opportunity, a matter not really contested by respondents, whose position was that since their current system was *not* discriminatory, they should not be required to change it.

The trial court's findings of fact sustained the petitioners' contentions on both of these contested issues.[114]

---

individual basis, different aptitudes and will perform, ideally, to the full extent of their varying capabilities. What is significant about the tangible measure of output here, such as achievement test scores, is two things. *First*, they establish a consistent and systematic differential between white schools and minority schools of such magnitude as to vitiate any suggestions that the observed pattern is merely the result of the interplay of different individual capacities. *Cf. Stell* v. *Savannah-Chatham Board of Education*, 318 F.2d 425 (5th Cir. 1963), 333 F.2d 55 (5th Cir. 1964). *Second*, they confirm the testimony of petitioners' expert witnesses that such segregated schools characteristically produce educationally undesirable effects upon the children and the teachers and can be expected to adversely affect the educational opportunity afforded the students.

[114] As to the fact of inequality:

OBJECTIVE FACTORS:

"Extensive and detailed evidence has been presented establishing the inferiority of plaintiffs' target schools." 313 F. Supp. at 77.

"The above material summarizes plaintiffs' evidence and our findings as to the objective indicia of inequality at the schools for which they seek relief." 313 F. Supp. at 81.

SUBJECTIVE FACTORS:

". . . [B]y the time a school becomes segregated it is looked upon by the whole community as being inferior.

"At this point the Negro community does not consider the segregated school as a legitimate institution for social and economic advancement. Since the students do not feel that the

2. *The Trial Court's Determination of Violation Resulted From the Proper Application of Equal Protection Principles.*

In its determination of violation the trial court applied traditional equal protection analysis. It recognized, as did *Brown*,[135] that education is a fundamental interest, the deprivation or impingement of which must be closely scrutinized. Further the trial court reasoned that where

---

school is an effective aid in achieving their goal—acceptance and integration into the mainstream of American life—they are not motivated to learn. Furthermore, since the parents of these Negro students have similar feelings with respect to the segregated school, they do not attempt to motivate their children to learn. Teachers assigned to these schools are generally dissatisfied and try to escape as soon as possible. Furthermore, teachers expect low achievement from students at segregated schools, and thus do little to stimulate higher performance." 313 F. Supp. at 81.

Finally:

"The evidence in the case at bar establishes, and we do find and conclude, that an equal educational opportunity is not being provided at the subject segregated schools within the district. . . . The evidence establishes this beyond doubt." 313 F. Supp. at 83.

As to the cause of the inequality:

". . . [W]e cannot ignore the overwhelming evidence to the effect that isolation or segregation per se is a substantial factor in producing unequal educational opportunity." 313 F. Supp. at 81.

As to the respondents' responsibility:

"Many factors contribute to the inferior status of these schools, but the predominate one appears to be the enforced isolation imposed in the name of neighborhood schools and housing patterns." 313 F. Supp. at 83.

[135] "We must consider public education in the light of its full development and its present place in American life throughout the nation. Only in this way can it be determined if segregation in public schools deprives these plaintiffs of the equal protection of the laws."

"In these days it is doubtful that any child may reasonably be expected to succeed in life if he is denied the opportunity of an education." 347 U.S. 492, 493.

the impact of the deprivation fell upon the poor, and ethnic and racial minorities, a suspect classification was involved which also had traditionally triggered close judicial review and required strong justification by the State for its actions.[126]

The only justifications put forth by the respondents was their good faith (which the trial court held irrelevant in the face of the proven discriminatory result),[127] the convenience and tradition[128] of the neighborhood school policy and the majority community's preference for the continuation of that policy.[129]

The trial court apparently found in these proffered justifications no compelling state interest sufficient to excuse or justify the discriminatory result, and concluded that the petitioners were being denied equal protection of the laws in violation of the Fourteenth Amendment. 313 F. Supp. at 83.

We submit that the trial court was correct in concluding that this systematic deprivation of the minority's right to equality of educational opportunity violated the Equal Protection Clause.

---

[126] Citing *Griffin* v. *Illinois*, 351 U.S. 12 (1956); *Douglas* v. *California*, 372 U.S. 353 (1963); *Hobson* v. *Hansen*, 269 F. Supp. 401, 497 (D. D.C. 1967).

[127] 313 F. Supp. at 82, n. 25.

[128] In view of the numerous optional attendance zones surrounding Denver's schools until 1964, and the absence of requirements for student transfers which existed for many years (Biddick, A. 697a-99a), one could question whether there was a tradition of "neighborhood schools."

[129] A preference which persisted despite the findings of the two study committees that its continuation might result in the inequality of educational opportunity for the District's minority children. PX 20, A. 1999a-2004a; PX 21, p. 36.

The whole basis of the Fourteenth Amendment historically was to prevent the systematic disadvantaging of minorities. Thus the first Fourteenth Amendment cases to reach this Court held all racial classifications unconstitutional: *Slaughterhouse Cases*, 83 U.S. (16 Wall.) 36 (1873); *Strauder* v. *West Virginia*, 100 U.S. 303 (1880).[139]

While the separate-but-equal doctrine diluted the main thrust of equal protection, it was premised upon failure to find inequality in the fact of separateness.

Subsequent decisions here relating to separate-but-equal education began an independent analysis to determine if there was inequality. *Sweatt* v. *Painter*, 339 U.S. 629 (1950); *McLaurin* v. *Oklahoma State Regents*, 339 U.S. 637 (1950).

This inquiry culminated in *Brown*, which found that racial classifications in public education inherently produced unequal educational opportunity.

---

[139] *Strauder* v. *West Virginia*, considered a Negro's plea of denial of equal protection. Strauder had been convicted of murder by a state court jury in West Virginia. West Virginia law disqualified Negroes from service on either grand or petit juries. This Court declared that the Fourteenth Amendment should be "construed liberally to carry out the purpose of its framers." 100 U.S. at 307. The court continued:

> "What is this but declaring that the law in the States shall be the same for the black as for the white; that all persons, whether colored or white shall stand equal before the laws of the States, and, in regard to the colored race, for whose protection the Amendment was primarily designed, that no discrimination shall be made against them by law because of their color? The words of the Amendment, it is true, are prohibitory, but they contain a necessary implication of a positive immunity, or right, most valuable to the colored race—the right to exemption from unfriendly legislation against them distinctively as colored; exemption from legal discriminations, implying inferiority in civil society, lessening the security of their enjoyment of the rights which others enjoy, and discriminations which are steps towards reducing them to the condition of a subject race." 100 U.S. at 307-08.

More recently, the Court has sharpened its perception of illegal discrimination under the Equal Protection Clause in ways clearly applicable to the facts of this case.

It can be argued that the neighborhood school policy is neutral and nondiscriminatory because it is applicable to Anglos and minorities alike. But this line of contention has been rejected in various contexts where racial classifications were defended as non-discriminatory because they applied to both blacks and whites. *Cf. McLaughlin* v. *Florida*, 379 U.S. 184 (1964); *Loving* v. *Virginia*, 388 U.S. 1 (1967); *Shelley* v. *Kraemer*, 334 U.S. 1 (1948).

As demonstrated above, when race was a factor the respondents consistently acted differently than when race was not an issue. This disparate racial treatment in itself required the showing of a compelling, nonracial reason for its discriminatory, segregatory result.

It is also clear from the evidence described above that this disparate treatment in the administration of an apparently neutral policy resulted in the systematic imposition of burdens upon Negroes and Hispanos but not upon Anglos. Thus it was the Negroes and Hispanos who were required to attend these unequal schools. "Class legislation, discriminating against some, and favoring others is prohibited . . ." *Yick Wo* v. *Hopkins*, 118 U.S. 356 at 368 (1886), quoting *Barbier* v. *Connolly*, 113 U.S. 27 (1885).

Even before *Brown* this provision of an unequal opportunity for public education to minorities would violate the Fourteenth Amendment under *Plessy*.[131] As noted in *Brown*,

---

[131] *Sweatt* v. *Painter; McLaurin* v. *Oklahoma State Regents, supra.* Tangible inequalities in the provision of lower public education were consistently struck down. *Corbin* v. *County School*

> Such an opportunity [for education] where the state has undertaken to provide it, is a right which must be made available to all on equal terms. 347 U.S. 493.

Thus the Equal Protection Clause is violated simply by the District's actions which systematically made it more difficult for minority children to receive an education where such difficulties were not imposed upon Anglo children. This result would obtain even if the minority student somehow managed to overcome the burdens. As noted in *Hunter* v. *Erickson*, 393 U.S. 385 (1969), where the state action "places special burdens on racial minorities . . . ," it is "no more permissible than denying them the vote, on an equal basis with others. . . ." 393 U.S. at 391-92. In *Hunter*, the Court in determining whether there was a racial classification looked behind the apparently equal application of the law to everyone and found the "reality" to be "that the law's impact falls on the minority." 393 U.S. at 391.

Hunter is another of a line of equal protection cases where the Court has struck down state action which merely impinged upon a right without requiring a showing that the right was actually denied. *Shapiro* v. *Thompson*, 394 U.S. 618 (1969); *Dunn* v. *Blumstein*, —— U.S. ——, 40 U.S.L.W. 4269 (Mar. 21, 1972); *Harper* v. *Virginia State Board of Elections*, 383 U.S. 663 (1966).

It of course follows where as here the board's actions had an actual adverse impact upon the educational result for minority children unable to overcome the obstacles and burdens which were created by the board, there has been a clear denial of equal protection. This is the teaching of an unbroken line of decisions invalidating actions which

---

Board, 177 F.2d 924 (4th Cir. 1949); *Carter* v. *School Board of Arlington County, Virginia*, 182 F.2d 531 (4th Cir. 1950).

denied equal rights to minorities in the use of public facilities, in voting, jury selection, and numerous other areas.[122]

Similarly, where the action denied or impinged upon a fundamental interest such as procreation and marriage,[123] voting,[124] or access to the criminal appellate procedure,[125] even where there was no racial classification involved this Court has required the State to come forward with compelling reasons for its denial of the right. *Harper* v. *Virginia State Board of Education*, 383 U.S. 663, 670 (1966):

> We have long been mindful that where fundamental rights and liberties are asserted under the Equal Protection Clause, classifications which *might* invade or restrain them must be closely scrutinized and carefully confined. . . . (Emphasis added.)

It seems apparent that the right to an equal opportunity for public education is such a fundamental interest.

The trial court was correct in concluding that the respondents' systematic denial to Negroes and Hispanos of the fundamental right to an equal opportunity for public education, a denial unjustified by the absence of less discriminatory alternatives and unexcused by the presence of a compelling state interest violated the Equal Protection Clause of the Fourteenth Amendment.

---

[122] *Muir* v. *Louisville Park Theatrical Association*, 347 U.S. 971 (1954); *Mayor and City Council* v. *Dawson*, 350 U.S. 877 (1955); *Gayle* v. *Browder*, 353 U.S. 903 (1956); *Johnson* v. *Virginia*, 373 U.S. 903 (1963); *Lee* v. *Washington*, 390 U.S. 333 (1968) *(per curiam)*; *Norris* v. *Alabama*, 332 U.S. 463 (1946); *Turner* v. *Fouche*, 396 U.S. 346 (1970).

[123] *Skinner* v. *Oklahoma*, 316 U.S. 535 (1942).

[124] *Reynolds* v. *Sims*, 377 U.S. 533 (1964); *Kramer* v. *Union Free School District*, 395 U.S. 699 (1969).

[125] *Griffin* v. *Illinois*, 351 U.S. 12 (1956); *Douglas* v. *California*, 372 U.S. 353 (1963).

The Court of Appeals in reversing held that "racially imbalanced schools . . . established and maintained on racially-neutral criteria . . ." did not deny equal protection. 445 F.2d at 10005. It reached this result[126] while apparently accepting the premise that unequal educational opportunity would violate equal protection, "provided the state has acted to cause the harm. . . ." 445 F.2d 1004.

The opinion reveals no open disagreement with the trial court's findings of fact that an unequal educational opportunity was being provided to minority children. As to the cause of the inequality some disagreement is apparent, but it is not supported by any appellate determination of clear error, but rather conveniently ignored or mischaracterized as a legal conclusion based upon a *per se* concept of inherent inequality stemming from any kind of segregation.[127] Overall, however, while there is no clear reversal of findings there is reflected in this section of the opinion the same piecemeal, fragmenting approach to the record which we have commented upon elsewhere in this Brief.[128]

We summarize the appellate court's treatment of the facts in the footnote below.[129] The court of appeals treat-

---

[126] We are unable to state with confidence exactly how this result obtained, but we will nevertheless attempt to demonstrate that regardless of the process employed by the appellate court, the result is unsupportable.

[127] See p. 113, *infra*.

[128] See pp. 73-79; 91, n. 9, *supra*, 115-116, *infra*.

[129] The court agreed that the evidence sustained the finding of comparatively low teacher experience in the minority schools, but gave it no legal effect, 445 F.2d at 1004. High teacher turnover and its relationship to the district's transfer policy was not discussed by the appellate court. It agreed with the findings of low academic achievement and high dropout rates, but apparently interpreted these as being "indicative of a flaw in the system" rather than evidence of unequal opportunity. 445 F.2d at 1004. Smaller sites and older buildings were not discussed. As far as the intangible factors in the segregated school, the court stated that it could not dispute

ment tended to mix the separate issues of the fact of inequality and its cause, treating them as one issue.[140]

As to the issue of the causation of the inequality the appellate court rejected the trial court's finding that it was the segregated condition of these schools which was a major and predominant factor in producing inferior schools and unequal educational opportunity.

Either of the two possible explanations for this result indicate its error.

The first explanation is that the appellate court rejected the trial court's findings of fact as to causation and substituted its own judgment as to causation.[141] The trial court's findings were supported by substantial evidence and

---

"the welter of evidence offered in the instant case and recited in the opinion of other cases that segregation in fact may create an inferior educational atmosphere." 445 F.2d 1004. Nevertheless the court gave no weight to the fact of this inferior educational atmosphere. 445 F.2d at 1004-05.

[140] See 445 F.2d at 1004-05.

[141] The appellate court stated:

> "Thus it is not the proffered objective indicia of inferiority which *causes* the substandard academic performance of these children, but a curriculum which is allegedly not tailored to their educational and social needs." 445 F.2d 1004. (emphasis ours).

Of course, as the trial court properly understood, the "objective indicia of inferiority" were not presented to nor used by the trial court as evidence of causation, but rather as evidence that these schools were in fact inferior. Some of these indicia did contribute to the inferiority but they were not asserted as being its principal cause. As the trial court summed it up:

> The above material summarizes plaintiffs' *evidence* and our findings as to the objective indicia *of inequality at the schools* for which they seek relief. Although plaintiffs claim that factors such as inexperienced faculty tend to contribute to the inferior educational opportunity provided at these schools, their main argument is that the segregation which exists at many of these schools makes a *major contribution to their inferiority*." 313 F. Supp. at 81. (Emphasis added.)

their rejection violated the "clearly erroneous" rule of appellate review prescribed in Rule 52 of the Federal Rules of Civil Procedure.

The second explanation is that the appellate court either misunderstood or mischaracterized the trial judges factual finding of causation as though it were a legal conclusion. Thus the appellate court apparently believed that Judge Doyle had held that as a matter of law all segregated schools were inferior, regardless of how they became segregated.

The trial court specifically rejected this *per se* approach:

> "... [P]laintiffs are not entitled to relief merely upon proof that de facto segregation exists at certain schools within the School District." 313 F. Supp at 77.

It is therefore apparent that the Tenth Circuit's perception of the basis of the trial court's findings as to causation was erroneous. The trial court did not invoke a *per se* rule; indeed it expressly recognized that the Tenth Circuit's prior decisions in *Downs*[142] and *Dowell*[143] prevented such an approach. 313 F. Supp. at 76-77. Rather it seems clear that Judge Doyle's findings of inequality and causation were based entirely upon the evidentiary record before him.

Regardless of the correctness of these contentions as to the appellate court's treatment of causation, the decision reflects two pervasive errors for which the reinstatement of the trial court's decree is the only appropriate solution.

---

[142] *Downs* v. *Board of Education of Kansas City*, 336 F.2d 988 (10th Cir. 1964), *cert. denied*, 380 U.S. 914 (1965).

[143] *Board of Education* v. *Dowell*, 375 F.2d 158 (10th Cir.), *cert. denied*, 387 U.S. 913 (1967).

The first prevasive error is the appellate court's narrow perception of the application of the Equal Protection Clause to public education. The gravamen of the appellate court's result is that the Fourteenth Amendment is limited to the peculiar facts of *Brown*, and a misreading of *Brown* as requiring an intent to provide unequal opportunity to minorities.

The rationale of *Brown* is not based upon any concept or finding that in creating dual school systems the states' intended purpose was to disadvantage Negroes. Rather, *Brown's* finding is that the states intended to accomplish segregation and must therefore be held responsible for inequalities caused by the segregation. Similarly in the instant case there is no requirement that petitioners demonstrate that the respondents' purpose or motive was to disadvantage minorities but merely that the effect or result of their intended actions was discriminatory as to Negroes and Hispanos.

The denial of equal protection condemned by the Fourteenth Amendment requires only that the discrimination be the result of intended state action. Of course, where odious intent is shown as where it is clear that the only purpose was to discriminate, equal protection is also denied. But it is clearly error to reason that all violations must therefore be intentional in that sense. Rather, as shown by the authorities discussed above[144] the central theme of equal protection is that where state action results in a racial discrimination, the Fourteenth Amendment is violated unless the state can show a compelling nonracial reason for continuance of the discrimination. This proposition was well stated in *Burton* v. *Wilmington Parking Authority*, 365 U.S. 706 (1961):

---

[144] *Supra*, pp. 105-110.

> But no state may effectively abdicate its responsibilities by either ignoring them or by merely failing to discharge them *whatever the motive may be.* It is of no consolation to an individual denied the equal protection of the laws that it was done in good faith. *Id.* at 725 (emphasis added).

The appellate court's restrictive interpretation of equal protection was clearly wrong, and at the heart of the appellate court's reversal.

The second pervasive error arises from the appellate court's complete disregard of the multiplicity of decisions and policies by the board and the school administration which created, contributed to, condoned and continued the educational disadvantagement of Negroes and Hispanos. These practices and policies, and their discriminatory effect have been recounted elsewhere in this Brief and will not be again repeated here. In failing to give effect to the entirety of the District's actions, but rather taking a piecemeal view of the record, the appellate court arrives at the rather startling conclusion that the inequality is completely divorced from any state action:

> As stated in the first instance then the trial court's findings stand or fall on the power of federal courts to resolve educational difficulties *arising from circumstances outside the ambit of state action.* 445 F.2d at 1004 (emphasis added).

Finally, the appellate court also failed to give any weight to at least two factors each of which this Court has determined to constitute denials of equal protection. As to intangible factors contributing to inequality, the court not only ignored *Brown*, but *Sweatt* and *McLaurin* as well, all decisions finding denial of equal protection in the pres-

ence of intangible factors which disadvantaged the minority's right to equal educational opportunity.

Secondly, the board's unequal provision to minorities of such an important educational input as the quality, experience and stability of teachers clearly violates every concept of equal protection from *Plessy* to *Swann*.[145]

We submit that it must be apparent from an overview of the numerous ways which the board and administration controlled school location, size and boundaries, pupil assignment and educational inputs that the respondents were responsible for the inequality of educational opportunity and the inferiority of the minority schools which resulted from their policies. We have contended elsewhere in this Brief that many of these acts and policies were demonstrative of segregatory intent. But regardless of that contention, that these policies led to inequality and inferiority satisfies in full the state action requirement of the Fourteenth Amendment. The appellate court's inability to locate state action was a substantial, if not sole, basis for its conclusion that there was no denial of equal protection. We submit that the appellate court erred.

B. The Remedy Formulated by the District Court for the Provision of Equal Educational Opportunity Was Fully Supported by the Record and Within the Bounds of Proper Judicial Discretion.

The breadth and flexibility inherent in equitable remedies was well stated in *Hecht Co.* v. *Bowles*:[146]

> The essence of equity jurisdiction has been the power of the Chancellor to do equity and to mould each decree to the necessities of the particular case. Flex-

---

[145] See 402 U.S. at 18-19.

[146] 321 U.S. 321 (1944).

> ibility rather than rigidity has distinguished it. The qualities of mercy and practicality have made equity the instrument for nice adjustment and reconcilation between the public interest and private needs as well as between competing private claims. 321 U.S. at 329-30.

In school cases arising under the Equal Protection Clause the principles of *Hecht* have often been endorsed by this Court, from *Brown II*[147] to *Swann*.[148] As noted in *Brown II*, in the exercise of this equitable power the district courts might have to eliminate "a variety of obstacles . . . in a systematic and effective manner." 349 U.S. at 300.

Brown had found that racial segregation inherently caused unequal educational opportunity for Negroes, and remedial efforts under *Brown* have been directed toward eliminating all vestiges of the dual system "root and branch." *Green* v. *County School Board*, 391 U.S. 430, 438 (1968).

In the instant case the remedial objective was perceived to be somewhat different than under *Brown* and its progeny. The violation found was not cast in terms of racial segregation but rather as the State's unequal provision of public education to Denver's minority children. Thus the remedial objective went beyond the elimination of segregation and included the equalizing of minorities' educational opportunities.

Certainly the principles established since *Brown* are relevant to this case, for here too the racial identity of schools was found to be an important contributing factor to the inequality.

---

[147] *Brown* v. *Board of Education*, 349 U.S. 294, 300 (1955).

[148] *Swann* v. *Charlotte-Mecklenburg Board of Education*, 402 U.S. 1, 15 (1971).

These principles include:

1. The remedy must promise "realistically to work." [149]

2. The remedy must be thorough in its elimination of the violation and in guarding against its reoccurrence; it must be eliminated "root and branch." [150]

3. The remedy must treat all vestiges of the violation; pupil assignment, faculty and staff assignment, transportation, extracurricular activities, or any other factor contributing to the racial identity of the school; Independent of student assignment, where it is possible to identify a "white school" or a "Negro school" simply by reference to the racial composition of teachers and staff, the quality of school buildings and equipment, or the organization of sports activities, "a *prima facie* case of violation of substantive constitutional rights under the Equal Protection Clause is shown." *Swann, supra,* 402 U.S. at 18.

   Tangible inequalities and different treatment on the basis of race must be eliminated. *Ibid.*

4. "The district judge or school authorities should make every effort to achieve the greatest possible degree of actual desegregation . . ." *Swann, supra,* 402 U.S. at 26.

5. "It is incumbent upon the school board to establish that its proposed plan promises meaningful and immediate progress. . . . It is incumbent upon the district court to weigh that claim in light of the facts at hand and in light of any alternatives which may be shown as feasible and more promising in their effectiveness. . . . Of course the availability to the board

---

[149] *Green* v. *County School Board,* 391 U.S. at 439.

[150] *Id.* at 438.

of other more promising courses of action may indicate a lack of good faith; and at the least it places a heavy burden upon the board to explain its preferences for an apparently less effective method." *Green supra*, 391 U.S. at 439.

6. The constitutional principles of equality "cannot be allowed to yield simply because of disagreement with them," [151] nor are the minority's constitutional rights "to be sacrificed or yielded to . . . violence and disorder . . . ," [152] nor can they be nullified "ingeniously or ingenuously." [153]

Just as the foregoing principles apply to the objective of the elimination of segregation, they are equally applicable to the objective of equalizing educational opportunity.

The trial court properly applied these principles in formulating a varied remedy. The board's proposals were limited to segregated compensatory education programs and the Denver version of freedom of choice.

Judge Doyle properly rejected compensatory education in a segregated setting where the record demonstrated the ineffectiveness of such programs.

In accepting compensatory education in an integrated setting the trial court selected a feasible, "more promising" program.

In rejecting the board's freedom of choice program as the exclusive means for ending the racial identity of

[152] *Cooper* v. *Aaron*, 358 U.S. 1, 16 (1958).

[153] *Id.* at 17.

schools, the trial court's judgment as to the inadequacy of this approach was indirectly endorsed on appeal. The appellate court stated:

> . . . [A] realistic appraisal of voluntary transfer plans has shown that they simply do not fulfill the constitutional mandate of dismantling segregated schools. In fact the voluntary transfer plans previously employed in Denver have had a minimal effect on the segregated status of the Park Hill area schools. 445 F.2d at 1002.

In mandating desegregation and integration, Judge Doyle implemented several important principles. The first was to remove the racial identity of the inferior schools. The second principle was that of timing; the mandatory plan would accomplish the objective much faster than a voluntary plan. Thirdly, desegregation and integration removed some of the principal causes of tangible inequalities in terms of teacher experience, teacher turnover, teacher expectancies and adequate facilities, as demonstrated by the Berkeley experience described by Dr. Sullivan. Finally, the trial court was recognizing not only that integration by itself assisted in raising minority achievements, but further that it furnished the best possible environment for compensatory education. The board's proposals ignored all of these factors, and were properly rejected by the court.

Finally, that the proposal to leave these schools segregated would have majority community support would not excuse failure to select an effective plan for the provision of equal opportunity.

The foregoing facts demonstrate that the board has defaulted in its duty to come forward with a realistic, effective plan. The trial court properly exercised its responsibilities in going forward and devising a remedy which on

the basis of the record before it offered superior potential for success.[154]

The trial court selected a variety of components, including desegregation, programs directed toward improving understanding of minority culture and history, raising teacher expectancies, raising the level of teacher experience, transportation, magnet schools, voluntary transfer and community education. The remedy exemplifies the equitable principles of fairness, flexibility and the balancing of interests. The remedy was fully within the administrative and financial competence of the District.

C. The Remedy Should Have Been Extended to All of the District's Predominantly Minority, Inferior Schools.

While as demonstrated above the trial court's formulation of the remedial plan was proper, we urge here that Judge Doyle should have extended the remedy to certain other schools in the District.

Eight elementary and one junior high school are involved in this contention.[155] As of September, 1969, these schools contained nearly 4,000 minority students and 860 Anglos, distributed as follows:[156]

---

[154] *Swann, supra,* at 16:

"In default by the school authorities of their obligation to proffer acceptable remedies, a district court has broad power to fashion a remedy that will assure a unitary school system."

[155] Boulevard, Crofton, Ebert, Garden Place, Gilpin, Swansea, Wyatt and Wyman; Morey Junior High.

[156] DX S-1, A. 2166a.

Racial Composition of Subject Schools

	Anglo		*Negro*		*Hispano*	
	No.	*%*	*No.*	*%*	*No.*	*%*
Boulevard	118	29.9	2	0.5	269	68.1
Crofton	23	7.1	121	38.4	162	51.5
Ebert	35	10.6	115	34.6	174	52.4
Garden Place	138	17.0	140	17.2	525	64.7
Gilpin	22	3.2	252	36.4	411	59.4
Swansea	197	29.2	24	3.6	450	66.6
Wyatt	9	1.9	223	46.4	248	51.5
Wyman	103	27.5	142	38.0	111	29.7
Total	645		1,019		2,350	
Morey Jr. High	215	26.8	419	52.4	149	18.6
Total	860		1,438		2,499	

The eight elementary schools contain 12% of the Negro and 18% of the Hispano elementary population. Morey contains over 13% of the Negro junior high population.[157]

[157] These schools contain less than 2% of the Anglo population. DX S-1, A. 2166a.

All of the tangible inequalities found in the court-designated schools are present to the same degree in these nine schools. Indeed, some of them are even worse than the average of the schools selected for relief.[118] On the average in 1968 the two groups of schools were nearly identical in their inequality:

	New Teachers	*Probationary Teachers*	*Median Yrs. Teachers Experience*	*Achievement 5th Grade Percentile 1968*
Subject Schools	20%	42%	3.7 yrs.	20th
Court Schools	23%	48%	3.5 yrs.	21st
District Average	15.9%	37%	5.6 yrs.	43rd
Selected Anglo Schs.	9.8%	25.6%	9.1 yrs.	75th

The evidence showed that the same low expectancies were established for these schools.[119] The expert testimony

was that the homogeneous peer group effect[159] and the adverse psychological attitudes[161] were the same in predominantly minority schools as in schools which were either predominantly Negro or predominantly Hispano.

In short, there was no basis in the record for the trial court's distinction between schools which were either 70% Negro or 70% Hispano on the one hand, and those whose combined Negro and Hispano enrollment exceeded 70%. Yet the trial court found one group to be denying equal protection and declined to find a violation as to the subject schools. 313 F. Supp. at 69, 77.

Neither is there any legal basis for the distinction. It is clear that the protection of the Fourteenth Amendment is not limited to Negroes[163] and extends to Hispanos.[163]

While the violation here was unequal provision of opportunity rather than intentional segregation, it would make little rational sense to declare that a formerly separate tri-racial system of Anglos, Negroes and Hispanos could be "desegregated" by simply integrating the Negroes and Hispanos and leaving the Anglos in racially identifiable, all-white schools.[164]

The distinction leads to other irrational results. The effect of the distinction is that it is unconstitutional

---

[159] Coleman, A. 1534a; O'Reilly, A. 1952a-54a. PX 83.

[161] Dodson, A. 1473a-76a, A. 1498a-99a; O'Reilly, A. 1952a-53a.

[163] *Yick Wo* v. *Hopkins*, 118 U.S. 356 (1886); *Korematsu* v. *United States*, 323 U.S. 214 (1944).

[163] *Hernandez* v. *Texas*, 349 U.S. 475 (1954); *Cisneros* v. *Corpus Christi Indep. School District*, 324 F. Supp. 599, 606 (S.D. Tex. 1970), appeal pending.

[164] In *Cisneros*, *supra*, n. 163, the federal district court determined that such "desegregation" did *not* meet the disestablishment requirements of *Brown*, and ordered integration of Anglos as well. 324 F. Supp. at 616, 628.

to discriminate against Negroes *or* Hispanos, but not against them together. It simply does not make sense to invalidate actions taken against Negroes or Hispanos separately while declaring the same actions legal if taken against them together.

The constitutional violation affected these nine subject schools; the remedy was equally appropriate for them. The trial court erred in failing to extend the remedy to these schools.

III.

Considered Together the Proven Racial Segregation and the Proven Inequality of Educational Opportunity in Denver Require a System-Wide Remedial Approach.

Considered separately, the constitutional violations discussed in parts I and II of the Argument, *supra*, would each support the relief sought by petitioners. Considered together they reinforce the need for a systematic remedy and a thorough remedy. Considered together they show the full magnitude of the constitutional deprivation imposed by the current system. The depth of the wrong inflicted on the victims of discrimination is more clearly seen when the practice of covert racial segregation is seen in connection with the operation of a caste-type separate and unequal educational system in the segregated schools. There can be no doubt that such a combination of wrongs inflicts serious injury and justifies extraordinary remedies.

CONCLUSION

Wherefore, petitioners respectfully submit that the judgment of the court of appeals should be reversed insofar as it reverses the judgment of the district court, and that the case should be remanded to the district court with directions that the court grant the prayers of the complaint requesting implementation of a comprehensive desegregation plan for the Denver school system.

Statement of the Case 6

Questions to Which This Brief Is Addressed 8

Summary of Argument 8

Argument

Point I—Inequality of public educational facilities is a violation of equal protection 10

Point II—Racial segregation discriminates *per se* against black pupils and, if brought about by state action, is a violation of the Fourteenth Amendment 12

A. Segregated Schools Are Inherently Unequal 12

B. Racial Segregation Brought About by State Action Is a Denial of Equal Protection 15

1. If the segregation is caused by state action, it is the effect that matters regardless of motive or purpose 15

2. The Equal Protection Clause is violated if the state is entwined in the management of a discriminatory program 18

PAGE

3. So-called "de facto" segregation in public schools constitutes unconstitutional discrimination within the scope of the *Brown* decision 20

Point III—Any desegregation plan must encompass the entire school district and not merely isolated schools 28

Conclusion 32

No. 71-507

WILFRED KEYES, *et al.*,

Petitioners,

vs.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, *et al.*,

Respondents.

On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit

MOTION OF THE ANTI-DEFAMATION LEAGUE OF B'NAI B'RITH, AMERICAN JEWISH CONGRESS AND AMERICAN JEWISH COMMITTEE FOR LEAVE TO FILE A BRIEF *AMICI CURIAE*

The undersigned, as counsel for the above-named organizations, respectfully move this Court for leave to file the accompanying brief *amici curiae*.

Interest of the *Amici*

The B'nai B'rith was founded in 1843 and established its Anti-Defamation League as its educational arm in 1913. The American Jewish Committee was founded in 1906 and the American Jewish Congress in 1918. All three of these organizations are concerned with preservation of the secu-

rity and constitutional rights of Jews in America through preservation of the rights of all Americans. They believe that the welfare of Jews in the United States is inseparably related to the extension of equal opportunity for all.

This case raises an important issue under the Equal Protection Clause of the Fourteenth Amendment, involving a form of discrimination recognized by this Court as abhorrent nearly eighteen years ago—segregation in public education. Here, the City of Denver, Colorado is maintaining what amounts to a segregated school system wherein minority students are being denied an equal educational opportunity.

The *amici* view the effect of the Denver school board's actions in administering its schools as having the same legal consequences as if separate schools were mandated by the board. Since these three organizations have consistently fought for equal opportunities for all, regardless of race, color, creed or national origin, and have opposed racial segregation in schools, they are deeply concerned about the impact of the decision in this case on future efforts to correct segregation in public schools.

The accompanying brief *amici curiae* is based on extensive concern and experience of the three organizations in matters involving discrimination against minorities. We argue that the harmful effects of segregation operate whether or not it is imposed by the state. In this connection, we show that this Court's conclusion in *Brown* v. *Board of Education*, 347 U. S. 483 (1954) that segregated schools are inherently unequal rested on studies most of which apply equally to *de facto* and *de jure* segregation.

We argue further that measures designed to correct past illegal discrimination cannot be confined to the narrow area directly affected by the discrimination but must be broad enough to insure elimination of the effects of discrimination from all of the operations conducted by the discriminator.

We have sought the consent of the parties to the filing of a brief *amici curiae*. Counsel for petitioners have consented. Counsel for respondents have informed us that the Denver school board had directed counsel to consent to requests to file *amicus* briefs only "upon written assurance that the person or organization requesting the consent will file a brief supporting the position of the school district."

On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit

BRIEF OF ANTI-DEFAMATION LEAGUE OF B'NAI B'RITH, AMERICAN JEWISH CONGRESS AND AMERICAN JEWISH COMMITTEE AS *AMICI CURIAE*

This brief is submitted by the undersigned *amici curiae* conditionally upon the granting of the motion for leave to file to which it is attached.

Interest of the *Amici*

The interest of the *amici* is set forth in the attached motion for leave to file.

Opinions Below

The opinions of the District Court are reported at 303 F. Supp. 279 and 313 F. Supp. 61. The opinion of the Court of Appeals is reported at 445 F.2d 990.

Statement of the Case

This case arises out of a school desegregation action brought by Denver school children and their parents in Federal District Court against the school board of School District No. 1, Denver, in 1969. Their complaint sought complete desegregation of the Denver public school system and provision of equal educational opportunities to all Denver school children.

The litigation was initiated after a newly elected school board rescinded a partial desegregation plan prepared by the outgoing board. That plan sought to alleviate high concentrations of Negro and Spanish-surnamed students in some schools and high concentrations of white students in others.

Evidence was introduced in the District Court to show a pattern of unconstitutional activity by the school board not only in the rescission of its desegregation plan for the Denver schools but also in its administration of the school system over the years (in its school site policies, attendance zones, etc.). In deciding on a motion for a preliminary injunction, the court ruled that the board had acted unconstitutionally, with respect to the Park Hill area in northeast Denver, in its action rescinding the original desegrega-

tion plan, and it preliminarily directed the school officials to implement the terms of the rescinded plan (App. 1a).*

These findings were reiterated by the District Court in its opinion on permanent relief (App. 44a). However, it there held that, as to the rest of the Denver schools, there had been no sufficient showing of a segregation policy on the part of the school board. It reached this conclusion even though it found that segregation existed in those schools as it did in those schools in which a segregation *policy* had been in existence (App. 66a).

The District Court also found that certain of the minority dominated schools were failing to offer their students an educational opportunity equal to that afforded white students in other Denver public schools (App. 89a). Because the court concluded that these schools were unequal largely because of their segregated character (App. 86a-87a), and also because, in a hearing on the question of remedy, the court found that desegregation was a necessary element in equalizing the educational opportunity (App. 112a), it directed the school board to desegregate and otherwise equalize the educational offering at these schools.

On appeal, the Court of Appeals for the Tenth Circuit agreed with the District Court both as to the segregation policy in northeast Denver (Park Hill) and as to the lack of a showing thereof as to other Denver schools (App. 122a-139a, 147a-150a). However, it modified the lower court's order to desegregate, insofar as it applied to schools out-

* References to (App.) are to the Appendix to the Petition for Certiorari.

sids the Park Hill area, holding that the court could not order desegregation of schools which had not been segregated by official policy (App. 144a). The Court of Appeals thereby declined to overrule *Downs* v. *Board of Education of Kansas City*, 336 F.2d 988 (10th Cir. 1964), cert. den., 380 U.S. 914 (1965).

Questions to Which This Brief Is Addressed

This brief *amici curiae* is addressed to the following questions:

1. Does the inferiority of facilities of those schools in the Denver school district attended predominantly by Negro and Hispano students of itself establish a violation of the Equal Protection Clause of the Fourteenth Amendment?

2. Does racial segregation in the public schools operated by respondents constitute discriminatory state action in violation of the Equal Protection Clause, irrespective of the intent of the policies pursued by respondents?

3. Should the remedial order in this case be limited to that part of the school system operated by respondents in which intentional segregation was found?

Summary of Argument

I. The record here plainly establishes the inferior quality of those Denver schools attended predominantly by Negro and Hispano students. The unconstitutionality of such unequal treatment was recognized even prior to 1954 and is sufficient, by itself, to require corrective action here.

II. Racial segregation, *per se*, is harmful to Negro students. To the extent that it is brought about by state action, it results in a denial of equal protection.

A. This Court held in *Brown* v. *Board of Education*, 347 U. S. 483 (1954), that segregated schools are inherently unequal. *Brown* establishes that racial classification brought about by state action is *per se* a denial of equal protection.

B1. If racial segregation is brought about by state action, the Constitution is violated even if there is no showing that segregation was the intended effect of the state action. It is the result, not the motive, that determines the constitutionality of the program in question.

B2. Unconstitutional state action is shown where state agencies are intertwined in a racially classified program under circumstances in which the power of the state could be used to prevent or eliminate the racial classification.

B3. This Court's conclusion, in the *Brown* case, that segregated schools are inherently unequal was announced in the context of deliberately imposed segregation. However, there is no basis for assuming that it was confined to that context. In fact, of the six authorities cited by this Court for its conclusion, four applied equally to *de facto* segregation. Recent decisions in the lower courts have increasingly rejected the *de facto-de jure* distinction.

III. Any desegregation plan must encompass the entire school district and not merely those schools where an official segregation policy is shown to have had demonstrable ef-

fects. Beginning with this Court's decision in the *Brown* case, remedial orders in school desegregation cases have encompassed entire school districts. This is consistent with the general practice under antidiscrimination laws, under which violators are required to take remedial steps with respect to all their operations. It is consistent also with the practical consideration that effective desegregation requires involvement of the entire school district.

ARGUMENT

POINT ONE

Inequality of public educational facilities is a violation of equal protection.

Even prior to this Court's decision in *Brown* v. *Board of Education*, 347 U. S. 483 (1954), it had long been established that inequality of racially separate, public educational facilities was prohibited by the Equal Protection Clause of the Fourteenth Amendment of the Constitution. See, e.g., *Missouri ex rel. Gaines* v. *Canada*, 305 U. S. 337 (1938); *Sweatt* v. *Painter*, 339 U. S. 629 (1950). That is, as Judge Skelly Wright noted in *Hobson* v. *Hansen*, 269 F. Supp. 491, 496 (D.C., 1967), aff'd *sub nom. Smuck* v. *Hobson*, 408 F.2d 175 (D.C. Cir. 1969):

> To the extent that *Plessy's* separate-but-equal doctrine was merely a condition the Supreme Court attached to the states' power deliberately to segregate school children by race, its relevance does not survive *Brown*. Nevertheless, to the extent the *Plessy* rule, as strictly construed * * * is a reminder of the responsibility entrusted to the courts for insuring that dis-

advantaged minorities receive equal treatment when the crucial right to public education is concerned, it can validly claim ancestry for the modern rule the court here recognizes.

Similarly, the District Court in this case noted that, "if the school board chooses not to take positive steps to alleviate *de facto* segregation, it must at a minimum insure that its schools offer an equal educational opportunity" (App. 89a). Judge Doyle went on to find that such equal educational opportunity is not being provided. Thus, he listed 15 schools, all of which have at least 70-75% Negro and/or Hispano students, which fail to meet the absolute minimum Equal Protection standards (App. 76a). He cited factual data relating to achievement (App. 78a), teacher experience (App. 80a), teacher turnover (App. 82a), pupil dropout rate (App. 81a), and building facilities (App. 83a) in support of his conclusions.

Teacher experience is a key example. At the Anglo schools, nearly half the teachers have over ten years experience; the figure for the Negro/Hispano schools is less than one-fifth. In addition, nearly twenty-five per cent of the teachers in the Negro/Hispano schools have no previous experience in the Denver school system; less than ten per cent of the teachers in the Anglo schools have no previous experience (App. 80a).

We submit, therefore, that, even by pre-*Brown* standards, the Denver school board has deprived the students under its jurisdiction of the equal protection of the laws. This Court should therefore affirm the District Court's decision on the Second Count of the Second Cause of Action and reverse the Court of Appeals' reversal of that decision.

POINT TWO

Racial segregation discriminates *per se* against black pupils and, if brought about by state action, is a violation of the Fourteenth Amendment.

A. Segregated Schools Are Inherently Unequal.

In 1954, this Court held in *Brown, supra,* that separate schools are inherently unequal. 347 U. S. at 485. The Court plainly stated that segregated schools are incapable of providing quality education. It also said that the effect of segregation in the school system was to place an indelible stamp of inferiority on those Negro children who were compelled to attend "Negro" schools.

Since 1954, numerous court decisions and a number of socio-educational studies have reinforced the conclusions reached in *Brown.* One of the most important studies is "Equality of Educational Opportunity," published in 1966 by the United States Office of Education, which was prepared under the supervision of Dr. James Coleman. Section 30 of the Coleman Report is of particular relevance to the issue of segregated schools. It notes, at page 302, that "attributes of *other students* account for far more variation in the achievement of minority group children than do any attributes of school facilities and slightly more than do attributes of staff." The Report further found that middle-class children have a heightened sense of motivation which induces a classroom atmosphere most conducive to learning and that Negro children showed educational improvement when introduced to such an atmosphere.

The Report also noted, at page 321, that school achievement was closely related to the student's sense of confidence and belief in the control of his own destiny. For many reasons, Negroes and other minority students are likely not to have confidence in themselves. By exposing them to the motivation to learn and sense of confidence of other (middle-class) children, their academic performance can be improved. And the only way to gain this exposure is by integration.

Several years earlier, this view had been expressed by the Board of Regents of the University of the State of New York. In a statement issued at its meeting of January 27-28, 1960, the Board said:

> Modern psychological knowledge indicates that schools enrolling students largely of homogeneous, ethnic origin, may damage the personality of minority group children. Such schools decrease their motivation and thus impair the ability to learn. Public education in such a setting is socially unrealistic, blocks the attainment of the goals of democratic education and is wasteful of manpower and talent, whether this situation occurs by law or by fact.

A third, more recent study, by the United States Commission on Civil Rights, entitled "Racial Isolation in the Public Schools," concluded in 1967 (at 193):

> The central truth which emerges from this report and from all of the Commission's investigations is simply this: Negro children suffer serious harm when their education takes place in public schools which are racially segregated, whatever the source of such segregation may be * * * Negro children believe that their schools are stigmatized and regarded as inferior by the

community as a whole. Their belief is shared by their parents and by their teachers. And their belief is founded in fact.

The case law uses very much the same language:

> Racial concentration in his school communicates to the Negro child that he is different and is expected to be different from white children. Therefore, even if all schools are equal in physical plant, facilities, and ability and number of teachers, and even if academic achievement were at the same level at all schools, the opportunity of Negro children in racially concentrated schools to obtain equal educational opportunities is impaired * * * *Barksdale* v. *Springfield School Committee*, 237 F. Supp. 543, 546 (Mass. 1965), rev'd on other grounds, 348 F. 2d 261 (1st Cir. 1965).

> (I)t is by now well documented and widely recognized by educational authorities that the elimination of racial isolation in the schools promotes the attainment of equal educational opportunity and is beneficial to all students, both black and white. *Lee* v. *Nyquist*, 318 F. Supp. 710, 714 (W.D.N.Y. 1970), aff'd, 402 U.S. 935.

Therefore, it must be concluded in the words of Judge Doyle, that "segregation regardless of its cause, is a major factor in producing inferior schools and unequal educational opportunity" (App. 86a).

The net effect of the *Brown* decision, as these authorities show, is that racial segregation—and any form of racial classification or separation—constitute discrimination *per se* which, if brought about by state action, violates the Equal Protection Clause. It is the classification itself which violates the constitutional mandate because it nec-

essarily creates inequality. *Hunter* v. *Erickson*, 393 U.S. 385, 392 (1969), and cases there cited.

In this case, the record is clear that the school attendance districts, as established by the respondent school authorities, are racially segregated. Those acts of the respondents that determined the school districts, and the resultant segregation, established a racial classification of the very kind prohibited by the Fourteenth Amendment, as interpreted in the *Brown* case.

B. Racial Segregation Brought About by State Action Is a Denial of Equal Protection.

1. If the segregation is caused by state action, it is the effect that matters, regardless of motive or purpose.

As the *Brown* decision held, state action by legislative fiat causing segregated schools is violative of the Fourteenth Amendment. It is not only legislative action in support of segregation that is in violation.

> Where a Board of Education has contributed and played a major role in the development and growth of a segregated situation, the Board is guilty of *de jure* segregation. The fact that such came slowly and surreptitiously rather than by legislative pronouncement makes the situation no less evil.

Davis v. *School Dist. of the City of Pontiac*, 309 F. Supp. 734, 742 (E.D. Mich., 1970), aff'd, 443 F. 2d 573 (6th Cir. 1971), cert. denied, 404 U.S. 913 (1971).

The concept of purposeful state action is not limited to an intent to cause segregation on the part of state officers.

If the action was taken with knowledge of the consequences and the consequences were not merely possible but were substantially certain, then the action is wilful and purposeful state action. This concept is well recognized in torts. *Restatement, Second,* Torts §500, comment f; *Mountain States Telephone and Telegraph Co.* v. *Horn Tower Construction Co.,* 147 Colo. 210, 363 P.2d 175, 179 (1961); *Commonwealth* v. *Welansky,* 316 Mass. 621, 55 N.E. 2d 902, 909 (1944). It has also been applied in criminal law. *People* v. *Conroy,* 97 N.Y. 62 (1884).

Furthermore, state action, even if not purposeful, violates the Constitution if it results in racial separation with its resultant inequality. There is no need to show motive, ill will or bad faith in invoking the protection of the Fourteenth Amendment against racial discrimination. *Sims* v. *Georgia,* 389 U.S. 404, 407-8 (1967). Furthermore, this Court has held, in a long line of cases dealing with equal protection of the laws, that racial discrimination may be established by proof of either purpose or effect. See *Yick Wo* v. *Hopkins,* 118 U.S. 356 (1886) and, more recently, *Reitman* v. *Mulkey,* 387 U.S. 369 (1967) and *Hunter* v. *Erickson,* 393 U.S. 385 (1969). "It is of no consolation to an individual denied the equal protection of the laws that it was done in good faith." *Burton* v. *Wilmington Parking Authority,* 365 U.S. 715, 725 (1961). Requirements which appear neutral on their face and theoretically apply to everyone, but have the inevitable effect of tying present rights to the discriminatory pattern of the past, are unlawful. *United States* v. *Louisiana,* 380 U.S. 145 (1965).

The concept that it is the effect rather than the intent that is of critical importance in assessing governmental

behavior with respect to the Fourteenth Amendment was applied to a public school desegregation case in a concurring opinion by Circuit Judge Stewart in *Clemons* v. *Board of Education of Hillsboro*, 228 F.2d 853, 859 (6th Cir. 1956), *cert. denied*, 350 U.S. 1006 (1956):

> The Board's subjective purpose was no doubt, and understandably, to reflect the 'spirit of the community' and avoid 'racial problems' as testified by the Superintendent of Schools. But the law of Ohio and the Constitution of the United States simply left no room for the Board's action, *whatever motives the Board may have had* (emphasis supplied).

In areas other than race, this Court has invalidated discriminatory action by a state despite a lack of evidence of purposeful activity. Thus, there was no suggestion of intention to inhibit the poor in *Harper* v. *Virginia State Board of Elections*, 383 U.S. 663 (1966). In the reapportionment cases, this Court held that the motive behind the challenged scheme of apportionment was immaterial. *Reynolds* v. *Sims*, 377 U.S. 533, 581 (1964). *Cf. Griffin* v. *Illinois*, 351 U.S. 12 (1956); *Douglas* v. *California*, 372 U.S. 353 (1963).

It follows that a state may not excuse action placing Negro citizens under a severe, unjustifiable disability on the ground that the action was inadvertent and without discriminatory intent. As Justice Clark said in *Kennedy Park Homes* v. *City of Lackawanna*, 436 F. 2d 108, 114 (2nd Cir. 1970), cert. den., 401 U.S. 1010 (1971): "Even were we to accept the City's allegation that any discrimination here resulted from thoughtlessness rather than a purposeful scheme, the City may not escape responsibility for placing its black citizens under a severe disadvantage which it

cannot justify." That case involved a suit to compel the City of Lackawanna to allow the development of a low-income housing project at a certain location in the city. Just as the Denver school board, by the way it has drawn attendance district lines, has kept the minorities educationally segregated, the city in *Kennedy* had effectively kept Negroes residentially isolated in one area of the city through rezoning and other techniques. The Circuit Court called for an end to this course of action and for a conscious effort to alleviate segregation.

We submit that the law was correctly stated in *Hobson*, *supra* (269 F. Supp. at 497):

> Whatever the law was once, it is a testament to our maturing concept of equality that, with the help of the Supreme Court decisions in the last decade, we now firmly recognize that the arbitrary quality of thoughtlessness can be as disastrous and unfair to private rights and the public interest as the perversity of a wilful scheme.

So, here, the Denver school board cannot argue that it did not intend the system to become segregated and unequal. If segregation and the resulting inequality exist as a result of the school board's failure to remedy the situation, the Equal Protection Clause has been violated.

2. *The Equal Protection Clause is violated if the state is entwined in the management of a discriminatory program.*

State action containing racial classifications outlawed by the Equal Protection Clause also arises when the state is "entwined in the management or control" of the private enterprise which discriminates. *Evans* v. *Newton*, 382 U.S.

296, 301 (1966). Or as was stated in a leading case involving school desegregation, responsibility for discrimination arises upon "state participation through any arrangement, management, funds or property." *Cooper* v. *Aaron*, 358 U.S. 1, 4 (1958).

That this is present in Denver is evident. The school board's every-day operations as well as its long-range planning show state participation in every aspect of the school operations.

The criterion for finding discriminatory state action violating the Equal Protection Clause is involvement of the state "to some significant extent" in any of the manifestations of discrimination. *Burton, supra*, 365 U.S. at 722 (1961). This Court said in that case: "Only by sifting facts and weighing circumstances can the nonobvious involvement of the State in private conduct be attributed its true significance" (*ibid*).

The issue in the *Burton* case was whether the Equal Protection Clause was violated by discriminatory action of a restaurant which had leased its premises from the Wilmington Parking Authority, a public agency. The state court held that the restaurant was acting in "a purely private capacity" under its lease, that its action was not that of the Parking Authority and was not therefore state action within the contemplation of the prohibitions contained in the Fourteenth Amendment. This Court disagreed. After discussing the various activities, obligations and responsibilities of the Parking Authority with respect to the restaurant, the Court found "that degree of state participation and involvement in discriminatory action

which it was the design of the Fourteenth Amendment to condemn". 365 U.S. at 724. It observed that the Parking Authority could have affirmatively required the restaurant to discharge the responsibilities under the Fourteenth Amendment imposed upon the private enterprise as a consequence of state participation.

This brings the question of so-called *"de facto"* segregation here into focus. By its activities, the Denver school board has allowed and is allowing segregation, with its resultant inequality, to exist in the Denver schools. As in *Burton*, a public authority—the school board—has abdicated its responsibility. The Court there held that the involvement of the state in the discriminatory action of the restaurant was significant enough to warrant the conclusion that the Authority had violated the Equal Protection Clause. Similarly, state support of segregated schools through any arrangement, management, funds or property cannot be squared with the Amendment's command that no state shall deny to any person within its jurisdiction the equal protection of the laws.

3. So-called "de facto" segregation in public schools constitutes unconstitutional discrimination within the scope of the Brown *decision.*

We submit that a school system where, as a result of a segregated residential pattern, white and black pupils generally attend different schools, amounts to a dual system which is in conflict with the Equal Protection Clause as interpreted in *Brown, supra*. This conclusion is rooted in language in *Brown* to the effect that (347 U.S. at 494):

> To separate [Negro pupils] from others of similar age and qualifications solely because of their race generates

> a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone.

The issue before the Court in that case was "the effect of segregation itself on public education" (at 492). The Court said (at 493):

> We come to the question presented: Does segregation of children in public schools solely on the basis of race, even though the physical facilities and other "tangible" factors may be equal, deprive the children of the minority group of equal education opportunities? We believe that it does.

As we noted above, the decision had the effect of equating state action that classified by race with a denial of equal protection.

The Court reached this conclusion in the context of deliberate imposition of a dual system by the school authorities. But it certainly did not hold that the constitutional prohibition of racial segregation is limited to segregation deliberately imposed by public authority. In fact, this Court accepted the finding that "Segregation of white and colored children in public schools has a detrimental effect upon the colored children. The impact is *greater* when it has the sanction of the law" (347 U.S. at 494; emphasis added).

This language does not permit the conclusion that this Court was drawing a line, for constitutional purposes, based on whether the segregation had formal state sanction. This conclusion is reenforced by the fact that this Court, in concluding that "separate educational facilities are inherently unequal," relied on authorities that support that

conclusion regardless of the origins of the segregation. 347 U.S. at 494, footnote 11. When the six references in this footnote are examined, it appears that, in four of the six, nothing limits the finding to the case of deliberate official segregation.

The first authority cited is K. B. Clark, "Effect of Prejudice and Discrimination on Personality Development" (Mid-Century White House Conference on Children and Youth, 1950). This is a study showing that existing practices of segregation and discrimination damage the personality development of children. Its results do not depend in any way on whether the segregation found to be harmful has official sanction.

In the second authority, Witmer and Kotinsky, "Personality in the Making" (1952, c. VI), the chapter cited is entitled, "The Effects of Prejudice and Discrimination." It is in no way restricted to legally enforced segregation; indeed, that concept, is not even considered. On the other hand, the harmful effects of the kind of segregation involved herein is specifically noted in the following passage (at pages 136-7):

> Nevertheless, there are rural areas and sections of large cities in which Negroes and Mexicans, for example, rear their children considerably apart from others, and in which tradition gives stability to life. For children brought up in such circumstances the early stages of personality development are probably passed through with relative equanimity, so far, at least, as the influence of prejudice and discrimination is concerned.

> Difficulties for children so reared come when they leave home or when they move out of the close family circle to mingle with other youths in small towns and cities. Such a change is likely to take place at adolescence, the time at which a sense of identity should be in the making. Sudden exposure to the fact that they are not considered as good as other people is very disrupting to personality development.

The next two works cited are Deutscher and Chein, "The Psychological Effects of Enforced Segregation: A Survey of Social Science Opinion," 26 J. Psychol. 259 (1948), and Chein, "What Are the Psychological Effects of Segregation Under Conditions of Equal Facilities" (3 Int. J. Opinion and Attitudes Res. 229 (1949)). These studies were concerned only with "enforced segregation"; hence, they neither support nor negate the proposition that segregation not resulting from official action is likewise harmful.

Brameld, "Educational Costs," in *Discrimination and National Welfare* (MacIver, ed., 1949), 44-48, is similar to the first two works cited. This author is particularly concerned with what he describes as "concomitant learnings." He says (at page 46):

> They are learnings that cause boys and girls to develop prejudice, distrust, guilt feelings; that cause them to substitute over-simplified, stereotyped thinking for honest, particularized thinking about their fellow human beings. They are learnings that do not happen so much through books as through association on playgrounds, in corridors, in swimming pools, at parties, in the everyday experiences of living association *or of non-association.* (Emphasis supplied.)

The author concludes his recommendations for action (page 48):

> Finally, and perhaps most imperative, let us develop much more closely than we have thus far as an audacious conception of education which flows with the magnetic vision of an order in which all people are at last equal and free, not merely in theory, but in every aspect of day by day practice.

The portion of the sixth authority cited, Frazier, *The Negro in the United States* (1949), 674-681, is entitled, "Effects of Discrimination on the Negro." It is in no way restricted to enforced segregation. Indeed, it contains some observations squarely applicable here. Thus, the author states (page 677):

> One of the truly remarkable phases of race relations in the United States is the fact that whites and Negroes do not know each other as human beings. * * * Nor has the Northern white known the Negro since he has only reacted to a different stereotype. White Americans do not know Negroes for the simple reason that race prejudice and discrimination have prevented normal human intercourse between the two races.

The last sentence in the preceding quotation has particular significance for one aspect of this case. The school board has suggested that the separation of Negro and white children in Denver schools is merely the unfortunate result of race prejudice and discrimination, manifest in the form that restricts Negroes in the sale and rental of housing. As Frazier makes clear, the resulting segregation is harmful. The *Brown* decision in turn establishes that this harm is compounded when the pattern of segregation extends to the public schools.

School authorities have the obligation to avoid or minimize the harmful effects of school segregation. This obligation is an important factor to be considered in establishing construction policies and attendance zones. This the Denver school board has clearly failed to do. It is hardly reasonable to suggest that the Negro children in the Denver schools must continue to suffer the resulting harm merely because the school board did not expressly order that they go to segregated schools.*

Frequently the distinction is made between segregation imposed by the school board and segregation merely tolerated by the school board. But it is neither just nor sensible to proscribe segregation having its basis in affirmative state action while at the same time failing to provide a remedy for segregation which grows out of discrimination in housing, or other economic or social factors.

The students involved in this action are in a publicly supported, mandatory state educational system. They must have the civil right not to be segregated, not to be compelled to attend a school in which all of the Negro children are educated separate and apart from anywhere from 70% to 99% of their white contemporaries.

The Denver situation *is* segregation by law, the law of the school board. It formulates attendance policies; it makes decisions as to school sites; it assigns teachers to

* School authorities "have the affirmative duty under the Fourteenth Amendment to bring about an integrated, unitary school system in which there are no Negro schools and no white schools—just schools. Expressions in our early opinions distinguishing between integration and desegregation must yield to this affirmative duty being now recognized." *U.S.* v. *Jefferson County Board of Education*, 380 F.2d 385, 389 (5th Cir. 1967), cert. den., 389 U.S. 840.

various schools. In light of Judge Doyle's findings, the continuance of the board's policies amounts to nothing less than state-imposed segregation.

The lower Federal and state courts have increasingly recognized that whatever a school system does is state action and that "de facto" is a term used to justify avoidance by school boards of their responsibilities. Cf. *Barksdale, supra; Hobson, supra; Blocker* v. *Board of Education of Manhasset*, 226 F. Supp. 208 (E.D.N.Y. 1964); *Jackson* v. *Pasadena City School District*, 59 Cal. 2d 871, 31 Cal. Rptr. 606, 382 P. 2d 878 (1963); *Branche* v. *Board of Education of Hempstead*, 204 F. Supp. 150 (E.D.N.Y. 1962); *Booker* v. *Board of Education of Plainfield*, 45 N.J. 161, 212 A. 2d 1 (1965); *Brewer* v. *School Board of the City of Norfolk*, 397 F. 2d 37 (4th Cir. 1968); *Spangler* v. *Pasadena City Board of Education*, 311 F. Supp. 501 (C.D. Cal. 1970), aff'd 427 F. 2d 1352 (9th Cir. 1970); *Crawford* v. *Board of Education of the City of Los Angeles*, Civil Docket No. 822-854 (Superior Court for County of Los Angeles, Feb. 11, 1970); *Bradley* v. *Milliken*, 433 F. 2d 897 (6th Cir. 1970), 438 F. 2d 945 (6th Cir. 1971), Civil Action No. 35257 (E.D. Mich. Sept. 27, 1971).

The *Blocker* case, *supra*, involved the action of a school board in New York in simply continuing an attendance pattern wherein all of the black elementary school children went to one school while virtually all of the white elementary school children attended two others. The Court said (226 F.Supp. at 223):

> The Fourteenth Amendment does not cease to operate once the narrow confines of the Brown-type situation are exceeded; the Supreme Court has made it clear that

it is the duty of the courts to interdict "evasive schemes for segregation whether attempted 'ingeniously or ingenuously.'" Cooper v. Aaron, 358 U.S. 1, 17, 78 S.Ct. 1401, 1409, 3 L.Ed. 2d 5 (1958), and has reaffirmed that objective in a recent decision on the subject. See Goss v. Knoxville Board of Education, 373 U.S. 683, 83 S.Ct. 1405, 10 L.Ed. 2d 632 (1963). Viewed in this context then, can it be said that one type of segregation, having its basis in state law or evasive schemes to defeat desegregation, is to be proscribed, while another, having the same effect but another cause, is to be condoned? Surely, the Constitution is made of sturdier stuff.

The recent decision in *Spencer* v. *Kugler*, 326 F. Supp. 1235 (N.D. N.J. 1971), aff'd without opinion, 92 S. Ct. 707 (1972), might be viewed as inconsistent with this trend, since its effect was to leave a segregation situation undisturbed. However, *Spencer* is distinguishable from the instant case on two points. First, plaintiffs there sought to impose a state-wide desegregation plan across city and district lines. The court held that municipal lines were a reasonable standard for setting up school districts. 326 F.Supp. at 1240. Plaintiffs in the instant case are concerned with one district and one municipality only. Secondly, plaintiffs in *Spencer* sought to establish racial balance in the schools. Plaintiffs in the instant case are not seeking this. They do not ask for a certain ratio of black and white children but only the elimination of segregated schools.

More consistent with the current trend in the lower courts is the recent case of *Davis, supra*, which resembled more clearly the case at bar. The school board in Pontiac had engaged in a series of discriminatory practices, such as placing teachers in schools according to race and locating

new schools in such a manner so as to perpetuate existing segregation rather than remedy it. The court ruled that school districts may be held accountable for the natural, probable and foreseeable consequences of their policies and practices and that, where racially identifiable schools are the result of such policies, the school authorities bear the burden of showing that the policies are based on educationally required, nonracial considerations.

POINT THREE

Any desegregation plan must encompass the entire school district and not merely isolated schools.

The outgoing Denver school board recognized serious deficiencies in many of the Denver schools, particularly the existence of segregation throughout most of the system. As a corrective measure the board passed Resolutions 1520, 1524 and 1531. The new board rescinded those plans but the District Court ordered them reinstated (App. 44a).

Amici urge that these plans, even if put into effect, are insufficient because they focus on only the all- or virtually all-Negro and Hispano schools.

In *Alexander* v. *Holmes County Board of Education*, 396 U.S. 19, 21 (1969), this Court noted that desegregation plans must be designed to insure "a totally unitary school system for all eligible pupils without regard to race or color." A system can be said to be unitary when the schools are no longer racially identifiable. *Robinson* v. *Shelby County Board of Education*, 330 F. Supp. 837 (W.D.

Tenn. 1971). There *are* virtually two separate school systems within the Denver school district. Judge Doyle noted that at least fifteen schools had Negro-Hispano populations of over 70% (App. 76a). Moreover, 73.5% of all the white students in the system attend schools which are over 75% white (Pet. for Cert. p. 4). These schools are racially identifiable and, surely, a system-wide solution is called for.

Even historically separate school districts, where shown to be created as part of a state-wide dual school system or to have cooperated in the maintenance of such a system, have been treated as one for purposes of desegregation. *Haney* v. *County Board of Education of Sevier County*, 410 F. 2d 920 (8th Cir. 1969); *United States* v. *Crockett County Board of Education*, Civ. Action 1663 (W.D. Tenn., May 15, 1967). The situation in Denver is tantamount to a dual system within the same district. Hence, it is more clearly necessary to treat its schools uniformly.

A further example is the case of *Pate* v. *Dade County School Board*, 434 F. 2d 1151, 1153 (5th Cir. 1970), cert. den. 402 U.S. 953 (1971), where a desegregation plan which left twenty-two schools all- or virtually all-Negro was found "unacceptable". The case is analogous to Denver because the solution proposed by Judge Doyle would leave the schools in northeast Denver all- or virtually all-Negro and Hispano.

In *United States* v. *Watson Chapel School District No. 24*, 446 F. 2d 933 (8th Cir. 1971), a freedom of choice plan was found unconstitutional where 94% of Negroes stayed in all-Negro schools. The Denver percentage may not be quite as high, but the principle is the same.

When this Court issued its decision in the *Brown* case, applicable to four separate school systems, it did not direct the lower courts to search the record to determine which part of each system had been affected by the statutorily imposed requirement of segregation. It was taken for granted that the corrective measures to be imposed would apply to each system as a whole. Since then, desegregation cases, whether *de jure* or *de facto*, have resulted in system-wide desegregation plans. See, e.g., *Davis* v. *School District of City of Pontiac, supra; Dandridge* v. *Jefferson Parish School Board*, 332 F. Supp. 590 (E.D. La. 1971).

The principle that arises out of the cases cited above, we submit, is that the pool of resources for the correction of unconstitutional segregation in a school district is the whole district—not just the particular part where the impact of a segregation policy was shown. If correction of past illegal segregation cannot be achieved without involving the whole district, the whole district must be involved.

This is fully borne out by this Court's most recent decision on the scope of remedy in desegregation cases, *Davis* v. *Board of School Commissioners of Mobile County*, 402 U.S. 33 (1971). That case involved a challenge to a desegregation plan which treated the City of Mobile as if it were two cities. The eastern portion of Mobile had a 94% Negro population and the schools were 65% Negro; in the western part of the city, the schools were 88% white. The desegregation plan treated each area separately, leaving nine elementary schools in the east 90% Negro and over half of the junior high and senior high school Negro students in all- or virtually all-Negro schools. This Court said (at 38):

On the record before us, it is clear that the Court of Appeals felt constrained to treat the eastern part of metropolitan Mobile in isolation from the rest of the school system, and that inadequate consideration was given to the possible use of bus transportation and split zoning. For these reasons, we reverse the judgment of the Court of Appeals as to the parts dealing with student assignment, and remand the case for the development of a decree "that promises realistically to work and promises realistically to work *now*." *Green* v. *County School Board*, 391 U.S. 430, 439 (1968).

There is nothing novel about the concept that measures designed to remedy racial discrimination may appropriately apply to all of the operations of the discriminator. Administrative agencies enforcing antidiscrimination laws do not confine their remedial orders to the narrow area affected by a particular act of discrimination. The owner of an apartment house who has illegally denied an apartment to an applicant because of his race is not told merely to stop discriminating with respect to that apartment. He is barred from discriminating with respect to the entire building. Normally, indeed, he must keep the antidiscrimination agency advised of vacancies in other apartments so as to ensure that the complainant or other applicants of the same race are given an opportunity to obtain suitable accommodations. Analogous procedures are used in the case of an employer who violates a fair employment law. His entire payroll is reviewed and kept under supervision to ensure that the administrative agency's corrective order effectively terminates discrimination throughout the operation.

So, here, effective action against the unconstitutional discrimination found by the trial court requires action dealing effectively with segregation throughout the school sys-

tem operated by the respondents. Nothing less, we submit, would achieve desegregation.

Desegregation orders rest on the conclusion, aptly stated by Judge Wright in *Hobson, supra* (269 F. Supp. at 504-5) that:

> Segregation "perpetuates the barriers between the races; stereotypes, misunderstandings, hatred, and the inability to communicate are all intensified." (Footnote omitted.) Education, which everyone agrees should include the opportunity for biracial experiences, carries on, of course, in the home and neighborhood as well as at school. In this respect, residential segregation, by ruling out meaningful experiences of this type outside of school, intensifies, not eliminates, the need for integration within school.

We submit that comprehensive segregation would not be the result of the plan for the City of Denver approved by the court below. The result will be, rather, continued segregation and the maintenance of all-Negro and all-white schools. We believe that, for the reasons stated above, this Court should not stop short of a solution that encompasses the entire Denver school system.

Conclusion

Even on the narrowest grounds, this Court should reverse the Court of Appeals. There is clear evidence here of unequal facilities in at least 15 of the Denver public schools and, under any standard of Equal Protection, these schools require remedial attention.

But this case goes farther than that. Nearly 18 years ago, this Court condemned racial segregation in public

education and ordered its elimination. These rulings dealt with the hard fact that Negro students in predominantly Negro schools get an education which is inferior to the education which they would receive, and which white students do receive, in schools that are integrated or predominantly white.

Whom are we dealing with here? In Denver, we are dealing largely with children in grades kindergarten through 6, i.e. from age 5 to 12. They are not capable of distinguishing between the total separation of all Negroes pursuant to a State statute based on race and the almost identical situation prevailing in their schools by reason of school districting and other policies followed by respondents. Simply stated, *amici* urge this Court to recognize that the operation of a public school system is state action and that, when a school system tolerates separation of the races and the resulting offering of inferior education, there is a denial of equal protection to the isolated minority group students.

We urge this Court that it is time to declare that, as to schools operated by public agencies, there is no such thing as *de facto* segregation. The segregation in the Denver schools stems from state action in one form or another. *"De facto"* is merely a term invented to justify school boards in ignoring the racial consequences of their actions.

Approval now of the *de facto-de jure* distinction would undermine 18 years of progress in the educational field since *Brown*. It would defeat attainment of the goal implicit in this Court's decisions since *Brown*—to protect school children and offer them as equal an education as possible within a given district. The statutes and regulations explicitly requiring dual systems have disappeared.

Yet segregated and therefore unequal educational opportunities within the same city and within the same districts still exist. And they exist despite the knowledge by local school boards that their actions intentionally or inadvertently, but necessarily, maintain and widen the educational gap between the races. This Court can make it clear in this case that the Constitution bars this manifestation of inequality in public affairs, as it bars all others.

For the reasons stated above, we respectfully submit that the decision below should be reversed.

No. 71-507

WILFRED KEYES, et al., *Petitioners,*

vs.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, et al.,
Respondents.

On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit

MOTION FOR LEAVE TO FILE BRIEF AMICUS CURIAE

The Mexican American Legal Defense and Educational Fund moves this Honorable Court for leave to file the attached Brief Amicus Curiae.

Petitioners' attorney has granted consent for the filing of this brief. The consent of Respondents' attorney was requested but refused.

The Mexican American Legal Defense and Educational Fund (MALDEF) is a non-profit corporation organized under the laws of the State of Texas whose

purpose is the protection of the civil rights of Spanish surnamed people in the Southwest. In pursuance of this purpose MALDEF has represented clients in matters involving employment discrimination, voting rights, and public accommodations discrimination. However, it is in the area of improving the educational process that MALDEF has devoted much of its resources.

Although *Mendez v. Westminster School District*, 64 F.Supp. 544 (C.D. Cal.) aff'd 161 F.2d 774 (9th Cir. 1947) held that school segregation against Chicanos* violated the equal protection clause, there has never been a holding by this Court to that effect. The Chicano community in the Southwest continues to attend segregated inferior schools.

This community believes that a quality educational program in an integrated setting provides the only hope for equal educational opportunity. As a result of this mandate MALDEF is counsel for Chicano parents and children in lawsuits throughout the Southwest including Dallas, Houston, Austin, El Paso and New Braunfels, Texas; Fullerton, California; Glendale, Arizona; Portales, New Mexico. These cases attack segregated schools and discriminatory treatment. Consequently, the whole Chicano community and MALDEF are vitally interested in the outcome of this case.

---

*Hispano is the word used in the record to denote Spanish speaking people in Denver. However, Chicano is the preferred name for Spanish speaking people in the Southwest.

MALDEF requests permission to file this brief in order to present an issue only touched upon by Petitioners; why Chicanos are an identifiable class for Fourteenth Amendment purposes. In addition, Amicus believes the constitutional wrongs which Chicanos have suffered over the years need elucidation before this Court.

Wherefore, MALDEF prays that this Court grant leave to file the attached Brief Amicus Curiae.

Dated, May 4, 1972.

Respectfully submitted,

MARIO G. OBLEDO,
MICHAEL MENDELSON,
ALAN EXELROD,
Attorneys for Amicus Curiae.

On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit

BRIEF AMICUS CURIAE

INTEREST OF THE AMICUS CURIAE

The Mexican American Legal Defense and Educational Fund is a non-profit corporation established in 1968 under the laws of the State of Texas. Its purpose is to represent Spanish surnamed people in the Southwest whose civil rights are being violated. MALDEF offices are located in San Francisco, Los Angeles, San Antonio and Denver.

A primary goal of the organization since its inception has been to end the patterns of ethnic isolation and inferior schools that pervade the Southwest. To

this end MALDEF is representing clients throughout the Southwest. See the Motion for Leave to File an Amicus Brief. Since it is likely that these cases will be strongly affected by the outcome of this case, MALDEF has an immediate direct interest in this lawsuit.

SUMMARY OF THE ARGUMENT

Amicus curiae make the following argument:

Chicanos in the Southwest are subject to deeply ingrained patterns of economic, political and educational discrimination. As a result, they are entitled to be considered an identifiable class for equal protection clause purposes. The demographic data and the evidence in this record prove that Chicanos in Denver have been discriminated against in this traditional Southwestern manner.

The District Court erred in refusing to find that Chicanos had been segregated by policies and practices of the Denver school district. The record showed a consistent unlawful pattern of discrimination in student and faculty assignment practices. The District Court correctly ruled that inequalities in education existed at minority schools. However, it erred in distinguishing between schools that had over 70% of one minority and schools that had over 70% of the two minorities, Negro and Chicano, for purposes of relief. The purposes of desegregation are not accomplished by integrating two economically and educationally disadvantaged minority groups.

The Court of Appeals erred by rejecting the equalization plan adopted by the District Court. The District Court's plan in regard to Spanish language training, teaching of Chicano culture and use of teacher aides was an appropriate use of his equitable powers to correct a proven constitutional wrong.

ARGUMENT

I. INTRODUCTION

The Chicano[1] is the forgotten minority.[2] He is the largest minority group in the Southwestern United States. He is the field hand. He is the janitor. Much as the Negro was forceably made part of this nation as a slave and still today bears the badges of this servitude, *Jones v. Albert Mayer & Co.*, 392 U.S. 409 (1968), so too were Chicanos forceably made part of this nation—they were the vanquished remnants, conquered heirs of the Spanish Conquistadores. Their vanquishment has made them exiles in their own land —the dominant Anglo[3] society has treated them as second class citizens.

Chicanos in Denver and the Southwest generally receive an inferior education, suffer occupational discrimination, and are deprived of crucial political rights and power that would allow them to change

---

[1]Hispano is the word used in the record to denote Spanish speaking people in Denver. However, Chicano is the preferred name for Spanish speaking people in the Southwest.

[2]The Southwest for purposes of this brief includes Arizona, California, Colorado, New Mexico and Texas.

[3]An Anglo is a non-Spanish surnamed member of the Caucasian race.

their socio-economic status through the political process. The opinion of the courts in this case does not overtly describe this exclusion of the Chicano. The purpose of this brief is to inform the Court of the plight of the Chicano and to help the Court understand why the remedies of desegregation and equalization are so important to him.

II. CHICANOS COMPRISE AN IDENTIFIABLE CLASS FOR PURPOSES OF THE EQUAL PROTECTION CLAUSE OF THE FOURTEENTH AMENDMENT

A. The Chicano in the Southwest Has Suffered Social, Economic and Political Discrimination

The Chicano has been subjected to the traditional methods used to create second class citizenship. He has been segregated in swimming pools,[4] hospitals,[5] movie theaters,[6] toilet facilities.[7] Racial and ethnic restrictive covenants in real estate deeds regularly included Chicanos.[8] The result was segregated barrios[9] and little opportunity to move into Anglo neighborhoods.

The administration of justice has been infected with the evil of second class citizenship for the Chi-

[9]That part of town where Chicano homes are concentrated.

cano.[10] The Texas Rangers hired their first Chicano two years ago. There are few Chicano district attorneys, judges,[11] or even law students.[12] Employment discrimination has been documented extensively.[13]

Political rights were for a long period suppressed but only recently have the courts opened up the political process.[14]

It is in the area of education that the Chicano suffers extraordinary deprivation. Segregation practices are widespread.[15] The reasons for the discrimination are much like those used to justify segregation

Tex. 1970).

[14]Texas had a poll tax which keep the Chicano poor from the polling place, *U. S. v. Texas*, 252 F.Supp. 234 (W.D. Tex. 1966) and a restrictive registration procedure which excluded Chicanos, *Beare v. Smith*, 321 F.Supp. 1100 (S.D. Tex. 1971). California had literacy requirements which prevented even those fully literate in Spanish from voting, *Castro v. State*, 3 Cal.3rd 223, 466 P.2d 244 (1970). Arizona similarly had stringent literacy requirements. Ariz. Revised Stat. §16-101. See also *Regester v. Bullock*, U. S. District Court for the Western District of Texas, No. A-71-CA-143 (Holding multi-member state representative districts discriminated against Chicanos).

[15]For information about the isolation of Chicano school children see U. S. Commission on Civil Rights, *Mexican American Study Project Report No. 1;* Salinas, Guadalupe, Mexican Americans and the Desegregation of Schools in the Southwest, 8 Houston L.R. 929 (1971); Hearings before the Select Committee on Equal Educational Opportunity of the U. S. Senate, 91 Congress Second Session, Part 4, Mexican American Education, Aug. 18-21, 1970.

in the South.[16] The result of this segregation with its creation of inferior status has been a dismal record of achievement in the schools. In 1960 in the Southwest the median years of school of Chicanos 25 years and older was 7.1 as compared to 12.1 for Anglos and 9.0 for non-whites.[17] Drop-out rates for Chicanos even today are considerably higher than for any other racial or ethnic group.[18] Later portions of this brief will reveal that the Denver school system fits too easily into this Southwestern pattern of segregation and inferior education.

The Chicano is living this legacy of a conquered people. Applying the words of a Texas Federal Court to the Southwest generally:

> "Because of long standing, educational, social, legal, economic, political and other widespread and prevalent restrictions, customs, traditions, biases and prejudices, some of a so-called de jure and some of a so-called de facto character, the Mexican American population of Texas . . . has historically suffered from and continues to suffer from, the results and effects of invidious discrimination and treatment in the fields of education, employment, economics, health, politics and others."[19]

B. The Courts Have Held Chicanos To Be A Class Protected By The Equal Protection Clause

This Court, shortly before deciding the landmark case for Negro Americans, *Brown v. Bd. of Education*, 347 U.S. 483 (1954), recognized for the first time that Chicanos are also entitled to Fourteenth Amendment protections. In *Hernandez v. Texas*, 347 U.S. 475 (1954), the total exclusion of Chicanos from grand juries was proven. The Court in finding this unconstitutional stated:

> "Throughout our history differences in race and color have defined easily identifiable groups which have at times required the aid of the courts in securing equal treatment under the law. But community prejudices are not static, and from time to time other differences from the common norm may define other groups which need the same protection. Whether such a group exists within a community is a question of fact. When the existence of a distinct class is demonstrated, and it is further shown that the laws, as written or as applied, single out that class for different treatment not based on some reasonable classification, the guarantees of the Constitution have been violated. The Fourteenth Amendment is not directed solely against discrimination due to a 'two-class' theory—that is, based upon differences between 'White' and 'Negro'." 347 U.S. at 478.

The Chicano community was at first slow to use the potent combination of *Hernandez* and *Brown* to remedy the pervasive discrimination described in Section II A above. But in recent years, one court after another has held that the constitutional guarantees of

the Fourteenth Amendment apply to Chicanos no less than to Negroes. For example, the *Hernandez* rule regarding discrimination against Chicanos in the composition of grand juries has been applied to a large Texas city, *Muniz v. Beto,* 434 F.2d 697 (5th Cir. 1970). Chicano political rights are now being protected under the Fourteenth Amendment, see *Regester,* supra, Note 14, *Castro v. State,* supra, Note 14. Employment discrimination under Title VII of the Civil Rights Act of 1964 has been proven, see cases cited in Note 13, supra.

Because education is at the root of many of the socio-economic problems of the Chicano, there has been considerable litigation attempting to undo school segregation. Courts have been most diligent in elaborating upon the reasons for considering Chicanos an identifiable class for equal protection purposes in these cases. In *Cisneros v. Corpus Christi I.S.D.,* 324 F.Supp. 599, 607 (S.D. Tex. 1970) appeal pending, the Court observed:

> ". . . [I]t is clear to this Court that these people for whom we have used the word Mexican Americans to describe their class, group, or segment of our population, are an identifiable ethnic minority in the United States, and especially so in the Southwest [and] in Texas . . . This is not surprising; we can notice and identify their physical characteristics, their language, their predominant religion, their distinct culture, and, of course, their Spanish surnames. And if there were any doubt in this court's mind, this court could take notice, which it does, of the congressional enactments, government studies and commissions on this problem."

See also *U.S. v. Texas,* U.S. District Court for the Eastern District of Texas, No. 5281 (E.D. Tex. 1971); *Soria v. Oxnard School District Board of Trustees,* 328 F.Supp. 155 (C.D. Cal. 1971); *Alvarado v. El Paso Independent School District,* 445 F.2d 1011 (5th Cir. 1971). Even where courts have refused to find that de jure segregation has been practiced against Chicanos, they have held that Chicanos are an identifiable minority group, cf. *Tasby v. Estes,* U.S. District Court for the Northern District of Texas, No. 3-4211-C, appeal pending. *U.S. v. Texas Education Agency* (Austin I.S.D.), U.S. District Court for the Western District of Texas, No. A-70-CA-80, appeal pending.[20]

The legal reality of the Chicanos' situation in the Southwest has seen courts remedy past legal deprivation only recently. Political, economic and educational freedoms have only now begun to receive constitutional protection by the courts. A holding that Chicanos are not a separate identifiable class would have widespread repercussions in all areas of the law as it is developing in the Southwest. For these reasons Amicus urge this Court to reaffirm *Hernandez*; to hold that Chicanos are, historically, a deprived class, and are thereby, an identifiable group, entitled to receive protection under the Fourteenth Amendment.

---

[20]School financing systems have also discriminated against Chicanos. *Rodriguez v. San Antonio I.S.D.*, 337 F.Supp. 280, 282 (W.D. Tex. 1972) appeal pending U. S. Supreme Court. See also *Chance v. Bd. of Examiners*, 330 F.Supp. 203 (S.D.N.Y. 1971) aff'd ___ F.2d ___ (2nd Cir. 1972) where an examination for an administrative position in the public schools was held to discriminate against Puerto Ricans.

III. CHICANO STUDENTS HAVE BEEN SEGREGATED AND DENIED AN EQUAL EDUCATIONAL OPPORTUNITY IN THE DENVER SCHOOL SYSTEM AND THEREFORE APPROPRIATE REMEDIES MUST BE CREATED TO ALLEVIATE THIS DENIAL OF EQUAL PROTECTION.

A. Chicanos In The State of Colorado And The City of Denver Have Suffered The Same Discriminatory Treatment As Chicanos In Other Parts of The Southwest

The most comprehensive study about the condition of the Chicano in Colorado ever written concludes:

"In general, the average Spanish surnamed resident of Colorado belongs to most of the following minority groups and possesses the traits associated with these groups.

1. The poor;
2. The poorly educated;
3. The unhealthy;
4. The victims of discrimination;
5. The illhoused;
6. The rural folk;
7. The Spanish-Mexican-American tradition;
8. The law violator;
9. The legally unprotected;
10. The politically unrepresented."[21]

These conclusions are borne out by the available data.

In the area of employment, Chicanos are underrepresented at all levels of the job rolls and over-

---

[21] Colorado Commission on Spanish-Surnamed Citizens, *Report to the Colorado General Assembly: The Status of Spanish Surnamed Citizens in Colorado*, Jan. 1967, p. 15.

represented on the unemployment rolls.[22] "Employment rosters within Colorado public institutions generally show a very low incidence of Spanish-surnamed employees." "It is clear from this data [on municipalities] that the Spanish-surnamed population is extremely under-represented in public employment in general."[23] A recent study shows that in Denver the same pattern prevails. Although 9.3% of the total work force in three of the most important industries in Denver are "Officials and Managers", only 1.3% of the Chicanos are in this category. 82% of employed Chicanos in these industries are in blue collar jobs, nearly twice the percentage in the total work force.[24]

Health conditions reveal "a serious differential between the Spanish-surnamed and the general population."[25] Mortality rates show that Chicanos die on an average of ten years earlier than the rest of the population.[26]

Housing segregation in Denver is acute and is worse than the Southwest generally.[27]

B. Chicanos Have Been Segregated and Denied An Equal Educational Opportunity in Denver

The education afforded Chicano students in the defendant school district mirrors the inferior educa-

tion provided in the Southwest generally. Ethnic isolation and unequal treatment pervade the Denver school system.

Chicanos are in large part isolated from the majority Anglo community. Several schools are almost totally Chicano (App. 2040a). Many Chicano children attend school with Negroes, the other disadvantaged minority in Denver. 31.6% of Chicano elementary students attend schools that are over 75% minority (App. 2038a). 28 out of 93 elementary schools in the district are over 50% minority (App. 2040).

The sources of this racial and ethnic isolation are the policies and practices of the defendant school district. The district assigned minority faculty to minority schools because the Anglo community refused to permit these teachers in the Anglo schools (303 F.Supp. at 294). The district maintained a neighborhood school policy that was shot through with optional zones to allow Anglo children to escape minority schools. The district constructed the predominantly minority New Manual High School with just enough capacity to insure that it would remain a minority school. The district maintained enrollment at minority schools under capacity while overcrowding Anglo schools to avoid mixing the two groups (313 F.Supp. at 71).

Whatever nonracial explanations are conjured up for these actions, the simple fact remains, the operative effect of the school board assignment policies was to exclude Negroes and Chicanos from Anglo schools and to place Negroes and Chicanos together in predominantly minority schools.

Along with segregation, the school district provided distinctly unequal educational opportunities for minority students.

Looking first to teacher assignment policies, the record reflects that in 1968: 1. The minority schools had almost twice as many probationary teachers as the Anglo schools (App. 2062a); 2. The minority schools had less than one half as many teachers with 10 or more years experience in the Denver public schools than the Anglo schools (App. 2064a); 3. The median years of Denver public school experience of teachers in minority schools was less than half that of Anglo schools (App. 2066a).

Turning next to physical facilities, Anglo schools are on the average half the age of minority schools (App. 2070a). Although these schools were built at a time when there was much more land available in urban areas than at present, minority schools have considerably less land per child than Anglo schools (App. 2068a).

In the area of curriculum, the Voorhees Report (Plaintiff's Exhibit 20) implies that the existing uniform curriculum throughout the school system met the needs of the Anglo majority but not the needs of the disadvantaged minorities. The same treatment in this case was in fact "unequal" treatment.

The results of this disparity in treatment are predictable. Achievement levels at the minority schools fall far below those at the Anglo schools at every stage of the education process.

STANFORD ACHIEVEMENT TESTS, APRIL 1969
MEAN SCORES BY SCHOOL AND GRADE
(APP. 2102a, 2104a)

	GRADE LEVEL AT WHICH TESTS WERE ADMINISTERED				
	2.6	3.6	4.6	5.6	6.6
Average Grade Level Score for Minority Schools	2.27	2.85	3.58	4.42	4.91
Average Grade Level Score for Anglo Schools	3.12	4.26	5.44	6.53	7.01

One need only compare Plaintiff's Exhibit 375 (App. 2094a) with Plaintiff's Exhibit 372 (App. 2088a), which show that achievement levels at the minority schools in Northwest Denver are considerably lower than at Anglo schools in the Southwest, to understand fully the impact of unequal educational opportunity.

If more proof is necessary, let us check the ultimate test of a school system, the extent to which students complete high school. It is here that the human tragedy resulting from unequal treatment and low achievement are reflected. The Chicano drops out earlier and in greater numbers in Denver than either of the other two groups. By seventh grade some Chicano students are lost from the schools and by twelfth grade, the exodus is a torrent.

SCHOOL POPULATION STATISTICS BY RACE AND ETHNIC ORIGIN FOR 1968

	Chicano		Negro		Anglo		Other	
	No.	%	No.	%	No.	%	No.	%
Sr. High School (Grades 10-12)	2,996	12.8	2,447	10.4	17,821	76.1	160	.7
Jr. High School (Grades 7-9)	3,629	19.5	2,888	15.5	11,886	64.0	173	1
Elementary School (K-6)	11,986	22.0	8,304	15.2	33,678	61.7	608	11

(These figures are from App. 2038a).

Amicus has demonstrated that Chicanos in the Southwest are subject to the same kind of overt and subtle differences in treatment as Negroes in this country. The discrimination documented above proves that the Denver school system is but a microcosm of the educational system of the Southwest.

C. The Trial Court Correctly Found That Inequalities Existed In The Minority Schools, But It Also Should Have Ruled That Racial And Ethnic Isolation Was Caused By School District Policies and Practices

The trial court concluded that except for those schools dealt with in the 1969 school board resolutions, nonracial explanations for ostensibly segregating practices prevented a finding of de jure segregation. Amicus urges this Court to reverse this finding. Racial and ethnic motivations pervaded the decisions of the Denver school board. The evidence on inequalities in school services is self-explanatory. The trial court additionally found that the school board was aware of the effect of its policies but practiced "eye-closing" and "head-burying" (313 F.Supp. at 76) to avoid integration. Further, the Court found that the decisions of the school board were dictated by a consensus of the community (313 F.Supp. at 73). However, this controlling Anglo[28] consensus was in part responsible for the existing housing segregation.[29] Because the primary contributors to the consensus were those who helped establish segregated housing patterns, their intent to segregate should be imputed to the board.

---

[28]Negroes and Chicanos never seemed to be a part of this consensus. (313 F. Supp. at 70, 71)

[29]"[I]f cause or fault has to be ascertained it is that of the community as a whole in imposing, in various ways, housing restraints." (313 F. Supp. at 75)

In regard to unequal educational opportunities the trial court concluded:

> "The evidence in the case at bar establishes, and we do find and conclude, that an equal educational opportunity is not being provided at the subject segregated schools within the District. . . . The evidence establishes this beyond any doubt."

Amicus agrees with this determination. However, the court erred in leaving out of its list of schools those where the combined total of Negro and Chicano students was over 70% but neither of the groups was individually over 70%. The same factors of teacher turnover, inferior physical facilities, and lower achievement are present in these over 70% black and Chicano schools (App. 2122a, 2124a), and therefore the same relief should be afforded.

The Court of Appeals reversed the trial court with regard to both the desegregation and equalization remedies. It did not deny the existence of the inequalities but by using the wrong constitutional standard and disregarding these inequalities the appellate court found no state action. The error in the appellate court's reasoning is manifest and Amicus defers to Petitioners' argument on this issue (Brief of Petitioners, p. 114).

D. Comprehensive Desegregation Is An Appropriate Remedy To Correct The Existing Constitutional Wrong

After hearing extensive evidence on the issues of relief the trial court concluded:

> ". . . The only feasible and constitutionally acceptable program—the only program which fur-

nishes anything approaching substantial equality —is a system of desegregation and integration which provides compensatory education in an integrated environment" (313 F.Supp. at 96).

This decision was clearly correct and within its equitable powers.

Those reasons normally supporting desegregation as a remedy exist in full force in Denver. Students will have heterogeneous, cross-cultural experiences, physical facilities at the inferior school will improve, teacher turnover will be reduced and the psychological stigma attached to attending an inferior school will be eliminated. For the Chicano, an important additional reason exists for desegregation. He often comes to school speaking Spanish as his mother tongue. To isolate him with other Spanish speaking students as the school district has done in the Elmwood, Fairmont and Fairview Elementary Schools deprives him of the opportunity to use his adopted language, English. That is not to say that his retention and development of Spanish should not be encouraged; however, he will never receive a balanced language learning experience in his most crucial years unless he is placed in a position to use Spanish on a regular basis. Oftentimes the only chance he has to speak English is at school because at home, the language in common use is Spanish.

The evidence in the record supports desegregation as a remedy for Chicanos. The testimony of Dr. James Coleman, author of *Equality of Educational Opportunity*, found that both Chicanos and blacks did better

in a school with students of diverse socio-economic backgrounds. (App. 1534a).

Amicus strongly supports the position of Petitioners that the trial court should have ordered system-wide desegregation. Excluding two race inferior schools from relief is simply not a decision grounded on the reality of Denver. Chicanos and blacks need cross-cultural interaction with Anglos, the dominant community in Denver. Maintaining minority schools continues the stigma attached to the schools. Teachers will continue to want to escape, physical facilities will remain inferior and peer group high-achievers will remain absent from these schools. Placing two economically and educationally disadvantaged groups together does not satisfy the policy underlying desegregated education. Professor Coleman found that a school population comprised of two disadvantaged minority groups is ordinarily as inferior as a school with one segregated minority, (App. 1538a).

In view of the facts set forth in Section II B of this brief, Chicanos in the district are themselves directly entitled to affirmative desegregation relief. However, even if this Court finds that the school board has practiced de jure discrimination against blacks only, with the result that blacks but not Chicanos are entitled to affirmative relief, neither sound policy nor the Fourteenth Amendment would permit treating Chicanos as Anglos nor leaving Chicanos completely out of the desegregation process.

Treating Anglos as Chicanos will result in continued segregation of minorities. Because of the proximity

of Chicano and Negro neighborhoods in Northeast Denver it will be poor Negros and Chicanos who are integrated together. Of course, none of the benefits of desegregation will accrue. The effect of such a decision will be to maintain all Anglo schools.[20]

The consequences of considering Chicanos as Anglo can be seen in the Houston desegregation litigation, *Ross v. Eckels,* 434 F.2d 1140, 1148 (5th Cir. 1970). That Court ordered 14 elementary schools paired on a black-white basis. Chicanos were considered white. The result of these pairings was that 13 of the 14 schools were over 80% minority (see Appellant's brief, *Ross, Rodriguez, U.S. v. Eckels,* U.S. Court of Appeals, No. 71-2357, appeal pending from denial of intervention to Chicano plaintiffs).

Recognizing that Chicanos are an identifiable group for equal protection purposes, but leaving them out of a black-Anglo desegregation plan results in different problems. There is the continuing stigma attached to Chicanos of going to isolated second class schools. In addition, the benefits accruing to the black, Anglo and Chicano children from the mutual understanding engendered by cross-cultural interaction would be lost.

Isolating Chicanos from blacks and Anglos also raises serious equal protection questions. No one could dispute that if a school board moving on its own initiative to end a supposedly de facto segregation situation were to desegregate blacks and Anglos to the

---

[20] *Green v. County School Board of New Kent County,* 391 U.S. 470 (1968) prescribed a realistic approach to desegregation, an approach that actually works.

exclusion of the Chicanos, it would violate the mandate of equality required by the Fourteenth Amendment. The school board would be treating a discreet, identifiable group differently without any compelling reasons for doing so.[21] It would be ironic if the courts, under the guise of remedying discrimination against one minority could permissibly discriminate against another. And the courts are not of course immune from the requirements of the equal protection clause. *New York Times v. Sullivan*, 376 U.S. 254 (1964); *Cantwell v. Conn.*, 310 U.S. 296 (1940); cf. *Shelley v. Kraemer*, 334 U.S. 1 (1948).

This Court's resolution of desegregation issues in a multicultural school district is crucial. Situations similar to Denver exist throughout the Southwest. Attorneys for Amicus are counsel in cases from Austin, Houston and Dallas, Texas.[22] Other pending litigation involves California cities such as Los Angeles and San Francisco.[23] Equal educational opportunity in America's cities requires desegregation

---

[21]Distinctions based on race and ethnicity are the archtypical classifications subject to the strict equal protection standard. *McLaughlin v. Florida*, 379 U.S. 184, 192 (1963). *Loving v. Virginia*, 388 U.S. 1, 9 (1967). See *McDonald v. Board of Election Comm'rs.* 394 U.S. 802, 807 (1969).

> "And a careful examination on our part is especially warranted where lines are drawn on the basis of wealth or race, two factors which independently render a classification highly suspect and thereby demand a more exacting judicial scrutiny."

[22]Austin, *U.S. v. Texas Education Agency*, supra, Houston, *Ross, Rodrigues U.S. v. Eckels*, supra, *Dallas, Tasby v. Estes*, supra.

[23]*Crawford v. Los Angeles Unified School District*, Superior Court of Los Angeles, California, No. 822854; and *Johnson v. San Francisco Unified School District*, U.S. District Court for the Northern District of California, No. C-70 1331 SAW (1971).

plans which realistically take account of their ethnically diverse character.

E. The Trial Court Correctly Ordered a Program For Equalization of Educational Opportunities

Both apart from and ancillary to the issue of desegregation, this Court should reinstate the District Court's order requiring the equalization of school facilities in which racial and ethnic minorities are concentrated. The record is clear that these schools are inferior to the Anglo schools, and this inequality is attributable only to action by the defendant district. As the Fifth Circuit noted in *U.S. v. Jefferson Co.*, 380 F.2d 385, 393-4 (5th Cir. 1967), the equalization of school facilities is an essential precondition to effective desegregation. But if this Court should hold that Chicano schools need not be desegregated, equalization of schools becomes all the more crucial—indeed, it then becomes the only hope for the district's Chicano children to receive a decent education.

The District Court approved a program which contains at least the following:

"1. Integration of teachers and administrative staff;

2. Encouragement and incentive to place skilled and experienced teachers and administrators in the core of city schools;

3. Use of teacher aides and para-professionals;

4. Human relations training for all School District employees;

5. In-service training on both district-wide and individual school bases;

6. Extended school years;
7. Programs under Senate Bill 174;
8. Early childhood programs such as Head Start and Follow Through;
9. Classes in Negro and Hispano culture and history; and
10. Spanish language training." (313 F.Supp. at 99.)

Spanish language training is crucial to development of a Spanish speaking child. If the language and culture that he brings to the school are rejected, his self-esteem and subsequent ability to succeed in school are adversely affected.[24] The use of teacher aides and para-professionals is of great benefit in implementation of these Spanish language programs.

The Court of Appeals reversed the District Court's equalization order in reliance on a resolution of the defendant board (445 F.2d at 1010). This was error. The constitutional rights of minority students should not depend on the good faith of a school board proven to have discriminated. Furthermore, the order of the District Court is much more particular than the resolution and provides specifically for programs for Chicanos. Finally, the school board's plan is not really a plan at all because it is dependent on the vagaries of the finances of the school district.

---

[24]Congress has recognized the need for these types of language programs. Bilingual Education Act, 20 U.S.C. Section 880.

CONCLUSION

Wherefore, Amicus Curiae prays that this Court grant the relief requested by the Petitioners and reverse the judgment of the Court of Appeals insofar as it reverses the judgment of the District Court and remand the case to the District Court with instructions that it institute a comprehensive desegregation plan for the Denver school system.

Dated, May 4, 1972.

Respectfully submitted,

MARIO G. OBLEDO,

MICHAEL MENDELSON,

ALAN EXELROD,

Attorneys for Amicus Curiae.

No. 71-507

WILFRED KEYES, *et al.*,

Petitioners,

v.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, *et al.*,

Respondents.

On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit

---

MOTION OF THE NATIONAL EDUCATION ASSOCIATION AND THE COLORADO EDUCATION ASSOCIATION FOR LEAVE TO FILE BRIEF AMICUS CURIAE

The National Education Association (NEA) and the Colorado Education Association (CEA) hereby move, pursuant to Rule 42 of the Rules of this Court, for leave to file the attached brief amicus curiae on the merits in the above entitled cause.[1] Petitioners have consented to the filing of this brief,[2] but respondents have withheld

[1] Rule 42 provides that briefs amicus shall be filed at the same time as the briefs of the party whose position they support. The brief of the petitioners was due for filing on May 1, 1972. On April 27, 1972, the Clerk of the Court, by telephone, granted the requests of movants herein, NEA and CEA, for an extension of time for the filing of this motion and the attached brief to and including May 5, 1972.

[2] The written consent of the petitioners has been filed with the Clerk.

their consent. Accordingly, NEA and CEA seek leave of the Court to file their brief.

The National Education Association is an independent, voluntary organization of educators open to all professional teachers, supervisors and administrators. It presently has over one million one hundred thousand regular members, and is the largest professional organization in the nation. NEA was first organized in 1857 and was chartered by a special act of Congress in 1906. Its statutory purpose is (34 Stat. 805)—

> to elevate the character and advance the interests of the profession of teaching and to promote the cause of education in the United States.

The Colorado Education Association, which was founded in 1875 and incorporated in 1917, is an affiliate of NEA. A principal purpose of CEA is to promote quality education. Currently CEA has some 22,000 members, of whom approximately 3,000 are employed in the Denver School District.

The overall policies of NEA are determined by its Representative Assembly, a body composed of approximately 7,000 delegates representing affiliated local and state education associations, including CEA. Similarly, CEA's policies are determined by its Delegate Assembly, which is a body of approximately 500 representatives.

Both NEA and CEA have a deep interest in achieving and assuring equality of education for the children of all races. Reflecting this concern, NEA's Representative Assembly at its 1971 Convention adopted a specific resolution on desegregation in the public schools, which provided in part (NEA, *Handbook 1971-72*, p. 68):

> The National Education Association believes it is imperative that desegregation of the nation's schools be effected. Policies and guidelines for school desegregation in all parts of the nation must be strength-

ened and must comply with *Brown* v. *Board of Education; Alexander* v. *Holmes County Board of Education, Mississippi;* other judicial decisions and with civil rights legislation.

The Association recognizes that acceptable desegregation plans will include a variety of devices such as geographical realignment, pairing of schools, grade pairing and satellite schools. These arrangements may require that some students be bussed in order to implement desegregation plans which comply with established guidelines adhering to the letter and the spirit of the law. The Association urges that all laws of this nation apply equally to all persons without regard to race or geographic location.

Similarly at its 1970 session, CEA's Delegate Assembly resolved that:

CEA urge all Colorado school districts to move to eliminate de facto segregation through increased integration. Further, that CEA provide consultative services and publicly support local associations and school boards as they pursue this goal.

NEA and CEA desire to participate in the case at bar not only because of our interest in quality education, but also because we believe we can be of service in informing the Court as to the general character and effects of neighborhood school plans like that employed in this case. Such plans, when used in major urban areas, almost inevitably result in separation of children along racial and economic lines. This racial and economic isolation reduces the ability of school systems to provide equal educational opportunity and quality education. As the President's Commission on School Finance found:

Research results are not yet conclusive on the effect of the socio-economic backgrounds of other students on a child's educational achievement. However, it is becoming increasingly apparent that the student-mix within a school exerts a strong influence on

learning patterns of the total student body. A student body reflecting different social, economic, ethnic, and cultural family backgrounds tends to improve the learning of lower achieving students.

Accordingly, the Commission concludes that the effect of the student-mix appears to be such that equal educational opportunity is enhanced in a heterogeneous student body. Moreover, such a student body better prepares all its members for productive and creative participation in a free society.[3]

Wherefore, the National Education Association and the Colorado Education Association request that this Court grant leave to file the accompanying brief amicus curiae urging that insofar as the court of appeals sanctioned racial segregation in the "core" schools of Denver, the court's judgment should be reversed.

Respectfully submitted,

BRIEF AMICUS CURIAE FOR THE NATIONAL EDUCATION ASSOCIATION AND THE COLORADO EDUCATION ASSOCIATION

I

STATEMENT

This case is before the Court on certiorari to review the holding of the court of appeals that the maintenance by the Denver School Board of segregated schools in the "core" area of the city and the resulting unequal educational opportunities afforded to minority children do not constitute a violation of the Equal Protection Clause of

the Fourteenth Amendment. The court of appeals affirmed the decision of the district court requiring enforcement of three resolutions of the Denver School Board desegregating certain predominantly Negro schools in the Park Hill area of Northeast Denver. That part of the court of appeals' judgment is not challenged in this case. It is attacked in a cross-petition for certiorari (No. 71-572) filed by respondents herein on October 23, 1971. To date, the Court has not acted upon the cross-petition.

A. The Importance of the Issues Presented.

Viewed most narrowly, this is the first case coming to this Court raising squarely issues as to the standards of proof which are to govern the federal courts in passing on the constitutionality of segregated schools in urban communities of the North and West. Viewed most broadly, the case puts in issue the question whether segregated schooling resulting in unequal educational opportunities for minority children is actionable when effectuated by the affirmative conduct of state authorities, where that conduct is found to have been pursued without segregatory motive. Whether viewed narrowly or broadly, the Court's decision can be expected to have major significance in future litigation over segregated schooling in urban communities.

B. The Proceedings Below.

1. *The Factual Setting.* The Denver public school system, serving the city and county of Denver, included at the time of record a total of 117 schools, comprising 92 elementary schools, 16 junior high schools, and 9 high schools (A. 126a).[4] This action was brought by children

[4] Citation is to the Appendix To Petition For Certiorari. This appendix contains all of the related opinions below. The record below is contained in a five-volume appendix which will be cited as "J.A." plus the page reference.

attending the Denver public schools, charging that the school board had intentionally created and/or was intentionally maintaining racially segregated schools in the school district, and was providing unequal educational opportunities to students attending those segregated schools (J.A. 5a-10a).

Plaintiffs' proof in the district court focused on the historical and existing conditions in schools serving areas of the city substantially populated by Negroes and Mexican-Americans. That proof demonstrated a high degree of segregation throughout the school system, both in student population and faculties (A. 77a-78a; 9a). It established, in addition, gross inequalities in the educational opportunity available to children attending minority schools as contrasted with white schools in the district, measured by teacher experience, teacher turnover, physical facilities and achievement levels (A. 78a-84a).

The minority schools the subject of proof were located in two adjoining areas of the city. One of these was Park Hill in Northeast Denver where seven schools were located (A. 47a, 38a).[5] During the decade of the 1960's, the northern section of this area of the city, on the frontier of the expanding Negro area, had shifted from a predominantly white to a predominantly black neighborhood (A. 47a). It was singled out for separate and special attention in the proof at trial (and in the decisions of the courts below) because of publicly announced acts of segregation practiced immediately prior to the filing of suit. Specifically, the Denver School Board, for the purpose, as found by the district court (A. 35a), of preventing the integration of minority students in the Park Hill attendance zones into predominantly white schools there and elsewhere in the city, had in June 1969 re-

[5] The schools were Barrett, Stedman, Hallett, Smith, Phillips and Park Hill Elementary Schools; and Smiley Junior High School. East High School serves the area but is located outside of it (J.A. 2022a).

scinded a series of resolutions passed by a former school board earlier that year for the purpose of desegregating those schools. This led to a separate trial on motion for preliminary injunction and interlocutory relief (by way of enforcement of the original resolutions) pending trial of the full case. (A. 20a-43a.)

The other group of schools the subject of plaintiffs' proof at trial, 20 in number (A. 140a), were located in the older "core" area of the city.[6] This area, by and large, lies just west of the Park Hill area, and is occupied predominantly by minority residents, Negroes and Mexican-Americans. (See A. 140a; J.A. 58a) At the time of the trial on the merits, no school in the core area exceeded 30 per cent in white enrollment; the student bodies of 13 of the 20 schools were less than 10 per cent white. (A. 77a-78a).[7]

Plaintiffs' proof demonstrated a sustained history of affirmative conduct by the school board effectively isolating minority groups in minority schools throughout the district and retarding or precluding integration of minority children into white schools. Actions of the school board productive of this result included: the establishment, change and elimination of optional attendance zones; the selection of sites for construction of new schools; and the use of temporary facilities within minority attendance zones (A. 48a-50a; 59a-67a). By 1960 the core area had become almost wholly minority and segre-

---

[6] We identify as core area schools those listed by the district court in its opinion of March 21, 1970 (A. 77a-78a), other than Barrett, Hallett, Smith and Stedman Elementary Schools and Smiley Junior High which are located in Park Hill and East and West High Schools which are located outside of the core and Park Hill areas (J.A. 58a).

[7] Four of the elementary schools were majority black, (Columbine (97.2%), Harrington (76.3%), Mitchell (70.9%), and Whittier (94.0%)); as were two junior high schools, (Cole 71.1%) and Morey (52.4%) and one senior high school (Manual 60.2%). Eleven elementary schools and one junior high school had majority Hispano enrollments (A. 77a-78a).

gation there could be maintained by strict adherence to a neighborhood school policy (A. 129). By this time, however, the racial composition of the adjoining Park Hill area was in transition from white to black. In that neighborhood the board during the 1960's acted affirmatively to maintain the racial make-up of the white schools by choice of locations for school construction, gerrymandering of attendance zone lines and the use of mobile units for expansion classrooms. (A. 21a-31a.) Based upon these historical facts, plaintiffs claimed that the school board had acted purposefully to segregate the schools in both the Park Hill and core areas and was adhering to a neighborhood school policy in the core area for the purpose of maintaining segregated schools. (J.A. 26a-27a; A. 73a). Defendants' answer to plaintiffs' case was that racial isolation in the Denver schools was solely the result of housing patterns. Defendants contended that the actions of the school board, which plaintiffs claimed produced or perpetuated segregated schooling, were racially neutral and taken solely for the purpose of effectuating the neighborhood school policy or other appropriate educational goals. (A. 134a; J.A. 473a.)

2. *The Decision of the District Court.* The district court, in approaching the case, compartmentalized its analysis of the evidence as if addressed to three separate, and largely independent issues: segregation in the Park Hill schools; segregation in the core area schools, and unequal educational opportunities in the minority schools generally. This is apparent from a reading of its decision (A. 47a *et seq.*) and was made explicit by the district court at the outset of that decision in announcing its approach to the case (A. 46a-47a):

> We will deal first with the schools which were the subject of preliminary hearing, considering the explanatory evidence offered at trial. Secondly, we will consider the evidence which has been offered relative to segregation and discriminatory educational oppor-

tunity in the core city schools and, finally, we will discuss possible remedies.

According to the district court's announced understanding of the prevailing law, segregated schooling constitutes an actionable violation of the Fourteenth Amendment only when it is causally connected to state action taken with the *intention* to segregate (A. 68a):[*]

> The important distinguishing factor between *de facto* and *de jure* segregation is purpose to segregate.

Starting from this asserted principle of law, the district court's analysis of each of three artificially separated issues followed this course:

a. *Segregation of the Park Hill Schools.* The Park Hill schools, as we have noted, came before the district court on motion for interlocutory relief to enforce a series of school board resolutions, later rescinded by the board, establishing a concrete program for the integration of those schools. That relief was ordered following an extensive evidentiary hearing on the motion for preliminary injunction (A. 37a), and was affirmed after full trial on the merits (A. 90a).

The district court's findings show a sustained and intentional policy of the board during the 1960's to segregate the schools in the Park Hill area. Viewing the actions taken by the board respecting each of the Park Hill

---

[*] "From the cases, we gleaned the following principles as essentials of *de jure* segregation:

(1) The State, or more specifically, the school administration, must have taken some action with a purpose to segregate;

(2) this action must have in fact created or aggravated segregation at the school or schools in question;

(3) a current condition of segregation must exist; and

(4) there must be a causal connection between the acts of the school administration complained of and the current condition of segregation" (A. 67a-68a).

schools individually, the court made the following findings:

(1) *Barrett Elementary School* "was opened in 1960"; "[a]t that time its student body was 89.6 per cent Negro"; "[p]resently . . . [it] is virtually 100 per cent minority students (93% Negro 7% Hispano)" (A. 21a); it was "built and opened as a segregated school" (A. 22a); "positive acts of the Board in establishing Barrett and defining its boundaries were the proximate cause of the segregation which has existed"; "we find that the board acted purposefully to create and maintain segregation at Barrett" (A. 23a);

(2) *Stedman Elementary School* "was in 1960 a predominantly 'white' school, the student body being only 4 per cent Negro" (A. 24a); "[a]s of 1968, Stedman was 94.6 per cent Negro and 3.9 per cent Anglo" (A. 25a); "[t]he actions of the Board with respect to boundary changes, installation of mobile units and repeal of Resolution 1531 shows a continuous affirmative policy designed to isolate Negro children at Stedman and to thereby preserve the 'white' character of other Park Hill schools" (A. 26a);

(3) "The Negro enrollment at *Hallett Elementary School* has increased from approximately one per cent in 1960 to 90 per cent in 1968" (A. 28a, emphasis added); in a 1962 boundary change in the Hallett Elementary School optional zone "[a]ll that was accomplished was the moving of Anglo students from a school district which would gradually become predominantly Negro to one which has remained predominantly Anglo" (A. 29a); in 1965 classrooms were added to Hallett over objection "that they would increase segregation at Hallett" (A. 11a); "[t]he effect of the mobile units

and additional classrooms was to solidify segregation at Hallett" (A. 29a);

(4) "In 1960 both *Park Hill* and *Phillips Elementary Schools* were overwhelmingly Anglo in racial composition. Despite continued Negro population movement into these school districts, Park Hill and Phillips presently continue to have a majority of Anglos. . . . This characteristic of both schools is due at least in part to the efforts of the Board to prevent the use of Park Hill and especially Phillips to relieve overcrowding at Stedman" (A. 26a, emphasis added); and

(5) "In 1968 *Smiley Junior High School* was 23.6 per cent Anglo, 71.6 per cent Negro and 3.7 per cent Hispano" (A. 30a, emphasis added); the effect of repeal of Resolutions 1520 and 1524 "was to reestablish *Smiley* as a segregated school by affirmative Board action"; "[w]e therefore, find that the action . . . was willful as to its effect on Smiley" (A. 31a).

More broadly, the district court found "a high degree of interrelationship among" the schools in the northeast area "so that any action by the Board affecting the racial composition of one would almost certainly have an effect on the other," and that "[i]t is significant to note that Board action between 1960 and 1969, such as the 1962 and 1964 boundary changes, dealt with the entire Park Hill area and had some effect on each school in that section of the city" (A. 32a). This led the court to the ultimate finding that "Between 1960 and 1969 the Board policies with respect to these northeast Denver schools show an undeviating purpose to isolate negro students," (A. 33a) and the conclusion that "[t]he policies and actions of the Board . . . [in respect of the northeast schools] constitute de jure segregation" (A. 34a; see, too, 50a, 52a).

b. *Segregation of the Core Schools.* Plaintiffs' claim as to the core area schools was that various affirmative acts as to school sites and attendance zones plus a neighborhood school policy were consciously being employed by the board to create and maintain segregated schools (A. 46a). Plaintiffs' proof demonstrated that during the 1960's the board enforced within the core area a policy of attendance at a school in immediate proximity to a student's home (A. 66a-67a). In addition, a school-by-school analysis by the district court of the activities of the school board respecting schools within the core area showed actions of the board in the form of school attendance boundary changes, changes in optional attendance zones and selection of sites for new schools directly productive of racial segregation. Among such actions were the following:

(1) *New Manual Training High School,* which was a minority school when it opened in 1953, was built near the site of the old Manual High School—in a traditional Negro area, and with the original mandatory attendance boundaries coterminous with the eastern-most boundary of the Negro population, one-half block from the school. When in 1956 the Negro population had spread further eastward, the attendance zone was revised, over the protests of the Negro community, to include the expanded Negro residential area. (A. 59a-61a.)

(2) *Morey Junior High School,* which was predominantly white in 1961, was surrounded by four optional zones (A. 63a). In 1962 two of these, each with a very low minority concentration, were transferred out of Morey and attached to a predominantly white school. The other two, with a high Negro concentration, were included in the non-optional attendance zone for Morey. In addi-

tion, in response to a "particularly strong protest" by parents of white pupils in a mandatory Morey zone, that zone was transferred to an adjoining and predominantly white junior high school. "Thus, the 1962 Morey boundary changes were largely responsible for the transformation of Morey from a predominantly Anglo school in 1961 to a predominantly minority school in 1962." (A. 64a.)

(3) Optional zones created for *Columbine Elementary School* "increased the minority concentration" at that school (A. 72a) and "were apparently employed by Anglo students as a means of escaping" to almost totally white schools (A. 66a).

In treating the Park Hill schools, findings such as these, viewed in the aggregate, had led the district court to find an overall design on the part of the Board to segregate the schools in that area, and in turn to conclude that the Board was guilty of actionable, de jure segregation. The court appears to have been influenced in arriving at that conclusion by its determination—quoted above (*supra*, p. 12)—that there was a strong interrelationship among these schools so that "any action by the Board affecting the racial composition of one would almost certainly have an effect on the others." The court emphasized, as well, the inferences derived from the school board's rescission of its earlier resolutions to effectuate integration of the Park Hill schools.

The district court's approach, however, was markedly different in evaluating the evidence applicable to the minority schools in the core area. The district court itself remarked on this (A. 57a):

> The evidentiary as well as the legal approach to the remaining schools is quite different from that which had been outlined above.

While the reasons are obscure,[9] the district court appears to have felt compelled to examine the evidence as to the minority schools outside the Park Hill area more or less in a vacuum. In so doing, it placed upon the plaintiffs the burden of establishing individually as to each school, and without reference to their showing of the board's general segregatory and discriminatory intent—evidenced, *inter alia*, by the actions with respect to the Park Hill schools—that its racial make-up was the product of purposeful discrimination by the board. Thus, the district court opinion explicitly states—not once, but at several points—that its entire inquiry concerning schools outside the Park Hill area was limited to determining whether segregatory intent could be established from the evidence introduced into the record respecting the *specific* actions taken as to *those* schools.[10] This statement of approach is confirmed by the text of the court's decision. For not once in evaluating the actions taken by the school board as to the core schools does the district court even men-

---

[9] The court recites as its reasons, that (A. 57a):

> For one thing, the concentrations of minorities occured at an earlier date and, in some instances, prior to the Brown decision by the Supreme Court. Community attitudes were different, including the attitudes of the School Board members. Furthermore, the transitions were much more gradual and less perceptible than they were in the Park Hill schools.
>
> Still another distinguishing point is that we do not here have legislative action similar to the recission of Resolutions 1520, 1524 and 1581.

[10] *E.g.*, "Before discussing the acts which are relied on . . ." (A. 58a); "We now turn to a consideration of the evidence offered by plaintiffs regarding boundary changes and elimination of optional areas, which evidence is presented in support of their argument that *de jure* segregation exists in the affected schools" (A. 59a); "we must reject the plaintiffs' contentions that they are entitled to affirmative relief because of the above mentioned boundary changes and elimination of optional zones" (A. 75a); "what we have said about the boundary changes disposes of this contention [that the neighborhood school policy was maintained for the purpose of segregation]" (A. 74a).

tion, let alone consider, the actions of the school board in the neighboring Park Hill area during the 1960's found by the district court to evidence "an undeviating purpose to isolate Negro students. . ." (A. 33a).

Similarly, in passing upon plaintiffs' claim that the core area schools were purposefully segregated, the district court did not mention or consider the substantial body of evidence that the board had treated these schools unequally in other important respects. Thus, the district court had found that the board had assigned a higher percentage of black and less experienced faculty to core area schools than elsewhere (A. 9a, 81a) and that these schools had older physical facilities than the white schools (A. 83a).

Under the district court's reading of the governing law, as we have explained (*supra*, p. 10), state action resulting in racial isolation—including adherence to a neighborhood school policy—is actionable only when taken with the purpose to segregate or to maintain existing segregated conditions (A. 68a-74a). Following the narrow evidentiary analysis which we have identified above, the court found inadequate evidence to establish the requisite segregatory motive in the core area, and thus no de jure segregation. Representative are its findings that:

> [T]here is absolutely no evidence presented, other than the fact of the 1962 [boundary] change upon which to base a finding that the School District was motivated by an intent to segregate Hispano students at Boulevard . . . [A. 73a].
>
> [T]here is a dearth of evidence that [the boundary change at Columbine] was accompanied by a purpose to segregate . . . [A. 72a].
>
> What we have said above regarding boundary changes disposes of this contention [that the neighborhood school policy was maintained or employed for the purpose of segregation] [A. 74a].

As to specified (but not all) core area schools, the district court reinforced this determination that there was no actionable, de jure segregation on the alternative grounds of "causation": it found that the allegedly discriminatory individual actions taken by the board with respect to specific core area schools had little long term effect on the racial composition of those schools given the board's neighborhood school policy and the racial housing patterns prevailing in the core area (A. 67a).[11]

c. *Unequal Educational Opportunities.* A third, distinct aspect of the district court decision involves plaintiffs' claim of unequal educational opportunities in the segregated schools throughout the Denver system. The claim was that minority children in segregated schools in the Denver school system had been deprived of educational opportunities equal to those afforded white children. The district court found that "extensive and detailed evidence has been presented establishing the inferiority of plaintiffs' target schools" (A. 76a). This disparity was evidenced by "significantly lower" achievement levels in the segregated schools than in the other schools in the city (A. 78a). As one cause, the district court found that the faculty in the segregated schools was markedly less experienced than in white schools, and had a far greater rate of turnover as well (A. 80a-82a). The court concluded that "[f]aculty experience is an important factor in determining the educational opportunity offered at a particular school" (A. 80a). It also found disparity in the physical plant of minority versus predominantly white schools, which it deemed contributed to the unequal educational opportunities found to exist

---

[11] Although the district court does in its findings addressed to the core area schools make generalized statements that residential patterns represent a "substantial" factor in the segregation existing in core area schools (A. 67a, 71a), only in the case of two of those schools—Manual (A. 61a, 72a) and Columbine (A. 72a)—is there a finding that the identified board action did not contribute to the long term segregation of the schools, at least in part (see A. 72a-73a).

in the segregated schools (A. 83a). Of even greater significance, the district court concluded from the extensive evidence submitted on the issue "that segregation, regardless of its cause, is a major factor in producing inferior schools and unequal educational opportunity" (A. 86a-87a; see also 84a, 107a-110a, 112a-113a, 115a). In all, the "evidence establishing the inferiority of the subject [segregated] schools is so convincing that it raises a serious equitable question about subjecting any pupils, minority or majority, to them" (A. 93a).

Based on these findings, the district court (after a further hearing on the issue of remedies) ordered desegregation of the Denver schools. In so doing, the court started from the predicate that the "present state of the law is that separate educational facilities (of the *de facto* variety) may be maintained, but a fundamental and absolute requisite is that these shall be equal" (A. 88a). Here, the district court found that "an equal educational opportunity is not being provided at the subject segregated schools," and that "[m]any factors contribute to the inferior status of these schools, but the predominant one appears to be the enforced isolation imposed in the name of neighborhood schools and housing patterns" (A. 89a).

8. *The Decision of the Court of Appeals.* As did the district court, the court of appeals treated the case as involving three distinct and separable issues: segregated schooling in Park Hill; segregated schooling in the core area; and unequal educational opportunities in segregated schools throughout the school district.

With respect to the first issue, segregated schooling in the Park Hill area, the court of appeals affirmed the finding of de jure discrimination. That determination, in the court's view, could be reversed only if, under Rule 52 of the Federal Rules of Civil Procedure, the district court's findings were clearly erroneous. Following an in-

dependent review of the evidence on this issue, the court of appeals found no basis to reverse. To the contrary it was its view that (A. 139a):

> The facts as outlined above simply do not mirror the kind of impartiality imposed upon a board which adheres to a neighborhood school plan. . . . In sum, there is ample evidence in the record to sustain the trial court's findings that race was made the basis for school districting with the purpose and effect of producing substantially segregated schools in the Park Hill area.

With respect to the second issue, segregated schooling in the core area, it again affirmed the district court—this time on appeal by plaintiffs—on the basis of Rule 52's "not clearly erroneous" standard. The court of appeals addressed itself only to the district court's findings that there was no improperly motivated state action as to the core area schools.[12] On this issue, the court's articulation of the governing law corresponds to that adopted by the district court (A. 134a):

> The rule of the Circuit is that neighborhood school plans, when impartially maintained and administered, do not violate constitutional rights even though the result of such plans is racial imbalance. . . . However, when a board of education embarks on a course of conduct which is motivated by purposeful desire to perpetuate and maintain a racially segregated school, the constitutional rights of those students confined within that segregated establishment have been violated.

Applying this principle of law to the evidentiary record before the district court, the court of appeals, while recognizing that plaintiffs "have introduced some evidence

[12] See A. 148a. The court of appeals did not, at least in terms, consider the district court's alternative findings—relevant to several but not all core area schools—on "causation."

which tends to support their claim," held that "there is also evidence of record which supports the findings of the trial court, so under Rule 52 . . . , we must affirm" (A. 148a).

Examination of the court of appeals' analysis demonstrates that in reviewing the evidence as to de jure segregation in the core area it followed the same, fragmented approach of the district court, looking to the acts and policy of the school board with respect to the core area in isolation from, and without reference to, the acts concurrently being taken by the very same board to segregate the adjoining Park Hill schools. Thus, at the outset of its opinion, the court of appeals defines the case as involving "two *separate* causes of action," one involving the Park Hill schools and one the core area schools (A. 124a, emphasis added). And a review of the court of appeals decision demonstrates that its analysis followed this same approach to the evidence, not once considering in its review of the school board actions in the core area or in its determination of whether the neighborhood school policy was being maintained in that area for a racial purpose, the patent segregatory action being practiced by the board in the Park Hill area.

Similarly, the court of appeals placed on plaintiffs the burden of establishing a discriminatory motive on the part of the school board independently with respect to each area and, it appears, for the core area, for each school within that area independently. This issue of burden of proof was explicitly raised with the court of appeals on review, the court noting in its decision plaintiffs' claim "that they were required to labor under an erroneous burden of proof" (A. 147a). The court of appeals' response was that "it would be incongruous to require the Denver School Board to prove the non-existence of a secret, illicit, segregatory intent" (*Id.*):

> Where, as here, the system is not a dual one, and where no type of state imposed segregation has previously been established, the burden is on the plaintiff to prove by a preponderance of evidence that the racial imbalance exists and that it was caused by intentional state action [A. 148a].

With respect to the third issue, unequal educational opportunity in the segregated schools in the core area, the court of appeals appears to have accepted the findings which furnished the predicate for the relief afforded by the district court. Thus, most narrowly, it accepted the view that "the evidence of the case supports the finding that the teacher experience in the designated core area schools is less than that which exists in other Denver schools" (A. 143a-144a); and, most broadly, "we cannot dispute the welter of evidence offered in the instant case and recited in the opinion of other cases that segregation may in fact create an inferior educational atmosphere" (A. 145a). It rejected, however, the district court's conclusion that the resulting unequal educational opportunity was remediable by court order.[12] It did so on the explicit ground that "a neighborhood school policy is constitutionally acceptable, even though it results in racially concentrated schools, provided the plan is not used as a veil to further perpetuate racial discrimination" (A. 144a); that there was no racially motivated segregation established, and, therefore, that there could be no court enforced desegregation whatever the inequality resulting from the segregated nature of the schools (A. 145a-46a).

---

[12] The court of appeals, in result, barred implementation of the district court order requiring desegregation of 17 core area schools.

II

ARGUMENT

A. Introduction and Summary of Argument.

This is the first school desegregation case involving a district outside the South to be heard by the Court. At issue is the constitutionality of segregated schools located in a portion of the Denver School District, the so-called core area, which provide inferior educational opportunities for the minority children who attend them. The segregation of these schools results from the adherence by the Denver School Board to a so-called "neighborhood school policy" whereby the children in this segregated residential area are assigned to schools located near their homes.

Two fundamental issues are presented: First, whether the courts below applied the proper rules of law in determining if the school board acted with a racial purpose in adhering to a student assignment policy for the core area schools which resulted in the segregation and inferior educational opportunities. If the board's action was motivated by race, the existing segregation is de jure and constitutes a violation of the Equal Protection Clause. Second, assuming that the board did not act with such a racial purpose, whether its student assignment policy for the core area schools was nonetheless barred by the Constitution because the segregation it produced resulted in inferior educational opportunities for minority children and because that policy served no compelling state need.

Before urging upon the Court the principles that we contend are controlling, we believe two preliminary observations are in order.

First, school boards have real options in selecting an assignment plan. Many boards—including the predeces-

sor of the defendant board—have determined that the convenience involved in assigning children to schools relatively closer to their homes is outweighed by the educational advantages of eliminating segregated conditions which breed inequality of educational opportunity. Thus, where a school board adheres to a so-called "neighborhood school" plan which has the effect of preserving segregation, it is incorrect to assume that the board would have maintained such a policy irrespective of any purpose to segregate. Faced with the cancerous conditions of segregation, an objective board, free of racial bias and racial pressures, could well opt, indeed might be *likely* to elect, to correct those conditions.

Second, a "neighborhood school policy" [19a] lends itself to purposeful school segregation in urban areas. In large black ghettos where students traditionally have been assigned to schools on the basis of attendance zones which reflect the residential segregation, a board can effectively maintain nearly perfect segregation in the heart of the ghetto merely by renewing the attendance zones and refurbishing existing facilities. On the other hand, at the fringes of the ghetto it may be necessary to manipulate attendance zones and building programs because the racial composition of these areas is in flux. Thus, in detecting whether a school district is utilizing a "neighborhood school" plan for purposes of racial segregation, the most probative evidence will involve acts taken with respect to the schools located on the fringes of the ghetto.

Because neither of the lower courts considered these factors, their analyses of whether de jure segregation existed in the core area schools were skewed. Both courts focused on the era of the 1950's when the core schools became segregated. Having found that the segregation

[19a] The term "neighborhood school policy" is an imprecise term susceptible to a variety of meanings. See, *infra*, pp. 49-50.

of the 1950's was not purposeful, the lower courts terminated their inquiry as to the core area. They did not question whether during the 1960's the school board, rather than employing some other student assignment plan, maintained the "neighborhood school plan" in the core area for the purpose, at least in part, of perpetuatting school segregation.

If the lower courts had considered the board's reasons for maintaining a "neighborhood school policy" during the 1960's, they would have found persuasive evidence of racially discriminatory motive. During this period the school board was systematically manipulating the "neighborhood school plan" to maximize segregation in the expansion area of the ghetto (Park Hill). This racially motivated manipulation, arguably, at the very least, lays bare the reason why the school board continued to reapply the "neighborhood school plan" in the core area where—to the knowledge of the Board—the plan was producing educational inequality.

In this brief, NEA submits two contentions concerning the proof of de jure segregation in the core area, and a third contention that the inferior education offered in the core schools constitutes a denial of equal protection even if it is not the product of de jure segregation.

We urge that the district court's approach to the evidence, which was affirmed on appeal, was erroneous. First, the district court compartmentalized the evidence of segregation. In determining whether the "neighborhood school plan" was being maintained and administered for discriminatory reasons the district court ignored other evidence of discrimination, including the deliberate discrimination in the Park Hill area. Such an approach is contrary to the longstanding principle that where motive is an issue, related acts showing a similar motive are probative.

Second, the lower courts erroneously allocated the burden of proof. Plaintiffs proved that during the 1960's the school board was purposely manipulating the "neighborhood school plan" to assure racial isolation in the fringe area of the black residential district. There the "neighborhood plan" would not, without adjustment, fully segregate the children. This proof of racial manipulation, we urge, made out at least a prima facie case that in the core area during the 1960's the "neighborhood school plan" was being maintained and administered for racially discriminatory reasons.

Assuming that the segregation of the core area was not purposeful, there remains the issue whether the inferior educational opportunities resulting from segregation of the core schools, when compared to other Denver schools, constitute a denial of equal protection. In resolving this issue the lower courts should have applied the compelling governmental interest standard. That standard applies because education is a fundamental interest and Denver's student assignment plan denies equal educational opportunities to minority group children. Both courts below, however, misapplied this test. The trial court failed to consider whether the Denver assignment plan served any compelling governmental interest that would justify the educational inequalities that it was producing. The court of appeals, on the other hand, erred in holding that maintenance of a "neighborhood school plan" is constitutional as a matter of law notwithstanding findings that the segregation it produces results in inferior educational opportunities for minority children.

B. The Courts Below Employed Erroneous Standards of Evidence and Proof in Determining Whether the Denver School Board Acted with a Purpose To Segregate the Core Area Schools.

1. Evidence of the School Board's Actions Throughout the School District Must Be Considered on the Issue of Motivation.

The district court, with the approval of the court of appeals on review, found as to the schools in the Park Hill area that "[b]etween 1960 and 1969 the Board's policies with respect to these northeast Denver schools show an undeviating purpose to isolate Negro students" (A. 33a). As to the segregated schools in the core area, however, the district court, again with the approval of the court of appeals, found no such discriminatory purpose either incident to the specific acts of selection of sites for new schools or changes in school boundaries or incident to the board's strict adherence to a neighborhood school policy. This finding, as we have shown, *supra*, pp. 13-17, was predicated exclusively on the evidence respecting the actions of the school board in the core area. The district court's attempt to identify the "purpose" underlying those actions was taken without visible regard to the often-concurrent actions taken by the board in the Park Hill area, which were found to have been racially motivated, or to the objectively measurable discrimination against the minority schools in the core area which the court found to exist in faculty placement and physical facilities (see, *supra*, n. 10 and pp. 17-18).

We do not know why the district court, and in turn the court of appeals, took so restrictive a view of the evidence before them as to the fundamental issue of the motive or purpose with which the actions of the school board were taken. Whatever the reason, we think their approach to the evidence plainly improper. For it is now firmly established in the federal courts that the determination of

such an issue can only be made by reference to the whole surrounding course of conduct of the party involved, not solely by reference to a single act of the party viewed in isolation.

This principle dates back to, and before, the leading federal decision, *Wood* v. *United States*, 41 U.S. (16 Pet.) 341 (1842). In that case the defendant was charged with filing false invoices in connection with four shipments of goods in 1839 with the purpose of evading or defrauding the United States. At trial the court admitted evidence of 25 other fraudulent importations by the defendant in 1839 and 1840, fifteen of which were made before, and ten after, the four in suit. Over defendant's objection, this Court held that evidence of these similar transactions was admissible to establish the defendant's motive or intent. In the Court's opinion Mr. Justice Story said (41 U.S. at 358-59, emphasis supplied):

> The question was one of fraudulent intent or not; and upon questions of that sort, where the intent of the party is a matter in issue, it has always been deemed allowable, as well in criminal as in civil cases, to introduce evidence of other acts and doings of the party of a kindred character, in order to illustrate or establish his intent or motive in the particular act directly in judgment. *Indeed, in no other way would it be practicable, in many cases, to establish such intent or motive, for the single act, taken by itself, may not be decisive either way; but when taken in connection with others of the like character and nature, the intent and motive may be demonstrated almost with a conclusive certainty.* . . .

Since that decision, the principle that a party's full course of conduct is to be considered on the issue of motive or purpose has been given effect in the widest possible range of contexts. Thus, under the criminal law evidence of like transactions is deemed relevant to the issue of intent:

> It was important in the actions on trial to discover the motive of the defendants, whether what they did at the time in question was the casual conduct of innocent parties intent upon their own lawful affairs, or whether it was inspired by the fraudulent purpose of assisting in the spoliation. It is the settled rule that in such a case evidence of similar acts at other times is admissible. The theory of the rule is that a succession of like instances tends to illustrate the character of the act under investigation and to negative innocence in the particular case. It is especially applicable where there is a charge of complicity in a scheme to defraud pursued as a vocation. Such a scheme is naturally conceived in secrecy, and the part of the defendant may be the performance of some act which furthers the accomplishment of the unlawful design, but which, when isolated from that which preceded and followed, may bear the aspect of innocence. Yet proof of a recurrence of similar acts in other cases where like frauds were perpetrated may be persuasive proof of a guilty purpose and so disclose the true character of the whole. [*Exchange Bank* v. *Moss*, 149 Fed. 340, 342 (8th Cir., 1906)]

See also *Lutwak* v. *United States*, 344 U.S. 604, 617 (1953). So too, under the anti-trust laws, it is the "established judicial rule of evidence that testimony of prior or subsequent transactions, which for some reason are barred from forming the basis for a suit, may nevertheless be introduced if it tends reasonably to show the purpose and character of the particular transactions under scrutiny." *F.T.C.* v. *Cement Institute*, 333 U.S. 683, 705 (1948). *Accord, Standard Oil Co.* v. *United States*, 221 U.S. 1, 46-47, 75-76 (1911); *United States* v. *Reading Co.*, 253 U.S. 26, 43-44 (1920); *Continental Ore Co.* v. *Union Carbide & Carbon Corp.*, 370 U.S. 690, 698-99 (1962). Again, in the many contexts under the National Labor Relations Act where an employer's "good faith" or motive is an operative element of the determina-

tion to be made, it is the established rule that "the Board must inquire into the 'totality of the employer's conduct.'" *N.L.R.B.* v. *Cascade Employers Assn., Inc.*, 296 F.2d 42, 47 (9th Cir. 1961). *Accord*, *N.L.R.B.* v. *Reed & Prince Mfg. Co.*, 205 F.2d 131, 134, 139-40 (1st Cir. 1953); *N.L.R.B.* v. *Wonder State Mfg. Co.*, 344 F.2d 210 (8th Cir. 1965); *Joy Silk Mills* v. *N.L.R.B.*, 185 F.2d 732, 741-42 (D.C. Cir. 1950); *N.L.R.B.* v. *National Seal Corp.*, 127 F.2d 776, 778 (2d Cir. 1942).

This rule has been applied repeatedly in the very context now before the Court. The federal courts have recognized in many school segregation cases the necessity that a trial court consider all the actions of a school board throughout the district when passing on the subjective, and often elusive, question of "purpose" or "motivation." [14] Ironically, the Tenth Circuit's own decision in *Downs* v. *Board of Education of Kansas City*, 336

---

[14] Compare *Brown* v. *Gaston County Dyeing Machine Co.*, No. 71-1268 (March 28, 1972) (Slip op. pp. 10-12), where the Fourth Circuit said:

> "Courts have often observed that proof of overt racial discrimination in employment is seldom direct. *E.g.*, United States v. Jacksonville Terminal Co., —— F.2d ——, ——, No. 30,448 at 51 (5th Cir., Aug. 31, 1971); Marquez v. Omaha District Sales Office, Ford Division, 440 F.2d 1157, 1162 (8th Cir. 1971); Holland v. Edwards, 307 N.Y. 38, 45, 119 N.E. 2d 581, 584 (1954). Recognizing this, we have found 'error in limiting Title VII to present specific acts of racial discrimnation.' United States v. Dillon Supply Co., 429 F.2d 800, 804 (4th Cir. 1970), and it is now well established that courts must also examine statistics, patterns, practices and general policies to ascertain whether racial discrimination exists. United States v. Jacksonville Terminal Co., —— F.2d ——, ——, No. 30,448 at 42, 51 (5th Cir., Aug. 31, 1971); Graniteville Co. v. EEOC, 438 F.2d 32, 41 (4th Cir. 1971); Parham v. Southwestern Bell Telephone Co., 433 F.2d 421, 426 (8th Cir. 1970); Jones v. Lee Way Motor Freight, Inc., 431 F.2d 245, 247 (10th Cir. 1970), *cert. denied*, 401 U.S. 954 (1971); United States v. Dillon Supply Co., 429 F.2d 800, 804 (4th Cir. 1970); United States v. Hayes International Corp., 415 F.2d 1038, 1044 (5th Cir. 1969)."

F.2d 988 (1964), provides one of the clearest statements on this point. There the court of appeals reviewed the board's minority transfer policy, its neighborhood school policy, changes in the attendance lines, and the racial imbalance of the faculty at various schools. The court then held (*id.* at 997, emphasis added):

> It follows from what has been said that none of the factors relied upon by appellants, when considered alone, is sufficient to establish a denial of their constitutional right not to be discriminated against because of race or color. *The crucial question, however, is whether all of these factors considered together are sufficient.*

The Fifth Circuit is in accord:

> In this case the essence of the complaint is purposeful discrimination against Negroes as a class. The inquiry into purpose makes it especially appropriate for the Court:
>
> > (1) to study the case as a whole, weighing all of the evidence and rational inferences in order to reach a net result . . . . [*Meredith* v. *Fair*, 305 F.2d 343, 360 (5th Cir. 1962)]

Similarly, the district court in its decision in the *Pontiac* case[15] emphasized that:

> If this Court's attention were directed and limited solely to the location of the Bethune School without being confronted by or concerned with the total pattern which was, at the time, developing in the construction of new schools in the system, the School Board may have succeeded in providing a persuasive argument here, as it did earlier, that the location of the Bethune School could be justified on the grounds of the existing criteria, namely, nearness, capacity and safety of access routes. However, this

---

[15] *Davis* v. *School District of City of Pontiac, Inc.*, 309 F. Supp. 734, (E.D. Mich. 1970), *aff'd*, 443 F.2d 573 (6th Cir. 1971).

> Court's consideration is not limited or directed solely to the location of the Bethune School, but has been broadened to take into consideration the composition of the entire Pontiac School System. [309 F. Supp. at 741]

The Sixth Circuit, on review, concurred in this approach:

> Although, as the District Court stated, each decision considered alone might not compel the conclusion that the Board of Education intended to foster segregation, taken together, they support the conclusion that a purposeful pattern of racial discrimination has existed in the Pontiac school system for at least 15 years. [443 F.2d at 576]

Other lower federal courts similarly have affirmed the requirement that the school authorities' "course of conduct" is to be "viewed in its totality," [16] and have stated that board actions must be "read against a background" of relevant facts.[17]

In the cases now before the Court, each of the courts below failed in any discernible way to take into account, in evaluating the motivation underlying the school board's actions outside the Park Hill area, the sustained acts of segregation practiced with respect to the Park Hill schools. Nor did the courts look to the "pattern" of school board conduct in the school district as a whole. On the evidence, given the bald segregatory policies being pursued in the Park Hill schools, we think no objective analysis of the evidence as a whole could have failed to identify a policy of segregation which affected the board's conduct in the core area and colored its adherence there to a neighborhood school policy. It is sufficient for present purposes, however, that the courts below

---

[16] *Taylor* v. *Board of Education of New Rochelle*, 191 F. Supp. 181, 195 (S.D. N.Y. 1961), *aff'd in part*, 294 F.2d 37 (2d Cir. 1961).

[17] *Evans* v. *Buchanan*, 173 F. Supp. 891, 892 (D. Del. 1959), *rev'd on other grounds*, 281 F. 2d 385 (2d Cir. 1960).

made no attempt to analyze actions directed to the core area schools against the school board's total pattern of conduct. For this reason alone, the judgment of the court of appeals as to the core schools should be reversed.

2. *School Authorities Have the Burden To Justify Segregated Schooling in any Part of the School System Once De Jure Segregation Has Been Established in a Transitional Area.*

The courts below, as we have shown, adopted an excessively restrictive view of the evidence to be considered in determining whether the Denver School Board had practiced de jure segregation outside the Park Hill schools. This error was compounded in the allocation of the burden of proof on this issue between the parties.

In the court of appeals, petitioners urged that they had been "required to labor under an erroneous burden of proof," but the Tenth Circuit approved the district court's handling of the burden (A. 147a). The court of appeals held that "where . . . no type of state imposed segregation has previously been established, the burden is on plaintiff to prove by a preponderance of evidence that racial imbalance exists and that it was caused by intentional state action" (A. 148a). And the court imposed on plaintiffs the burden of proving such a discriminatory motive with respect to each school in the core area notwithstanding its finding that the board had purposefully segregated the Park Hill schools.

We consider the position of the court of appeals on the issue of burden of proof seriously in error. If allowed to stand, it would have grave consequences with respect to segregated schools in urban communities of the North and West since plaintiffs would be required to bear the virtually insurmountable burden of proving separately for each and every school that segregation was the result of willful discrimination by the school board. In our

view, where, as in the instant case, plaintiffs have met the burden of establishing that school authorities have intentionally acted to establish or maintain segregation in a transitional area of the school district, the burden should shift to the school authorities to prove that segregation in the remaining areas is not purposeful.

a. The Governing Principles.

The authorities make clear that there are no hard and fast standards governing allocation of the burden of proof in every legal setting. The issue, rather, "is merely a question of policy and fairness based on experience in the different situations." IX Wigmore, *Evidence* § 2486 (1940 ed.). In the context of racial segregation, the courts, including this Court, have recognized a range of situations in which "fairness" and "policy" require state authorities to bear the burden of explaining actions or conditions when challenged in litigation. These have direct application to the facts now before the Court.

In *Swann* v. *Charlotte-Mecklenburg Board of Education*, 402 U.S. 1, 26 (1971), this Court observed that the existence of a one-race school was not conclusive evidence that the system "still practices segregation by law." But, "in a system with a history of segregation" a presumption against racially disproportionate schools is warranted. Again, in a school district with a history of segregation, the discharge of a disproportionately large number of black teachers incident to desegregation has been held to raise a presumption of discrimination which "thrusts upon the School Board the burden of justifying its conduct by clear and convincing evidence." *Chambers* v. *Hendersonville City Board of Education*, 364 F.2d 189, 193 (4th Cir. 1966) (en banc). This follows because (Id.):

> Innumberable cases have clearly established the principle that under circumstances such as this where a

history of racial discrimination exists, the burden of proof has been thrown upon the party having the power to produce the facts.

See *United States* v. *Jefferson County Board of Education*, 372 F.2d 836, 887-88 (5th Cir. 1966), *aff'd en banc*, 380 F.2d 385 (1967), *cert. den.* 389 U.S. 840; *North Carolina Teachers Ass'n.* v. *Asheboro City Board of Education*, 393 F.2d 736, 743 (4th Cir. 1968) (en banc); *Williams* v. *Kimbrough* 295 F. Supp. 578, 585 (W.D. La., 1969); *Bonner* v. *Texas City Independent School District*, 305 F. Supp. 600, 621 (S.D. Tex., 1969); *Armstead* v. *Starkville Muncipal Separate School District*, 325 F. Supp. 560, 570 (N.D. Miss. 1971), *appeal pending*, No. 71-2124; *Baker* v. *Columbus Municipal Separate School District*, 329 F. Supp. 706, 720 (N.D. Miss. 1971), *appeal pending*, No. 71-2581.[18]

In seems to us that when school authorities have evidenced a pattern of affirmative and purposeful segregatory action within one area of a school district, logic compels a presumption that these same authorities will be motivated by the same illegal considerations and impelled to parallel action elsewhere in the school district should the occasion or need arise. There is, to our knowledge, nothing in the history of school segregation suggesting that a single school authority can be expected

---

[18] Similarly, in the jury selection cases, this Court repeatedly has held that a substantial disparity between blacks and whites selected for juries when coupled with a showing of procedures which would permit or facilitate racial discrimination constitutes a prima facie case of invidious discriminaton. *Alexander* v. *Louisiana*, No. 70-5026, 36 U.S.L.W. 4365 (decided April 3, 1972); *Turner* v. *Fouche*, 396 U.S. 346, 361 (1961); *Eubanks* v. *Louisiana*, 356 U.S. 584, 587 (1958); *Avery* v. *Georgia*, 345 U.S. 559 (1953). The Court has ruled in such cases that "once a prima facie case of invidious discrimination is established, the burden of proof shifts to the State to rebut the presumption of unconstitutional action by showing that permissible racially neutral selection criteria and procedures have produced the monochromatic result." *Alexander* v. *Louisiana*, *supra*, at 4367.

to pursue an active policy of segregation in one area of the district it administers, while concurrently pursuing a policy of neutrality elsewhere within the district. Thus, common sense as well as the authorities discussed above strongly support our claim that proof of de jure segregation in one group of schools justifies a rule imposing on school authorities the burden of establishing that segregation found to exist in other schools within the same district is not the result of their illegal actions.

b. The Tenth Circuit's Ruling on Burden.

According to the Tenth Circuit, "it would be incongruous to require the Denver School Board to prove the nonexistence of a secret, illicit, segregatory intent" (A. 147a). Colorado has never, by legislation, required segregated educational facilities (A. 126a). Thus, the court held that (A. 148a):

> Where, as here, the system is not a dual one, and where no type of state imposed segregation has previously been established, the burden is on the plaintiff to prove by a preponderance of evidence that the racial imbalance exists and that it was caused by intentional state action.

As the court put it, "Such an onerous burden does not fall on school boards who have not been proved to have acted with segregatory intent" (A. 147a). On the other hand, if Denver were located in Oklahoma or some other state in the South where at some point in time segregated schooling had prevailed by virtue of legislative fiat, the Tenth Circuit would have decided this case differently. *United States* v. *Board of Education of Tulsa County*, 429 F.2d 1253 (10th Cir. 1970). See also A. 147a.

In our view, the analysis adopted by the Tenth Circuit is indefensible, both in principle and as applied to the facts of this case.

(1) When it came to the allocation of the burden of proof, the court of appeals attached importance to the fact that there has never been state imposed segregation in Colorado. But in an earlier section of its opinion, that court emphasized that the Fourteenth Amendment's prohibition against racial discrimination reaches not only actions of the legislature but also the actions of other state agencies, and that there is "no rational explanation why state imposed segregation of the sort condemned in *Brown* should be distinguished from racial segregation intentionally created and maintained through gerrymandering, building selection and student transfers" (A. 134a). In short, the court of appeals first demonstrated the irrelevance of a distinction between discrimination required by legislation and discrimination voluntarily but purposefully undertaken by a public school board, but then the court inexplicably refused to apply its own compelling logic on the issue of burden. We see no reason why the existence of the presumption of discrimination should turn on whether the history of discrimination is one compelled by state law or is the product of voluntary action of the very school board under scrutiny.

(2) The court of appeals' treatment of the facts reveals a related inconsistency. In placing on plaintiffs the burden of proving discriminatory motive, the court reasoned that "[s]uch an onerous burden does not fall on school boards who have not been proved to have acted with segregatory intent" (A. 147a). While advancing this reason for its ruling, however, the court ignored the findings of the district court, affirmed in part on appeal, to the effect that the board, for a decade at least, had deliberately discriminated against black children in the Park Hill area.

We submit that the allocation of the burden of proof as to the core schools was erroneous. Simply as a matter of common sense, public officials who deliberately discrim-

inate with their left hand should be called upon to show that other conditions of segregation within their school district have not been wrought with their right hand.

3. *The District Court Erred in Requiring a Showing that the Segregation of Each School in the Core Area Was Caused by Discriminatory Actions, Such as Boundary Changes, Aimed at the Individual School.*

A word is in order concerning the trial court's allusions to questions of causation. The court suggested with varying degrees of specificity that certain individual acts of the school district during the 1950's and early 1960's (see, *supra*, pp. 13-14), even if found to have been racially motivated, were not the proximate cause of the segregation of the core area schools existing at the time of the trial, given the board's neighborhood school policy and the racial housing patterns (*supra*, p. 17).

In our view whether the specific acts of the 1950's and early 1960's created or originated the segregation in some core schools is beside the point. The point is that throughout the 1960's the Denver School Board annually assigned children to their respective schools. Each year the board used a "neighborhood school plan." And each year the plan produced segregated schooling. The board did this despite its receipt of formal reports and studies advising of the segregation and inferior educational offering which the "neighborhood school plan" was producing for minority children (A. 127a-128a).

Clearly the decision to adhere to the "neighborhood plan" had the direct result of continuing the segregation in the core area schools. Thus, the key issue, in amici's view, with respect to plaintiffs' claims concerning de jure segregation was whether the board acted for a racial purpose in deciding to maintain a "neighborhood school policy" in the core area—despite its knowledge that the

resulting segregation afforded inferior educational opportunities to the minority students. The evidence of the segregatory motive behind other contemporaneous actions of the board is directly relevant to the evaluation of the board's purpose in determining to adhere to the "neighborhood school policy" which, without question, was a major cause of the continued segregation of the core area schools.[39]

C. The Court of Appeals Erred in Holding that the Constitution Prohibits Only Purposeful Denials of Equal Educational Opportunity and that in any Event Such Denials Are Justified as a Matter of Law When They Result from the Operation of a "Neighborhood School Plan."

1. *Introduction.*

In the first section of our brief we have discussed the lower courts' failure to apply proper standards of proof in evaluating plaintiffs' evidence establishing that the extensive segregation throughout the Denver public school system was deliberate. In the balance of this brief we assume arguendo that the segregation in the core schools was not deliberate. Viewed in that light the case takes on fundamental importance, for it presents the question whether the Fourteenth Amendment renders unconstitu-

---

[39] Plaintiffs are urging, *inter alia:* that the record leads inescapably to the conclusion that the Denver School Board has engaged in actionable, de jure segregation throughout the school district and that this Court should itself find that the segregation in the core area was de jure. We believe that course is commended by *Alexander* v. *Holmes County Board of Education*, 396 U.S. 19, 20 (1969). In the event the Court should wish to follow some alternative path in remedying the procedural deficiencies of the courts below, we urge that the proceeding be remanded to the trial court with instructions that the district court (a) consider the pattern of school board actions throughout the district in passing on the issue of its motivation with respect to segregated schooling in the core area, and (b) place on the school board the burden of establishing that segregated schooling, where it exists within the district, is not the result of illegal state action.

tional school segregation, whether or not purposeful, which results in educational opportunities for black students unequal to those available for white students.[20]

The factual predicate framing this important question is not in dispute. For as we explained in our statement of this case, *supra*, pp. 17-18, 21, *both* lower courts were in agreement that the facts of record established that segregation in the Denver public schools results in inferior educational opportunities for minority children. Thus, the trial judge found that the children assigned to the

---

[20] It may be suggested that the position advanced here is inconsistent with the so-called "de facto" cases in the lower courts. See, *e.g.*, *Bell* v. *School City of Gary*, 324 F.2d 209 (7th Cir. 1963), *cert. denied*, 337 U.S. 924 (1964); *Deal* v. *Cincinnati Board of Education*, 369 F.2d 55 (6th Cir. 1966), *cert. denied*, 389 U.S. 847 (1967); *Downs* v. *Board of Education of Kansas City*, 336 F.2d 988 (10th Cir. 1964), *cert. denied*, 380 U.S. 914 (1965). But see *Evans* v. *Ennis*, 281 F.2d 385, 389 (3d Cir. 1960), *cert. denied*, 364 U.S. 933 (1961); *Branche* v. *Board of Educ. of Hempstead*, 204 F. Supp. 150 (E.D. N.Y. 1962); *Blocker* v. *Board of Educ. of Manhasset*, 226 F. Supp. 208 (E.D. N.Y. 1964); *Barksdale* v. *Springfield School Comm.*, 237 F. Supp. 543 (D. Mass.), *vacated on other grounds*, 348 F.2d 261 (1st Cir. 1965); *Booker* v. *Board of Educ. of Plainfield*, 45 N.J. 161, 212 A.2d 1 (1965); *Jackson* v. *Pasadena City Bd. of Educ.*, 59 Cal. 2d 876, 31 Cal. 606, 382 P.2d 878 (1963). However that may be, this is the first time that this Court has considered the issue on its merits, and we believe the de facto cases should not be regarded as persuasive. To the extent that the plaintiffs in the *Bell*, *Deal* and *Downs* line of cases rested their claims on the theory that the Constitution requires racial balance in the schools (see, *e.g.*, *Bell*, *supra*, 213 F. Supp. at 828; *Deal*, *supra*, 369 F.2d at 58), the decisions are irrelevant. Plaintiffs have not urged such a theory and we make no such claim. To the extent that the decisions are predicated on a finding that state action was absent, the decisions are erroneous. Ample state action is present when school boards draw the attendance zones, locate the schools, assign the students and compel the attendance of students at those schools. The leading de facto cases (*Bell*, *Deal*, and *Downs*), moreover, did not present to the courts a factual record and findings, present here, showing the educational harm suffered by black students in racially identifiable black schools. Finally, to the extent that the *Bell*, *Deal* and *Downs* cases relied on a requirement that a discriminatory purpose must be shown, they are inconsistent with decisions of this Court. See, *infra*, pp. 46-48.

segregated core schools showed significantly lower scholastic achievement and significantly higher dropout rates. The court observed that these adverse consequences were attributable in part to factors such as "home and community environment, socio-economic status of the family, and the educational background of the parents . . . ." But even so, "we cannot ignore the overwhelming evidence to the effect that isolation or segregation per se is a substantial factor in producing unequal educational opportunity." (A. 84a.) "Many factors contribute to the inferior status of these schools, but the predominant one appears to be the enforced isolation in the name of neighborhood schools and housing patterns" (A. 89a).[21] So too, it was the view of the court of appeals that "[w]e cannot dispute the welter of evidence offered in the instant case and recited in the opinion of other cases that segregation in fact may create an inferior educational atmosphere" (A. 145a).

The issue, rather, is as to the principles of law to be applied to these facts. On this question the courts below disagreed. The trial court ruled that the proven inequalities must be remedied. "Where state action, even if nondiscriminatory on its face, results in the unequal treatment of the poor or a minority group as a class, the action is unconstitutional unless the state provides a substantial justification in terms of legitimate state interest" (A. 87a). In other words, the "present state of the law is that separate educational facilities (of the *de facto* variety) may be maintained, but a fundamental and absolute requisite is that these shall be equal. Once it is found that these separate facilities are unequal in the quality of education provided, there arises a substantial probability that a constitutional violation exists. This probability becomes almost conclusive where minority groups are relegated to inferior schools." (A. 88a.)

[21] See also, A. 86a-87a.

The court of appeals disagreed and reversed. It is difficult to tell precisely why. Evidently it did so for either of two reasons. First, it appears to have been the position of the court of appeals that the Fourteenth Amendment, at least as interpreted in *Brown*, prohibits school segregation only when it is purposeful, regardless of the effect of such segregation. Alternatively, the court of appeals appears to have been of the view that a school board's employment of a neighborhood school policy, if not shown to be motivated by a purpose to segregate, suffices in and of itself to excuse any resulting educational inequality inflicted on minority children within the school district. The court thus stated "that the law in this circuit is that a neighborhood school policy is constitutionally acceptable, even though it results in racially concentrated schools . . ." (A. 144a).[22]

NEA contends that the district court, rather than the court of appeals, used the proper standard for determining whether Denver's segregated schools are permissible under the Fourteenth Amendment.[23] In our view, where it is established that segregated schools afford minority children unequal educational opportunities, the school district must show that the policies responsible for the segregation serve a compelling governmental interest. Absent such a showing, the inequality constitutes a violation of the Equal Protection Clause. The court of ap-

---

[22] Elsewhere the court said "the rule of the Circuit is that neighborhood school plans, when impartially maintained and administered, do not violate constitutional rights even though the result of such plans is racial imbalance" (A. 134a).

[23] As we explain below, *infra*, p. 52, we believe that the district court misapplied this standard. The court failed to make any findings concerning the advantages of the neighborhood school system and failed to determine whether such advantages, if any, amounted to a compelling justification for the deprivations that the neighborhood school policy was found to inflict upon the minority group children in the district.

peals thus erred in ruling that the Fourteenth Amendment prohibits segregation only when it is purposely aimed at a minority group, and/or in adopting the position that a neighborhood school policy is a per se justification for the educational inequalities that are caused by the adventitious maintenance of segregated schools.

We discuss below our claim that the "compelling governmental interest" test is the standard which must be applied in cases such as this, where the proof establishes that segregated schooling within a school district denies equal educational opportunities to minority children. We follow this with a discussion of the alternative arguments which the court of appeals appears to have advanced in reaching a contrary result.

2. *The Compelling Governmental Interest Test Is the Proper Standard for Judging Whether Denver's "Neighborhood School Policy" Satisfied the Equal Protection Clause.*

The Fourteenth Amendment, in terms, speaks of "equal protection of the laws." Federal courts have interpreted the clause to place on the state the burden of justifying any state action which impinges unequally and unfairly upon a group or an individual.[24] As the law has developed, two distinct standards have been applied to measure the validity of state action put in issue under the clause. One branch of the cases requires only that the state, in justification of a proven discrimination, demonstrate a reasonable basis therefor.[25] A second branch of the cases —applicable in circumstances where suspect classifications and fundamental interests are involved—requires

---

[24] *McLaughlin* v. *Florida*, 379 U.S. 184, 190-191 (1964).

[25] See, *e.g.*, *Dandridge* v. *Williams*, 397 U.S. 471, 485 (1970), and cases discussed therein.

the state to demonstrate a compelling governmental interest justifying the discrimination.[26]

As we have demonstrated above, both courts below are in agreement on the facts: the Denver school authorities have maintained segregated schooling by adherence to a "neighborhood school policy," and, as a result, have afforded minority children unequal educational opportunities. In determining whether this proven condition of inequality violated the Equal Protection Clause, the district court in essence applied that branch of the case law requiring the state to justify its actions by demonstrating a "compelling state interest." Thus, the district court held that where minority groups are consigned to inferior schools the probability that the assignment policy is unconstitutional "becomes almost conclusive" (A. 88a).

In our view, the district court's approach to the case was correct. We urge the Court to hold that once the plaintiffs demonstrate that school assignment policies have created segregated schools, which in turn provide inferior educational opportunities for minority children, a prima facie violation of the Fourteenth Amendment is established, which places upon the school district an obligation to show a compelling justification for its assignment policies.

We would urge this standard on the Court merely as a matter of principle if in fact the slate were clean and this were an issue of first impression. At stake in this case is the education of children—"perhaps the most important function of state and local governments," "the very foundation of good citizenship" and "a principal instrument" in the development of the individual's ca-

---

[26] See, *e.g.*, *Harper* v. *Virginia Board of Elections*, 383 U.S. 663, 670 (1966); *Hunter* v. *Erickson*, 393 U.S. 385, 391-92 (1969), and cases discussed therein.

pacities. See *Brown* v. *Board of Education*, 347 U.S. 483, 493 (1954).

But the slate is not clean. Recently, state and federal courts have recognized the paramount importance of education and have sought to assure equal educational opportunities to all children. Thus, five courts have required the state to show a compelling justification for school financing arrangements that in effect diminish the educational opportunities of children residing in poorer areas of the state. *Serrano* v. *Priest*, 5 Cal. 2d 584, 487 P.2d 1241 (1971); *Van Dusartz* v. *Hatfield*, 334 F. Supp. 870 (D. Minn. 1971); *Robinson* v. *Cahill*, No. L-18704-69 (Superior Court of New Jersey, Jan. 19, 1972), pp. 66-69 (slip op.); *Hollins* v. *Shoftstall*, No. C-253652 (Superior Court of Maricopa County, Arizona, January 13, 1971) p. 6 (slip op.); *Rodriquez* v. *San Antonio Independent School District*, C.A. No. 68-175-SA (W.D. Tex. Dec. 23, 1971) (3 Judge Ct.) *jurisdictional statement filed*, 40 U.S.L.W. 3513 (U.S. April 17, 1972) (No. 71-1332).

The case at bar presents an even more appropriate instance for employing the compelling interest standard. In this case the educational deprivation falls most heavily upon the children of minority groups. In the past when such groups have been burdened disproportionately by state action, this Court repeatedly has applied the compelling interest standard in determining whether the racial or ethnic group has been denied equal protection. *Loving* v. *Virginia*, 388 U.S. 1, 11 (1967); *Harper* v. *Virginia Board of Elections*, 383 U.S. 663, 668 (1966); *McLaughlin* v. *State of Florida*, 379 U.S. 184, 196 (1965); *Korematsu* v. *United States*, 323 U.S. 214, 216 (1944). Consistent with these rulings of this Court, lower courts called upon to judge state action neutral on its face but disproportionately burdening blacks have similarly required the state to establish a "compelling state interest"

in order to justify its action. *Hawkins* v. *Town of Shaw*, 437 F.2d 1286, 1288, 1292-93 (5th Cir. 1971), *aff'd en banc*, —— F.2d —— (No. 29013 March 27, 1972); *Armstead* v. *Starkville Municipal Separate School District*, 325 F. Supp. 560, 570 (N.D. Miss. 1971), *appeal pending*, No. 71-2124 (5th Cir.); *Baker* v. *Columbus Municipal Separate School District*, 329 F. Supp. 706, 720 (N.D. Miss. 1971), *appeal pending*, No. 71-2531 (5th Cir.); *Western Addition Community Organization* v. *Alioto*, 330 F. Supp. 536, 539 (N.D. Cal. 1971); *Arrington* v. *Mass. Bay Transp. Auth.*, 306 F. Supp. 1355, 1358 (D. Mass. 1969); *Hobson* v. *Hansen*, 269 F. Supp. 401, 497 (D.D.C. 1967). *Cf. Dandridge* v. *Williams*, 397 U.S. 471, 485 n. 17 (1970).

We submit that the great purposes of the Fourteenth Amendment cannot be satisfied unless black children in school districts throughout the country are assured of educational opportunities equal to those provided to whites in the same districts. More than half of the nation's black children reside in the center cities.[27] For these children *Brown* v. *Board of Education* has no meaning so long as school boards are free to make student assignments which mirror in the schools, and compound the effects of, the residential segregation in the city.

NEA does not urge here, however, that a "neighborhood school policy" is per se unconstitutional. We leave open the possibility of circumstances which might justify it.[28] We urge only that, upon a showing that minority

---

[27] The official census for 1970 reveals that 58 per cent of the black population lives in inner city areas. U.S. Bureau of the Census, Census of Population in Housing 1970, *General Demographic Trends for Metropolitan Areas*, 1960-1970 (Final Report, October 1971), p. 33, Table 9.

[28] A district court should consider, for example, whether the segregation produced by a "neighborhood school policy" is detrimental to the educational development of the black children in those schools, whether the school district has embarked upon compensatory

students are afforded inferior educational opportunities in segregated schools, the state be required to show a compelling governmental interest justifying the policies responsible for such inequality. As the court put it in *Hobson* v. *Hansen*, *supra*, 269 F. Supp. at 508:

> If the situation were one involving racial imbalance but in some facility other than the public schools, or unequal educational opportunity but without any Negro or poverty aspects (*e.g.*, unequal schools all within an economically homogeneous white suburb), it might be pardonable to uphold the practice on a minimal showing of rational basis. But the fusion of these two elements in *de facto* segregation in public schools irresistibly calls for additional justification. What supports this call is our horror at inflicting any further injury on the Negro, the degree to which the poor and the Negro must rely on the public schools in rescuing themselves from their depressed cultural and economic condition, and also our common need for the schools to serve as the public agency for neutralizing and normalizing race relations in this country. With these interests at stake, the court must ask whether the virtues stemming from the Board of Education's pupil assignment policy (here the neighborhood policy) are compelling or adequate justification for the considerable evils of *de facto* segregation which adherence to this policy breeds.

3. *The Court of Appeals Erred in Holding that Only Purposeful Discrimination Violates the Equal Protection Clause.*

The court of appeals in one of its alternative holdings rejected the standard we urge upon this Court because that standard does not make segregatory purpose

---

education programs that actually remedy the effects of racial segregation, and whether there is a practical alternative to the segregated conditions resulting from the "neighborhood school policy."

or invidious motive an element of the constitutional violation. In this regard the Tenth Circuit's ruling conflicts with the decisions of this Court.

To be sure, a discriminatory purpose may be relevant or even conclusive in establishing a Fourteenth Amendment violation. *Griffin* v. *Prince Edwards County*, 377 U.S. 218 (1964). *Cf. Gomillion* v. *Lightfoot*, 364 U.S. 339, 347 (1960). But cf. *Palmer* v. *Thompson*, 403 U.S. 217, 225 (1971). Discriminatory motive is not a prerequisite, however. Last term this Court again eschewed the search for a discriminatory motive or intent, looking instead at the operative effect of the state action. *Palmer* v. *Thompson, supra*, 403 U.S. at 225. Traditionally this has been the manner in which the Court has tested state action against the requirements of the Equal Protection Clause. *Douglas* v. *California*, 372 U.S. 353 (1963); *Near* v. *Minnesota*, 283 U.S. 697, 708 (1931); *Griffin* v. *Illinois*, 351 U.S. 12, 17 n. 11 (1956); *Guinn* v. *United States*, 238 U.S. 347 (1915); *Bailey* v. *Alabama*, 219 U.S. 219, 244 (1911); *Home Insurance Co.* v. *New York*, 134 U.S. 594, 598-599 (1890); *Henderson* v. *Mayor of New York*, 92 U.S. 259, 268 (1876).

Recently the Fifth Circuit sitting in banc was confronted with this issue. *Hawkins* v. *Town of Shaw*, No. 29013 (decided March 27, 1972). The court held that the unequal distribution of municipal services between the white and black residents of a town constituted a violation of the Fourteenth Amendment irrespective of motive or intent. Quoting from decisions of the Second Circuit, the court said in *Hawkins* (Slip op. p. 2):

> In order to prevail in a case of this type it is not necessary to prove intent, motive or purpose to discriminate on the part of city officials. We feel that the law on this point is clear, for 'equal protection of the laws means more than merely the absence of governmental action designed to discriminate; . . .

we now firmly recognize that the *arbitrary quality of thoughtlessness* can be as disastrous and unfair to private rights and to public interest as the perversity of a willful scheme.' (emphasis supplied) *Norwalk Core* v. *Norwalk Redevelopment Agency*, 2 Cir. 1968, 395 F.2d 920, 931. See also *Kennedy Park Homes Association* v. *City of Lackawanna, New York* (2 Cir., 1970) 456 F.2d 108, 114, cert. den. 401 U.S. 1010 (1971) and *United States ex rel. Seals* v. *Wyman*, 5 Cir. 1962, 304 F.2d 53 at 65.

To conclude, the Tenth Circuit would hold plaintiffs to proof of discriminatory purpose. Such a requirement is not only at odds with the decisions of this Court and other federal courts but is inconsistent with the basic purposes of the Fourteenth Amendment. The gravamen of the Amendment is not the requirement that public officials act with a pure heart; rather the Amendment's basic purpose was to secure for blacks and other minority groups the same rights and privileges as are enjoyed by whites. *Palmer* v. *Thompson*, 403 U.S. at 220. See also, *e.g.*, *Slaughter House Cases*, 16 Wall. 36, 71-72 (1873).

4. The Court of Appeals Erred in Treating the Defendants' "Neighborhood School Policy" as a Per Se Justification for the Unequal Educational Opportunities Afforded to Minority Children.

As we read the Tenth Circuit's decision, the court held in the alternative that the inequalities arising from Denver's segregated schools—however serious and detrimental to the interest of minority groups in general or minority children individually—were justified by the school district's adherence to a "neighborhood school policy." The court reached this conclusion, not on the basis of evidence in the record, but on the basis of its holding and dicta relating to school assignment policies in Kansas City, Oklahoma City and Tulsa. *Downs* v. *Board of Education*

of Kansas City, 336 F.2d 988 (1964), *cert. denied*, 380 U.S. 914 (1965); *Board of Education of Oklahoma City* v. *Dowell*, 375 F.2d 158 (1967); *United States* v. *Board of Education of Tulsa County*, 429 F.2d 1253 (1970). Citing these cases, it declared: "The law in this Circuit is that a neighborhood school policy is constitutionally acceptable even though it results in racially concentrated schools . . ." (A. 144a). In effect the court held that educational inequality resulting from racially segregated schools is constitutional per se if it is produced by a "neighborhood school policy." We believe the court erred.

NEA and CEA urge that a strong evidentiary showing, at the very least, should be required to justify educational inequality stemming from segregated schools. The existence of a constitutional right, including the right to equal protection of the laws, should not turn on mere lar student assignment plan which has the effect of pre-

The phrase "neighborhood school" at best is amorphous. As this Court observed in another context, "The word 'neighborhood' is quite as susceptible of variation as the word locality. Both terms are elastic and, dependent upon circumstances, may be equally satisfied by areas measured by rods or by miles." *Connally* v. *General Const. Co.*, 269 U.S. 385, 395 (1925). Nor have school administrators poured definite content into those words.

Generally, the term "neighborhood school policy," when used to describe a school board's student assignment plan, may be understood to mean that the factor of distance from home to school is taken into account. Typically, distance is but one of a substantial number of factors,

---

[10] E.g., *Taylor* v. *Board of Education*, 191 F. Supp. 181, 194 (S.D.N.Y. 1961). Cf. *Goldberg* v. *Kelly*, 397 U.S. 254, 262-63 (1970); *Shapiro* v. *Thompson*, 394 U.S. 618, 627 n. 6 (1969); *Sostre* v. *McGinnis*, 442 F.2d 178, 196 (2d Cir. 1971); *Knight* v. *State Board of Education*, 200 F. Supp. 174, 178 (M.D. Tenn. 1961).

including safety, natural obstacles, utilization of classroom space, economics, etc., given varying weights by the board in varying circumstances. In Boston, for example, schools once were built in isolated areas rather than the center of "neighborhoods" because land in those areas could be purchased at reduced cost. See Weinberg, *Race & Place* 7 (1967). According to the most recent available statistics, covering the school year 1967-68, 42 percent of the nation's pupils in average daily attendance were transported to schools at public expense. U.S. Dept. HEW, Office of Education, *Statistics of Public Schools* 7-8 (Fall 1970). This fact constitutes irrefutable proof that school boards across the United States give greater weight to considerations other than the convenience of the "walk-in school" in formulating student assignment plans.

Manifestly, in framing a student assignment plan, a school board should consider various educational objectives. The weight given to those factors will dilute that allocated purely to proximity. For example, the board may decide to eliminate two small, inefficient schools and substitute one large school, with a broader attendance area, which can offer a more substantial program. School boards typically will draw larger attendance zones for junior and senior high schools than for elementary schools so as to insure student bodies of a size sufficient to sustain special programs and expensive facilities such as gymnasiums, swimming pools and theaters. As the court of appeals noted, in Denver the board "attempts to draw junior high school and senior high school boundary lines so that all students transferring from a given school will continue their education together" (A. 127a). Nonetheless, the ultimate assignment plan is commonly called a "neighborhood school plan."

The most evident benefit of a plan which gives relatively greater weight to the factor of proximity than to

overcoming school segregation is that it is more convenient for a larger number of students and parents. Convenience, however, is not so important as to require that all other educational values—or constitutional rights—be subordinated to it. "The first and most important consideration in determining a satisfactory attendance unit is the kind of educational program that is to be provided." [20] Many school systems, including the predecessor to the Denver board, have concluded that segregation, regardless of how it is caused, is educationally unsound, and have assigned students to schools other than those nearest their homes to overcome racial imbalance.

At the very least, a reasonable application of the compelling interest test requires a court to weigh the convenience of an assignment plan against the educational inequality it produces. In making such a judgment a court might also consider, for example, the relative inconvenience or burden that might result from an alternative plan which would minimize the segregation. See *Swann* v. *Charlotte-Mecklenburg Board of Education*, *supra*. Clearly a court cannot assess whether a particular student assignment plan which has the effect of preserving segregation and educational inequality serves values so compelling as to justify the plan without scrutinizing the elements of the plan, the actual objectives served and the alternatives available. The accordian-like nature of the term "neighborhood school policy" and its uncertain meaning preclude any per se rule sanctioning school segregation and educational inequality by mere incantation of the term. In adopting such a per se rule, the court of appeals erred.

---

5. The Appropriate Remedy Is To Remand this Branch of the Case for Trial of the Issue Whether Denver's "Neighborhood School Policy" Can Be Justified by a Compelling Governmental Interest.

It seems to us that if this Court does not dispose of the case on the ground that the record demonstrated purposeful segregation in the core area schools, it should remand this issue to the district court with instructions to resolve the question whether there are compelling governmental interests which justify the segregation and inequality in those schools. The trial court has yet to make findings regarding the objectives served by the student assignment plan of the Denver board, the respective values to be accorded to each of those objectives and the relation of those values to the costs of the segregation and resulting unequal education.

III

CONCLUSION

For the foregoing reasons the judgment of the court of appeals, insofar as it denies relief with respect to the core schools, should be reversed and the case remanded to the district court with instructions to (1) frame a remedy for the de jure segregation in the core area, or (2) in the alternative, (a) reconsider its finding that the board did not purposefully segregate the core area schools in light of its own finding that the board purposefully segregated the adjoining Park Hill schools and in light of the presumption of discrimination flowing therefrom, and (b) conduct hearings on the question whether the values served by the board's student assignment plan constitute a compelling justification for the

resulting segregation of the core schools and inferior education afforded thereby.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

MOTION FOR LEAVE TO FILE BRIEF OF AMERICAN CIVIL LIBERTIES UNION AND AMERICAN CIVIL LIBERTIES UNION OF COLORADO, *AMICUS CURIAE*

The American Civil Liberties Union and the ACLU of Colorado have requested the parties in this case to consent to their filing the attached brief *amicus curiae* out of time. The Petitioners have granted their consent. The Respondents have declined consent because we could not give them assurance that we would "file a brief supporting the position of the School District." The letters of consent and non-consent have been filed with the clerk.

The American Civil Liberties Union is a nation-wide nonpartisan organization of over 170,000 members dedicated solely to preservation of the liberties safeguarded by the

Bill of Rights and the 13th, 14th and 15th Amendments to the United States Constitution. The American Civil Liberties Union of Colorado is a state affiliate of the ACLU.

The ACLU and the ACLU of Colorado have been particularly concerned with the pervasive effects of racial discrimination and segregation on American society. They participate in numerous law suits challenging racial discrimination and segregation. They take the position that effective racial integration of the public schools is a necessary prerequisite to the full and equal protection of the laws for Americans of all races and colors.

In the attached brief, the ACLU and the ACLU of Colorado provide additional focus on the issues in this case which go well beyond the facts of the particular case. To place these issues in the larger perspective, they therefore respectfully request leave to file the attached brief.

BRIEF OF AMERICAN CIVIL LIBERTIES UNION, AMERICAN CIVIL LIBERTIES UNION OF COLORADO, *AMICUS CURIAE*

Interest of *Amicus*

The interest of the *amicus* appears from the attached motion.

I.

The Children of Denver Are Denied Equal Educational Opportunity Because Their Schools Are Racially Segregated.

"Separate educational facilities are inherently unequal." *Brown* v. *Board of Education*, 347 U.S. 483, 495 (1954).

"To separate [black students] . . . generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone. . . . Segregation with the sanction of law, therefore, has a tendency to [retard] the educational and mental development of Negro children and to deprive them of some of the benefits they would receive in a racial[ly] integrated school system." *Id.* at 494.

The nation must not repudiate *Brown*. This nation must never again accept the argument that "separate but equal" is not a badge of inferiority unless "the colored race chooses to put that construction on it," *Plessy* v. *Ferguson*, 163 U.S. 537, 551 (1896). The task of bringing equality of educational opportunity to the minority children of this nation through elimination of racially-identifiable schools has not yet been accomplished. We can ill afford to lower this standard of equal opportunity in the North, for segregation is now a more serious problem in the North than in the South. Nationwide, 68% of all blacks attended schools with student bodies 80-100% black in 1966 and by 1970, the figure had dropped to 49%. In the thirty-two Northern and Western states, however, 58% of all black students still attended such minority-race schools despite the drop in the nationwide figures—accounted for, obviously, by the dramatic decrease in Southern school segregation. U. S. Dept. of Health, Educ. & Welfare, *News Release*, June 18, 1971 (Table 2-A). Obviously, then, school segregation is not a problem confined to the South and constitutional doctrine intended to deal with the problem must not be so limited as to apply only to the South.

If schools are identifiably "minority race" or "white," if they are more than "just schools," *Green* v. *County School*

Board of New Kent County, 391 U.S. 430, 442 (1968), the discriminatory injury so zealously to be guarded against under *Brown* occurs. And that injury occurs whether or not the school is a northern school or a southern school, and regardless of whether the segregation is imposed under a dual or a "neighborhood" school system. What matters is the school's identifiability as a "minority race" school in a system which contains "minority race" schools and "white" schools. The identifiability of schools, and the resultant injury to students, is largely a matter of society's, and more particularly, of a child's perception. If a child can say (or see or feel) "This is one of Denver's minority race schools—and this is one of Denver's white schools," the school and the system that creates it, are segregated within the meaning of *Brown* and its progeny—and the constitutional harm is accomplished.

This case brings before the Court, for the first time since *Brown*, a school system in which segregation is pervasive but in which segregation is not mandated by explicit statements of public policy embodied in legislative enactments. It presents the question whether one constitutional standard prohibiting school segregation is to govern all schools, nationwide, or whether the South is to be separately and distinctly treated because it has been placed under a "judicial Bill of Attainder." *Monroe* v. *Board of School Commissioners*, 380 F.2d 955, 958 (6th Cir. 1967), *rev'd* 391 U.S. 450 (1968).

Putting aside for the moment any questions of intent or causation, Denver's schools are racially segregated, so segregated in fact, that the District Court concluded that "the result [of the Respondents' actions] is about the same as it would have been had the administration pursued dis-

criminatory policies, since the Negroes and . . . Hispanos . . . always seem to end up in isolation." 313 F. Supp. 61, 73. Given this factual context, no matter where he lives in the Denver area, the child perceives that some people attend "minority race" schools, and other people living elsewhere attend "white" schools. This racial identification causes the harm condemned under *Brown*, as amply demonstrated by the record and findings below.

The school age population of the metropolitan Denver area is approximately 64% Anglo and 15% black and 21% Hispano. If a child were in a school with a similar proportion of students, he would not perceive it as a "minority race" school or a "white" school but simply as a school which reflects the metropolitan Denver society in which he lives. However, in Denver most students attend schools which are readily identifiable as either "minority race" schools or "white" schools.

When almost every school in an area can be seen to be a "minority race" school or a "white" school, when schools in an area are not "just schools," it is obvious that the schools are segregated. That this segregation is caused by a "neighborhood school policy" does not alter the child's perception, or the injury stemming from the segregation. Indeed, plaintiffs produced a number of witnesses to testify to the actual educational harm done by this separation of the races. They also produced tangible evidence of this harm. The District Court in this case expressly found, as a fact, that Denver's segregated school system denied minority students equal educational opportunity. Arguably such evidence and findings should not have been necessary. For almost two decades now, this Court has recognized

that "Separate educational facilities are inherently unequal." *Brown* v. *Board of Education, supra*, 347 U.S. at 495. This case teaches that the same inequality inheres in "neighborhood" schools as in "dual" schools.

II.

The Denver School System Must Be Desegregated on a System-Wide Basis.

A. *The State Has Created the Segregated School System.*

To the extent that the State of Colorado has delegated to Respondents the power to determine location, size, attendance boundaries, student assignments, and faculty staffing of the schools in Denver, the exercise of those powers is still the state's responsibility and they must be exercised in conformity with the state's constitutional obligations under the Fourteenth Amendment. The Respondents, acting under color of and pursuant to state law located, sited, constructed, set attendance zones for, assigned students and allocated teachers and resources to all the schools in Denver. Regardless of the mechanism used by the Respondents or their purported justifications, the result of their exercise of state power is obvious—segregated schools.

The question in this case, therefore, is not whether state action has resulted in a segregated school system—that clearly has occurred. Rather, the question is whether the state, which has exercised its power in a fashion which resulted in segregated schools, can be held to have acted for reasons which reflects a compelling state interest. In other words, having acted in such a manner as to segregate the races in fact, can the state demonstrate justifica-

tion of a sufficiently compelling nature so as to excuse the effects of its actions? If such justification does not exist, then the school system is, within the meaning of *Brown*, segregated and the equity powers of a federal court may properly be invoked to remedy the resultant segregation.

The lower courts did not discuss this question. Applying the wrong legal rules, they instead deemed the relevant question to be the existence or non-existence of "racial motivation" or "segregative intent" as an explanation for the Respondents' behavior. This was error.

B. *The Courts Below Applied a Constitutionally Defective Standard of Proof the Effect of Which Is to Create Two Rules of Constitutional Law: One for the South, One for the North.*

The District Court considered the evidence in this case and found that Respondents were motivated by "segregatory intent" with respect to the Park Hill schools in Denver. Despite the apparent and obvious inconsistency in so doing, the District Court also found, with respect to schools other than the Park Hill schools, that the Respondents' actions were constitutionally permissible because Respondents were not "motivated by either an intention or desire to discriminate" even though the effects of their actions were "about the same as it would have been had the administration pursued discriminatory policies." 313 F. Supp. 61, 73. The Court explained that the segregatory effects which occurred at schools other than the Park Hill schools flowed from the Respondents' decision to bow to community sentiment with respect to the desirability of racial concentration in schools rather than from any desire to discriminate. "They just found the consensus and followed it." 313 F. Supp. 61, 73.

Since the court failed to find the necessary intent to discriminate with respect to these schools, it felt constrained to hold that petitioners failed to prove the existence of unconstitutionally imposed segregation. The Court of Appeals apparently adopted the same view and based its decision on the proposition that in order for a constitutional deprivation to be shown, a plaintiff must prove that a "state segregates children in public schools solely on the basis of race" because "racially imbalanced schools [are not prohibited] provided they are established and maintained on racially neutral criteria." 445 F.2d 990, 1005.

It is difficult to understand the precise definition given to the term "racially neutral" by the lower courts. Obviously, a desire to follow community sentiment when that sentiment is in favor of "racial concentration," or segregation, is not, in any usual sense of the word, "racially neutral." In fact, action based on such desires clearly is racially motivated. To follow such a consensus necessarily requires acts that are segregatory in nature. Similarly, to suggest, as did the Court of Appeals, that use of "racially neutral criteria" which leads to racial segregation is permissible distorts the commonly understood meaning of "racially neutral criteria." Many criteria are "neutral" on their face, but if the effect of their application is segregatory or unduly disadvantages a minority race, then such criteria can hardly be considered "neutral." Obviously, both courts were using "racially neutral" in a very strained, artificial and legally erroneous manner. This ill use becomes more apparent in other portions of the opinion of the Court of Appeals. It is apparent, from later portions of the opinion focusing on the existence of proof of "discriminatory intent" or "segregatory desires," that both courts define "racially neu-

tral criteria" as nothing more than criteria which do not, on their face, bear proof of such intent or desires. Only on such a basis is it possible for a court to suggest that criteria may be racially neutral when their effect, in the face of other equally available and less discriminatory alternatives, is foreseeably certain to, and in fact does, segregate the races and when, in utilizing such criteria, defendants are admittedly following community consensus which prefers such segregation. The Court of Appeals further demonstrates this focus on intention by stating that "The burden is on the plaintiffs to prove by a preponderance of evidence that the racial imbalance exists and that it was caused by intentional state action," *Id.*, 1006. By "intentional state action," the Court of Appeals meant action pursuant to "segregatory intent" or a "racially discriminatory policy," *Id.*, 1006. In short, both lower courts found no state imposed segregation, despite the clear segregatory effect of the state's action, because petitioners had failed to prove bad faith motivation or bad faith intent to discriminate by direct evidence of actual, conscious purpose. Such a reading of the requirements of the equal protection clause is clearly erroneous.

When a government drawn or supported classification is based on race, and its burdens fall heavily on members of a minority race, that law is at least "suspect." To justify it, a state must show a compelling, not simply a rational (or "neutral") basis for the classification. Even if such a classification is enacted in order to further a valid state interest, it "bears a heavy burden of justification . . . and will be upheld only if it is necessary, and not merely rationally related, to the accomplishment of a permissible state policy." *McLaughlin* v. *Florida*, 379 U.S. 184, 196 (1964); *accord, Loving* v. *Virginia*, 388 U.S. 1, 9 (1967).

Similarly, and aside from the case of a classification scheme which contains racial criteria on its face, a "neutral" statutory scheme or a "neutral" course of governmental action the objective of which is to segregate the races or disadvantage members of a minority race is impermissible; it is not merely "suspect" but invalid. "Whatever non-racial grounds might support a state's allowing a county to abandon public schools, the object must be a constitutional one, and grounds of race and opposition to desegregation do not qualify as constitutional." *Griffin* v. *Prince Edward County School Board*, 377 U.S. 218, 231 (1964). See also *Gomillion* v. *Lightfoot*, 364 U.S. 339 (1960). In cases where the classification scheme or governmental action challenged is not racial on its face or in which the objective is not clearly apparent, the most telling point is the *effect* of the governmental action. In such cases, "the focus . . . [is] on the actual effect" rather than on motivation, intent, purpose or rationalization. *Palmer* v. *Thompson*, 403 U.S. 217, 225 (1971). See also, *Evans* v. *Abney*, 394 U.S. 1012 (1969). In such cases, if the state has acted in the face of other available alternatives and the *effect* of such action is to discriminate between, or segregate, the races, a prima facie case of racial discrimination is made. Thus, courts have not permitted school attendance lines to be drawn around a residentially segregated neighborhood when other attendance zones are just as feasible. *Brewer* v. *School Board of City of Norfolk*, 397 F.2d 37 (4th Cir. 1968). Even attendance zones which follow natural or historical boundaries have been struck down when they operate to separate the races. See *Henry* v. *Clarksdale Municipal Separate School District*, 409 F.2d 682 (5th Cir.), *cert. denied*, 396 U.S. 940 (1969); *United States* v. *Greenwood Municipal Separate*

School District, 406 F.2d 1086 (5th Cir.) *cert. denied*, 395 U.S. 908 (1969); *Clark* v. *Board of Education of Little Rock*, 426 F.2d 1035 (8th Cir. 1970); and *Monroe* v. *Bd. of Comm'rs of Jackson*, 427 F.2d 1005 (6th Cir. 1970). See also *Davis* v. *Board of School Commissioners of Mobile County*, 402 U.S. 33 (1971).

If the effect of state action is racial segregation and the non-racial justification is weak, there is no need to probe the psychological motivation of a legislature and determine whether there was in fact a racial purpose. Anyone involved in such a classification will readily perceive that they are treated unequally, and courts will agree with the perception. See *Jackson* v. *Godwin*, 400 F.2d 529 (5th Cir. 1968); *Hawkins* v. *Town of Shaw*, 437 F.2d 1286 (5th Cir. 1971).

Statutes prohibiting racial discrimination in voting and employment have been construed from this perspective. See *Gaston County* v. *United States*, 395 U.S. 285 (1969). In *Griggs* v. *Duke Power Co.*, 401 U.S. 424 (1971), an employer used a standardized test for hiring and promotion decisions. The District Court found there was no racial purpose or invidious intent in adopting the test although whites generally did better than blacks in taking it; and by a split decision, the Court of Appeals affirmed. Nevertheless, this Court found that the use of the test violated Title VII of the Civil Rights Act of 1964 which made it unlawful for an employer "to limit, segregate, or classify his employees in any way which would deprive . . . any individual of employment opportunities . . . because of such individual's race." The Court ruled that an employment test could be used only if it was in fact related to performance of the job, and that the employers' motive in using the test was not the significant question.

Indeed, any attempt to establish motivation, rather than effect is normally impossible and, because they are so conjectural even where possible, such attempts normally viewed as neither a necessary nor an adequate basis for constitutional determination. *Palmer* v. *Thompson*, 403 U.S. 217 (1971); *United States* v. *O'Brien*, 391 U.S. 367 (1968).

Where the effect of a classification is to separate the races, persons subject to the classification are likely to be harmed severely regardless of whether the classification was overtly on racial grounds or not. They should not be put to the burden of demonstrating an actual racial motive, intent or purpose. Further, it may prove impossible to prevent deliberate racial discrimination if the discriminator need only cite some rational basis not directly and obviously connected with race to support his action. Individuals and states then need only search for an apparent non-racial basis to continue segregation as before. Unless the state is forced to demonstrate substantial reasons for action which has a racial effect adverse to minority group members, the state can continue a policy of segregation behind a facade of neutrality.

In any event, it should not matter whether the guarantee of equal protection was deliberately denied or not. In this case, children have been forced to attend segregated schools and the state which requires them to do so can offer no compelling justification for its acts. Despite the clarity of this point, the Court of Appeals ignored the effect of Respondents' actions and held proof of intent necessary. Failing this proof by Petitioners the court would not impose a burden of proving a compelling justification on Respondents. The Court of Appeals further held that segregatory effects that flow from a neighborhood school

plan render such a plan constitutionally suspect only when adopted by school systems which had previously operated under a state law requiring racial segregation. The existence of the same segregatory effects under the same type of school plan, it ruled, are not constitutionally suspect if no such statewide law previously existed. 445 F.2d 990, 1005-6.

Thus, the Court of Appeals in effect laid down two rules of constitutional adjudication—one which is correct in that it focuses on effects, not intent, but which the Circuit Court felt was applicable only to schools located in the South, and one which is incorrect in that it focuses on intent rather than effect and which the Circuit Court felt was applicable only to Northern schools. This anomalous result necessarily follows from the lower courts' holding that proof of present constitutional deprivation in Northern schools (but not Southern schools) requires proof that the state has "taken some action with a purpose to segregate" 313 F. Supp. 61. But such proof may be negated by defendants' assertion of some colorably neutral basis for their decisions and actions, *e.g.*, a "neighborhood school policy," even though such decisions and actions resulted, and were known beforehand necessarily to result, in segregation, and even though, such "neutral criteria" cannot, in any sense, be deemed to involve a "compelling state interest." This result is invidious on both a personal and societal level.

On a personal level, adoption of the two disparate rules permits dissimilar treatment of similarly situated school pupils, which turns not on proof of the effects of objective acts but on the provable intent with which they were performed. To the southern student, therefore, relief from the harmful effects of segregation is granted notwithstanding the present "good faith" of the School Board. To the

northern student, relief from the harmful effects of segregation is not granted, despite the performance of identical acts with identical results—because no provable lack of "good faith" exists, even though "It is of no consolation to an individual denied the equal protection of the laws that it was done in good faith." *Burton* v. *Wilmington Parking Authority*, 365 U.S. 715, 725 (1961).

On a societal level, two constitutional rules of conduct are mandated. They turn not on the differing effects of the objective conduct but on the existence or non-existence, in the ever more remote past, of political and social views strongly enough held to be both codified and followed as, in the South, rather than simply followed, as in the North. A southern school's decisions even if rationalizable on "neutral grounds" are presumed invalid if segregation results, cf., *Swann* v. *Brd. of Comm. of Charlotte-Mecklenburg*, 403 U.S. 1, 26 (1970). But according to the lower courts, a northern school's decision, reached on the same grounds and with the same effect, are not presumed invalid and, indeed, are not provable as constitutionally invalid unless proof of the "intent" and "bad faith" with which they were taken is also proffered and believed.

The test of "intent" required by the lower courts is not even defensible assuming arguendo acceptance of the requirement that proof of an intent to segregate is necessary. Action taken with the knowledge of the consequences, where such consequences are both foreseeably certain and other alternatives are available, is "intentional" action even if some of the specific harmful consequences which flow therefrom were not provably desired by the actor. Rest. Torts §500. Obviously, Respondents here knew that the conse-

quences of their decision would be segregated schools when they selected, from all the available alternatives, the particular criteria they utilized in determining student assignments. When the criterion selected is geographical proximity and schools are built and located within "neighborhoods" in a system with residential segregation, the resulting segregation is foreseeable. So easily foreseeable were the consequences of utilization of the "neighborhood school criteria" in this case that Respondents had no difficulty in assigning minority race teachers to schools in which minority students were concentrated. The Court of Appeals stated that such assignments were "not proof of segregative desires," 445 F.2d 990, 1007, but this misses the point of the proof. The Respondents were well enough aware of the segregative results of application of their selected criteria that they could without difficulty assign teachers to schools, on a racial basis. Therefore, it is obvious that selection of such criteria was made in the light of the foreseeability of segregation.

The lower courts' insistence on proof of "intent" and disregard of proof of "effect" in the face of non-segregatory alternatives and the absence of compelling justification for the alternatives chosen were, therefore, clearly erroneous. Despite the lack of proof of "segregative desires," unless the criteria selected were selected because of the existence of some over-riding and compelling interest, Respondents must be chargeable with responsibility for the segregation that resulted.

C. *The School Boundary Lines Are Unconstitutional Because They Operate to Discriminate on the Basis of Race and Are Not Justified by a Compelling State Interest.*

The Court of Appeals held, in this case, that there is no remedy for segregation or the denial of equal educational opportunity if execution of that remedy would conflict with a school board's policy of pupil assignment to "neighborhood schools." 445 F.2d 990, 1004. However, the court did not suggest, analyze or weigh any argument that a state's interest in "neighborhood schools" is sufficiently compelling to justify segregation which knowingly and foreseeably flows from its utilization in a given school district. And, indeed, there seems to be no justifications, non-racial in character, which can be given in the circumstances of this case. There may be situations where deviation from an attendance system based on proximity is so expensive, or so destructive of other legitimate values that such zoning is permissible despite segregatory results. This clearly is not one such case—no justification was or can be given and none was weighed by the Court of Appeals which assumed the necessity for such zoning despite its effects.

The real danger of such an assumption, aside from its departure from relevant constitutional standards, is the mockery it makes of the equal protection clause as it applies to segregated schools. To deify "neighborhood schools" ignores the most obvious fact about such schools, —notably the "neighborhoods" which "neighborhood schools" serve, are defined by state action. It is the state which locates the school initially, which then determines its pupil capacity and which finally sets attendance zones for the school. In doing so, the state, and not local residents, is defining the "neighborhood" for the school. When

the effect of that state action is to segregate the schools racially and when the effect of the state's definition of "neighborhoods" is that the "neighborhoods" are racially segregated, there is simply no basis for the suggestion that the resulting segregation was not due to state action.

> "'Racially neutral' . . . plans may fail to counteract the continuing effects of past school segregation resulting from discriminatory location of school sites or distortion of school size in order to achieve or maintain an artificial racial separation. When school authorities present a district court with a 'loaded game board,' affirmative action in the form of remedial alteration of attendance zones is proper." *Swann, supra*, 28.

Aside from ignoring the obvious fact that the state is responsible for the "neighborhoods" which "neighborhood schools" serve, other justifications offered for such schools simply do not meet any rational, not to speak of compelling, standard of justification. To assume that such schools are an example of the "free choice" of the parents whose children attend them, which choice is manifested by selection of neighborhoods, ignores all reality. Housing choices for blacks and other minorities are not now and have never been "free". School boards must be charged with the knowledge of this fact, therefore rendering such segregation as results from utilization of these "neighborhood" criteria foreseeably certain. Similarly, even assuming that "neighborhood schools" are somewhat cheaper or administratively more simple, when the educational disparities created by such schools are considered, it is difficult to conceive that convenience or economy could justify such a pervasive deprivation. No such comparison was even made

in this case but it was clearly demonstrated that reasonable, feasible, non-segregative alternatives were available. Thus here there is no basis for Respondents to assert that the segregative choices it made were "compelled" at all.

In short, to assume, as did the Court of Appeals, that a school board's profession of adherence to the concept of "neighborhood schools" renders unnecessary all real proof of a compelling interest is a proposition wholly without merit. In a given case, utilization of "neighborhood schools" may, or may not, be justifiable. But if the effect of a present plan is segregatory, the state must establish its justification by proffer of alternatives and proof of their unacceptability. To require any less, given the nature of the harm and deprivation and the importance of the remedy, is irresponsible. ". . . [S]chool segregation is forbidden simply because its perpetuation is a living insult to the black children and immeasurably taints the education they receive. This is the precise lesson of *Brown*." *Brunson* v. *Brd. of Trustees*, 429 F.2d 820, 826 (4th Cir. 1970) (concurring opinion of Judge Sobeloff). As demonstrated by the record and the trial court's finding in this case, segregation becomes no less a "living insult" and education is no less "tainted" because the state segregated schools are all located in state segregated "neighborhoods," or simply because the segregated schools are Northern schools rather than Southern schools. In all such schools, Northern or Southern, segregation causes the insult and taint. The harm and the cause being identical, the remedies available and the rules of proof applied in determining the appropriateness of such remedies must be identical.

CONCLUSION

For the reasons stated, the judgment of the court below should be reversed insofar as it reverses the judgment of the District Court and the case remanded with directions that a comprehensive desegregation plan for the Denver School System be implemented.

Respectfully submitted,

IN THE

Supreme Court of the United States

No. 71-507

WILFRED KEYES, ET AL., *Petitioners*

v.

SCHOOL DISTRICT No. 1,

DENVER, COLORADO, ET AL., *Respondents*

BRIEF ON THE MERITS IN SUPPORT OF RESPONDENTS SCHOOL DISTRICT NO. 1, DENVER, COLORADO, ET AL., SUBMITTED BY THE STATE OF INDIANA, AS AMICUS CURIAE

INTEREST OF AMICUS CURIAE

The State of Indiana, by the Attorney General of Indiana, respectfully presents this brief amicus curiae in support of the School District No. 1, Denver, Colorado, et al., pursuant to paragraphs 4 and 5 of Rule 42 of the Rules of the Supreme Court of the United States.

The State of Indiana, pursuant to its Constitution, Article 8, Section 1 (1851), and statutes duly enacted, has provided for a system of common schools, wherein tuition shall be without charge, and "equally open to all."

An examination of the session laws of the General Assembly of Indiana, from 1850 forward, demonstrates the

State's commitment to the development of quality education in Indiana. Those laws speak to myriad items. Some of them are: teacher training; teacher qualification and certification; curriculum development and inspection; quality of curriculum; quality and safety of buildings; libraries; student-teacher ratios; student attendance; and student educational development. See generally, *Indiana Code, 1971*, Title 20 and Title 21.

The interest of the amicus is in seeking an interpretation of the Equal Protection Clause of the 14th Amendment, which will permit a continued development, a continued expansion, and a continued experimentation in educational programs in Indiana. It is a development and educational evolution which recognizes the vast complexities in educational programs in an open and pluralistic State, and also recognizes that within that development and evolution there shall be an equal educational opportunity for all students enrolled in public schools.

The amicus asks the Court not to restrain that development and evolution by a constitutional interpretation which would impose an interdicting rigidity, in the name of the Fourteenth Amendment, in educational theory and practice, as well as in established educational programs.

Accordingly, the amicus urges that the opinion and decision of the United States Court of Appeals for the Tenth Circuit, 445 F.2d 990 (1971) (App.Pet.Cert. 122a-160a), be affirmed but only to the extent that it reversed the opinions United States District Court, 313 F.Supp. 61 (1970) (App. Pet.Cert. 44a-98a), 313 F.Supp. 90 (1970) (App.Pet.Cert. 99a-121a).

This brief amicus curiae is limited in its discussion and presentation to that part of this case which is represented by the reversal in the Tenth Circuit of the District Court.

OPINIONS BELOW

The opinion of the Court below consists of the opinion and judgment of the United States Court of Appeals for the Tenth Circuit, filed June 11, 1971, 445 F.2d 990 (App. Pet.Cert. 122a-160a). The opinions in the District Court are found at (App.Pet.Cert. 44a-98a) 313 F.Supp. 61; (App. Pet.Cert. 99a-121a) 313 F.Supp. 90 (1970).

In its opinion and judgment, the Court of Appeals ordered that the judgment of the District Court be affirmed in all respects except that part pertaining to the "core area" or "court designated schools"; and it particularly reversed the District Court in its legal determination that those schools were maintained in violation of the Fourteenth Amendment because of "unequal educational opportunity afforded, this issue having been presented by * * * the Second Cause of Action contained in the complaint." (App. Pet.Cert. 160a), 445 F.2d 990, 1007.

JURISDICTION

The Supreme Court has jurisdiction to review this case by writ of certiorari under 28 U.S.C. 1254(1), and has accepted it for such purpose by granting said writ on January 17, 1972 (A. 1988a).

QUESTIONS PRESENTED FOR REVIEW

The schools in Denver, Colorado, which were affected by the District Court's decisions (App.Pet.Cert. 44a-98a), 313 F.Supp. 61, (App.Pet.Cert. 99a-121a), 313 F.Supp. 90, were divided into two categories, towards which the plaintiffs directed separate claims for relief in separate causes of action, supported by alleged separate and independent legal theories. The second category or group of schools, called hereafter (and in the case throughout), the "court-designated schools" or the "core area schools" was the subject

of the second claim for relief, in four counts, of which the third became primary.

The gist of the second claim for relief as developed by the complaint, evidence, and findings, was that because of comparatively low average achievement test scores of the pupils tested in the "court-designated schools", (and because of low morale and because of "segregation" [the word is used in quotation because the court found that there was *no state or officially imposed* segregation] in those schools) there was a denial of an equal educational opportunity and of equal protection of the law. The following questions are presented:

1. Shall *Brown v. Board of Education*, 347 U.S. 483 (1954), and its progeny, be reinterpreted to render unconstitutional the distinctive achievements among students in public schools which may be shown by standard achievement tests whenever they are administered?

2. Are there adequate data available, either in the record of this case or information in the public domain, upon which to develop a rule of constitutional law under the Fourteenth Amendment, Equal Protection Clause, concerning standard achievement scores and equal educational opportunity?

3. When there is *admittedly* no dual school system present, and when the District Court finds that there is no *de jure* segregation present in the specific schools about which plaintiffs complained in a separate count, does the District Court have judicial power to decree compulsory integration and compensatory educational programs?

4. After a District Court found that there was no *de jure* segregation in the court-designated schools, but

then concluded that there was a denial of an equal educational opportunity because of lower achievement levels in standard achievement tests administered in those schools, does the District Court have power to decree compulsory integration, and compensatory educational programs which must be subordinated thereunder?

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED

This case involves the first and fifth sections of the Fourteenth Amendment; and the Civil Rights Act of 1964, § 401, 42 U.S.C. 2000c; § 407, 42 U.S.C. 2000c-6; and § 410, 42 U.S.C. 2000c-9. These constitutional and statutory provisions are printed in the Appendix to this brief.

STATEMENT OF THE CASE

In this case the plaintiffs filed a complaint which contained two (2) causes of action, each with separate and distinct legal theories and claims for relief. (A. 2a-57a).

The complaint related to two groups of schools in Denver, Colorado. The first group of schools, called in the case and litigation the "Resolution schools" (because they were affected by Denver School Board resolutions), was the subject of the First cause of action. Concerning those schools, a hearing was held in July, 1969, which resulted in a preliminary injunction. Defendant was later to present its evidence, but the District Court found that the action of the School Board in rescinding and nullifying a school integration plan, had "the effect of perpetuating school segregation * * *" (App.Pet.Cert. 19a and 37a). 303 F.Supp. 279 at 288; 303 F.Supp. 289 at 296-97, in that the action was taken with knowledge of the consequences, and had a tort-like wilfullness about it, 303 F.Supp. at 286.

Court-Designated Schools, or Core Area Schools

"The evidentiary as well as the legal approach to the remaining schools [referred to hereafter as the "court designated schools" or the "core area schools"] is quite different from that which has been outlined above." (App. Pet.Cert. 57a), 313 F.Supp. 61 at 69 (1970).

Concerning these schools,[1] the plaintiffs first complained that there was *de jure* segregation (*Id*), because of boundary changes and other acts on the part of the School Board; but the District Court *found* that there was no *de jure* segregation (App.Pet.Cert. 75a), 313 F.Supp. 61 at 77. The court also said, concerning these schools, that it "is to be emphasized here that the Board has not refused to admit any student at any time because of racial or ethnic origin. It simply requires everyone to go to his neighborhood school unless it is necessary to bus him to relieve overcrowding." (App.Pet.Cert. 67a), 313 F.Supp. 61 at 73.

In the second count of the second cause of action, the plaintiffs asserted that the neighborhood school policy was itself maintained for the purpose of, and with the effect of, segregating minority pupils,[2] to a degree that it was un-

---

[1] Eventually the Court said that there were 15 schools involved. The court said, "we are here primarily concerned with the following schools: Bryant-Webster, Columbine, Elmwood, Fairmont, Fairview, Greenlee, Hallett, Harrington, Michell, Smith, Stedman and Whittier Elementary Schools; Baker and ColeJunior High Schools; and Manual High School." (App.Pet.Cert. 78a), 313 F.Supp. 61 at 78.

[2] The plaintiffs themselves used a racial and minority class grouping which is of far more than casual interest. It should be noted because it is in contrast to the bases of much of their experts' testimony, namely the *Coleman Report*, see footnote 14 infra.

"In some schools there are concentrations of Hispanos as well as Negroes. Plaintiffs would place them all in one category and utilize the total number as establishing the segregated character of the school. This is often an oversimplification * * * [which] * * * plaintiffs have accomplished * * * by using the name 'Anglo' to describe the white community. However, the Hispanos have a wholly different origin, and the problems applicable to them are often different." (App.Pet.Cert. 58a), 313 F.Supp. 61 at 69.

constitutional. But the district court rejected that claim too, saying that there was no such policy apparent.

The third count of the second cause of action said, in part, that the neighborhood school system was unconstitutional if it produced segregation in fact in a school system. In short, regardless of the cause, regardless of the absence of state or official law or policy, if the result was a separation or segregation, it was unconstitutional. This too the District Court rejected under the authority of previous cases in the Tenth Circuit, which in turn was built on cases in this Court.

The District Court then approached the heart of plaintiffs claim in their second cause of action. It was that the defendants were maintaining the "court-designated schools" in such a way as to fail to provide an equal educational opportunity for students attending them.

All of those schools, plaintiffs said, produced low average scholastic achievement. They also maintained that there was a high teacher turnover; a higher student dropout rate; that there were older buildings and smaller building sites; and that there were less experienced teachers.

The District Court agreed that there was a low achievement level present and significantly lower than in other schools in the city, as shown by comparative scores on the 1968 Stanford Achievement Test results. The trial court made findings of fact with regard to teacher experience, teacher turnover, pupil dropout rates, and building facilities, but there was no finding, as there could not have been on the evidence presented, that there was a *causal* relationship between these factors and student achievement. (App.Pet.Cert. 78a-89a), 313 F.Supp. 61 at 78-83.

To then seek the judicial declaration of court-ordered equalized achievement, the plaintiffs presented the testimony of several witnesses, chief among them, and on

which testimony the district court relied, were Dr. James Coleman (A. 1516a-1561a); Dr. Neal Sullivan (A. 1562a-1598a); Dr. Robert O'Reilly (A. 1910a-1968a), and in a prior hearing, Dr. Dan Dodson (A. 1469a-1513a).

It is clear that some of the plaintiffs' witnesses sought society-wide, social reformation, which would simply use the school system as the instrument of change:

Dr. Dan Dodson:

"Q. Now, isn't it also true that in your study you found that race is not causally related to the achievement level in these minority schools?

A. That's right." (A. 1508a)

* * *

After discussing the socioeconomic structure of some areas, but not Denver, Colorado, and the effect of a parents' educational background, Dodson continued:

"Q. In other words, you think, then, that it's the schools' problem?

A. I certainly do.

Q. And so your opinion is that the school has an obligation for a social change?

A. That's right.

Q. For the entire community?

A. That's right.

Q. Not for just the—not for the achievement of academic aspect of the school?

A. That's right." (A. 1509a).

* * *

"Q. In other words then, you mean that the board must cure any racial imbalance created by housing patterns in their school system?

A. I think that's right." (A. 1510a).

Another witness, Dr. Neal Sullivan testified, in part:

> "Q. Now, also, even under your own theory that integration in the schools has to be—as you say in the article, a massive educational revolution? Right?
>
> A. I like that expression.
>
> Q. Well, that's yours, isn't it?
>
> A. You bet. I like that language.
>
> Q. You need something more than integration?
>
> A. You bet. Massive reform. (A. 1595a).

And the District Court itself caught the spirit of the thing:

> "The Court: I mean, psychologically, the school is taking over for the family in many instances. It has to. I know this is abhorrent to all of you. You just disregard it all at (sic) paternalism. But you can't. I mean, that is the fact of life. The church has fallen down somewhat. The family has collapsed, and there is not much left. And a kid has to relate to something, to an institution, and to people, doesn't he? Where is this substitute? So, you say there is no psychological foundation for this? [The Court was then, apparently, addressing Dr. O'Reilly]. There is no foundation in experience? That you can just substitute this competitive atmosphere? And this impersonal competitive atmosphere of the integrated school and let him sink or swim?" (A. 1934a).[2]

The District Court held that there was no *de jure* segregation with regard to the core-city schools, and that a neighborhood policy was not unconstitutional per se as *de facto* segregation.

---

[2] "One vehicle can carry only a limited amount of baggage. It would not serve the important objective of Brown I to seek to use school desegregation cases for purposes beyond their scope, although desegregation of schools ultimately will have impact on other forms of discrimination." Swann v. Charlotte-Mecklenberg Board of Education, 402 U.S. 1, 22-23 (1971).

But against such an evidentiary background, the District Court found an alternative. It held that the "core-city schools in question were providing an unequal educational opportunity to minority groups *as evidenced by low achievement and morale.*" (Emphasis added). (App.Pet.Cert. 100a), 313 F.Supp. 90, 91.

From that position the District Court then moved to a consideration of a remedial plan or plans, consistent with the *Brown I*,[4] *Brown II*[5] dichotomy.

During that proceeding, in May 1970, the District Court said on opinion, and largely in response to the proposals which the defendants raised, that the,

> "crucial *factual* issue considered was whether compensatory education alone in a segregated setting is capable of bringing about the necessary equalizing effects * * *" (App.Pet.Cert. 106a), 313 F.Supp. 90 at 94.

In an effort to answer that question the District Court then turned principally to the testimony of Dr. James Coleman (A. 1516a-1561a); Dr. Neal Sullivan (A. 1562a-1599a); and Dr. Robert O'Reilly (A. 1910a-1968a); 313 F.Supp. 90 at 94.

A Second Look at The Expert Testimony

The petitioners ask on brief that the Court itself conduct an independent examination of the record.[6] If so, then

---

[4] Brown v. Board of Education, 347 U.S. 483 (1954).

[5] Brown v. Board of Education, 349 U.S. 294 (1955).

[6] Petitioners' Brief page 79. The authority cited for this request is *Haynes v. Washington*, 373 U.S. 503, 515-517 (1963); *Spano v. New York*, 360 U.S. 315, 316 (1959); *Stein v. New York*, 346 U.S. 156, 181 (1953); and *Oyama v. California*, 332 U.S. 633, 636 (1948). But the petitioners seek here a new constitutional rule: that equal educational opportunity shall mean equal achievement results, however measured. They deny this result, of course, see footnote 123, page 103 of Petitioners' Brief. But the district court said: "The final portion of the

under the evidentiary standards freely used in this case,[7] this Court can consider the relevant surveys, data, and findings (the "Coleman Report" 737 pages, for example, is marked as PX 500) which were used and to which reference was made, as well as other data and information which this Court can acknowledge and consider. *Erie Railroad v. Tompkins*, 304 U.S. 64 (1938).[8]

The testimony given by these witnesses, when measured against the data admitted, and subsequent interpretation and analyses thereof, simply does not support the conclusions reached or the holding which the petitioners seek from this Court, as a principle of Constitutional law.

In short, having concluded, primarily on the basis of the 1968 Stanford Achievement Scores, that there was an unequal educational opportunity, these experts were called to discuss a remedy.

That testimony and the impact of other data upon it is discussed in the Argument section of this brief, under Argument I-C, *"The Testimony of Dr. Coleman, Dr. Sullivan, and Dr. O'Reilly."*

In summary, the results against which the District Court directed a remedy in regard to the "court designated" schools were not the product of, or caused by state action, or official, or school board action, or positive law. To the extent that these results were established (and the expert witnesses often testified that they were not referring to Denver in their testimony), they occurred adventitiously.

---

plaintiffs' plan suggest a system of compensatory education programs, carried out in an integrated environment, *designated to equalise achievement."* (App.Pet.Cert. 102a), 313 F.Supp. 90, 91-92. (Emphasis added).

[7] Coleman—A. 1526a; Sullivan—A. 1568a, 1583a-1586a; O'Reilly—A. 1915-1928a.

[8] *"Equality of Educational Opportunity"* (H.E.W., G.P.O. 1966) PX 500 (herein *"Coleman Report"*); *"On Equality of Educational Opportunity,"* Mosteller & Moynihan (Vintage Ed. 1972) (herein "Mosteller & Moynihan"); *"The Effectiveness of Compensatory Education"* (H.E.W., G.P.O. 1972) (herein, *"Effectiveness"*).

The District Court thus entered findings and guidelines, which, generally, provided for a program of "desegregation" [which word, again, is used in quotation simply to recall to the reader that there was no state or officially imposed segregation] and compensatory education as a solution to low average achievement in the "court-designated schools." (App.Pet.Cert. 112a-121a), 313 F.Supp. 90 at 97-100. The preliminary injunction arising from the first cause of action remained in effect, except as altered by the orders entered.

This determination was reversed in the United States Court of Appeals for the Tenth Circuit, which said that the final decree and judgment of the District Court was affirmed, "except that part pertaining to the core area or court designated schools, and particularly the legal determination by the court that such schools were maintained in violation of the Fourteenth Amendment because of unequal educational opportunity afforded, * * * *" (App. Pet.Cert. 151a), 445 F.2d 990 at 1007 (1971). Other orders are well described by the Denver School Board, on brief. On January 17, 1972, this Court granted a writ of certiorari to the United States Court of Appeals for the Tenth Circuit.

The brief amicus curiae is limited in its discussion to that part of this case which is represented by the reversal in the Court of Appeals.

SUMMARY OF ARGUMENT

I

In so far as the "court-designated" schools are concerned, the measure of this case as it reaches the Supreme Court is found in what this Court is asked to affirm from the District Court and the consequences it would have on educational development throughout the United States. This Court is being asked to affirm the assertion, as a

matter of Constitutional law, that compensatory educational programs, as a means to develop and improve a child's educational performance and achievement, are unconstitutional unless they are developed in the setting of subordination to racial and economic integration, as effected by the remedies which were developed in, and are borrowed from, the cases decided from *Brown I* to *Swann*.

But the empirical data which have become available since this case was in the District Court show that the bases for that court's holdings with regard to both the wrong and the remedy are disestablished to such an extent that no constitutional interpretation should be indulged in.

II

The Fourteenth Amendment, as interpreted by this Court, and as addressed and interpreted by the Congress of the United States, does not mandate a specific educational performance among children attending a public school.

The Fourteenth Amendment should not be interpreted so to mean that equal rights under the law, when one is confronted by the State, shall mean equality in achievement when one attends a public school.

Racial segregation was never an educational program; it was a social-racial policy imposed in an educational system by the State.

In the name of racial (or economic) desegregation, the Fourteenth Amendment should not be interpreted to require an educational program which would attempt to develop but one result: equal achievement among students, as evidenced by achievement test scores.

ARGUMENT

I

The Fourteenth Amendment Does Not Mandate A Specific Intellectual Result Among Children In Public Schools, Measured By Achievement Tests. Compensatory Educational Programs, Designed To Attempt To Improve Performance Require Flexibility For Development. Empirical Data Do Not Support Their Subordination Pursuant To The District Court's Holdings, To Racial And Economic Integration. Those Holdings Are Disestablished To Such An Extent That A Constitutional Ruling Is Improper.

A. Introduction

In the District Court, this was a great case. Walter Lippmann remarked many years ago, in America there is a distinct prejudice in favor of those who make accusations. Never was such an observation more appropriate than in this judicial proceeding.

It was a great case because a great school board, in Denver, Colorado, was well defended. It was a school system which had known a tremendous population growth subsequent to World War II, and it dealt with the remarkably complex educational problems which evolved from it, very well indeed. It was a school system which in fact spent over 100 million dollars on new buildings and installations since World War II. Its effort to manage the urban sprawl's impact on education was well underway long before the Congress and Executive branches of the Federal Government created the Department of Housing and Urban Development, or the Department of Transportation, or the Environmental Protection Agency, which is some testimony to their recognition of the urban problems confronted by the Denver School Board. But it came long after that School Board was already making the effort.

It was a School Board which never resulted, as the State of Colorado did not, to the use of a dual school system. There was in fact, for the School Board in Denver, simply no factual analogy to the bases of the cases and schools found in *Brown I*,[9] or *Green*,[10] or *Swann*[11]. Nor, for that matter, was the case factually similar to the *Tulsa*[12] case in the 10th Circuit.

Those were cases which arose in a dual school system, or they were cases in which the School Board failed to deal with the "vestiges of dualism".

But as the growth of Denver was great, so also was its growth of minority groups. In 1940 the Negro population was 8,000 persons. In 1966, it was estimated by plaintiffs' witness Bardwell to be at 45,000. Faced with this growth, still no dual school system ever developed, or existed in Denver. No person was ever excluded from any school because of race, color, or ethnic origin.

At the beginning of the school year 1968-69, there were 116 schools: 92 elementary, 15 junior high schools and 9 senior high schools. In the elementary schools, Negro students were enrolled in 78, "Hispano" in 88, "Anglo" in 92. Among the 15 junior high schools, there were Negro students in 14 of the 15, and Hispano in all 15. Anglo were in all 15. Among the high schools, Anglo and Hispano students were enrolled in all 9 schools; and Negro students in 8 of the 9 high schools.

In short, the defendant Board did not refuse to admit any student at any time because of racial or ethnic origin.

[9] Brown v. Board of Education, 347 U.S. 483 (1954).

[10] Green v. County School Board, 391 U.S. 430 (1968).

[11] Swann v. Charlotte-Mecklenburg Board of Education, 402 U.S. 1 (1971).

[12] United States v. Independent School District No. 1, Tulsa, Oklahoma, 429 F.2d 1253, 1259 (10th Cir. 1970).

It simply required a student, consistent with the Civil Rights Act of 1964, § 410, 42 U.S.C. 2000c-9, to attend his neighborhood school. (App.Pet.Cert. 67a), 313 F.Supp. 61 at 73.

But if, as Lippmann said, there is prejudice in favor of one who makes an accusation, then the prize will go to he who makes the greatest accusation.

For the accused, however, the Denver School Board, the dilemma was enormous. The attack took a bifurcated approach. First, there was the accusation relating to the usual kind of segregation charge: the location of school buildings; boundary changes; the formal actions of a school board, and the like. That attack, as the case left the District Court, was largely a failure.

Secondly, in the plaintiffs' second cause of action, there was an attack for the "failure" of the School Board to cause students to achieve at the same level according to the Stanford Achievement Tests. The District Court found, "and concluded that the achievement level in these schools is markedly lower and dropout rates are high; and that there has been a concentration of minority and inexperienced teachers." (App.Pet.Cert. 90a), 313 F.Supp. 61 at 84. This presented an opportunity, as the case concluded in the District Court, for petitioners to strike hard at an *entire* school system (as they now do in this Court, on brief, page 68-92, and their factual assertions, page 1-64, passim) and more. It was an opportunity to attempt to bury any further experimentation and development with compensatory education, a favorite *bête noire,* unless it is compelled to march in constitutional lockstep with the massive movement of children, and massive social reform, as plaintiffs' own witnesses described it, under the banner of *Green-Swann.*

Concerning the first leg of attack, the District Court gave primary attention to the rescinding of School Board Resolutions, 1520, 1524, and 1531, and the court concluded that such an act violated the case law of *Reitman v. Mulky*, 387 U.S. 369 (1967); 313 F.Supp. at 67-69. The Court of Appeals did not reach the point, 445 F.2d 990 at 1002, and the petitioners appear to have abandoned the idea in this Court, entirely. Then the District Court considered the charges of boundary changes 313 F.Supp. 61 at 69, but came to the finding that there was no *de jure* segregation, 313 F.Supp. 61 at 77.

Up to this point the primary finding concerned the construction of Barrett Elementary School, along with an incorporation of the preliminary injunction statements, 303 F.Supp. 289, 290-95, which when made did not then consider defendants' evidence. Concerning Barrett Elementary School, the trial court said that alternative sites were available; and both the trial court and the petitioners on brief made much of the testimony of Superintendent Oberholtzer, (313 F.Supp. at 73; Petitioners' Brief, e.g., pp. 18 and 20), because he was "of the opinion that it was not permissible for him to classify Negroes as such, even for the purpose of bringing about integration." (App. Pet.Cert. 66a), 313 F.Supp. 61 at 73.

The Superintendent, in supporting the neighborhood school policy of the Denver Schools, and in assuring that the conduct of the Denver School Board was "color blind", anticipated, insofar as their schools were concerned, the fact that their policy was to become the policy of the United States, and so it remains to this day, in the Civil Rights Act of 1964, § 410, 42 U.S.C. 2000c-9. That section provides:

> "Nothing in this subchapter shall prohibit classification and assignment for reasons other than race, color, religion or national origin."

Speaking to that section, Senator Humphrey said:

> "Furthermore, a new section 410 would explicitly declare [it is then set out in full].
>
> Thus, classification along bona fide neighborhood school lines, or for any other legitimate reason which local school boards might see fit to adopt, would not be affected by title IV, so long as such classification was bona fide." 110 Cong. Rec. 12714 (June 4, 1964).

Again, Senator Humphrey spoke to one of the very central factual questions in this case, and one which, it appears, the petitioners' would attempt to obscure on brief in their presentation of a factual quagmire: that issue is the legitimacy of a neighborhood school which was not designed to cause or perpetuate racial discrimination or unlawful segregation, or, for that matter, a school district organized in the same way:

Senator Humphrey:

> "* * * The bill does not attempt to integrate the schools, but it does attempt to eliminate segregation in the school systems. [The Senator was speaking of racial segregation]. The natural factors such as density of population, and the distance that students would have to travel are considered legitimate means to determine the validity of a school district, if the school districts are not gerrymandered, and in effect deliberately segregated. The fact that there is racial imbalance per se is not something which is unconstitutional." 110 Cong. Rec. 12717 (June 4, 1964).

In short, § 410 of the Civil Rights Act of 1964 was specifically added to permit student classification into school districts, or neighborhood schools, on bases other than race, religion, color, or national origin.

It did hardly behoove the District Court, to remark the "failure on the part of the Board" to take some action

which would have an integrating effect, when to do so would violate the spirit and broad command of the Congress of the United States, in structuring a neighborhood school system; which the District Court itself found not to be in violation of *Brown I*.

Generally, the Court of Appeals affirmed those very limited findings, and felt restrained by Rule 52 in its review —although, now, of course, petitioners ask this Court to review the entire record.

Secondly, an attack came to the Board of a very different nature. It was that, as the District Court finally evolved the issue, there was no equal educational opportunity present with respect to the "court-designated" schools, even if there was no *de jure* discrimination. The District Court held that there was not. Then the District Court looked at essentially one item: the student achievement level as determined by the 1968 Stanford Achievement Tests. Other things found their way into this part of the decision: teacher turnover; pupil dropout rates (one premise for this consideration is conventional wisdom: "its better that he be in school than on the streets,", or, "if you are in school, then stay in school"); building facilities ("the fact that the physical plant is old may aggravate the aura of inferiority which surrounds the school", the court said, 313 F.Supp. 61 at 81), teacher experience, and the testimony of Dr. Dodson. The court did not find that these conditions caused inferior achievement, and the experts at the remedy stage did not so testify either.

The District Court did not find here a *Brown I* type of violation. Rather it turned to other cases and said: in an effort to safeguard the poor or minorities "state action, even if non-discriminatory on its face" which results in unequal treatment of "the poor or a minority group as a class" [presumably the District Court was referring to

racial minorities,although the word, coming after the word "poor" could have meant an economic minority] is unconstitutional uness the state provides substantial justification, citing *Griffin v. Illinois*, 351 U.S. 12 (1956), and *Douglas v. Califrnia*, 372 U.S. 353 (1963). 313 F.Supp. 61 at 82. Contra, *James v. Valtierra*, 402 U.S. 137 (1971).

B. The Court of Appeals and the Remedy in the District Court

As the case left the district court on the "violation" side, these thingshad occurred:

1. **On Plaintiff's First Cause of Action:**
   a) The district court found a *Reitman* violation; which was phased out of the case in the Court of Appeal.
   b) With regard to the Resolution Schools, and especially Barrett Elementary, the District Court found a kind of *Brown I-Reitman* violation, which received a Rule 52 affirmance in theCourt of Appeals.
   c) With respect to all other claims, all other schools, there was a finding that no *Brown I* vioation was present.
2. **On The Plaintiff's Second Cause Of Action:**
   a) The district court found no *Brown I* violation.
   b) The district court found a *Griffin v. California*, violation.

On appeal, theCourt of Appeals seemed at first to agree with the Distric Court in its assertion on equal achievement:

> "The trial court's opinion * * * leaves little doubt that the finding of unequal educational opportunity in the deignated schools pivots on the conclusion that segrgated schools, whatever the cause, per se produce lower achievement and an inferior educational opportunity." 445 F.2d 990, at 1004.

But then the Court of Appeals spoke one of the most important sentences in its entire proceeding;

> "Thus it is not the proffered objective indicia of inferiority which causes the sub-standard academic performance of these children, but a curriculum which is allegedly not tailored to their educational and social needs." Id. at 1004.

In short, the Court of Appeals did not accept the bases of the trial court's holdings, namely the items to which the trial court referred as showing a *Griffin* type of violation[18] (and allegedly justifying the remedy which plaintiffs sought and the trial court imposed) plus inferior achievement, in the sense that they provided a basis for a *Constitutional Mandate*

Implicit in the Court of Appeals holding is the fact that we really do not know what causes inferior achievement nor, especially, how to remedy it, sufficiently to form a rule of *Constitutional law,* binding on 200 million persons and all of their school districts and programs.

Even acknowledging the experts presented at the remedies hearing by the plaintiffs, educational achievement development is at the early ether stage of anesthetics. The most we can do is try, experiment, develop, test, determine, and try again. That is precisely what the Denver School Board recognized (as did the Court of Appeals) in its Resolution 1562, found at 445 F.2d 1009-10.

3. On The Remedy.

The opportunity which was presented to plaintiffs certainly was not lost. It was an opportunity to judicially subordinate compensatory educational programs to racial integration remedies, and more. It was an opportunity to

---

[18] Again, those things were in addition to achievement scores, teaching experience, building facilities, pupil dropout rates, and teacher turnover, and the testimony of Dr. Dodson. 313 F.Supp. 61 at 78-82.

bury, once and for all, one of the most important observations made in the *Coleman Report:*

> "The overall results of this examination of school-to-school variations in achievement can be summed up in three statements:
>
> 1. For each group,[14] by far the largest part of *the variation in student achievement lies within the same school, and not between schools.*
> 2. Comparison of school-to-school variations in achievement at the beginning of grade 1 with later years indicates that only a small part of it is the result of school factors, in contrast to family background differences between communities.
> 3. There is indirect evidence that school factors are more important in affecting the achievement of minority group students; among Negroes, this appears especially so in the South. This leads to the notion of differential sensitivity to school variations, with the lowest achieving minority groups showing highest sensitivity."
>
> *"Coleman Report"* (1966) at page 297. (Emphasis added).

The plaintiffs did not pass the chance. They proposed a simple pairing plan, wherein the great distinctions in student achievement *within each school* in the Denver schools would be lost forever. That is, they would exist, but not be recognizable. The plan would take an *average achievement* among the students in a school, and pair the school with the *average achievement* among students in another school. (Pl.Ex.501-A).

To this the District Court gave its constitutional imprimatur.

---

[14] The Report was referring to: Puerto Rican; Indian American; Mexican-American; Negro, South; Negro, North; Oriental American; White, South; White, North.

C. The Testimony of Dr. Coleman, Dr. Sullivan and Dr. O'Reilly

The plaintiffs called Dr. Coleman, Dr. Sullivan, and Dr. O'Reilly to speak about remedies, and there was one consistency among their remarks: they were not speaking about Denver, Colorado, and had no previous experience with the schools there.

The petitioners have summarized Dr. Coleman's testimony in this way: the studies of compensatory programs "have not been very encouraging with regard to their efforts." (A. 1537a) (Petitioners' Brief page 58), and that "I think" the major problem with compensatory educational programs has been the fact that the child's environment has not changed if he speaks with other children who are homogeneous with his past. *Id.*

The H.E.W. Report on *"Effectiveness of Compensatory Education"* of 1972 states:

> "In this connection, it is worth noting two additional features of the *Coleman* report:
>
> - As the author has recently pointed out, the Coleman report should not be used to claim that physical desegregation is the only educational treatment that can have any positive achievement effects.
>
> - There is no direct evidence in the *Coleman* report for the conclusion, sometimes drawn from it, that compensatory education does not work. The Coleman report analyzed the existing range of school conditions in 1965-1966 and had nothing to say about situations in which very substantial additional resources above normal school expenditures were provided for basic learning programs. *The Coleman report did not analyze any such intensive programs.* (Emphasis added). "The Effec-

tiveness of Compensatory Education," (H.E.W., G.P.O. 1972), page 10.

The petitioners also summarized the testimony of Dr. Sullivan. That is understandable. Dr. Sullivan appeared as the Secretary of the State Board of Education in the State of Massachusetts. As such, he spoke on several things: compensatory programs in Boston, Massachusetts, and Berkeley, California; inferiority complexes (A. 1579a); psychology (A. 1579a); sociology (Id.); and the moral duties of educators. (Id.) But the principal purpose of his testimony was to establish that a compensatory education program with which he was associated in Berkeley, California, was a failure, that it "had no effect." (A. 1578a).

He explained that Berkeley tried everything: "lower class size; "materials and equipment"; "[h]undreds of thousands of dollars for electronic equipment that most schools have now"; the "addition of paraprofessionals"; "lots and lots of black administrators"; "Black principals in white schools. We felt that was only fair. White principals in black schools. We felt that was good. You name it and we tried it." (A. 1577a). Still, he said, it was a failure.

The H.E.W. Report on *"Effectiveness of Compensatory Education"* (1972), said this:

> "The important difference between success and nonsuccess appears to depend on whether compensatory education funds have been channeled into traditional patterns of expenditure—salary increases, routine techniques, etc.—or whether they have been used to develop supplementary, focused, compensatory education programs. *The reason there is so much evidence of failure is that resources have more often been used in the former rather than the latter manner."* (Emphasis added). *"Effectiveness"*, Id at 11.

The Report spoke about the situation in California in this way:

> "The most complete data are those available from the State of California. * * * Achievement data was (sic) collected for about 80% of all participants in compensatory reading programs and analyses were conducted using data covering about 50% of the participating children. Only that achievement data which met specified quality control criteria was (sic) included. Over the four years covered by the data, 54% to 67% of children receiving compensatory services showed a rate of reading achievement gain larger than the usual maximum for disadvantaged children. Analysis and results for mathematics were similar and even slightly better. *We judge this to be clear evidence of success.* (Emphasis added). *"Effectiveness"*, Id at 7.

Dr. Sullivan testified that integration in Berkeley eased such problems as teacher turnover and low teacher experience; and Dr. O'Reilly questioned the value of compensatory programs in either an integrated or non-integrated setting. (A. 1929a-20a). It is small wonder that with this evidence, the District Court came to its conclusions.

But one of the most important observations in the *Coleman Report,* went, it seems, almost unnoticed. It is stated as follows:

> "This analysis has concentrated on the educational opportunities offered by the schools in terms of their student body composition, facilities, curriculums, and teachers. *This emphasis, while entirely appropriate as a response to the legislation calling for the survey,* [§ 402 of the Civil Rights Act of 1964, 42 U.S.C. 2000c-1] *nevertheless neglects important factors in the variability between individual pupils within the same school; this variability is roughly four times as large as the variability between schools.* For example, *a pupil attitude factor,*

> *which appears to have a stronger relationship to achievement than do all the 'school' factors together, is the extent to which an individual feels that he has some control over his own destiny." "Coleman Report"* (1966) at page 22-23. (Emphasis added).

Dr. Sullivan spoke about the feelings of inferiority of the Negro student. He said, "it was very clear to me that in their isolation they [Negroes] were completely rejected and psychologically this came through." (A. 1579a).

Again, the *Coleman Report* disturbs a number of assumptions and eye-witness certainties, such as that:

> "When asked about whether they wanted to be good students, a higher proportion of Negroes than any other group—over half—reported that they wanted to be one of the best in the class (table 3.13.2)." *"Coleman Report"* (1966) at 278.

And in speaking about general attitudes toward themselves and their environment, held by students, the following is found:

> "Apart from the generally high levels for all groups, the most striking differences are the especially high level of motivation, interest, and aspirations reported by Negro students. * * * [And speaking about the child's concept of himself] In general, the responses to these questions do not indicate differences between Negroes and whites, but do indicate differences between them and the other minority groups." *"Coleman Report"* (1966) at pages 280 and 281.

But with the testimony before it, the District Court was moved from the comparative to the superlative sense of approach:

> "We have concluded after hearing the evidence that *only feasible and constitutionally acceptable* program—the only program which furnishes anything

> approaching substantial equality—is a system of desegregation and integration which provides compensatory education in an integrated environment." (Emphasis added). (App.Pet.Cert. 112a), 313 F. Supp. 90 at 96.

And the court continued with the same penultimate language in its findings: "Thus, the *only hope* for raising the level of these students * * * *"; "The *ideal approach*, and that which offers maximum promise * * * *" (Emphasis added), Id. at 96.

Such comments if spoken by an educator would be regarded as graduation-day puffing. But the court spoke as a matter of *constitutional law* and it subordinated compensatory education programs, educational experimentation and research, all, to a kind of warmed-over *Swann* remedy, as a solution to low average achievement in the court-designated schools.

The essence of what the petitioners ask in this part of the case is that this Court do the same thing.

II

This Court And The Congress Of The United States Have Not Interpreted The Fourteenth Amendment To Require A Specific Educational Performance Among Children Attending Public Schools. There Is No Data To Support Such An Interpretation; It Should Not Be Given Under The Name Of Racial Or Economic Desegregation.

A. Introduction

The Fourteenth Amendment was certified as a part of the Constitution on July 28, 1868, and its Equal Protection Clause forbids a state to "deny to any person within its jurisdiction the equal protection of the laws."

Thus, the Equal Protection Clause requires a state to treat in like manner all persons similarly situated. *State*

Board of Tax Commissioners of Indiana v. Jackson, 283 U.S. 527 (1931); *Maxwell v. Bugbee*, 250 U.S. 525 (1919). It is a clause which does not, in law or fact, require identity of treatment. *Walters v. St. Louis*, 347 U.S. 231 (1954). And it permits a state to make distinctions between persons subject to its jurisdiction if the distinctions are based on some reasonable classification, and all persons embraced within the classification are treated alike. It outlaws invidious discrimination. *Avery v. Midland County*, 390 U.S. 474 (1968).

From 1868 to 1954, the Equal Protection Clause was interpreted to permit a state to impose, as a matter of state law, racial segregation in its public schools, when it furnished equal facilities for the education of the children of each race or races. Compare *Plessy v. Ferguson*, 163 U.S. 537 (1896), with *Brown v. Board of Education*, 347 U.S. 483 (1954), and *Bolling v. Sharpe*, 347 U.S. 497 (1954).

"Nearly 17 years ago this Court held, in explicit terms, that state-imposed segregation by race in public schools denies equal protection of the laws. At no time has the Court deviated in the slightest degree from that holding or its constitutional underpinnings." *Swann v. Charlotte-Mecklenberg Board of Education*, 402 U.S. 1, 11 (1971). "This case [*Swann*] and those argued with it arose in States having a long history of maintaining two sets of schools in a single school system deliberately operated to carry out a governmental policy to separate pupils in schools solely on the basis of race. That was what Brown v. Board of Education was all about." *Swann v. Charlotte-Mecklenberg Board of Education*, supra at 5.

In short, this Court struck down a governmental policy of racial segregation, which was effected in the public school system. The Court did not then, and not since that time has it used the Fourteenth Amendment to develop edu-

cational policy. *Brown* was not a case on educational programs and policies, and racial segregation was not a part thereof either.

Brown, and its progeny, was a case which struck at a government developed racial-social policy of segregation and discrimination in the public schools; such governmental policies meant inherent inequality by governmental order, which was developed and effectuated, in part, by use of the public school system. Thus this Court said, "The target of the cases from *Brown I* go the present was the dual school system." *Id.* at 22.

But the use of the public school system to develop and promote a governmental policy of racial segregation was only a part of the systematic program. It occurred and was struck down in public parks, *Muir v. Louisville Park Theatrical Assn.*, 347 U.S. 971 (1954), in and on public beaches and bathhouses, *Mayor and City Council of Baltimore City v. Dawson*, 350 U.S. 877 (1955), municipal golf courses, *Holmes v. City of Atlanta*, 350 U.S. 879 (1955), and on municipal buses, *Gayle v. Browder*, 352 U.S. 903 (1956), all on the authority and the concept of the *Brown* decision.

Under these authorities, the cases which hold that for a *Brown* violation there must be a state act in creating racial segregation or separation, rather than adventitious development, are simply legion. Among them are: *Springfield School Committee v. Barksdale*, 348 F.2d 261, 264, (1st Cir. 1965); *Offerman v. Nitkowski*, 378 F.2d 22 (2nd Cir. 1967); *Sealy v. Dept. of Public Instruction*, 252 F.2d 898 (3rd Cir. 1957), certiorari denied, 356 U.S. 975 (1958); *Deal v. Board of Education*, 369 F.2d 55 (6th Cir. 1965); *Bell v. School City of Gary, Indiana*, 324 F.2d 209 (7th Cir. 1963), certiorari denied, 377 U.S. 924; *Downs v. Board of Education*, 366 F.2d 988 (10th Cir. 1964), certiorari denied, 380 U.S. 914.

B. The Congress Of The United States Has Interpreted The Equal Protection Clause As A Constitutional Right To Be Free From Racial Discrimination In Public Schools

Section 5 of the Fourteenth Amendment provides:

> "Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

Acting under the Fourteenth Amendment, and in response to this Court's decision in *Brown I*, and subsequent decisions, the Congress enacted subchapter IV, of the Civil Rights Act of 1964. In it, it gave an interpretation to desegregation (and thus segregation) 42 U.S.C. 2000c; it defined the power of the Attorney General to initiate a law suit to seek the desegregation of a school system, when a person is unable to initiate such an action, 42 U.S.C. 2000c-6; and it spoke specifically to the classification legitimacy, on bases other than race, color, religion or national origin, 42 U.S.C. 2000c-9. These interpretations were binding on the Denver School Board, and they were followed by the School Board. There was no finding of racial discrimination in the court-designated schools.

Congress is authorized to enforce the prohibitions by appropriate legislation under § 5 of the Fourteenth Amendment, *Ex Parte Virginia*, 100 U.S. 339, 345 (1879), and it could do so without regard to whether this Court or any court would hold the act prohibited to be in violation of the Equal Protection Clause. In seeking to promote the objects of the Equal Protection Clause the Congress prohibited racial discrimination in the public schools, it defined desegregation, and it specifically allowed classification of students on bases other than race, color, religion or national origin.

It was said:

> "In implementing the decision of the Supreme Court, we urge the Congress to be guided by two fundamental premises: (1) The American system of public education—an essential bulwark of a democratic system of government—should be preserved unimpaired; (2) the *constitutional right* to be free from *racial* discrimination in public education must be realized (Emphasis added). 2 *U.S. Code Cong. & Adm. News* p. 2504 (1964).

Section 410, 42 U.S.C. 2000c-9 provides:

> "Nothing in this subchapter shall prohibit classification and assignment for reasons other than race, color, religion, or national origin."

In speaking about this provision Senator Humphrey said:

> "Thus, classification along bona fide neighborhood school lines, or for any other legitimate reason which local school boards might see fit to adopt, would not be affected by title IV, so long as such classification was bona fide." 110 Cong. Rec. 12714 (June 4, 1964).

Again, Senator Humphrey said:

> "* * * The bill does not attempt to integrate the schools, but it does attempt to eliminate segregation in the school system. The natural factors such as density of population, and the distance that students would have to travel are considered legitimate means to determine the validity of a school district, if the school districts are not gerrymandered, and in effect deliberately segregated. The fact that there is racial imbalance per se is not unconstitutional. * * *" 110 Cong. Rec. 12717 (June 4, 1964).

The interpretation given to the Equal Protection Clause by the Congress in subchapter IV of the Civil Rights Act of 1964 is binding here. *Katzenbach v. Morgan*, 384 U.S. 641 (1966).

C. Griffin-Douglas; Equitable Remedies; And Challenged Propositions Of Education.

The petitioners support the trial court's assertion that nondiscrimination, if it results in unequal treatment of the poor or a minority group, is unconstitutional unless the state shows a substantial interest therein, citing *Griffin v. Illinois*, 351 U.S. 12 (1956), and *Douglas v. California*, 372 U.S. 353 (1963); compare *Hunter v. Erickson*, 393 U.S. 385 (1969). *Contra, James v. Valtierra*, 402 U.S. 137 (1971).

From this position, the petitioners as well as the district court would sweep on to the full use of a court's equitable power under *Hecht Co. v. Bowles*, 321 U.S. 321, 329-330 (1944), and *Swann v. Charlotte-Mecklenberg Board of Education*, 402 U.S. 1, 15, (1971).[18] The result, as in this case,

---

[18] But other courts, and authorities, have recognized that there is much more in the use of equitable judicial power than simply the recognition of its existence, which the petitioners show in their Brief on the Merits.

For example, the precise point was made by Chief Justice Burger, then Circuit Judge, in dissenting in the case of *Smuck v. Hobson*, 408 F.2d 175 (D.C. Cir. 1969), at page 196, where he said:

> "Several commentators have expressed views which undergird what Judge DANAHER has said as to the need for caution and restraint by judges when they are asked to enter areas so far beyond judicial competence as the subject of how to run a public school system. We have little difficulty taking judicial notice of the reality that most if not all of the problems dealt with in the District Court findings and opinion are, and have long been, much debated among school administrators and educators. *There is little agreement on these matters, and events often lead experts to conclude that views once held have lost their validity.*" (Emphasis added).

And the dissent cited impressive authority where the point is further discussed. Among them are: Kurland, *Equal Educational Opportunity: The Limits of Constitutional Jurisprudence Undefined*, 35 U.Chi.L.Rev. 583, 592, 594, 595 (1968); Hobson v. Hansen, *The DeFacto Limits on Judicial Power*, 20 Stan.L.Rev. 1249, 1267 (1968); Hobson v. Hansen: *Judicial Supervision of the Color-Blind School Board*, 81 Harv.L.Rev. 1511, 1527, 1525 (1968).

The point that policy commitments are present in asserting equitable power and decrees was made by Professor Alexander Bickel: "Willy-nilly, the Supreme Court imposes a choice of educational policy, for the time being at least * * * and I don't think we can be sure that the

is to subordinate, if not bury, innovative compensatory educational programs, unless they march in lockstep to the *Brown I—Swann remedies.*

The substantial interest of the State of Indiana is in preventing the constitutionalization of education propositions, which, in the context of constitutional law, may be called "myths".

A short time ago, Mr. Justice Harlan reminded us that "*[d]ecisions on questions of equal protection and due process are based not on abstract logic, but on empirical foundations.*" *Katzenbach v. Morgan,* 384 U.S. 641, 668 (1966) (Emphasis added).

With that thought in mind, the amicus presents to the Court several "Propositions of Education" which are implicit in this case, and in the District Court's action:

"Proposition of Education, No. 1":

> The amount of money spent determines the goods and services bought, which in turn determines the effectiveness of the school in developing and meeting the needs of a child.

This proposition appeared in rough form when it was asserted by Charles Sumner in 1849 before the Massachusetts Supreme Court. He argued that racially segregated schools in Boston, Massachusetts, provided unequal opportunities for Negroes and whites. The ground for the argument was that his "client, a Negro girl, had to walk 2100 feet to her school while a white school was only 800 feet away from her home. He lost the case, but the same

---

choice is the right one * * * Professor Bickel cannot be read to oppose school integration; but rather, he opposes *Swann* because it *willy-nilly decided that the nation's legal order compels the racial mixing of students [where there was a dual school system] as a matter of educational policy.*" Comment, *Civil Rights v. Individual Liberty,* 5 Indiana Legal Forum 368, 376 (1972).

kind of reasoning has pervaded the thinking of educators, the courts, and the public ever since. Up to 1954, innumerable attempts were made to prove that the separate education of Negroes in the South was either equal or not equal to white education by comparing schools in respect to their location ["inferior status of these school (is) the enforced isolation imposed * * * (by) neighborhood schools and housing patterns, 313 F.Supp 61 at 83 (1970)], the quality of their buildings ["the fact that the physical plant is old may aggravate the aura of inferiority which surrounds the school," 313 F.Supp. 61 at 81], the adequacy of facilities, the number of courses in the curriculum, the length of the school term, the paper credentials of teachers, and most importantly, the amount of capital outlay and annual expenditure per pupil." Mosteller & Moynihan, *"On Equality of Educational Opportunity,"* Dyer, page 514, (Vintage Ed. 1972).

Since 1954, and *Brown I*, the Court has disposed of the proposition, it too an educational myth, that to separate a child by government policy from an available school because of his race is somehow to treat him equally under the law.

The Court is being pressed to create another myth in its place, and in turn, to reinterpret *Brown I*. It is, essentially, that a minority child cannot be educated and receive equal educational opportunity unless his separation, from a majority group regardless of cause, is judicially destroyed.

"Proposition of Education, No. 2":

> The measure of equal educational opportunity is found in counting the dollars and cents spent on one school, or in one school district and comparing that with another school district, or school.

Probably the most extreme form of this assertion is found in the California case of *Serrano v. Priest*, 96 Cal. 601, 487 P.2d 1241 (1971). However, Mr. Dyer says this:

> "There is no guarantee that a more expensive installation is inherently better, if only as a piece of machinery, than a less expensive one. There is also no guarantee that a more expensive laboratory is capable of producing more language learning than a less expensive one, or indeed no language laboratory at all . * * * (During the period of excitement over the possibilities for audio-lingual instruction, many schools bought language labs that are now gathering dust.)" "Mosteller & Moynihan, *"On Equality of Educatonal Opportunity,"* Dyer, page 514-515. (Vintage Ed. 1972).

"Proposition of Education, No. 3:"

> Achievement Test Scores Determine the Education Received; the Equality Thereof; and Whether There is an Equal Educational Opportunity.

But a major educational reading does gainsay the statement:

> "The tendency is to assume that if on a reading test the 6th-grade pupils in a slum school average X points lower than those in a school in white suburbia, then X is the measure of the difference between the two schools in the effectiveness of reading instruction. The case may be quite the opposite: the slum school may be *more* effective than the suburban school in upgrading reading competence, especially in light of the deficiencies it has had to overcome." "Mosteller & Moynihan, *"On Equality of Educational Opportunity,"* Dyer, page 515. (Vintage Ed. 1972).

D. On Experimentation In Education And The Fourteenth Amendment

Certainly the State of Indiana does not say that there is no relationship between money spent, excellence of teachers, quality of facilities, teacher credentials, and the myriad concepts relating to educational standards and educational goals, and the product of the school system: the student. Obviously, there is; but equally obvious, or it should be, is the fact that it is not yet determined to an extent that a rule of *Constitutional Law* can be declared based upon it. But if this Court were to approve the fashioning of an equity decree, based upon, essentially, achievement criteria and a disparity among them, then there would be a major obstruction by the Judiciary in the environment and development of education programs, throughout Indiana and the United States.[16]

> "One of the compelling reasons for educational experiments is the importance for society of every improvement in the learning process." Mosteller & Moynihan, *"On Equality of Educational Opportunity,"* ~~Dyer~~, page 377. (Vintage Ed. 1972).

But success is still not a certain thing. For example:

> Indeed, after half a century of tightly controlled studies of optimum class size, we have made practically no progress toward answering the question (perhaps nature is hinting that the question is a poor one as customarily phrased). It is not that we haven't done controlled investigations, but rather that the studies have been too small and specialized for their implications to have much chance of holding in new situations." Mosteller & Moynihan, *"On*

[16] Mr. Justice Powell, concurring, spoke exactly to the point in saying: "In an age in which empirical study is increasingly relied upon as a foundation for decision making, one of the more obvious merits of our federal system is the opportunity it affords each State, if its people so choose, to become a 'laboratory' and to experiment with a range of trial and procedural alternatives." *Johnson v. Louisiana*, — U.S. —, 92 S.Ct. 1635, 1641 (1972)

Equality of Educational Opportunity," ~~Dyer~~, page 375. (Vintage Ed. 1972).

"The controversies about the Coleman Report show that we still are ignorant of what makes education tick for children and of why what works for some doesn't seem to for others. For whom is laissez faire wise, and for whom a lockstep program? Naturally we do not expect that only one sort of program is workable, because children can adapt to or resist most things. *Our point is that when a big national effort is as little understood as education now is, we are obligated to experiment."* (Emphasis added). Mosteller & Moynihan, *"On Equality of Educational Opportunity"*, page 378 (Vintage Ed. 1972).

To say that equity, as a judicial matter, should recognize as a judicial wrong the achievement level distinctions among students in public schools, and then proceed to order that the levels be equalized, pursuant to a decree which a District Court might attempt to fashion, is judicial obstructionism in its worst form; indeed, the Court might as well order an Opera Soprano to sing well.

To try to succeed is the essence of the thing, and that, precisely, is what the Denver School District was, and is, attempting to do.

The conclusion is manifest: the Fourteenth Amendment should not be construed to effect the adoption, as a matter of Constitutional law, of one specific educational policy, and programmatical result: equal achievement levels.

CONCLUSION

Mr. Justice Holmes once observed that,

"The Fourteenth Amendment does not enact Mr. Herbert Spencer's Social Statics. . . . Some of these laws embody convictions or prejudices which judges are likely to share. Some may not. But a constitution is not intended to embody a particular economic

> theory, whether of paternalism and the organic relation of the citizen to the State or of *laissez faire.*" *Lochner v. New York,* 198 U.S. 45, 75-76 (1905).

If this be so, then must the Fourteenth Amendment embody the social-educational theory of a Dr. Neal Sullivan, among several others?

In reversing the District Court in Richmond, Virginia, the United States Court of Appeals for the Fourth Circuit said, in speaking about the expert testimony in that case, that,

> "We think it fair to say that the only 'educational' reason offered by the numerous school experts in support of consolidation was the egalitarian concept that it is good for children of diverse economic, racial and social background to associate together more than would be possible within the Richmond school district. *Bradley v. School Board of Richmond, Virginia,* (June 5, 1972, slip opinion at page 25).

One can look at this case in Denver, and the record which was produced, and see that a similar tide was running. It was, as is,[17] that a particular theory, a particular way of approach, a specific "educational" program, a specific theory of "education", namely social reform and massive

---

[17] In the Richmond case, the principal expert testimony for the plaintiffs came from Dr. Thomas F. Pettigrew, whose central theme was that all good things shall come from a carefully calibrated racial mixture which would give white superiority by, ideally, about a 70-30 ratio. Here the expert testimony was only less candid.

"The invidious nature of the Pettigrew thesis, advanced by the dissent in the present case, thus emerges. Its central proposition is that the value of a school depends on the characteristics of a majority of its students and superiority is related to whiteness, inferiority to blackness. Although the theory is couched in terms of 'socio-economic class' and the necessity for the creation of a 'middle-class milieu,' nevertheless, at bottom it rests on the generalization that, educationally speaking, white pupils are somehow better or more desirable than black pupils." *Brunson v. Board of Trustees,* 429 F.2d 820, 826 (4th Cir. 1970) (Judge Sobeloff, concurring).

societal remolding, should receive not only approval, but the dignity and the compulsion of constitutional law.

In the core area of Denver, there was no racial discrimination; there was no dual school system; there has never been. But the District Court wanted a result. That result was the mixing of persons in the schools, so that the public schools in Denver could act, according to the District Court, as a substitute for the home and the church. To accomplish that result, the District Court attached itself to equal achievement levels and from this it evolved a principle and holding of constitutional law.

It is clear that the curse at which Holmes directed his pen remains. It is the curse of binding constitutional rigidity based upon the cry of the moment, and the passion of the hour: equal achievement levels in the public schools. The terrible flaw in the District Court's desire is that it read the Constitution to embrace exclusively the passion of the moment. But the record in this case does not support the District Court; and massive other data do not support the District Court. Further, this Court should resist fully the temptation to enter into the thicket of educational policy and educational philosophy.

Accordingly, the State of Indiana urges that this Court affirm the decision of the United States Court of Appeals in this case, to the extent that it reversed the District Court.

Respectfully submitted,

THEODORE L. SENDAK
Attorney General of Indiana

WENDELL C. HAMACHER
Deputy Attorney General

WILLIAM F. HARVEY
Special Counsel for the Attorney General

FOURTEENTH AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES

SECTION 1:

§ 1. Citizenship—Due process of law—Equal protection.—All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

SECTION 5.

§ 5. Power to enforce amendment.—The congress shall have power to enforce, by appropriate legislation, the provisions of this article.

CIVIL RIGHTS ACT OF 1964

42 U.S.C. 2000c

§ 2000c. Definitions

As used in this subchapter—

(a) "Commissioner" means the Commissioner of Education.

(b) "Desegregation" means the assignment of students to public schools and within such schools without regard to their race, color, religion, or national origin, but "desegregation" shall not means the assignment of students to public schools in order to overcome racial imbalance.

(c) "Public school" means any elementary or secondary educational institution, and "public college" means any institution of higher education or any technical or vocational school above the secondary school level, provided that such public school or public college is operated by a State, subdivision of a State, or govern-

mental agency within a State, or operated wholly or predominantly from or through the use of governmental funds or property, or funds or property derived from a governmental source.

(d) "School board" means any agency or agencies which administer a system of one or more public schools and any other agency which is responsible for the assignment of students to or within such system.

Pub.L. 88-352, Title IV, § 401, July 2, 1964, 78 Stat. 246.

42 U.S.C. 2000c-6

§ 2000c-6. Civil actions by the Attorney General—Complaint; certification; notice to school board or college authority; institution of civil action; relief requested; jurisdiction; transportation of pupils to achieve racial balance; judicial power to insure compliance with constitutional standards; impleading additional parties as defendants

(a) Whenever the Attorney General receives a complaint in writing—

(1) signed by a parent or group of parents to the effect that his or their minor children, as members of a class of persons similarly situated, are being deprived by a school board of the equal protection of the laws, or

(2) signed by an individual, or his parent, to the effect that he has been denied admission to or not permitted to continue in attendance at a public college by reason of race, color, religion, or national origin,

and the Attorney General believes the complaint is meritorious and certifies that the signer or signers of such complaint are unable, in his judgment, to initiate and maintain appropriate legal proceedings for relief and that the institution of any action will materially further the orderly achievement of desegregation in public education, the Attorney General is authorized, after giving notice of such complaint to the appropriate school board or college

authority and after certifying that he is satisfied that such board or authority has had a reasonable time to adjust the conditions alleged in such complaint, to institute for or in the name of the United States a civil action in any appropriate district court of the United States against such parties and for such relief as may be appropriate, and such court shall have and shall exercise jurisdiction of proceedings instituted pursuant to this section, provided that nothing herein shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school district to another in order to achieve such racial balance, or otherwise enlarge the existing power of the court to insure compliance with constitutional standards. The Attorney General may implead as defendants such additional parties as are or become necessary to the grant of effective relief hereunder.

Persons unable to initiate and maintain legal proceedings

(b) The Attorney General may deem a person or persons unable to initiate and maintain appropriate legal proceedings within the meaning of subsection (a) of this section when such person or persons are unable, either directly or through other interested persons or organizations, to bear the expense of the litigation or to obtain effective legal representation; or whenever he is satisfied that the institution of such litigation would jeopardize the personal safety, employment, or economic standing of such person or persons, their families, or their property.

"Parent" and "complaint" defined

(c) The term "parent" as used in this section includes any person standing in loco parentis. A "complaint" as used in this section is a writing or document within the meaning of section 1001, Title 18. Pub.L. 88-352, Title IV, § 407, July 2, 1964, 78 Stat. 248.

42 U.S.C. 2000c-9

§ 2000c-9. Classification and assignment

Nothing in this subchapter shall prohibit classification and assignment for reasons other than race, color, religion, or national origin.

Pub.L. 88-352, Title IV, § 410, July 2, 1964, 78 Stat. 249.

Summary of Argument 59

Argument 63

I. SUMMARY OF APPLICABLE CONSTITUTIONAL PRINCIPLES 63

A. INTRODUCTION 63

B. ELEMENTS OF A CONSTITUTIONAL VIOLATION 66

C. THE BURDEN OF PROOF 70

II. RACIAL IMBALANCE IN DENVER PUBLIC SCHOOLS WAS NOT CAUSED BY STATE ACTION 72

A. THE COURTS BELOW CORRECTLY FOUND NO STATE-IMPOSED SEGREGATION IN THE CORE CITY SCHOOLS 73

1. The Findings Regarding the Core City Schools were Fully Supported by the Evidence and were Correctly Sustained by the Court of Appeals 73

2. The Policy of the Denver School District has been Nondiscriminatory Throughout 79

3. The Courts Below Correctly Allocated the Burden of Proof 82

Page

B. THE ONLY ACTIONABLE SEGREGATION FOUND AS TO THE RESOLUTION SCHOOLS WAS THE RESCISSION OF THREE RESOLUTIONS, A FINDING WHICH IS ERRONEOUS AS A MATTER OF LAW 88

1. The Findings Regarding the Three Elementary Schools and the Junior High School did not Include a Finding of Present Segregative Effect and do not Support a Finding of Actionable Segregation 88

2. The Findings as to the Four Resolution Schools were Ultimately Used by the Trial Court Only as a Basis for Finding Segregatory Intent in the Rescission of the Unimplemented Racial Balancing Resolutions 93

3. The Trial Court Erred in Concluding that the Rescission of the Resolutions Was an Act of State-Imposed Segregation in and of Itself 96

C. THE SCOPE OF THE REMEDY IS LIMITED BY THE EXTENT OF A VIOLATION 99

III. THE NEIGHBORHOOD SCHOOL POLICY, AS APPLIED IN DENVER, DOES NOT OPERATE TO DEPRIVE ANY PUPIL OF AN EQUAL EDUCATIONAL OPPORTUNITY, AND THE HOLDING OF THE COURT OF APPEALS TO THAT EFFECT SHOULD BE AFFIRMED 101

Page

A. INTRODUCTION

1. Neighborhood School Policy—Generally 101

2. Equality of Educational Opportunity .. 102

3. Points Argued 103

B. THE SCHOOL DISTRICT DID NOT CAUSE THE ALLEGED INFERIORITY IN THE COURT-DESIGNATED SCHOOLS 104

1. Summary of District Court Findings that Low Test Scores Evidenced Inferior Schools, that Racial and Ethnic Concentrations Caused Inferior Schools, but that the Concentrations were not Caused by the School District 104

2. The Court of Appeals, in View of the Trial Court's Findings, Correctly Reversed, Finding No State Action Causing the Educational Outcomes at the Schools in Question 106

(a) The Trial Court had Found that the School District did not Cause the Racial Imbalance 106

(b) The Court of Appeals Correctly Based its Reversal of the District Court on the Absence of Findings of Causal Relationship 108

Page

(c) The Court of Appeals did not Require a Showing of Racial Purpose, Whether or not it is Required 109

(d) The Neighborhood School Policy does not Operate as a Racial Classification 110

3. The Court-Designated Schools were Located, Built, and Assigned Attendance Areas Without Any Segregatory Purpose or Effect, and the School District has done Nothing Since to Affect Their Racial Composition 111

4. Allocations of Resources to Core Area Schools were Equal or Greater 112

C. ON TWO OTHER GROUNDS THE DISTRICT COURT'S JUDGMENT SHOULD HAVE BEEN REVERSED 114

1. Achievement Test Scores are not a Valid Basis for Comparing Educational Opportunity among schools 115

2. The Conclusion that Racial or Ethnic Concentrations are the Principal Cause of "Inferior" Schools is not Supported by Expert Opinion Relevant to Denver or by any Other Competent Evidence .. 119

Page

D. EDUCATIONAL DIFFICULTIES ARISING FROM CIRCUMSTANCES NOT CAUSED BY STATE ACTION ARE NOT WITHIN THE POWER OF FEDERAL COURTS TO RESOLVE; THE REMEDY FOR EDUCATIONAL PROBLEMS AS DISTINCT FROM CONSTITUTIONAL VIOLATIONS MUST BE LEFT TO THE PLENARY POWERS OF SCHOOL AUTHORITIES 122

1. Absent a Constitutional Violation, There is no Authority for a Court to Order a Remedy 122

2. The Scope of the Remedy is Limited by the Civil Rights Act of 1964 as to "De Facto Segregation" 123

3. The Denver School District has Constantly been Searching for Better Means to Improve Educational Results 124

4. Even if the Courts had the Power to Intervene in Solving the Educational Problems and the Competence to Prescribe Effective Educational Measures, the Remedy Urged by Petitioners—Racial and Ethnic Balancing —Would Not Meet the Tests of Either Practical Effectiveness or Recognition of Competing Values 126

Conclusion 132

WILFRED KEYES, et al,

Petitioners,

vs

SCHOOL DISTRICT NO. 1, DENVER COLORADO, et al,

Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

BRIEF FOR RESPONDENTS

OPINIONS BELOW

The principal opinions of the courts below are adequately set forth in the Brief for Petitioners.

JURISDICTION

The jurisdictional statement is adequately set forth in the Brief for Petitioners.

CONSTITUTIONAL PROVISION INVOLVED

This case involves the Equal Protection Clause of the Fourteenth Amendment to the Constitution of the United States.

QUESTION PRESENTED

The sole question presented by Petitioners is: Whether petitioners are entitled to obtain system-wide relief to desegregate the Denver Public Schools. Four legal theories are propounded thereunder by Petitioners.

STATEMENT

The Brief for Petitioners contains a complex and lengthy statement. Portions thereof consist of preliminary findings of fact by the district court made following a hearing on motion for preliminary injunction, which are not supported by the ultimate findings made after a full hearing on the merits; portions consist of reiteration of some findings of fact and additional new findings of fact by the trial court after the hearing on the merits; portions pertain to asserted inferences from facts in evidence but not adopted by the trial court in its findings of fact; portions consist of conclusions of counsel but not of the lower courts; and other portions contain argumentative matters. For these reasons, respondents present a detailed statement to put this case in proper chronology and perspective.

1. PROCEDURAL HISTORY.

This action was commenced in the United States District Court for the District of Colorado on June 19, 1969, by Anglo (white, excluding Hispano), Negro, and Hispano (Spanish surnamed) parents of children attending public schools in Denver, Colorado, suing individually, on behalf of their minor children, and, under Rule 23, Federal Rules of Civil Procedure, on behalf of classes of persons similarly situated. They alleged violations of their constitutional rights and sought reinstatement of certain rescinded resolutions of the Board of Education, desegregation of certain schools alleged to have been segregated by acts of the Board

of Education, desegregation of the entire district, and other relief.

The complaint contained two separate causes of action.[1] The first cause of action addressed itself only to a small number of schools in a portion of northeast Denver known as Park Hill, and alleged that the rescission of three resolutions of the Board of Education numbered 1520, 1524, and 1531, containing plans for stabilization of the racial and ethnic pupil composition of those schools ("resolution schools") in northeast Denver was unconstitutional and void and prayed that the resolutions be reinstated by order of the court.

The three resolutions contained plans for reassignment of pupils from eight northeast Denver neighborhood schools to other schools more distant. Only four of the eight were predominantly Negro and none was predominantly Hispano.

The second (main) cause of action alleged the existence of racially and ethnically segregated residential patterns in Denver, and with knowledge thereof, the superimposition by the Board of a "neighborhood school policy" resulting in state imposed segregation on the basis of race and ethnicity at schools in the central or core city area of Denver ("core city schools") and an unequal allocation of facilities, resources and faculty to predominantly minority schools of the school district.

Although various forms of relief were sought, the Question Presented herein by petitioners is limited to the refusal of the lower courts to order system-wide "desegregation" in the Denver schools.

[1]Joint Appendix, pp. 2a-70a, hereinafter cited A. For ease of reference, the citation conventions adopted by petitioners in footnote 3 of their brief will be used in this brief. The Appendix to Petition for Certiorari is hereinafter cited as "A.P.", the Brief for Petitioner is cited as "Pet. Br."

Only the first cause of action was considered on motion for preliminary injunction to reinstate and implement the three rescinded resolutions. After hearing in July of 1969, the district court granted the preliminary injunction, holding the rescission unconstitutional.[2]

On application for stay of the preliminary injunction, the Tenth Circuit Court of Appeals remanded the case to the district court to make its injunction more specific and for consideration of the applicability of section 407(a) of the 1964 Civil Rights Act, 42 U.S.C. §2000c(6)(a).[3]

On remand the district court held section 407(a) of the Civil Rights Act of 1964 inapplicable and made its injunction more specific by ordering implementation of the resolutions as to five elementary schools, only three of which were predominantly minority and the one junior high school they fed, a total of only four minority schools. It reserved ruling on the second minority junior high school involved in the resolutions until trial on the merits.[4] The court also held that East High School, one of the eight resolution schools, was not within the ambit of a preliminary injunction because of section 407(a) and because the evidence failed to disclose a condition at East which merited a preliminary injunction (East was and has remained predominantly Anglo.)[5]

On August 27, 1969, the court of appeals stayed the preliminary injunction until further order of court stating that the important and difficult questions presented in the case

should not be decided on application for preliminary injunction and questioned the piece-meal consideration of the case.[6]

On August 29, 1969, the Friday before the opening of school on September 2, 1969, Mr. Justice Brennan, Acting Circuit Justice, reinstated the preliminary injunction on the grounds that the stay was improvidently granted, the court of appeals not having said that the grant of the preliminary injunction was an abuse of discretion.[7]

The court of appeals on September 15, 1969, denied a motion to amend its August 27, 1969, stay order to specifically hold that the district court abused its discretion in granting the preliminary injunction, the schools having opened in compliance therewith and any change at that time would have had a disruptive effect on them.[8]

After trial on the merits from February 2 to February 24, 1970, the district court, in an opinion dated March 21, 1970, "considered the explanatory evidence offered at trial" (313 F.Supp. 61, 64, A.P. 46a) as to the first cause of action and made specific findings of fact and conclusions of law concerning the resolution schools reiterating the finding of unconstitutional rescission of the three resolutions. The court made the injunction permanent and included therein the second minority junior high school and one high school (East High), although it was a predominantly Anglo school. The court further held that the racial imbalance in the schools which were the subject of the second cause of action (core city schools) was not caused by state action, but that the schools which were over 70% Negro or over 70%

Hispano were not providing an equal educational opportunity in violation of the Fourteenth Amendment.[9]

The district court issued a "Decision re Plan or Remedy" on May 21, 1970, after a further hearing on remedies and ordered a plan of massive compensatory education and the desegregation of seventeen "court designated" schools—fourteen elementary, two junior high and one senior high, all located in the core city area of Denver—which it concluded were not providing an equal educational opportunity, although not segregated by state action.[10] These included two elementary and one junior high resolution schools.

A Final Decree and Judgment was entered on June 11, 1970,[11] which was appealed by both parties. After a stay by the court of appeals[12] pending decisions of this Court in *Swann v. Charlotte-Mecklenburg Board of Education* and other cases was vacated by this Court, per curiam,[13] following the announcement of its decision in *Swann*[14] and other cases, the court of appeals issued its opinion on June 11, 1971.[15]

The court of appeals affirmed the holding of the district court on the first cause of action, not on the grounds of unconstitutional rescission of the three resolutions, but instead on the basis of certain school districting in the Park Hill area involving only four predominantly minority schools; af-

[14]402 U.S. 1 (1971).

[15]Opinion of Court of Appeals of June 11, 1971, 445 F.2d 990, A.P. 122a.

firmed the findings of the district court that the core city schools which were the subject of the second cause of action were not segregated by state action; and reversed the judgment of the district court decreeing desegregation of the court designated schools on the ground that its decree was beyond the power of the court, there having been no state action causing the "de facto" segregation and therefore no constitutional violation.

Plans to implement the district court's Final Decree and Judgment regarding desegregation of the court designated schools were formulated and approved by the district court prior to the announcement of the opinion of the court of appeals on June 11, 1971, but were not implemented because of the reversal of the district court's decision in the interim.

As a result of an opinion of the court of appeals issued on August 30, 1971,[16] on motion for clarification, the district court ordered additional cross-busing to further reduce minority percentages at two elementary schools in northeast Denver[17] which were determined by the court of appeals in its June 11, 1971, opinion to be "de jure" segregated independently of the rescission of the three resolutions of the Board of Education. That order was implemented in January of 1972, after this Court granted certiorari on January 17, 1972.

2. THE CITY AND COUNTY OF DENVER AND SCHOOL DISTRICT NO. 1.

A. *Political System*

The City and County of Denver was created as a home rule city by amendment to the Constitution of Colorado in 1902 and has a mayor-council form of government. Article

[16]Opinion of Court of Appeals of August 30, 1971. A. 1987a.

[17]Stedman and Hallett, both of which were resolution schools.

XX of the Constitution of Colorado provides in pertinent part:

> "Section 7. City and county of Denver single school district—consolidations.—The city and county of Denver shall alone always constitute one school district, to be known as District No. 1, but its conduct, affairs and business shall be in the hands of a board of education consisting of such numbers, elected in such manner as the general school laws of the state shall provide. . . .
>
> * * *
>
> "Upon the annexation of any contiguous municipality which shall include a school district or districts or any part of a district, said school district or districts or part shall be merged in said 'District No. 1,' which shall then own all the property thereof, real and personal, located within the boundaries of such annexed municipality, and shall assume and pay all the bonds, obligations and indebtedness of each of the said included school districts, and a proper proportion of those partially included districts . . . ."

The respondent School District No. 1 was thus created by the Constitution of Colorado along with the City and County of Denver in 1902. The school district is governed by a seven-member board of education elected for staggered six-year terms and is both fiscally and politically independent from the city and county. The boundaries of these two political subdivisions are identical. Until 1967 the City and County of Denver had exclusive control over annexation of surrounding lands into the city and county and, by virtue of the Constitution, into School District No. 1. Since then, con-

templated annexations must be approved by School District No. 1.[18]

B. *Geography*

Geographically, Denver is roughly square, (See map, Appendix to respondents' Brief in Opposition to Petition for Certiorari) approximately 11 miles north to south and 9½ miles east to west, or approximately 100 square miles. The South Platte River flows from south to north curving to the west near the center of the city. The principal business and commercial area is located in the center of the city.

Denver's major growth has been to the east and south over the past 25 years, much of it by territorial annexation of undeveloped land, subsequently developed primarily for residential uses, neighborhood business and suburban shopping centers. The annexations to Denver since World War II have totaled approximately 40 of Denver's present 100 square miles. DIX L, A. 2148a; DX HK, A. 2158a; and PX 20, Map No. 2, A. 2018a.

C. *Demography*

The city of Denver is most densely populated near its center. In the early 1940's, the relatively small Negro population lived in a rather small area immediately north of the center of the city, commonly called "Five Points". A.P. 47a. Hispanos generally lived further to the north, as well as to the south and west of the city's center. After World War II, the Negro population increased in size substantially and, supplemented by immigration from other areas of the country, migrated to the east.

A large number of the Negroes who came to Denver after the war were from the rural South, unskilled, partially edu-

[18]Colorado Revised Statutes 1963, §139-21-4(5).

cated, burdened by traditions of legally imposed inequality, and unable to compete successfully. PX 20, A. 2001a.

A large number of the Hispanos came from New Mexico and southern Colorado, forced to the city by the closing of mines, the seasonal nature of agricultural work and mechanization of farms, bringing value patterns and cultural characteristics which interfered with adjustment to urban life. PX 20, A. 2002a.

The change in population is reflected by the following statistics:[19]

	Anglo		Negro		Hispano		Others		Total
Year	No.	%	No.	%	No.	%	No.	%	Population
1930	279,814	97.2	7,204	2.5	Incl. in Others		843	0.3	287,861
1940	313,810	97.3	7,386	2.4	Incl. in Anglo		766	0.3	322,412
1950	397,491	95.6	15,059	3.6	Incl. in Anglo		3,236	0.8	415,786
1960	398,332	80.7	30,251	6.1	60,294	12.2	5,010	1.0	493,887
1970	371,842	72.3	47,011	9.1	86,345	16.8	9,480	1.8	514,678

Following World War II, the Negro population began to migrate eastward and by 1950 had reached York Street, a main north-south thoroughfare. Between 1950 and 1960, the migration continued eastward from York Street to Colorado Boulevard, another principal north-south six-lane thoroughfare which the trial court recognized as a natural dividing line. 303 F.Supp. 282 and 290, A.P. 4a, 21a. In the early 1960's, the Negro migration continued to the east of Colorado Boulevard into a middle class residential area known as Park Hill and on to the easterly city limits. 313 F.Supp. 64, A.P. 47a.

The change in the Negro population between York Street and Colorado Boulevard is roughly reflected in the following figures:[20]

[19]Source. U.S. Bureau of Census.

[20]PX 38, Table 3, p. 6, A. 2116a; U.S. Bureau of Census for 1970 figures.

Year	Negro Population	Total Population	Percent Negro
1940	86	12,482	0.7
1950	898	16,028	5.6
1960	8,715	17,216	50.6
1970	10,506	15,047	69.8

The Park Hill population changes, Colorado Boulevard eastward to Quebec Street, are shown by the following figures:[21]

Year	Negro Population	Total Population	Percent Negro
1950	54	20,201	0.3
1960	566	32,679	1.7
1966	12,222	32,944	37.1
1970	18,516	36,893	50.2

The 1966 census of the Park Hill area was conducted by petitioners' witness Bardwell in a study for the City and County of Denver (not the School District), wherein he made the following concluding remarks:

> "If one adopts the position that a balance and stable mixture of Negro and white residents in Park Hill is a desirable public goal, the results of the 1966 census are not encouraging. There is ample evidence that the Negro movement into Park Hill is persistent and growing in momentum. The results suggest that a massive shift in racial composition in new residents moving into the area will be required to reverse this trend.
>
> "A number of factors suggest a continuing and mounting pressure for school facilities. The aver-

[21]PX 38, Table 4, p. 6, A. 2116; U.S. Bureau of Census for 1970 figures.

age size Negro family in the 1966 census is about one-fourth larger than the white family in the 1960 census. This disparity is even more pronounced if the average white family in the 1966 census is used. Moreover, there is a relatively high vacancy rate in 'transitional' areas in Park Hill. These factors, together with the prospect of higher proportion of Negroes in Park Hill, point to an impact on school populations which is likely to be more severe than that experienced to date." PX 38, p. 23, A. 2116a.

The Hispano population of the city of Denver also migrated but over a larger and less well-defined area, generally north and west of the city's center. The record does not reflect the Hispano movement as clearly as it does the Negro movement. An example which is typical, however, is illustrated by Boulevard Elementary School, in an older section of west Denver, which in 1946-1947 had an enrollment of 576 whites (93.4%), no Negroes and 31 Hispanos (6.6%). PX 336, A. 2084a. The 1969-1970 enrollment for Boulevard was 118 Anglo (30.3%), 2 Negro (0.5%) and 269 Hispano (69.1%). DX S-1, A. 2166a. The older part of the school was demolished and not replaced prior to 1969.

The Five Points area and the Hispano residential areas just north and west of the city's center had the lowest median family income and the lowest adult educational attainment level in 1960. The Park Hill area was near the median of family income for the same year, and the areas in the south and southeast parts of the city showed the highest median family income. PX 20, Map No. 5.

Population mobility was highest in the area of the core city schools. As examples, Emerson Elementary School and Morey Junior High School each experienced pupil popula-

tion mobility of over 100% during a single school year. Oberholtzer, A. 1361a.

In summary, Denver experienced normal growth prior to World War II, but shared in the dramatic postwar population movement to the cities, perhaps more than some cities because its territorial annexation policy in the 1940's, 1950's and 1960's enabled it to accommodate more of the population influx than some metropolitan areas where growth has been primarily in the suburbs.

3. DENVER'S SCHOOLS

A. *General Background*

At the time the action was commenced, School District No. 1 operated 118 schools consisting of 92 elementary schools, 15 junior high schools, 9 senior high schools including 2 junior-senior high schools, an opportunity school and a metropolitan youth education center.

At the beginning of the school year 1968-69, immediately prior to the commencement of this action, Anglo students were enrolled in all 92 elementary schools, Negro students in 78, and Hispano students in 88. Anglo students were enrolled in all 15 junior high schools, Negro students in 14 of the 15, and Hispano students in all 15. Anglo and Hispano students were enrolled in all 9 senior high schools and Negro students in 8 of the 9. PX 242, A. 2051a; PX 273, A. 2075a; and PX 302, A. 2079a.

Prior to 1947, a racial and ethnic survey had been taken annually by the school district. Oberholtzer, A. 1309a. When Kenneth E. Oberholtzer took office as Superintendent of Schools that year, there was brought to his attention the existence of published reports of racial data and the provisions of the Constitution of Colorado, Article IX, Section 8, which provides in pertinent part:

> "Section 8. Religious test and race discrimination forbidden—. . . No sectarian tenets or doctrines shall ever be taught in the public schools, nor shall any distinction or classification of pupils be made on account of race or color."

The superintendent sought and received advice of counsel (A. 1309a) and was advised that the survey conflicted with the constitutional provision. He thereupon directed that the practice be discontinued. A. 1309a. This continued as the policy of the administration and the Board until 1962, when racial and ethnic surveys of pupils and teachers were made in May of that year as a result of the need to have such data available for the Office of School-Community Relations and the Special Study Committee created that year. A. 1352a. These surveys were made annually thereafter by observations of pupils in the classroom in the fourth week of September in each year. No indication of race appeared on the individual records of the pupils.

The time frame covered by this lawsuit coincides approximately with the tenure of Dr. Oberholtzer as superintendent of the Denver schools from 1947 to his retirement in 1967.

During those twenty years the school population more than doubled from 45,000 to over 97,000 pupils and the number of classroom teachers increased from approximately 1600 to more than 4000.[22] Over 100 million dollars was spent during that time for construction and equipping school facilities in all areas of Denver to accommodate this school population explosion. Oberholtzer, A. 1304a, Map PX 20, A. 2018a. Yet funds were never adequate to provide schools in all locations where they were needed to accommodate Denver's growing and shift-

[22]Oberholtzer, A. 1306a. See also comparative data, 1940 to 1969, DX HK A. 2158a.

ing school population, particularly in newly annexed areas from which children had to be transported to the nearest available spaces in their grade levels.

Sizeable capital outlays were expended on renovation and maintenance of older buildings and facilities to keep them in good condition and provide up-to-date lighting, seating and other educational equipment. Oberholtzer, A. 1365a.

Schools were constructed over the years where they were needed to accommodate resident pupils without regard to the race or color of the pupils until 1964. Oberholtzer, A. 1316a, 1317a, and A. 1370a.

These schools reflect the racial and ethnic composition of the areas of the city that they serve. As that composition changed, so did that of the schools.

There is no evidence that the school district or any other governmental agency either caused or had any control over the changing racial characteristics of the neighborhood areas involved.

The public policy of the State of Colorado as shown by its laws and decisions was to prohibit discrimination based on race and protect the right of the individual to choose his place of residence regardless of race, creed, color, sex, national origin or ancestry.[23]

Section 4 of Colorado's Enabling Act provided in pertinent part:

> "... whereupon the said convention shall be and is hereby authorized to form a constitution and

[23]The Supreme Court of Colorado in *Capitol Federal Savings and Loan Association v. Smith*, 136 Colo. 265, 316 P.2d 252 (1957) went further than this Court in *Shelley v. Kraemer*, 334 U.S. 1 (1948) and following cases, when it held that no rights, duties or obligations whatever could be based on a private racially restrictive covenant on real property and, in essence, declared such covenants absolutely void.

state government for said territory; provided, that the constitution shall be republican in form, and make no distinction in civil or political rights on account of race or color. . . ." Colorado Revised Statutes 1963, Vol. 1, p. 52.

In 1895, Colorado enacted statutes prohibiting discrimination in public accommodations. Colorado Revised Statutes 1963, Section 25-1-1. Subsequent, statutes in 1917 broadened the anti-discrimination provisions. Colorado Revised Statutes 1963, Section 25-2-3. In 1957, The Colorado Antidiscrimination Commission was created, which has since been granted broader powers. Colorado Revised Statutes 1963, Chap. 25, Art. 3. The Colorado Fair Housing Act of 1959 (Colorado Revised Statutes 1963, Chap. 69, Art. 7) made it unlawful and prohibited a person having the right of ownership or possession to real property to refuse to transfer, rent or lease to any person because of race, creed, color, sex, national origin or ancestry; or to discriminate against such persons in connection with housing, including lending, making of restrictions, advertising or aiding or abetting such conduct. Jurisdiction was given to The Colorado Antidiscrimination Commission to enforce the provisions thereof with appropriate judicial review and enforcement. (Laws of 59, p. 489; Chap. 69, Art. 7.)

In the period shortly after *Brown v. Board of Education* 347 U.S. 483 (1954), Superintendent Oberholtzer requested opinion of counsel and was advised that *Brown* did not apply to Denver as it did not have separate schools for the races and *Brown* applied only to state-imposed dual systems and not to racial imbalance in schools resulting from residential concentrations. Oberholtzer, A. 1310a.

B. *Pupil Assignment Policies and Practices*

The Denver School District has never maintained a system of separate schools for children of different races or a

dual system. 445 F.2d 990, 996; A.P. 126a. The school district has always utilized a neighborhood school policy of assigning children to schools. Under this policy, the school district is divided into geographic subdistricts. A school is provided for each subdistrict generally within ready walking distance for all children in the attendance area (subdistrict). There is a subdistrict for each level of education, elementary, junior high and senior high. Elementary school attendance areas are smaller than the upper levels to accommodate the younger children and limit walking distances to school, generally no more than one mile. Junior high school attendance areas are generally limited to a two-mile walking distance. Senior high school subdistricts are much larger and rely on various forms of transportation to and from school such as public transit, private automobiles and bicycles. Oberholtzer, A. 1308a.

The school district has never assigned pupils to its schools on the basis of race or other individual characteristic except that children with extreme physical handicaps are transported to a special school at district expense, some children with learning disabilities are assigned to special education classes outside the subdistricts where such classes are not provided at their neighborhood schools, and in recent years, a Voluntary Open Enrollment or majority to minority transfer policy has permitted transfers from the neighborhood school to another school on the basis of race or ethnicity where such transfers improve integration at both the sending and receiving schools.

The district court found:

> "It is to be emphasized here that the Board has not refused to admit any student at any time because of racial or ethnic origin. It simply requires everyone to go to his neighborhood school unless

it is necessary to bus him to relieve overcrowding." 313 F.Supp. 73 A.P. 67a.

The school district never took into account race or ethnicity as a factor in establishing school subdistrict boundaries until 1964. Oberholtzer, A. 1370a.

Benefits of the neighborhood school concept include a rational distribution of school population, convenience to the child in getting to and from school, a close home and school relationship with parents and teachers and placement of pupils in relation to maximum use of school plants. PX 20, p. A-2, A. 2008a.

The neighborhood school policy has had some exceptions in its application based on necessity but non-discriminatory. These include transportation of children in newly annexed areas, where there are no schools, to the nearest schools with space available at the required grade levels. Other variations of the neighborhood school policy have included optional attendance areas, eliminated in 1964; individual transfers for a limited number of purely personal non-racial reasons; transportation out to relieve overcrowding; and Voluntary Open Enrollment.

In 1962, concern developed over a proposal to construct a new junior high school on the northern portion of a large site in northeast Denver at East 32nd Avenue and Colorado Boulevard, purchased for that purpose in 1949 when the neighborhood was predominantly Anglo. Many in the community were of the opinion that the rapidly changing racial composition of the area would cause the new school to be predominantly Negro if built. The School Board deferred action on the proposal and appointed A Special Study Committee (sometimes referred to as "Voorhees Committee") to study the question and report generally on the status of educational opportunity in the Denver Public Schools. The

committee was composed of representatives of the varied racial, ethnic, cultural and economic groups which form the total Denver community. PX 20, p. 10, A. 2006a. After an exhaustive study, the committee made a written report to the Board with recommendations on March 1, 1964. PX 20, A. 1997a.

In that report the committee generally endorsed the application of the neighborhood school concept in the organization of the Denver school system (PX 20, p. A-1, A. 2008a), recommended that the Board formalize into a written policy the criteria theretofore utilized in establishing school boundaries and locating new schools (PX 20, p. A-6), and recommended that the Board continue the neighborhood school principle except that it should establish a limited open enrollment plan. PX 20, p. A-10, A. 2011a. The committee also recommended that a matter to be considered with all other factors was that school boundaries and the location of new schools should be determined so that the school neighborhoods will represent, to the extent possible, a heterogeneous school community. PX 20, pp. A-6 and A-7. Such a policy was promptly adopted by the Board on May 6, 1964. PX 1, Policy No. 5100, A. 1989a.

As to optional attendance areas, the committee found that they often were continued after the reasons for their establishment ceased to exist and were no longer necessary to a rational boundary system, and therefore recommended that they be abolished. PX 20, p. A-13, A. 2013a. The remaining few were abolished by the Board shortly after receipt of the committee's report in 1964. The racial effects of optional areas were insignificant and there were no findings that optional areas or their abandonment in any way caused racially concentrated schools.

The committee also reviewed the school district's transportation policies and concluded that while transportation is

sometimes necessary, it is never desirable and that transportation of pupils for the sole purpose of integrating school populations was regarded by the committee as impractical. It was recommended that transportation should be regarded as an expedient rather than a solution to problems including the problem of racial imbalance in the schools. PX 20, p. 11 and 12, A. 2011a and 2012a.

The transportation of pupils from newly annexed areas, where there were no schools, to the nearest available space at the appropriate grade level involved approximately 1000 pupils in 1964. PX 20, p. A-11, A. 2011a. Petitioners complained that these children, who were predominantly Anglo, were not transported to available space in minority schools. The great majority of these children lived in the southwest and southeast areas of Denver where there was space available in schools near their homes. Basically, the petitioners' complaint was that these children were not bused additional miles to integrate minority schools and not that the school district used such transportation as a device to maintain "segregation."

> The Court: Are you maintaining here that the transportation is used to maintain segregation, that transportation is employed in order to avoid integration?
> Mr. Greiner: The latter, yes, Your Honor, that certain students are bused past schools with space in them to schools further distant. A. 769a.

The evidence was not as counsel stated. The evidence was that *minority* students from Smith School who were transported out to relieve overcrowding were bused past some Anglo schools to other Anglo schools. Bardwell, A. 770a.

This type of busing — to relieve overcrowding — was different from the type of busing employed to trans-

port children from areas which had no schools until such time as schools could be built. Petitioners do not complain about busing to relieve overcrowding. The example cited on page 26 of their brief — transporting a small number of pupils from Montbello to Lake Junior High instead of to Cole Junior High which was closer in terms of miles but not on the Interstate highway route utilized—was evaluated by the Court in considering the effect of Resolution 1524 on Cole Junior High School.

> "The purpose of this change [reduction of the pupil membership by 275 students] was to decrease the pupil-teacher ratio at Cole and to make room for a number of special programs to be instituted there. This was also a good faith effort by the Board to improve the quality of education at predominantly Negro Cole." 313 F.Supp. 67 A.P. 54a.

Having determined on educational grounds to reduce the membership at Cole, it would have been inconsistent for the school district to bus additional children into Cole at the same time. School capacity as explained numerous times in the testimony was related directly to the type of educational program conducted at the school and was not simply the product of number of classrooms times 30, the average pupil-teacher ratio for the district, as petitioners assumed.

The district court made no findings that the use of transportation as an adjunct to the neighborhood school policy in any way contributed to or caused "segregation" in any of the schools.

Regarding individual pupil transfers between schools, the Special Study Committee stated that there was every evidence that the rules governing such transfers have been followed carefully and without prejudice. These were extreme-

ly small in number (during 1963, 122 at the elementary level and 29 at the junior and senior high level. PX 20, A-9) and thus were insignificant in relation to the issues in this case.

The Limited Open Enrollment program (LOE) recommended by the Special Study Committee was instituted in 1964. LOE did not employ racial criteria. It simply permitted a student to transfer from his assigned school to any other school in the system where space was available in his grade level on a first come, first served basis. No transportation was provided by the School District. Petitioners state in their brief (p. 32) that LOE involved only 267 elementary students and had a negligible effect on integration.

LOE was instituted to enable minority children who desired an integrated school environment the opportunity to obtain it. To further improve integration, LOE was replaced in the fall of 1968 with a majority to minority transfer policy based on race, with transportation provided by the school district. This program was called Voluntary Open Enrollment (VOE). It was not expected that VOE would racially balance the entire school system although it had that potential. Koeppe, A. 432a. It was designed to give students an opportunity to attend another school where their race was in the minority and at the same time, to improve the racial balance of both the sending and receiving schools. Perrill, A. 1082a, Koeppe, A. 428a.

The VOE principle was incorporated into the Hallett Elementary School Voluntary Exchange Program and was intended to integrate Hallett. Koeppe, A. 425a. As petitioners note in their brief at page 33, the program reduced the Negro percentage at Hallett from 84% Negro to 58.4% Negro during the pendency of this litigation in the summer of 1969, despite the disruptive effects of this litigation. The Hallett plan was contained in Resolution 1531 and also in

its replacement, Resolution 1533. PX 6a, A. 2111a. In addition, the district-wide VOE policy was reaffirmed on June 9, 1969, and the Superintendent was ordered to initiate concentrated and effective plans and programs to accomplish, through voluntary transfers, the results intended by Resolutions 1520 and 1524. PX 6, A. 2110a and Koeppe, A. 433a.

C. Measures Utilized by the School District to Relieve Overcrowding

During the period in question, the school district was obliged not only to provide school facilities for children in newly annexed areas and newly developed areas within the city, but it was faced with increasing school population within some of the existing subdistricts and particularly, the Park Hill area. School buildings in these subdistricts had been adequate to house the children residing therein until the postwar population explosion.

The problem was particularly acute in northeast Denver which was experiencing an influx of young Negro families on the average about one-fourth larger than the white families they displaced. As pointed out by petitioners' witness Bardwell in his 1966 study of the area, the impact on school population was severe. PX 38, p. 23, A. 2116a.

Several means of handling this overcrowding were employed by the school district: permanent construction, temporary buildings or mobile units, boundary changes where adjacent subdistricts were less crowded, double sessions and busing out to nonadjacent subdistricts where space was available.

Permanent construction was preferred. Former Superintendent Oberholtzer testified: "Now, our ideal was to provide permanent construction wherever possible. We had the

usual problems of insufficient funds to do all the things that we wanted to, to meet the needs. A great many of the needs were met through the three bond issues and the other program that I referred to, but a lot of them were not met." A. 1333a.

(1) *Construction of New Schools.*

School District No. 1 spent more than 100 million dollars on school construction from 1947 to 1967, involving 100 or more building projects. Oberholtzer, A. 1304a.

Petitioners complain of only two new schools. The first was not the creation of a new school to relieve overcrowding, but was simply the replacement of the old Manual High School building which had been constructed sometime prior to 1900, and was the oldest high school in the city. Planning and the decision to build the replacement facility were made some years prior to 1951. The new building was constructed on lots immediately adjacent to the old building and opened in 1953. The old building was then razed and the site was used for athletic fields and playgrounds for the new school. PX 356, p. 19. Attendance boundaries for the new building were not changed and remained the same as for the old building and the district court so found. 313 F.Supp. 69-70, A. 59a. In 1950, Manual High School was 27.7% Negro. In 1953, when new Manual opened, the Negro enrollment was 35%. PX 401.

Petitioners' statements to the effect that new Manual was designed to serve the minority community imply that it was planned for a discriminatory purpose. This ignores the fact that the existing school building was simply replaced by the new structure and the area served was exactly the same as the area served by the old building. Former Superintendent Oberholtzer testified that race and color were simply not

considered in the school district's decision making. Oberholtzer, A. 1316a.

The district court commented on this testimony.

> "Former Superintendent Oberholtzer testified at great length to the fact that the administration, including the Board, followed a policy of strict neutrality as far as segregation or integration was concerned. Indeed, Superintendent Oberholtzer stated that even after the decision in *Brown v. Board of Education, supra,* he was of the opinion that it was not permissible for him to classify Negroes as such, even for the purpose of bringing about integration." 313 F.Supp. 73. A. P. 66a.

The court found:

> "Quite apart from the cause element which will be discussed further below, it cannot be said that the acts were clearly racially motivated. One would have to labor hard in order to come up with this conclusion.
>
> "It can, however, be concluded that the segregation (or racial concentration) which presently exists at Manual is not *de jure*." 313 F.Supp. 75, A.P. 71a.

As the court had earlier pointed out, "The impact of the housing patterns and neighborhood population movement stand out as the actual culprits." 311 F.Supp. 75, A.P.71a.

The other new school of which petitioners complain is Barrett Elementary School located at East 29th Avenue and Jackson Street and constructed in the late 1950's for the purpose of relieving extreme overcrowding at neighboring schools then serving the area.

The district court, after the preliminary injunction hearing, held that Barrett Elementary School was built in the late 1950's for the purpose of serving a residential area which was destined in a short time to become populated by Negro families. When the school was completed and opened, its population was predominantly Negro. 303 F.Supp. 282, A.P. 5a. This had come about, the court found, by reason of the Negro migration from the core city area to the east, first to Colorado Boulevard and later beyond, which "caused these areas to become substantially Negro and segregated." 303 F.Supp. 282, A.P. 4.

The court further found fault with the school district for failing to build Barrett larger and not extending its boundaries further east across Colorado Boulevard, a six-lane highway, to encompass the westerly portion of the Stedman Elementary School and relieve its overcrowding, and at the same time obtain some white students in order to integrate Barrett. 303 F.Supp. 290, A.P. 22a.

Yet the principal of Stedman from 1958 to 1963 testified at the trial on the merits that she resided in the 2900 block of Albion Street in 1960 (one block east of Colorado Boulevard and directly east of Barrett School), that there were more Negro families than white families living in the two block area immediately east of Colorado Boulevard; and that the children from that area were attending Stedman Elementary School, which was also receiving children bused from the Hallett area immediately to the east of Stedman. McLaughlin, A. 1135a.

Thus, extending the Barrett boundaries to the east of Colorado Boulevard would have exposed the children to the hazards of a busy six-lane highway without accomplishing any of the salutary purposes assumed by the district judge.

Further, as the district judge found, the school district did not segregate the children in the area served by

Barrett. The migration had done that. The school district simply provided a neighborhood school building for the children who were already there. The only alternatives were to build an addition to Harrington School to the north, as some in the community had suggested,[34] or increase busing out on a permanent basis to whatever schools had space available from time to time.[35] Busing out was not only against the wishes of most parents but also contrary to school policy at the time. The essence of the district court's findings as to Barrett is that the school district, although it had no responsibility whatever for the racial concentration in the Barrett area, violated the Constitution when it did exactly what it did in other areas of the city, built schools where the children were.[36]

The district court commented on the school district's evidence:

> "At trial (on the merits) Defendants attempted to justify Barrett on the ground that until 1964 the Board maintained a racially neutral policy. Racial and ethnic data were not maintained by the District, and race was not considered as a factor in any decision. Defendants further stated that (1) the Barrett site had been owned by the District since 1949 and a school was needed in that general vicinity; (2) Colorado Boulevard was established as the eastern boundary of the Barrett attendance zone because it was a six-lane highway and would have been a safety hazard were

[34]DX GC. Harrington would have had a racial composition similar to Barrett and by 1963, was 81.1% Negro. PX 243, A. 2054a.

[35]All the elementary schools to the east of Colorado Boulevard were overcrowded less than two years after Barrett had opened. McLaughlin, A. 1130a.

[36]Denison School, in southwest Denver was built at the same time from the same plans as Barrett for the same reason—to house children. Oberholtzer, A. 1343a.

children required to cross it; and (3) Barrett was built relatively small because its main function was to relieve overcrowding in existing schools rather than to accommodate any significant projected increase in area population." 313 F.Supp. 64, A. P. 48a.

The court then held that these factors failed to provide a basis for inferring that a justifiably rational purpose existed for Barrett. First, it held that the District owned other sites east of Colorado Boulevard. The court misunderstood the evidence on this point. The evidence was that the school district owned two sites east of Colorado Boulevard in 1952, eight years before Barrett was built. One had already been used for Smith School in 1955 and the other was five blocks north of Stedman and eight blocks east of Colorado Boulevard, completely away from the residential area to be served and too close to Stedman. Oberholtzer, A. 1346a and A. 1442a.

Second, the court stated there were other school sites on both sides of busy thoroughfares indicating that safety was not a primary factor. Of twelve elementary schools near Colorado Boulevard, two have boundaries crossing it. DX HL. One was built in 1920 and the other in 1930 before traffic was a substantial hazard. One now utilizes an elevated crossing, built after two pupils were killed while crossing Colorado Boulevard. Armstrong, A. 1281a.

Third, the court would have had Barrett relieve overcrowding east of Colorado Boulevard as well as west of Colorado Boulevard. Overcrowding east of Colorado Boulevard was indeed to become a major problem later because of the influx of new families with more school age children. PX 38, p. 23, A. 2116a. It would have required an elementary school of enormous size to solve this problem and if it had been built by the school district, petitioners un-

doubtedly would have complained that it was intended to capture Negro students east of Colorado Boulevard.

The decision to build Barrett was made in 1958 before the 1960 federal census which was used by petitioners to show that the school district should have known that Barrett would have opened with a predominantly Negro school population. PX 41, A. 2022a. That census did show that in 1960 the southern portion of the Barrett attendance area was 73% Negro and that the northern portion was 51% Negro. But the 1960 census was not available to the school district until some time *after* Barrett opened. Had the school district been basing its decisions on racial factors, which it was not, (Oberholtzer, A. 1346a) the 1950 census showed that the area was only 5.6% Negro at that time. PX 38, Table 3, p. 6, A. 2116a.

Speaking of the 1956 Manual boundary change, the district court found that extension of the mandatory Manual attendance area to Colorado Boulevard at that time would have resulted in the inclusion of a *predominantly Anglo* neighborhood. 313 F.Supp. 70, A.P. 61a. Yet it concluded that the school district should have known that the area was *predominantly Negro* just two years later when the decision to build Barrett was made.

(2) *Construction of Additions to Existing Schools.* Between 1940 and 1964, the school district constructed 39 new school buildings, 5 replacement buildings and 46 additions to existing buildings (some were additions to buildings also constructed during that time). PX 20, p. B5. These additions were evenly distributed throughout the city. Of the 36 additions constructed between 1940 and 1960, 18 were constructed east of Broadway, the main north-south thoroughfare near the center of the city and 18 were constructed west of Broadway. Sixteen were constructed north of Colfax Avenue, the main east-west thoroughfare slightly

to the north of the geographical center of the city, and 20 were constructed south of Colfax Avenue. PX 20, App. No. 2. Thus each of the four quadrants of the city contained 9 additions.

Petitioners made no complaint about the construction of additions to existing schools except the addition at Hallett. The district court found that this increased the school's capacity to absorb the influx of Negro population into the area. 303 F.Supp. 293, A. P. 29a. The court did not suggest what other measures to deal with overcrowding would have been acceptable and did not find that this measure caused the racial concentration in the Hallett subdistrict.

(3) *Mobile Units.* Mobile units, or more properly, self-contained classrooms, installed on concrete foundations with air-conditioning and toilet facilities, were erected as a temporary measure at some schools when permanent construction was not feasible and after other measures to relieve overcrowding had been considered. Oberholtzer, A. 1333a. Petitioners complained of the use of mobile units in northeast Denver to accommodate the large migration of students into that area in the 1960's. However, the Special Study Committee approved their use as a temporary measure to relieve overcrowding PX 20, B-10. The district court found that, as to Stedman and Hallett, this measure to relieve overcrowding did just that and that it provided more room for students moving into these school subdistricts. 303 F.Supp. 291, 293, A. P. 25a, 29a. There was no finding that the use of mobile units caused the Negro concentrations within the subdistricts or that other measures should have been used to relieve the overcrowding within such subdistricts. Four mobile units were placed at Stedman in 1965 and four mobile units were placed at Hallett between May of 1964 and May of 1965. Boundary changes to adjust for crowding had already been used. Busing out of Stedman

had to be employed in 1966 as an alternative to double sessions. Burch, A. 972a, Oberholtzer, A. 1350a. At Smith Elementary School, adjacent to and northeast of Stedman, also predominantly Negro, some 12 mobile units were used because the parents preferred them to busing out (A. 106a and A. 1337a), and the court made no findings whatever with regard to mobile units at Smith.

(4) *Subdistrict Boundary Changes.* During the years in question, a great number of minor subdistrict boundaries were changed by the school district throughout the city as a means of adjusting for pupil population changes. For example, in 1962, subdistrict boundary changes were made by the administration involving some 32 schools at the elementary level (DX BD, Hedley A. 855a), and the same year, some 18 boundary changes were being considered at the junior high level. PX 405, Johnson, A. 951a. Junior and senior high school boundary changes were made by the Board of Education. By Board by-law, the superintendent had power to change elementary school boundaries.

A number of the school district's witnesses, including former board members and its former superintendent, testified that racial and ethnic characteristics were never considered by them as a factor in their decision making for any purpose until 1964. Johnson, A. 899a, Burch, A. 968a, Oberholtzer, A. 1371a. This fact was noted by the district court in its opinion following trial on the merits which found that the boundary changes of the core city schools were neither "willful or malicious actions of the Board or the administration." 313 F.Supp. 73, A.P. 66a.

Of the numerous school subdistrict boundary changes made by the school district over the years since World War II, petitioners complained of the few treated by the district court in its opinions. In every case, the boundary changes in question were minor and were made in response to a need to

adjust numbers of children because of overcrowding in some schools. Unnecessary boundary changes were not made because of the educational disruption caused to the children involved. McLaughlin, A. 1138a.

a. *Columbine Elementary School.* In 1946, Columbine, located north of City Park and east of York Street, had an enrollment of 510 pupils, 39 of whom were Negro. PX 336, A. 2081a. In 1950, Columbine School was overcrowded and on double sessions (PX 406a, A. 991a) and in 1951, its Negro enrollment was 24%. A.P. 65a. In 1952, three optional zones were established around Columbine—Columbine-Harrington, Columbine-Mitchell, and Columbine-Stedman—for the purpose of relieving overcrowding at Columbine and they did have the effect of decreasing the overcrowding at Columbine so that double sessions could be eliminated. 313 F.Supp. 75, A.P. 72a. The district court found no actions based on racial considerations, no willful or malicious actions on the part of the board or the administration, and no segregative effect. 313 F.Supp. 73, 75; A.P. 66a, 67a, 72a.

b. *1956 Secondary School Boundary Changes.* In 1956, a new junior high school, Hill, opened in the eastern part of the city to house the large increase in the area's pupil population occasioned by new residential construction and annexations to the city. Establishment of boundaries for the new junior high school caused a domino effect in changing boundaries for all other junior high schools in the area, Smiley, Gove, Morey and Cole. As a result, high school boundaries between Manual and East high schools also required adjustment because of changes in their feeder junior high schools. Oberholtzer, A. 1314a. There was objection to the high school changes and Cole-Smiley changes by some in the minority community primarily because they felt that these changes should have been more extensive to obtain a

better racial mix at Cole and Manual. The district court held that the effect of these actions, on the minority concentrations at Cole and Manual is not known and that "the instant situation then cannot be placed at the administration doorstep." 313 F.Supp. 75, A.P. 72a.

c. *1962 Elementary School Boundary Changes.* In 1962, minor boundary changes were proposed involving more than 30 elementary schools. McLaughlin, A. 1138a. One of these was Boulevard Elementary School located west of the South Platte River in the northwest quadrant of Denver. The change there was made necessary by the decision to raze the older portion of Boulevard School and the resulting reduction of the capacity of the school. The district court held that there was absolutely no evidence presented, other than the fact of the boundary change, upon which to base a finding that the school district was motivated by an intent to segregate Hispano students at Boulevard but did find that the boundary change was necessitated by the legitimate need to reduce pupil enrollment. 313 F.Supp. 75, A.P. 73a.

There was no evidence whatever as to any boundary change involving any other predominantly Hispano school.

Stedman Elementary School located just east of Colorado Boulevard in Park Hill was another of the more than 30 schools involved in the proposed 1962 boundary changes. The administration proposed that some minor changes be made in the Stedman subdistrict, (PX 53, A. 2026a) but after a meeting and discussion with the principals involved the suggested changes were not made. The district court found after preliminary hearing that the refusal to change these boundaries confined Negro students in Stedman (50-65% Negro) and denied them the opportunity to attend an integrated school at Hallett (85-95% Anglo) immediately

to the east of Stedman. In the next finding, the court held that Hallett would gradually become predominantly Negro. 303 F.Supp. 293, A.P. 28a, 29a. The court of appeals held that "The Board's refusal to alter the Stedman attendance area in 1962 was not an affirmative act which equates with de jure segregation." 445 F.2d 1001, A.P. 136a.

The administration did make a proposed minor change from Hallett to Philips by making the optional area between the two schools a part of the Philips mandatory attendance area. The district court made two assumptions: (1) that the children who lived in the area were 100% Anglo and (2) that *all* the children in that optional area had opted to attend Hallett in the 1961-62 school year. Neither of these two assumptions was supported by the evidence. There is no evidence to indicate how many of the children in the former optional area had opted for Philips in previous years. The district court commented on the result: "All that was accomplished was the moving of Anglo students from a school district which would gradually become predominantly Negro [but was then predominantly Anglo] to one which has remained predominantly Anglo." 303 F.Supp. 293, A.P. 29a. There was no finding that this change caused Hallett to become predominantly Negro or that it was racially motivated. In fact, Hallett remained predominantly Anglo for two years after the change. PX 243, A. 2054a.

d. *1962 Junior High School Boundary Changes.* In 1962, 18 separate boundary changes were proposed at the junior high school level. PX 405, p. 22. It was alleged that the elimination of optional areas and changes involving Cole, Morey and Byers located from north to south in the geographic center of the city were racially motivated. The district court found:

"The removal of the Morey Junior High optional zones in 1962 did have the effect of increasing the concentration of minority students at that school. It also had the salutary effect of relieving the concentration of Negro students at Cole, a result consistent with defendants' claim that it was carrying out a racially neutral policy. Both the desirable and undesirable consequences of the 1962 changes appear to have been by-products of a general redistribution. In view of that, it would strain both the facts and the law to say that the administration acted with an unlawful purpose or design in this instance." 313 F.Supp. 76, A.P. 73a.

e. *1964 Boundary Changes.* Twenty-one minor boundary changes were made at the elementary level in 1964. Hedley, A. 857a. Petitioners contended that the boundary changes affecting four elementary schools in Park Hill resulted in "segregation" at two of the schools, Stedman and Hallett.

These boundary changes included one from Stedman to Hallett and another making the Stedman-Park Hill optional area mandatory to Park Hill which was proposed by the administration in 1962 but not made until 1964. PX 71, A. 2030a. They also included changes from Park Hill to Philips and Hallett to Philips. The size of the areas changed could not have made a significant difference in the enrollment in any school. If anything, the changes should have reduced the enrollment at Stedman. Yet whatever reductions were made were more than offset by the influx of pupils into the Stedman district. The total enrollment increased from 796 in 1963 to 838 in 1964. Anglos decreased by 52 and Negros increased by 99. The following table made from plaintiffs' Exhibit 242 (A. 2052a) shows the enrollment by race in all four schools in 1963 before the changes and in

1964 after the changes. Considering all four schools, Anglos decreased by 201, Negroes increased by 357, and Hispanos increased by 29. None of these changes could be attributed to boundary changes among these four schools.

	1963				1964			
	A	N	H	Total	A	N	H	Total
Stedman	127	611	58	796	75	710	53	838
Hallett	417	183	28	628	239	296	42	577
Park Hill	779	10	4	793	745	63	16	824
Phillips	486	4	9	499	539	96	17	652
	1809	808	99	2716	1598	1165	128	2891

The district court found that the change in the Stedman optional area removed the option open to "many" Anglos residing in the optional area to attend Stedman. 303 F.Supp. 291, A.P. 25a. In view of the undisputed fact that Park Hill not only failed to gain Anglos after the change but lost 34 and gained 53 Negroes, this finding is clearly erroneous. The court also found that the predominantly "white" portion of Stedman was detached to Hallett. 303F.Supp. 291, A.P. 24a. As shown in the table above, Stedman lost only 52 Anglos and 5 Hispanos from *all* causes. If there were any whites at all in the area transferred to Hallett, there were only a handful.

The change from Hallett to Philips involved some 70 pupils of whom approximately 50 were Negro. McLaughlin, A. 1141a. The table above shows that the Negro enrollment at Philips increased from 4 to 96 for a gain of 92 Negroes.

(5) *Double Sessions.* Extended days and double sessions were other measures used by the school district temporarily to relieve overcrowding resulting from increased pupil population. Double sessions were used in preference to constructing temporary buildings. At times, the school district had as high as 200 classrooms on double sessions. Oberholtzer, A. 1333a. There was no evidence of the use of double sessions for containment and no findings of such.

(6) *Transportation Out to Relieve Overcrowding.* Transportation of children out of overcrowded school subdistricts was utilized by the school district as a temporary solution to overcrowding when other means of relieving overcrowding were not available. At times parents were given a choice of measures to relieve overcrowding. In 1966, Stedman parents preferred busing out to predominantly Anglo schools over double sessions. At the same time, Smith parents chose mobile units instead of busing out. Oberholtzer, A. 1337a, Burch, A. 972a.

D. *School District Policies Regarding Racial Imbalance.*

Until 1962, the school district followed a policy of strict racial neutrality. Its administration and Board members were of the opinion that the provisions of the Colorado Constitution would not permit them to classify pupils by race for any purpose. 313 F.Supp. 73, A.P. 66a.

In 1962, the administration proposed to construct a new junior high school in northeast Denver. Protests from the community, both majority and minority, caused it to postpone the decision and refer the broad question of what to do about growing concentrations of racial and ethnic minorities in the Denver Public Schools to a special study committee (the Voorhees Committee). A. 2005a. This decision marked the beginning of a change in official policy from that of strict racial neutrality to that of a conscious racial awareness. Oberholtzer, A. 1319a.

Also, in 1962, the Board created the Office of School-Community Relations on the recommendation of the Superintendent. Oberholtzer, A. 1351a. That office then compiled the first comprehensive racial survey of students and teachers since 1946.

In March of 1964, the report of the Special Study Committee was received (PX 20) and in April of 1964 the Su-

perintendent made a summary of the 155 recommendations and distributed it to every member of the school administrative staff. Oberholtzer, A. 1323a.

Action was taken on a large number of the recommendations over the following two-year period. Optional attendance areas were discontinued; racial and ethnic characteristics of school population were added to the criteria for setting subdistrict boundaries; experimental low cost lunch programs were set up in low income areas; an industrial arts facility was added to Smiley Junior High School (a resolution school); social studies programs to promote cultural understanding were added; teachers were given special training in human relations concepts; books dealing with intergroup relations were added to school libraries; special federally-funded educational programs including Headstart, team teaching of language, reading and arithmetic were established in core city schools; a Metropolitan Youth Education Center was established to provide basic educational training to unemployed youths; counselling time was doubled in core city secondary scools; recruitment of well-qualified minority group teachers was intensified and they were assigned to nearly all schools of the district; a community study hall program was instituted in northeast Denver; and various other actions were taken to implement the recommendations of the Special Study Committee. DX H.O. and H.P., Oberholtzer, A. 1382a-1388a.

On May 6, 1964, the Board of Education adopted Denver Public Schools Policy 5100 (PX 1, A. 1989a) which provided in pertinent part:

> "The continuation of neighborhood schools has resulted in the concentration of some minority racial and ethnic groups in some schools. Reduction of such concentrations and the establishment of

more heterogeneous or diverse groups in schools is desirable to achieve equality of educational opportunity. This does not mean the abandonment of the neighborhood school principle, but rather the incorporation of changes or adaptations which result in a more diverse or heterogeneous racial and ethnic school population, both for pupils and for school employees." PX 1, A. 1989a, A. 1990a.

At the same time, the Board eliminated the optional attendance area between Cole and Smiley Junior High Schools, a predominantly Negro area, and assigned that area on a mandatory basis to Gove Junior High School, a predominantly Anglo school further to the south. This was the first time that the Board endeavored to take into account racial and ethnic factors pursuant to Policy 5100, and the result was integrative. Oberholtzer, A. 1375a.[27]

At the same meeting, the Board, in eliminating optional attendance areas between high schools, assigned a predominantly Negro optional area between Manual High School and East High School to predominantly Anglo East High

---

[27]As a result of the 1964 boundary changes, a suit was instituted on May 14, 1964, against the Superintendent, the Board of Education and the School District by a white parent alleging that his children, who attended Park Hill Elementary School and Smiley Junior High School, would be affected by the boundary changes and that the changes were made

> ". . . with distinctions and classifications of pupils made on account of race or color, all in contravention of Article IX, Section 8, of the Constitution of the State of Colorado, which prohibits any distinction or classification of pupils on account of race or color."
>
> "4. That said boundaries were established for the express purpose of 'racial balancing' and with racial distinctions in mind."
>
> * * *
>
> "6. That said defendants at the same meeting on May 6,

School. Oberholtzer, A. 1376a. An area on the easterly edge of the city in the path of the Negro migration was assigned from East to almost totally Anglo George Washington High School. Oberholtzer, A. 1377a. Both actions were taken with the intention of changing the racial-ethnic factors to the extent feasible in accordance with Policy 5100. Oberholtzer, A. 1378a.

Also, in May of 1964, the Board adopted the limited open enrollment policy (LOE) recommended by the Special Study Committee. Oberholtzer, A. 1369a, A. 1978a.

On March 17, 1966, the Board appointed the Advisory Council on Equality of Educational Opportunity which considered the question of whether the school district's neighborhood school policy (as defined in Board Policy 1222C dealing with criteria for establishing or changing school subdistrict boundaries) should be applied to the location of new schools and additions to schools in northeast Denver. Oberholtzer, A. 1380, 1381a.

The Council submitted its final report and recommendations dated February, 1967 (PX 21) in which it recommended that no new schools should be built in northeast

---

1964, adopted a 'Statement of General Policy' relating to the establishment of school attendance boundaries and the factors to be considered in their establishment, which Statement contained the following factor for consideration:

'(f) The ethnic and racial characteristics of the school population—making, to the extent possible, a heterogeneous school community.'

which Statement, together with the school boundaries as enacted, are annexed hereto as Exhibits A and B and by this reference incorporated herein.

"7. That the Board and the Superintendent have exceeded their jurisdiction and abused their discretion in enacting and approving said boundaries."

The suit was eventually dismissed on motion of the School District on July 31, 1964. *Willis v. Burch, et al.*, Civil Action No. B-71888, in the District Court in and for the City and County of Denver and State of Colorado. No appeal was taken.

Denver until plans were developed to implement the previously adopted policies of the school district to consider racial and ethnic characteristics in order to obtain more heterogeneous school communities. The Council also recommended a school capacity study, a cultural arts center, a superior school program, educational centers and continuation of the advisory council. All of these recommendations were implemented except the educational centers and continuation of the council. DX H.Q. Oberholtzer, A. 1389a.

As a result of the decision not to build new schools in northeast Denver and the pressing need for additional capacity at the junior high school level dating back to the proposal to build a new junior high school at East 32nd Avenue and Colorado Boulevard in 1962, the Board authorized the construction of Hamilton Junior High School in southeast Denver to be utilized to relieve overcrowding at Smiley Junior High School in northeast Denver. This permitted the transfer of minority pupils out of the Smiley area to Hamilton. Later similar transfers were made to another new junior high school (Place) in southeast Denver. Noel, A. 98a, 103a and 104a.

In 1967, the Board proposed a bond issue to finance construction of needed capital improvements in all parts of the city. The proposal provided for the establishment of middle schools to accommodate pupils in grades 4, 5 and 6 which would serve areas larger than the traditional elementary schools. The middle schools proposed would have been located in or near northcentral and northeast Denver and would have contained more heterogeneous school populations than existing elementary schools. PX 24, pp. 1-15. The bond proposal was defeated at a special bond election that fall.

In May of 1968, the Board passed Resolution 1490 (PX 2, A. 1991a) which was designed to further implement Pol-

icy No. 5100. PX 1, 1989a. Resolution 1490 provides in pertinent part:

> "Therefore, in order to implement Policy 5100, the Board of Education hereby directs the Superintendent to submit to the Board of Education as soon as possible, but no later than September 30, 1968, a comprehensive plan for the integration of the Denver Public Schools. Such a plan then to be considered by the Board, the Staff and the community and, with such refinements as may be required, shall be considered for adoption no later than December 31, 1968."

Pursuant to Resolution 1490, the then Superintendent (Dr. Robert D. Gilberts, who had succeeded Dr. Oberholtzer upon his retirement in 1967) with the aid of educational consultants, prepared his report entitled "Planning Quality Education" (DX D, A. 2128a) which he submitted to the Board in October of 1968. Basic to the proposals contained in the plan was the consideration that integration alone did not assure quality education and there was a need for intensified educational programs for children of all races who come from deprived environments to overcome the limitations imposed by their backgrounds. DX D, p. 6, A. 2133a.

The Superintendent's plan embodied, as its key feature, a Model-School Complex which involved a grouping of several schools into one administrative unit, preserving the neighborhood school as the basic unit in accordance with Policy 5100, but providing maximum social and racial integration through special programs in the larger area comprising the cluster. Other features included continued transportation of minority students out of overcrowded schools to majority Anglo schools, the Voluntary Open Enrollment Plan (VOE) embodying the principle of majority to minor-

ity transfers with transportation provided, and innovative educational programs. DX D, pp. 6, 7, A. 2134, A. 2135a.

In November of 1968, the Board adopted the VOE program to become effective at the beginning of the second semester of that school year in January of 1969, at which time approximately 850 students were transferred under the plan. Koeppe, A. 428a.

Despite limited applicability of VOE due to the mandatory injunctive orders of the district court, 1,648 students obtained transfers under VOE during the first semester of the 1969-1970 school year. Of those, 408 were Anglo, 94 were Hispano and 1,146 were Negro, (DX VA, p. 51, A. 2161a) or approximately 8.2% of all Negro students enrolled in all of the Denver Public Schools in 1969. DX S-1, A. 2166a.

Also, in November of 1968, the Superintendent commenced planning one element of his program for quality education, the "stabilization" of schools in northeast Denver. Gilberts, A. 228a. This included improving the percentage composition of Philips and Park Hill Elementary Schools and East High School (all predominantly Anglo) as well as the reversal of the racial composition of Barrett Elementary School and Smiley Junior High School. Gilberts, A. 229a. As the plans eventually evolved, certain areas were carved out of the attendance areas of these schools and assigned to noncontiguous majority Anglo schools in other parts of the city and children from some predominantly Anglo schools in the city, who were being transported because they lived beyond walking distance from their schools, were diverted and reassigned to these northeast Denver schools. These plans included innovative educational planning and reduction in pupil membership in Cole Junior High School and Stedman Elementary School. They also included a voluntary exchange program to integrate Hallett

Elementary School. The purpose of the entire planning was to attempt to reverse the trend of growing minority concentrations in the schools of northeast Denver and, as a side benefit, to test the hypothesis of whether an integrated setting provides a better educational opportunity for minority children. Gilberts, A. 235a, 313 F.Supp. 95, A.P. 109a. Dr. Gilberts was not convinced that there was a direct relationship between school integration and improved academic achievement. Gilberts, A. 245a.

The plans for the racial stabilization of these northeast Denver schools were embodied in three resolutions passed by the Board between January and April, 1969. Resolution 1520 (PX 3 annexed to Complaint, A. 42a), approved on January 30, 1969, recited that because of housing patterns, East High School and Smiley Junior High School contained growing numbers of racial and ethnic minorities and that reduction of such numbers was desirable as one of the steps to improve educational opportunity in those schools. The Resolution then made a series of boundary changes to accomplish the reduction of minorities at those schools effective as of the opening of school in September, 1969, with transportation provided.

Resolution 1524 (PX 4 annexed to Complaint, A. 49a), approved on March 20, 1969, made additional boundary changes by detaching areas from the Smiley Junior High School area containing approximately 850 students and assigning them to other noncontiguous predominantly Anglo junior high schools with transportation provided. Additionally, portions of the Cole Junior High School attendance area were detached and assigned to other predominantly Anglo junior high schools.

Resolution 1531 (PX 5 annexed to Complaint, A. 60a), passed by the Board on April 25, 1969, contained many of the same recitals as Resolution 1520 and directed the super-

intendent to implement the model-school complex concepts contained in his plan in response to Resolution 1490, by activating elementary school complexes 1 and 2 in September of 1969; made boundary changes affecting Philips, Park Hill and Barrett Elementary Schools; directed the superintendent to implement pre-primary educational programs in northcentral Denver; directed the superintendent to make Hallett Elementary School a demonstration integrated school as of September, 1969, by use of voluntary transfers; continued the transportation of pupils from Stedman Elementary School to permit removal of mobile units; and directed that cooperative plans be developed to group schools in complex 5 (northcentral Denver) with other schools outside the complex.

Some planning was begun during the month of May, 1969, in preparation for the implementation of the three resolutions in September of that year. A school board election was held in May of 1969, and two new members of the Board were elected. A majority of the reconstituted Board rescinded the three resolutions on June 9, 1969, nearly three months before they were to become effective.

At the same meeting, Resolution 1533 (PX 6a, A. 2111a) was passed by the Board. It was designed to replace rescinded Resolution 1531 and contained all of the elements of the rescinded resolution except the mandatory boundary changes. It recited that the Board had rescinded the three resolutions because they were inappropriate to accomplish their intended purposes and lacked community support. Other recitals included consideration of Resolution 1490 and the need to stabilize pupil memberships in certain schools of the district. The Board then found that many of the same steps contained in the previous Resolution 1531 were necessary and appropriate to the improvement of education in the Denver Public Schools and adopted them in Resolution 1533.

Consistent with its policy of voluntary rather than mandatory integrative efforts, the Board also passed a motion at its June 9, 1969, meeting designed to apply that principle vigorously to accomplish the same objectives contained in rescinded Resolutions 1520 and 1524—reversal of the minority racial concentrations at Smiley Junior High School and improvements in the percentage composition at East High School. PX 6, A. 2110a.

Both the mandatory plan and the voluntary plan were formulated on the premise that racial concentrations existed in Denver as a result of housing patterns and not as a result of any action on the part of the school district. Both plans were alternative evolutionary steps in Denver's developing educational policies to provide the best educational opportunities for all the children of Denver. Both were designed to reverse the trend of growing racial minority concentrations in northeast Denver schools as one of the steps to improve the quality of the educational programs in those schools. Only the means were different and the petitioners' major complaint regarding rescission and replacement of the three resolutions was the effectiveness of the replacement. Gilberts, A. 250a—A. 255a.

The Board has continued to pursue its policy of attempting always to improve the quality of education offered to the children of Denver. Following the trial on the merits and the opinion of the district court on March 21, 1970, the Board adopted Resolution 1562 (Appendix II to the Opinion of the Court of Appeals of June 11, 1971, 445 F.2d 1010, A.P. 156a) which reaffirms utilization of Voluntary Open Enrollment (VOE) while at the same time directing that intensified educational efforts be employed to improve the quality of education offered to children at the schools designated by the district court regardless of the final outcome of this litigation.

The court of appeals commented on this resolution in its opinion of June 11, 1971: "The salutary potential of such a program cannot be minimized, and the Board is to be commended for its initiative." 445 F.2d 1005, A.P. 146a.

E. *School District Resources*

(1) *School Facilities.*

In their second cause of action, petitioners alleged that the school facilities serving predominantly minority school populations were old and therefore inferior. The evidence indicates that some of the buildings located in the core city are older, but they are well maintained by an extensive maintenance and improvement program. Armstrong, A. 1284a. Of 39 elementary schools constructed prior to 1921, only four were court-designated schools to be desegregated (PX 24, p. 33), and of these, three had new additions constructed in the 1960's (PX 24, pp. 33-36), and the fourth, Elmwood, is currently being replaced by a new building. Of the three court designated secondary schools, Cole was constructed in 1925, Baker in 1957, and Manual in 1953. PX 24, pp. 52, 54. The district court held, in its opinion of March 21, 1970, that in general terms a disparity in age of buildings and size of sites exists between predominantly minority and predominantly Anglo schools. Based on the evidence of ages of buildings, the disparity favors the court designated schools. The court then found, "However, we do not think that the age of a building and site size are, in and of themselves, substantial factors affecting the educational opportunity offered at a given school." 313 F.Supp. 81, A.P. 83a.

(2) *Teachers.*

a. *Assignment Practices.* At no time, has any school faculty or staff been 100% minority in the Denver schools. With one exception, no school ever had more than 50% mi-

nority teaching staff. The exception was at Barrett School which, for a short period of time, had more Negro than white teachers, there being available several Negro teachers with special skills in the teaching of reading and other subjects, which expertise was needed at that school. Stetzler, A. 1167-9a.

In 1970, Negro teachers were assigned to 70 of the district's 92 elementary schools. Stetzler, A. 1166a. No school had more than 50% minority teachers, two schools had 41 to 50%, two schools had 31 to 40%, five schools had 21 to 30%, and all the rest had fewer than 20%. Of the three court designated secondary schools, Cole had 61% Anglo teachers, Baker had 83.6% Anglo teachers and Manual had 68.6% Anglo teachers. DX S-1, A. 2166a.

Dr. Stetzler testified that for some years it was considered discriminatory to identify teachers or applicants by race, through photographs or even requiring place of birth. Such was a policy of the Colorado Antidiscrimination Commission. A. 1168-9a.

Although the district court made no findings with regard to the racial composition of teachers in its opinion after trial on the merits, the petitioners argued in the court of appeals that the assignment of minority teachers was probative of segregatory intent. The court of appeals held that the Board's teacher assignment practices were not reflective of segregative desires.

> "It operated on the prevailing educational theory of the day, the Negro pupils related more thoroughly with Negro teachers. The rationale was that the image of a successful, well educated Negro at the head of the class provided the best kind of motivation for Negro children and that in turn the Negro teacher had a greater understand-

ing for the Negro pupil's educational and social problems. Although the validity of that theory is under severe attack today, we do not agree that the results of its past application infer segregatory intent. In response to new educational theories, the Denver public school system has today assigned Negro teachers to schools throughout the system and has reduced the percentages of Negro teachers in the predominantly minority schools." 445 F.2d 1007, A.P. 150a.

b. *Experience of Teachers.* There was no finding by the district court that any certain level of experience was superior to any other level or that teachers without prior experience were inferior to older and more experienced teachers. Nor was there any evidence to support such contentions.

All teachers must be licensed by the State of Colorado with a bachelor's degree from a standard institution of higher learning as one of the qualifications. Colorado Revised Statutes 1963, §127-17-14. Thus all Denver schools were assigned teachers with comparable educational backgrounds.

Petitioners' evidence on experience level of the faculty at the core city schools was severely distorted by their use of Denver public school experience only. The more significant evidence was that between 38 and 50% of the new teachers employed by respondents between 1962 and 1968 had prior teaching experience in other school districts. DX DA, A. 2143a. Of those, 18 to 24% had three or more years' prior experience. DX DB, A. 2144a. Further, about 9% of the new teachers hired by respondents had advanced degrees. Stetzler, A. 1156a.

Dr. James S. Coleman was of the opinion that teacher experience and graduate degrees were not important fac-

tors. A. 1557a. The Negro principal at Barrett Elementary School, Mr. William Smith, testified for the petitioners and his evidence included his opinion that new teachers were as capable and competent as those with more experience. A. 1701a. Dr. Stetzler testified that new teachers of the younger generation were better prepared and with greater social awareness than those of even five years earlier. A. 1170a.

The record contains no other significant evidence despite any claim by the petitioners pertaining to teacher inexperience as a cause of or relation to unequal educational opportunity in the core city schools.

c. *Transfers.* The school district's agreement with Denver Classroom Teachers Association, an affiliate of the National Educational Association (NEA), permitted transfers by teachers between schools, on the basis of seniority, within the district. The district court found that this created more vacancies in minority schools which were typically filled by new teachers with little or no Denver Public School experience. 313 F.Supp. 80, A.P. 82a. There was no finding that this resulted in an inferior educational offering at these schools.

(3) *Curricula.* Petitioners alleged in the second count of their second cause of action that the school district allocated inferior resources to predominantly minority schools. One of the items specified was curricula. They produced no evidence of disparate curricula and the court made no findings that curricula was inferior in any school. Dr. Oberholtzer testified that there were differences in curriculum offerings within specific subject areas, depending on the needs of the pupils and their interests, but the basic subjects were taught in all of the schools. A. 1366a.

(4) *Dollar Inputs.* There was abundant evidence that the predominantly minority schools received proportion-

ately *more* of the district's financial resources than predominantly Anglo schools. Petitioners point only to a possibility that the total salaries paid to teachers at minority schools was comparatively less because the district's salary schedule is based partly on experience. But the slight difference in salaries paid based on experience is far outweighed by a lower pupil-teacher ratio at minority schools, teacher aides, expensive compensatory educational programs, newer types of curriculum materials, more community trips, more teacher-developed educational materials, assignment of special reading teachers, and funds in substantial amounts allocated to low-income area schools under federal programs limited to such schools. Oberholtzer, A. 1367a, 1368a. The district court made no findings of unequal allocation of any resources to the core city schools.

F. *Educational Results—Achievement.*

The district court found lower academic achievement in the court designated schools by considering results of standardized achievement tests (1968 Stanford Achievement Tests). The school district had published a report in 1968 containing an alphabetical listing of all schools in the district and the results of the various standardized tests given in each school that year.

The *average* of the median for each test given at a particular school was used by the court as indicative of that school's overall achievement level.

The court then found from this data that children at minority schools achieved at a lower level than the city wide average for all schools (the city wide average was an average of the average median scores for all schools at the same level). 313 F.Supp. 79, A.P. 79a, 80a.

Individual pupil achievement in all schools ranged to highs between the ninty-fifth and the ninty-ninth percentile,

thus demonstrating conclusively that individual students in all minority schools achieve at the highest level shown by the standardized tests. Klite, A. 574, 576a, PX 379, PX 83.

Achievement expectancies at all schools were based on individual IQ tests previously administered. Expectancies were not based on racial or ethnic composition of the schools. School expectancies were then computed based on the individual expectancies of their pupils. PX 83, PX 379, Cavanaugh, A. 650a. In almost all cases achievement test results exceeded expectancies thus established. PX 379.

The finding of comparatively low average achievement was the single most important factor in the court's conclusion that the court-designated schools were inferior.

G. *Remedy*

The district court concluded, following trial on the merits, that "segregation, regardless of its cause, is a major factor in producing inferior scools and unequal educational opportunity." 313 F.Supp. 82, A.P. 86a, 87a. The court then proceeded to a discussion of remedies which included a "program of improvement" for the court-designated schools and a suggestion that the Board guarantee space for minority students who wished to transfer out of the court-designated schools under VOE. 313 F.Supp. 84, 85, A.P. 90a, 93a. The court observed as to the latter:

> "Arguably, at least, this method satisfies the Constitution in that it recognizes the right of every student and makes that right available to him without forcing it on him. Comments of the litigants on this will be considered at a further hearing." 313 F.Supp. 85, A.P. 94a.

At the later hearing on remedies, the Board presented a plan (DX VA, A. 2160a) responsive to the suggestions of

the district court. It contained a specific program for improvement in the quality of education and included VOE with space guaranteed. Through Resolution 1562 (A. 2160a) the Board committed itself to continue improvement in the quality of education offered in its schools regardless of the final outcome of this litigation. In its discussion of remedies, however, the district court discarded the question of whether VOE would satisfy the Constitution and stated that the crucial factual issue was whether compensatory education alone in a segregated setting is capable of bringing about the necessary equalizing effects or whether desegregation and integration are essential. 313 F.Supp. 94, A.P. 107a.

Petitioners' position was that both desegregation *and* massive compensatory education were essential to satisfy the Constitution. Respondents' position was that there was no competent evidence that desegregation or traditional compensatory education had any significant effect on improvement of educational achievement and that solution of the problem required continued experimentation with varied innovative approaches to educational policies until an effective solution was found.

The district court summarized the testimony of the expert witnesses produced by both sides, substantially all of which was designated and appears in Volume 4 of the Joint Appendix.

None of the experts could suggest an unqualified solution to the problem of low achievement of children with low socio-economic family background and attendant cultural disadvantages. The solutions suggested were studied but unproven theories. None of petitioners' experts had studied the Denver school system. They expressed general opinions not addressed to Denver specifically but to every school system

in the country. None of them prescribed a specific solution to Denver's problems.

The testimony of Dr. James Coleman, who supervised the survey reported in the publication entitled "Equality of Educational Opportunity" (PX 500), makes it abundantly clear that the causes of low achievement are socio-economic and are not a matter of race. A. 1546a and A. 1558a.

This conclusion of the experts that the cause of low achievement was not a matter of race but rather a product of the socio-economic status of the students was made so clear that the court remarked in colloquy with Dr. Coleman:

> "The thing that worries me about all this is that what you say is that the schools are not inferior as counsel proved at the trial, but that the students are inferior. They proved it overwhelmingly that the schools were inferior. Now, in coming up with a new tack—it's not the schools at all, it's the students and their economic and cultural deprivation that makes the educational experience one that is non-competitive. It's dull; not exciting. I mean, I get that from what you're saying. Sort of a self-defeating proposition. They proved the Constitution was violated and now they are unproving it." A. 1546a.

Dr. Coleman admitted his survey did not show the effects of racial integration one way or the other because the survey was limited to one point in time and did not purport to be a controlled study of a before and after situation. A. 1542a. The report did not examine innovative educational programs designed to improve the quality of education and Dr. Coleman could not comment on the programs proposed by the school district or on those underway at Manual and

Cole. A. 1537a, 1553, 1554a. When asked for the primary factor present in a predominantly Anglo school which would improve the education of a minority child, he stated that his answer was based on a mere statistical inference:

> "What that means in effect is that, if the inference is correct, is that a child from a linguistically-impoverished background will be most affected by a school situation which has a—which is more linguistic, particularly the rich or different educated environment." A. 1543a.

Dr. Neal Sullivan, former superintendent of schools in Berkeley, California, and, at the time of trial, Secretary to the Massachusetts State Board of Education, also testified for petitioners. His duties included administration of a Massachusetts statute requiring local school committees to eliminate racial imbalance. He had implemented a voluntary program of integration in Berkeley, California, prior to leaving his position there.

He testified that Boston, Massachusetts, had in the planning stage a proposal to construct educational parks costing $200 million as a means of racially balancing that school system, and that some 2000 minority students were being bused to suburban schools under a voluntary transfer plan. A. 1565a. He testified that research indicated that the black child's achievement improved under the voluntary plan (A. 1566a), but gave no specifics. Dr. Sullivan left the Berkeley school system at about the same time the integration plan went into effect and could not testify that integration alone would be sufficient to improve education in any event.

> "Q. You need something more than integration?"
> "A. You bet. Massive reform." A. 1595a.

Petitioners' rebuttal witness, Dr. Robert O'Reilly, a research psychologist employed by the New York State Board

of Education, described a research study of compensatory education programs carried on in various parts of the United States. This study, he admitted was really a study of the reports of other studies and not an independent study. A. 1925a. In his opinion, all the various types of intensive educational programs categorized as compensatory education were entirely valueless, even in an integrated setting, from all indications. A. 1929a, 1930a.

His general opinion was that, with regard to integration, knowledge of the process is not yet so complete nor is what is known so systematically applied that any startling changes in educational development should become evident in desegregated minority students. A. 1957a, 1958a.

Dr. O'Reilly's primary objection to compensatory education programs was that they were generally just more of what the schools already have. A. 1933a. He would recommend new approaches:

> "So, what I'm trying to communicate to you, I guess, is that this is a very unsettled field. There are no hard and fast rules to go on. It's very unlikely that anybody is ever going to come up with a treatment that is going to be generally effective with minority students at all. What has to be done is basically many, many years of experimentation in which we slowly and carefully identify and develop specific programs designed for specific groups, specific minority groups. Because they differ so greatly." A. 1932a.

Dr. O'Reilly testified that the effectiveness of the educational program should not be based on a single indicator and that "there are many, many indicators of the effectiveness of the school that are not necessarily achievement test data." A. 1957a. He would look at such items as students' opinions and how many of the students go on to college.

The court of appeals also recognized that achievement scores were not the sole indicator of the effectiveness of the educational opportunities in the schools and commented that:

> "Pupil dropout rates and low scholastic achievement are indicative of a flaw in the system, but as indicated by appellee's experts, even a completely integrated setting does not resolve these problems if the schooling is not directed to the specialized needs of children coming from low socio-economic and minority racial and ethnic backgrounds. Thus it is not the proffered objective indicia of inferiority which causes the substandard academic performance of these children, but a curriculum which is allegedly not tailored to their educational and social needs." 445 F.2d 1004, A.P. 144a.

Mr. James Ward, principal of Manual High School, has instituted innovative educational programs designed to meet the needs of high school students from low socio-economic areas because the basic traditional program was not meeting the needs of those students. A. 1845a. These included pre-professional studies and work-study vocational training.

The district court summarized some of these programs at Manual, Cole and Bryant-Webster at 313 F.Supp. 95, A.P. 110a, and ultimately ordered the school district to continue these programs.

The effectiveness of these new approaches is dramatically illustrated by use of the "indicators" established by petitioners' expert witness Dr. O'Reilly. The dropout rate at Manual has been reduced and the students are staying in school (Ward, A. 1859a) and more Manual graduates applied to college (58%) than did the graduates of three predomi-

nantly Anglo schools (Thomas, A. 1233, 1234a) and 51% of the graduates actually entered college. Ward, A. 1859a.

None of the petitioners' experts had ever made any studies of or visited any of Denver's schools. In fact, the national survey directed by Dr. Coleman did not include Denver. A. 1562a.

Respondents' main witness at the hearing on remedy was Dr. Robert Gilberts, who had resigned as Superintendent of Schools for the respondent school district effective September 1, 1970, to take a new position as Dean of the College of Education at the University of Oregon. A. 1707a.

Dr. Gilberts had supervised preparation of the respondents' plan to comply with the district court's opinions following trial on the merits (DX VA, A. 2160a) which included a detailed plan for improvement and continuation of the VOE program with space guaranteed, both of which were discussed as remedies in the district court's opinion and which had been included in the Superintendent's original proposal for quality education (DX D). The district court characterized the respondents' plan as "designed to reconstruct the educational climate" and summarized many of its elements in the Decision Re Plan or Remedy. A.P. 109a.

In Dr. Gilberts' opinion, desegregation was not an absolute and necessary first step to the solution of the complex problem of comparatively low achievement among children from low socio-economic environments. A. 1712a. He said: "I agree with Dr. Sullivan's comments . . . that some massive changes are necessary . . . in the entire form of education." A. 1713a. Respondents' plan emphasized new and different approaches to the problem and not just more of the same.

Dr. Gilberts testified that integration is a voluntary process of changing attitudes so that individuals are accepted re-

gardless of their race or ethnicity (A. 1762a) and that, as such, it is necessary in the larger society to prevent the ill effects of racial polarization. A. 1751a. Yet he was not convinced that desegregation in terms of simple racial mixing had any educational advantage *per se* and that one of the reasons for proposing the resolutions in northeast Denver was to test the hypothesis in that regard. A. 1752a. In his opinion, the plan proposed by the respondents had a better probability of success in improving education than that proposed by petitioners. A. 1762a.

SUMMARY OF ARGUMENT

Respondents oppose the demand of petitioners that this Court decree racial and ethnic desegregation, on a system-wide basis, of the Denver school district. Respondents' position is that judicial intervention in the conduct of the Denver school system was never warranted, there having been no constitutional violation properly found by the courts below.

The detailed Statement in this brief is intended not only to show the entire relevant history of the school district's conduct of its affairs, but also to demonstrate that the Denver school district is quite different from the school district described by petitioners. The Denver school district has never excluded a child from any school by reason of race or ethnic origin; it has not continuously, obsessively, and covertly pursued a policy of discrimination toward its pupils; and it has not devoted inferior or different resources to any of its schools. The full facts in this case show that Denver has never practiced discrimination toward any racial or ethnic group and that, until 1964 when Denver adopted an affirmative policy of seeking racial and ethnic heterogeneity to the extent feasible within the neighborhood school policy, the Denver schools had followed a completely color-blind policy as far as pupil assignment was concerned. In short, the

Denver school district is and always has been a unitary system conducted in accordance with the Colorado constitutional mandate prohibiting "any distinction or classification of pupils . . . on account of race or color."

1. *The claims of state-imposed segregation.*

The claims of segregation in the Denver school system were made as to two groups of schools, each substantially separate from the other. The first group was referred to by the courts below as the core city schools, and the second as the resolution schools.

The district court expressly found that the existing racial imbalance in the core city schools was caused by housing patterns and neighborhood population movement and not as a result of any state action. In making these findings, the trial court placed upon the plaintiffs the burden of proving actionable segregation unaided by any presumption that racially imbalanced schools, in a unitary system with no history of discrimination, was caused by school district action. In such a case as Denver's, the allocation of burden of proof was in accordance with all authority and experience in such cases, and was correctly approved by the court of appeals.

As for the resolution schools, the district court failed to find in its earlier opinions that the claimed acts of segregation in the early 1960s caused the racial imbalance existing at the time of trial in any of the schools involved, and thus erred in its apparent conclusion that a constitutional violation existed as to three elementary schools and one junior high school. The evidence clearly showed such imbalance resulted from a massive movement of Negroes into the involved neighborhoods.

The district court erroneously found state-imposed segregation by reason of the rescission of three resolutions of the

Denver School Board in 1969. These resolutions would have required mandatory busing from the resolution school area. By rescission, the Board substituted a voluntary transfer plan which contained all of the elements of the rescinded resolutions except the mandatory boundary changes. The mandatory plan was preliminary, experimental and had not been implemented. No students had been transferred prior to the rescission nor were any transferred by reason of the rescission.

In its later opinion following trial on the merits, the district court noted that the findings of segregative acts in the early 1960s were discussed only as they were probative on the issue of the segregative purpose of the 1969 rescission, and held, in its ultimate finding on this part of the case, that the rescission, per se, was the operative act of segregation, and ordered the implementation of the rescinded resolutions.

The court of appeals affirmed the earlier findings regarding the claimed segregative acts at the four schools, and then erroneously concluded that those acts caused the present racial imbalance in the resolution schools, and thereafter erroneously declined to rule on the question of whether the rescission, in and of itself, was unconstitutional.

On the resolution school part of the case, therefore, the court of appeals should have found that the acts complained of in the early 1960s were not the cause of existing racial imbalance, and, further, that the school board's rescission of the racial balancing resolutions in 1969 was not, as a matter of law, an act of segregation causing the existing racial imbalance.

Nor should the remedy for acts found to have tended to intensify racial imbalance in four schools in the early 1960s extend beyond the reduction of racial imbalance as to those particular schools. Any remedy beyond correcting the ef-

fects, if any, of the earlier violations would be in excess of the power of the courts.

2. *The claims of unequal educational opportunity.*

The other branch of the case does not involve state-imposed segregation. It involves, rather, the question of whether any constitutional violation arises where it is shown that the median scores on standardized achievement tests differ substantially as among the several schools in the Denver school system, and where some, but by no means all, of the schools with relatively low scores also have relatively high percentages of Negro and Spanish surnamed pupils.

The district court found that certain court-designated schools showing low test scores were inferior schools compared with others, that concentrations of Negro and Spanish surnamed pupils were the cause of the inferiority, but that the racial and ethnic concentrations were not caused by actions of the school district. On the basis of these findings, the district court ordered racial balancing of the court-designated schools, together with implementation of the school district's existing program of compensatory education and voluntary majority-to-minority transfer.

The court of appeals, finding no state action causing the racial imbalance nor the educational outcomes in the schools, reversed. The holding of the court of appeals was correct and should be affirmed by this Court.

The neighborhood school policy, as applied in Denver, did not determine the racial or ethnic composition of the schools. This was determined, the trial court found, by housing patterns and population movement. Therefore, the school district did not cause the racial or ethnic concentrations which the trial court had held created an unequal educational environment.

In addition, the evidence in this case and available to the Court shows that median achievement test scores were not a valid basis for comparing educational opportunity among schools within a school system. Nor does the evidence support the conclusion that racial or ethnic concentrations were the cause of claimed inferior schools characterized by low test scores. Both of these conclusions of the district court were clearly erroneous and provide additional grounds for affirming the reversal of the district court by the court of appeals.

The Denver school district has never excluded any pupil at any time because of racial or ethnic origin. It operates on a neighborhood school plan free from racial discrimination and, in addition, for educational reasons, seeks to encourage racial and ethnic heterogeneity through voluntary majority-to-minority transfers with transportation provided. The Denver school district is carrying out its responsibility in full compliance with all the requirements of the United States Constitution.

ARGUMENT

I.
SUMMARY OF APPLICABLE CONSTITUTIONAL PRINCIPLES

A. INTRODUCTION

This case is a class action by parents of children attending the public schools of Denver who complained that their rights to equal protection of the laws under the Fourteenth Amendment to the Constitution of the United States have been violated by alleged racial and ethnic segregation and resulting unequal educational opportunity.

Unlike *Brown v. Board of Education*, 347 U.S. 483 (1954), this case does not arise in a state "having a long history of maintaining two sets of schools in a single school

system deliberately operated to carry out a governmental policy to separate pupils solely on the basis of race" as the *Brown* situation was described by this Court in *Swann v. Charlotte-Mecklenburg Board of Education*, 402 U.S. 1, at p. 6 (1971). The policy of the State of Colorado as contained in its Constitution adopted in 1876 is that:

> "No sectarian tenets or doctrines shall ever be taught in the public schools, nor shall any distinction or classification of pupils be made on account of race or color." Article IX, Section 8, Constitution of Colorado.

No "dual system" has ever existed in Denver. Its school system has always been operated as a "unitary system," defined by this Court in *Alexander v. Holmes County Board of Education*, 396 U.S. 19 (1970), as one "within which no person is to be effectively excluded from any school because of race or color." After trial on the merits the district court below found:

> "It is to be emphasized here that the Board has not refused to admit any student *at any time* because of racial or ethnic origin. It simply requires everyone to go to his neighborhood school unless it is necessary to bus him to relieve overcrowding." 313 F.Supp. 73, A.P. 67a. (emphasis added)

School assignment in Denver has always been on the basis of residence in a geographic attendance area, a principle of pupil assignment contemplated by this Court in *Brown II*, 349 U.S. 294 (1955): ". . . [R]evision of school districts and attendance areas into compact units to achieve a system of determining admission to the public schools on a nonracial basis. . . ." 349 U.S. 300, 301.

With the possible exception of *Spencer v. Kugler*, ——

U.S. ——, 30 L.Ed.2d 723 (1972), this is the first case to reach this Court in which it is claimed that racial segregation exists in a unitary school system. *Brown* and the several school segregation cases decided by this Court since *Brown* have dealt solely with the duty of school authorities to dismantle, disestablish and convert former dual systems into unitary systems. *Swann* anticipated the day when former dual systems will have complied with *Brown I* and become unitary systems. At that point:

> "It does not follow that the communities served by such systems will remain demographically stable, for in a growing, mobile society, few will do so. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composition of student bodies once the affirmative duty to desegregate has been accomplished and racial discrimination through official action is eliminated from the system. This does not mean that federal courts are without power to deal with future problems; but in the absence of a showing that either the school authorities or some other agency of the State has deliberately attempted to fix or alter demographic patterns to affect the racial composition of the schools, further intervention by a district court should not be necessary." 402 U.S. 31, 32.

Denver does contain a growing, mobile society and it has experienced swift and massive demographic changes in the years since World War II which have caused racial imbalance in its schools.[28]

During the years that Denver's minority population grew in size and moved about the city, Denver's school officials

[28] See statement *supra*, pp. 9-13.

made the numerous policy decisions and took the many actions necessary to govern and administer a fast growing large urban school system.

Of all these actions, petitioners focused in their first cause of action on the building of one new school, a few minor subdistrict boundary changes in the early 1960's, and a policy decision in 1969 to change some unimplemented racial balancing plans from a mandatory to a voluntary approach. After a four-day hearing on preliminary injunction, the district court held that these actions amounted to state-imposed segregation as to four schools in northeast Denver. The court of appeals applied Rule 52, FRCP, and affirmed.

The second cause of action, heard seven months later at the trial on the merits, concerned a larger number of schools located in the core city area of Denver and involved a time period of roughly the ten years preceeding the actions complained of in northeast Denver. The district court held that the evidence did not support the conclusion that state-imposed segregation existed at those schools and that the neighborhood school policy was not unconstitutional per se. Both of these holdings were affirmed by the court of appeals. The district court also held that the racial imbalance at these schools, even though not caused by the school district, resulted in unequal educational opportunity for the children attending them and ordered, as a remedy, reduction of racial and ethnic concentrations. The court of appeals reversed on the ground that no state action had caused the condition.

B. ELEMENTS OF A CONSTITUTIONAL VIOLATION

Swann reminds us that judicial powers may be exercised only on the basis of a constitutional violation (402 U.S. 16) and teaches that:

> "[I]n the absence of a showing that either the school authorities or some other agency of the State has deliberately attempted to fix or alter demographic patterns to affect the racial composition of the schools, further intervention by a district court should not be necessary." 402 U.S. 32.

The Court was speaking of a former dual system which had complied with *Brown* and become "unitary."

Denver always has maintained a unitary system. Plaintiffs, in attacking the existence of schools which are substantially disproportionate in their racial composition, are not aided by the presumption of the continuance of a dual system which arises only in a system with a long history of state-imposed segregation. *Swann*, at 402 U.S. 26.

The court of appeals recognized this principle and applied it below:

> "Where, as here, the system is not a dual one, and where no type of state-imposed segregation has previously been established, the burden is on plaintiff to prove by a preponderance of evidence that the racial imbalance exists and that it was caused by intentional state action." 445 F.2d 1006, A.P. 148a.

This formulation is firmly based on this Court's holding in *Brown I* and other decisions of lower federal courts applying that holding to school districts where the question of a constitutional *violation* is put in issue, as distinct from cases involving concededly dual systems where only the *remedy* is in issue.

In *Brown I*, this Court held that the creation and maintenance by the state of separate schools for Negroes, solely on the basis of their race, was inherently unequal treatment and, therefore, violated the equal protection clause. The

precise question and holding in *Brown I* was "Does segregation of children in public schools solely on the basis of race, even though the physical facilities and other 'tangible' factors may be equal, deprive the children of the minority group of equal educational opportunities? We believe that it does." 347 U.S. at p. 493.

Analytically, the Court's holding involved (1) separate schools for Negroes, (2) caused by state action, (3) purposefully taken solely on the basis of race, and (4) unequal treatment.

Since *Brown* it has been deemed unnecessary to prove the fourth element because the Court found that state-imposed segregation (the combination of the first three elements) results in unequal treatment *per se*.[29] This Court in *Swann* described the constitutional violation announced in *Brown I* in terms of these elements. If, by state action, pupils are deliberately segregated in the schools solely on the basis of race, the Constitution is violated. 402 U.S. 5, 6.

In cases involving dual systems, the objective is to correct the violation by the remedial measures of *Brown II* and subsequent cases. Disestablishment cases are therefore not concerned with the violation, but with the remedy and the school authorities are required to show that all vestiges of state-imposed segregation have been eliminated. *Swann*, 402 U.S. 15.

In unitary systems such as Denver's, one who alleges a

[29]Stated another way, the Court held race to be an arbitrary and impermissible criterion for governing the use of public facilities. The principle was promptly applied to public parks (*Muir v. Louisville Park Theatrical Assn.*, 347 U.S. 971, 98 L.Ed. 1112, 74 S.Ct. (1954)) public beaches and bathhouses (*Mayor and City Council of Baltimore City v. Dawson*, 350 U.S. 877, 100 L.Ed. 774, 76 S.Ct. 133 (1955)), municipal golf courses (*Holmes v. City of Atlanta*, 350 U.S. 879, 100 L.Ed. 76 S.Ct. 141 (1955)) and municipal buses (*Gayle v. Browder*, 352 U.S. 903, 1 L.Ed.2d 114, 77 S.Ct. 145 (1956)), all on the authority of *Brown*.

constitutional violation must show the existence of all the elements of a violation.

First, it must be shown that there is racial separation in the public schools of the system. Something more than mere racial imbalance is necessary; how much more is a problem in itself.[30] Even separation to the extent that the system contains some schools which are all Negro and others that are all white is not sufficient, standing alone, to justify a conclusion that the Fourteenth Amendment has been violated.[31]

The second element necessary to the legal conclusion that the Fourteenth Amendment has been violated is a finding that such racial separation is *caused by state action.* Only actions of the state which deny persons the equal protection of the laws are proscribed by the terms of that Amendment. In *Deal v. Cincinnati Board of Education,* the Sixth Circuit observed:

> "[T]he crucial fact to be found is whether the racial imbalance was intentionally *caused* by gerrymandering or by other alleged discriminatory practices on the part of the Board." 369 F.2d 55, 64. (emphasis added)

The third element necessary to support a conclusion that the Fourteenth Amendment has been violated is that the state action causing the racial separation must have been

---

[30]"We pass the unsettling problem which would face every school committee of anticipating what amount of imbalance the local federal court would consider equivalent to segregation. . . . Deciding what is excessive racial imbalance necessarily involves the resolution of expert appraisals of highly intangible factors." *Springfield School Committee v. Barksdale,* 348 F.2d 261 at 264. (1st Cir. 1965).

[31]*Deal v. Cincinnati Board of Education,* 369 F.2d 55, 60 (6th Cir. 1966) *cert. den* 389 U.S. 847 (1966); *Downs v. Board of Education,* 336 F.2d 988, 996 (10th Cir. 1964) *cert. den* 380 U.S. 910 (1964); *Bell v. School City of Gary,* 324 F.2d 209 (7th Cir. 1963) *cert. den* 377 U.S. 924 (1963); *Brown v. Board of Education,* 139 F.Supp. 468, 470 (D.C. Kan. 1955).

based solely on race. This requires proof of purposeful and deliberate action to classify persons on the basis of race. Mere coincidence of result is not enough. The court of appeals for the Second Circuit, in *Taylor v. Board of Education of City School District of New Rochelle*, 294 F.2d 36 (2nd Cir. 1961) *cert. den.* 368 U.S. 940 (1961), approved the crucial finding that race was made the basis for school districting with the purpose and effect of producing a substantially segregated school. In *Downs*, the Tenth Circuit recognized that the element of racial purpose was necessary to a constitutional violation:

> "Of course, we agree with the appellants that the school authorities cannot, under applicable constitutional standards heretofore discussed, use such a change in boundary lines or the neighborhood school system as a guise for the purpose of perpetuating racial segregation. The trouble is that there is no evidence to show that the boundary line was change *for that purpose*." 336 F.2d 996. (emphasis added)

But of the several elements making up the constitutional violation, the most important, as emphasized by the district court, is a "causal relationship between the discriminatory action complained of and the current condition of segregation in the school or schools involved." 313 F.Supp. 74, A.P. 70a.

It is the absence of this causal relationship, in addition to the absence of segregatory purpose, which required the courts below to conclude that there was no actionable segregation in the Denver school system, except arguendo as to four resolution schools.

C. THE BURDEN OF PROOF

The rules relating to the burden of proof of the elements of actionable segregation which have governed actions in-

volving school districts which do not maintain dual systems were well summarized by the court of appeals:

> "Once a prima facie case is made, the defendants have the burden of going forward with the evidence. Hobson v. Hansen, 269 F.Supp. at 429. They may attack the allegations of segregatory intent, causation and/or defend on the grounds of justification in terms of legitimate state interest. But the initial burden of proving unconstitutional segregation remains on plaintiffs." 445 F.2d 1006, A.P. 148a.

This accurately formulates the universal rule regarding burden of proof followed in the federal courts in cases involving no relevant history of segregation (See, e.g. *Deal* at p. 571, *Wright v. Rockefeller*, 376 U.S. 52 at 56 (1964). This rule is related to the presumption accorded to school authorities, bound by state constitutions or laws making state-imposed racial segregation in the schools unlawful, that their actions are taken in accordance with law. In *Deal v. Cincinnati Board of Education*, 244 F.Supp. 572 (1965), the district judge, commenting on the failure of plaintiffs to carry their burden of proof, said at pp. 581, 582:

> "In a case involving similar issues, a colleague in this Circuit has recently recognized the well established principle that '. . . *public officials are presumed to have properly discharged their duties.*' (Craggett v. Board of Education of Cleveland, 234 F.Supp. 381, 386 (N.D. Ohio 1964, Kalbfleisch, J.)). . . . This proposition has also been in part at least the basis of determinations sustaining school boards in Bell v. School, City of Gary, Indiana, 213 F.Supp. 819 (N.D.Ind.), aff'd, 324 F.2d 209 (7th Cir.), cert. denied, 377 U.S. 924, 84 S.Ct. 1223, 12 L.Ed.2d 216 (1963)

(Plaintiffs' contend this case to have been 'wrongly decided.'); Downs v. Board of Education, 336 F.2d 988 (10th Cir. 1964), cert. denied, 380 U.S. 914, 85 S.Ct. 895, 13 L.Ed.2d 800 (1965); Lynch v. Kenston School Dist., 229 F.Supp. 740 (N.D.Ohio E.D. 1964), (appeal to the 6th Circuit Court of Appeals dismissed by plaintiffs-appellants July 2nd, 1965); Northcross v. Board of Education, 333 F.2d 661 (6th Cir.), cert. denied, 370 U.S. 944, 82 S.Ct. 1586, 8 L.Ed.2d 810 (1964); and Barksdale v. Springfield School Committee, 237 F.Supp. 543 (D.C.Mass.), rev'd, 348 F.2d 261, (1st Cir. 1965)." (emphasis added)

Petitioners seek the adoption of a new standard of proof which would, in effect, cast upon school authorities the burden of disproving allegations of actionable segregation in any racially imbalanced school system. There is no authority for such a reversal of the burden of proof in a unitary system such as Denver's. This contention is fully discussed later in this brief at pp. 82-87.

II.

RACIAL IMBALANCE IN DENVER PUBLIC SCHOOLS WAS NOT CAUSED BY STATE ACTION

In the two opinions following the preliminary hearing, it is clear that the District Court misapprehended the elements of a constitutional violation when it concluded, in essence, that the failure of the Board to take action to alleviate racial imbalance, although not state-created, amounted to a violation of the Constitution.

By the time of the trial on the merits, the district court

had a clearer view of the constitutional principles of law as enunciated by this Court and some lower courts and recognized that judicial powers were limited to state-created segregation in schools, in violation of the Constitution. This is evident by the court's remarks during the trial on the merits and the substance of its opinions following that trial. The court then recognized that to be actionable, the school authorities must have acted with the purpose and effect of creating segregation in the school or schools in question, and that such action must have been the cause of racial imbalance present and existing at the time of trial. 313 F.Supp. 73-75, A.P. 67-71a.

Accordingly, the findings of the district court in the opinions following the preliminary hearing must be evaluated in light of the opinions subsequent to the hearing on the merits.

It was the absence of the element of causal relationship, in addition to the absence of segregative purpose, which was the basis for the conclusion of the courts below that there was no actionable segregation in the Denver school system (except in four specific schools, which we shall show was the result of an erroneous conception of the law).

A. THE COURTS BELOW CORRECTLY FOUND NO STATE-IMPOSED SEGREGATION IN THE CORE CITY SCHOOLS.

1. The findings regarding the core city schools were fully supported by the evidence and were correctly sustained by the court of appeals.

With respect to these core city schools, the following portions of the district court's opinion following trial on the merits are pertinent:

"The evidentiary as well as the legal approach to the remaining schools is quite different from that which has been outlined above. For one thing, the concentrations of minorities occurred at an earlier date and, in some instances, prior to the *Brown* decision by the Supreme Court. Community attitudes were different, including the attitudes of the School Board members. Furthermore, the transitions were much more gradual and less perceptible than they were in the Park Hill schools." 313 F.Supp. 69, A.P. 57a

* * *

"It is to be emphasized here that the Board has not refused to admit any student at any time because of racial or ethnic origin. It simply requires everyone to go to his neighborhood school unless it is necessary to bus him to relieve overcrowding." 313 F.Supp. 73, A.P. 67a

* * *

"So also in our case, the complained of acts are remote in time and do not loom large when assessing fault or cause. The impact of the housing patterns and neighborhood population movement stand out as the actual culprits." 313 F.Supp. 75, A.P. 71a

* * *

"In summary, then, we must reject the plaintiffs' contentions that they are entitled to affirmative relief because of the above mentioned boundary changes and elimination of optional zones. We hold that the evidence is insufficient to establish *de jure* segregation." 313 F.Supp. 77, A.P. 75a.

The court of appeals as to these schools affirmed under Rule 52, as follows:

"The trial court held that cross-appellants [petitioners] failed in their burden of proving (1) a racially discriminatory purpose and (2) a causal relationship between the acts complained of and the racial imbalance admittedly existing in those schools.

"The evidence in this case is voluminous, and we have attempted to carefully scrutinize it. Thorough review reflects that cross-appellants have introduced some evidence which tends to support their assertions. However, there is also evidence of record which supports the findings of the trial court, so under Rule 52 F.R.Civ.P. 28 U.S.C., we must affirm." 445 F.2d 1006, A.P. 148a.

While professing not to challenge the district court's fact findings regarding core city scools, petitioners contend that as to findings on two such schools, Manual and Cole, the court should have found discriminatory acts on the part of the school district and secondly, that such acts were the cause of the racial imbalance in those schools at the time of trial.

The trial court expressly found contrary to those claims of the petitioners as demonstrated by the above quoted portions of the court's opinion. As to intent, the district court also found:

"Quite apart from the cause element which will be discussed further below, it cannot be said that the acts were clearly racially motivated. One would have to labor hard in order to come up with this conclusion." 313 F.Supp. 75, A.P. 71a.

There was ample evidence to support this finding.

The district court thoroughly considered the construction

of a new Manual High School building at the same site as the old building and with the same attendance area.

As the court of appeals pointed out (445 F.2d 1006, A.P. 149a), the racial change at the school since 1927 had been gradual. PX 356, p. 5, A. 2086a. The racial makeup in 1950, when the planning for the new school was taking place, was majority white,[22] and the "community concern was with the nature and character of the new facility," rather than its racial makeup. 313 F.Supp. 70, A.P. 59a. As for the 1956 Manual-East boundary change, the trial court found that it was justified by the overcrowding at East and that the suggested alternative of a larger boundary change would not have had any significant or enduring integrative effect. 313 F.Supp. 70, A.P. 61a.

Similarly, the claim that the Manual and Cole boundary changes in 1956 "insured" that the schools would later become predominantly Negro cannot stand analysis. In essence, petitioners claim that the district court failed to find present segregative effect. The trial court, in discussing this claim, recalled that an essential requisite of a constitutional violation is state action which produces the presently existing segregation complained of. Upon a review of the evidence, the court found that the boundary changes did not have segregative effect either at the time in 1956 or at the time of trial. 313 F.Supp. 75, A.P. 71a, 72a. Again, the court made express findings on the acts complained of and there was ample evidence to support the finding.

The effect of the boundary change on minority concentrations in 1956, the court found, was simply not known or shown. 313 F.Supp. 75, A.P. 71a, 72a. Moreover, since much of the racial and ethnic concentration in the schools occurred after 1956, without any action on the part of the

[22] 27.7% Negro, 23.5% Spanish origin, 40.7% other white, and 8.1% Oriental PX 356, p. 5, A 2086a.

school district, there was ample evidence to support the court's finding that the present concentrations in those schools were not caused by the school district. 313 F.Supp. 75, A.P. 72a.

In criticizing these findings, petitioners analogize to an inapplicable principle from *Swann*. They rely on the principle that a school district, in dismantling a dual system, must avoid closing racially mixed schools and building new schools remote from Negro population centers, thereby promoting segregated residential patterns. *Swann*, 402 U.S. at 21. This never happened in Denver. The proper analogous principle, instead, is that in a unitary system such as Denver's, there is no constitutional duty to make year-by-year adjustments in racial balance, in the face of demographic change, where the school district is not shown to have deliberately acted to change demographic patterns to effect the racial composition in the schools. *Swann*, 402 U.S. at 32. In the case at bar, segregative purpose and effect as to boundary changes must have been shown before an actionable violation can be found. These elements were not shown and the trial court so held.

Finally, petitioners fault the court of appeals for not considering a factor the district court had also refused to consider with respect to these schools, namely, the continuing but declining (DX DG, A. 2146a) disproportion of Negro teachers teaching in several majority-Negro schools. Teacher assignments received great emphasis by plaintiffs in their evidentiary presentation and in their arguments here. With one exception, no Denver school ever had more than 50% minority teaching staff and that justifiable exception is discussed in the Statement at pp. 47-49, *supra*, along with the distribution of minority teachers throughout the system.

The district court made no mention of the racial propor-

tions of teachers in either the core city schools or the resolution schools in its opinion on the merits.

In Denver, teachers were never assigned with either the purpose or effect of identifying particular schools by race. Denver has vigorously pursued a policy of recruitment of minority teachers since 1964 and has assigned such teachers throughout the system. Stetzler, A. 1155a-1171a.

The teacher assignment policy prior to 1964 and the subsequent policy followed since then are best described in the opinion of the court of appeals:

> "[The Board] operated on the prevailing educational theory of the day, the Negro pupils related more thoroughly with Negro teachers. The rationale was that the image of a successful, well educated Negro at the head of the class provided the best kind of motivation for Negro children and that in turn the Negro teacher had a greater understanding for the Negro pupil's educational and social problems. Although the validity of that theory is under severe attack today, we do not agree that the results of its past application infer segregatory intent. In response to new educational theories, the Denver public school system has today assigned Negro teachers to schools throughout the system and has reduced the percentages of Negro teachers in the predominantly minority schools." 445 F.2d 1007, A.P. 150a, 151a.

The record abundantly supports the refusal of both lower courts to find evidence of segregatory intent from the assignment of teachers.

2. The policy of the Denver School District has been nondiscriminatory throughout.

Petitioners assert in their brief, that the school district followed a ten year policy of racial segregation during the 1960s. On this assertion, petitioners then build the argument that as to their claims of state-imposed segregation in the core city, the burden of proof as to the elements of intent and of causation and the burden of justification of racial imbalance should be shifted to the school district.

This argument quite obviously disregards the time of the alleged segregative acts with regard to the core city schools. The evidence at the trial on the merits relating to these schools consisted of the replacement of one school building and some school boundary changes during the 1950s. The claimed "policy of segregation" is not only non-existent as we show below, but the alleged discriminatory acts in northeast Denver occurred in the 1960s, after the core city actions were taken. Petitioners would thus apply such a policy retroactively and impute unlawful intent to the acts of the 1950s from acts of the 1960s.

Secondly, the alleged ten year policy applied only to 4 predominantly minority and 4 Anglo northeast Denver schools, as petitioners candidly admit in their brief, p. 71, and not to other areas of the system.

Thirdly, petitioners' assertions regarding the ten year policy are not supported by the ultimate findings of the district court. Here, it is necessary to take a careful look at what the trial court found and at what stage of the development of the case. It should be remembered that the district court entered four principal opinions over a period from August 14, 1969, to May 21, 1970. The first two opinions followed a hearing on a motion for preliminary injunction, were prepared under the pressure of the approach of the opening of school in September, 1969, on the basis of only

four days of evidentiary hearings and without having heard the case fully on the merits. Thus, where inconsistencies appear between the early opinions in 1969 and the later opinions in March and May of 1970, after full hearing on the merits, the opportunity for more careful and complete consideration of issues in the later opinions becomes significant.

In both of the opinions following the preliminary hearing, it is apparent that the court misapprehended the law. The court went beyond the constitutional concept that only state created segregation was violative of the 14th Amendment. Although having recognized the historical practice of pupil assignment in Denver under the neighborhood school policy, the court obviously concluded at that time that the state of the law proscribed not only state-imposed segregation, but also mere inaction or continuance of a neighborhood school policy without affirmative attempts to alleviate the resulting racial imbalance in an urban school district. As indicative of the erroneous concept of *Brown I* as applied to a dual system, the court stated:

> "Thus the clear import of the *Brown* decision is that neither a state or its agencies may establish, *maintain or lend support* to a system of segregated public education. Furthermore, if the state or any of its agencies prior to or after *Brown* take any action which creates *or furthers* segregation, a positive duty arises to remove the effects of such de jure segregation." 303 F.Supp. 286, A.P. 13a (emphasis supplied to demonstrate the disjunctive)

Although the court proceeded to discuss the 10th Circuit decision in *Downs v. Board of Education*, 336 F.2d 988, (1964), the district judge questioned that opinion particularly in view of the decisions in the 5th Circuit. 303 F.Supp. 286, 287, n 8, A.P. 15a.

Thus prior to the hearing on the merits, the district court proceeded on the premise that the mere maintenance *or* continuance of racial imbalance in some schools was a constitutional violation and hence it made a general finding of a ten year policy of segregation. After making its general finding of ten years of segregation, the court further stated:

> "To maintain, encourage and continue segregation in the public schools in the face of the clear mandate of Brown v. Board of Ed. cannot be considered innocent" 303 F.Supp. 287, A.P. 16a.

A later statement by the court that a duty existed to remove segregation which had developed as a result of prior affirmative acts does not lessen the impact of the foregoing statements.

Following trial on the merits lasting over a period of 4 weeks, the court made some new findings and incorporated some old ones. It did not incorporate the mentioned ten year segregation policy and made no similar new findings, after having heard the school district's evidence. The significant findings as to the boundary changes for the core area from 1952 to 1962 was as follows:

> "There is no comprehensive policy apparent other than the negative approach which has been described . . ." 313 F.Supp. 76, A.P. 74a.

In the opinion after the hearing on the merits, there is clearly apparent a change and tightening up in the court's thinking and understanding of the constitutional concepts. Thus the district court discussed in detail the various elements necessary to be proven to establish a constitutional violation and held that there must be not mere inaction but affirmative acts of segregation purposefully or intentionally done and with a causal relationship to the conditions of racial imbalance existing at the time of trial. See Opinion of March

21, 1970, 313 F.Supp. 61, particularly pages 73 to 75; A.P. 67a to 70a.

The court also found that in 1962 the school district "was carrying out a racially neutral policy" in connection with boundary changes that year. 313 F.Supp. 76, A.P. 73a. Finally, and most significantly, the court describes the Board's policies during the ten years of rapid racial change in Park Hill as a

> "[P]rior undeviating policy of refusing to take any positive action which would bring about integration in the Park Hill Schools." 313 F.Supp. 66, A.P. 51a, 52a.

Even this description of the school district's policy, stated in terms of racially neutral inaction rather than affirmative action, was, we submit, contrary to the facts. Significant steps were taken from 1962 onward, as a matter of educational policy, to promote racial and ethnic heterogenity in the schools. (see Statement pp. 37 to 47).

After trial on the merits the district judge described the policy of the 1960s in Park Hill as one of racially neutral inaction while racial changes in the Park Hill neighborhoods resulted in corresponding changes in the schools there. The district court thus significantly modified its earlier comments regarding a "policy of segregation in Park Hill," made seven months earlier after the hearing on the preliminary injunction but before hearing on the merits.

3. The courts below correctly allocated the burden of proof.

Under the rules relating to burden of proof discussed earlier (*supra* pp. 70-72), as applied by the trial court in this case, the plaintiffs failed to prove, as to the acts complained of in the core city area, both segregative purpose and any

causal relationship to the present racial imbalance. The trial court found, accordingly, that there was no state-imposed segregation as to those schools. The court of appeals affirmed, applying Rule 52 F.R.C.P.

Petitioners complain that the courts below misplaced the burden of proof of actionable segregation. They seek to have this Court enunciate a new rule, substantially as follows: "Where a court finds one or more instances of discriminatory practices or factors in a school system and there exists within that system some degree of racial imbalance (even though not state-imposed), then the burden, not of going forward, but of proof, shifts to the school district to prove that the racial imbalance is justified by some compelling state interest."

Such a rule finds no authority in decided cases. Petitioners cite as their only source a law review article.[33]

To support the application of such a rule in this case, petitioners resort to charges such as "blatant discrimination", racially "distorted management", "covert policy", and subterfuge", none of which are contained in the record or in the findings of the district court.

The facts, as found by the courts below, are in sharp contrast with these assertions. Discriminatory acts were found to have occurred only as to three elementary schools during the early 1960s four or more years *after* the acts complained of relating to the core city schools, and would not, therefore, be part of a "history of discrimination" at the time in question. Thus, the court of appeals correctly refused to impose on the school district the burden of proving the non-existence of segregative acts, since "no type of state

[33]Dimond, *School Segregation in the North: There is but One Constitution*, 7 Harvard Civil Rights—Civil Liberties Law Review 1 (1972), (hereinafter, Dimond.) which describes the rule as a "proposed standard" (p. 32)

imposed segregation has previously been established" 445 F.2d 1006, A.P. 148a.

The petitioners' urging of such a rule was considered by the court of appeals, which stated:

> ". . . . [I]t would be incongruous to require the Denver School Board to prove the non-existence of a secret, illicit, segregatory intent. . . . Such an onerous burden does not fall on school boards who have not been proved to have acted with segregatory intent." 445 F.2d 1005, 1006, A.P. 147a.

We submit that if three instances of problematical segregative acts affecting three elementary schools in a system of 119 schools over a twenty-year period of inquiry, meets the test of "one or more instances of discriminatory practices or factors", and if "some degree of racial imbalance" means simply racial imbalance without proof of cause, as it surely must, then the proposed rule is nothing more nor less than the application of rules governing dual school systems to all public school systems in the Nation wherever racial imbalance exists, regardless of cause.[34]

In short, the rule petitioners urge has no application to the Denver case. The rule urged actually is that racial imbalance within a school system creates a conclusive presumption of state imposed segregation. Such a rule has no basis in any authority, and its proponents can offer none.

Of the many cases dealing with school systems which were not concededly dual systems at the time of trial, *Hobson v. Hansen*, 269 F.Supp. 401 (D.D.C., 1967), speaks most directly to petitioners' contention that "some" discrimination,

[34]Indeed, this is exactly what Mr. Dimond proposes. "The standard for review set forth here holds all school segregation actionable . . . unless insubstantial or adequately justified." Dimond, p. 11 (n. 43).

coupled with racial imbalance, triggers a shift of burden of proof. In the District of Columbia, the school authorities had deliberately maintained a dual system with complete racial separation until only 12 years *prior* to trial. (In Denver, the alleged discriminatory acts in northeast Denver occurred *after* the alleged acts pertaining to the core city). When the District of Columbia desegregated in 1954, immediately after the decisions in *Bolling v. Sharpe*, 347 U.S. 497 (1954) and *Brown I*, by the adoption of a neighborhood school plan, 27% of its schools remained one-race. This racial imbalance intensified during the next 12 years, so that by the time of trial in 1966, 87% of the District's schools were more than 85% of one race. 259 F.Supp., at 411, 412. Yet Judge Wright refused to relieve the plaintiffs of the burden of proof or shift the burden of justification to the school authorities. 259 F.Supp. at 495.

The standards formulated by the court of appeals represent the consistent rule of the federal courts in these non-dual cases, as we have discussed above. pp. 70-72. When school districts operate under state laws making racial separation in the schools illegal or unconstitutional, the school authorities are entitled to the presumption that their actions are lawful, and the burden is on the party challenging such actions to establish unlawful discrimination.

While there is no universal working rule as to the allocation of burden of proof, the standards develop out of experience in different types of situations as "a question of policy and fairness based on experience in the different situations." IX Wigmore, *Evidence*, Sec. 2486 (1940 ed.). The rules applied in cases of this kind are the ones which have best satisfied the basic requirements of fairness.

The "fairness" of the rule must be evaluated by considering the complexities of a school system in a large urban city. The over-all racial composition of large urban school dis-

tricts, and the schools within them, is determined by a myriad of factors completely outside the control of the school authorities. These factors, many of which this case illustrate, may and often do include rapid and unpredictable population growth and movement, annexation by separate governmental entities, freeway and urban renewal construction, and construction or abandonement of neighborhood parochial schools. To require such a school district to overcome the virtually conclusive presumption that all racial imbalance in its schools is the result of allegedly discriminatory acts would impose a punitive burden wholly unrelated to fairness. Furthermore, in this case, as the record shows, the plaintiffs had access to and analyzed with computer assistance all of the records of the school district. There were no facts or expertise available to the school district not equally available to the plaintiffs and in fact used by the plaintiffs in a most thorough manner.

Where, as in this case, multiple classifications of racial and ethnic groups are involved, and where plaintiffs purport to sue on behalf of all of the several classes, a serious danger would be introduced if the school authorities were put in the position of being required to justify repeatedly all existing aggregations of minority and ethnic pupils merely at the instance of a suit by one or two of their members. Other members of the classes represented may not perceive their neighborhood residential and school attendance arrangements as being contrary to their own interests. At the beginning of the hearing on remedy following trial on the merits, the district judge took note of this problem:

> "The Court: Now, you undertake to represent the Hispano community too?
> Mr. Greiner: That's correct, Your Honor.
> * * * *
> The Court: . . . I'm merely saying that our basic

> legal problem is remedying the invasion of the constitutional rights. And if it's true that there is a segment that says their rights are not violated, why, I don't see that it is any of our business to say, 'Well, they are. And you're going to get them remedied whether you like it or not.' I just don't —Not a single Spanish-origin person has appeared here demanding relief or even suggesting that any should be granted to them.
>
> Mr. Greiner: Well, I think the only basis upon which we can proceed, Your Honor, is the status of the record and the record—in the record there is no dissenting Hispano intervenors." A. 1515a, 1516a.

Nor does the rationale for the presumption applied in *Swann* to substantially one-race schools in a dual system in the process of desegregating (*Swann*, 402 U.S. 26) warrant the carrying over of that presumption to racially imbalanced unitary systems. In a dual system, especially at this late date, the constitutional right and remedy are so clear-cut and the instances of evasion of duty by dual school systems (e.g. *Green v. County School Board*, 391 U.S. 430 (1968)) have been so frequent that a shift of burden is warranted. But the circumstances are vastly different in a school system like Denver's which has never been a dual one and which has no history of state-imposed segregation except, arguendo, as to the four resolution schools which was not substantial but *de minimus* under all of the circumstances of this case.

We submit that neither experience, fairness, authority, nor logic requires a departure from the principles of burden of proof followed by the courts below.

B. THE ONLY ACTIONABLE SEGREGATION FOUND AS TO THE RESOLUTION SCHOOLS WAS THE RESCISSION OF THREE RESOLUTIONS, A FINDING WHICH IS ERRONEOUS AS A MATTER OF LAW.

1. The findings regarding the three elementary schools and the junior high school did not include a finding of present segregative effect and do not support a finding of actionable segregation.

We are here concerned with whether there has been a violation of the Constitution.

> "[I]t is important to remember that judicial powers may be exercised only on the basis of a constitutional violation. Remedial judicial authority does not put judges automatically in the shoes of school authorities whose powers are plenary." *Swann*, 402 U.S. 16.

A constitutional violation requires a showing of intentional state action causing presently existing racial segregation. We refer again to the Constitutional principles discussed in Part I above. pp. 66-70.

When the district court's findings with regard to the resolution schools are viewed in the light of such principles, it must be concluded that such findings were insufficient to support the court's legal conclusion of state-imposed segregation as to any of those schools. The legal conclusion was therefore erroneous.

The findings related to only three elementary scools and one junior high school. The first of these schools was Barrett elementary, where substantial racial imbalance was found to exist at the time it was built and opened in 1960. The trial court found that the school district built Barrett

with the intent to create a predominantly Negro school (313 F.Supp. 64, A.P. 48a) stating, as the principal reason, that the school could have been built with greater capacity to serve an area on the other side of a major traffic artery where fewer Negroes lived. 313 F.Supp. 65, A.P. 49a. The court of appeals likewise found segregative intent on those facts. 445 F.2d 1000, 135a, 136a.

But neither court found that the construction of Barrett had any continuing effect, at the time of trial, on the racial characteristics of Barrett or any other school in Denver. The construction of Barrett had no racial effect on either residential patterns or school racial proportions. There was no significant change in the number of children living in the area served by Barrett and the four schools surrounding it between 1959 and 1960[35]. Thus, no new pupils were drawn into the area by the building of Barrett; the new school simply added needed school capacity in a neighborhood where the pupil population had previously increased causing an overcrowded condition in the existing schools. See Statement, pp. 26-29.[36]

As a preface to discussion of other boundary changes among the other three northeast Denver elementary schools in the decade between 1960 and the trial in 1970, it must be kept in mind that such actions were taken during substantial demographic changes. Between 1960 and 1970 the Negro population for the entire City of Denver increased from 30,251 (6.1%) to 47,011 (9.1%). During the same period the Park Hill (northeast Denver) Negro population increased from 566 (1.7%) to 18,516 (50.2%) with an in-

[35] See 445 F.2d 1000, A.P. 135a, n. 3.

[36] A Negro spokesman had suggested to the school board in 1959, as an alternative to a new school, the addition of capacity to Harrington, immediately to the north (PX GC), which illustrates that the purpose of the construction of Barrett was to meet the then existing need for increased school capacity, not to alter or influence demographic patterns.

crease of the total population of the area from 32,679 to 36,893 residents (Statement, pp. 10, 11, *supra*.)

As to the assignment of the Hallett-Philips optional area to Philips in 1962, the court assumed that the white pupils residing in the area were choosing to attend Hallett and then found that they were thereby reassigned to Philips. 303 F.Supp. 293, A.P. 29a. Actually, both schools were insignificantly different in racial composition in the spring of 1962 when the superintendent made the change (Hallett was 95.8% white, Philips was 99.6% white. PX 393). Therefore, both the assumption and the finding were erroneous. But more importantly, there was no finding that this action had or could have had any effect on the racial composition of either school in 1970 at the time of trial.

In 1964, in response to the Special Study Committee recommendations (A. 301a), the two-block optional area between Stedman and Park Hill was abolished and assigned to less crowded Park Hill, another two-block strip on the east side of Stedman's attendance area was assigned to Hallett, and an area in the southeast corner of the Hallett area was assigned to Philips equidistant to the south. As between Stedman and Hallett, *both* schools gained about 100 Negro pupils after the boundary change between them (PX 242, A. 2050a), a result which could not possibly have been caused by the boundary change. Hallett's Negro percentage increased from 28% to 42% (P. 243, A. 2053a), despite the fact that the pupils in the area changed from Hallett to Philips were 70% Negro (McLaughlin, A. 1143a), which is confirmed by the increase of Negro pupils at Philips from 4 to 96 after the boundary change. PX 243, A. 2053a. The evidence thus showed that the boundary changes among Stedman, Hallett, and Philips in 1964 had no segregatory effect at the time, despite the findings of the district court made prior to the trial on the merits. No boundary changes

were made among these schools between 1964 and the time of trial, and during that period the racial change within the schools continued unabated.[37]. On this record there is no possible basis for a finding that the 1964 boundary changes, whatever their effect at the time, had any effect on the racial balance in the resolution schools at the time of trial in 1970. Indeed, the district judge, in his opinion on the merits, suggested as much. 313 F.Supp. 74, A.P. 70a, n. 18. Earlier, he stated: "The migration *caused* these areas to become substantially Negro and segregated." 303 F.Supp. 282, A.P. 4a. (emphasis added)

Findings regarding the fourth school, Smiley Junior High, appear only in the district court's second opinion. 303 F.Supp. 293, 294, A.P. 30a, 31a. The sole connection between school district action and Smiley's racial composition, the trial court found, was the so-called feeder relationship. The court attached a map as an appendix to the opinion (303 F.Supp. 297, A.P. 38a) to explain its finding that

> "[A]ny factors affecting the racial composition of the elementary schools will also have a similar effect upon Smiley." 303 F.Supp. 294, A.P. 32a.

and that

> "[S]egregated situations at Barrett, Stedman, and Hallett . . . ultimately led to a substantially segregated situation at Smiley." 303 F.Supp. 295, A.P. 33a.

The fallacy of the court's latter finding on Smiley is demonstrated by the map itself, which shows that the Smiley attendance area encompassed all of the schools affected by the boundary changes in 1962 and 1964. The elementary

[37] At the time of the preliminary hearing, the Negro percentages were: Stedman, 92.4%; Hallett, 84.4%; Philips, 36.6%; and Park Hill, 23.2% (PX 243, A. 2053a).

school attendance areas are all within the Smiley Junior High School subdistrict, and boundary changes among them could have no effect whatsoever on the pupil population at Smiley. Whether or not the changes were made, the same children would go on to Smiley.

Similarly, whether or not crowding was relieved at Stedman or Hallett by added classrooms or mobile units, the pupils at those schools would continue to live in the Smiley subdistrict. Nor did the existence or non-existence of Barrett school change or affect the racial composition of Smiley. The children in the Barrett area, until 1964, were in an optional area with Smiley, and thereafter were assigned, in accordance with Policy 5100, to Gove Junior High to the south, in order to improve racial balance at both junior high schools.

The inherent difficulty in the trial court's findings of fact as to Smiley led the court of appeals to go beyond the findings and refer to testimony in the record that white students in the Smiley attendance area were permitted to transfer to another school. 445 F.2d 1001, A.P. 138a. But the court of appeals failed to notice that the testimony referred to only four families, one of whom was Negro, during the entire period from 1964 to 1969, and that the assignments were made for valid non-racial reasons. Morton, A. 657a. Neither court below expressly found that the school district had acted to confine Negro pupils in Smiley, and there was no finding of any school district action causing racial imbalance at Smiley at the time of trial.

With respect to the legal conclusion that the four resolution schools were segregated, the essential element that state action *caused* the present racial imbalance at those schools was wholly absent and therefore, no constitutional violation exists. "Absent a constitutional violation there would be no basis for judicially ordering assignment of students on a racial basis." *Swann*, 402 U.S. 28.

2. The findings as to the four resolution schools were ultimately used by the trial court only as a basis for finding segregatory intent in the rescission of the unimplemented racial balancing resolutions.

The original findings regarding the resolution schools were made after the hearing on the preliminary injunction prayed for in plaintiffs' first cause of action, which the district court said "deals *solely* with the purpose and effect of the rescission of [the] Resolutions." 313 F.Supp. 63, A.P. 46a (emphasis added). These resolutions, the court added, "were designed to relieve [de facto] segregation[38] and the tendency toward [de facto] segregation in schools located in . . . northeast Denver." 313 F.Supp. 64, A.P. 47a. The plaintiffs claimed, the court said, that the rescission of the resolutions was "unconstitutional because its purpose and effect was to perpetuate racial segregation" in the affected schools. 313 F.Supp. 64, A.P. 47a. The rescission of the three earlier resolutions was accompanied by the adoption of a substitute resolution, No. 1533 (PX 6a, A. 2111a), which contained all the elements of the substituted resolutions except the mandatory pupil reassignment for racial balancing purposes.

The plaintiffs' efforts, then, in seeking an injunction under their first cause of action, was to show that the school board, knowingly and with segregatory motive, maintained previously existing racial and ethnic separation and thus resegregated children on the basis of race and ethnic origin.

[38]We add "de facto" where the district judge uses the word "segregation" or "segregated" without the "de jure" qualification. The judge consistently used the unqualified terms in the descriptive or neutral sense of racial imbalance or de facto segregation not resulting from school district action. He was careful always to use "de jure segregation" or "de jure segregated" when he meant racial concentrations caused by school district action. Nevertheless, because "segregation" is freighted with connotations of deliberate or purposefully imposed separation, we have used throughout this brief other terms such as "racial imbalance."

Third and fourth counts, A. 20a, A. 21a. To obtain a declaration that the change of plans violated the Constitution would require a showing that the act of rescission was taken (a) with segregatory purpose and (b) with the effect of bringing about racial separation.

We submit that the district court's findings of state-imposed segregation in the early 1960s at Barrett, Stedman, Hallett, and Smiley were not, in the final analysis, the basis for the court's order directing the implementation of the rescinded resolutions.

The injunction order rested, instead, squarely on the conclusion of law that the rescission "in and of itself was an act of de jure segregation" in 1969. 303 F.Supp. 295, A.P. 35a; 313 F.Supp. 66-67, A.P. 52a.

The court explained this in the opinion following trial on the merits:

> "*Although past discriminatory acts may not be a substantial factor contributing to present segregation*, they may nevertheless be probative on the issue of the segregative purpose of other discriminatory acts which are in fact a substantial factor in causing a present segregated situation. Thus, in Part I of this opinion, we discussed the building of Barrett, boundary changes and the use of mobile units as they relate to the purpose of the rescission of resolutions 1520, 1524, and 1531." 313 F.Supp. 74, A.P. 70a, n. 18 (emphasis added).

The purpose of the rescission, the court found, was to maintain existing de facto segregation in majority-Negro schools and permit the trend of increasing Negro percentages to continue in those schools, such as East, Park Hill, and Philips, which were still majority-white in 1969. 313

F.Supp. 67, A.P. 53a, 54a; 303 F.Supp. 292, A.P. 27a. The substitution of the mandatory measures for undoing the effects of racial shifts with a voluntary program (Resolution 1533) was found to be a constitutional violation. 313 F.Supp. 67, A.P. 53a.

The district judge's last retrospective summary of what he had done is the most telling. In his opinion of May 21, 1970, three months after his opinion on the merits, he recalled what had happened during an intensive year of hearings, trials, and multitudes of briefs and arguments. He had found, he wrote:

> "[T]hat certain schools, elementary, junior high and high schools within an area of Denver known as Park Hill, and also some 15 schools within the core city, were segregated." 313 F.Supp. 91, A.P. 100a.

Significantly, the district judge is including in the one category of "segregated", East High School, Cole Junior High, and Park Hill and Philips Elementary Schools, all of which were expressly found not to be de jure segregated, as well as all of the remaining core city schools, also expressly found not to be de jure segregated. He was using "segregated", standing alone, in his consistent sense of de facto segregated. In other words, all schools were found, in 1970, to be de facto and not de jure segregated (absent effects of rescission as to the resolution schools).

Then the district judge succinctly stated his finding regarding de jure segregation:

> "[The Order of March 21, 1970] also concluded that our temporary injunction entered in August 1969, finding a condition of de jure segregation in certain schools *resulting from* the Denver Board of Education's action rescinding Resolu-

tions 1520, 1524 and 1531, which had been designed to have an integrating effect on Park Hill schools, must be made permanent." 313 F.Supp. 91, A.P. 100a. (emphasis added)

We submit, accordingly, that the only act of actionable segregation found by the district court to have effect at the time of trial was the rescission of the resolutions.[39]. The only way the court could extend the injunction to non-segregated schools such as East and Cole was on the basis of a holding that the rescission was the operative de jure act. 313 F.Supp. 67-69, A.P. 54a-57a.

Thus, the court of appeals, in reviewing and sustaining, under Rule 52, the district court's findings of earlier acts regarding the three elementary schools (445 F.2d 1000-1003, A.P. 126a-139a), and deeming it unnecessary to decide further whether the rescission was an act of de jure segregation (445 F.2d 1003, A.P. 139a), misconceived the final true basis of the district court's order enjoining the rescission.

3. The trial court erred in concluding that the rescission of the resolutions was an act of state-imposed segregation in and of itself.

The full history of the three resolutions and the rescission thereof is summarized at pp. 44 to 46 of the Statement.

The rescinded resolutions reassigned pupils, effective in September, 1969, from 15 schools.[40] These plans were rescinded and the substitute plans embodied in Resolution 1533 (PX 6, A. 2111a) were adopted by the Board on June

[39]Logic, as well as the district judge's own holdings, leads also to the same conclusion.

[40]PX 10, A. 2112a and PX 11, A. 2114a. Pupils from three senior high schools, four junior high schools, and eight elementary schools were reassigned. Only four of the fifteen schools were predominantly minority.

9, 1969, three months before their effective date. The previous plans were never put into effect as far as the pupils were concerned.[41] With the adoption and later rescission of the resolutions, *nothing happened* insofar as there was any school district action to affect racial proportions in the schools. To hold, as the district court did, that the rescission was a legislative act which "in and of itself was an act of de jure segregation" (303 F.Supp. 295, A.P. 35a, 313 F.Supp. 66, A.P. 52a) was an attempt by pure metaphysics to convert the substitution of unimplemented planning into an affirmative unconstitutional act.

The district court relied on *Reitman v. Mulkey*, 387 U.S. 369 (1967), as authority for the holding. 313 F.Supp. 67-69, A.P. 55a-57a. That case, we submit, does not support the holding. The district judge understood *Reitman* to strike down an initiated constitutional amendment which had the effect of repealing legislation "which recognized rights guaranteed by the equal protection clause." 313 F.Supp. 67, A.P. 55a. The amendment actually had the effect of repealing *pro tanto* all statutes forbidding private discrimination in housing. Its infirmity was not the repeal, but the finality of the action, which disabled every level of government from treating the problem, thereby authorizing and constitutionalizing the private right to discriminate. 387 U.S. at 377.[42]

In the case at hand, the rescission in no way disabled the board from continuing to deal with the educational problems of racial or socio-economic concentrations. After the

[41]As the district court put it, "True, the resolutions had not been carried out, but extensive preparations were in progress." 313 F.Supp. 67, A.P. 53a.

[42]In *Hunter v. Erickson*, 393 U.S. 385, 390 (1969), this Court expressly stated that it was not holding that the mere repeal of legislation enacted for the benefit of racial minorities violates the Fourteenth Amendment. *James v. Valtierra*, 402 U.S. 137, (1970) applied the same principle to repeal of legislation concerning other classifications.

rescission, the Board could and did take further legislative action in this regard (e.g. Resolution 1533, PX 6a, A. 2111a, and Resolution 1562, 445 F.2d 1010, A.P. 156a).

Nor were the rescinded resolutions aimed at recognizing constitutional rights. Of the 15 schools from which pupils were to be reassigned, only 4 had been found to have been the object of prior discriminatory acts, and, in those cases, as we have shown, there was no finding by the court of present segregatory effect and, accordingly, no existing constitutional violation at the time of trial as to any of those schools. Thus, the effect of the rescission was to repeal a mandatory racial balancing plan originally adopted in response to an undertaking, for educational reasons, to increase efforts to find solutions to the "educational problems of de facto . . . segregation."[48] The resolutions were to implement, as an educational policy, a racial balancing plan. This was within the discretionary power of the school board. But where no constitutional violation existed, the district court exceeded its authority in ordering the rescinded plans carried out. *Swann*, 402 U.S. 16.

The evidence was that the three resolutions represented pilot plans educationally, and were part of the long-range planning of the school district for improving educational quality. This is a process of trial and error, which all experts agreed was an extremely complex matter in which no certain answers were known. Any rule of constitutional law which would impute segregatory purpose and effect to the repeal of plans, proposed as a matter of educational policy, which include, among other measures, the reduction of racial or ethnic concentrations, would have a chilling effect on future educational efforts to solve the complex problems of public education. As Mr. Justice Harlan observed, in his dissent in *Reitman*,

---

[48]Resolution 1490, (PX 2, A. 1992a-1996a).

> "I think that this decision is not only constitutionally unsound, but in its practical potentialities short-sighted. Opponents of state anti-discrimination statutes are now in a position to argue that such legislation should be defeated because, if enacted, it may be unrepealable." 387 U.S. at 395

Educational policy-making by the local school districts of the Nation should not be thus inhibited by the threat of being permanently enjoined to carry out every proposed innovation and experimental educational plan which happens to include measures for the reduction of racial or socio-economic imbalance as a matter of educational policy.

C. THE SCOPE OF THE REMEDY IS LIMITED BY THE EXTENT OF A VIOLATION.

Petitioners seek system-wide desegregation of the Denver public schools.

The background against which petitioners urge this argument regarding remedy is that of a school district practicing "covert segregation" with "hidden motives" involving "shams . . . surreptitous practices" . . . and "underhanded subterfuges." In this case there were no findings or evidence of such as to the Denver school district.

The findings of deliberate discrimination in the Denver school system, if sustained, are limited to only four predominantly minority schools which are only a small percentage of the 119 schools in the District and are located in a relatively small geographical area. No issue of system-wide discriminatory violations is before this court.

One of the axioms stated in *Swann* which should apply to a unitary system as well as a dual system is that:

> "(T)he nature of the violation determines the scope of the remedy. *Swann*, 402 U.S. 16.

Accordingly, the scope of the remedy must be limited to the geographical area and the schools in that area.[44]

In the Denver case, the nature of the violation, as we have shown was either the construction of one elementary school in 1960 and several minor elementary school boundary changes in the early 1960s, all in northeast Denver, or it was the modification of unimplemented mandatory racial balancing plans in 1969 involving the same area. If the violation was the former, it had no continuing or present effect at the time of trial because of demographic changes in the meantime. If the latter, the violation has been fully and precisely remedied by the reinstatement of the rscinded plans by injunctive decree of the district court.

Petitioners urge that various practical considerations require a remedy going far beyond the few schools where segregatory acts were found. The considerations they have discussed find no basis in the evidence nor in the findings of the courts below. The practicality argument grows out of a series of dual system cases involving dilatory practices resulting in unacceptable lack of progress. One of these cases, *Green*, 391 U.S. 430, illustrates the proper application of practical considerations. There, this Court had before it a problem involving a dual system operating two schools. The most obvious way to have created a unitary system in that situation was simple neighborhood zoning, 391 U.S. at 442, n. 6. This simple and workable solution had clearly been by-passed in favor of a scheme, predictably ineffective in that rural community, of "freedom of choice."

[44]Accord: Taylor v. Board of Education, 191 F.Supp. 181, (S.D.N.Y. 1961) appeal dismissed. 288 F.2d 600 (2nd Cir. 1961), 195 F.Supp. 231 (S.D.N.Y. 1961) affd. 294 F.2d 36 (2nd Cir. 1961) cert. den. 368 U.S. 940 (1961) The district court found that one elementary school (Lincoln) had been segregated by state action. The remedy was limited by the nature of the violation and the decree was for the desegregation of that school and did not require system-wide desegregation.

This Court simply refused to accept a remedy based on theoretical and unrealistic assumptions where a far more feasible and specific remedy was at hand. The same pragmatic approach here would find no further remedial intervention necessary in Denver.

We submit that there is no evidence in this case and no findings by the courts below which would warrant or constitutionally require system-wide racial balancing of the Denver school system.

III.

THE NEIGHBORHOOD SCHOOL POLICY, AS APPLIED IN DENVER, DOES NOT OPERATE TO DEPRIVE ANY PUPIL OF AN EQUAL EDUCATIONAL OPPORTUNITY, AND THE HOLDING OF THE COURT OF APPEALS TO THAT EFFECT SHOULD BE AFFIRMED.

A. INTRODUCTION

1. Neighborhood school policy—generally.

The neighborhood school policy, when impartially maintained and administered, does not violate the Constitution even though the result of such policy is racial imbalance in certain schools of the system.

Various circuits have considered this question and all have upheld the constitutionality of the neighborhood school policy.[45]

---

[45] *Downs v. Board of Education of Kansas City*, 336 F.2d 988 (10th Cir., 1964), cert. den., 380 U.S. 914 (1965); *Deal v. Cincinnati Board of Education*, 369 F.2d 55 (6th Cir., 1966), cert. den., 389 U.S. 847 (1967); *Bell v. School City of Gary*, 324 F.2d 209 (7th Cir., 1963), cert. den., 337 U.S. 924 (1964), *Springfield School Committee v. Barksdale*, 348 F.2d 261 (1st Cir. 1965).

2. Equality of Educational Opportunity.

Equality of educational opportunity is conceded to be a constitutional right. It is also an ultimate objective in all educational planning. The elusive question is what constitutes equality of educational opportunity? If all children were born with equal mental capabilities and had equivalent environmental advantages, equal educational resources could be allocated mechanically.

The facts of life are different in that the planning and execution of educational programs is a complex social science.

Does the providing of equal fiscal, physical and teaching resources to all students and all schools constitute the providing of equal educational opportunities? Or, is a school district constitutionally required to evaluate the needs of children individually and by class (socio-economic or other) and provide greater but unequal resources to those who are more disadvantaged than others in order to arrive at the "equal protection" threshold? There is no question that such evaluations are repeatedly made as matters of educational policy. There is also no question that a school district constitutionally may allocate resources unequally for specific classes, e.g., mentally retarded, physically handicapped or culturally disadvantaged, as a matter of educational policy. The question presented in this case is whether, as a matter of Constitutional Law, courts should decree for all the nation, a requirement that all low-achieving students in a school district shall be considered a new class under the Constitution, and order the implementation of a new educational policy formulated by the judiciary and not by educational experts? It is obvious that such is beyond both the power and the expertise of the courts.

For years before the institution of this suit the school district in Denver had sought the optimum of equality of edu-

cational opportunity for all students. School buildings were maintained equally, core city schools were not shorted on educational materials but, to the contrary, they were provided extra dollars, lower pupil-teacher ratios, use of paraprofessionals, compensatory education programs, and many other programs and resources not made available to other schools.

Thus an unequal but greater quantity and quality of resources were furnished the court-designated schools which were found to be "inferior". The fact that the median achievement scores on standardized tests were below average in those schools was in spite of such action. What would have been the result but for the greater efforts and facilities furnished to the specific schools? Undoubtedly even lower median achievement scores and more drop outs.

Until sufficient controlled studies are made with empirical results, any attempt by the courts to decree educational programming through assignment of pupils by race, allocation of resources, or designation of other criteria would be well beyond the ability of the courts to perform and would constitute an unlawful exercise of the power of the courts under the present state of educational social science.

As is shown hereafter, the evidence is insufficient to establish any constitutional deprivation of "equal educational opportunity."

3. Points argued.

Petitioners claim that minority children attending certain Denver schools were consciously treated differently and discriminatorily and have been denied equal educational opportunities. We reply arguendo as follows: First, the existence of unequal educational opportunities in such schools, if true, was not caused by discriminatory acts of the respondents,

and did not, therefore, constitute a constitutional violation warranting judicial intervention.

Second, the trial court's conclusion that certain schools were "inferior" on the basis of median scores on standardized achievement tests was clearly erroneous. Third, there was no competent evidence in the record to support the trial court's conclusion that racial or ethnic imbalance was the cause of inferiority in any schools.

Fourth, the apparent lack of achievement in certain schools not being the result of state action (neither unequal allocation of resources nor racial or ethnic concentration) the remedy to alleviate existing educational difficulties is outside the province of the federal courts, and must be fashioned by the school authorities as educational policy.

B. THE SCHOOL DISTRICT DID NOT CAUSE THE ALLEGED INFERIORITY OF THE COURT-DESIGNATED SCHOOLS.

1. Summary of district court findings that low test scores evidenced inferior schools, that racial and ethnic concentrations caused inferior schools, but that the concentrations were not caused by the school district.

A clear summary of the claims as alleged in petitioner's complaint is found in the opinion of the court of appeals. 445 F.2d 994, A.P. 124. Under the main or second cause of action, three counts were urged at time of trial (the fourth count having been expressly abandoned). The first count, alleging deliberate and purposeful state-imposed segregation, was rejected by the trial court. The second count, which alleged an unequal allocation of resources to the core city schools was also, in effect, rejected by the district court.

The third count attacked the neighborhood school policy, even when operated without segregatory intent, claiming

that it causes racial and ethnic segregation in some schools, which, in turn, denies equal educational opportunity to pupils assigned there. A. 29a, 30a.

The district court made two rulings on the third count. First, the court denied relief merely upon a showing of racial concentrations resulting from the application of the neighborhood school policy, citing *Downs* and *Dowell*. 313 F.Supp. 76, A.P. 74a-75a.

Then the court found that certain schools with high proportions of Negro or Spanish surnamed pupils (the court-designated schools), although not segregated by state action, were, nevertheless, providing an unequal educational opportunity which was caused by the racial and ethnic concentrations.

This circular reasoning was rejected by the court of appeals, which reversed the trial court on the ground that there was no finding of state action causing the racial and ethnic imbalance said to be the cause of the lower achievement scores and inferior educational opportunity.

The trial court found that petitioners were not entitled to relief upon a mere showing of *de facto* segregation (313 F.Supp. 73, A.P. 67a), and that "[A] neighborhood school policy, even if it produces concentration, is not *per se* unlawful if it is carried out in good faith and is not used as a mask to further and perpetuate racial discrimination." 313 F.Supp. 76, A.P. 74a. The district court then rejected petitioners' claim that "the neighborhood school policy has been maintained by the School Board for the purpose and with the effect of segregating minority pupils." 313 F.Supp. 76, A.P. 73a.

The trial court's findings of unequal educational opportunity at the court-designated schools rest solely on the evidence of low average achievement and low morale (313

F.Supp. 77, 91, A.P. 76a, 100a) and that this condition was caused by racial or ethnic concentrations. 313 F.Supp. 80-82, A.P. 83-86a.

The district court reaffirmed this finding in the clearest terms in its later opinion on remedy. Reviewing the earlier order, the district court stated:

> "We found at the trial that the schools in question became segregated as a result of neighborhood housing patterns—at least that this was the substantial factor in producing the result. *It was not caused by positive law or as a result of official action.* 313 F.Supp. 81, 82, A.P. 111a. (emphasis added)

Thus, the trial court, having found unequal educational opportunity and having identified its cause as racial or ethnic concentration, nevertheless found that the concentration was not caused by the school district.

The trial court then became concerned with educational principles as opposed to *Constitutional Principles* and determined that, despite its findings that the neighborhood school policy was constitutional even though it produces (racial) concentrations, the court-designated schools should be desegregated.

2. *The court of appeals, in view of the trial court's findings, correctly reversed, finding no state action causing the educational outcomes at the schools in question.*

(a) The trial court had found that the school district did not cause the racial imbalance.

The opinion of the court of appeals shows that it fully understood that the District Judge had (1) found unequal educational opportunity in the court-designated schools on the

evidence of low test scores and high drop-out rates and other evidence of low morale, and (2) had concluded that the racial and ethnic concentration, "regardless of its cause," was the cause of the unequal educational opportunity. 445 F.2d 1003, A.P. 142a The court of appeals agreed with the district court that constitutional rights would be violated if the education in one school was sub-standard when compared with another school within the same school district, *"provided the state had acted to cause the harm."* 445 F.2d 1004, A.P. 143a (emphasis added).

But the court of appeals also understood that the district court had expressly found that the school district had not caused the racial and ethnic concentrations which had been found, in turn, to be the cause of the educational problems. The court of appeals itself concluded that the "educational difficulties [arise] from circumstances ouside the ambit of state action." 445 F.2d 1004, A.P. 144a. Later, in the discussion of plaintiffs' cross-appeal, the appellate court put it more plainly:

> "The trial court held that cross-appellants [petitioners herein] failed in their burden of proving (1) a racially discriminatory purpose and (2) a causal relationship between the acts complained of and the racial imbalance admittedly existing in those schools." 445 F.2d 1006, A.P. 418a

Racial imbalance in the schools can, and did in Denver, develop over a period of years when an impartially administered and racially neutral neighborhood pupil assignment policy was followed by the school district. But that policy, while it permits racial and ethnic change within school subdistricts, did not cause the adventitious racial imbalance in the schools, and both courts below expressly so found.

(b) The court of appeals correctly based its reversal of the district court on the absence of findings of causal relationship.

Petitioners, ignoring the fact that the district court expressly found no state action in the development of racial and ethnic imbalance in the court-designated schools, proceed to speculate as to various explanations for the same finding by the court of appeals. Rule 52, F.R.C.P., is an adequate explanation.

Petitioners suggest that the court of appeals confused indicia of inferiority with the cause of "inferiority". To the contrary, the court of appeals correctly noted that the indicia (low test scores and dropout rates) were obviously not the cause of the low test scores. 445 F.2d 1004, A.P. 144a.

Petitioners suggest that the court of appeals may have overlooked the district court's finding that racial and ethnic imbalance caused the alleged unequal educational opportunity. The court of appeals was entirely aware of this finding as it was the basis of its reversal as to the core city schools.

Finally, petitioners suggest that the court of appeals overlooked, in the record, the multiplicity of decisions by the school board (as to school locations, size and boundaries, pupil assignments, and educational input) as factors in causing unequal educational opportunity. To the extent these factors were part of the neighborhood school policy, they were held by the district court not to have caused the racial and ethnic imbalances. To the extent they refer to differences in teacher experience, the district court considered it a symptom, not a cause (313 F.Supp. 81, A.P. 83a), and the court of appeals found it insubstantial:

> "[W]e cannot conclude from that one factor [teacher experience]—as indeed neither could the

trial court—that inferior schooling is being offered." 445 F.2d 1004, A.P. 144a.

At the hearing on remedy, Dr. James S. Coleman testified that teacher experience and advanced degrees were not important factors (A. 1557a), and Mr. Smith, an elementary principal called by the plaintiffs confirmed that his new teachers were as capable and competent as those with more experience (A. 1701a).[46]

(c) The court of appeals did not require a showing of racial purpose, whether or not it is required.

The other claimed error, that the court of appeals required a finding of intent to deny equal educational opportunities to the pupils in the racially and ethnically imbalanced schools, is not relevant in view of the district court's finding that the imbalance in the core city schools was not "de jure" or state imposed. In any case, the appellate court's reference to racially motivated intent (in this part of its opinion) occurs only in connection with its observation that instances of judicial intervention in school systems in Pontiac, Cook County, District of Columbia, Manhassett, Hempstead, and Pasadena were cases where de jure segregation was expressly found, with its necessary element of racial purpose. 445 F.2d 1006, A.P. 1480.

This case is clearly distinguishable from *Burton v. Wilmington Parking Authority*, 365 U.S. 715 (1961) in which the issue was whether exclusion by race from a public accommodation could be excused by delegating state authority to a private party by contract. Here we are concerned with the power of the courts over educational decisions involving complex factors not caused by state action, not at-

[46]"Anyone who believes [inexperience] is a serious disadvantage for a teacher, has a faith in experience and degrees which is justified by no known evidence." N. Glazer, *Is Busing Necessary?* Commentary, March, 1972, p. 50, ——CONG. REC. —— (daily ed. March 13, 1972, S-3855).

tempted delegation of state authority with concomitant unconstitutional wrongs.

(d) The neighborhood school policy does not operate as a racial classification.

One other theme in petitioners' argument on this point remains to be dealt with. This is the contention that the school district maintained two kinds of schools, good schools and bad schools, and that the school district arranged to have good schools where non-Spanish white children predominate and bad schools where Negro and Spanish surnamed children predominate.[47] This means, the argument goes, that unequal schools were being provided on the basis of a racial or ethnic classification, which was not justified by any compelling state interest, and therefore was in violation of the Fourteenth Amendment.

But it is at this point that the argument loses sight of its causal predicate, which the court of appeals was careful to keep in view. The cause of the good schools and bad schools, according to the petitioners and the district court (313 F.Supp. 82, A.P. 86a), was the absence or presence of concentrations of children of certain racial or ethnic minorities in the schools. If this is the cause, then the school district cannot be providing or arranging for a poor school at one place and a good school at another unless it also controls the racial or ethnic makeup of the schools. This control, the courts below both held, the school district simply did not have or exert.

Nor did the school district set about to select or identify schools with high Negro or Spanish surname concentrations and proceed to arrange inferior education at such schools. This was manifestly impossible because it was the racial or

[47] "The violation found was not cast in terms of racial segregation but rather as the State's unequal provision of public education to Denver's minority children." (Pet.Br., p. 117).

ethnic concentrations, not the school district's allocation of resources to the schools, which caused, the trial court held, the inferior education.

In other words, since Denver's neighborhood school policy is racially neutral, it does not operate as a mechanism for racial or ethnic classification, and any racial or ethnic concentration which the neighborhood school policy permits or produces is not attributable to school district action, but to housing patterns. Accordingly, even assuming arguendo that the evidence in this case supports a finding that the racial concentration in some schools causes unequal educational opportunity in those schools, the inequality cannot be attributable to the racially neutral classification or to school district action.

3. The court-designated schools were located, built, and assigned attendance areas without any segregatory purpose or effect, and the school district has done nothing since to affect their racial composition.

The Denver school system is not and never has been a dual system (445 F.2d 1006, A.P. 148a), and the school authorities have not refused to admit any student at any time because of racial or ethnic origin. 313 F.Supp. 73, A.P. 67a.

Thus, when each of the court-designated schools was built and assigned its attendance area,[48] the school system was unitary in every sense of the word. Plaintiffs failed to prove that the school authorities or any other state agency had done anything to affect the racial composition of these schools.[49]

---

[48]The newest of the court-designated schools (Smith) was built in 1955. (PX 106, A. 2042a; PX 20, Appendix 13-18).

[49]Except, arguendo, at Stedman and Hallett, but with no effect on their present racial compositions.

Not only did the courts below expressly find that there was no such segregatory action, as discussed above, but the elementary school subdistrict boundary maps in evidence in this case show this graphically.

4. Allocation of resources to core city schools were equal or greater.

In their brief, petitioners enumerate fourteen points as indicia of unequal educational opportunities in the court-designated schools. An analysis of those points discloses duplications, repetition of the same matters and nothing of a substantial objective nature to prove causation of alleged inferiority of the schools.

There was no proof and no finding of inadequate or disparate physical facilities or educational materials in the core city schools as compared to those in other parts of the city. Some of the buildings located in the core city were older, but the undisputed evidence was that they were as well maintained as any of the others in the city. Of the court-designated elementary schools, only 4 had been constructed before 1921 and three of those have had new additions since 1960 with the fourth one currently being replaced with a new building. None of the court-designated secondary schools was constructed prior to 1925. See Statement p. 47, supra, as to further details.

Much was made of teacher inexperience and transfers. All teachers in all schools had college degrees and there was no evidence of assignment to court-designated schools of any teacher who was any less educated than those assigned to other schools. There was no evidence that younger teachers were less effective in teaching than older teachers; in fact, the evidence was to the contrary. Much can be said for the greater effectiveness of younger teachers as compared to older ones, particularly many of those ap-

proaching retirement age at the elementary level. There was no evidence and no findings that teachers were more or less competent by reason of their greater or lesser experience in the Denver system or in a single school. See Statement, pp. 49, 50.

The dollar inputs to the predominantly minority schools were not only equal but often in excess of the amounts allocated to the other schools. See Statement, pp. 50, 51, supra. The curricula varied among schools depending on the needs and interests of the pupils but the same basic subjects were taught at each and every one of the schools. A. 1366a.

In the end, the only objective evidence of a cause in all of these fourteen points upon which petitioners could rely is that of teacher inexperience, assignment and transfer; but both lower courts found this was not a material factor in the lack of achievement by the pupils in the court-designated schools.

The other items contained in the fourteen points are not causes (e.g., drop out rates and achievement results) or are discussed in other parts of this brief (e.g., neighborhood schools and boundaries).

The resources allocated to the core city schools being at least equal and in many instances greater in quality or quantity, the conclusion of the trial court of "inferiority" in the court-designated schools must rest primarily upon outputs or results rather than inputs or resources. By reason of other factors not within the control of the state, particularly the early childhood deprivations of children from low socio-economic environments, it is erroneous to infer that below average outputs or achievement levels were caused by unequal inputs or resources.

C. ON TWO OTHER GROUNDS THE DISTRICT COURT'S JUDGMENT SHOULD HAVE BEEN REVERSED.

There were two additional reasons for refusing to affirm the district court's conclusion that Fourteenth Amendment rights were being denied to pupils attending the court-designated schools. The court of appeals did not find it necessary to discuss these additional reasons because of the lack of any finding of a causal connection to state action. But these additional deficiencies in the district court's approach to the core city schools should be discussed, we believe, because of their importance to the entire question of equal protection principles as they apply to public education.

The district judge succinctly summarized his methodology and perception of the problem in the post-trial opinion on remedy:

> "[T]he [de facto] segregated core city schools in question were providing an unequal education opportunity to minority groups as evidenced by low achievement and morale. The causes of this inferiority were held to be the segregated condition, together with concentration of minority teachers, low teacher experience and high teacher turnover in each of the schools." 313 F.Supp. 91, A.P. 100a

Indicia are clearly distinguished from causes, in the court's view. Evidence or indicia of "inferior" schools were found to be low achievement and morale; the cause of such "inferiority" was held to be primarily (313 F.Supp. 81, A.P. 83a, 313 F.Supp. 82, A.P. 86a), racial or ethnic concentrations, together with lower teacher experience. Respondents have previously set forth the evidence on concentration of minority teachers, teacher experience and turnover. See Statement, pp. 47-50.

Both the indicia and the cause of what the district court found to be unequal educational opportunity in its designated schools must be questioned.

1. Achievement test scores are not a valid basis for comparing educational opportunity among schools.

Of the two signs or indicia of inferior schools, one, low morale, was the consequence of the other, pupil achievement.[20] Low morale was a combination of (a) relatively high teacher turnover, which produces relatively lower teacher experience (313 F.Supp. 79-80, A.P. 80a-82a), and (b) relatively high pupil dropout rates (at the secondary level) 313 F.Supp. 80, A.P. 83a. In other words, the district court interpreted the tendency of teachers with seniority, under the negotiated agreement with the teachers' bargaining agent, to transfer to other schools, and the tendency of pupils to leave school when legally permitted, as evidence of low morale within the schools involved. But the court evidently attributed these factors to the low pupil achievement in the schools.

Thus, the sole, or at least dominant, sign of an inferior school, in the district court's view, was relatively low median scores, by school, on standardized achievement test scores. We submit that such evidence is not sufficient as a basis for finding a violation of the Fourteenth Amendment.

The results of tests involved in this suit, the Stanford achievement test given in May, 1968, were reported (PX 83, 379) in two different ways. Both displayed the scores of the individual pupils, by school, along a scale. One scale (a percentile chart) compared the scores of the school's pupils against nation-wide scores of pupils at that grade level. The other scale (a grade equivalent chart) compared the pupils'

[20] "Low standards and *consequently* low morale." 313 F.Supp. 77, A.P. 76a. (emphasis added).

scores against the test publisher's grade equivalent expressed by the grade number followed by a decimal point and a number expressing the month of the school year.[51]

There were eight different tests in the Stanford battery. Plaintiffs averaged the median grade equivalent scores for the eight tests, by school, and compared these averages with a city-wide average, similarly computed. This analysis showed that in the third grade in 1968, the Denver average median grade equivalent was 3.6. Of the court-designated elementary schools, their average grade equivalent ranged from 2.7 (Mitchell, 70.9% Negro) to 3.4 (Elmwood, 91.6% Spanish surnamed) and averaged 3.0. In other words, the average performance on this test by children in the schools selected by the court was about 6 months behind the city-wide average.

But both the percentile charts and the grade equivalent charts also show the *range* of performance, and these charts show that third grade children at Mitchell, for example, tested as high as 7th grade 5th month in word study skills, and above the 85th percentile, compared with the national performance, in all eight tests, and at the 99th percentile in three of them. This wide range of individual pupil performance in the court-designated schools was virtually the same as in all other schools in the Denver system.

Another comparison made with these test data by the school district was between expected or predicted achievement test performance based on IQ tests given earlier, and the actual achievement test results. This would give the staff and teachers some measure of how well their pupils were performing on the achievement tests in relation to their abilities as measured by the IQ tests. Generally, all Denver school children performed at or above their expectancies. The reports to teachers and parents, accordingly, could

[51]Thus, 3.6 means third grade, sixth month.

speak positively and encouragingly about the results of the pupils' and teachers' efforts. Where results fell short of expectancies, the report said so."[59]

All of this shows, we submit, that pupils in the court-designated schools achieved not only throughout the entire range of performance, but also in accordance with their capabilities as measured by the IQ tests. This does not show denial of opportunity to achieve on a district wide basis.

Recent intensive studies of the Coleman Report (PX 500) reach the same conclusion. Henry S. Dyer, Vice President of the Educational Testing Service, writing on "The Measurement of Educational Opportunity" in the published papers deriving from the Harvard University Faculty Seminar on the Coleman Report[60] criticizes both inputs and outputs as valid measures of educational opportunity. Dyer regards it as a serious fallacy to assume that "any difference in the results constitutes a measure of the degree to which [schools] are unequal."[61] He points to both dropout rates and achievement test scores as the usual measurements of results, and says of the latter:

> "The tendency is to assume that if on a reading test the 6th-grade pupils in a slum school average X points lower than those in a school in white suburbia, then X is the measure of the difference between the two schools in the effectiveness of reading instruction. The case may be quite the

[59]Petitioners do not quote, at page 49 of their brief, the full comment on the Wyatt School tests, which said, "A comparison of these scores with those of pupils tested in 1953 reveals gains at all levels of ability. Several deficiencies have been corrected, and the general position of the more able and average pupils is much stronger. A need is indicated for continued remedial work in the language area. The faculty should be well pleased with these achievements." (PX 379).

[60]Mosteller and Moynihan, *On Equality of Educational Opportunity*, Vintage Books, New York, 1972.

[61]Id, p. 515.

> opposite: the slum school may be *more* effective than the suburban school in upgrading reading competence, especially in light of the deficiencies it has had to overcome. Thus, the pupils' level of performance as they emerge from any phase of the educational system tells nothing in itself about how well the system is functioning. One needs to know, in addition, what the pupils have *gained* during the time they have been under instruction, how much of the gain may be reasonably attributed to the instruction, and how much to factors beyond the reach of the school." (Id, p. 515)

As an advocate for petitioners' position has put it, "Insofar as the [equal educational opportunity] theory relies in part on educational outcomes, especially to prove that either inequality or harm result from disparate inputs, it is suspect."[55] Here, there was no finding of effectively disparate inputs, and the court was left only with a disparity of outcomes—differences in achievement test scores. On such a suspect basis a constitutional violation should not rest.

Dr. Coleman has also published a most enlightening critique of his earlier publications and frankly states it was not intended to and should not be used as forensic evidence in determining constitutional issues.[56] He says:

> "It's probably not appropriate to say on achievement grounds alone that segregated schooling does not provide equality of educational opportunity. There is not sufficient evidence to show that the kind of benefits to lower-class children that arise

[55]Dimond, op. cit., pp. 13, 14.

[56]Coleman on The Coleman Report, Education Researcher, March, 1972, Vol. 1, No. 3, p. 13, published by American Educational Research Association, Wash. D.C.

from a socio-economically heterogeneous or racially heterogeneous school can't also be provided by other means. I don't think a judge can say there is prima facie evidence of inequality in educational opportunity on achievement grounds if there is school segregation. In this sense, I think judges have looked at that study and used the results more strongly than the results warrant.

"I remain uncertain about the appropriate role of social science evidence or statistical evidence in relation to the courts. The concept of evidence by lawyers or judges is very different from the concept of evidence in social science. When results show that certain kinds of attendance patterns provide higher achievement for children from lower socio-economic levels, as our results did, the results ought to *contribute* to the question of whether schools should be integrated, and to the decision of how much effort should be put into school integration. But I don't think that a judicial decision on whether certain school systems are obeying or disobeying the constitution ought to be based on that evidence."

2. *The conclusion that racial or ethnic concentrations are the principal cause of "inferior" schools is not supported by expert opinion relevant to Denver or by any other competent evidence.*

The only expert on this issue called by petitioners at the trial on the merits was Dr. Dan Dodson, professor of education from New York City.[57] Dr. Dodson admittedly knew nothing of the problems in the Denver schools (A. 1507a) nor of the minority groups in Denver. A. 1506a. He testi-

[57] It was later, at the hearing on the question of remedy, that the court heard the other educational experts.

fied at length as to generalities of achievement as related to race and socio-economic class. The trial judge pressed Dr. Dodson for his "opinion as to causation." A. 1472a. Dr. Dodson answered by saying that a school has a problem of adjusting its programs to minority children, and then drifted off into an abstract account of negative community attitudes and low morale in predominantly minority schools. A. 1473a. He did not directly answer the question until cross-examination, when he finally stated:

> "Q. Now, isn't it also true that in your study you found that race is not causally related to the achievement level in these minority schools? A. That's right." (A. 1508a)

The court also gathered from Dr. Dodson that the "Negro community" typically regards a majority-Negro school as inferior. 313 F.Supp. 81, A.P. 84a. But the professor was not speaking of Denver, where, in an opinion survey conducted for the Special Study Committee in 1963, only 4% of Negro parents believed that minority children have less opportunity for a good education in Denver's schools. PX 20, Appendix 38, Table 2.

The trial court noted that the two study committees had recognized the possibility that racial and ethnic concentrations might be a causative factor, and that the school board had adopted a policy recognizing the desirability of reducing such concentrations. 313 F.Supp. 81, 82, A.P. 85a, 86a. But views and policy goals such as these do not suffice as proof of a proposition upon which educational policy is to be constitutionally mandated by judicial intervention.

The evidence in this case is, in fact, to the contrary. The significant cause of poor achievement test performance, the experts agreed, was socio-economic class, not race. In addition to Dr. Dodson's admission to that effect (A. 1508a),

Dr. James S. Coleman of Johns Hopkins University, author of the celebrated Coleman Report on Equality of Educational Opportunity testified:

> "The Court: Well they say it's the middle class—upper middle class influence that produces most significantly; whether the students are Negro or whatever they are.
> "The Witness: Yes, sir. That's certainly the evidence of our survey." (A. 1535a, 1536a)

And later:

> "Q. And, regardless of the race, if it's a low socio-economic homogeneous neighborhood, you find low achievement? A. Yes.
>
> "Q. And that is true regardless of the racial composition of the school, if it's a low socio-economic area? A. Yes."
>
> "The Court: Well, that's a problem for the legislators or the school board; not for the Court." (A. 1558a)

In short, if inferior schools are not caused by racial or ethnic concentrations, and if, further, as both courts below have held, such concentrations were not caused by the school district, then the court of appeals was surely correct in refusing to find a violation of the equal protection clause of the Fourteenth Amendment.

D. EDUCATIONAL DIFFICULTIES ARISING FROM CIRCUMSTANCES NOT CAUSED BY STATE ACTION ARE NOT WITHIN THE POWER OF FEDERAL COURTS TO RESOLVE. THE REMEDY FOR EDUCATIONAL PROBLEMS AS DISTINCT FROM CONSTITUTIONAL VIOLATIONS MUST BE LEFT TO THE PLENARY POWERS OF SCHOOL AUTHORITIES.

1. Absent a constitutional violation, there is no authority for a court to order a remedy.

The court of appeals held that federal courts are without the power to play a role in correcting educational deficiencies arising from circumstances outside the ambit of state action 445 F.2d 1004, A.P. 144a, 145a. This holding is soundly based not only on the decisions of four circuit courts which have considered cases of racial imbalance not caused by state action (*Downs*, *Deal*, *Barksdale*, and *Bell* supra), but also on this Court's decision in *Swann:*

> ". . . [I]t is important to remember that judicial powers may be exercised only on the basis of a constitutional violation. Remedial judicial authority does not put judges automatically in the shoes of school authorities whose powers are plenary. Judicial authority enters only when local authority defaults.
>
> "School authorities are traditionally charged with broad power to formulate and implement educational policy and might well conclude, for example, that in order to prepare students to live in a pluralistic society each school should have a prescribed ratio of Negro to white students reflecting the proportion for the district as a whole. To do this as an educational policy is within the

broad discretionary powers of school authorities; absent a finding of a constitutional violation, however, that would not be within the authority of a federal court." (402 U.S. 1, at 16)

2. *The scope of the remedy is limited by the Civil Rights Act of 1964 as to "de facto segregation".*

The district court recognized that it could not, under existing law, remedy self-imposed "segregation" resulting from housing patterns. Nevertheless, it determined that racial imbalance beyond an arbitrary standard set by the court created a denial of equal educational opportunity. The court's remedy for such denial was reduction of the minority pupil population in each affected school to a point below 50%. This necessarily required reassignment of pupils based on race alone. It also necessarily required, given the geography and housing patterns in Denver, extensive busing to accomplish such reassignment.

Thus, the trial court's remedy was contrary to the various Circuit Court holdings previously cited herein that *de facto* segregation or racial imbalance cannot be judicially changed. In adopting such a remedy, the district court imposed its notions of social and educational policy upon a coordinate branch of government. This was a usurpation of the powers properly delegated by the people of Colorado to the defendant Board of Education. It also violated congressional policy as expressed in Title IV of the Civil Rights Act of 1964, 42 U.S.C. §2000c. This Court, in *Swann*, recognized and commented on this matter as follows:

"The legislative history of Title IV indicates that Congress was concerned that the Act might be read as creating a right of action under the Four-

> teenth Amendment in the situation of so-called 'de facto segregation,' where racial imbalance exists in the schools but with no showing that this was brought about by discriminatory action of state authorities." (401 U.S. 1, at 17, 18)

The Civil Rights Act of 1964 treats school desegregation in detail and ultimately determines that *de facto* or voluntary segregation shall not be treated by the courts. The Act provides that nothing contained therein "shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school district to another in order to achieve such racial balance or otherwise enlarge the existing power of the court to insure compliance with constitutional standards. 42 U.S.C. §2000c-6(a)(2).

Since the district court admittedly was not remedying *de jure* segregation in this portion of its order, it was in violation of clear Congressional policy.

3. The Denver school district has constantly been searching for better means to improve educational results.

The Special Study Committee had informed the Denver school board, in 1964, that it was a "real possibility" that "concentrations of races and ethnic groups because of housing patterns" "may result in educational inequalities." (PX 20, A. 2003a) The board promptly acted upon the committee's report and adopted, effective May 6, 1964, Policy 5100, which recognized two important principles: (1) that the neighborhood school principle should be adapted in order to reduce concentrations of minority racial and ethnic groups in the schools,[88] and (2) that the educational pro-

[88] "The continuation of neighborhood schools has resulted in the concentration of some minority racial and ethnic groups in some schools. Reduction of such concentration and the establishment of more heterogeneous or diverse groups in schools is desirable to achieve equality

gram should be tailored to the individual educational needs of the children."[89]

To implement this policy, and in further responding to the committee recommendations, the board also established pupil assignment guidelines which aimed for maximum racial and ethnic heterogeneity consistent with the neighborhood school policy (PX 102), and established the optional pupil transfer plan recommended by the committee (Howard L. Johnson, A. 299a) known as Limited Open Enrollment (LOE).

The 1964 LOE plan, was used mainly and increasingly by Negroes (DX CG, A. 2126a) as a means to transfer to other schools. It was later, in 1968, changed to make it more effective in furthering racial and ethnic heterogeneity in the schools. The improved plan, Voluntary Open Enrollment (VOE), provided for majority-to-minority transfers with transportation provided. The VOE plan was given wide publicity (PX 10, A. 2112a) and was explained in detail to parents (DX J, A. 2156a). By the fall of 1969, in its second semester of operation, nearly 9% of Denver's Negro elementary pupils chose VOE as a means to transfer to a school where they would be in a minority.[90]

The potential of a voluntary transfer plan such as Denver's with its majority-to-minority limitation and with transportation provided should not be underestimated as an effec-

---

of educational opportunity. This does not mean the abandonment of the neighborhood school principle, but rather the incorporation of changes or adaptations which result in a more diverse or heterogeneous racial and ethnic school population, both for pupils and for school employees." (PX 1, A. 1989a, 1990a).

[89] "Because individuals differ greatly in their backgrounds, their capacities, and their motivations, equality of educational opportunity must not be conceived as the same opportunity for each person; that is, for example, as schools with the same curriculum, guidance, and instruction." (PX 1, A. 1989a).

[90] DX VA, A. 2160a, last page (51), and PX S-1, A. 2166a, showing 728 of Denver's 8,250 Negro elementary pupils participating.

tive mechanism for reducing racial imbalance while giving due recognition to individual choice and perception of educational need. Denver's plan should not be confused with freedom of choice plans which have been used elsewhere as a device to impede the disestablishment of dual systems.

In addition to the opportunity and encouragement afforded to Negro and Spanish-surnamed pupils to transfer to schools where they would no longer be in a majority, the school district reaffirmed, in Resolution 1562 adopted May 6, 1970 (A. 1709a), its intention to try to find answers to educational difficulties shown by achievement test results. The text of the resolution is set forth as an appendix to the opinion of the court of appeals. 445 F.2d 1010, A.P. 156a-158a.

4. Even if the courts had the power to intervene in solving the educational problems and the competence to prescribe effective educational measures, the remedy urged by petitioners—racial and ethnic balancing—would not meet the tests of either practical effectiveness or recognition of competing values.

Given the district court's theory that racial or ethnic imbalance causes poor schools, the remedy of racial balancing had at least a surface appearance of consistency. But the experts at the hearing on remedy brought the proceedings about on "a new tack." After hearing Dr. Coleman explain that the social class composition of the school, not its racial makeup, was the operative factor, the district judge caught sight of a new explanation for poor academic achievement: "[I]t's not the schools at all, it's the students and their economic and cultural deprivation that makes the educational experience one that is non-competitive." (A. 1546a)

Dr. Coleman's testimony was consistent with the conclusion of the Coleman Report itself:

> "[T]he apparent beneficial effect of a student body with a high proportion of white students comes not from racial composition per se, but from the better educational background and higher educational aspirations that are, on the average found among white students." (PX 500, p. 307)

Dr. Neal Sullivan, testifying mainly from his experience as a school administrator[81] felt that each city should develop its own plan. A. 1589a. He described his experience in Berkeley, California, where a racial balancing plan was adopted as a matter of educational policy. But he felt that in a large city like Boston (with 100,000 public school pupils, comparable to Denver?) the solution to school problems would be the construction of large educational parks with massive state financial aid. A. 1565a. He had no knowledge regarding the Denver school system and could offer no prescription tailored for Denver.

Dr. Robert O'Reilly, who likewise knew nothing about Denver, was called by plaintiffs mainly to give his opinion that compensatory educational programs, as tried in various places in the country, were not significantly effective in raising the scholastic achievement of minority children. A. 1928a. He described such programs as merely increasing the educational inputs, and stated that "[t]here is no indication that these [programs] would necessarily work in an integrated setting." A. 1929a, 1930a. He was utterly unable to suggest any educational program to help minority pupil achievement beyond mere racial balancing. A. 1931a-1934a. And the most he could say for racial balancing was that "[I]t can help." A. 1935a.

Both Dr. Sullivan and Dr. O'Reilly agreed with Dr. Cole-

[81] "School administrators typically think what they're doing is great." O'Reilly, A. 1956a.

man that they were talking about socio-economic balancing, not necessarily racial balancing (A. 1599a, A. 1950a), although Dr. O'Reilly (who had never previously studied or visited Denver, A. 1948a), felt, from talking with others, that there was a correlation between race and social class in Denver (A. 1947a), so that racial and socio-economic balance would be the same thing.

In any case, the Coleman Report, as more recently studied, does not support the conclusion that racial or socio-economic balancing would have significant educational effects.[63] Dr. Thomas F. Pettigrew[64] and others, in one of the papers from the Harvard Seminar on the Coleman Report[65] concludes that:

> "Our findings on the school racial composition issue, then, are mixed . . . the initial *Equality of Educational Opportunity* survey overstressed the impact of school social class. . . . When the issue is probed at grade 6, a small independent effect on schools' racial composition appeared, but *its significance for educational policy seems slight.*" (pp. 351, 351) (emphasis added)

With such doubt as to the educational efficacy of racial or ethnic balancing, it seems fair to raise the question of competing social values which are diminished by any mandatory plan of pupil assignment by racial or ethnic classification.

---

[63]See Coleman on the Coleman Report, pp. 118, 119, supra. A current analysis of race and achievement describes several studies which cast doubt upon the theory that racial balance will improve achievement of minority students. D. Armor, *The Evidence on Busing*, The Public Interest, No. 28, Summer 1972, p. 90.

[64]The principal author of *Racial Isolation in the Public School*, (PX 27).

[65]"Race and the Outcomes of Schooling," in *On Equality of Educational Opportunity*, supra note 53.

Beyond the obvious values of a neighborhood pupil assignment plan which includes administrative efficiency, safety, and convenience, there is the matter of the associational values and desires of the pupils and their parents.

The district judge expressed doubt that the Hispano[65] community in Denver would accept reassignment of their children outside their neighborhoods. A. 1515a, 1516a. This view is confirmed in an article by Mr. Alan Exelrod, one of the attorneys for Amicus Curiae, Mexican-American Legal Defense and Educational Fund, in which he reports that "in large urban areas, such as . . . Denver . . . there is little desire for integration. The leaders of these 'barrios' resist education policies which undermine community control of schools and retard the enactment of bilingual/bicultural education."[66]

Another value is the one just suggested—preserving or developing a measure of localized control of school affairs. One certain consequence of the remedy as was decreed by the district court is the ever-increasing centralization and enlargement of school administrative units, with corresponding loss of community control and individual self-determination.[67]

Finally, there is the matter of balancing the interests of all concerned. The court of appeals for the 1st Circuit after holding that the Constitution does not require racial balanc-

[65]"Hispano" is used in Denver because most Spanish origin persons there come from rural New Mexico and southern Colorado (PX 20, A. 2002a) rather than from Mexico. Dr. Valdes (Pet. Br., p. 5, n. 1) writes, " 'Chicano' is the diminutive of 'Mejicano', and is, therefore, quite restrictive, and can be used only when referring to Mexicans or Mexican-Americans." (*La Luz*, June, 1972, p. 61).

[66]*Inequality in Education*, Center for Law and Education, Harvard University, August 3, 1971, p. 28.

[67]See, generally, A. Bickel, *The Supreme Court and the Idea of Progress*, (1970), esp. pp. 134, 135.

ing in the absence of state-imposed segregation, observed that:

> "When the goal is to equalize educational opportunity for all students, it would be no better to consider the Negro's special interests exclusively than it would be to disregard them completely." *Springfield School Committee v. Barksdale*, 348 F.2d 261, at 264. (1st Cir. 1965)

The problems of modern education are far too complex to yield to simplistic solutions of mathematical racial or ethnic balancing. As plaintiffs' witness, Dr. O'Reilly, said:

> "So, what I'm trying to communicate to you, I guess, is that this is a very unsettled field. There are no hard and fast rules to go on. It's very unlikely that anybody is ever going to come up with a treatment that is going to be generally effective with minority students at all. What has to be done is basically many, many years of experimentation in which we slowly and carefully identify and develop specific programs designed for specific groups, specific minority groups. Because they differ so greatly." (A. 1932a)

The Denver schools will continue to search for ways to improve education for all, while providing maximum choice of school assignment for each pupil consistent with its established policy of maximum feasible racial and ethnic heterogeneity.[40] This process should not be disrupted by the imposition of doubtful policies through judicial intervention without basis in constitutional violation.

The remedy for racial imbalance as adopted by the Denver School Board in May, 1970, and submitted to the district

[40]Resolution 1562, 445 F.2d 1010 A.P. 156a.

court at the hearing on remedies provided for voluntary transfer (VOE) rather than mandatory, with transportation furnished and space guaranteed. This was not a subterfuge as in *Green*, rather it was a bona fide effort by the respondents to meet the suggestions of the district court made at the close of the trial on the merits. It was a proposal by the Board to give each pupil whose race was the majority in his neighborhood school the right to go to any other school where his race would be in the minority.

Even though the pupils in the core city schools were not subjects of state-imposed segregation, such a plan gave each Negro or Hispano student the *right* to transfer to a predominantly Anglo school, thus meeting all constitutional criteria guaranteed by the equal protection clause. With transportation furnished and space guaranteed, every element of equal protection was present in fact as well as in theory.[40]

In contrast to the petitioners' experts who admittedly knew nothing about the Denver school system and could offer no plans tailored to the Denver problems, substantial expert testimony was received from members of the administrative staff of the Denver public schools. These men knew the city, the schools, the faculties, the available resources and allocation thereof and had worked closely with the Board of Education and the two study committees.

It would be beyond the scope of judicial power and certainly beyond anything that this Court has done heretofore to accept the general non-specific opinions of the petitioners' experts and make them "the law of the land" under the guise of enlarging the scope of *Brown I*. Decreeing racial and ethnic balancing as a constitutionally-required remedy

[40]See *McLaurin v. Okla. State Regents*, 339 U.S. 637 (1950): "There is a vast difference — a Constitutional difference — between restrictions imposed by the state which prohibit the intellectual commingling of students, and the refusal of individuals to commingle where the state presents no such bar.

for equalizing educational outcomes in all the schools throughout the Nation would be unsound not only as a matter of educational fact, but also as a matter of constitutional law.

CONCLUSION

Respondents pray that this Court order as follows:

1. That the judgment of the court of appeals reversing that part of the district court judgment pertaining to the core-city or court-designated schools be affirmed.

2. That the Court grant the conditional cross-petition for certiorari in Case No. 71-572; and that the judgment of the court of appeals affirming the judgment of the district court in all other respects be reversed.

Respectfully submitted,

Interest of Amici Curiae	2
Preliminary Statement	7
Summary of Argument	9
Argument	12
I. A State Agency's Forbearance in the Adoption of a Questionable Educational Theory as a Basis for Pupil Assignment Does Not Confer Federal Jurisdiction. The Mission and Structure of Public Schools Throughout the United States Should Not Be Resolved by a Footrace to the Federal Courthouse.	12
A. "Equal educational opportunity" is a slogan which means different things to different people.	14
B. If "inequality" is to be defined as statistical disparity in the median achievement levels of arbitrarily defined groups, there is no clear way to achieve "equality."	16
1. "The smart will teach the dumb."	18
2. "The rich will teach the poor."	23
3. "The black will teach the white."	26
C. The strategies for improvement of pupil achievement which plaintiffs urge be required by the Constitution would create conflicting constitutional duties.	31
D. "Equal educational opportunity" affords no standard for measurement of a school district's performance of its constitutional duty.	42
II. A Neighborhood School Policy Is a Reasonable Legislative Policy. It Is a Reasonable Compromise of Conflicting Demands and Competing Considerations of Educational Policy, a Governmental Function Best Performed by Legislative Bodies and Not by Courts.	45
A. Denver's policy meets expectations long established.	46
B. The neighborhood school appears to enhance academic achievement, and it invites community participation as well.	49

Page

C. A neighborhood school policy excludes no person on account of his race. Its abandonment is more likely than not to contribute to greater geographic separation of racially defined populations, and to an adverse effect upon schools available to the poor and disadvantaged as well. 50

D. At worst, the neighborhood school is a mild form of pluralism, pluralism which is constitutionally protected in its more extreme forms. 54

E. A neighborhood school policy does not disrupt parental expectations either as to the justification for compulsory education or as to choice among schools. 60

III. The Racial Standard for Pupil Assignment Which Plaintiffs Urge Is a Suspect Standard. Moreover, Requiring Its Use in a Multi-Racial and Multi-Ethnic Community May Result in a Denial of Due Process of Law to Some Minority Persons Who Are Not "Negro," "Hispano," "Chicano" or "Anglo" and to Some "Negroes," "Hispanos," "Chicanos" and "Anglos" as Well. 64

A. Racial classification is a suspect if not illegal standard for the assignment by government of benefits and burdens. 64

B. Non-discrimination is not discrimination; nor is it exclusion by race. 67

C. It is reasonable for a school board to balance the harm likely to result from the adoption of a policy of pupil assignment by race against the harm which plaintiffs argue results from treating all pupils alike for the purpose of assignment to schools. 75

IV. Constitutional Standards Against Which a Public Body's Performance of Its Constitutional Duty May Be Measured Should Not Be Abandoned to the Varied Susceptibilities of Lower Courts to Conclusionary Sociological Testimony and Revanchist Essays in American History. 81

Page

A. The remedies decisions in the school desegregation cases offer no ascertainable standard of constitutional duty. 81

B. Shifting to school districts the burden of disproving an intent to segregate merely affords another means to compel the adoption of racial quotas, a means suited chiefly to setting an equivocal constitutional standard against due process of law. 86

C. Even if Denver committed "segregatory acts," equity should not require a district-wide remedy. Experience should preclude such a remedy. 91

In the Supreme Court
OF THE
United States

October Term, 1971

No. 71-507

Wilfred Keyes, et al.,
Petitioners,
(Plaintiffs below),

vs.

School District No. 1, Denver,
Colorado, et al.,
Respondents,
(Defendants below).

BRIEF AMICI CURIAE

On behalf of Robert G. Nelson, Gustav F. Fehlhaber, Patricia Chin, Alfretta Hankins, Mitsuo Murakami, Rose Noe, Marcel G. Ross, Charles Stringer II, Carlos H. Barbano, Adam P. Y. Gee, Frank G. Mastro and Mary D. Garcia in Support of the Position of Respondents

This brief is filed with the written consent of all the parties, pursuant to Rule 42 of the Rules of the Supreme Court of the United States. It is in support of the posi-

tion of the respondents, Denver School District No. 1 et al., that the Denver School District has not discriminated racially among the pupils it serves and should not now be required to do so.

INTEREST OF AMICI CURIAE

Amici curiae are San Franciscans who are, as intervenors, parties in the San Francisco elementary school desegregation case pending before the Court of Appeals for the Ninth Circuit: *David Johnson, et al. v. San Francisco Unified School District, et al.*, Nos. 71-1878, 71-2189; *San Francisco Unified School District, et al., Robert G. Nelson, et al. v. David Johnson, et al.*, Nos. 71-1877, 71-2163; *Guey Heung Lee, et al. v. David Johnson, et al.*, No. 71-2105. On March 1, 1972, the Ninth Circuit set aside the submission of the San Francisco case, stating in its order that the San Francisco case would be set for reargument only after this Court's decision in the case at bar. The Ninth Circuit thus recognized that the case at bar is likely to bear upon the future pupil assignment policy of the San Francisco Unified School District, as it will upon the future pupil assignment policy of Denver School District No. 1.[1]

Robert G. Nelson, Gustav F. Fehlhaber, Patricia Chin, Alfretta Hankins, Mitsuo Murakami, Rose Noe, Marcel G. Ross, Charles Stringer II, Carlos H. Burbano, Adam

---

[1]There is also pending before the Ninth Circuit an appeal by the Oxnard School District (California) from a summary judgment that a neighborhood school policy which does not improve racial balance violates a school district's constitutional duty to balance its schools racially (No. 71-2929); *Soria v. Oxnard School District Board of Trustees* (D.C. C.D.Cal. 1971) 328 F. Supp. 155.

P. Y. Gee, Frank G. Mastro and Mary D. Garcia include persons in each of the four major racial classifications presently used by the San Francisco Unified School District: Spanish speaking/Spanish surname; Negro/Black; Other White; and Asian.[2]

Robert G. Nelson, et al., are filing this brief because of their particular concern for San Francisco's public schools. Robert G. Nelson, et al., are also filing this brief because due process of law to the person—which the Fourteenth Amendment is supposed to protect—cannot be afforded solely by class actions in which the plaintiff class is racially defined (see, e.g., A. 1015-1016; 1515a-1516a). The assumption that one or more members of a racially defined group can be taken as representative of an entire racially defined group was reasonable when this Court was asked in *Brown v. Board of Education* (1954) 347 U.S. 483 to forbid exclusion by race created by mistaken belief in the objective reality, definability and relevance of racial groups. It is not reasonable when this Court is asked, even beyond the context of a remedial decree, to require that a school district act as though such beliefs are not mistaken.

We believe it will be helpful to this Court in fashioning a decision which must have nation-wide application to consider the effect upon another Western urban multiracial school district of the adoption of the theories which

---

[2]San Francisco uses nine "racial" classifications: Spanish speaking and/or Spanish surname; Other White; Negro/Black; Chinese; Japanese; Korean; American Indian; Filipino; Other Non-White. Because of the total uncertainty of the meaning of "Other Non-White" at its core as well as at its parameters, we do not know whether amici curiae include anyone in this classification or not.

the plaintiffs put forth in the case at bar. San Francisco, like Denver, for many years followed a neighborhood school policy. Pupils were included in an elementary school population on the basis of the proximity of their residence to the school. That policy remained substantially unchanged irrespective of the substantial growth proportionately over the years of San Francisco's Negro population and the more recent substantial growth of San Francisco's Chinese and Filipino populations. No pupil was excluded from a school on account of his race. In 1970, only one out of over a hundred San Francisco elementary schools was without a Negro pupil. In that school more pupils than not were of Chinese ancestry. No schools were without Caucasian pupils.

For several years, claimed "de facto segregation" of Negro pupils has been a matter of political controversy in San Francisco. The school case is not the first litigation resulting from the attractions afforded by multi-ethnic San Francisco to a migrating Negro population. Most of the San Francisco elementary schools which in 1971 the United States District Court found to be "identifiably black" (meaning in this instance 47.3 per cent or more "black") drew their pupils from public housing projects in which, on Federal constitutional grounds, the San Francisco Housing Authority was properly forbidden to impose racial quotas approximating the then proportion in San Francisco of "poor" whites and "poor" Negroes which these public housing projects were built to serve (*Banks v. Housing Authority of the City and County of San Francisco* (1953) 120 Cal.App.2d 1, certiorari denied (1954) 347 U.S. 974; see also *Progress Development Corp.*

v. Mitchell (D.C. N.D. Ill. E.D. 1960) 182 F.Supp. 681; *Cooney v. Katzen* (1963) 41 Misc. 236, 245 N.Y. Supp. 2d 548; *Taylor v. Leonard* (1954) 30 N.J. Super. 116, 103 A.2d 632).

In September, 1971, by order of the United States District Court, San Francisco reassigned by race many of its elementary school teachers and its entire elementary school population, about forty-seven thousand pupils from the kindergarten through the sixth grade. Over twenty-five thousand pupils were scheduled by the school district's computer to be bused. Neither the school district's plan nor the District Court's decree included any provision for notice to the pupil of his racial classification, nor any limitation upon the subsequent use by the school district of the pupil racial classifications memorialized in its computer system (cf. Countryman, *The Diminishing Right of Privacy: The Personal Dossier and the Computer* (1971) 49 Texas L.Rev. 837, 847).

San Francisco was given only six weeks to prepare a plan and nine weeks to implement it. The city was divided into seven new attendance zones. By design, racial quotas were to differ from the schools in one zone to the schools in another by as much as thirty per cent of the total number of elementary pupils in the school district. The district-wide percentage of Negro elementary pupils was assumed to be 28.7 per cent.[3] The projected assignments of Negro pupils ranged from 13.9 per cent in one zone to 37.1 per cent in another. In addition to wide variations

[3]The district-wide percentage of "Negro/Black" elementary pupils has recently been reported by the San Francisco Unified School District to be 32.2 per cent as of November 12, 1971.

in racial quotas, the class sizes and special services projected varied substantially from the schools in one zone to those in another. These disparities raised the issues in *Wright v. Council of City of Emporia* (1972) ___ S.Ct. ___; *United States v. Scotland Neck City Board of Education* (1972) ___ S.Ct. ___; *Serrano v. Priest* (1971) 5 Cal.3d 584; and (to the extent it embraced the same issues as *Serrano*) *Plessy v. Ferguson* (1896) 163 U.S. 537. These issues are before the Ninth Circuit in the appeals in the San Francisco case. Before the District Court and on appeal, Robert G. Nelson, et al., supported the only remedy proffered which was consistent with this Court's remedies decisions, the pupil reassignment plan proposed by the NAACP modified only to exclude the many elementary schools which the District Court found to be "integrated."

Except for the possible self-executing application of Title VIII, Section 803, of the *Education Amendments of 1972*, the District Court's order remains in effect in San Francisco. Motions by the school district and by Robert G. Nelson et al., for a stay were denied on July 7, 1971, and on August 10, 1971. Motions for a stay, or in the alternative for temporary modification of the order to perpetuate the status quo and thereby free those elementary pupils who remain in the system from the threat of reassignment to rebalance San Francisco's schools again in September, 1972, were denied in March, 1972.

PRELIMINARY STATEMENT

In *Wright v. Council of City of Emporia* (1972) ____ S.Ct. ____, *United States v. Scotland Neck City Board of Education* (1972) ____ S.Ct.____, *Swann v. Charlotte-Mecklenburg Board of Education* (1971) 402 U.S. 1, and *Green v. County School Board of New Kent County* (1968) 391 U.S. 430, this Court carefully preserved the distinction between rights and remedies in the school desegregation cases. This Court thereby preserved an aura of impermanence to the racial quotas associated with the administration of the remedies which this Court has allowed. Rights and remedies cannot be neatly packaged for separate impact upon children. To some, therefore, a universal right is inferred from remedies to date unlimited.

With an eye upon the remedy it appears that the harm to which *Brown* was addressed was racial imbalance, for a remedy may reasonably be presumed to be related directly to the harm to be offset. With an eye upon the absence of any period of limitations upon liability for wrongdoing, it appears that wrongdoing has become irrelevant, for one may not conclude lightly that the medieval doctrine of attaint of the blood has come back into fashion. "Segregation" has in this manner become synonymous with "racial imbalance." To some there appears to be no difference between segregation resulting from laws or from racially discriminatory acts by public officials, and racial imbalance resulting from demographic patterns and the choice of persons planning their lives within racially neutral governmental policy. Since racially neutral governmental policy sometimes does not provide racial balance, it follows that a racially neu-

tral policy must in all circumstances give way. A desire for symmetry among school districts has become a substitute for reasoned policy. A desire for educational reform has become an excuse for contradictory demands upon local school districts (A. 1595a). Whether or not a school district's pupil assignment policies exclude pupils by race, it becomes "unconstitutional" for a school district to be color blind. We are thus brought full circle. We are brought, for "benign" purposes, to the very place we were prior to the decisions in *Brown v. Board of Education* (1954) 347 U.S. 483 and *Brown v. Board of Education* (1955) 349 U.S. 294. We are brought to that place at a time of clamor from all directions for reform of the institution of public education.

The case at bar will tell whether a "* * * nonracial system of public education * * * is the ultimate end to be brought about * * *"[4] or whether means have redefined the end. The case at bar will also tell whether the Constitution will allow educational reform to include reasonable local resolution of questions of educational policy. Against a school board's legislative decisions not based upon race, plaintiffs propose that to achieve educational reform they should have been. Plaintiffs in effect propose that to achieve educational reform this Court require pupil assignment by race in every public school in the nation. Such a rule, irrespective of its purpose, would undermine the chief principle upon which court-ordered desegregation must rest, constitutionally, morally, and pragmatically: one may not because of his race be

[4] *Green v. County School Board of New Kent County* (1968) 391 U.S. 430, 436.

COPY BOUND CLOSE IN CENTER

treated differently than another by law or by public officials. Such a rule seeks to foreclose natural racial and ethnic diversity among public schools.

The Constitution allows no such rule. Sensibly, it assigns to all arms of government limited powers. It assigns to legislative bodies controversies not justiciable. It assigns to Federal government enumerated powers. It assigns to this Court the role of arbiter, between the person and government whatever its branch, and among the branches of government whether state or Federal. The case at bar, accordingly, requires not alone that this Court weigh the right of the person that government as well as others treat him as a person and not as a fungible member of an arbitrarily defined group. It requires also that this Court weigh the claims of local school districts that they can best determine whether or in what manner the assignment of pupils by race to improve racial balance will further or impede the education of the individuals committed by law to their charge.

The issue, then, in the case at bar is whether all school districts must assign their pupils to schools by race for the purpose of balancing schools and classrooms racially. It will be soon enough if such a case is presented to decide whether or in what circumstances a school district may do so if it chooses.

SUMMARY OF ARGUMENT

"* * * [I]n what is called a free society all are equal as citizens without proof. Therefore, once a people chooses a free constitution and recognizes it as the

law of the land, there is nothing to prove or disprove about races as such, there is no issue to debate except the honest administration of the law" (Barzun, *Race: A Study In Superstition* (Harper & Row, N.Y., 1937 and 1965), Pref. to 2d Ed. at p. xii).

The plenary authority of school districts which do not distinguish among their pupils by race affords a road to racial integration more likely to consolidate the success already gained than that afforded by extending court-ordered racial quotas throughout the nation. School districts which have consistently pursued even-handed pupil assignment policies, school districts which have in doing so included Negro pupils in seventy-eight out of ninety-two elementary schools (Denver—A. 2038a) and in ninety-nine out of one hundred elementary schools (San Francisco), and school districts which have achieved substantial numbers of stable racially integrated elementary schools should not now be told that the Constitution requires that they orient racially all pupil assignment decisions.

The duty of a school district is to provide the best educational services it can to children within the district without discrimination against any child because of his race. That duty has been fulfilled by the Denver School District both in its "core area" schools and in its four so-called "resolution schools." The only "harm" which the Denver School District has done in either instance is to treat all pupils alike, irrespective of their race. The Denver School District and all others who pursue reasonable methods of pupil assignment which do not distinguish among pupils by race should be allowed to resolve for

themselves competing considerations of educational policy. The governing board of the Denver School District is best able to weigh for Denver the competing policy considerations which must bear upon legislative decisions.

To impose upon a school district a constitutional duty to balance its schools racially would impose upon all school districts a duty to classify pupils racially for the purpose of school and classroom assignment irrespective of its effect upon educational opportunity. To impose such a duty upon school districts would serve to undermine the power of local school boards in a manner which would weaken further the accountability of the other elements of the public school system to local governing boards and to those they serve. Moreover, such use by school districts of racial classifications would require that some school districts violate the Fourteenth Amendment, for such use of racial classifications may violate both due process and equal protection of the law. A racial quota is no less a racial quota by virtue of calling it something else, by allowing one quota one place and a different one elsewhere, or by changing it annually.

At best, the use of racial classification to assign pupils is required only by virtue of interim decisions of this Court, adopted as judicially supervised "equitable remedies" for deliberate exclusion of Negro pupils by the state or the school district. It should be required in no other circumstances without proof of (a) the definability of the group sought to be established or maintained as a legally cognizable "racial" group; (b) the fungibility of the members of the group as subjects of discrimination; and (c) the utility of the racial classification as a cor-

rective measure. That proof must be sufficient to overcome the presumption that racial classification is arbitrary and capricious, and is not the sort of classification which will further any reasonable legislative purpose. No such proof appears in the case at bar.

ARGUMENT

I. A STATE AGENCY'S FORBEARANCE IN THE ADOPTION OF A QUESTIONABLE EDUCATIONAL THEORY AS A BASIS FOR PUPIL ASSIGNMENT DOES NOT CONFER FEDERAL JURISDICTION. THE MISSION AND STRUCTURE OF PUBLIC SCHOOLS THROUGHOUT THE UNITED STATES SHOULD NOT BE RESOLVED BY A FOOTRACE TO THE FEDERAL COURTHOUSE.

The central question at the outset and at the end is whether it is the responsibility of the Denver School District to balance Denver's schools racially. The plaintiffs' argument that the Denver School District has, by allowing minority-dominated schools to exist, denied to plaintiffs equal protection of the law assumes that a school district has a constitutional duty to balance its schools racially. It thereby begs the question. School districts faced with conflicting demands—demands often racially oriented and often pressed by contentious and conflicting factions within a single racially defined group (cf. A. 945A)—cannot reasonably be presumed to be motivated by invidious racial discrimination because they adhere to even-handed policies. Obviously, "no State may effectively abdicate its [constitutional] responsibilities by either ignoring them or by merely failing to discharge them whatever the motive may be" (*Burton v. Wilmington Parking Authority* (1961)

365 U.S. 715, 725; Pl.Br., p. 114). But school boards which sense some complexity in educational issues, school boards required to resolve not only competing policy considerations but conflicting demands, cannot reasonably be charged with malignant neglect of duty merely because they can seldom satisfy everyone and can never satisfy some.

School districts are not like the Alabama police officer who "would not lift a finger" to protect freedom riders (*United States v. U.S. Klans, Knights of Ku Klux Klan, Inc.* (D.C.M.D.Ala. N.D. 1961) 194 F.Supp. 897, 901). The responsibility of states to maintain order is plain. The governance of a school district is seldom as simple as police protection against organized violence is at least assumed to be. We would likely discover that affording police protection is no simple matter either if we were to start with the conclusion that New York's finest are uniformly inferior to the village constable by virtue of notably different crime rates with which each must contend. That is in effect the approach which plaintiffs take to public education in general and to Denver's schools in particular. From the existence of racial imbalance, plaintiffs conclude that Denver's educational policies and decisions have been racially discriminatory, irrespective of all evidence to the contrary. From the existence of "unequal" educational "outcomes" measured by arbitrarily defined groups, plaintiffs conclude that they are being denied an "equal educational opportunity."

A. "Equal educational opportunity" is a slogan which means different things to different people.

Every person is entitled to equal protection of the law. In education, this principle has been translated into a demand for "equal educational opportunity." "Equal educational opportunity" relates to a process taking place in school buildings. Beyond that, there is little consensus (see Gordon, *Toward Defining Equality of Educational Opportunity*, pp. 423, 427 et seq. in Mosteller and Moynihan, *On Equality of Educational Opportunity* (Vintage Books, N.Y., 1972); see also Silberman, *Crisis in the Classroom* (Random House, N.Y., 1970) passim). The classical notion of the mid-nineteenth century, with which the first compulsory education laws were introduced, was that the state is obliged through its educational system to "restrain the inherent savagery of children," and to mold a character acceptable to that part of the adult world able politically to establish community standards (Katz, M., *The Irony of Early School Reform* (Harv. Univ. Press, 1968) pp. 117, et seq.). The modern notion was that the state should provide a school building and incidental supplies with teachers equipped to impart literary and mathematical skills which the pupil might or might not learn (see Dewey, *Intelligence in the Modern World* (Mod. Lib., N.Y., 1939) pp. 683-687). Although a shift in emphasis from the school to the child during the modern period resulted in changes in teaching method, the object remained to maximize individual potential (see Cremin, *The Transformation of the School* (Alfred A. Knopf, N.Y., 1961) pp. 104, 201-202). Everyone had an "opportunity" to learn. If the hardware was equal, the opportunity was equal. No one was surprised that out-

comes were different because it has long been believed that people have different talents, aptitudes and interests.

This unsophisticated modern notion of "equal educational opportunity" was largely eclipsed by the publication in 1966 of an expensive study commissioned by Congress: Coleman, *Equality of Educational Opportunity*, U.S. Dept. of Health, Educ. & Welfare, U.S. Gov't. Printing Office, 1966.[5] The Civil Rights Act of 1964 directed the U.S. Office of Education to make a survey and report "concerning the lack of availability of equal educational opportunities for individuals by reason of race, color, religion or national origin in public educational institutions * * *." A lack assumed is a lack predictably found. But the lack found was not the sort expected (Mosteller and Moynihan, *On Equality of Educational Opportunity* (Vintage Books, N.Y., 1972) pp. 8-12; 117-119). Prior to the Coleman Report, it was believed that schools which Negro children attended would prove to have inferior facilities. Coleman found this not to be the case (Mosteller, op. cit. supra, pp. 8-12). Further, the range of performance within each school was greater than school-to-school variations, at all grade levels, for all racial and ethnic groups (Coleman Report, p. 296; cf. A. 626a). From Coleman's findings, one could reasonably conclude that no one was being shortchanged by the nation's public school system, at least within large geographic regions, and that everyone was being afforded an opportunity to maximize whatever academic potential he brought to school with him (see Mosteller, op. cit. supra, pp. 11-12).

---

[5]We shall throughout this brief refer to this publication by its common name, the Coleman Report.

The Coleman Report, however, furnished a toehold for redefining "equal educational opportunity" (see Moynihan, *Sources of Resistance to the Coleman Report*, in *Equality of Educational Opportunity* (Harv. Univ. Press, 1969) p. 25 et seq.). In the school districts studied (which did not include Denver—A. 1561a-1562a) a statistical disparity was found between the median test scores of Negro pupils and the median test scores of white pupils (Coleman Report, pp. 20-21). Since the samples of Negroes studied did not perform as well on the average as the samples of whites on the particular standardized tests provided, an educational lack was assumed to be the cause. "Equal educational opportunity" could now be redefined as educational "outcomes" by racially defined groups. Disparity in the median achievement levels of Negroes and whites on public school achievement tests could now be used to establish group "inequality," contrary to the direction of the Civil Rights Act of 1964 and contrary to the requirements of the Fourteenth Amendment.

B. If "inequality" is to be defined as statistical disparity in the median achievement levels of arbitrarily defined groups, there is no clear way to achieve "equality."

The implication for sensible policy of the Coleman Report redefinition of equal educational opportunity is not at all clear. Perhaps the solution lies in giving new standardized tests to demonstrate group equality. See Mayer, *The Schools* (Harper & Bros., N.Y., 1961) at page 112 for an account of the construction of tests in Rockford, Illinois, which would ensure that middle-class children will *not* do better than lower-class children. Perhaps, on the other hand, Dr. Coleman's standardized tests

are themselves to become required by the Constitution so that the "inequality" of slum children may be preserved.

"There are two ways * * * of looking at the [Coleman Report] and its aftermath. It can, in effect, be judged a worthy enterprise but so flawed in its execution as to be of no real use. . . . This is the view of Henry M. Levin . . . : 'For a piece of large-scale research, there are big portions of data that are worthwhile and salvageable. But there is absolutely nothing in the report to support policy decisions. Its social value is zero.' An alternative view would hold that some findings . . . offer policy makers important information in some areas and point to new questions requiring investigation in others" (Mosteller, op. cit. supra, at pp. 43, 44).

"One of the principal weaknesses of the Coleman Report is that it failed to put sufficient emphasis on the fact that its findings, being based only on cross-sectional data, could be regarded as no more than highly tentative hypotheses and therefore highly inadequate grounds for any firm decisions about the future direction that American education ought to take" (Mosteller, op. cit. supra, pp. 405-06). The central problem in the use of the Coleman Report for policy decisions is that Coleman collected statistics only over a brief period. Dr. Coleman was careful to point out in his testimony in this case that his findings at best described only static, existing, correlations (A. 1542a). To consider all of Coleman's correlations as causation factors would result in bizarre, if not unconstitutional, effects. Cafeterias, for example, have a negative correlation with achievement scores. The more there are the worse pupils do (Coleman Report, pp. 9-12). Yet, presumably, no one

would argue that taking cafeterias out of predominantly Negro schools would improve the educational opportunity of Negro pupils.

1. "The smart will teach the dumb."

The District Court below concluded that "it is now clear that the quality and effectiveness of the education process is dependent on the presence within the classroom of knowledgeable fellow students" (App. to Pet. for certiorari, 113a). Perhaps reflecting his earlier preoccupation with peer-group relationships (Coleman, *The Adolescent Society* (Free Press of Glencoe, N.Y., 1961)), Dr. Coleman testified below that "what was the most related to the performance were the characteristics of other students" (A. 1532a). "What that means in effect is that, if the inference is correct, is that a child from a linguistically impoverished background will be most affected by a school situation which has a—which is more linguistic, particularly the rich or different educated environment" (A. 1543a). The middle-class was credited universally with "a majority effect" (A. 1535a), and the mechanism was that of necessity: "I have often used the analogy of an English-speaking child attending a school in which all the children spoke French. • • • [H]e would very quickly come to learn French; not through anything other than the fact of being confronted every minute of the day with the necessity for communicating with those students" (A. 1555a). This theory has obvious limitations in situations and in school districts in which the middle-class does not predominate. Dr. Sullivan had a different picture of the hoped-for improvement in achievement: "But when [the Negro child] came home from the white school and when

he was going back the next day to compete with whitey he started to do his homework * * * (A. 1571a). Another view is embodied in the work of Irwin Katz, who found that Negroes perform best in interracial situations free of social and failure threat, moderately well in all-Negro situations, and worst in interracial situations characterized by social and failure threat (Katz, I., *Review of Evidence Relating to Effects of Desegregation on the Intellectual Performance of Negroes* (1964) 19 Amer. Psychologist 391).

No one presently knows whether the statistically significant median Negro "pupil" will act like the cooperative model projected by Dr. Coleman, the racially-hostile model projected by Dr. Sullivan or the more varied model projected by Dr. Katz. No one, therefore, knows whether or in what circumstances the model will raise or lower his achievement score so as to reduce or exacerbate "inequality of educational opportunity" as redefined by Coleman. By virtue of its single-shot nature, the Coleman Report does not even offer much of a clue. The indications from one study of two hundred sixty-six children are that modest gains in I.Q. scores took place in grades one through four when children were bused from slum schools into suburban schools, *with not more than three bused children* placed in the suburban classroom (see report on Hartford, Conn., Project Concern in Mosteller, op. cit. supra, pp. 408-409). One study of one thousand four hundred ninth graders in Pittsburgh suggests that "desegregation" appears to elevate achievement and lower educational aspirations. One explanation for this result is that majority-white schools discourage high educational aspirations among Negro pupils (Mosteller, op. cit. supra,

pp. 363-364; see also DuBois, *The Autobiography of W.E.B. DuBois* (Int'l. Publishers, N.Y., 1968) pp. 101, 230-231, and Pl.Br., at pp. 33-34). Another explanation, put forward by Irwin Katz, is that integration benefits learning among Negro children by "lowering their aspirations to more effective and realistic levels" (Mosteller, op. cit. supra, p. 364).

A recent article by David J. Armor describes several studies which cast further doubt upon the speculation that racial balance will improve the achievement of Negro pupils. The studies described by Armor were, moreover, "longitudinal" studies. Unlike the Coleman Report, they compared groups of pupils over a span of time (Armor, *The Evidence on Busing* (1972) 28 The Public Interest 90).

In trying to project from static to dynamic situations, the road is seldom plain. Coleman's major speculation was that "attributes of other students account for far more variation in the achievement of minority group children than do any attributes of school facilities and slightly more than do attributes of staff" (Coleman Report, p. 302). The table upon which this speculation is based shows an exception: At grade 6, white Northern children show a greater percentage variance in verbal achievement accounted for by student body quality than do Northern Negroes, an exception to the balance of the table (Ibid. p. 303). This exception clouds Coleman's speculation that "minority" children are more affected than others by the attributes of their classmates. It would, however, if race were pertinent and Coleman's methodology were sound, establish that the presence of Northern Negro classmates

sometimes affects adversely the achievement of Northern white children, whereas the presence of white classmates seldom benefits Northern Negro children. For a painstaking review of the possible results and theoretical underpinnings of desegregation strategy, see Goodman, *De Facto School Segregation: A Constitutional and Empirical Analysis* (1972) 60 Cal.L.Rev. 275, 408-435.

Projection from static correlations to dynamic situations is not the only weakness in the use of the Coleman Report for policy decisions. Coleman did not correlate his test performance data with predominantly white or predominantly black schools. David J. Armor reanalyzed the Coleman data by breaking Coleman's samples into predominantly black and predominantly white schools. Armor found that according to Coleman's data the average white in a predominantly white school consistently had a higher average verbal achievement score than the average black in the same school, and that the average black in predominantly black schools had an average verbal achievement score higher than the average white in those schools (Mosteller, op. sit. supra, pp. 197, 198, 229). Could it be that most Negroes, like anyone else, are most comfortable, secure and able to achieve well in situations in which they are in the majority? See Bettelheim and Janowitz, *Social Change and Prejudice* (Free Press of Glencoe, N.Y., (1964) p. 87.

The Coleman Report, as well as Dr. Coleman's testimony below, generalized from the measurement of populations. Neither a mean nor a median achievement level demonstrates much about the academic performance

within the populations compared.[6] Comparison of the median of almost any population classification with another will show a disparate result. In 1904, Max Weber postulated that the Protestant ethos had a great influence on the development of Western civilization (Weber, *Die Prostestantiche Ethik und der Geist des Kapitalismus,* 20 Arch. Sozialwiss u. Sozialpolitik 1-54 (1904); 21 Arch. Sozialwiss u. Sozialpolitik 1-110 (1905); see also Tawney, *Religion and the Rise of Capitalism* (Harcourt, Brace & Co., N.Y. 1926)). Efforts to substantiate this thesis continue to the present day, with the current results being that Jewish males possess a high achievement motivation at all socio-economic levels, Catholics the next highest achievement motivation and Protestants the least (see Heckhausen, *The Anatomy of Achievement Motivation* (Academic Press, N.Y., 1967) pp. 31, 160-161). The Civil Rights Act of 1964 mentioned religion as well as race. It is fortunate that Dr. Coleman disregarded both the current research into the effect of religious affiliation and the language of the Civil Rights Act of 1964 and did not classify his samples by religious affiliation.

Dr. Coleman's invidious statistical comparison of one racially defined group with another is highly suspect. It is firmly in the tradition of the measurement of personal traits for the purpose of justifying racial classifications. In 1764, for example, Daubenton was measuring in degrees the position of the head on the top of the spinal column and correlating the measure of that angle with the

---

[6]Coleman sometimes used "mean," sometimes "median" and sometimes "average."

"amount of will power" in the several races (Barzun, op. cit. supra, at p. 35). Studies comparing the intelligence, temperament, biological "strength" and "morality" of the several races continue to the present day (see Simpson and Yinger, *Racial and Cultural Minorities* (3rd ed.) (Harper & Row, N.Y., 1965) pp. 45-47). Even if a disparate median level of achievement on standardized tests were a sufficient basis for constitutional principle, it has not even been demonstrated that the median level of achievement at predominantly "Negro" schools is uniformly lower than in predominantly "white" schools. School children in North Dakota, which has a predominantly white population, score well below national norms (Silberman, *Crisis in the Classroom* (Random House, N.Y., 1970) p. 285). At least six predominantly "Anglo" schools in Denver (College View, 74.0 per cent Anglo; Columbian, 66.6 per cent Anglo; Barnum, 69.9 per cent Anglo; Belmont, 71.9 per cent Anglo; Thatcher, 81.1 per cent Anglo; and Sherman, 76.7 per cent Anglo) scored lower in fifth grade achievement than Hallett (84.4 per cent Negro) (Pl.Exh. 106, A. 2042a). Dr. Coleman's invidious statistical comparison becomes even more suspect when one considers that forty per cent of Negro middle-class high school age children attend private schools whereas only thirteen per cent of white middle-class high school age children attend private schools (Mosteller, op. cit. supra, p. 65, fn. 25).

2 "The rich will teach the poor."

Dr. Coleman himself opines that disparity of outcome is the result not of race but of the disparity of social class backgrounds children bring to school. His specula-

tion that racial balance will improve Negro achievement is founded upon a congruence between "class" and "race" (A. 1534a). This Court recognized in *James v. Valtierra* (1971) 402 U.S. 137, that there is no congruence between "class" and "race" (cf. *Jefferson v. Hackney* (1972) 92 S. Ct. 1724).

The experts who testified below were not offered as experts in race relations, in general demography, or in the demographic patterns of Denver. Dr. Coleman described himself as a sociologist (A. 1516a). Dr. Sullivan described himself as the Secretary of the Massachusetts State Board of Education (A. 1563a). Dr. O'Reilly described himself as an educational psychologist and Chief of the Bureau of School and Cultural Research of the New York State Education Department (A. 1910a-1911a). Evidently, Drs. Coleman and O'Reilly are experts in administering psychological tests and Dr. Sullivan is an expert in administering schools. These witnesses nonetheless testified as to conclusions not only regarding Denver population patterns but as to all cities. They concluded—upon what evidence it is difficult to imagine—that every neighborhood in every city is homogeneous both as to "class" and "race" (A. 1551a, 1950a, 1947a, 1593a-1594a). Dr. Coleman further concluded that neighborhoods are always congruent with school attendance zones (A. 1559a).

These same experts are aware that some Negroes and some "Hispanos" are middle-class (O'Reilly, A. 1952a; Sullivan, A. 1594a; Coleman, A. 1532a-1536). Either a given racial and ethnic group is all one "class" or not every neighborhood is homogeneous as to "class" and

"race." Logic cannot have it both ways. Without benefit of the flagrantly inconsistent conclusionary testimony of two psychologists and one school administrator, common knowledge suggests that both conclusions are wrong. City neighborhoods are seldom homogeneous; and "class" is not congruent with "race." State Senator George L. Brown, Jr., testifying for the plaintiffs, was aware that a middle-class black community exists in Denver (A. 892a), as it does in most if not all cities.

The record in the case at bar affords no better basis for overturning the legislative decisions of a school board than is offered by the hodge-podge of sociology, educational theory, and definition of races upon which second-guessing Denver's school board was based. The "equal educational opportunity" argument is at best an effort to incorporate into the Constitution the preference of some of today's school administrators for heterogeneous ability grouping by mistakenly using racial classification for the purpose. Even if the theory of heterogeneous ability grouping is correct, low achievement will not be improved by racial balance, for race and academic achievement are not congruent. Low achievement will not be improved no matter how "race" is defined if the achievement models remain constant. If one sinks promptly to the bottom of the swimming pool with others in one swimming class, one will be no more encouraged about learning to swim than if one sinks promptly to the bottom of the pool with others in a different swimming class.

The theory of heterogeneous ability grouping may, of course, be incorrect. That theory, conveniently revived contemporaneously with the Coleman Report, does not

account for the child who floats when all around him are sinking. Nor does it account for the low achieving pupil in a high achieving classroom. Educational theory is in a constant state of ferment and today's imperative is tomorrow's cause for reform (cf. Cremin, op.cit. supra, pp. 23-57 for the checkered career of the manual training high school; and compare ibid., at p. 297-299 for the evolution of individualized instruction into the "tracking" system with Pl.Br., pp. 80-81 and 95). Heterogeneous ability grouping is now considered by some to be educationally desirable, and academic "tracking" condemned (see *Hobson v. Hansen* (D.C.D.C. 1967) 269 F. Supp. 401, 492). At the same time, the Procrustes' bed approach to racial and ethnic differences has been replaced by demands for black studies and ethnic separation for at least a part of the school day.

3. "The black will teach the white."

There are some who argue that there is a sufficient overlap between class and race that improvement in Negro reading scores *might* result from balancing schools racially, and another objective would be furthered. More children of different races would get to know each other and thereby shed their prejudices (contra Armor, *The Evidence on Busing* (1972) 28 The Public Interest 90, 120-122, Figures 7-10).

The goal is laudable. In setting policy, however, one must consider not only the desirability of the goal but how best to achieve it. The mechanisms by which prejudice may be ameliorated are not well known (see Glazer, *Is Busing Necessary*, Commentary, March, 1972, p. 39,

reprinted in Cong. Record, March 13, 1972, S-3855; see also Simpson and Yinger, *Racial and Cultural Minorities* (3rd ed.) (Harper & Row, N.Y., 1965) pp. 503-521). Allport reports a study of one hundred white boys who lived twenty-eight days in a bi-racial camp. He found that at the end of this experience twenty-five per cent "showed a marked lessening of prejudice during the period of camping, but about the same number showed a marked increase in prejudice" (Allport, *The Nature of Prejudice* (Beacon Press, Boston 1954) p. 280, and see pp. 395-457 on the characteristics of the prejudiced personality). Until we know much more about each set of boys, there is no way of knowing even as a matter of reasonable probability whether particular strategies add to or subtract from the sum total of racial prejudice. The circumstances in which the members of racially defined groups meet, as well as personal background and individual personality, appear to be material. In addition to sociocultural factors (Ibid., pp. 218-339) and personality factors (Ibid., pp. 395-457) that might contribute to fostering attitudes of prejudice, Allport described contact effects: Casual contacts and contacts where the group traditionally discriminated against is of lower status tend to reinforce negative stereotypes (Ibid., pp. 264, 276). Equal status contacts and those in which the member of the class discriminated against has higher status tend to lessen prejudice (Ibid., p. 276). There are, accordingly, those who recommend that if the object is to mitigate racial hostility, we should make sure that schools are balanced racially only within the same social class. (see National Academy of Sciences, *Freedom of Choice in Housing, Opportunities and Constraints,* Advisory Committee to H.U.D., Washington, D.C. 1972).

The counter-productive effect of balancing schools by social class results from the mistaken impression from casual contact that class differences are related to visible physical indicia by which race often becomes defined (cf. Barzun, op.cit. supra). "One of the central sociological hypotheses in the integration policy is that integration should reduce racial stereotypes, increase tolerance, and generally improve race relations. Needless to say, we were quite surprised when our data failed to verify this axiom. Our surprise was increased substantially when we discovered that, in fact, the converse appears to be true" (Armor, *The Evidence on Busing* (1972) 28 The Public Interest 90, 102).

The occasion for surprise should not be that the sociologist's data has failed to verify the sociologist's hypothesis, nor even that some sociologists prefer axioms to hypotheses. The chief occasion for surprise should be that the sociologist who studied under Allport is surprised. Casual contact carries with it a screening effect which allows the observer to "see" only those aspects of behavior which confirm his predispositions (Allport, op. cit. supra, at p. 264). Thus one observer, encountering a newspaper article describing a school with "no graded courses in geography, American and Ohio history, natural science, government and other required subjects" where the children spent time in school copying diary entries referring to plowing and cleaning the raspberry patch, ironing, and feeding the turkey broilers commented: "One's first reaction to such an education might be one of sympathy for the children deprived of their birthright in a free society. Upon further consideration, however,

the example illustrates not the depravity of the Amish parents, but the sharp difference in the educational task of a stable farming society and that of a rapidly changing highly industrialized society" (Coleman, *The Adolescent Society* (Free Press of Glencoe, N.Y., 1961) p. 2). Later on the same distinguished author criticizes grading and deplores the fact that the adolescent has no useful work to perform (Ibid. pp. 3, 317).

Neither school boards nor Federal courts can reasonably be expected to do away by fiat with racial prejudice. Law alone, like other social forces, and like laws affecting other institutions, may not be able to alter these relations beyond a certain point, and in some situations it cannot make much difference. But some law commentators who have addressed themselves to compelling racial balance have been as simplistic about goals and methods as sociologists are uncertain about both. In *Sweatt v. Painter* (1950) 339 U.S. 629, this Court held that the exclusion of a Negro plaintiff from a law school on account of his race was inherently unequal treatment. Some law commentators have suggested that this holding could be reformulated to say that a law school attended only by Negroes is inherently unequal; and that this reformulation of *Sweatt v. Painter*, supra, could serve as the foundation of a constitutional duty. Such a duty would require not only the admission of a pupil otherwise qualified to the school of his choice, but also the deliberate structuring of all schools so that the choice would be among like alternatives. One visible "equalization" would be to balance the racial composition of all the schools in a system. "Equal educational opportunity" would thereby

become equated with racial balance, and racial balance would be a constitutional imperative (see *Developments in the Law—Equal Protection* (1969) 82 Harv.L.Rev. 1065); Kaplan, *Segregation Litigation and the Schools—Part II The General Northern Problem* (1963) 68 Harv.L.Rev. 564; Wright, *Public School Desegregation: Legal Remedies for de facto Segregation* (1965) 40 N.Y.U.L.Rev. 285; *Hobson v. Hansen* (D.C.D.C. 1967) 269 F.Supp. 401, 497, 503-506).

Lawyers might with profit ponder the words of Edmond Cahn, commenting upon the origins in the writings of a distinguished sociologist of the national origins quota system in the Immigration Act of 1921:

"Only a generation ago, McDougall was a leader in his profession; as recently as 1943 Roscoe Pound saw fit to assign reasons for not adopting McDougall's concepts of social psychology. Yet, anyone who has a sufficiently strong stomach to read McDougall's *Is America Safe for Democracy?*—a book published while he was professor of psychology at Harvard—will find it filled with racist slander, crude propaganda and arrant nonsense. The book provided a cloak of pseudo-scientific respectability for agitation resulting in the Immigration Act of 1921 and the national origins quota system.

"Social psychology is certainly not to be charged for all time with McDougall's sins against science. On the contrary, it is the law educators who will be blameworthy if they undertake the use of psychological theories and studies in a naive and credulous spirit. We cannot afford to settle for less than the truth. For if a license to purvey loose opinions as scientific facts is given to those who will testify on

the egalitarian side, why is not a similar license available to the William McDougalls?

"* * * Our search for truth requires an unremitting awareness of covert interests—interests ranging from the very finest to the basest——

"* * * [T]here is no substitute for the vigilant exercise of critical intelligence. Where public justice is concerned, an educator has no more right to play the dupe than the deceiver" (Cahn, *Confronting Injustice* (Little, Brown and Company, Boston, 1966) pp. 356, 357).

C. The strategies for improvement of pupil achievement which plaintiffs urge be required by the Constitution would create conflicting constitutional duties.

Good intentions do not always produce unmixed blessings. In 1909, a distinguished educator, Leonard Ayres, published a book, *Laggards In Our Schools* (N.Y., 1909). He collected data from school records, and statistics and reports collected and published by government agencies showing that schools were filled with children over age for their grade and that most students dropped out before finishing the eighth grade. Criticized on methodological grounds, he conducted another study of over two hundred thousand elementary school children. It confirmed his earlier work. Although Ayres' concern was efficiency and parsimony in school operation, one major outcome was the widespread practice of age promotion regardless of achievement, the practice about which plaintiffs now complain bitterly (compare Callahan, *Education and the Cult of Efficiency* (Univ. of Chi. Press, 1962) pp. 14-18, 165-168 with Pl.Br., pp. 52, 53). The choice between age promotion and achievement pro-

motion is never easy. Surely it would not lower the dropout rate, one of plaintiff's measures of inequality of educational opportunity (Pl.Br., p. 53), to require that children spend their school days with younger children. The reaction of the sixteen-year-old put into the sixth grade is predictable, irrespective of race.

Recently, "educational input" in the form of dollars spent upon facilities has been re-emphasized in *Rodriguez v. San Antonio Independent School District* (D.C. W.D. Tex., 1969) 299 F.Supp. 476, (1972) 337 F.Supp. 280, review granted June 6, 1972, U.S. Sup. Ct. Dkt. No. 71-1332; and in *Serrano v. Priest* (1971) 5 Cal.3d 584. The theory of equality of input upon which these cases are based appears to be a reversion to a pre-Coleman Report measurement of "equal educational opportunity." We will not presume to guess whether it is the California Supreme Court or Dr. Coleman who is in the backwater. Certainly it is not Leonard Ayres, echoed below by Dr. O'Reilly, who would lower the dropout rate (A. 1938a), increase the efficiency of the teacher by increasing the "information transmitted" (A. 1953a) without any costly preparations (A. 1962a) by eliminating minority-dominated schools. Dr. O'Reilly's opinion was that expensive compensatory education programs were "valueless" (A. 1929a). Amazed at this turn of events, the District Court below repeated its question and Dr. O'Reilly explained that "it's nothing particularly new about any of these things" (A. 1929a).

Inconsistently with their thesis that Anglo pupils are the chief "learning resources" and in pursuit of one aspect of the equal dollar theory, plaintiffs argue that the

quality, experience and stability of teaching staffs is inferior at minority-dominated schools (Pl.Br., pp. 40-43). Even if this proposition were true generally, which is doubtful, it does not appear to be true in Denver. Plaintiffs' Exhibit 510 (A. 2124a) discloses, for example, that Wyatt elementary school, with an enrollment of only two per cent Anglo pupils had in 1968 a median teacher experience level exceeding the city-wide average.

Dr. Coleman testified only that, in general, teacher characteristics had some effect on achievement (A. 1531-1532a). According to the Coleman Report, teacher variables that showed some effect on Negro achievement were: "the teachers' own education (positive effect), and the score on the vocabulary test (positive effect). Teachers' attitudes showed a slight effect in some grades (negative effect of preference for middle-class students); as did experience (positive effect), while localism and proportion white show little or no effect. For other minority groups, similar results hold, except that teachers' experience shows inconsistent directions of effect, suggesting that it has no effect of its own * * *" (Coleman Report, pp. 317-318).

Measuring teacher effectiveness has been more of a continuing puzzle to education researchers than to common sense. It would be strange indeed if the Federal courts were now to embark upon the elaborate and futile efforts which have for years characterized education research into the measurement of teacher effectiveness. See Koerner, *The Miseducation of American Teachers* (Houghton Mifflin Co., Boston, 1965) pp. 52-55: It is a commonplace that there are good and bad teachers of all races, ages

and salary levels and the fervent hope of all parents is that the school district will hire competent teachers. As in San Francisco, the Denver School District pursued a policy of allocating more teachers per pupil to schools in which achievement levels were lower (A. 1327a-1329a).

School boards are today faced with a bewildering variety of conflicting standards for pupil assignment as proposed mandatory alternatives to geographic proximity:

1. An equal distribution of Negro pupils throughout a district. This appears to be the standard allowed by this Court in its recent remedies decisions: *Wright v. Council of City of Emporia* (1972) ___ S.Ct. ___; *United States v. Scotland Neck City Board of Education* (1972) ___ S.Ct. ___; *Swann v. Charlotte-Mecklenburg Board of Education* (1971) 402 U.S. 1.

2. An equal distribution of "minority" pupils throughout a district. This appears to be the standard being urged as a constitutional requirement by plaintiffs in this case and in Corpus Christi, Texas (see *Cisneros v. Corpus Christi Independent School District* (D.C. S.D.Tex. 1971) 330 F.Supp. 1377 (appeal pending); see, contra, *United States v. Midland Independent School District* (D.C. W.D. Tex. 1971) 334 F.Supp. 147).

3. An equal distribution of low-achieving pupils throughout a district. This is a standard being urged as a constitutional requirement in a class action being litigated against the San Francisco Unified School District for its maintenance of an academic high school (Lowell High) to which admissions are by academic achievement

(*Berkelman et al. v. San Francisco Unified School District*, No. C-71-1875, D.C. N.D. Cal.).

4. A distribution of pupils throughout several districts so that (i) Negro pupils, or (ii) minority pupils, or (iii) low-achieving pupils will always be in a minority. This distribution offers three possible standards. It is distinguished from the others, however, by its involvement of more than one school district and is in Federal litigation in Richmond, Virginia, Detroit, Michigan, and Indianapolis, Indiana (*Bradley v. School Board of the City of Richmond, Virginia* (D.C. E.D. Va. 1972) 338 F.Supp. 67; reversed (1972) ___ F.2d ___; *Bradley v. Milliken* (D.C. E.D. Mich., 1971) 338 F.Supp. 582; *United States v. Board of School Com'rs. of the City of Indianapolis, Indiana* (D.C., S.D., Ind. 1971) 332 F.Supp. 655.

5. A distribution of pupils among schools so that the average "wealth" of the families represented in the schools is equal. This standard is being pressed upon the Duluth, Minnesota, school district (see Hubert, *The Duluth Experience*, Saturday Review, May 27, 1972, p. 55 et seq.).

6. An equal distribution of pupils classified by sex.

7. An equal distribution of pupils classified by achievement without regard to sex. Standards 6 and 7 are also involved in San Francisco's Lowell High case.

8. An equal distribution of pupils classified by religion. Religion as well as race is specified in the Civil Rights Act of 1964. Presumably, this standard would raise the same type of constitutional question as does the use of race as a standard for pupil assignment to schools.

9. An equal distribution of pupils among schools in which dollar inputs are equal. This standard is offered by *Rodriguez v. San Antonio Independent School District* (D.C. W.D. Tex. 1969) 299 F. Supp. 476; (1972) 337 F.Supp. 280, review granted June 6, 1972, U.S. Sup.Ct. Dkt. No. 71-1332; and by *Serrano v. Priest* (1971) 5 Cal. 3d 584.

Any of these standards might require "equal distribution" of pupils either to schools or to classrooms. Each of these standards conflicts with the other, because each defines differently the group upon which the standard is based. Each standard except the last assumes that children learn more from each other than they do from their teachers. The geographic area throughout which the "learning resources" found in other children can be distributed is limited only by travel time, and perhaps not by that for the home itself is viewed by some as a sufficiently universal detriment to encroach upon it further. Dr. Coleman has argued in favor of replacing the family environment of the low achiever as much as possible "with an educational environment—by starting school at an earlier age, and by having a school which begins very early in the day and ends very late" (Coleman, *Equal Schools or Equal Students?* (1966) 4 The Public Interest 70, 74; see also, Levine, *Ocean-Hill Brownsville: Schools in Crisis,* (Popular Library, N.Y. 1969) p. 143). Others advance similar views in seeking to expand the school year, the number of years in school and the children subject to regulation by the public school system (see, e.g., Cremin, *The Transformation of the School* Alfred A. Knopf, N.Y., 1961) pp. 325-332 for an account

of "the best-laid plans of the teaching profession for American education in the post-war decades," which was to embrace "a comprehensive public school system concerned with all young people from the age of three through twenty, those in school as well as those outside").

There is some evidence that it is Negro children who can least afford to have the family undermined or replaced, that it is Negro children who most need the family to be supported and strengthened (see Simpson and Yinger, *Racial and Cultural Minorities* (3rd Ed.) (Harper & Row, N.Y., 1965) pp. 349-355; Erikson, *Identity, Youth and Crisis* (W.W. Norton & Company, N.Y., 1968) at p. 311: "Can Negro culture afford to have the 'strong mother' stereotyped as a liability?").

It is curious in itself that an institution whose professional representatives admit teaching failure and credit the home with the production of the institution's chief "learning resources"—other children—should look chiefly to further encroachment upon all homes as the solution to its problems. For an account of the results of a similar venture with the "platoon school" operated from 8 A.M. to 5 P.M. and on Saturdays, see Callahan, op.cit. supra, at pages 126-147. For an account of the origin of the kindergarten in philanthropic concern with the problem of juvenile crime, see Katz, M., *Class, Bureaucracy and Schools* (Praeger Pub. Co., N.Y., 1971), at pages 121-122. For accounts of the results of ventures which sought to carry out entirely the replacement of the home with the institution, see Katz, M., *The Irony of Early School*

Reform (Harv. Univ. Press, 1968) for a discussion of Horace Mann's New York Reform School, and Katz, M., *Class, Bureaucracy and Schools* (Praeger Pub. Co., N.Y., 1971), at pages 45-47 for a discussion of the Massachusetts Reform School (which represented, in 1848, the first form of compulsory schooling in the United States).

For discussions of like efforts to force the acculturation of American Indian children, see Burnette, *The Tortured Americans* (Prentice Hall, N.Y., 1971) at pages 24, 25; and Schusky, *The Right to be Indian* (The Indian Historical Press, Inc., San Francisco, 1970) at pages 50, 51. One would think that the outcome of public school ventures to replace the home has been sufficiently grim, uniformly, to give pause to the most ardent advocates of forced acculturation:

> "Education is and has been a farce. The overriding purpose of education in years past was to separate the Indian child from his home and his heritage.
>
> * * * * *
>
> "The implications are clear to anyone who has undergone the educational experience on a reservation: Indian students, while they recognize the value of education, must, if they have any dignity or pride, resist the kind of training they are subjected to. * * * Added to these handicaps is the awareness that the goal of the school system fostered by the BIA is not education but acculturation. Never have I known one teacher in an Indian school or one BIA employee who troubled himself to learn the Sioux language or to acquaint himself with the cultural background of his students" (Burnette, *The Tortured Americans* (Prentice Hall, N.Y., 1971) pp. 24, 25).

Against views that see the solution to all social ills in an expanded public school system aimed at forced acculturation are arrayed other voices who see in the public school system itself an institution specifically designed to invade the mind and shape the personality, the greatest danger of all. The danger inherent in such an institution is magnified by the increased central direction which must follow inevitably upon the undermining of local school boards. Some wish to escape into alternative systems (*Wisconsin v. Yoder* (1972) 92 S.Ct. 1526; *Pierce v. Society of Sisters* (1925) 268 U.S. 510; *In the Matter of Skipwith* (Dom.Rel.Ct., 1958) 14 Misc.2d 325; 180 N.Y.S.2d 852). Others demand freedom within the system (*Meyer v. Nebraska* (1923) 262 U.S. 390; *Tinker v. Des Moines Ind. Com. School Dist.* (1969) 393 U.S. 503). Others see *choice* as the essence of the protection afforded not alone by *Yoder* and *Pierce* but by universal state statutory exemptions from public school attendance extended to pupils attending private and parochial schools. A benefit made available by the state to those who can pay is required by the Constitution to be extended to all by the equal protection doctrine of *Griffin v. Illinois* (1956) 351 U.S. 12. Choice, therefore, cannot constitutionally be restricted to those who can pay.

There are advocates of a voucher plan to make the choice among educational alternatives which are available to those who can afford private schools economically possible for the many. Notwithstanding *Griffin* (and notwithstanding the millions of "G.I. Bill" dollars spent at Baptist and other denominational colleges following World War II), versions of the voucher plan have al-

ready twice run afoul of lower Federal courts concerned at extending choice to the private expenditure of public funds at church supported schools (*Wolman v. Essex* (D.C.S.D. Ohio 1972) 40 Law Week 2724; *Lemon v. Sloan* (D.C.E.D. Pa. 1972) 340 F.Supp. 1356). If choice cannot be made available by indirect public support of alternative school systems, then choice must be made available within the system. Some regard the neighborhood school as offering choice. Some advocate programs such as Black House in Berkeley and its counterpart in Washington, D.C., to make radically different choices available, including in Washington, D.C., the introduction by direct public subsidy of religious fervor if not religion itself into the promotion of racial and cultural identity (see Gross and Osterman, *High School* (Simon & Schuster, N.Y., 1971) pp. 285, 301).

Some have lost the faith. They advocate no school at all: See Illich, *DeSchooling Society* (Harper & Row, N.Y., 1971); Reimer, *School is Dead* (Doubleday & Co., Inc., N.Y., 1971; cf. Whitehead, *The Aims of Education* (Mentor Pub. Co., N.Y., 1929). Even this Court has recognized that neither graduation certificates nor tests devised by psychologists are fair measures of ability (*Griggs v. Duke Power Co.* (1971) 401 U.S. 424).

Still others suggest a realistic appraisal of what formal schools can and cannot do and a sensible limit to the aims of public education: ". . . [P]eople ask no more of schools today than they did a hundred and twenty-five years ago. Even then the schools were asked to do the impossible . . . stop crime and check immorality by teaching obedience. . . . [R]eformers

should begin to distinguish between what formal schooling can and cannot do. They must separate the teaching of skills from the teaching of attitudes, and concentrate on the former. . . . [I]t is of course impossible to separate the two. . . . But there is a vast difference between leaving the formation of attitudes untended and making them the object of education. This is a radical position, despite the ordinary presumption to the contrary" (Katz, M., *Class, Bureaucracy and Schools* (Praeger Pub. Co., N.Y., 1971) pp. 141, 142).

A school board may reasonably question the notion that equality of result can measure equality of opportunity. It may reasonably question the notion that a median can fairly be used to compare one racially defined group with another for the purpose of deducing group opportunity from tests given to individuals. *Individual* opportunities not *group* opportunity was specified in the Civil Rights Act of 1964, as indeed the Fourteenth Amendment itself requires. The use by the District Court below of a definition of "equal educational opportunity" as "equality of educational outcome" by group was not consistent with judicial obligation to the person under the Fourteenth Amendment. Theories of education are pertinent to educational debate but they often serve chiefly to obscure the problem facing the teacher just as they obscure the legal problem facing this Court. When teachers teach, they do not teach a group. They teach a person. It is the person not a group which the Fourteenth Amendment assigns to this Court the duty to protect. There is no conflict between the requirements of teaching and the requirements of the Constitution.

D. "Equal educational opportunity" affords no standard for measurement of a school district's performance of its constitutional duty.

In light of all the learning published by educators, sociologists, psychologists, philosophers, and concerned laymen it is tempting to adopt Edmund Gordon's definition of "equal educational opportunity" which is no definition at all: "Equalization of educational opportunity in a democracy requires parity in achievement at a baseline corresponding to the level required for social satisfaction and democratic participation. It also demands opportunity and freedom to vary with respect to achievement ceilings" (Mosteller, op.cit. supra, p. 433). Satisfying as this may be to today's thoughtful educational theorist, it provides no guide to courts. If an output advocate such as Dr. Coleman arrives first with conflicting strands of current educational theory seductively interwoven to promote heterogeneous ability grouping as a constitutional requirement, then socio-economic "integration" or an "easily measurable" incongruent substitute—race—is to be decreed. If an input advocate arrives first, then additional expenditures or compensatory education programs are to be decreed. If a John Dewey arrives again at the doorstep (if he has not then been foreclosed), then individual instruction is to be decreed. The "opportunities" will still vary, but not by the exercise of choice and self-selection within the framework of local school district judgments. They will vary by operation of the decrees of Federal courts.

If a proportion of Negro pupils in each classroom is the constitutional right of every white child, and a proportion of white pupils is the constitutional right of every

Negro child, it is difficult to see how this right can be realized short of chartering a fleet of airplanes. It is impossible to provide the national statistical averages in many cities now or in the foreseeable future. Such impossibilities cannot be the basis for a constitutional duty. Requiring a fair share of everyone available necessarily results in a different "opportunity" from school district to school district, just as in-district variations now provide different "opportunities." There can be no real "equalization" (see Kurland, *Equal Educational Opportunity: The Limits of Constitutional Jurisprudence Undefined* (1968) 35 Univ. of Chicago L.Rev. 583, 596-598).

No one seeks an "equal" opportunity for his child. He seeks the "best" within the constraints of his individual circumstances. For one child, this may be in a highly competitive, high achieving classroom (U.S. Commission on Civil Rights, *Racial Isolation in the Public Schools* (U.S. Gov't Printing Office, 1967) at pp. 102-103). For another, this same situation may be a disaster. See Dennison, *The Lives of Children* (Vintage Books, N.Y., 1969) for accounts of children damaged by conventionally structured schools, and a persuasive argument against the trend toward larger and more impersonal educational units. Some send their children to parochial schools; for others, watching children being released for religious training is damaging (see *Illinois ex rel. McCollum v. Board of Education* (1948) 333 U.S. 203). The compulsion to seek and find what seems best is universal, and, to most, unrelated to the color of the children:

> "* * * theoretically, the Negro needs neither segregated schools nor mixed schools. What he needs is Education. What he must remember is that there is

no magic, either in mixed schools or in segregated schools. A mixed school with poor and unsympathetic teachers, with hostile opinion, and no teaching concerning black folk, is bad. A segregated school with ignorant placeholders, inadequate equipment, poor salaries, and wretched housing, is equally bad. Other things being equal, the mixed school is the broader, more natural basis for the education of all youth. It gives wider contacts; it inspires greater self-confidence; and suppresses the inferiority complex. But other things are seldom equal, and in that case, Sympathy, Knowledge and the Truth, outweigh all that the mixed school can offer" (W.E.B. DuBois, *Does the Negro Need Separate Schools* (Journal of Negro Education, July, 1935) p. 335; reprinted in Myrdal, *An American Dilemma* (Harper Bros., N.Y. 1944) p. 902).

"Equal educational opportunity" affords no standard for the measurement of a school district's performance of its duty. It affords no standard against which courts or school districts may presently measure fair treatment of the person. It is a slogan which reflects a great public controversy about the purpose and effect of public schools, a controversy which at bottom is not justiciable. That controversy should not be resolved by the happenstance of which educational theory or which mix of theories is first pressed upon this Court. It should not be resolved by the happenstance of which theory or which mix appeals to one lower court but not to another. It should be resolved by allowing local school boards democratically to exercise their function, for the Constitution can carry only so much excess baggage. It is not fitting that the political-sociological concept of an "equal educational opportu-

nity" should transform Federal courts into ex-officio school boards meeting at irregular intervals. The Constitution assigns to Federal courts no such task. Courts, moreover, must be sure footed. No educational theory advanced as an alternative standard for pupil assignment to schools achieves the stability which should be reflected in fundamental constitutional principle. Such theories are made no more digestible by throwing them all into one pot to make some kind of jumble stew. (Pl.Br., pp. 103, 104). Neither the problems of educational policy nor the problems of reducing racial hostility are likely to yield either to such culinary arts or to the court-ordered solutions which sometimes result (see Schoettle, *The Equal Protection Clause in Public Education* (1972) 71 Colum. L.Rev. 1355).

II. A NEIGHBORHOOD SCHOOL POLICY IS A REASONABLE LEGISLATIVE POLICY. IT IS A REASONABLE COMPROMISE OF CONFLICTING DEMANDS AND COMPETING CONSIDERATIONS OF EDUCATIONAL POLICY, A GOVERNMENTAL FUNCTION BEST PERFORMED BY LEGISLATIVE BODIES AND NOT BY COURTS.

The claims of the Denver School District and the State of Colorado to a compelling interest in a neighborhood school policy are at least as persuasive as are the claims of plaintiffs on behalf of a racially defined group to a racially measured benefit from pupil assignment by race. When one considers the variety of conflicting standards which class action plaintiffs would today have judges substitute for geographic proximity as the basis for pupil assignment to schools, it is not difficult to see why a policy of pupil assignment based solely upon geographic

proximity was adopted in the first place. It is not difficult to see why it has in some instances been adhered to tenaciously. If a school board were obliged to take everyone's advice, it would likely join Mr. Illich[7] in the view that the best decision would be not to have schools (see Aesop, *The Miller, His Son, and Their Donkey* (Aesop's Fables, Grosset and Dunlap, 1947) p. 50 et seq.). A neighborhood school policy is a reasonable legislative compromise of competing policy considerations.

A. Denver's policy meets expectations long established.

Denver's neighborhood school policy is more than an administrative convenience. It enjoys the presumption that attaches to all legislation not on its face discriminatory, by race, by economic circumstances, or by length of residence. It meets the expectations which often attach to long standing policies (cf. *Perry v. Sindermann* (1972) ___ S.Ct. ___). It therefore enjoys the values of precedent which attach to such policies. To deny to today's urban minorities an amenity of urban living allowed by the greater density in urban than in rural areas would deny to today's urban dwellers an amenity available to others in the past. To deny to the minorities which populate many cities today the political influence over local school district legislative and administrative policies available to yesterday's urban dwellers would deny to today's urban dwellers a fundamental right also enjoyed by others in the past. Today's and tomorrow's urban dwellers—of all colors and persuasions—are as entitled to

[7]Illich, *DeSchooling Society* (Harper & Row, N.Y., 1971).

an equal political opportunity as to an equal educational opportunity.

Brown v. Board of Education, supra, was but one instance of a broad purpose pursued by this Court in other cases. Racial classifications are not the only suspect classifications. This Court has persistently struck down state laws and practices discriminatory against newcomers. The right to change one's residence has become a fundamental right by virtue of constitutionally required removal of disabilities upon newcomers: A state may not exclude indigents (*Edwards v. California* (1941) 314 U.S. 160). A state must apply to newcomers the same standards as it applies to others for welfare qualification (*Shapiro v. Thompson* (1969) 394 U.S. 618). A state may not exclude newcomers from the voting franchise (*Dunn v. Blumstein* (1972) 92 S.Ct. 995).

When a state may not discriminate against newcomers, a fortiori it may not discriminate against some newcomers on account of their race. A state may not countenance in its judicial processes the use of racial classifications to exclude newcomers from housing opportunities (*Shelley v. Kraemer* (1948) 334 U.S. 1; *Barrows v. Jackson* (1953) 346 U.S. 249). A state may not place upon its legislative processes disabilities which would preclude altogether participation by state and local legislative bodies in efforts to increase housing opportunities available to newcomers. (*Reitman v. Mulkey* (1967) 387 U.S. 369; *Hunter v. Erickson* (1969) 393 U.S. 385).

These cases do not, as plaintiffs suggest (Pl.Br., p. 108), imply that a constitutional requirement of proportionate

inclusion by race follows from a policy forbidding the deliberate exclusion of newcomers. The Constitution no more requires the assignment of residential billets by race than it requires a state to issue marriage licenses only to racially mixed couples by virtue of *Loving v. Virginia* (1967) 388 U.S. 1 (cf. Bittker, *Case of the Checker-board Ordinance*, (1962) 71 Yale L.J. 1387). *Reitman* and *Hunter* do not imply that a state must legislate in some particular manner, nor do they imply that a state may allow no personal rights to exist under its laws. *Reitman* and *Hunter* entailed the balancing of the nation's interest in freedom of population movements against private interest in rental property and property after it has been sold. A man's interest in rental property is ordinarily commercial and his interest in any property after he has sold it is tenuous. A man's interest in his children is seldom commercial. Nor does he customarily sell them. His interest is continuing, and is an interest at least as fundamental as having a beer with the boys (*Moose Lodge No. 107 v. Irvis* (1972) 92 S.Ct. 1965).

This Court has nowhere suggested that reasonable legislative policies applicable to all alike must be remade to accommodate newcomers. Nor has this Court suggested that any racially, ethnically, or economically defined group has standing to speak for all newcomers, those arriving tomorrow as well as those who arrived yesterday. On the contrary, this Court has held in a long line of cases that a state may not discriminate between newcomers and those already there. These cases imply that a drastic change in policy falling largely upon newcomers might by that effect alone offend the Constitu-

tion. Upon what principle, then, is Denver to be precluded from offering to newcomers to its public school system the same services and privileges and political franchise afforded to those who came before?

That all are entitled to an equal political opportunity lies at the heart of *Baker v. Carr* (1962) 369 U.S. 186. The breakdown of local communities and local political boundaries attendant upon mandatory racial balance strikes at the heart of the political franchise which that case and its progeny sought to insure for all alike, irrespective of race. Small wonder that some regard "busing" as merely another example of the maintenance of control by "whites" over "blacks" (see Knowles and Prewitt, *Institutional Racism in America* (Prentice Hall, N.Y., 1969) pp. 31-35).

B. The neighborhood school appears to enhance academic achievement, and it invites community participation as well.

There is some evidence that the neighborhood school is more likely than not to enhance academic achievement in the early grades, and that its perpetuation may be particularly important to Negro pupils. "Non-metropolitan" pupils who are traditionally transported to consolidated schools consistently achieve at a lower level in all subjects than do metropolitan students for all races and regions (Coleman Report, pp. 221-251; see also Mosteller, op.cit. supra, p. 374). Although there is considerable decline in the relative achievement of Negroes as compared to whites in all rural areas, there is "little or no decline" in the northeast, midwest or west metropolitan areas (Coleman Report, p. 220), areas which have traditionally maintained neighborhood schools.

In addition, the neighborhood school has in many cities become the focus for small scale neighborhood community activity, tangential to direct instruction of pupils. The neighborhood school is often the focus for family community involvement, in activities such as the PTA, candidates' nights for local elections, boy scouts, the recycling of tin cans and bottles for "ecological" purposes, community bazaars, and many other activities in which people like to engage collectively on a small scale. Such activities need not extend to "local control" and the type of cataclysmic controversy which this twentieth century version of democratic localism can create (compare Mayer, *The Teachers Strike: New York, 1968* (Harper & Row, N.Y., 1969) and Levine, *Ocean Hill-Brownsville: Schools in Crisis* (Popular Library, N.Y., (1969) with Katz, M., *Class Bureaucracy and Schools* (Praeger Pub. Co., N.Y., 1971) pp. 15-22, 127-128). The neighborhood school affords a means and a degree of participation and local community involvement which tends to meet the needs manifest in controversies such as *Ocean Hill-Brownsville*, without their disruptive effects.

C. A neighborhood school policy excludes no person on account of his race. Its abandonment is more likely than not to contribute to greater geographic separation of racially defined populations, and to an adverse effect upon schools available to the poor and disadvantaged as well.

People move for a great many reasons having nothing to do with the race of their neighbors, the race of their children's classmates, or the race of their children's playmates. Moving sometimes amounts to a vote with the feet, but population movements are complex phenomena. The

notion that racially homogeneous neighborhoods, when they occur, result from "white" flight is often mistaken. The dimension of the migration of Southern rural Negroes into both Southern and Northern cities belies any such simplistic explanations as either "black flight" or "white flight." Migrating populations homogeneous as to social and economic class sometimes exert a "pushing effect" upon Negroes and whites alike (see Simpson and Yinger, *Racial and Cultural Minorities* (3rd Ed.) (Harper & Row, N.Y., 1965) at p. 330: "[T]he newer Negro families were of a lower socio-economic level. Both the Negro and the white families who had supported the interracial school and neighborhood began to move out").

The migration of populations is not the only phenomenon with a pushing effect. Many cities have become familiar with the pushing effect of redevelopment which has too frequently used the power of eminent domain to produce high-cost housing unsuitable for family living or beyond the means of parents. Often, shifts in racial and class demographic patterns are not so much a matter of people moving out as of which people move in.

Neither the massive Negro migration into cities nor urban redevelopment are the last contributors to shifts in demographic patterns which will affect the racial and class patterns of urban areas.[76] San Francisco, for example, is experiencing a dramatic growth in the number of immigrants of Chinese ancestry. These immigrants tend to

[76]For a description of the changed proportions by national origin of today's immigration resulting from removal of the national origins quota system in 1965, see Andersson and Boyer, *Bilingual Schooling in the United States* (Southwest Educ. Dev. Lab., U.S. Gov't Printing Office, Wash. D.C. 1970) Vol. II, pp. 60-61.

flow into neighborhoods long occupied primarily by families of Chinese ancestry. This is occurring at the same time as the descendants of earlier residents are moving out, dispersing themselves throughout the city. Similarly, San Francisco is experiencing a dramatic growth in Filipino immigration. Filipino immigration alone had the effect of reducing the Negro proportion in one San Francisco elementary school from forty-five to nineteen over a five-year period.

All such migrations place great demands upon a city's housing supply and contribute to increased density. One reason people move is that they have been educated, in part by public policy, to maximize consumption. Housing is one means, indeed the chief means, of consumption. Schools are another. As city amenities such as neighborhood schools diminish, the displacement of residents to suburbia is accelerated, particularly among those whose values are least compatible with increased density and most compatible with mowing the lawn on Saturday morning. Most cities have experienced such population turnovers several times since the nineteenth century. A few cities seem to be experiencing it for the first time.

All experience to date points to but one overall result for the public school in the city: affluent families withdraw from the school system, either for the suburbs or for private schools. The effect upon the public school system is to increase the proportion of the immigrant poor of all races. Unless plaintiffs' reliance upon Dr. Coleman is wholly misplaced, the predictable effect of the policy urged by plaintiffs upon the Denver School District would be to reduce the proportion of pupils who

tend to achieve at higher levels, and thereby reduce the proportion of such pupils available for the heterogeneous ability grouping which plaintiffs would like all school districts to pursue. That this predictable acceleration of population displacement actually occurs has been demonstrated time and time again, and quite recently in San Francisco. To the extent that the immigrant poor are over-represented among "racial" minorities the effect is to increase the "concentration" of racial minorities in city public school populations. The effect also, of course, is to conscript for "desegregation" on the basis of income.

A neighborhood school policy allows parents of all races to participate in the ethical choices involved in racial integration, but it does not allow to parents the freedom to choose among schools solely upon the basis of the race of its pupils. Neighborhood schools are not maintained by race. To the extent that small attendance zones keyed to neighborhood schools afford freedom of choice predicated upon race, they burden choice as much as do larger attendance zones. Absent unusual circumstances, to attend a school in a neighborhood one must live there. To attend school elsewhere, one must move. Larger attendance zones offer to people the same choice about the race and social class of their children's classmates as do neighborhood schools, but they encourage people to move for other reasons as well. Larger attendance zones mean only that to the extent allowing choice is the cause of racial imbalance, people move farther and cities integrated—whether by race or by social class—thereby become more difficult to achieve.

D. At worst, the neighborhood school is a mild form of pluralism, pluralism which is constitutionally protected in its more extreme forms.

Consensus about the forms and effects of authoritarian structures appears to be dissolving at the same time as belief in the effectiveness of public schools to create entirely new forms of human beings appears to be increasing. This tension between the images of the school as culture-destroyer and the school as savior has always been felt in immigrant groups. It is now felt among the black and the poor (see Coles, *The South Goes North* (Little, Brown & Co., Boston, 1971) p. 591). As in the past, the public school aspires to assimilation (Bickel, *The Supreme Court and the Idea of Progress* (Harper & Row, N.Y., 1970) pp. 115-151). But today the question has become "assimilation into what?" and the virtues of pluralism have been noted (see Glazer and Moynihan, *Beyond the Melting Pot* (MIT Press, Cambridge, Mass., 1963); see also MALDEF Brief, p. 26). Pluralism, moreover, may be the heart of the city (Jacobs, *The Death and Life of Great American Cities* (Random House, N.Y., 1961).

Pluralism has found shelter in the Constitution. Pluralism has found shelter in protected schools (*Pierce v. Society of Sisters* (1925) 268 U.S. 510), in protected activities (*Tinker v. Des Moines Ind. Com. School Dist.* (1969) 393 U.S. 506), and most recently in protected cultures (*Wisconsin v. Yoder* (1972) 92 S.Ct. 1526). The right of the person to enjoy this sort of pluralism is regarded as so fundamental as to have its exercise a constitutional right. Yet the mild form of pluralism repre-

sented by the neighborhood school is regarded by some as so malevolent as to require its destruction by constitutional mandate. Its malevolent nature is considered an outcome of city neighborhoods where like-minded people with the same incomes, educational levels and color are assumed to cluster together to avoid contact with a larger world which is assumed to be uniformly white and middle-class. This is the same image that many urban dwellers have of suburbia, except that the larger world which the suburbanite is supposed to be avoiding is assumed to be racially and economically mixed, as well as cosmopolitan. When a city has diverse elements in its population, the neighborhood is considered confining and destructive (see, e.g., Dodson, *Education and the Powerless* in Passow, ed., *Developing Programs for the Educationally Disadvantaged*, Teacher's College Press, Colum. Univ., 1968) p. 332). When the city becomes uniform, at least as to its public school population, the entire city acquires a confining and destructive image. The thrust then is toward amalgamation of school districts.

These images are not new. Neither is the use of such images by some representatives of the institution of the public school to render politically impotent those who are supposed to be the institution's beneficiaries (see Katz, M., *The Irony of Early School Reform* (Harv. Univ. Press, 1968) p. 213, et. seq.; Schusky, *The Right to be Indian*, (The Indian Historical Press, Inc., San Francisco, 1970) at pp. 50-52). The institutional response to the spectre of parental participation in schools—indeed, participation by anyone deemed "educationally conservative"—in ways not institutionally approved is sometimes spectacular (see,

e.g., Cremin, op. cit. supra, at pp. 341-343; Urofsky, ed. *Why Teachers Strike: Teachers' Rights and Community Control* (Doubleday & Co., N.Y., 1970) esp. p. 18).

In the case at bar the conversion into impotence of a political opportunity to reform a small part of the institution of American public education is again threatened by attack upon a democratically chosen local school board. It is easier to influence the climate in a school in one's neighborhood than the climate in a school located elsewhere. It is more difficult to influence a school with no easily ascertainable attendance zone. It is impossible to influence a school with a massive clientele, or a school run from the Federal courthouse or from the District of Columbia. These obvious facts are overlooked and it is the neighborhood school which becomes a monster that creates "feelings of low self esteem, political impotence, isolation and inferiority, both in the minority children and their parents." (Pl.Br., p. 103). One of the conclusions of the Coleman Report, that both Negro and white children expressed a high self-concept, as well as a high interest in school and learning compared to other groups, is overlooked (Coleman Report, pp. 280, 281, 319). Instead, the portion seized upon is that Negroes were like other minority groups in "expressing a much lower sense of control of the environment than whites" (Ibid., p. 319). In the same manner, Dr. Dodson concluded that the factors present in the neighborhood school "combine to teach these children of the minority that they are powerless people and consequently as all people tend to do when they feel powerless, they resign in apathy * * *" (A.1474a; Dodson, op.cit. supra, p. 332).

One might more reasonably conclude that no one has any choice but to resign in apathy from an institution whose professional political representatives are so adept as to use justified feelings of impotence in dealing with the institution to make sure that all who must deal with it will remain impotent. In a paper published in 1930, retracting the conclusions of a study published in 1923 making comparisons between racial and ethnic groups based on Army Alpha scores in World War I, Brigham cautioned: "A safe procedure is to disregard what a psychologist calls his test, and to study the test itself as an instrument more or less adequate to its purpose. Most psychologists working in the test field have been guilty of a *naming fallacy* which easily enables them to slide mysteriously from the score in the test to the hypothetical faculty suggested by the name given to the test" (Brigham, *Intelligence Tests of Immigrant Groups* (1930), 37 Psych. Rev. 158, reprinted in Jenkins and Paterson, *Studies in Individual Differences: The Search for Intelligence* (Appleton-Century-Crofts, Inc., N.Y. 1961) pp. 285, 286). Dr. Coleman's "sense of control of environment" test was based upon the responses (agree or disagree) to three statements: "good luck is more important than hard work for success"; "every time I try to get ahead, something or someone stops me"; and "people like me don't have much of a chance to be successful in life" (Coleman Report, p. 320). The responses to the first question correlated dramatically with achievement scores (Ibid., p. 323). Perhaps only the iconoclast would wonder whether those who perceive that the rain falls on the just and the unjust or those who have Hora-

tio Alger programmed into their personality have the greater "sense of control of environment." One thing is certain: if the opportunities for influence in the real world are decreased, one's "sense of control" *should* be impaired. Some interpret "majority schools"—predominantly white schools—in that light (see Knowles and Prewitt, *Institutional Racism in America* (Prentice-Hall, Inc., N.Y., 1969) pp. 32-35, 44-45).

One need not look to the weaknesses in psychological testing for an explanation of Dr. Dodson's selective perception of the neighborhood school. Dr. Dodson has made it quite clear elsewhere that he is bent upon the destruction of local government and the neighborhood school simply as a means of "inducing dysfunction into the system"—referring, of course, only to the local school system—and co-opting for the institutional politician the positive aspects of "black power." He does not expect to further racial integration. His object is to administer the therapy offered by self-assertion, by asserting himself on behalf of those who need self-assertion to overcome feelings of powerlessness. See Dodson, *Education and the Powerless* in Passow, ed., *Developing Programs for the Educationally Disadvantaged* (Teacher's College Press, Colum. Univ., 1968):

> "Today the sociologists are coming up very rapidly with their version [of] infant damnation. When one is through reading our 'verified hypothesis,' he feels like saying 'For God's sake, if this is all we see in the human potential with which we work, we had better turn them over to the Black Muslims and resign from the business.' Somehow when youths get

a dose of that ideology, and take power, they show considerable intelligence, and ability" (Ibid., 334).

"The alternative to this so-called integration approach resides in the Negro group itself taking power and moving under self-direction * * *. This approach calls for conflict * * *. This does not necessarily mean violence. It means inducing dysfunction into the system * * * until the social order comes to recognize the interdependency of the whole to its parts" (Ibid., p. 338).

"Negroes must learn the art and skill of taking power—as they rapidly are doing" (Ibid., p. 338).

"Every classroom should be a laboratory in how to take power, how to shield the group from power which is abused * * *" (Ibid., p. 339).

A school board may reasonably doubt that operating classrooms as laboratories in which to teach pupils how to take power by racially defined groups will reduce racial friction and hostility in integrated or in any other classrooms. A school board may reasonably consider its duty to be to provide an education for all rather than to engage in restructuring government along racial lines. It is not reasonable to predicate Federal jurisdiction upon a school board's unwillingness deliberately to create "dysfunction" in a local public school system so that some of its constituency will feel that they have been able to assert themselves.

II. A neighborhood school policy does not disrupt parental expectations either as to the justification for compulsory education or as to choice among schools.

Parents and their children have claims upon the institution of the public school as legitimate as those of sociologists, educational theorists, institutional politicians, school district lobbying associations, teachers' colleges, school administrators' associations, teachers' unions, and racially defined pressure groups. It is reasonable for a local school board to take parental claims into account. The rights of parents serve a purpose beyond recognition of the natural feelings of parents for their children. We have in the Nazi and Fascist regimes the clear historical lesson of the result of law under which children belonged to the state. See, e.g., *Decision of the Vormundschaftsgericht*, Frankfurt Am Main-Hochst, Germany, May 4, 1937, 7 Deutsches Recht 446 (1937), translated in Simpson & Stone, *Law and Society* (West Pub. Co., 1949), at p. 1874; see also *Decision of the Amsgericht*, Wilster, Germany, Feb. 26, 1938 (67 Juristische Wochenschrift, 1938), translated in Simpson & Stone, *Law and Society*, at p. 1264: "• • • one of the boys expressed his desire to enter the Hitler Youth. But his parents would not allow it. From these facts the Court has concluded that B. is abusing his right of custody over his children and endangering their spiritual welfare. Therefore the Court has decided to deprive him of his right of custody • • •."

This Court recognized in *Wisconsin v. Yoder* (1972) 92 S.Ct. 1526 that the rights of parents are essential to the preservation of a free society. Most parents of all races

prefer the neighborhood school.[8] This preference is based in part upon its convenience, and the parental supervision which such convenience allows. It is also based in part upon the fact that the abandonment of the neighborhood school is advanced by some as a moral duty. Many parents regard the moral and ethical instruction of their children as the highest moral duty of parents. They do not regard such instruction as the proper function of the state. They are not willing to yield to the state the moral instruction of their children merely because some parents as well as some schools fall short in performing their obligations. Few parents regard the institution of the public school as Jehovah; fewer have the faith of Abraham (compare The Holy Bible, King James Trans., Genesis, c. 22, with Fiss, *A Theory of Fair Employment Laws* (1971) 38 Univ. of Chicago L.Rev. 235, 248-249, and with Cong. Record, Senate, Feb. 23, 1972, pp. S. 2380, 2381). Many parents have had experience in competing with state agencies in moral instruction of their children, and are therefore particularly sensitive to plans which lengthen school days without, in the parental view, compensating benefits (cf. *Wisconsin v. Yoder* (1972) 92 S. Ct. 1526; *West Virginia Board of Ed. v. Barnette* (1943) 319 U.S. 624;

[8]According to a Gallup poll on "busing to achieve desegregation" reported in Havemann, *Report*, National Journal, No. 16 at p. 632 (Wash., D.C., Apr. 15, 1972), 15% of the "whites" are in favor, 79% are opposed, with 6% having no opinion; 45% of the "blacks" are in favor, 47% are opposed with 8% having no opinion. Cf. A. 1015-1016 regarding a similar poll of affected parents in Denver. Obviously such polls are not helpful except to suggest that opinion about "busing" does not divide along racial lines. That polls show a policy to be favored by most does not make a policy right. It does not make it wrong either, for right and wrong are matters of individual thought and conscience. A poll measures neither.

Engel v. Vitale (1962) 370 U.S. 421). Travel time has been a source of controversy at least since 1902 (Smith, *Pupil Transportation: A Brief History* (1972) 11 Inequality in Education 6). Upon the evidence that it is after all the home which produces the school's chief "learning resources" parents would seem to have the better claim.

Many parents do not readily accept the notion that the law requires that they be afforded due process before their television set can be repossessed, but forbids that they be afforded an effective say, individually or collectively, in where, or for how long, or for what purpose their children are to be required to attend school (compare *Blair v. Pitchess* (1971) 53 Cal.3d 258 with *San Francisco Unified School District v. Johnson* (1971) 3 Cal. 3d 937). Such law has little moral force.

The success of compulsory education, if it has been successful, does not lie in the legal sanctions which can be brought to bear upon recalcitrant parents. The success of compulsory education lies in parental consensus, parental willingness to assign instruction to public schools. That consensus derives its moral force from the justification for compulsory education: a child is required to attend school for his own benefit. A shift to justifying compulsory education not upon the benefit to the child but upon the benefit to be derived by another from his presence, accompanied at the same time by increased burdens and loss of expectations, is highly disruptive of the delicate balance between the interest of the parent and the interest of the state in the instruction of the child. The person to benefit from the child's

presence may not be a classmate. It may be a teacher who does not wish to change *his* school assignment, a school administrator who wishes to shield himself from criticism based on low median achievement scores, or one or more political organizations who wish to enhance their prestige among "racial" or "professional" factions. In such circumstances the disruption attendant upon abandonment of the neighborhood school is quite likely to be accompanied by acrimony and an outright refusal of parental cooperation.

Acrimony is merely heightened by the easy tendency to characterize legitimate parental concerns as expressions of racial bigotry. The abandonment of the neighborhood school has frequently been grounded not in any firm knowledge of what will or will not benefit this or that racially defined group but simply in a desire to symbolize goodwill by the tender of someone else's child, or in a desire to administer some kind of mass therapy by constitutional mandate. A school board may reasonably doubt that such claims can be sufficient to justify disruption of a balance predicated by parents upon natural law within the penumbra of fundamental rights guaranteed by the First Amendment. A local school board's democratic recognition of parental claims should be afforded great weight.

III. THE RACIAL STANDARD FOR PUPIL ASSIGNMENT WHICH PLAINTIFFS URGE IS A SUSPECT STANDARD. MOREOVER, REQUIRING ITS USE IN A MULTI-RACIAL AND MULTI-ETHNIC COMMUNITY MAY RESULT IN A DENIAL OF EQUAL PROTECTION AND A DENIAL OF DUE PROCESS OF LAW TO SOME MINORITY PERSONS WHO ARE NOT "NEGRO," "HISPANO," "CHICANO" OR "ANGLO" AND TO SOME "NEGROES," "HISPANOS," "CHICANOS" AND ANGLOS" AS WELL.

A. Racial classification is a suspect if not illegal standard for the assignment by government of benefits and burdens.

Plaintiffs set against Denver's racially non-discriminatory pupil assignment policy the most suspect of the several conflicting standards by which courts are being asked to mandate the assignment of pupils, the race of the pupils. Prior to *Brown v. Board of Education*, racial classification by government could be used to intern American citizens solely because of their racial ancestry, for racial classifications were merely "suspect" (*Korematsu v. United States* (1944) 323 U.S. 214.) *Sweatt v. Painter* (1950) 339 U.S. 629 overruled *Plessy v. Ferguson* (1896) 163 U.S. 537 sub silentio. Until recently most were of the opinion that *Brown* similarly overruled *Korematsu* sub silentio, particularly in view of the emphasis in *Bolling v. Sharpe* (1954) 347 U.S. 497 upon the suspect nature of racial classifications. Some mistakes are too great and too fraught with implications to acknowledge publicly.[9] But the trouble with unacknowledged bastards is that they

[9]See Grodzins, *Americans Betrayed: Politics and the Japanese Evacuation* (Univ. of Chicago Press, 1969); cf. Goebbels, *The Goebbels Diaries* (Lochner Trans., N.Y., 1948, Eagle Bks. Ed.) p. 176: "It's a life-and-death struggle between the Aryan race and the Jewish bacillus * * *. Fortunately, a whole series of possibilities presents itself for us in wartime that would be denied us in peacetime. We shall have to profit by this."

often surface, with followers, to claim the throne. Today, the calm confidence, the wisdom and the fairness of the relocation of American citizens because of their Japanese ancestry is to be acknowledged by using its principles to ends currently perceived by some as equally good (see *Hobson v. Hansen* (D.C. D.C. 1967) 269 F.Supp. 401[10]; *United States v. School District 151 of Cook County, Illinois* (D.C.N.D.Ill., E.D. 1969) 301 F.Supp. 201; *Developments in the Law—Equal Protection* (1969) 82 Harv. L.Rev. 1065, 1087; Wright, *Public School Desegregation: Legal Remedies for de facto Segregation* (1965) 40 N.Y.U.L.Rev. 285, 297). Racial classification is reasonable —indeed it is to be required—so long as its object is some expedient purpose of the moment.

If *Korematsu* still lives and racial classifications are merely suspect and not illegal, it would still be a surprise to find them required at the end of the road. To those who hailed *Brown* as the dawn of enlightenment about "race," it would be a surprise to find racial classifications required of school districts which have for many years operated and continue to operate "just schools." It is easy enough to see why racial classifications for the purpose of distributing state rights and obligations should be illegal per se. "Among the words that can be all things to all men, the word 'Race' has a fair claim to being the most common, the most ambiguous, and the most explosive" (Barzun, op.cit. supra, at p. 1).

---

[10]See also Hansen, *Danger in Washington: The Story of My Twenty Years in the Public Schools in the Nation's Capital* (Parker Pub. Co., N.Y., 1968).

At best, "race" is definable only with reference to the time, place and purpose of the definition. One normally has in mind a model of how one thinks others would define a particular race (Alexander and Alexander, *The New Racism* (1972) 9 San Diego L.Rev. 190, 198-203). The Alexanders' "model" points up the fact that local custom is critical to any effort to define the indicia of a "race." Every operating definition of "race" is a function of time and place as well as purpose (*Hernandez v. Texas* (1954) 347 U.S. 475). It was largely law establishing the classification, supportive of social custom, which gave "Negro" the core of meaning which it had. It is largely new interpretations of salutary laws forbidding racial discrimination, interpretations corroborating the premise of a passing social custom, which give "Negro" the core of meaning which it still has (see Banton, *Race Relations* (Basic Books, N.Y., 1967) pp. 300-303 on the effect of stereotypes as creating self-fulfilling prophecies).

If racial classifications are now to be constitutionally required legal classifications for the purpose of assigning children to public schools, plaintiffs should at a minimum be required to establish that the "Negro" classification has some meaning at the time and in the place in which the use of such a classification for pupil assignment is sought to be required. Plaintiffs have not done so. They have, on the contrary, established that "race" has been consistently considered immaterial by the Denver School District in its pupil assignment policies.

B. Non-discrimination is not discrimination; nor is it exclusion by race.

Plaintiffs argue that whether an act or policy is racially discriminatory must be determined not by its object but by its effect (e.g., Pl.Br., p. 114). Non-discrimination is to become discrimination by virtue of the effect of failure to discriminate among pupils by race. Plaintiffs thus stand upon its head the fundamental principle that one may not because of his race be treated by government differently than another.

When the benefit or burden of an act or policy falls cleanly upon one racially defined group and not at all upon another, the act or policy may be a denial of equal protection. The act or policy may be a denial of equal protection because the congruence of race and benefit or burden may itself demonstrate that the act or policy is arbitrary and capricious, for racial classifications are themselves arbitrary and capricious. These principles are easy to apply. A state may not require a permit for wooden laundry buildings and grant such permits only to Caucasians (*Yick Wo v. Hopkins* (1886) 118 U.S. 356). A railway company may not allot some dining car tables to white passengers and others to Negroes. Such quota systems are unlawful racial discrimination (*Henderson v. United States* (1950) 339 U.S. 816).

This Court has upon several occasions disclaimed approval of racial quotas in public schools, for racial quotas of pupils in schools are as likely to result in a revival of caste based upon racial indicia as in its complete demise.[10a]

[10a] Plaintiffs' confusion of "caste" with "class" (compare Pl.Br. at pp. 33 and 125 with pp. 39, 40) is comprehensible in the light of the considerable disagreement among sociologists as to whether

A racial quota is necessarily exclusionary as well as inclusionary in two ways: First, if to achieve and maintain the racial balance of a classroom of thirty pupils, a quota of fifteen black and fifteen white pupils is established, the quota includes only fifteen black pupils. It excludes all black pupils who exceed that number and who would, absent the limit, be in the classroom. Second, by including fifteen black pupils on the basis of race, fifteen white pupils are thereby excluded on the basis of race.

Since quotas are necessarily exclusionary as well as inclusionary, Denver can hardly be said to have violated a constitutional duty by declining to establish racial quotas. The establishment of racial quotas for schools and classrooms would be squarely contrary to *Brown's* prohibition against the exclusion of persons by race. Based as it has been and continues to be upon geographic standards alone, Denver has pursued faithfully the policy laid down by this Court. Denver's policy seeks to avoid deliberate exclusion by race. It seeks at the same time to avoid deliberate inclusion by race, for such deliberate inclusion necessarily entails deliberate exclusion by the same suspect standard. Yet the plaintiffs here urge in effect that what was unlawful racial discrimination when

---

"caste" and the rigidity and lack of mobility associated with it, ever had any application to the American Negro, Myrdal notwithstanding (see Simpson and Yinger, *Racial and Cultural Minorities* (3rd Ed.) Harper & Row, 1965) pp. 245-259). Strictly speaking, it would seem that the only groups in our society treated with caste-like rigidity are children, and (except for the very few who transcend the common fate by their attachment to the few remaining institutions in which age is venerated, or at least no disability) the elderly. "In the debate on the question whether or not there are castes in the United States it is well to remember that caste and class are not realities, essences, but concepts" (Ibid., at p. 245).

practiced by a railroad upon its passengers is required by the Constitution to be practiced by school districts upon the nation's children.

Plaintiffs argue in effect that *Brown's* prohibition of racial discrimination requires racial discrimination because Denver's non-discriminatory policy does not fall upon all alike. It does not, according to plaintiffs, fall upon all alike because the median level of achievement of Negro and "Hispano" pupils is less than the median achievement level of "Anglo" pupils. It does not, according to Dr. Dodson, fall upon all alike because black pupils, unlike white pupils, need the therapy to be afforded by his power to create dysfunction in another local school system. These are curious means by which to seek to benefit Negro pupils. They are also curious conclusions from the evidence offered by the Coleman Report and the record in the case at bar. The Coleman Report data shows, if anything, that the average pupil in the racial majority in any school tends to achieve better than the average pupil in the racial minority in that school (supra, at p. 21). The record in this case offers no achievement data in Denver by race. There is, therefore, no basis for concluding that it is the Negro or the Hispano pupils in Denver's minority-dominated schools who are adversely affecting the school's average achievement level. Evidently, the District Court considered "Hispanos" to be as "knowledgeable" as "Anglos."

Plaintiffs reach their conclusion by a circular chain of reasoning: The Denver schools in which Negro and Hispano pupils predominate tend to have lower median achievement levels than do selected Denver schools in

which Anglo pupils predominate. Since Negro and Hispano pupils are disproportionately represented in the Denver schools with lower median achievement levels, it must be the Negro and Hispano pupils whose median achievement level in those schools is lower. Since Negro and Hispano pupils are in general as capable of performing as well as anyone else—an item with which we certainly agree—the Denver school district must be depriving its Negro and Hispano pupils of a benefit which the Denver School District is making available to its Anglo pupils. The only discernible such benefit is "knowledgeable fellow students", i.e., Anglo pupils.

This chain of reasoning assumes a great deal. It assumes that "Negroes" and "Hispanos" are fungible among the group defined as "Negro" and "Hispano." It assumes at the same time that "Anglos" are not fungible among the group defined as "Anglo", for one would otherwise suppose that the Anglo pupils in Denver's minority-dominated schools already provide "knowledgeable fellow students"; or, alternatively, it assumes that "Anglos" are also fungible but provided in insufficient numbers. It assumes either that it is the children and not the homes from which they come which generate learning, or that children from homes supportive of education are an adequate substitute for homes supportive of education.[10] It further assumes that it is possible for the Denver School District to provide an institutional substi-

[10] "Children from homes strongly supportive of education may not be influenced in achievement as much by variations in school factors as will children from homes not supportive of education (Coleman Report, p. 22).

tute for the home. How simple it would be if that were so!

There is an inherent limit upon the fungibility of institutions just as there is a limit upon the fungibility of people. The school cannot replace the home. There is also an inherent limit upon the effectiveness of social work and psychiatry remote from its intended beneficiaries. This Court observed in *Brown* that the deliberate exclusion of pupils by race does those excluded psychological harm. Indeed it does. One does not need Kenneth Clarke's experiment with several dolls and a few children to agree with that common sense proposition (Cahn, *Jurisprudence* (1955) 30 N.Y.U. Law Rev. 150, 161-165). That exclusion by race is an indignity to the pupil excluded—and an indignity also to those who identify with him—is well within the requirements for judicial notice. Plaintiffs, however, would construe this Court's just observation as having set aside the requirements of judicial notice to conclude, contrary to all evidence and experience, that "minority" children are more insulted than are "Anglos" by laws and practices which exclude pupils from schools because of their race (Pl.Br., pp. 103-104). That proposition is untenable.

Mistaken notions of racial superiority are but the counterpart of the mistaken self-perception of racial inferiority which this Court noted in *Brown*. Ideal self-perception is not easy to achieve, for "race pride" has positive as well as negative aspects (see Barzun, op. cit. supra., Pref. to 2d Ed. at p. xix). The psychological data offered in *Brown* is not universal today, if it ever was. It predated the rise of significant black nationalist

movements (see Essien-Udom, *Black Nationalism: A Search for Identity in America* (Univ. of Chicago Press, 1962) p. 5). It predated demands by some minority persons for racially oriented schools and studies, such as those in Berkeley, California, and Washington, D.C., from which whites (and in the case of Berkeley's *chicano* La Casa, Negroes) are excluded. It predated such contributions—presumably positive but in any event entitled to First Amendment free speech protection—as Donald W. Howie's unique analysis of *Brown* I: *The Image of Black People in Brown v. Board of Education* (1971) 1 The Black Law Journal 234.

One immediate effect of schools such as those in Berkeley and Washington, D.C., has been to condone by the support implicit in the use of Federal public funds the substitution of "black" attitudes of racial superiority for "white" (see, e.g., Gross and Osterman, *High School* (Simon & Schuster, N.Y., 1971), pp. 293, 300). The effect of allowing any racially defined group to exclude from public facilities persons of another race appears to be the same. If, therefore, the effect of Denver's neighborhood school policy were exclusion by race, which it is not, the burden of mistaken perception of *race* as determinative would not fall upon black and white pupils differently. It would fall upon both alike.

Not only does the effect of deliberate pupil exclusion by race fall alike and adversely upon black and white self-perception, but considering Negro pupils alone, the possible harm to self-perception which could result from the policies which plaintiffs in effect urge be required nationally may be as great as those resulting from segre-

gation laws and the deliberate exclusion by race which accompanied those laws. Self-perception is a tricky business, as the existence of the profession of psychiatry attests. We do not presume to guess about the self-perception of all Negro children or all of any-other-kind of children. The myths concerning Negroes of even thirty years ago seem absurd today (see Myrdal, op.cit. supra, pp. 106-108; cf. Barzun, op.cit. supra, passim). New myths tend to replace old myths (see Clark, *Dark Ghetto* (Harper & Row, N.Y., 1965) pp. 129-133, criticizing the current "cultural deprivation" theory; Erikson, *Identity, Youth and Crisis* (W. W. Norton & Company, N.Y., 1968) p. 304: "A clinician may be forgiven for questioning the restorative value of an excessive dose of moral zeal"; see also Murray, *The Omni-Americans: New Perspectives on Black Experience and American Culture* (Outerbridge & Dienstfrey, N.Y., (1970) pp. 98-112; Schragg, *Village School Downtown* (Beacon Press, Boston, 1967) pp. 171-172; and Katz, M., *Class, Bureaucracy and Schools* (Praeger Pub. Co., N.Y., 1971) pp. 111-112).

A local school board may reasonably question whether a Negro or "Hispano" child's self-perception might in some instances be damaged by law and school district pupil assignment policies which tell him that too much association with those who live in his neighborhood will retard his intellectual development. It may well question whether a pupil assignment policy based upon an invidious and misleading statistical comparison of the median achievement level of one racially defined group with the median achievement level of another might damage the self-perception of some children.

Policy based upon such an invidious comparison would in any case serve to mark Negro pupils by race as members of a group from which not much can be expected. Plaintiffs themselves note that performance is sometimes affected by expectations (see Rosenthal and Jacobson, *Pygmalion in the Classroom: Teacher Expectation and Pupils' Intellectual Development* (Holt, Rhinehart and Winston, N.Y., 1968). Plaintiffs do not seek escape from the mechanism by which this effect sometimes occurs. They seek instead to reinforce it. Plaintiffs choose to ignore the likely effect of their own panacea upon expectations from Negro pupils. They complain instead about the long standing and almost universal practice of paying some attention to achievement levels *in schools* for the purpose of central decision making about the allocation of resources *to schools* (Pl.Br., pp. 33, 34).

In Denver, for example, a lower pupil-teacher ratio—that is, fewer pupils per teacher—was deliberately fostered in schools with lower average achievement (A. 1327a-1329a). It is difficult to see how such a practice can be considered adverse to the pupils in schools with lower average achievement levels; but the adverse effect of this practice, if it is adverse, does not fall upon Negro pupils alone. The vice of the practice, if it is a vice, stems from central direction. To the extent that the practice treats the pupil in a school with a lower average achievement level as a member of group, it does *by school* the very thing which plaintiffs seek to require be done *by race*. The effect upon Negro pupils of limited expectations would hardly be improved by a constitutional rule requiring the deliberate balancing of pupils by race on

the ground that as a racially defined group Negro pupils do not achieve well. Laws not only set standards but help to create habits of conformity to them.

C. It is reasonable for a school board to balance the harm likely to result from the adoption of a policy of pupil assignment by race against the harm which plaintiffs argue results from treating all pupils alike for the purpose of assignment to schools.

Brown v. Board of Education was addressed to the deliberate exclusion of one race by another in a subculture polarized bi-racially. The harm likely to result from abandonment of a racially neutral standard for pupil assignment in cosmopolitan and pluralistic communities, neither wholly separate nor wholly integrated, cannot be readily assessed. Courts are ill-equipped to make such assessments. A school board elected by the people must be sensitive to the wishes of those actually affected. It can at the same time accommodate better than can a court the process of compromise inherent in democratic formulation of policy.

When the Fourteenth Amendment is turned from a judicial shield into a legislative sword, neither the person nor the racially defined group enjoys any longer the sanctuary from legislative excess contemplated by judicial review. The tangible burden of departure from San Francisco's neighborhood school policy has fallen most heavily upon pupils of Chinese, Latin and Filipino ancestry, not because of contacts with Negroes in school, which is nothing new in San Francisco, but because of the effect of dispersal upon special programs which ethnic minorities often want and need (cf. MALDEF Br., p. 26). Many

pupils of Chinese, Latin and Filipino ancestry need bilingual instruction in public schools, a need having its origin not in ethnic background but in existing ethnic environment. Special programs are sometimes essential to assimilation of pupils into the larger community.

It borders upon the frivolous to argue as some have done in San Francisco, that all children can benefit from learning Chinese. It is doubtless true that many children other than those of Chinese ancestry could benefit from learning Chinese, just as they could benefit from learning Spanish, or Italian, or Greek, or Russian, or the first language of other bilingual groups in San Francisco. It does not, however, seem likely that the child from a Spanish speaking home, who is having difficulty with English, will be encouraged by burdening him with learning Chinese in the first grade. Moreover, teachers bilingual in Chinese and English are scarce. The voluntary "concentration" of young children whose first language is Chinese is sometimes the only way in which such children can be aided—voluntary "concentration" not because of racial or ethnic background but because of the need of a child for a particular educational benefit.

A neighborhood school policy is not segregation merely because it allows self-selection to create ethnic diversity among schools. Racially and ethnically diverse schools are equal and not separate, for racial imbalance resulting from self-selection excludes no one by racial or ethnic ancestry. Nor does it freeze more firmly into the institution of the public school the insensitivity often reflected in the nation's most centralized, longest standing

and least successful program of forced acculturation, that of American Indian children:

> "ITEM: The students in a sixth grade English class in a school on a Chippewa Indian reservation are all busily at work, writing a composition for Thanksgiving. The subject of the composition is written on the blackboard for the students (and the visitor) to see. The subject: 'Why We Are Happy the Pilgrims Came!'" (Silberman, *Crisis in the Classroom* (Random House, N.Y., 1970) p. 173).

Plaintiffs themselves recognize that a constitutional duty measured by "benefit" to Negroes alone is untenable, for they seek to dispose of all "Hispanos" as well. "Hispano" is not defined universally as plaintiffs suggest (Pl. Br., p. 5). Normally, "Hispano" means "native[s] or resident[s] of the southwestern United States descended from Spaniards settled there before annexation" (Webster's Third New International Dictionary (G. & C. Merriam Co., 1961)). "Hispano" is not equivalent to Mexican-American, Chicano, Latino, Puerto Rican or Spanish-speaking and/or Spanish surname any more than Anglo is the equivalent of Saxon. "These three names—'Mexican,' 'Spanish American,' and 'Latin American'—are the three designations about which there has been the greatest status battle. 'Mexican American' (with or without hyphen) is increasingly used * * *. In recent years, *chicano* (diminutive of *Mexicano*) has come into increasing use as a self-referent, notably among the young, and especially among the militent" (Grebler, Moore, and Guzman, *The Mexican American People* (The Free Press, N.Y., 1970) p. 386; see also Ibid., Table 16-2 *Self-designation in Spanish and English*, by Income, Los Angeles and San Antonio Survey Re-

spondents 1965-1966; and Ibid., pp. 601-604 for a history of the changes in census designations).

Admiral Farragut might fairly have called himself a "Spanish-American" (Roosevelt, Theo., *Fear God and Take Your Own Part* (George H. Doran Company, N.Y., 1916) p. 363). Self-designations often differ from labels applied by others. "To infer that all Hispanos are non-white is fallacious, malicious sometimes, and always unjustified .... The term 'Anglo' should always be used whenever it is necessary to differentiate between Americans of Spanish, Mexican or other Hispanic or Hispanic-Indian background and Americans of European background other than Spanish" (Valdes, *What You Are* (1972) 1 La Luz 56, 57). Some "Anglos" who identify with the Irish Free Republic would disagree, just as Dr. Valdes rightly protests: "In the same spirit that a Bolivian-American resents being called a Spanish-American or Mexican-American, so too do the one million descendants of the original Spanish colonizers resent being called Mexicans or Mexican-Americans ..." (Ibid., p. 58). The diminutive *chicano* has little application in Denver, where most "Hispanos" come from rural Colorado and northern New Mexico (A. 2002a).

In the absence of any evidence in the record as to its meaning as "used throughout the record" (Pl.Br., p. 5) or as to the indicia which are to govern a public official's placing a child in any such "racial" category for any operative purpose, "Hispano" is a vague classification. Since people often at least think they know what Negro means, plaintiffs try to do what *they* think best for all "Hispanos," and at the same time solve the vagueness inherent in the "Hispano" classification by pointing to one attribute—low

reading achievement scores—allegedly shared with Negroes. Plaintiffs are compelled to their peculiar effort to reclassify Hispanos for special treatment as Negroes by the necessity to impress a unique set of problems upon the "Negro" group. For when Negro and non-Negro groups share the same problems, the irrelevance of the Negro classification to pupil assignment to schools and classrooms becomes apparent. Classifications irrelevant to a valid purpose are certainly not to be required by the Fourteenth Amendment. Some feel they should be prohibited by it (cf. Burt, *Forcing Protection on Children and Their Parents: The Impact of Wyman v. James* (1971) 69 Mich.L. Rev. 1259).

For the same reasons which motivate plaintiffs in the case at bar, there is a compulsion to widen the "Negro" group to include Mexican-Americans in Corpus Christi, Hispanos in Denver, Chinese in San Francisco, Puerto Ricans in New York and American Indians in Arizona. The only common problem shared by such groups in public schools is low average achievement scores on standard tests, although most pupils of Chinese ancestry in San Francisco do not share even that problem. The ultimate absurdity of plaintiffs' "racial" classification of "Negroes" is demonstrated by considering the fact that, among all racial groups, boys notoriously get lower grades in elementary schools than do girls. If plaintiffs' theory were correct, one should conclude that boys are suffering from a lack of equal educational opportunity in predominantly male classrooms. Should we then be required by the Constitution to balance boys with girls more closely? Or should we be required to reclassify boys for special treat-

ment as "Negroes?" Or should we be required to develop equations on the order of the Lorentz transformation by which we may weight Negroes, blacks, Chinese, Japanese, Mexicans, Filipinos, Samoans, boys, girls, Hispanos, Indians, Armenians, Italians, Germans, Russians and so on? And have we not already, by embarking upon racial classifications in schools, increased geometrically the opportunities for schoolmen who are inclined to do so to discriminate against a child because of his ancestry?

In San Francisco, these are not idle rhetorical questions. In San Francisco, the average scores on achievement tests among pupils of Chinese ancestry is high. Are pupils of Chinese ancestry, therefore, to be classified as "white" for the purpose of assignment to schools with "Negroes"?[11] Or must they be classified for school assignment as "Negro" by virtue of California laws which at one time excluded some of their ancestors (see *Guey Heung Lee v. Johnson* (1971) 404 U.S. 1215; Yankwich, *Social Attitudes as Reflected in Early California Law* (1959) 10 Hastings L.J. 250). Must San Francisco provide in each school (or in each classroom?) pupils in each of its nine "racial" classifications? Or is it San Francisco's constitutional duty to classify all of the low achievers among the pupils in its "racial" categories, taken together, for treatment as "Negroes" and all the high achievers for treatment as "white," and then to balance its schools so that each have an approximately equal proportion of high and low achievers?

---

[11]Americans of Chinese ancestry have waited long enough for an answer to this question (see *Gong Lum v. Rice* (1928) 275 U.S. 78).

Neither reason, nor science, nor anything in the record in the case at bar offers anything to justify any of such racial classifications as legally cognizable classifications for the assignment by the state of benefits or burdens. If children are to be required by the Constitution to be handicapped by public officials, children are entitled to be handicapped at least as fairly as horses. If we wish to address ourselves to slow learners and low achievers, we can address ourselves to slow learners and low achievers. That requires no *racial* classification.

IV. CONSTITUTIONAL STANDARDS AGAINST WHICH A PUBLIC BODY'S PERFORMANCE OF ITS CONSTITUTIONAL DUTY MAY BE MEASURED SHOULD NOT BE ABANDONED TO THE VARIED SUSCEPTIBILITIES OF LOWER COURTS TO CONCLUSIONARY SOCIOLOGICAL TESTIMONY AND REVANCHIST ESSAYS IN AMERICAN HISTORY.

The central question at the outset and at the end is whether it is the responsibility of the Denver School District to balance Denver's schools racially. Whether the question is posed as one of rights or of remedies, or as one of proof, disproof, or causation, that central question remains.

A. The remedies decisions in the school desegregation cases offer no ascertainable standard of constitutional duty.

Plaintiffs have shown only that the Denver School District has not considered itself obliged to abandon its long-standing policy of providing schools convenient to those whom the schools are to serve, in favor of assignment of pupils by race. Plaintiffs' charge that Denver's schools are insufficiently balanced racially requires at the outset a standard of a sufficient pattern, for a pattern of pupils by race cannot otherwise be insufficient.

The proper recipe for inclusion in and exclusion from specific schools to avoid "isolation" is entirely speculative. This Court's remedies decisions offer no standard of sufficiency better than that offered naturally by Denver's schools. Plaintiffs object to a school 27.5 per cent Anglo, 38 per cent Negro and 29.7 per cent Hispano (Pl.Br., p. 122). If interracial contact is the goal, this mix seems ideal. The "Anglo" percentage is greater than many cities can currently produce.

This Court's remedies decisions offer neither a measure from which one may deduce when "desegregation" has been accomplished nor a measure of sufficient racial patterns for any other purpose. "Desegregation" is to be measured not by motive but by effect. Yet school districts subject to "desegregation" are forbidden to create new attendance zones in which the proportion of pupils by race is about equal (*Wright v. Council of City of Emporia* (1972) ____S.Ct.____; *United States v. Scotland Neck City Board of Education* (1972) ____ S.Ct. ____). School districts subject to "desegregation" are thereby forbidden to reach for the "majority effect" which the plaintiffs in the case at bar consider to be vital to the improvement of Negro pupil achievement (supra, at p. 18). A school board's speculation about the effect upon shifts in racially defined populations of a Federal remedy which denies to all pupils in a school district the benefit of Dr. Coleman's prescription is not relevant. Yet judicial prognosis of the effect of population shifts upon the self-perception of all Negro pupils requires the perpetuation of a county-wide school system (*Wright v. Council of City of Emporia*, supra; *United*

States v. Scotland Neck City Board of Education, supra). The perpetuation of minority-dominated schools throughout an entire school district is required, for the creation of new attendance zones in which the proportion of white and black pupils would be about equal would have the effect of increasing the proportion of black pupils in some schools. Yet San Francisco was subjected to "desegregation" because it allowed some minority-dominated schools to exist within a framework of pupil assignment without regard to race, and San Francisco was allowed at the same time to increase the proportion of black pupils in some schools by minimizing them elsewhere.

One effect of this flexibility of equity has been to substitute asymmetry among school districts resulting from Federal court remedies decisions for asymmetry among school districts resulting from the legislative decisions of school districts alone. Another effect in San Francisco was the destruction of stable integrated elementary schools and the substitution for them of schools deliberately imbalanced racially in compliance with a Federal decree. Still another effect was to set San Francisco upon the long and divisive road of annual petitions and orders for further relief. The District Court's refusal to order San Francisco's elementary schools to be balanced evenly the first time assures Federal court supervision of San Francisco's pupil assignment policy in perpetuity, if "desegregation" remedies were at the outset correctly grounded in the understanding that racial imbalance is sufficient to show a violation of a constitutional duty conferring Federal jurisdiction.

If racial imbalance caused by the pupil assignment policy of a Federal District Court stands on some different footing than racial imbalance caused by the pupil assignment policy of a school district, one may reasonably ask what part of the Constitution exempts Federal court equity power from the requirements of equal protection and due process of law? What part of the Constitution allows to equity so much flexibility that Federal District Courts are always correct and school districts are always wrong? There is no end to the conundrums which Federal court remedies cases have put to school districts: Can they keep racial data without its being used as proof of racially discriminatory intent? Can they fail to keep racial data without its absence being used as proof of racially discriminatory intent? Can they build a new school, or not? Can they repair a school in a "predominantly black" neighborhood, or not? Can they assign a "black" teacher to a "black" school, or not? Can they allow a "white" child to transfer out of a "predominantly black" school for *any* reason? Can they meddle with the natural racial balance of a school attendance zone? If they do not strike the correct balance, will they then have committed an act of segregation by law? And what is the correct balance? Is it measured by pupil population in the school district, by adult population in the school district, or now, by pupil population or adult population in whatever three or more suburban areas someone might later think the school district should be required by the Constitution to merge with? If, on the other hand, they do not meddle with the racial balance of a school attendance zone, then are they guilty of an act of segregation by law, by virtue of "failure" to correct racial imbalance?

Uncertainty is compounded by the problem of the proper number of kinds: Two classifications as in *Racial Isolation in the Public Schools*?[12] Or six as in Denver? (A. 2038a). Or seven as in the Coleman Report? Or nine as in California? Uncertainty is further compounded by the recently enacted *Emergency School Aid Act*, Section 720 (9), (10). For the purpose of granting Federal aid to local school districts, Congress has determined that "minority isolation" consists of schools dominated by the aggregate of an open ended number of "racial minorities" (*Emergency School Aid Act*, Section 720 (9), (10).

As San Franciscans, we find the history of Denver's aborted plans for the creation of larger attendance zones by the use of "complexes" distinctly poignant. If innovations once adopted cannot be modified or postponed without thereby risking Federal court plenary authority in perpetuity over the school district, perhaps school districts will be more cautious in adopting innovations. Plaintiffs here argue that Denver's abandonment of its "complex" plan in favor of a plan allowing voluntary "majority to minority" pupil transfers was racially discriminatory (Pl.Br., p. 16). Yet neither the NAACP nor the District Court in San Francisco chose to abstain when San Francisco initiated the first stage of its like plan embracing roughly ten per cent of San Francisco's elementary schools and made clear its intention to adopt similar "complexes" throughout San Francisco (see *San Francisco Unified School District v. Johnson* (1971) 3 Cal.3d 937). San Francisco's "failure" to adopt quickly enough a city-wide plan of assignment of elementary pupils by

[12]U.S. Commission on Civil Rights, *Racial Isolation in the Public Schools* (U.S. Gov't. Printing Office, 1967).

race was state action requiring a decree directing the adoption of a city-wide plan of assignment of elementary pupils by race.

How high, in short, is up? Those who seek in good faith responsibly to administer school districts by law and free of racial discrimination are damned if they do and damned if they don't. With school districts compelled to labor in the absence of rules, which is the absence of law, in a climate of racially oriented political propaganda, respect for law is itself undermined. School men who do wish to discriminate against pupils by race are afforded the best possible situations in which they may do so freely, for there is no measure by which the racist may be distinguished from the missionary.

B. Shifting to school districts the burden of disproving an intent to segregate merely affords another means to compel the adoption of racial quotas, a means suited chiefly to setting an equivocal constitutional standard against due process of law.

Plaintiffs would shift to local school districts the burden of disproof once an unspecified number of acts of "intentional segregation" have been shown (Pl.Br., p. 66). Given the evidence which plaintiffs offer as acts showing "intentional segregation" there would be little use in a requirement that some "segregatory action" be shown. Purity of heart is impossible to prove. Even Uncle Tom who gave his life rather than reveal the whereabouts of fugitive slaves became to some a symbol of black betrayal some while ago.

The natural and necessary actions of school districts —and that is all plaintiffs offer in this case—can easily be reinterpreted. If black teachers are assigned to pre-

dominantly black schools those schools are then said to be "identified" as "Negro" schools. If black teachers are assigned to "white" schools, then educational opportunities are being depressed at "black" schools because the children have no role models. If portable classrooms are located at a predominantly black school, that act becomes an effort to "contain" black students (App. to Pet. for Certiorari, 29a). If they are not, the educational opportunity is unequal because the pupils are then either in overcrowded classrooms or have an extended school day because they are transported elsewhere. If compensatory education programs are initiated, the accusation is that pupils are being "contained" in their old neighborhoods by the attractiveness of the school program. If compensatory education is not provided, pupils with a greater need are being discriminated against because they are not given more than children who need less. If a replacement school is built and opens with a twenty-seven percent Negro pupil population, it becomes "earmarked for minority occupants" (Pl.Br., p. 24). If school boundaries are drawn in a traditional fashion along a busy thoroughfare, then Negro pupils are being "segregated" if a disproportionate number live on one side of the street (1132a-1133a). And if school boundaries are drawn without regard to such a thoroughfare to include a greater proportion of Negro pupils in a school, then Negro pupils are being discriminated against because they must—unlike white pupils—cross a dangerous street or because such gerrymandering has included too few or too many.

Under this sort of Freudian analysis, the allocation of the burden of proof is dispositive. Constitutional rights and corresponding duties become mere matters of a

lower court's judgment at a given moment as to the sufficiency of the racial balance in a school district.

> "[I]n Detroit, one charge against the school board, accepted by Judge Roth, was that the board built small schools of 300 in order to contain the population and make desegregation more difficult. Paul Goodman and many others would argue that even schools of 300 are probably too large. In San Francisco, on the other hand, the argument was that schools were expanded to 'contain' the black and white population. The Detroit judge, it seems, would have preferred the large San Francisco schools, and the San Francisco judge would have preferred the small Detroit schools * * *" (Glazer, *Is Busing Necessary*, Commentary, March, 1972, 39, 48, reprinted in Cong. Record, Senate, March 13, 1972, S-3855, 3860).

Constitutional rights and corresponding duties should not depend upon the views of a single judge as to a sufficient pattern of pupil assignment by race. The redemption of constitutional rights should not have to depend upon waiting for the "right" judge.

Nor should constitutional rights and corresponding duties be so uncertain as to result in the imposition of conflicting duties in the same case, as has happened in the case at bar. The disparate treatment below of Denver's "core area" schools and its so-called "resolution" schools simply imposes upon the Denver School District conflicting duties. Denver has been told in one breath that its constitutional duty lies in classifying its pupils racially and that it must gerrymander four of its school boundaries to improve racial balance. It has been told in the next

breath that it need not classify racially and reassign all of its pupils on a racial basis. Such conflicting duties merely put off upon conflicting standards of proof substantive legal questions of the greatest moment.

When substantive questions are put off upon conflicting standards of proof, or when the "burden of proof" is shifted to require proof of a negative, the substantive rule comes to be wholly fictional and recognized as such however vigorous the disclaimer in dicta. Some such changes do not matter much. But some changes do. School desegregation cases result in mandatory injunctions disposing of an entire racially defined class, whether a member of the class wants such a "benefit" or not. They are sometimes even accompanied by the explicit denial of the right to intervene by persons who purport to speak for the class. Shifting the burden of proof in such unique "class actions" is particularly dangerous to the integrity of the judicial system. What is perceived as "discrimination" by a bystander may be perceived as a benefit by the person actually affected. Some pupils of Chinese ancestry, for example, view predominantly Chinese schools as superior in spite of a long history of prejudice and discrimination against Orientals in California. As Dr. Coleman commented about students in small town schools who were considering going to the University of Chicago: "They didn't know any better—all they were after was an education" (Coleman, *Adolescents and the Schools* (Basic Books, Inc., N.Y., 1965) p. 26). Nothing is more frustrating to the social engineer than the member of an oppressed minority who does not believe himself to be oppressed.

The constitutional requirement that there be a case or controversy assures an adversary process, which in turn justifies both the doctrine of res adjudicata which is supposed to bind the members of a class in a class action and the doctrine of precedent which binds everyone (*Sierra Club v. Morton* (1972) 92 S.Ct. 1361; but see, e.g., *Henry v. Godsell* (D.C. E.D. Mich. 1958) 165 F.Supp. 87, and *Davis v. School District of Pontiac, Inc.* (D.C. E.D. Mich. 1970) 309 F.Supp. 734, (6th Cir. 1971) 443 F.2d 573). The case or controversy disappears, and the adversary process disappears along with it, if a political organization can, by producing statistics and the history of some normal and necessary actions that can after the fact be construed as "segregatory", force a school district to choose between protracted litigation (which the school district must lose because undefined insufficient racial balance proves racial discrimination) and protracted transportation of the district's pupils. The only ones hurt are those who are to be allowed no voice, individually or collectively, the "beneficiaries" of the institution. For the parents of those "beneficiaries," be they white, black, red, or brown, recourse against a public institution which sometimes has as much in common with the jailor as with the fairy godmother is undercut by the very judicial system to which they must look for redemption of the pledge of due process of law.

A change to constitutionally required racial quotas in public schools is of too great moment for indulgence in legal fiction. For court-ordered and judicially supervised racial quotas would thus be impressed into the Constitution itself; the voting franchise would be undermined;

and unique "class actions" allowed at the outset as a means of protecting the person would have become instead the means for denial of due process of law. Worse still: required adoption of racial quotas accompanied neither by judicial supervision nor by a definite standard by which such quotas are to be established and administered would afford unlimited opportunities for racial discrimination beyond the establishment of quotas themselves.

C. Even if Denver committed "segregatory acts," equity should not require a district-wide remedy. Experience should preclude such a remedy.

Plaintiffs argue that only system-wide relief "promises to effectively remedy the effects of past discriminatory policy" (Pl.Br., p. 65). Admitted failure of proof as to most Denver schools is to be excused because all the school district's actions should be considered "prima facie illegal" where "the school authorities have been found guilty of intentional segregation as to some action" (Pl. Br., p. 66). Plaintiffs equate "the objective of equalizing educational opportunity" with the objective of racial quotas. Not only would plaintiffs shift to the school district the burden to explain why it has not established and maintained racial quotas in all of its schools, but they equate the "flexibility" of equitable remedies with the requirement that equity always go as far as this Court has most recently allowed.

Even equity power has limits (cf. *Sixty-seventh Minnesota State Senate v. Beens* (1972) 92 S.Ct. 1477). The remedy which plaintiffs urge upon Denver is not likely to be effective except in furtherance of Dr. Dodson's purpose to introduce dysfunction into another local public

school system. Plaintiffs' "remedy" for racial imbalance would be impermanent. It is, moreover, directed at the wrong body. Racial imbalance as well as the deficiencies in the institution of the public school would continue because both problems stem from conditions over which school boards have the least control and are at the same time the most vulnerable as the scapegoat.

In San Francisco, one immediate and direct effect of disruption of the entire system was the loss of about one-eighth of San Francisco's elementary school population. There is reason to believe that the loss was greatest among pupils formerly in schools which even the District Court in San Francisco found to be "integrated." We trust that in view of the pupils of Negro ancestry and Chinese ancestry included in San Francisco's dramatic pupil loss, characterizing that loss as "white" flight would be a further misuse of racial classification.

If school districts must provide against voluntary population movements, they will be hard pressed to stay one step ahead of their pupils. Mrs. Lewis "found that moving out of the core city to an integrated area provided only temporary integration" because other Negroes followed her (Pl.Br., p. 85). Senator Brown found his political position compromised because when the elimination of certain optional zones was discussed, the area in which he and another black elected official lived were to continue in the optional zone (A. 866a-867a, 875a). Senator Brown moved to another optional zone between a predominantly white and a predominantly black school, and his daughter attended the predominantly white school (A. 876a-877a). Barrett school was constructed to serve his residence area

and opened in 1960 as a predominantly black school, even though in 1957 Senator Brown's family was the first black family in his block (A. 876a-878a).

The population shifts which affected plaintiffs' witnesses have been demonstrated time and time again in cities which have been affected by Southern school remedies cases (see *Calhoun v. Cook* (D.C.N.D. Ga. 1971) 332 Fed.Supp. 804, order vacated in part (5 Cir. 1971) 451 F.2d 583). Even if it were proper that they seek to do so, neither school boards nor courts can any more assist Negro families to escape from other Negro families than they can assist white families to exclude Negroes.

Insofar as plaintiffs seek a remedy which will reform education, relief against Denver's school board undercuts the wrong body. Whatever requiring racial balance might do to improve racial balance temporarily, it would not improve educational opportunity. "Affirmative action to relieve racial imbalance" has enabled some to disguise the overdue public confession of the near bankruptcy of the public school (see Greer, *The Great School Legend* (Basic Books, N.Y., 1972) passim). "Racial imbalance" has enabled some to disguise the simple fact that the Negro community has succeeded where so many others have failed in stripping the emperor of garments never there. Since children will teach children when the institution has been unable to, one might reasonably conclude that it is not the institution which has been doing much teaching of anybody. By virtue of disguising teaching failure behind racial imbalance, the chief effect of "affirmative action" to date has been to leave the rabbits in charge of the lettuce patch. Many public school administrators today

have the most enthusiasm for "desegregation" and "equal opportunity" programs which require the expenditure of vast sums on large impersonal education parks (Sullivan, A. 1601a-1602a; Passow, ed. *Developing Programs for the Educationally Disadvantaged* (Teachers College Press, Colum. Univ., N.Y., 1968) pp. 314-316). They have no enthusiasm for compulsory reassignment of effective teachers to schools with low achievement levels. They are not even enthusiastic about such mild teacher "coercion" as offering higher pay scales for service in schools with low achievement levels. The NEA did not endorse *Brown* I or *Brown* II after studying the matter in 1959 (Lieberman, *The Influence of Teachers' Organizations Upon American Education* in Henry, ed. *Social Forces Influencing American Education*, National Society for the Study of Education, Sixtieth Yearbook, Part II, Univ. of Chi. Press, Chicago 1961). It is, therefore, not surprising that there is no comment from that quarter about teacher turnover in Denver's "core area" schools (A. 281a). There is no request from that quarter to remove seniority transfer provisions from teachers' union contracts. Such requirements exist in Denver as elsewhere (A. 260a, 261a, 266a, 308a). Equity has as much power over teachers' unions as over school boards; but there is only willingness to join in undermining local school boards and in compelling children and their families to undergo the educational and social trauma which accompanies frequent reassignment and larger more impersonal custodial institutions.

Neither the Constitution nor the flexibility of equity requires that Federal courts be used toward such ends. We find no evidence in the record in this case of any act

or policy which excluded pupils by race from Denver's schools. The Denver school board is entitled to retreat from experiment with boundary gerrymandering by suspect pupil assignment standards without suffering Federal jurisdiction in perpetuity. But if an experiment commits a school board irrevocably, then equity should direct itself to nothing beyond that experiment. Even then, equity should consider whether a court's judgment about such an experiment should be substituted for the judgment of a democratically chosen school board. Effective local democratic expression is a vital balance against the vast bureaucracy which the institution of the public school has become.

CONCLUSION

Plaintiffs argue not that laws requiring that school districts distinguish among pupils by race are wrong, but that the South simply had the wrong such laws. The right such laws, they say, should now be required by this Court. If we seek to teach our children that a man may not be judged by the color of his skin—if freedom of association is our goal—the lesson cannot be taught by constitutionally compelled racial classification by school districts. If we seek to teach our children that we value self-government, the lesson cannot be taught by removing the governance of public schools almost entirely from local democratic accountability in the guise of correcting the effect of racial discrimination.

The result would be the same whether racial quotas be explicitly approved or brought about by continued con-

flicting demands or an impossible burden of proof upon local school boards. To require that school districts substitute the racially defined population for the person under the Fourteenth Amendment coincident with the revival of Social Darwinism would be dangerously shortsighted (see, e.g., Ardrey, *The Social Contract* (Kingsford Press Inc., 1970); Jensen, *How Much Can We Boost IQ and Scholastic Achievement?* (1969) (39 Harv.Educ.Rev. 1). To impose upon school districts a constitutional duty to classify pupils racially for the purpose of school and classroom assignment would serve chiefly to perpetuate the myth that it is race which determines behavior, ability, accomplishment, and character. Given the purported correlation between race and academic achievement upon which plaintiffs base their argument that a school district must classify and assign its pupils racially, it would serve also as a measure—by race—of the nation's view of a pupil's prospects for academic success. No school district should be compelled by the Constitution of the United States to do that to any child.

The decision of the Tenth Circuit below should, therefore, be affirmed as it relates to Denver's "core area" schools. Certiorari should be granted and the decision of the Tenth Circuit reversed in No. 71-572.

Respectfully submitted,

Willis Hannawalt

October Term, 1971
No. 71-507

WILFRED KEYES, *et al.*,

Petitioners,

vs.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, *et al.*,

Respondents.

On Writ of Certiorari to the United States Court of Appeals for the 10th Circuit.

BRIEF AMICUS CURIAE FOR SAN DIEGO UNIFIED SCHOOL DISTRICT.

Introduction.

This brief is filed with the written consent of both parties, pursuant to Rule 42 of the Rules of the Supreme Court of the United States. It is in support of the position of the Respondents, Denver School District, No. 1, *et al.*, that the Supreme Court should affirm the decision of the Court of Appeals which refused to order racial balancing of schools in the absence of proof that the racial imbalance was the result of racially motivated conduct.

Interest of Amicus Curiae.

For the past several years the San Diego Unified School District, like many other large northern city school districts,[1] has been struggling with some of the same conditions which are present in the *Denver* case. Over the past three decades the San Diego area has experienced a large influx of Negro and other minority group residents.[2] These new residents tended to congregate together in certain areas of the city, and as a result the neighborhood schools in some of those areas have a disproportionate number of minority students as compared to other areas of the city.[3]

Some of these minority students presented special educational problems. For example, some had come from other parts of the country where there were lower educational standards; others entered school with little English-language background, and many came from economically deprived families. In an attempt to alleviate many of these problems, the San Diego Unified School Board has formulated a plethora of compensatory and other educational programs[4]—all of which

---

[1]The San Diego Unified School District is one of the largest urban school districts in the United States, serving some 128,317 pupils in its 33 secondary schools (grades 7-12) and 124 elementary schools (grades K-6).

[2]A review of the San Diego City Schools Pupil Racial Ethnic Census for the past several years illustrates this trend. In 1965-66 the figures for the three largest racial and ethnic pupil groups were as follows: Spanish Surname 8.0%, Other White 80.6%, and Negro 9.3%. By 1971-72 the respective figures were: Spanish Surname 10.6%, Other White 73.1%, and Negro 12.8%.

[3]The San Diego City School Pupil Ethnic Census, 1971-72 (Publ. Jan. 72) indicated that 21 of the District's 124 elementary schools and 5 of the District's 33 secondary schools had individual or combined Negro and Spanish Surname enrollments of 50% or more.

[4]Several of these programs (*E.g.*, The Fremont-Silvergate Model Schools Program and the Balboa Park Program) were

are designed to assure that each child has an equal educational opportunity no matter what his race, ethnic, economic or social background.

However, some individuals have not been satisfied with the School District's actions, and commencing in 1967 the San Diego School District has been almost continuously involved in litigation brought by various parties seeking to require the San Diego School District to adopt a policy of forced racial and ethnic balancing of its pupil population.[5]

By granting certiorari in the *Denver* case, for the first time the United States Supreme Court is in a position

---

designed to provide an opportunity for pupils from various ethnic and socio-economic groups to come together for the purpose of developing mutual respect and understanding.

In addition, commencing in 1966, the San Diego School District initiated a voluntary ethnic transfer program with the school district paying all transportation costs. Each year participation in that program has increased, and in 1971-72 1,957 students took advantage of this program.

[5]In December 1967 a so-called "class action" suit seeking "integration" was filed. (*Carlin v. Board of Education, San Diego Unified School District*, San Diego Superior Court, No. 303800). In July 1969 that suit became inactive with the filing of a similar suit by the then California Attorney General, Thomas C. Lynch (*People v. San Diego Unified School District et al.*, San Diego Superior Court, No. 312080). Although the School District was successful in obtaining a dismissal of this latter suit, on appeal, the California Court of Appeals for the Fourth Appellate District reversed and remanded the case for trial (*People ex rel. Lynch v. San Diego Unified School District* (1971) 19 Cal.App.3d 252, 96 Cal. Rptr. 658). On November 11, 1971, following a denial of hearing by the California Supreme Court, the San Diego School District petitioned the United States Supreme Court for a writ of certiorari. On February 29, 1972, California's present Attorney General, Evelle J. Younger, replied to that petition by stating that he intended to dismiss the action. On March 27, 1972, the United States Supreme Court denied the petition for the writ of certiorari. (*San Diego Unified School District v. California* (1972) 405 U.S. 1016). On April 6, 1972, that case was dismissed, but within two weeks the original *Carlin* plaintiffs re-commenced their action, and at present, a trial is set for October 1972.

to decide what should be the respective role of the courts and the local school authorities in determining what should or must be done when racial imbalance, not the result of a prior *de jure* segregated system or prior discriminatory acts, exists. In this decision the San Diego Unified School District is vitally interested.

Opinions Below.

The Opinion of the Tenth Circuit Court of Appeals is reported at 445 F.2d 990 (App. Pet. Cert. 122a-158a). The various opinions of the District Court are reported at 303 F. Supp. 279 (App. Pet. Cert. 1a-19a); 303 F. Supp. 289 (App. Pet. Cert. 20a-48a); 313 F. Supp. 61 (App. Pet. Cert. 49a-98a); and 313 F. Supp. 90 (App. Pet. Cert. 98a-121a).

Jurisdiction.

The Supreme Court has jurisdiction to review the Tenth Circuit decision by a writ of certiorari pursuant to 28 U.S.C. Section 1254(1). This jurisdiction was invoked by the granting of said writ on January 17, 1972.

Question Presented for Review.

ARE SCHOOL AUTHORITIES REQUIRED TO RACIALLY BALANCE THEIR SCHOOLS REGARDLESS OF THE CAUSE OF THE IMBALANCE OR ARE THEY FREE TO ADOPT OTHER METHODS FOR PROVIDING EQUAL EDUCATIONAL OPPORTUNITY?

Statement of the Case.

In June 1969, the plaintiffs (petitioners herein) brought a "class action" against the Denver School District, its Board of Education, and Superintendent seeking broad injunctive relief to require defendants (respondents herein) to remedy the alleged racial seg-

regation and unequal educational opportunity in certain of defendants' schools.

Plaintiffs' complaint consisted of two causes of action. The first cause of action related to the so-called "resolution schools" consisting of six Northeast Denver elementary schools, two junior highs, and one high school affected by three resolutions adopted by the Board of Education in the spring of 1969 and thereafter in June 1969 rescinded. As to these schools, the trial court found affirmative discriminatory acts. (303 F. Supp. 289, at 294-295, App. Pet. Cert. 32a-35a; 313 F. Supp. 61, at 67-69, App. Pet. Cert. 52a-57a).

The second cause of action related to a larger number of Denver schools which plaintiffs alleged were either segregated or providing unequal educational opportunity. After finding that said schools were not *de jure* segregated, (313 F. Supp. 61, at 69-76, App. Pet. Cert. 57a-74a), nor that the neighborhood school policy had been intentionally used to segregate these schools, (313 F. Supp. 61, at 76-77, App. Pet. Cert. 74a-75a), the trial court proceeded to review a group consisting of twelve elementary schools, two junior high schools, and one senior high school. These "court designated schools" were generally located in the north-central part of Denver in what the court referred to as the "core aren" and were stated to have been selected because of their high (70% or more) concentration of Negro and "Hispanic" pupils.* (313 F. Supp. at 77, App. Pet. Cert. 76a-77a). The major thrust of the

*The court specifically noted that some of these schools had already been discussed in regard to the First Cause of Action, "but they are included here *because of their racial concentrations, if not in every instance their educational inferiority*". (313 F. Supp. 61, at 78, App. Pet. Cert. 77a). [Emphasis added.]

plaintiffs' claim as to these schools was that the racial concentration in those schools made them inferior, and thus the students attending them were denied equal educational opportunity. (313 F. Supp. 61, at 81, App. Pet. Cert. 83). Based primarily upon his conclusion that regardless of its cause, racially concentrated schools produce lower achievement and an inferior educational opportunity, (313 F. Supp. 61, at 77, 83, App. Pet. Cert. 76a, 89a), the trial court ordered that these "court designated schools" be "desegregated" and that grades 1-6 be racially balanced with an "Anglo" composition in excess of 50 percent. (313 F. Supp. 90, at 98, App. Pet. Cert. 116a).

On appeal the Tenth Circuit Court of Appeals, after affirming the other District Court findings, reversed as to the "court designated schools", holding that the trial court's ruling pivoted on a conclusion that Denver's neighborhood school policy violated the Constitution because it resulted in racial and ethnic imbalance and that this conclusion was contrary to the Tenth Circuit's previous holdings on this issue. (445 F.2d at 1007, App. Pet. Cert. 151a).

Thereafter the plaintiffs petitioned for a Writ of Certiorari to seek review of the Court of Appeals' decision. On January 17, 1972, the United States Supreme Court granted the writ of certiorari.

The brief of this Amicus will be limited to a discussion of the part of the case presented by the Circuit Court's reversal of the trial court.

Summary of Argument.

I.

The Tenth Circuit Court of Appeals correctly applied existing law when it reversed the trial court's ruling that pupil racial imbalance, regardless of its cause, results in a deprivation of equal educational opportunity. The decisions of the United States Supreme Court and every Federal Appellate Court which has considered the situation have indicated that there is no federal constitutional duty to racially balance the schools in the absence of proof that the inbalance was the result either of a prior *de jure* system, or purposeful discriminatory action.

II.

Recent empirical studies indicate that the problem of providing equal educational opportunity to minority students is very complex and that racial composition of the classroom, if at all related to achievement, accounts for only a small proportion of the differences among the schools. A very recent study indicates that racial balancing may not achieve the intended beneficial results and may, in fact, be counterproductive.

III.

In light of the problems presented by varying local conditions, the Supreme Court should not adopt one solution to the problem of providing equal educational opportunity, but should allow local school authorities the flexibility to work out their own solutions.

Argument.

I.

THE TENTH CIRCUIT PROPERLY RULED THAT ABSENT A PRIOR HISTORY OF SEGREGATION OR DISCRIMINATORY ACTS THERE IS NO CONSTITUTIONAL DUTY TO REMEDY PUPIL RACIAL IMBALANCE.

A. The Federal Circuit Courts of Appeal Have Uniformly Held That Absent a Prior History of Segregation or Other Discriminatory Acts, There Is No Constitutional Duty to Remedy Pupil Racial Imbalance.

Whenever Circuit Courts of Appeal have been faced with the issue of pupil racial imbalance in the absence of proof of prior discriminatory acts, they have reached consistent conclusions.[7] (*E.g. Bell v. School City of Gary, Indiana* (1963 7th Cir.) 324 F.2d 209, 213, *cert. denied* (1964) 377 U.S. 924 (no constitutional duty to change innocently arrived at school attendance districts merely because shifts in population had increased or decreased the percentage of Negro or white pupils); *Downs v. Board of Education* (1964 10th Cir.) 336 F.2d 988, 998, *cert. denied* (1965) 380 U.S. 914 (no requirement to abandon or destroy the neighborhood school system even though it results in racial imbalance where it was maintained with no intention or purpose to maintain or perpetuate segregation); *Springfield School Committee v. Barksdale*

[7]There has been a divergence of opinion in some trial courts. *E.g.*, compare *Blocker v. Board of Education of Manhasset, New York* (1964 E.D.N.Y.) 226 F. Supp. 208 and *Soria v. Oxnard School District* (1971 C.D. Cal.) 328 F. Supp. 155, with *Lynch v. Kenston School District Board of Education* (1964 N.D. Ohio) 229 F. Supp. 740 and *Gomperts v. Chase* (1971 N.D. Cal.) 329 F. Supp. 1191.

(1965 1st Cir.) 348 F.2d 261, 264 (no requirement to remedy racial imbalance at all costs); *Deal v. Cincinnati Board of Education* (1966 6th Cir.) 369 F.2d 55, 61, *cert. denied* (1967) 389 U.S. 847, (1969 6th Cir.) 419 F.2d 1387, 1390, *cert. denied* (1971) 402 U.S. 962 (no constitutional duty to bus children out of their neighborhoods or transfer classes, or select new schools to alleviate racial imbalance caused not by the school board but by the racial character of the neighborhoods in which the schools were located); see also, *Offermann v. Nitkowski* (1967 2nd Cir.) 378 F.2d 22, 24; *Sealy v. Dept. of Public Instruction of Penn.* (1958 3d Cir.) 252 F.2d 898, 901, *cert. denied* 356 U.S. 975.)

Thus in its decision in June, 1971, the Court in the Denver case could accurately state:

> *"We never construed Brown to prohibit racially imbalanced schools provided they are established and maintained on racially neutral criteria, and neither have other circuits considering the issue.* [citations omitted]" (445 F.2d at 1005) [Emphasis added.]

The Circuit Court cases decided since *Denver* have continued to affirm its principles. (See *e.g. Lawlor v. Board of Education of the City of Chicago* (1972 7th Cir.) 458 F.2d 660 wherein the Court affirmed a trial court decision dismissing a complaint which alleged that the School Board's action had "forced whites to move out" and encouraged the segregation of "black people" within certain schools, stating:

> "If separation in racially imbalanced schools were the result of unlawful discrimination, school officials would be under an affirma-

tive duty to remedy the situation. However, the mere fact of imbalance of races is not alone a deprivation of equality of educational opportunity in the absence of purposeful invidious discrimination." (458 F.2d at 662).

Thus, since *Brown*, every Federal Appellate Court which has been directly confronted with the issue of racial imbalance has held that there is no constitutional duty to remedy pupil racial imbalance when it is not the product of some prior action of segregation or purposeful discrimination.[8]

B. Recent Supreme Court Decisions Indicate That Racial Imbalance Existing in a Unitary School System Does Not Require Judicial Interference in the Absence of a Finding of Specific Discrimination.

Within the last year the United States Supreme Court on three different occasions has expressed agreement with the principle that racial imbalance *per se* is not unconstitutional.

1. *The Charlotte Case*

In *Swann v. Charlotte-Mecklenburg Board of Education* (1971) 402 U.S. 1, the Court illustrated that point in dealing with a case from a former dual school system. The Court upheld the power of a federal district judge to use "cross-busing", "pairing", and "grouping" techniques to remove the last vestiges of a dual

[8]The remedying of racial imbalance has been ordered by some of these same Circuit Courts where there was a specific finding that it was the result of purposeful discrimination. (See *e.g., Davis v. School District City of Pontiac* (1971 6th Cir.) 443 F.2d 573, *cert. denied* 404 U.S. 913; *United States v. School Dist. 151 of Cook County, Illinois* (1970 7th Cir.) 432 F.2d 1147, *cert. denied* (1971) 402 U.S. 943).

school system.[9] In addition, however, the court laid down the following guidelines:

(a) *A Unitary School Need Not Be Racially Balanced.*

The appellant school board argued that the District Court order imposed a racial balance requirement of 71%-29% for each of its individual schools. The Supreme Court disagreed.[10] It saw the use made of mathematical ratios as no more than a starting point and thus within the District Court's "discretionary powers, an equitable remedy for the particular circumstances". (402 U.S. at 25.)

Moreover the Supreme Court stated:

> "If we were to read the holding of the District Court to require, as a matter of substantive constitutional right, any particular degree of racial balance or mixing, that approach

---

[9]In accordance with *Brown* and the Supreme Court's later implementation decision (*E.g., Brown v. Board of Education of Topeka* (1955) 349 U.S. 294 (requiring all deliberate speed); *Griffin v. County School Board of Prince Edward County* (1964) 377 U.S. 218 (prohibiting the closing of public schools to avoid desegregation); *Green v. County School Board* (1968) 391 U.S. 430 (holding freedom of choice plans an unacceptable substitute for desegregation) racial imbalance has been ordered remedied by several Southern courts in an attempt to create a unitary school system where none existed previously and wipe out the last vestiges of state imposed segregation. (*See e.g., United States v. Jefferson County Board of Education* (1966 5th Cir.) 372 F.2d 836, *affirmed en banc* (1967 5th Cir.) 380 F.2d 385, *cert. denied* 389 U.S. 840; *Hobson v. Hansen* (1967 D.D.C.) 269 F. Supp. 401, *remanded sub nom. Smuck v. Hobson* (1969 D.C.Cir.) 408 F.2d 175).

[10]The Supreme Court noted that the District Court itself had stated: " 'This court has not ruled, and does not rule that "racial balance" is required under the Constitution . . . *nor that the particular order entered in this case would be correct in other circumstances not before this court*' (emphasis in original)." (402 U.S. at 25n.9.)

would be disapproved and we would be obliged to reverse. *The constitutional command to desegregate schools does not mean that every school in every community must always reflect the racial composition of the school system as a whole.*" (402 U.S. at 24.) [Emphasis added.]

(b) *A Unitary School System May Have "One-Race" or Virtually "One-Race" Schools.*

The court stated:

> "No per se rule can adequately embrace all the difficulties of reconciling the competing interests involved; but in a system with a history of segregation the need for remedial criteria of sufficient specificity to assure a school authority's compliance with its constitutional duty warrants a presumption against schools that are substantially disproportionate in their racial composition." (402 U.S. at 26.)

However, the Supreme Court noted that in certain metropolitan areas minority groups are often concentrated in one part of the city and stated:

> "In light of the above, it should be clear that the existence of some small number of one-race, or virtually one-race, schools within a district is not in and of itself the mark of a system which still practices segregation by law." (402 U.S. at 26.)

(c) *There Is No Duty to Racially Balance Schools in the Absence of a Constitutional Violation.*

The Supreme Court held that where there is a dual school system a court has broad remedial powers including the right to take such drastic steps as "gerry-

mandering" of school attendance zones and "pairing" or "grouping".

The Court noted, however:

> "Absent a constitutional violation there would be no basis for judicially ordering assignment of students on a racial basis. All things being equal, with no history of discrimination, it might well be desirable to assign pupils to schools nearest their homes." (402 U.S. at 28.)

(d) *Establishment of a Unitary School System Satisfies Constitutional Requirements.*

In conclusion the Supreme Court stated:

> "At some point, these school authorities and others like them should have achieved full compliance with this Court's decision in *Brown* I. The systems will then be unitary in the sense required by our decisions in *Green* and *Alexander*.
>
> It does not follow that the communities served by such systems will remain demographically stable, for in a growing mobile society, few will do so. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composition of student bodies once the affirmative duty to desegregate has been accomplished and racial discrimination through official action is eliminated from the system. This does not mean that federal courts are without power to deal with future problems; but *in the absence of a showing that either the school authorities or some other agency of the State has deliberately attempted to fix or alter demographic patterns to*

affect the racial composition of the schools, further intervention by a district court should not be necessary." (402 U.S. at 31-32) [Emphasis added.]

2. *Spencer v. Kugler*

Although the *Charlotte* case factually involved a former state segregated school system, many thought that its teachings would have applications to all courts, both north and south. This forecast seemed justified by the United States Supreme Court's handling of the case of *Spencer v. Kugler* (1971 D.N.J.) 326 F. Supp. 1235. In that case, a three judge Federal Court held that a complaint which sought inter-district pupil racial balancing did not state a claim upon which relief could be granted. Although the Court reached its decision before publication of the *Charlotte* decision, in its written opinion the Court reviewed the *Charlotte* case and noted that it fully supported the Court's disposition of the plaintiffs' claims. (326 F. Supp. at 1241-1243.)

The plaintiffs appealed and the United States Supreme Court affirmed *per curiam,* (1972) 404 U.S. 1027.

3. *Wright v. Council of City of Emporia*

In the very recent decision of *Wright v. Council of City of Emporia, Virginia,* 40 U.S.L.W. 4806 (U.S. June 22, 1972) the Supreme Court was again faced with a situation arising from a former state segregated school system. Soon after a Federal District Court had ordered a "pairing" plan for the Greens-

ville County School District, the City of Emporia tried to withdraw from the County System and operate its own school system. Although the majority of the Court found that under the circumstances this withdrawal would impede the dismantling of the former dual school system, they were careful to point out that their decision was not based upon any racial balancing concept. The opinion stated:

> "We need not and do not hold that this disparity in the racial composition of the two systems would be a sufficient reason, standing alone, to enjoin the creation of a separate school district. The fact that a school board's desegregation plan leaves some disparity in racial balance among various schools in the system does not alone make that plan unacceptable. We observed in *Swann, supra* that 'the constitutional command to desegregate schools does not mean that every school in every community must always reflect the racial composition of the school system as a whole. 402 U.S. at 24.'" (40 U.S.L.W. at 4810-4811.)

The Supreme Court's consistent language and treatment of these three recent cases indicates that in dealing with a unitary school system the fact of racial imbalance alone does not give a court the right to interfere and order that it be remedied.

II.

RECENT EMPIRICAL EVIDENCE OFFERS NO EXCUSE FOR CHANGING THIS RULE.

In *Brown v. Board of Education of Topeka* (1954) 347 U.S. 483 the Supreme Court in overruling the "separate but equal" doctrine of *Plessy v. Ferguson* (1896) 163 U.S. 537 was able to cite several sociological and psychological treatises for the proposition that:

> "Segregation with the sanction of law, therefore, has a tendency to [retard] the educational and mental development of Negro children and to deprive them of some of the benefits they would receive in a racial[ly] integrated school system." (347 U.S. at 494.)

Plaintiffs and others have emphasized this finding and would have the Supreme Court blindly extend it to all cases where pupil racial imbalance exists regardless of cause. In support of this contention in the Denver case, they pointed to the low average achievement scores of the "court designated" area schools and leaped to the conclusion that only by racially balancing these schools will the minority students receive equal educational opportunity.

Whatever may have been the extent of sociological and psychological knowledge in 1954 as applied to the effects of segregated school systems on minority pupils, today we know that the problem of providing equal educational opportunity to minority groups is very complex and is not dependent upon just one factor such as the racial proportions in a school or classroom.

A. The Coleman Report and Later Studies of Recent Data Indicate That the Racial Composition of a School Has Little Effect on the Educational Achievement of the Students.

In July, 1966, the COLEMAN REPORT was published.[11] Its results were startling and questioned some of the basic assumptions hitherto prevalent in the field of education. Contrary to what the investigators thought they would find, the survey indicated that minority schools, even in the south, did not differ substantially in physical facilities (COLEMAN REPORT pp. 9-11) and that what differences were shown did not relate closely to achievement (COLEMAN REPORT p. 312). The key factor in predicting achievement appeared to be the socio-economic background of the students (COLEMAN REPORT pp. 21, 302).

Although the report found higher achievement in schools with a high proportion of white students, it noted:

> ". . . The apparent beneficial effect of a student body with a high proportion of white students comes not from racial composition per se, but from the better educational background and higher educational aspirations that are, on

[11]The Civil Rights Act of 1964 provided that the United States Office of Education should undertake a survey and report within two years concerning the lack of availability of equal educational opportunities by reason of race, color, religion, or national origin in the public schools (42 U.S.C. 2000 c-1). The Commissioner of Education entrusted the operation to a team headed by James S. Coleman of Johns Hopkins University. Initially a massive survey was undertaken involving some 570,000 school pupils, 60,000 teachers, and information on the facilities available in over 4,000 schools. This massive study was published in two parts, the REPORT ON EQUALITY OF EDUCATIONAL OPPORTUNITY, [EEOR—often called the COLEMAN REPORT], and a Supplemental Appendix containing a part of the survey data [EEOS] upon which the report was based.

> the average, found among white students. The effects of the student body environment upon a student's achievement appear to lie in the educational proficiency possessed by that student body, regardless of its racial or ethnic composition." (COLEMAN REPORT pp. 307-310).

More recently there have been some independent reanalyses of some of the survey data included in the COLEMAN REPORT. See Cohen, *Defining Racial Equality in Education* (1969) 16 UCLA Law Review 255, who states that on the basis of his analysis of the earlier data he has concluded that:

> ". . . if recent research is correct, racial composition—if at all related to achievement—accounts for only a small proportion of school-to-school performance differences among blacks. The research seems to show that other measures of school resources are more important than racial composition, but it also seems to show that all of these factors are of almost negligible importance to achievement; family background, social and economic status, and community characteristics appear to be by far the most important predictors of achievement in school. None of these are elements over which schools have traditionally had much control." (16 UCLA L.Rev. at 258-259).

In March 1972, a series of 14 papers derived from a Harvard University Faculty Seminar analyzing the COLEMAN REPORT and its data were published in a volume entitled ON EQUALITY OF EDUCATIONAL OPPORTUNITY edited by Frederick Mosteller and Daniel P. Moynihan [hereinafter cited as MOSTELLER].

After analyzing the COLEMAN REPORT and commenting upon its finding regarding the general equality of school facilities and the new emphasis on non-school factors, the editors commented:

> "In this respect the EEOR was part of a generally new phenomenon which was unsettling both to the advocates of social change and to the analysts of social conditions. Especially with respect to matters of race, the period of the EEOR, which is to say the mid-1960's, had been preceded by a half century, at very least in which social science had been the unfailing ally of social change in this field. Not infrequently social scientists had been advocates as well as analysts, and there had been little if any tension between their dual roles. Social science had come to the aid of the widest range of causes, and not least that of educational equality. A distinctive feature of *Brown v. Board of Education of Topeka* had been the introduction by the plaintiffs of social science information purporting to prove that segregated schools were inherently unequal, and that the disadvantage was sustained by the Negro children. What then was to be made of social scientists apparently turning on their old allies with a report that implied that this was all greatly exaggerated, *and that the low levels of educational achievement came from generalized social conditions against which schools could hardly expect to prevail, save in the most marginal ways?*" (MOSTELLER p. 31) [Emphasis added.]

The papers themselves tended to support the COLEMAN REPORT findings.

In "The Coleman Report and the Conventional Wisdom" Professor Christopher H. Jencks concentrated his efforts in analyzing the data from northern urban elementary schools. Among his conclusions was the following:

> "The achievement of lower-class students, both black and white, was fairly strongly related to the socio-economic level of their classmates. This usually meant that a student's achievement was also related to the race of his classmates, since blacks' classmates tended to be poor classmates and vice versa. If the socio-economic level of a lower-class child's classmate was held constant, however, their race had no relationship to his achievement." (MOSTELLER p. 71).

Professor David J. Armor in his paper "On School and Family Effects on Black and White Achievement: A Re-examination of the USOE Data" found:

> "The results are strongly suggestive of the conclusion that the determinants of student achievement are more likely to be found in the home than in the school." (MOSTELLER p. 224).

After examining the data gathered in regard to the achievement of blacks in integrated schools he concluded:

> "In other words, even those black students in integrated and higher socio-economic environment still achieved at a lower level than whites. The most likely explanation for this is that their *individual family background* is still more disadvantaged than that of white students in the same environment. Thus, while integration may

be an important factor for black achievement, blacks might still never attain full achievement equality until their individual family life style catches up to that of whites. The policy implication here is that programs which stress financial aid to disadvantaged black families may be just as important, if not more so, than programs aimed at integrating blacks into white neighborhoods and schools." (MOSTELLER p. 226).

Professors David K. Cohen, Thomas F. Pettigrew, and Robert T. Riley in their paper entitled "Race and the Outcomes of Schooling" studied the effect of racial composition in the sixth grade of northern metropolitan schools. They concluded:

"Our findings on the school racial composition issue, then, are mixed. Although the initial EEOS analysis overstressed the impact of school social class, it would not be profitable to perform a complete reanalysis at both the school and student level at grades nine and twelve given the problems of unmeasured school selection processes. When the issue is probed at grade six, a small independent effect of schools' racial composition appeared, but its significance for educational policy seems slight. The evidence suggests that student body racial composition at grade six acts more as a 'proxy' than a 'mediator' of the school social-class effects. *Until the breadth of the EEOS data can be combined with sufficient longitudinal information on students and their schools, stronger results on this point will not be forthcoming.*" (MOSTELLER pp. 351-352). [Emphasis added.]

B. New Evidence on the Effects of Integration Raise Serious Questions About the Advisability of a Court Imposed Program of Racial Balancing.

Very recently one of the first longitudinal studies on the effects of racial composition in the schools[12] has been published by Professor Armor in an article entitled "The Evidence on Busing" appearing in the Summer 1972 issue of a magazine called THE PUBLIC INTEREST [hereinafter cited as ARMOR].

Professor Armor's findings were based on the study of data collected over the past five years from several voluntary integration programs in five northern cities (Boston, Massachusetts; White Plains, New York; Ann Arbor, Michigan; Riverside, California; and Hartford, Connecticut).

His purpose in collecting the data was to determine if in fact integration had a positive effect for Black students. His findings were as follows:

1. *Achievement.*

"None of the studies were able to demonstrate conclusively that integration has had an effect on academic achievement as measured by standardized tests. Given the results of the Coleman study and other evaluations of remedial programs (e.g., Head Start), many experts may not be surprised at this finding. To date

---

[12]To a certain extent Professor Armor's studies had been forecast by St. John, the Relation of Racial Segregation in Early Schooling to the Level of Aspiration and Academic Achievement of Negro Students in a Northern High School, a 1962 thesis presented to the Faculty of the Graduate School of Education of Harvard University. The unexpected results of that study were summarized in Kaplan, *Segregation Litigation and the Schools—Part II: The General Northern Problem* (1963) 58 Nw. U. L. Rev. 157, 202-203.

there is no published report of *any* strictly educational reform which has been proven substantially to affect academic achievement; school integration programs are no exception." (ARMOR p. 99)

2. *Aspiration and Self-Concept.*

"In the METCO study [Boston] we found that there were no increases in educational or occupational aspiration levels for bused students . . . on the contrary, there was a significant decline for the bused students, from 74 per cent wanting a college degree in 1968 to 60 per cent by May 1970. (ARMOR p. 101).

3. *Race Relations.*

"One of the central sociological hypotheses in the integration policy model is that integration should reduce racial stereotypes, increase tolerance, and generally improve race relations. Needless to say, we were quite surprised when our data failed to verify this axiom. Our surprise was increased substantially when we discovered that in fact, the converse appears to be true. The data suggest that, under the circumstances obtaining in these studies, integration heightens racial identity and consciousness, enhances ideologies that promote racial segregation, and reduces opportunities for actual contact between the races." (ARMOR p. 102).

4. *Long-term Educational Effects.*

". . . [T]here does seem to be some strong evidence that middle-class suburban or prep schools have an important "channeling" effect not found in black schools. The effect is prob-

ably due to better counseling and better contacts with college recruiting officers. Whatever the reason, black students attending such schools may have doors opened for them that are closed to students attending predominantly black schools. Given the lack of positive effects in other areas, these findings may have great significance for future busing programs, and further research is urgently needed." (ARMOR p. 106).

5. *Program Support.*

"We must conclude that the busing programs we have reviewed seem to have considerable support from both the black and white communities. In most cases, black parents were highly supportive of the various busing programs. Like the students in our own study, black parents stressed quality education as the most important benefit of such programs, whereas white parents in receiving schools tended to stress the experience of coming into contact with other races. We must point out, however, that *none* of the programs reviewed involved *mandatory* busing of white students into black communities; cities facing this situation might present a very different picture of white support. Moreover, it is unlikely that many in the black community have seen the data on achievement reported here; much black support may be based upon premises regarding academic gain which our findings call into question. Whether or not black support will be affected by such findings remains to be seen." (ARMOR p. 107).

Professor Armor then concluded:

"It seems clear from the studies of integration programs we have reviewed that four of the five major premises at the integration policy model are not supported by the data, at least over the one-to-five-year periods covered by various reports. While this does not deny the possibility of longer-term effects or effects on student characteristics other than those measured, it does mean that the model is open to serious question." (ARMOR p. 109).

6. *Policy Implications.*

In regard to policy implications he stated:

"The most serious question is raised for mandatory busing (or induced integration) programs. If the justification of mandatory busing is based upon an integration policy model like the one we have tested here, then that justification has to be called into question. The data do not support the model on most counts. There may be justifications for school integration other than those in the integration policy model, but then the burden must fall upon those who support a given school integration program to demonstrate that it has the intended effects (with no unintended negative side-effects). It also must be demonstrated that any such program is at least supported by the black community." (ARMOR p. 114).

III.

IN THE ABSENCE OF PROOF OF CONSTITUTIONAL VIOLATIONS LOCAL SCHOOL AUTHORITIES SHOULD BE ALLOWED TO FORMULATE THEIR OWN SOLUTIONS TO THE PROBLEM OF PROVIDING EQUAL EDUCATIONAL OPPORTUNITY.

If our educational system is to work, solutions to the problems of providing equal educational opportunity must come not from the Courts, but from those best equipped to resolve these questions: The members and staff of the State Boards of Education, the local Boards, and the professional local Administrators. This is a teaching of the Court in *Deal v. Cincinnati Board of Education* (1966 6th Cir.) 369 F.2d 55:

> "In dealing with the multitude of local situations that must be considered and the even greater number of individual students involved, we believe it is the wiser course to allow for the flexibility, imagination and creativity of local school boards in providing for equal opportunity in education for all students. It would be a mistake for the courts to read *Brown* in such a way as to impose one particular concept of educational administration as the only permissible method of insuring equality consistent with sound educational practice." (369 F.2d at 61.)

Chief Justice Burger made similar pronouncements while still a Circuit Judge. In the course of his dissent in *Smuck v. Hobson* (1969 D.C. Cir.) 408 F.2d 175 he made the following statement:

> "Several commentators have expressed views which undergird what Judge Danaher [another dissenting Judge] has said as to the need for

> caution and restraint by judges when they are asked to enter areas so far beyond judicial competence as the subject of how to run a public school system. We have little difficulty taking judicial notice of the reality that most if not all of the problems dealt with in the District Court findings and opinion are, and have long been, much debated among school administrators and educators. There is little agreement on these matters, and events often lead experts to conclude that views once held have lost their validity." (408 F.2d at 196.)

The above statement is particularly appropriate in the instant case where as a result of some of the recent empirical studies established views may in fact have to be subject to an "agonizing reappraisal".

There is no dispute that there is a problem in providing equal educational opportunity to minority students. The question is how to solve it. The plaintiffs in *Denver* want this Court to adopt one solution. Many educators, even before Armor's study, were not so sure that plaintiffs' solution of racial balancing would be an instant panacea. They questioned if there really is a causal relationship between racial imbalance and the low achievement of minority students or if the low achievement is not caused by other factors, some beyond the ability of the school to remedy. This is not to say that the schools should give up—but it certainly means that the schools have a great deal of experimenting to do before they can be sure how to best allocate their limited resources to solve this problem.

Mosteller and Moynihan reached a similar conclusion when they wrote:

> "The nation has acquired a goal, or, if it has not, we think it should accept it—equal educational opportunity defined as approximately equal distributions of achievement (but not just for cognitive skills) for the different ethnic/racial groups. *This is a goal it does not know how to attain.* Given a vital, prosperous, and still largely optimistic society, it follows that a period of fairly intensive educational experimentation and research is in order—and is likely to occur." (MOSTELLER p. 45). [Emphasis added.]

With these thoughts in mind the court should allow the local school boards flexibility to experiment and not bind them to just one solution.

Conclusion.

For many years the United States Supreme Court has focused its efforts on implementing the *Brown* decision in areas which had a former dual school system. Now for the first time, it has before it the question of pupil racial imbalance arising in areas where there was no state imposed segregation.

In this latter situation the court should not leap to the conclusion that the same methods necessary to remove the last vestiges of racial segregation are required where pupil racial imbalance exists in a unitary school system. At least until it gains more familiarity in this field, the court should adopt a case by case approach

and attempt to allow local authorities a chance to solve this problem before mandating one solution.

In this situation the court should more than ever reaffirm as its policy and as the policy for lower federal courts its pronouncement in *Swann v. Charlotte-Mecklenburg Board of Education, supra:*

> "[I]t is important to remember that judicial powers may be exercised only on the basis of a Constitutional violation. Remedial judicial authority does not put judges automatically in the shoes of school authorities whose powers are plenary. Judicial authority enters only when local authority defaults."
>
> "School authorities are traditionally charged with broad power to formulate and implement educational policy and might well conclude, for example, that in order to prepare students to live in a pluralistic society each school should have a prescribed ratio of Negro to white students reflecting the proportion for the district as a whole. To do this as an educational policy is within the broad *discretionary* powers of school authorities; *absent a finding of constitutional violation, however, that would not be within the authority of a Federal Court.*" (402 U.S. at 16) [Emphasis added.]

The court should avoid the "educational thicket" and affirm the decision of the Court of Appeals which refused to order racial balancing of schools in the

absence of proof of a prior *de jure* system or specific discriminatory acts.

No. 71-507

WILFRED KEYES, et al.,

Petitioners,

v.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, et al.,

Respondents.

On Writ of Certiorari to the United States
Court of Appeals for the Tenth Circuit

BRIEF OF JEWISH RIGHTS COUNCIL, INC. AS AMICUS CURIAE

Interest of the Amicus

The Jewish Rights Council, Amicus, was founded in 1971 for the purpose of ensuring and promoting equality of all persons before the law, and in that manner to strengthen and

COPY PRINTED CLOSE TO EDGE

preserve the security and constitutional rights of Jews in America through the preservation of the rights of all Americans. The Jewish Rights Council believes that the welfare of Jews in the United States is inseparably related to and dependent upon the equality of treatment of all Americans. The Jewish Rights Council's membership includes over one hundred Rabbis from over a dozen States, representing Orthodox, Conservative, and Reform Congregations.

The instant case raises an important, if not crucial, issue under the Equal Protection Clause of the Fourteenth Amendment, involving the imposition by a Federal Court upon an elected School Board of ethnic quotas of pupils in public schools. Public education has been one of the keystones for the unprecedented success of the Jew and other minorities in this country, and therefore the Jewish Rights Council has a particular interest in quality as well as equality in public educational facilities. Being composed of members of a persecuted minority, the membership of the Jewish Rights Council is especially sensitive to any and all forms of discriminations based upon race, religion, or ethnic background. On the other hand, the Jewish Rights Council believes that it is extremely important for the preservation of our American way of life with its concomitant "American dream" that the rights of one group of persons shall not be sacrificed in the name of the promotion of another minority group. In so doing, the Jewish Rights Council wishes to make it crystal clear that there must never be any retreat from the principle of *Brown v. Board of Education*, 347 U.S. 483 (1954), that a State should not be able to keep a person out of a public school (or other facility) merely on the basis of race, religion, or ethnic background.

Consent to Filing

This Brief is being filed with the consent of all parties to the proceeding.

Opinions Below

The opinions of the District Court are reported at 303 F. Supp. 279; 313 F. Supp. 61; and 313 F. Supp. 90. The opinion of the Court of Appeals is reported at 445 F.2d 990.

Statement of the Case

This case arose when a newly elected school board rescinded Resolutions 1520, 1524 and 1531 of the previous school board in Denver, Colorado; and the newly elected school board instituted Resolution 1533 instead. The rescinded Resolutions 1520, 1524 and 1531 sought to achieve a system of ethnic quotas in the pupil compositions of various schools by means of redistricting their respective boundaries; whereas the newly instituted Resolution 1533 provided for a voluntary pupil exchange program between various districts.

The plaintiffs below brought a Civil Rights action against the school board in two causes of action which are pertinent here:

Cause I: The rescission of Resolutions 1520, 1524, and 1531 constituted a violation of the Constitution.

Cause II: *Count 1*: Both old and new defendant school boards were guilty of deliberate segregation in a "core" area of the City of Denver.

Count 2: The defendants had purposely maintained inferior schools in certain designated predominantly minority schools.

Count 3: The defendants' neighborhood school policy was a violation of the Constitution.

The District Court held for the plaintiffs on Cause I and on Cause II, Count 2 only. The Court of Appeals affirmed the judgment of the District Court, except for Cause II, Count 2 on which the Court of Appeals reversed the judgment of the District Court.

ARGUMENT

POINT I

A Federal Court Has No Power to Require a School Board to Adopt a Plan to Achieve Ethnic Quotas of Pupils in Neighborhood Schools.

The stigma of racial segregation, caused by a school board's refusal to allow a single person of a given ethnic or racial background to attend a public school, is intolerable in America under the Fourteenth Amendment. *Brown v. Board of Education*, 347 U.S. 483 (1954). Such segregation prevents, for example, a Black person from ever attending a certain school no matter what ability the Black person may possess, no matter where he lives, no matter how hard he tries. It is simply intolerable in a society such as ours under the Fourteenth Amendment. An entirely different question is presented where a school board merely continues a long-standing and traditional neutral policy of neighborhood schools in the name of public safety, health, welfare and morals; for these objectives of a

society under ordered liberty are the primary responsibility of the States of which the school board is an agent. The State has plenary "police power" with regard to these functions; and there is no Federal jurisdiction which can properly operate in this area, so long as the State and its agents remain neutral with regard to race, religion, and ethnic origin.

There are many legitimate "police" functions served by the neighborhood school. With the increasing problem of groups of students "all over the land [who] are already running loose, conducting break-ins, sit-ins, lie-ins, and smash-ins" (Black, J. dissenting in *Tinker v. Des Moines Community School District*, 393 U.S. 503 at 525; 1969), a Federal Court should be especially careful not to undermine the primary authority of the school board. Moreover, the neighborhood school ensures that pupils and teachers know each other better, so that outside untoward influences, such as drug-peddlers, are easier to detect, isolate, and eradicate. Thus, the role of the Federal judiciary should be most sensitive to the needs of the legitimate local "police" functions and responsibilities of school boards; and therefore the courts should limit the scope of appropriate judicial function and interference in the workings of the school boards accordingly, lest the judiciary unintentionally undermine the whole system of public education. Clearly the Federal Courts are ill-equipped to cope with the day to day exigencies faced by school boards.

In view of the foregoing, it seems imperative that a great deal more than a mere preponderance of the "sharp conflict" of evidence (445 F.2d 990, 1001) should be required before a Federal Court intervene in the internal affairs of a school board. See: *Milky Way v. Leary*, 305 F. Supp. 288, 292 (S.D.N.Y., 1969), aff'd 397 U.S. 98 (1970).

It should be stressed repeatedly that this case emphatically is not a case of segregation, but rather is a case involving a finding of de facto racial "imbalance" brought about by housing patterns resulting from private choices. The judicial finding below of a racial or ethnic "imbalance" necessarily implies a finding of a departure from some arbitrarily conjectured ethnic quota. Yet this Court itself has warned of the tremendous difficulties and chaos which would result from the imposition of such quotas in "a population made up of so many diverse groups as ours". *Hughes v. Superior Court of California*, 339 U.S. 460, 464 (1950). And racial quotas themselves may exacerbate "community tensions and conflicts" particularly among the non-quota minorities "through the whole gamut of racial and religious concentrations". *Ibid.*

The instant case does not at all raise a "segregation" issue as in *Brown v. Board of Education, supra*, but merely poses the question of the appropriateness of a Federal remedy of ethnic quotas to change ethnic pupil ratios brought about by private housing patterns in a neighborhood school system.

The interference of the District Court below in the affairs of the school board would not be so serious were it not for the fact that the forgotten child in all of this is the poor black, Hispanic, etc. or white pupil in the predominantly white school who is "being conscripted only on the basis of income" and who may not "escape", as may his more affluent neighbor, either to the suburbs or to a private school. Nathan Glazer, "Is Busing Necessary?" *Commentary*, Vol. 53 Number 3, March 1972, p. 39 at 45-46 (published by the American Jewish Committee, one of the Amici jointly with the Anti-Defamation League in this case). Especially is this state of affairs compounded by the fact

that the District Court put heavy reliance upon the relatively low Achievement Test results of students in "designated schools" (445 F.2d 990 at 1003). Just the other day, a California District Court held that IQ tests were unconstitutionally used by a school district because they resulted in a disproportionately large number of Black children being sent to mentally retarded classes. *Larry P. v. Riles*, 41 LW 2033 (D.N. Cal. June 21, 1972). Can constitutional rights depend upon the latest fashions in educational testing?

Many years ago, just after the *Brown, supra,* decision, the late Professor Edmond Cahn cautioned against using "expert" sociological testimony for any purpose other than to *support* legislative action or merely to reinforce common knowledge:

"It is one thing to use the current scientific findings, however ephemeral they may be, in order to ascertain whether the legislature has acted reasonably in adopting some scheme of social or economic regulation; deference here is shown not so much to the findings as to the legislature. It would be quite another thing to have our fundamental rights rise, fall, or change along with the latest fashions of psychological literature. Today the social psychologists – at least the leaders of the discipline – are liberal and egalitarian in basic approach. Suppose, a generation hence, some of their successors were to revert to the ethnic mysticism of the very recent past; ... What then would be the state of our constitutional rights?" "Jurisprudence", *1954 Annual Survey of American Law*, 809 at 826.

Implicit in the notion of racial quotas, to change racial mixes brought about by private housing patterns, is the idea that a certain mix of races in certain proportions is constitutionally required in order to enable the members of certain

minority groups to learn better in public schools. However, the interpretation of the statistics used to validate this notion fails to consider that there are reasons unrelated to ethnic balance which account for the fact that a significant proportion of Black students who attend predominantly White neighborhood schools seem to learn better. For these Black students tend to come from middle-class Black homes, and it may well be the home environment which accounts for their learning better in their neighborhood school. It is a well-established fact that "socioeconomic factors bear a strong relation to academic achievement" and that "schools as they have been generally run in this country do not make much difference in the educational achievement of students, that what is more important is the home and community environment of children." *Equality of Educational Opportunity* ("Coleman Report"), 1966, U.S. Office of Education, OE 38000, at p. 21; N.Y. Times, March 24, 1972, p. 54, col. 1. Thus, purely on a socioeconomic basis, i.e. the type of homes that Black students in neighborhood White schools come from, it would be expected that Black students in White neighborhood schools should achieve better results than the poor Black students in Black neighborhood schools, for reasons which are independent of the racial composition of the student body in the respective schools but which are dependent upon the type of homes the Black students come from. Thus, it is neither invidious discrimination nor the racial ratios in neighborhood schools which necessarily accounts for the differences in achievement levels of Black students in Black vs. White neighborhood schools. Moreover, the expectations of experts regarding the educational benefits of ethnic quotas in public schools have not been realized in practice. N.Y. Times, *ibid.*

Thus, this case thrusts upon us the spectre of legally

mandated social experimentation. Surely the Constitution does not require the State to perform such experiments. Particularly is this experimentation, under the coercion of a Federal Court order, totally unnecessary in a case where, as here, the school board has instituted a voluntary transfer program, which can more easily be policed by the school authorities, so that each parent may decide for himself whether he wishes his own child to take part in the experiment for the sake of a hoped-for better education. There simply is no room in a case like this for any coercion by the Court below in its judicial legislation of school boundaries to achieve what it believes to be a proper system of "ethnic group quotas". Glazer, *supra*, *53 Commentary* at 52. For the promise of *Brown*, *supra*, already "is being realized" without such ethnic quotas. *Ibid.*

Ethnic quotas on Grand Juries have long ago been condemned as unconstitutional by this Court. *Cassel v. Texas*, 339 U.S. 282 (1950). Likewise, this Court has held the States to be free to ban the picketing of a business establishment for the purpose of pressuring the hiring of employees on a racial quota basis. *Hughes v. Superior Court of California*, 339 U.S. 460 (1950). Pupil assignments on a racial basis in public schools likewise should be avoided by school boards, and certainly not coerced by the federal judiciary.

While the judiciary has the duty and power to implement the negative command of the Equal Protection clause of section 1 of the Fourteenth Amendment, only the Congress is given the authority to implement the affirmative power of section 5 of the Fourteenth Amendment. If such a departure from traditional practice, as racial pupil quotas, is to become a part of our national scheme, then at the very least it should be the Congress which decree such a policy after appropriate hearings in depth.

Yet the Congress has explicitly legislated *against* such a policy in enacting the Civil Rights Act, 42 USC 2000e – 6 (a)(2). Thus, Congress has re-affirmed a policy against racial or ethnic quotas as set forth by this Court in *Hughes, supra*. There is simply no reason in law or policy why this Court should not now likewise continue our national commitment of equality for all, with quotas for none.

CONCLUSION

The judgment of the Court of Appeals should be affirmed, except insofar as the Court of Appeals affirmed the judgment of the District Court on the First Cause of Action and in this respect the judgment of the Court of Appeals should be reversed; and the cause should be remanded to the District Court with directions to dismiss the complaint.

WILFRED KEYES, ET AL., PETITIONERS

v.

SCHOOL DISTRICT NO. 1, DENVER, COLORADO, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

MEMORANDUM FOR THE UNITED STATES AS AMICUS CURIAE

INTEREST OF THE UNITED STATES

The United States has substantial responsibility under 42 U.S.C. 2000c-6, 2000d, and 2000h-2 in the area of school desegregation. The appearance here as *amicus* is consistent with the government's participation in such cases as *Brown* v. *Board of Education*, 347 U.S. 483; *Brown* v. *Board of Education*, 349 U.S. 294; *Cooper* v. *Aaron*, 358 U.S. 1; *Goss* v. *Board of Education*, 373 U.S. 683; *Green* v. *School Board of New Kent County*, 391 U.S. 430; *Alexander* v. *Holmes County Board of Education*, 396 U.S. 19; *Swann* v. *Board of Education*, 402 U.S. 1.[1] While the govern-

[1] The United States has participated in every school desegregation case which this Court has heard on the merits since *Brown I. Rogers* v. *Paul*, 382 U.S. 198, and *Bradley* v. *School Board*, 382 U.S. 103, in which the government did not participate, were decided on the petitions for certiorari.

ment did not participate in this case in the courts below, the issues presented are related to those presented in cases where the government is a party. Thus, the outcome of this case will affect the government's enforcement responsibilities under federal law, especially in cases against school districts where racial segregation has not been compelled by state statute.

STATEMENT

The procedural history and the decisions of the courts below are summarized in the briefs of the parties. The Denver school district serves an area of 100 square miles and operates about 120 schools. Of its 100,000 pupils, 14 percent are black and 20 percent are Hispano.

The evidence before the district court was, broadly speaking, two-fold. First, evidence was presented concerning actions by school officials that allegedly contributed to the racially and ethnically segregated character of some predominantly black or Hispano schools in the system. This evidence related to such matters as construction policies and practices, assignment of faculty, and creation of attendance zones.

Second, evidence was presented comparing other predominantly minority schools in the system with certain predominantly Anglo schools, in terms of such characteristics as faculty experience and turnover, school facilities including site size, and achievement as measured on standard aptitude tests.

INTRODUCTION AND SUMMARY

This case presents for the first time in this Court questions involving the application of the equal pro-

tection clause in the context of racial and ethnic concentration in a northern urban school system with no history of compulsory segregation.

The record sets forth a pattern familiar to many urban areas—a basic neighborhood school system; a well-defined "core area" populated predominantly by black or ethnic minorities; a gradual expansion of this area into surrounding neighborhoods accompanied by an increasing number of predominantly minority schools; and significant evidence of sub par educational success in such schools.

Both below and in this Court, the parties have urged one-dimensional application of the equal protection clause. The plaintiffs contend that official acts of invidious racial discrimination have been widespread and continuous and require system-wide desegregation relief; the defendants argue that racial and ethnic impaction in the schools is primarily a function of residential patterns and that any official acts found in retrospect to have been racially motivated should be viewed as remote and insignificant causes of the present problems.

We agree with the courts below that there are at least two discrete applications of the equal protection clause to this factual pattern. First, both the district court and the court of appeals found that with respect to some of the schools in the neighborhoods that changed from Anglo to black or Hispano, the school board took official steps that deliberately caused or promoted minority concentrations. Such acts of *de jure* segregation violate the equal protection clause

and, under the decisions of this Court, must be remedied promptly and effectively.

Second, with respect to the original core area schools, both courts found that the petitioners had not presented sufficient evidence to show that the minority concentrations were related to official school board acts; the record supports that finding as to most core area schools. However, there was some evidence that the school district allocated disproportionately less of its resources to such schools and that by some of the standard measurements a poorer quality of education was delivered. The district court found in these "input" and "output" disparities a constitutional violation which it chose to remedy by eliminating the racial concentration. The court of appeals, however, found the apparently inferior education to be causally remote from the disproportionate allocation of resources and therefore considered it only an educational, and not a constitutional problem.

As explained more fully below, we concur generally with the district court's legal analysis, but believe that the relief ordered was beyond that required to remedy the violation. Under familiar principles, we therefore suggest a remand to define more precisely the nature of the violation and to design appropriate relief in this phase of the case.

DISCUSSION

We discuss here, in terms of the record in this case, both the standards that we believe should be applied in determining whether there has been presented a *prima facie* case of unconstitutional segregation of

public schools and unconstitutional denial of an equal educational opportunity, and the facts that we believe constitute a defense to each such *prima facie* showing.

I. STANDARDS FOR DETERMINING WHETHER THERE HAS BEEN AN UNCONSTITUTIONAL SEGREGATION OF PUBLIC SCHOOLS

We begin with the premise that the existence of racial or ethnic imbalance in public schools does not, by itself, constitute a *prima facie* case of unconstitutional segregation of public schools. *Spencer* v. *Kugler*, 326 F. Supp. 1235 (D.N.J.), affirmed, 404 U.S. 1027. We also assume that the intentional segregation of students in public schools on the basis of race or national origin is *per se* an invidious racial or ethnic classification that cannot be justified by benign motives and is therefore unconstitutional. *Brown I*. While an absolute rule based solely on segregative results or, conversely, requiring in every case proof of discriminatory motive might be easy to apply, the former would, in our view, go beyond the requirements of the Fourteenth Amendment and the latter would mistakenly permit an agent of the state to segregate students by race or national origin so long as his motive is benign. See *Wright* v. *Council of the City of Emporia*, 407 U.S. 451; *Buchanan* v. *Warley*, 245 U.S. 60. The proper test requires a more sophisticated scrutiny of the facts to determine whether state officials have intentionally acted to create a racial or ethnic classification and whether the classification is an invidious one; it does not require a probing of the subjective motives of those state officials.

478-439—72——2

1. *State action.* The first requisite to invoking the equal protection clause is that the classification be created by state action. *Ex parte Virginia*, 100 U.S. 339. The courts below agreed that, as stated by the court of appeals, "state imposed segregation of the sort condemned in *Brown* should [not] be distinguished from racial segregation intentionally created and maintained through gerrymandering, building selection and student transfers" (Pet. App. 134a). Since student and teacher assignments, building locations, and other aspects of school operation are controlled by the school board, the existence of state action is clear. The principal inquiry, therefore, is whether the state action is a racial classification.

2. *Racial or ethnic classification.* The respondents contend that at least until 1964 the Denver school officials consistently made their decisions affecting student assignments on the basis of a neutral neighborhood school policy and without regard to race. If the record supported that proposition we believe the respondents would have a valid defense to a charge of unconstitutional segregation. For, in light of its common usage throughout the country[8] and the fact that it is in many ways the easiest and most logical system of student assignment, the neighborhood school should be presumptively nondiscriminatory.[9]

[8] Dr. Coleman testified that "most school systems organize their schools in relation to the residents by having fixed school districts and some of these are very ethnically homogeneous" (App. 1549a).

[9] The rule stated by the court of appeals was: "* * * neighborhood school plans, when impartially maintained and administered, do not violate constitutional rights even though the results of such plans is racial imbalance" (Pet. App. 134a).

The record does not reflect the racial residential patterns in School District No. 1 or the nature of the school operation when the neighborhood school structure was first adopted by the system. Consequently, there is no basis for a finding that the Denver school officials imposed a neighborhood school system *ab initio* on an existing pattern of residential segregation.[4] Compare *Cisneros* v. *Corpus Christi Independent School District*, C.A. 5, No. 71-2397, decided August 2, 1972 (*en banc*). On this record, therefore, the adoption of the neighborhood school policy cannot be said to have been racially discriminatory.

But the neighborhood served by a school is what the board chooses it to be, and we think the courts below were correct in saying that a neighborhood school system may not be manipulated to segregate students by race. In determining whether a neighborhood policy is being fairly applied, one must consider evidence about the size of the school buildings, their locations, the availability of transportation, natural and man-made barriers, and so forth. As this Court recognized in *Swann*, these are the factors "which, when combined with one technique or another of student assignment, will determine the racial composition of the student body in each school in the system." 402 U.S. at 20.

---

[4] The evidence related almost exclusively to actions of school officials since 1950. While the record shows that at that time blacks were concentrated in the "Five Points" area (Pet. App. 4a), nothing in the record discloses how that situation occurred, or whether choices in school construction, attendance zone boundaries, and the like may have influenced the pattern of school attendance.

What is required, then, is a factual analysis of the causes of the segregation at each school to determine whether it is the result of intentional segregative action by the school authorities. The factual burden falls initially on the plaintiffs, who must show that the disparate racial or ethnic effect of the school authorities' action is related to a historical pattern or other circumstances showing explicit considerations of race or from which race-consciousness might be inferred. Here, such evidence was offered as to some schools, such as Manual High and the Park Hill schools,[4] but the record is silent as to others, such as the predominantly Hispano schools.

When the plaintiffs' burden has been met, as in the case of some schools here, the school officials may rebut the resulting presumption of racial discrimination by showing that they had no knowledge of the racial effect and that such effect was wholly fortuitous. *Jefferson* v. *Hackney*, 406 U.S. 535, 547. Or they may, besides factually disputing any evidence presented by the plaintiff, show that a variation from established policy was justified by a compelling circumstance or that available alternatives would not have changed the racial effect or were not feasible, or they may make some other showing that negates the

[4] In addition to racial statistics, there was evidence that Manual was planned as a heavily minority school. As to Manual and Park Hill there was evidence of deviations from normal school board policy, including a pattern of construction, boundary line changes, rejection of non-segregative options, and segregated faculty assignments.

basis of the presumption. But the thrust of the inquiry should be the objective intent of state officials, not their subjective motives.[6]

Here, the respondent school officials denied that any of their decisions or actions were made with an intention to segregate students or to assign faculty on the basis of race. They disputed the factual accuracy of some of the evidence presented by the petititoners, and they attempted to rebut any presumption of discrimination by showing that their action was consistent with established practices or that any variance from usual policies was based on other educational considerations.[7] The respondents' evidence varied from general disclaimers of any racial purpose to evidence which purported to justify, on educational grounds, actions which had a known racial effect.

In evaluating the evidence concerning "the special circumstances surrounding * * * particular schools" (Pet. App. 21a), the courts below appear to have applied a proper standard to the Park Hill area schools. For example, in determining that Barrett was uncon-

---

[6] Thus, a judge should not be asked to determine whether racial considerations or other considerations were the "dominant purpose" underlying school officials' decisions. *Wright* v. *Council of the City of Emporia*, *supra*, 407 U.S. at 462; *Palmer* v. *Thompson*, 403 U.S. 217, 225.

[7] For example, to rebut the implications of evidence that optional zones were employed by Anglo students to avoid attending predominantly minority schools, the respondents presented evidence that the use of optional zones was a standard practice in the school system (App. 827a–857a). To justify the transportation of Anglo students past apparently under-utilized predominantly minority schools to Anglo schools, the respondents contended that the actual capacity of predominantly minority schools could not be measured by the usual standard

stitutionally segregated when it was opened, the district court considered the unusually small size of the school, its location and zone boundaries in light of the established board policies, the severity of the racial effect, the school officials' knowledge of the probable racial effect, the racial pattern of faculty assignments, and the alternatives available to the board (Pet. App. 5a, 21a–23a), and it considered and rejected the respondents' proffered justifications (Pet. App. 48a–49a). The court of appeals affirmed, concluding that there was "sufficient evidence to support segregative intent" (Pet. App. 135a). Concerning the construction of new Manual and the alterations of the mandatory Cole-Manual attendance zone,[8] the courts reached the opposite result, without examining in detail whether a *prima facie* case had been made out or rebutted. We think it is error to fail to make a detailed analysis of the evidence presented in determining whether a school is *de facto* or *de jure* segregated.[9]

---

applied in the school system because the classroom size in those schools was reduced for educational reasons in order to lower the pupil-teacher ratio (Br. 20–21).

[8] The racial considerations underlying the construction of new Manual were explicit and the concentration of black high school students in that school was severe: 541 of the 641 black high school students in the district were enrolled in new Manual in its first year of operation (Br. 23).

[9] The district court said that pre-*Brown* "it was apparently taken for granted by everybody that the status quo, as far as the Negroes were concerned, should not be disturbed because this was the desire of the majority of the community" (Pet. App. 67a), and that the actions were not "wilful or malicious" (Pet. App. 68a–67a). It is thus unclear whether the reason for failing to explore the evidence as to these schools more fully was that the court excused the segregative effects of those race-

Cf. *Deal* v. *Cincinnati Board of Education*, 369 F. 2d 55 (C. A. 6).

3. *Segregative effect.* The purpose of injunctive relief, of course, is to remedy present violations, not to punish for past sins. The district court therefore inquired whether there was "a causal connection between the acts of the school administration complained of and the current condition of segregation" (Pet. App. 68a). However, it appears, at least as to Manual High School, that the court placed the burden of proof as to causal connection upon the plaintiffs. This Court has held that where a plaintiff has shown that state action caused unconstitutional segregation in the past, the burden is on the school officials to establish that the present segregated condition of schools affected by such action "is not the result of present or past discriminatory action on their part." *Swann* v. *Board of Education*, *supra*, 402 U.S. at 26. We see no reason why that rule should not apply as well where the segregation was caused by deliberate school board action.[10]

---

conscious decisions on the ground that the motives of the board were benign. Such an approach would be inconsistent with previous decisions of this Court. See, *e.g.*, *Buchanan* v. *Warley*, 245 U.S. 60; *Cooper* v. *Aaron*, 358 U.S. 1; *Lucas* v. *Forty-Fourth General Assembly*, 377 U.S. 713.

[10] Of course, the rule applies only to schools as to which it has been shown that state action caused unconstitutional segregation. It does not apply to some other school in the system as to which it has been shown only that the student body is racially or ethnically imbalanced. In light of the general knowledge and judicial recognition of the effects of school construction and like decisions on residential patterns (see *Swann*, *supra*, 402 U.S. at 20-21), it is not an unreasonable burden to require the respondents, insofar as they relied upon racial shifts in

II. STANDARDS FOR DETERMINING WHETHER THERE HAS BEEN A DENIAL OF EQUAL EDUCATIONAL OPPORTUNITY

In ascertaining whether school authorities have unlawfully discriminated on the basis of race or national origin by providing Negroes and Hispanos inferior facilities, faculties, or instructional programs, the courts again must also determine the existence of state action, of an invidious racial classification, and of a present discriminatory effect. Two types of evidence relating to unequal education were presented in this case: evidence about objectively measurable resources allocated to the various schools in the system (teacher experience and turnover, site size, age of buildings), and evidence of a more indirect nature about the quality of the educational program in the various schools (achievement test scores, drop-out rates, testimony of educators and parents). Perhaps because of the theories upon which the case was tried, neither kind of evidence was fully developed below.

1. *Objectively measurable resources.* The justiciability of allegations that equal educational opportunities have been denied could depend on whether the evidence necessary to support the allegations can be analyzed in terms of judicially discoverable and manageable standards for determining a violation and devising a remedy. See *Baker* v. *Carr*, 369 U.S. 186, 217. In this respect, a disparity in the allocation of objectively measurable resources may stand on a firmer

residential populations, to demonstrate that their segregative actions were not a cause of the residential segregation.

footing than more indirect evidence of the quality of education.[11]

The courts below agreed that with respect to at least one objectively measurable aspect—teacher experience—there was a disparity between predominantly Anglo schools and predominantly Negro/Hispano schools (Pet. App. 80a–82a, 143a–144a).[12] Instead of viewing such disparities as discrete violations, however, the courts below appear to have viewed them as evidence to be considered in determining whether minority group children were being denied an equal educational opportunity.[13]

---

[11] For example, in *Swann*, *supra*, this Court said (402 U.S. at 18–19):

> Independent of student assignment, where it is possible to identify a "white school" or a "Negro school" simply by reference to the racial composition of teachers and staff, the quality of school buildings and equipment, or the organization of sports activities, a *prima facie* case of violation of substantive constitutional rights under the Equal Protection Clause is shown. * * * In these areas, normal administrative practice should produce schools of like quality, facilities, and staffs.

The court of appeals appears to have expressed the same notion this way (Pet. App. 143a):

> If we allow the consignment of minority races to separate schools, the minimum the Constitution will tolerate is that from their objectively measurable aspects, these schools must be conducted on a basis of real equality, at least until any inequalities are adequately justified.

The court of appeals said this was "but a restatement" of *Brown* v. *Board of Education*, 347 U.S. 483, 493. See, also, the district court's opinion (Pet. App. 88a–89a).

[12] The district court also found a disparity in facilities but considered it of only marginal importance (Pet. App. 83a).

[13] As the court of appeals stated: "* * * we cannot conclude from that one factor—as indeed neither could the trial court—that inferior schooling is being offered" (Pet. App. 144a).

We think it would be inappropriate to adopt an all-or-nothing approach under which a school system can justify a disparity in objectively measurable educational inputs by showing, for example, that "it is not the proffered objective indicia of inferiority which causes the substandard academic performance of these children, but a curriculum which is allegedly not tailored to their educational and social needs" (Pet. App. 144a). The causes of substandard academic performance are too conjectural to be made the central issue in desegregation suits; and in any event substandard performance is not the only effect of inadequate schooling.

Where the state provides inferior resources to predominantly Negro/Hispano schools, there is state action; in the absence of a legitimate non-racial reason for the disparity, there is a racial classification; the present discriminatory effect is simply that minority group students are receiving inferior resources for their education, and nothing further in the way of proof about educational consequences should be necessary to show that this is a basic unfairness.

2. *Output as a measure of equal education.* The district court's findings that scholastic achievement and student drop-out rates were worse at heavily Negro or Hispano schools (Pet. App. 78a–80a, 82a–83a) are fully supported by the record, and the court of appeals seems to have accepted them (*e.g.*, Pet. App. 144a). Thus, there appear to be objectively measurable disparities reflecting that the educational goals of the Denver public school system are less fully realized in the heavily Negro or Hispano schools. The difficulty

arises in determining whether that failure is the result of unconstitutional state action and, if so, in devising an appropriate remedy.

The school system urged, in effect, that the output disparities are not caused by state action or, if they are, that the action was not discriminatory as to blacks and Hispanos. It thus offered at least three explanations: (1) the low scores and high drop-out rates are the result of non-school-related factors; (2) some Anglo schools have similarly low achievement score medians; (3) the low scores correlate more closely with socioeconomic status than with race or national origin. A fourth question might be whether achievement scores are accurate indicators of the success of the educational program.

The district court found that the principal cause of the output disparities was "the enforced isolation imposed in the name of neighborhood schools and housing patterns" (Pet. App. 89a). The court of appeals said "[w]e cannot dispute the welter of evidence offered in the instant case and recited in the opinions of other cases that segregation in fact may create an inferior educational atmosphere" (Pet. App. 145a); it reversed, however, because "the trial court's findings stand or fall on the power of federal courts to resolve educational difficulties arising from circumstances outside the ambit of state action" (Pet. App. 144a). Thus, while the courts below seem to agree that the quality of a student's education depends in part on who his classmates are, the court of appeals found the district court inconsistent in ruling, on the one hand, that the school system had not discriminatorily segre-

gated the students in particular schools but, on the other hand, that the school system had discriminatorily provided inferior input for those schools by assigning a segregated student body to them.

But the issue, as perceived by the district court, was not whether the segregation was illegal but whether the school board had denied Negro and Hispano students equal protection of the laws by providing an educational environment in which the median achievement level of the students was predictably lower than in other schools. The board offered children in these allegedly *de facto* segregated schools what the court of appeals called "a curriculum which is allegedly not tailored to their educational and social needs" (Pet. App. 144a). The court of appeals appears to have assumed that because the school system may have treated the *de facto* segregated schools roughly the same as the predominantly Anglo schools, there could be no denial of equal protection.[11]

Like treatment of the two groups of schools would appear analogous to "the fabled offer of milk to the stork and the fox." *Griggs* v. *Duke Power Co.*, 401 U.S. 424, 431.[12] We think that when this Court said in

---

[11] As the district court said in its opinion on remedy (Pet App. 114a):

> * * * the underlying constitutional basis for [the March 21, 1970] decision * * * is that a state or its subdivision may not constitutionally maintain any program which treats members of minority groups unequally as compared with other groups. It makes no difference that the system may appear to be equal on its face, if its operation in fact results in unequal treatment. * * *

Brown I that state-provided education "must be made available to all on equal terms" (347 U.S. at 493) it meant that "the vessel in which the milk is proffered [must] be one all seekers can use." *Griggs* v. *Duke Power Co., supra*, 401 U.S. at 431. This means that where non-school-related factors produce differing educational needs among different racial and ethnic groups, the school system must seek to meet the needs of all groups equally.[15] If it fails to take adequate steps to meet these differing needs, the court may find that disparate achievement levels are school-related and caused by state action.[16]

The respondents pointed out below (*e.g.*, App. 568a) that although all predominantly minority group

---

[15] As former Superintendent Oberholtzer testified (App. 1366a):

> There were differences in the curriculum within specific subject areas, to be sure, depending upon the needs of the pupils, their interests, and such. * * * This was related directly to that in an attempt to provide equality of opportunity.

See also *Schools, People & Money*, the Final Report of the President's Commission on School Finance (1972), p. 17:

> * * * the school is accountable if it fails to build upon a student's resources so as to enable him to make the most of whatever advantages he enjoys. Likewise, the school is at fault if it is insensitive to a student's handicaps or fails to give him the special help he needs to cope with them.

[16] In Denver, where in 1968 15.8 percent of the students were Hispano, the defendants might be constitutionally required to provide programs to meet special needs of Hispano students stemming from language or cultural differences. Cf. *Yu Cong Eng* v. *Trinidad*, 271 U.S. 500, 525; *Meyer* v. *Nebraska*, 262 U.S. 390, 401. Also, compare *Cardona* v. *Power*, 384 U.S. 672, 675–677 (Douglas, J., dissenting), with *Katzenbach* v. *Morgan*, 384 U.S. 641, 659–664 (Harlan, J., dissenting).

schools have lower median achievement scores than the district-wide average, some predominantly Anglo schools scored lower than some of the predominantly minority group schools."[17] Respondents also point out that the experts testified that the low achievement was more closely correlated to socioeconomic status than to race (Br. 120–121). Such evidence is relevant to the question whether the inequality of opportunities is between racial or ethnic groups or between some other disfavored and favored classes.[18] The district court and court of appeals here held that the classification weighed most heavily on Negro and Hispano students, and the evidence appears to support that conclusion." Compare *Jefferson* v. *Hackney*, 406 U.S. 535.

---

[17] For example, Plaintiffs' Exhibit 373 (App. 2090a) is a map designating the 30 elementary schools whose average achievement for the fifth grade in 1968 was below the 30th percentile. Four of those schools (Columbian, Sherman, Alameda, and College View) were majority Anglo in 1968 (Pl. Ex. 97, App. 2038a), and three of the predominantly minority schools affected by the district court's relief (Barrett, Hallett, Smith) ranked above the 30th percentile. Nine of the schools with achievement below the 30th percentile had enrollments between 30 and 50 percent Anglo and were therefore not classified as "minority schools" by either the district court or the petitioners (Remington, Smedley, Ashland, Eagleton, Evans, Monroe, Westwood, Elyria, Swansea). Two of these (Elyria and Smedley) subsequently fell below 30 percent Anglo and were therefore included in the relief.

[18] The plaintiffs have not claimed any unconstitutional economic classification, and that issue is not presented here. Cf. *San Antonio ISD* v. *Rodriguez*, No. 71–1332, this Term.

[19] See, *e.g.*, Pl. Ex. 376–R (App. 2096a), which shows that 13 percent of the Anglo students and over 60 percent of the Negro and Hispano students in 1968 were enrolled in schools that had average percentiles of below 30 on the fifth grade achievement tests. See, also, the Appendix to this memorandum, *infra*, pp. 25–26.

Apart from state action and racial classification, there is the question of the reliability of drop-out rates and achievement scores as measures of educational output. One difficulty is summarized in Mosteller and Moynihan's introduction to the recent restudy of the Coleman Report, *Equality of Educational Opportunity* (1966):[20]

> At the same time that we emphasize the importance of outputs, the reader must note that academic achievement is but one output, and that schooling is expected to produce many others. Retention rates, proportion going to college, income and occupation of graduates, even happiness, are a few of many outputs that might be measured. Although the EEOR studied academic achievement with some attention to self-image and self-esteem, the long-run implication of the EEOR is that outputs should be measured much more generally. Because the EEOR devotes so much space to academic achievement, the reader is likely to lose sight of that more general picture, since inevitably this book must often describe these variables both for EEOR and for the reanalysis. Lest it seem that academic achievement must be the only job of the schools, let us remember that studies do not find adult social achievement well predicted by academic achievement.

The Denver school authorities, however, have themselves relied upon drop-out rates and achievement scores as at least partial measurements of the success

---

[20] Mosteller and Moynihan, *On Equality of Educational Opportunity* (1972), pp. 6–7.

of the school program,[21] and it is therefore appropriate to evaluate their actions in the light of evidence concerning those measurements. That evidence shows the existence of a school-related disparity in the achievement levels of children at minority group schools and Anglo schools. In these circumstances, we believe that the school board can meet its heavy burden of justifying its failure to eliminate the disparity by demonstrating that it is engaged in a concentrated, high priority, bona fide effort to meet the educational needs of the minority group students.[22] Although the defendants here presented testimony at the hearing on the merits relating to their efforts to meet the educational needs of all pupils,[23] it appears that the district court skipped over this step of the analysis and jumped directly from a finding of a school-related output disparity to a conclusion that the equal protection clause has been violated.[24]

---

[21] See, *e.g.*, the testimony of the Denver Superintendent of Schools (App. 1777a) and Supervisor of Testing Services (App. 630a), and the system's report on old Manual High School (Pl. Ex. 356, App. 2086a, p. 6).

[22] The respondents argue that the low achievement test scores of most pupils in the predominantly Negro or Hispano schools were "in accordance with their capabilities as measured by the IQ tests" (Br. 117). Assuming the validity of such comparisons—as to which the record appears to be silent—this would not relieve respondents of the duty to develop and implement programs that attempt to deal with this difference between the characteristics of the minority group and Anglo schools.

[23] See, *e.g.*, the testimony of former Superintendent Oberholtzer (App. 1366a), quoted in note 21, *supra*.

[24] The district court did state, in a section headed "Discussion of Remedies," that "the remedial or special education pro-

III. STANDARDS FOR FASHIONING AN APPROPRIATE REMEDY

Both of the courts below found that the Denver school board had through official acts substantially contributed to the racial concentration of black students in the Park Hill area schools. This finding is supported by the record and should not be disturbed. The relief ordered by the district court and approved by the court of appeals was the implementation of the corrective program adopted and subsequently rescinded by the school board. Under the circumstances of this case we believe that these steps "promise realistically to work *now*," and are therefore appropriate. *Green* v. *School Board of New Kent County*, 391 U.S. 430, 439.

We further support as legally and factually sound the conclusion of both courts below that the racial and ethnic concentrations in most of the core area schools did not originate with the policies and practices of the school board.[25] However, we share the view of the district court that significant disparities in educational opportunities in a group of schools defined by racial and ethnic concentrations would constitute violations of the equal protection clause. We do not concur with

---

grams which have been carried on in these schools have not resulted in any significant improvement and so other methods are indicated" (Pet. App. 91a). There was, however, no mention of these special programs in the court's discussion of the constitutional violation (see Pet. App. 75a–89a).

[25] We believe that with respect to some of those schools a remand is necessary for a determination, based on proper legal standards, of the extent to which school board action may have intentionally segregated them. See, pp. 10–11, *supra*.

the district court's assumption that the only effective remedy for such a violation is to eliminate the racial concentration—and therefore the longstanding neighborhood school policy—by transferring the affected students. It would be equally effective to eliminate the disparities rather than disperse the students.[20] Indeed, such a program could be more specifically tailored to the violation—*i.e.*, the failure to provide an equitable share of resources and to meet special educational needs—and to that extent would be a preferred equitable remedy. We therefore agree with the court of appeals that in this situation the educational program, not the racial concentration, is the legal problem; we do not support that court's view that such a condition is beyond the area where it is appropriate for the federal judiciary to intervene (Pet. App. 145a).

If a violation is found, "the task is to correct, by a balancing of the individual and collective interests, the condition that offends the Constitution." *Swann* v. *Board of Education, supra*, 402 U.S. at 16. That balancing process may be difficult to apply where the condition is a denial of equal educational opportunity, since there is widespread disagreement among educational experts as to what the individual and collective interests are. However, while recognizing that there is not

---

[20] In our view, the record here does not provide sufficient empirical support for the district court's apparent conclusion that the only feasible way to eliminate the disparities "is a system of desegregation and integration which provides compensatory education in an integrated environment" (Pet. App. 112a).

at this time—and may never be—one perfect educational remedy for the offending condition, one should be able to formulate guidelines for fashioning a judicial remedy. Such guidelines should begin with a recognition that equal educational opportunity "is a goal [the nation] does not know how to attain." Mosteller and Moynihan, *supra* note 20, at 45. "What is needed is innovation, experiment, effort, measurement, analysis" (*id.* at 63)."

We submit that the most appropriate remedy for this kind of violation is an educational one and should be developed by the school board in the first instance. Its elements would include: (1) application of resources in an even-handed manner; (2) identifying within the limits of educational expertise the special needs of each school that has either received inferior resources or offered demonstrably inferior educational opportunities; and (3) plans for designing and implementing a remedial program to meet such needs. The record below, compiled as it was with a different perception of the issue, precludes a more precise definition of either the violation or the remedy and in our view calls for a remand for such determinations within guidelines fixed by this Court.

" And see the testimony of plaintiffs' expert witness, Robert O'Reilly (App. 1932a):

> * * * this is a very unsettled field. There are no hard and fast rules to go on. It's very unlikely that anybody is ever going to come up with a treatment that is going to be generally effective with minority students at all. What has to be done is basically many, many years of experimentation in which we slowly and carefully identify and develop specific programs designed for * * * specific minority groups.

CONCLUSION

For the reasons stated above, we believe the decision of the court of appeals should be affirmed in part, reversed in part, and remanded for further proceedings.

Respectfully submitted.

Slip Opinion

NOTE: Where it is feasible, a syllabus (headnote) will be released, as is being done in connection with this case, at the time the opinion is issued. The syllabus constitutes no part of the opinion of the Court but has been prepared by the Reporter of Decisions for the convenience of the reader. See *United States* v. *Detroit Lumber Co.*, 200 U.S. 321, 337.

SUPREME COURT OF THE UNITED STATES

Syllabus

KEYES ET AL. *v.* SCHOOL DISTRICT NO. 1, DENVER, COLORADO, ET AL.

CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

No. 71-507. Argued October 12, 1972—Decided June 21, 1973

Petitioners sought desegregation of the Park Hill area schools in Denver and, upon securing an order of the District Court directing that relief, expanded their suit to secure desegregation of the remaining schools of the Denver school district, particularly those in the core city area. The District Court denied the further relief, holding that the deliberate racial segregation of the Park Hill schools did not prove a like segregation policy addressed specifically to the core city schools and requiring petitioners to prove *de jure* segregation for each area that they sought to have desegregated. That court nevertheless found that the segregated core city schools were educationally inferior to "white" schools elsewhere in the district and, relying on *Plessy* v. *Ferguson*, 163 U. S. 537, ordered the respondents to provide substantially equal facilities for those schools. This latter relief was reversed by the Court of Appeals, which affirmed the Park Hill ruling and agreed that Park Hill segregation, even though deliberate, proved nothing regarding an overall policy of segregation. *Held:*

1. The District Court, for purposes of defining a "segregated" core city school, erred in not placing Negroes and Hispanos in the same category since both groups suffer the same educational inequities when compared with the treatment afforded Anglo students. Pp. 5–8.

2. The courts below did not apply the correct legal standard in dealing with petitioners' contention that respondent School Board had the policy of deliberately segregating the core city schools. Pp. 8–23.

(a) Proof that the school authorities have pursued an intentional segregative policy in a substantial portion of the school district will support a finding by the trial court of the existence

Syllabus

of a dual system, absent a showing that the district is divided into clearly unrelated units. Pp. 10–12.

(b) On remand the District Court should decide initially whether respondent School Board's deliberately segregative policy respecting the Park Hill schools constitutes the whole Denver school district a dual school system. Pp. 13–15.

(c) Where, as in this case, a policy of intentional segregation has been proved with respect to a significant portion of the school system, the burden is on the school authorities (regardless of claims that their "neighborhood school policy" was racially neutral) to prove that their actions as to other segregated schools in the system were not likewise motivated by a segregative intent. Pp. 17–22.

445 F. 2d 990, modified and remanded.

BRENNAN, J., delivered the opinion of the Court, in which DOUGLAS, STEWART, MARSHALL, and BLACKMUN, JJ., joined. DOUGLAS, J., filed a separate opinion. BURGER, C. J., concurred in the result. POWELL, J., filed an opinion concurring in part and dissenting in part. REHNQUIST, J., filed a dissenting opinion. WHITE, J., took no part in the decision of the case.

NOTICE: This opinion is subject to formal revision before publication in the preliminary print of the United States Reports. Readers are requested to notify the Reporter of Decisions, Supreme Court of the United States, Washington, D.C. 20543, of any typographical or other formal errors, in order that corrections may be made before the preliminary print goes to press.

SUPREME COURT OF THE UNITED STATES

No. 71-507

Wilfred Keyes et al., Petitioners, v. School District No. 1, Denver, Colorado, et al.

On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit.

[June 21, 1973]

MR. JUSTICE BRENNAN delivered the opinion of the Court.

This school desegregation case concerns the Denver, Colorado, school system. That system has never been operated under a constitutional or statutory provision that mandated or permitted racial segregation in public education.[1] Rather, the gravamen of this action, brought in June 1969 in the District Court for the District of Colorado by parents of Denver school children, is that respondent School Board alone, by use of various techniques such as the manipulation of student attendance zones, school site selection and a neighborhood school policy, created or maintained racially or ethnically (or both racially and ethnically) segregated schools throughout the school district, entitling petitioners to a decree directing desegregation of the entire school district.

The boundaries of the school district are co-terminus with the boundaries of the City and County of Denver.

[1] To the contrary, Art. IX, § 8, of the Colorado Constitution expressly prohibits "any classification of pupils . . . on account of race or color." As early as 1927, the Colorado Supreme Court held that a Denver practice of excluding black students from school programs at Manual High School and Morey Junior High School violated state law. *Jones* v. *Newlon*, 81 Colo. 25, 253 P. 386 (1927).

There were in 1969 119 schools[1] with 96,580 pupils in the school system. In early 1969, the respondent School Board adopted three resolutions, Resolutions 1520, 1524, and 1531, designed to desegregate the schools in the Park Hill area in the northeast portion of the city. Following an election which produced a Board majority opposed to the resolutions, the resolutions were rescinded and replaced with a voluntary student transfer program. Petitioners then filed this action, requesting an injunction against the rescission of the resolutions and an order directing that the respondent School Board desegregate and afford equal educational opportunity "for the School District as a whole." App., p. 32a. The District Court found that by the construction of a new, relatively small elementary school, Barrett, in the middle of the Negro community west of Park Hill, by the gerrymandering of student attendance zones, by the use of so-called "optional zones," and by the excessive use of mobile classroom units, among other things, the respondent School Board had engaged over almost a decade after 1960 in an unconstitutional policy of deliberate racial segregation with respect to the Park Hill schools.[2] The court therefore ordered the Board to desegregate those schools through the implementation of the three rescinded resolutions. 303 F. Supp. 279 (1969); 303 F. Supp. 289 (1969).

Segregation in Denver schools is not limited, however, to the schools in the Park Hill area, and not satisfied with their success in obtaining relief for Park Hill, peti-

---

[1] There are 92 elementary schools, 15 junior high schools, 2 junior-senior high schools, and 7 senior high schools. In addition, the Board operates an Opportunity School, a Metropolitan Youth Education Center, and an Aircraft Training Facility.

[2] The so-called "Park Hill schools" are Barrett, Stedman, Hallett, Smith, Philips, and Park Hill Elementary Schools; and Smiley Junior High School. East High School serves the area but is located outside of it. (See appendix.)

tioners pressed their prayer that the District Court order desegregation of all segregated schools in the city of Denver, particularly the heavily segregated schools in the core city area.[4] But that court concluded that its finding of a purposeful and systematic program of racial segregation affecting thousands of students in the Park Hill area did not, in itself, impose on the School Board an affirmative duty to eliminate segregation throughout the school district. Instead, the court fractionated the district and held that petitioners must make a fresh showing of *de jure* segregation in each area of the city for which they seek relief. Moreover, the District Court held that its finding of intentional segregation in Park Hill was not in any sense material to the question of segregative intent in other areas of the city. Under this restrictive approach, the District Court concluded that petitioners' evidence of intentionally discriminatory School Board action in areas of the district other than Park Hill was insufficient to "dictate the conclusion that this is *de jure* segregation which calls for an all-out effort to desegregate. It is more like *de facto* segregation, with respect to which the rule is that the court cannot order desegregation in order to provide a better balance." 313 F. Supp. 61, 73 (1970).

Nevertheless, the District Court went on to hold that the proofs established that the segregated core city schools were educationally inferior to the predominantly "white" or "Anglo" schools in other parts of the district—that is, "separate facilities . . . unequal in the quality of education provided." *Id.*, at 83. Thus, the court held that, under the doctrine of *Plessy* v. *Ferguson*,

[4] The so-called "core city schools" which are said to be segregated are Boulevard, Bryant-Webster, Columbine, Crofton, Ebert, Elmwood, Elyria, Fairmont, Fairview, Garden Place, Gilpin, Greenlee, Harrington, Mitchell, Smedley, Swansea, Whittier, Wyatt, and Wyman Elementary Schools; Baker, Cole, and Morey Junior High Schools; and East, West, and Manual High Schools. (See appendix.)

163 U. S. 537 (1896), respondent School Board constitutionally "must at a minimum . . . offer an equal educational opportunity," *ibid.*, and, therefore, although all-out desegregation "could not be decreed, . . . the only feasible and constitutionally acceptable program—the only program which furnishes anything approaching substantial equality—is a system of desegregation and integration which provides compensatory education in an integrated environment." 313 F. Supp. 90, 96 (1970). The District Court then formulated a varied remedial plan to that end which was incorporated in the Final Decree.[4]

Respondent School Board appealed, and petitioners cross-appealed, to the Court of Appeals for the Tenth Circuit. That court sustained the District Court's finding that the Board engaged in an unconstitutional policy of deliberate racial segregation with respect to the Park Hill schools and affirmed the Final Decree in that respect. As to the core city schools, however, the Court of Appeals reversed the legal determination of the District

[4] The first of the District Court's four opinions, 303 F. Supp. 279, was filed July 31, 1969, and granted petitioners' application for a preliminary injunction. The second opinion, 303 F. Supp. 289, was filed August 14, 1969, and made supplemental findings and conclusions. The third opinion, 313 F. Supp. 61, filed March 21, 1970, was the opinion on the merits. The fourth opinion, 313 F. Supp. 90, was on remedy and was filed May 21, 1970. The District Court filed an unreported opinion on October 19, 1971, in which relief was extended to Hallett and Stedman Elementary Schools which were found by the court in its July 31, 1969, opinion to be purposefully segregated but were not included within the scope of the three 1969 Board resolutions. The Court of Appeals filed five unreported opinions: on August 5, 1969, vacating preliminary injunctions; on August 27, 1969, staying preliminary injunction; on September 15, 1969, on motion to amend stay; on October 17, 1969, denying Motions to Dismiss; and on March 26, 1971, granting stay. Mr. Justice Brennan, on August 29, 1969, filed an opinion reinstating preliminary injunction, 396 U. S. 1215 (1969), and on April 26, 1971, this Court entered a *per curiam* order vacating the Court of Appeals' stay, 402 U. S. 182 (1971).

Court that those schools were maintained in violation of the Fourteenth Amendment because of the unequal educational opportunity afforded, and therefore set aside so much of the Final Decree as required desegregation and educational improvement programs for those schools. 445 F. 2d 990 (1971). In reaching that result, the Court of Appeals also disregarded respondent School Board's deliberate racial segregation policy respecting the Park Hill schools and accepted the District Court's finding that petitioners had not proved that respondent had a like policy addressed specifically to the core city schools.

We granted petitioners' petition for certiorari to review the Court of Appeals' judgment insofar as it reversed that part of the District Court's Final Decree as pertained to the core city schools. 404 U. S. 1036 (1972). The judgment of the Court of Appeals in that respect is modified to vacate instead of reverse the Final Decree. The respondent School Board has cross-petitioned for certiorari to review the judgment of the Court of Appeals insofar as it affirmed that part of the District Court's Final Decree as pertained to the Park Hill schools. *School District No. 1, etc.* v. *Wilfred Keyes et al.*, No. 71-572. The cross-petition is denied.

I

Before turning to the primary question we decide today, a word must be said about the District Court's method of defining a "segregated" school. Denver is a tri-ethnic, as distinguished from a bi-racial, community. The overall racial and ethnic composition of the Denver public schools is 66% Anglo, 14% Negro and 20% Hispano.[4] The District Court, in assessing the question of

[4] The parties have used the terms "Anglo," "Negro," and "Hispano" throughout the record. We shall therefore use those terms. "Hispano" is the term used by the Colorado Department of Education to refer to a person of Spanish, Mexican, or Cuban heritage. Colorado Department of Education, Human Relations in Colorado,

de jure segregation in the core city schools, preliminarily resolved that Negroes and Hispanos should not be placed in the same category to establish the segregated character of a school. 313 F. Supp., at 60. Later, in determining the schools that were likely to produce an inferior educational opportunity, the court concluded that a school would be considered inferior only if it had "a concentration of either Negro or Hispano students in the general area of 70 to 75 percent." *Id.*, at 77. We intimate no opinion whether the District Court's 70 to 75% requirement was correct. The District Court used those figures to signify educationally inferior schools, and there is no suggestion in the record that those same figures were or would be used to define a "segregated" school in the *de jure* context. What is or is not a segregated school will necessarily depend on the facts of each particular case. In addition to the racial and ethnic composition of a school's student body, other factors such as the racial and ethnic composition of faculty and staff and the community and administration attitudes toward the school must be taken into consideration. The District Court has recognized these specific factors as elements of the definition of a "segregated" school, *id.*, at 74, and we may therefore infer that the court will consider them again on remand.

We conclude, however, that the District Court erred

A Historical Record 203 (1968). In the Southwest, the "Hispanos" are more commonly referred to as "Chicanos" or "Mexican-Americans."

The more specific racial and ethnic composition of the Denver public schools is as follows:

	Anglo		*Negro*		*Hispano*	
Pupils	No.	%	No.	%	No.	%
Elementary	38,719	61.8	8,297	13.2	12,570	23.0
Junior High	14,848	66.7	2,898	13.4	3,858	17.9
Senior High	14,852	72.8	2,442	12.0	3,101	15.2
Total	68,419	65.7	13,632	14.1	19,529	20.2

in separating Negroes and Hispanos for purposes of defining a "segregated" school. We have held that Hispanos constitute an identifiable class for purposes of the Fourteenth Amendment. *Hernandez* v. *Texas*, 347 U. S. 475 (1954). See also *United States* v. *Texas Education Agency*, 467 F. 2d 848 (CA5 1972) (*en banc*); *Cisneros* v. *Corpus Christi Independent School District*, 467 F. 2d 142 (CA5 1972) (*en banc*); *Alvarado* v. *El Paso Independent School District*, 445 F. 2d 1011 (CA5 1971); *Soria* v. *Oxnard School District*, 328 F. Supp. 155 (CD Cal. 1971); *Romero* v. *Weakley*, 226 F. 2d 399 (CA9 1955). Indeed, the District Court recognized this in classifying predominantly Hispano schools as "segregated" schools in their own right. But there is also much evidence that in the Southwest Hispanos and Negroes have a great many things in common. The United States Commission on Civil Rights has recently published two Reports on Hispano education in the Southwest.[7] Focusing on students in the States of Arizona, California, Colorado, New Mexico, and Texas, the Commission concluded that Hispanos suffer from the same educational inequities as Negroes and American Indians.[8] In fact, the District Court itself recognized that "[o]ne of the things which the Hispano has in common with the Negro is economic and cultural deprivation and discrimination." 313 F. Supp., at 60. This is agreement that, though of different origins, Negroes and His-

[7] United States Commission on Civil Rights, Mexican-American Education Study, Ethnic Isolation of Mexican-Americans in the Public Schools of the Southwest (April 1971); United States Commission on Civil Rights, Mexican-American Education Series, The Unfinished Education (October 1970).

[8] The Commission's first Report, on p. 41, summarizes its findings:

"The basic finding of this report is that minority students in the Southwest—Mexican-Americans, blacks, American Indians—do not obtain the benefits of public education at a rate equal to that of their Anglo classmates."

panos in Denver suffer identical discrimination in treatment when compared with the treatment afforded Anglo students. In that circumstance, we think petitioners are entitled to have schools with a combined predominance of Negroes and Hispanos included in the category of "segregated" schools.

II

In our view, the only other question that requires our decision at this time is that subsumed in Question 2 of the Questions Presented by petitioners, namely, whether the District Court and the Court of Appeals applied an incorrect legal standard in addressing petitioners' contention that respondent School Board engaged in an unconstitutional policy of deliberate segregation in the core city schools. Our conclusion is that those courts did not apply the correct standard in addressing that contention.[9]

Petitioners apparently concede for the purposes of this case that in the case of a school system like Denver's, where no statutory dual system has ever existed, plaintiffs must prove not only that segregated schooling exists but also that it was brought about or maintained by intentional state action. Petitioners proved that for almost a decade after 1960 respondent School Board had engaged in an unconstitutional policy of deliberate racial segregation in the Park Hill schools. Indeed, the District Court found that "[b]etween 1960 and 1969 the Board's policies with respect to those northeast Denver schools show an

[9] Our Brother REHNQUIST argues in dissent that the Court somehow transgresses the "two-court" rule. *Infra*, p. 11. But at this stage, we have no occasion to review the factual findings concurred in by the two courts below. Cf. *Neil* v. *Biggers*, 409 U. S. 188 (1972). We address only the question whether those courts applied the correct legal standard in deciding the case as it affects the core city schools.

undeviating purpose to isolate Negro students" in segregated schools "while preserving the Anglo character of [other] schools." 303 F. Supp., at 294. This finding did not relate to an insubstantial or trivial fragment of the school system. On the contrary, respondent School Board was found guilty of following a deliberate segregation policy at schools attended, in 1969, by 37.69% of Denver's total Negro school population, including one-fourth of the Negro elementary pupils, over two-thirds of the Negro junior high pupils, and over two-fifths of the Negro high school pupils.[10] In addition,

---

[10] The Board was found guilty of intentionally segregative acts of one kind or another with respect to the schools listed below. (As to Cole and East, the conclusion rests on the rescission of the resolutions.)

PUPILS 1968–1969

	Anglo	*Negro*	*Hispano*	*Total*
Barrett	1	410	12	432
Stedman	27	634	25	686
Hallett	76	634	41	751
Park Hill	684	223	56	963
Philips	307	203	45	555
Smiley Jr. High	360	1,112	74	1,546
Cole Jr. High	46	884	289	1,219
East High	1,409	1,039	175	2,623
Subtotal Elementary	1,095	2,104	179	3,378
Subtotal Jr. High	406	1,996	363	2,765
Subtotal Sr. High	1,409	1,039	175	2,623
Total	2,910	5,139	717	8,766

The total Negro school enrollment in 1968 was:

Elementary	8,297
Junior High	2,893
Senior High	2,442

Thus, the above-mentioned schools included:

Elementary	25.36% of all Negro elementary pupils
Junior High	68.99% of all Negro junior high pupils
Senior High	42.55% of all Negro senior high pupils
Total	37.69% of all Negro pupils

there was uncontroverted evidence that teachers and staff had for years been assigned on a minority teacher-to-minority school basis throughout the school system. Respondent argues, however, that a finding of state-imposed segregation as to a substantial portion of the school system can be viewed in isolation from the rest of the district, and that even if state-imposed segregation does exist in a substantial part of the Denver school system, it does not follow that the District Court could predicate on that fact a finding that the entire school system is a dual system. We do not agree. We have never suggested that plaintiffs in school desegregation cases must bear the burden of proving the elements of *de jure* segregation as to each and every school or each and every student within the school system. Rather, we have held that where plaintiffs prove that a current condition of segregated schooling exists within a school district where a dual system was compelled or authorized by statute at the time of our decision in *Brown* v. *Board of Education*, 347 U. S. 483 (1954) (*Brown I*), the State automatically assumes an affirmative duty "to effectuate a transition to a racially nondiscriminatory school system," *Brown* v. *Board of Education*, 349 U. S. 294, 301 (1955) (*Brown II*), see also *Green* v. *County School Board*, 391 U. S. 430, 437–438 (1968), that is, to eliminate from the public schools within their school system "all vestiges of state-imposed segregation." *Swann* v. *Charlotte-Mecklenburg Board of Education*, 402 U. S. 1, 15 (1971).[11]

---

[11] Our Brother REHNQUIST argues in dissent that *Brown* v. *Board of Education* did not impose an "affirmative duty to integrate" the schools of a dual school system but was only a "prohibition against discrimination" "in the sense that the assignment to a child of a particular school is not made to depend on his race . . . ." *Infra*, p. 5. That is the interpretation of *Brown* expressed 18 years ago by a three-judge court in *Briggs* v. *Elliott*, 132 F. Supp. 776, 777

This is not a case, however, where a statutory dual system has ever existed. Nevertheless, where plaintiffs prove that the school authorities have carried out a systematic program of segregation affecting a substantial portion of the students, schools, teachers and facilities within the school system, it is only common sense to conclude that there exists a predicate for a finding of the existence of a dual school system. Several considerations support this conclusion. First, it is obvious that a practice of concentrating Negroes in certain schools by structuring attendance zones or designating "feeder" schools on the basis of race has the reciprocal effect of keeping other nearby schools predominantly white.[12] Similarly, the practice of building a school—such as the Barrett Elementary School in this case—to a certain size and in a certain location, "with conscious knowledge that it would

---

(1955): "The Constitution, in other words, does not require integration. It merely forbids discrimination." But *Green* v. *County School Board*, 391 U. S. 430, 438 (1968), rejected that interpretation insofar as *Green* expressly held that "School boards . . . operating state-compelled dual systems were nevertheless clearly charged [by *Brown II*] with the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch." *Green* remains the governing principle. *Alexander* v. *Holmes County Board of Education*, 396 U. S. 19 (1969); *Swann* v. *Charlotte-Mecklenburg Board of Education*, 402 U. S. 1, 15 (1971). See also *Kelley* v. *Metropolitan County Board of Education*, 317 F. Supp. 980, 984 (1970).

[12] As a former School Board President who testified for the respondents put it: "Once you change the boundary of any one school, it is affecting all the schools, . . ." Testimony of Mrs. Lois Heath Johnson on direct examination. App., p. 951a–952a.

Similarly, Judge Wisdom has recently stated:

"Infection at one school infects all schools. To take the most simple example, in a two school system, all blacks at one school means all or almost all whites at the other." *United States* v. *Texas Education Agency*, 467 F. 2d 848, 888 (CA5 1972).

be a segregated school," 303 F. Supp., at 285, has a substantial reciprocal effect on the racial composition of other nearby schools. So also, the use of mobile classrooms, the drafting of student transfer policies, the transportation of students, and the assignment of faculty and staff, on racially identifiable bases, have the clear effect of earmarking schools according to their racial composition, and this, in turn, together with the elements of student assignment and school construction, may have a profound reciprocal effect on the racial composition of residential neighborhoods within a metropolitan area, thereby causing further racial concentration within the schools. We recognized this in *Swann* when we said:

> "They [school authorities] must decide questions of location and capacity in light of population growth, finances, land values, site availability, through an almost endless list of factors to be considered. The result of this will be a decision which, when combined with one technique or another of student assignment, will determine the racial composition of the student body in each school in the system. Over the long run, the consequences of the choices will be far reaching. People gravitate toward school facilities, just as schools are located in response to the needs of people. The location of schools may thus influence the patterns of residential development of a metropolitan area and have important impact on composition of inner-city neighborhoods.
>
> "In the past, choices in this respect have been used as a potent weapon for creating or maintaining a state-segregated school system. In addition to the classic pattern of building schools specifically intended for Negro or white students, school authorities have sometimes, since *Brown*, closed schools which appeared likely to become racially mixed

through changes in neighborhood residential patterns. This was sometimes accompanied by building new schools in the areas of white suburban expansion farthest from Negro population centers in order to maintain the separation of the races with a minimum departure from the formal principles of 'neighborhood zoning.' Such a policy does more than simply influence the short-run composition of the student body of a new school. It may well promote segregated residential patterns which, when combined with 'neighborhood zoning,' further lock the school system into the mold of separation of races. Upon a proper showing a district court may consider this in fashioning a remedy." 402 U. S., at 20-21.

In short, common sense dictates the conclusion that racially inspired school board actions have an impact beyond the particular schools that are the subjects of those actions. This is not to say, of course, that there can never be a case in which the geographical structure of or the natural boundaries within a school district may have the effect of dividing the district into separate, identifiable and unrelated units. Such a determination is essentially a question of fact to be resolved by the trial court in the first instance, but such cases must be rare. In the absence of such a determination, proof of state-imposed segregation in a substantial portion of the district will suffice to support a finding by the trial court of the existence of a dual system. Of course, where that finding is made, as in cases involving statutory dual systems, the school authorities have an affirmative duty "to effectuate a transition to a racially nondiscriminatory school system." *Brown II*, *supra*, at 301.

On remand, therefore, the District Court should decide in the first instance whether respondent School

Board's deliberate racial segregation policy with respect to the Park Hill schools constitutes the entire Denver school system a dual school system. We observe that on the record now before us there is indication that Denver is not a school district which might be divided into separate, identifiable and unrelated units. The District Court stated, in its summary of findings as to the Park Hill schools, that there was "a high degree of interrelationship among these schools, so that any action by the Board affecting the racial composition of one would almost certainly have an effect on the others." 303 F. Supp., at 294. And there was cogent evidence that the ultimate effect of the Board's actions in Park Hill was not limited to that area: the three 1960 resolutions designed to desegregate the Park Hill schools changed the attendance patterns of at least 29 schools attended by almost one-third of the pupils in the Denver school system.[12] This suggests that the official segregation in Park Hill affected the racial composition of schools throughout the district.

On the other hand, although the District Court did not state this or indeed any reason why the Park Hill finding was disregarded when attention was turned to the core city schools—beyond saying that the Park Hill and core city areas were in its view "different"—the areas, although adjacent to each other, are separated by Colorado Boulevard, a six-lane highway. From the record, it is difficult to assess the actual significance of Colorado Boulevard to the Denver school system. The Boulevard runs the length of the school district, but at least two elementary schools, Teller and Steck, have attendance zones which cross the Boulevard. Moreover, the District Court, although referring to the Boulevard as "a natural dividing line," 303 F. Supp., at 282, did not feel

[12] See the chart at 445 F. 2d 1008–1009, which indicates that 31,707 pupils attended the schools affected by the resolutions.

constrained to limit its consideration of *de jure* segregation in the Park Hill area to those schools east of the Boulevard. The court found that by building Barrett Elementary School west of the Boulevard and by establishing Colorado Boulevard as the eastern boundary of the Barrett attendance zone, the Board was able to maintain for a number of years the Anglo character of the Park Hill schools. This suggests that Colorado Boulevard is not to be regarded as the type of barrier that of itself could confine the impact of the Board's actions to an identifiable area of the school district, perhaps because a major highway is generally not such an effective buffer between adjoining areas. Cf. *Davis* v. *Board of School Commissioners of Mobile County*, 402 U. S. 33 (1971). But this is a factual question for resolution by the District Court on remand. In any event, inquiry whether the District Court and the Court of Appeals applied the correct legal standards in addressing petitioners' contention of deliberate segregation in the core city schools is not at an end even if it be true that Park Hill may be separated from the rest of the Denver school district as a separate, identifiable and unrelated unit.

III

The District Court proceeded on the premise that the finding as to the Park Hill schools was irrelevant to the consideration of the rest of the district, and began its examination of the core city schools by requiring that petitioners prove all of the essential elements of *de jure* segregation—that is, stated simply, a current condition of segregation resulting from intentional state action directed specifically to the core city schools.[14] The

[14] Our Brother REHNQUIST argues in dissent that the District Court did take the Park Hill finding into account in addressing the question of alleged *de jure* segregation of the core city schools. *Infra*, p. 9. He cites the following excerpt from a footnote to the

segregated character of the core city schools could not be and is not denied. Petitioners' proof showed that at the time of trial 22 of the schools in the core city area were less than 30% in Anglo enrollment and 11 of the schools were less than 10% Anglo.[13] Petitioners also introduced substantial evidence demonstrating the existence of a disproportionate racial and ethnic composition of faculty and staff at these schools.

On the question of segregative intent, petitioners presented evidence tending to show that the Board, through its actions over a period of years, intentionally created and maintained the segregated character of the core city schools. Respondents countered this evidence by arguing that the segregation in these schools is the result of a racially neutral "neighborhood school policy" and that the acts of which petitioners complain are explicable within the bounds of that policy. Accepting the School Board's explanation, the District Court and the Court of Appeals agreed that a finding of *de jure* segregation as to the core city schools was not permissible since

---

District Court's opinion of March 21, 1970, 313 F. Supp., at 74–75: "Although past discriminatory acts may not be a substantial factor contributing to present segregation, they may nevertheless be probative on the issue of the segregative purpose of other discriminatory acts which are in fact a substantial factor in causing a present segregated situation." But our Brother REHNQUIST omits the rest of the footnote: "Thus, in part I of this opinion, we discussed the building of Barrett, boundary changes and the use of mobile units as they relate to the purpose for the rescission of Resolutions 1520, 1524 and 1531." Obviously, the District Court was carefully limiting the comment to the consideration being given past discriminatory acts *affecting the Park Hill schools* in assessing the causes of current segregation of *those schools*.

[13] In addition to these 22 schools, see 313 F. Supp., at 78, two more schools, Elyria and Smedley Elementary Schools, became less than 30% Anglo after the District Court's decision on the merits. These two schools were thus included in the list of segregated schools. 313 F. Supp., at 92.

petitioners had failed to prove "(1) a racially discriminatory purpose and (2) a casual relationship between the acts complained of and the racial imbalance admittedly existing in those schools." 445 F. 2d, at 1000. This assessment of petitioners' proof was clearly incorrect.

Although petitioners had already proved the existence of intentional school segregation in the Park Hill schools, this crucial finding was totally ignored when attention turned to the core city schools. Plainly, a finding of intentional segregation as to a portion of a school system is not devoid of probative value in assessing the school authorities' intent with respect to other parts of the same school system. On the contrary, where, as here, the case involves one school board, a finding of intentional segregation on its part in one portion of a school system is highly relevant to the issue of the board's intent with respect to other segregated schools in the system. This is merely an application of the well-settled evidentiary principle that "the prior doing of other similar acts, whether clearly a part of a scheme or not, is useful as reducing the possibility that the act in question was done with innocent intent." II Wigmore, Evidence 200 (3d ed. 1940). "Evidence that similar and related offenses were committed . . . tend[s] to show a consistent pattern of conduct highly relevant to the issue of intent." *Nye & Nissen* v. *United States*, 336 U. S. 613, 618 (1949). Similarly, a finding of illicit intent as to a meaningful portion of the item under consideration has substantial probative value on the question of illicit intent as to the remainder. See, for example, the cases cited in II Wigmore, *supra*, at 301–302. And "[t]he foregoing principles are equally as applicable to civil cases as to criminal cases, . . ." II Wigmore, *supra*, at 300. See also McCormick, Evidence 329 (1954).

Applying these principles in the special context of school desegregation cases, we hold that a finding of intentionally segregative school board actions in a meaningful portion of a school system, as in this case, creates a presumption that other segregated schooling within the system is not adventitious. It establishes, in other words, a prima facie case of unlawful segregative design on the part of school authorities, and shifts to those authorities the burden of proving that other segregated schools within the system are not also the result of intentionally segregative actions. This is true even if it is determined that different areas of the school district should be viewed independently of each other because, even in that situation, there is high probability that where school authorities have effectuated an intentionally segregative policy in a meaningful portion of the school system, similar impermissible considerations have motivated their actions in other areas of the system. We emphasize that the differentiating factor between *de jure* segregation and so-called *de facto* segregation to which we referred in *Swann* [10] is *purpose* or *intent* to segregate. Where school authorities have been found to have practiced purposeful segregation in part of a school system, they may be expected to oppose system-wide desegregation, as did the respondents in this case, on the ground that their purposefully segregative actions were isolated and individual events, thus leaving plaintiffs with the burden of proving otherwise. But at that point where an intentionally segregative policy is practiced in a meaningful or significant segment of a school system, as in this case, the school authorities can not be heard to argue that plaintiffs have proved only "isolated and individual" unlawfully segregative actions. In that circumstance, it is both fair and

[10] 402 U. S. 1, 17–18 (1971).

reasonable to require that the school authorities bear the burden of showing that their actions as to other segregated schools within the system were not also motivated by segregative intent.

This burden-shifting principle is not new or novel. There are no hard and fast standards governing the allocation of the burden of proof in every situation. The issue, rather, "is merely a question of policy and fairness based on experience in the different situations." IX Wigmore, Evidence § 2486 (3d ed. 1940). In the context of racial segregation in public education, the courts, including this Court, have recognized a variety of situations in which "fairness" and "policy" require state authorities to bear the burden of explaining actions or conditions which appear to be racially motivated. Thus, in *Swann*, *supra*, 402 U. S., at 18, we observed that in a system with a "history of segregation," "where it is possible to identify a 'white school' or a 'Negro school' simply by reference to the racial composition of teachers and staff, the quality of school buildings and equipment, or the organization of sport activities, a *prima facie* case of violation of substantive constitutional rights under the Equal Protection Clause is shown." Again, in a school system with a history of segregation, the discharge of a disproportionately large number of Negro teachers incident to desegregation "thrust[s] upon the School Board the burden of justifying its conduct by clear and convincing evidence." *Chambers* v. *Hendersonville City Board of Education*, 364 F. 2d 189, 192 (CA4 1966) (*en banc*). See also *United States* v. *Jefferson County Board of Education*, 372 F. 2d 836, 887–888 (CA5 1966), aff'd *en banc*, 380 F. 2d 385 (1967); *North Carolina Teachers' Association* v. *Asheboro City Board of Education*, 393 F. 2d 736, 743 (CA4 1968) (*en banc*); *Williams* v. *Kimbrough*, 295 F. Supp. 578, 585 (WD La. 1969); *Bonner* v. *Texas City*

Independent School District, 305 F. Supp. 600, 621 (SD Tex. 1969). Nor is this burden-shifting principle limited to former statutory dual systems. See, *e. g.*, *Davis* v. *School District of the City of Pontiac*, 309 F. Supp. 734, 743, 744 (ED Mich. 1970), aff'd, 443 F. 2d 573 (CA6 1971); *United States* v. *School District No. 151*, 301 F. Supp. 201, 228 (ND Ill. 1969), mod. on other grounds, 432 F. 2d 1147 (CA7 1970). Indeed, to say that a system has a "history of segregation" is merely to say that a pattern of intentional segregation has been established in the past. Thus, be it a statutory dual system or an allegedly unitary system where a meaningful portion of the system is found to be intentionally segregated, the existence of subsequent or other segregated schooling within the same system justifies a rule imposing on the school authorities the burden of proving that this segregated schooling is not also the result of intentionally segregative acts.

In discharging that burden, it is not enough, of course, that the school authorities rely upon some allegedly logical, racially neutral explanation for their actions. Their burden is to adduce proof sufficient to support a finding that segregative intent was not among the factors that motivated their actions. The courts below attributed much significance to the fact that many of the Board's actions in the core city area antedated our decision in *Brown*. We reject any suggestion that remoteness in time has any relevance to the issue of intent. If the actions of school authorities were to any degree motivated by segregative intent and the segregation resulting from those actions continues to exist, the fact of remoteness in time certainly does not make those actions any less "intentional."

This is not to say, however, that the prima facie case may not be met by evidence supporting a finding that a

lesser degree of segregated schooling in the core city area would not have resulted even if the Board had not acted as it did. In *Swann*, we suggested that at some point in time the relationship between past segregative acts and present segregation may become so attenuated as to be incapable of supporting a finding of *de jure* segregation warranting judicial intervention. 402 U. S., at 31–32. See also *Hobson* v. *Hansen*, 269 F. Supp. 401, 495 (DC 1967), aff'd *sub nom. Smuck* v. *Hobson*, 132 U. S. App. D. C. 372, 408 F. 2d 175 (1969).[17] We made it clear, however, that a connection between past segregative acts and present segregation may be present even when not apparent and that close examination is required before concluding that the connection does not exist. Intentional school segregation in the past may have been a factor in creating a natural environment for the growth of further segregation. Thus, if respondent School Board cannot disprove segregative intent, it can rebut the prima facie case only by showing that its past segregative acts did not create or contribute to the current segregated condition of the core city schools.

The respondent School Board invoked at trial its "neighborhood school policy" as explaining racial and ethnic concentrations within the core city schools, arguing that since the core city area population had long been Negro and Hispano, the concentrations were necessarily

[17] It may be that the District Court and Court of Appeals were applying this test in holding that petitioners had failed to prove that the Board's actions "caused" the current condition of segregation in the core city schools. But if so, certainly plaintiffs in a school desegregation case are not required to prove "cause" in the sense of "non-attenuation." That is a factor which becomes relevant only after past intentional actions resulting in segregation have been established. At that stage, the burden becomes the school authorities' to show that the current segregation is in no way the result of those past segregative actions.

the result of residential patterns and not of purposefully segregative policies. We have no occasion to consider in this case whether a "neighborhood school policy" of itself will justify racial or ethnic concentrations in the absence of a finding that school authorities have committed acts constituting *de jure* segregation. It is enough that we hold that the mere assertion of such a policy is not dispositive where, as in this case, the school authorities have been found to have practiced *de jure* segregation in a meaningful portion of the school system by techniques that indicate that the "neighborhood school" concept has not been maintained free of manipulation. Our observations in *Swann*, *supra*, at 28, are particularly instructive on this score:

> "Absent a constitutional violation there would be no basis for judicially ordering assignment of students on a racial basis. All things being equal, with no history of discrimination, it might well be desirable to assign pupils to schools nearest their homes. But all things are not equal in a system that has been deliberately constructed and maintained to enforce racial segregation. . . . 'Racially neutral' assignment plans proposed by school authorities to a district court may be inadequate; such plans may fail to counteract the continuing effects of past school segregation resulting from discriminatory location of school sites or distortion of school size in order to achieve or maintain an artificial racial separation. When school authorities present a district court with a 'loaded game board,' affirmative action in the form of remedial altering of attendance zones is proper to achieve truly non-discriminatory assignments. In short, an assignment plan is not acceptable simply because it appears to be neutral."

Thus, respondent School Board having been found to have practiced deliberate racial segregation in schools attended by over one-third of the Negro school population, that crucial finding establishes a prima facie case of intentional segregation in the core city schools. In such case, respondent's neighborhood school policy is not to be determinative "simply because it appears to be neutral."

IV

In summary, the District Court on remand, *first*, will afford respondent School Board the opportunity to prove its contehtion that the Park Hill area is a separate, identifiable and unrelated section of the school district that should be treated as isolated from the rest of the district. If respondent School Board fails to prove that contention, the District Court, *second*, will determine whether respondent School Board's conduct over almost a decade after 1960 in carrying out a policy of deliberate racial segregation in the Park Hill schools constitutes the entire school system a dual school system. If the District Court determines that the Denver school system is a dual school system, respondent School Board has the affirmative duty to desegregate the entire system "root and branch." *Green* v. *County School Board*, *supra*, 391 U. S., at 438. If the District Court determines, however, that the Denver school system is not a dual school system by reason of the Board's actions in Park Hill, the court, *third*, will afford respondent School Board the opportunity to rebut petitioners' prima facie case of intentional segregation in the core city schools raised by the finding of intentional segregation in the Park Hill schools. There, the Board's burden is to show that its policies and practices with respect to school site location, school size, school renovations and additions, student at-

tendance zones, student assignment and transfer options, mobile classroom units, transportation of students, assignment of faculty and staff, etc., considered together and premised on the Board's so-called "neighborhood school" concept, either were not taken in effectuation of a policy to create or maintain segregation in the core city schools, or, if unsuccessful in that effort, were not factors in causing the existing condition of segregation in these schools. Considerations of "fairness" and "policy" demand no less in light of the Board's intentionally segregative actions. If respondent Board fails to rebut petitioners' prima facie case, the District Court must, as in the case of Park Hill, decree all-out desegregation of the core city schools.

The judgment of the Court of Appeals is modified to vacate instead of reverse the parts of the Final Decree that concern the core city schools, and the case is remanded to the District Court for further proceedings consistent with this opinion.[12]

It is so ordered.

MR. CHIEF JUSTICE BURGER concurs in the result.

MR. JUSTICE WHITE took no part in the decision of this case.

---

[12] We therefore do not reach and intimate no view upon the merits of the holding of the District Court, premised upon its erroneous finding that the situation "is more like de facto segregation," 313 F. Supp., at 73, that nevertheless, although all-out desegregation "could not be decreed, . . . the only feasible and constitutionally acceptable program . . . is a system of desegregation and integration which provides compensatory education in an integrated environment." *Id.*, at 96.

SUPREME COURT OF THE UNITED STATES

No. 71-507

Wilfred Keyes et al., Petitioners, v. School District No. 1, Denver, Colorado, et al.	On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit.

[June 21, 1973]

MR. JUSTICE DOUGLAS.

While I join the opinion of the Court, I agree with my Brother POWELL that there is, for the purposes of the Equal Protection Clause of the Fourteenth Amendment as applied to the school cases, no difference between *de facto* and de *jure* segregation. The school board is a state agency and the lines that it draws, the locations it selects for school sites, the allocation it makes of students, the budgets it prepares are state action for Fourteenth Amendment purposes.

As Judge Wisdom cogently stated in *United States* v. *Texas Education Agency*, 467 F. 2d 848, segregated schools are often created, not by dual school systems decreed by the legislature, but by the administration of school districts by school boards. Each is state action within the meaning of the Fourteenth Amendment. "Here school authorities assigned students, faculty, and professional staff, employed faculty and staff; chose sites for schools; constructed new schools and renovated old ones; and drew attendance zone lines. The natural and foreseeable consequence of these actions was segregation of Mexican-Americans. Affirmative action to the contrary would have resulted in desegregation. When school authorities by their actions, contribute to segrega-

tion in education, whether by causing additional segregation or maintaining existing segregation, they deny to the students equal protection of the laws.

"We need not define the quantity of state participation which is a prerequisite to a finding of constitutional violation. Like the legal concepts of 'the reasonable man,' 'due care,' 'causation,' 'preponderance of the evidence,' and 'beyond a reasonable doubt,' the necessary degree of state involvement is incapable of precise definition and must be defined on a case-by-case basis. Suffice it to say that school authorities here played a significant role in causing or perpetuating unequal educational opportunities for Mexican-Americans, and did so on a system-wide basis." *Id.*, at 863–864.

These latter acts are often said to create *de facto* as contrasted with *de jure* segregation. But as Judge Wisdom observes, each is but another form of *de jure* segregation.

I think it is time to state that there is no constitutional difference between *de jure* and *de facto* segregation, for each is the product of state actions or policies. If a "neighborhood" or "geographical" unit has been created along racial lines by reason of the play of restrictive covenants that restrict certain areas to "the elite," leaving the "undesirables" to move elsewhere, there is state action in the constitutional sense because the force of law is placed behind those covenants.

There is state action in the constitutional sense when public funds are dispersed by urban development agencies to build racial ghettoes.

Where the school district is racially mixed and the races are segregated in separate schools, where black teachers are assigned almost exclusively to black schools, where the school board closed existing schools located in fringe areas and built new schools in black areas and in distant white areas, where the school board continued

the "neighborhood" school policy at the elementary level, these actions constitute state action. They are of a kind quite distinct from the classical *de jure* type of school segregation. Yet calling them *de facto* is a misnomer, as they are only more subtle types of state action that create or maintain a wholly or partially segregated school system. See *Kelly* v. *Guinn*, 456 F. 2d 100.

When a State forces, aids, or abets, or helps create a racial "neighborhood," it is a travesty of justice to treat that neighborhood as sacrosanct in the sense that its creation is free from the taint of state action.

The Constitution and Bill of Rights have described the design of a pluralistic society. The individual has the right to seek such companions as he desires. But a State is barred from creating by one device or another ghettoes that determine the school one is compelled to attend.

SUPREME COURT OF THE UNITED STATES

No. 71-507

Wilfred Keyes et al., Petitioners, v. School District No. 1, Denver, Colorado, et al.	On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit.

[June 21, 1973]

MR. JUSTICE POWELL, concurring in part and dissenting in part.

I concur in the remand of this case for further proceedings in the District Court, but on grounds that differ from those relied upon by the Court.

This is the first school desegregation case to reach this Court which involves a major city outside the South. It comes from Denver, Colorado, a city and a State which have not operated public schools under constitutional or statutory provisions which mandated or permitted racial segregation.[1] Nor has it been argued that any other legislative actions (such as zoning and housing laws) contributed to the segregation which is at issue.[2] The

[1] Article IX, § 8, of the Colorado Constitution has expressly prohibited "any classification of pupils . . . on account of race or color."

[2] See, *e. g.*, *Swann* v. *Charlotte-Mecklenburg Board of Education*, 402 U. S. 1, 23 (1971):

"We do not reach . . . the question whether a showing that school segregation is a consequence of other types of state action, without any discriminatory action by school authorities, is a constitutional violation requiring remedial action by a school desegregation decree." The term "state action," as used herein, thus refers to actions of the appropriate public school authorities.

Court has inquired only to what extent the Denver public school authorities may have contributed to the school segregation which is acknowledged to exist in Denver.

The predominantly minority schools are located in two areas of the city referred to as Park Hill and the core city area. The District Court considered that a school with a concentration of 70 to 75% "Negro or Hispano students" was identifiable as a segregated school. 313 F. Supp., at 77. Wherever one may draw this line, it is undisputed that most of the schools in these two areas are in fact heavily segregated in the sense that their student bodies are overwhelmingly composed of non-Anglo children. The city-wide school mix in Denver is 66% Anglo, 14% Negro, and 20% Hispano. In areas of the city where the Anglo population largely resides, the schools are predominantly Anglo, if not entirely so.

The situation in Denver is generally comparable to that in other large cities across the country in which there is a substantial minority population and where desegregation has not been ordered by the federal courts. There is segregation in the schools of many of these cities fully as pervasive as that in southern cities prior to the desegregation decrees of the past decade and a half. The focus of the school desegregation problem has now shifted from the South to the country as a whole. Unwilling and footdragging as the process was in most places, substantial progress toward achieving integration has been made in southern States.[8] No comparable progress has been made in many nonsouthern cities with large minority

[8] According to the 1971 HEW estimate, 43.9% of Negro pupils attended majority white schools in the South as opposed to only 27.8% who attended such schools in the North and West. Fifty-seven percent of all Negro pupils in the North and West attend schools with over 80% minority population as opposed to 32.2% who do so in the South. 118 Cong. Rec. 8145.

populations[4] primarily because of the *de facto/de jure* distinction nurtured by the courts and accepted complacently by many of the same voices which denounced the evils of segregated schools in the South.[5] But if our national concern is for those who attend such schools, rather than for perpetuating a legalism rooted in history rather than present reality, we must recognize that the evil of operating separate schools is no less in Denver than in Atlanta.

---

[4] The 1971 HEW Enrollment Survey dramatized the segregated character of public school systems in many nonsouthern cities. The percentage of Negro pupils which attended schools more than 80% black was 91.3 in Cleveland, Ohio; 97.8 in Compton, California; 78.1 in Dayton, Ohio; 78.6 in Detroit, Michigan; 95.7 in Gary, Indiana; 86.4 in Kansas City, Missouri; 86.6 in Los Angeles, California; 78.8 in Milwaukee, Wisconsin; 91.3 in Newark, New Jersey; 89.8 in St. Louis, Missouri. The full data from the Enrollment Survey may be found in 118 Cong. Rec. S144-148, Jan. 20, 1972.

[5] As Senator Ribicoff (D.-Conn.) recognized:

"For years we have fought the battle of integration primarily in the South where the problem was severe. It was a long, arduous fight that deserved to be fought and needed to be won.

"Unfortunately, as the problem of racial isolation has moved north of the Mason-Dixon line, many northerners have bid an evasive farewell to the 100-year struggle for racial equality. Our motto seems to have been 'Do to southerners what you do not want to do to yourself.'

"Good reasons have always been offered, of course, for not moving vigorously ahead in the North as well as the South.

"First, it was that the problem was worse in the South. Then the facts began to show that that was no longer true.

"We then began to hear the de facto-de jure refrain.

"Somehow residential segregation in the North was accidental or de facto and that made it better than the legally supported de jure segregation of the South. It was a hard distinction for black children in totally segregated schools in the North to understand, but it allowed us to avoid the problem." 118 Cong. Rec. S2542, Feb. 24, 1972.

I

In my view we should abandon a distinction which long since has outlived its time, and formulate constitutional principles of national rather than merely regional application. When *Brown* v. *Board of Education*, 347 U. S. 483 (1954), was decided, the distinction between *de jure* and *de facto* segregation was consistent with the limited constitutional rationale of that case. The situation confronting the Court, largely confined to the southern States, was officially imposed racial segregation in the schools extending back for many years and usually embodied in constitutional and statutory provisions.

The great contribution of *Brown I* was its holding in unmistakable terms that the Fourteenth Amendment forbids state-compelled or authorized segregation of public schools. 347 U. S., at 488, 493–495. Although some of the language was more expansive, the holding in *Brown I* was essentially negative: It was impermissible under the Constitution for the States, or their instrumentalities, to force children to attend segregated schools. The forbidden action was *de jure*, and the opinion in *Brown I* was construed—for some years and by many courts—as requiring only state neutrality, allowing "freedom of choice" as to schools to be attended so long as the State itself assured that the choice was genuinely free of official restraints.[6]

---

[6] See, *e. g.*, *Bradley* v. *School Board*, 345 F. 2d 310, 316 (CA4 *en banc*, 1965):

"It has been held again and again . . . that the Fourteenth Amendment prohibition is not against segregation as such. . . . A state or school district offends no constitutional requirement when it grants to all students uniformly an unrestricted freedom of choice as to the school attended, so that each pupil, in effect, assigns himself to the school he wishes to attend." (The case was later

But the doctrine of *Brown I*, as amplified by *Brown II*, 349 U. S. 294 (1955), did not retain its original meaning. In a series of decisions extending from 1954 to 1971 the concept of state neutrality was transformed into the present constitutional doctrine requiring affirmative state action to desegregate school systems.[7] The keystone case was *Green* v. *County School Board*, 391 U. S. 430, 438 (1968), where school boards were declared to have "the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch." The school system before the Court in *Green* was operating in a rural and sparsely settled county where there were no concentrations of white and black populations, no neighborhood school system (there were only two schools in the county), and none of the problems of an urbanized school district.[8] The Court properly identified the freedom of choice program there as a subterfuge, and the language in *Green* imposing an affirmative duty to convert to a unitary system was appropriate on the facts before the Court. There was, however, reason to question to what extent this duty would apply in the vastly different factual setting of a

---

vacated and remanded by this Court, which expressed no view on the merits of the desegregation plans submitted.) 382 U. S. 103, 105 (1965). See also *Bell* v. *School City of Gary, Ind.*, 324 F. 2d 209 (CA7 1963); *Downs* v. *Board of Educ.*, 336 F. 2d 988 (CA10 1964); *Deal* v. *Board of Educ.*, 369 F. 2d 55 (CA6 1966).

[7] For a concise history and commentary on the evolution, see generally A. Bickel, The Supreme Court and the Idea of Progress, pp. 126–130 (1970).

[8] See also the companion cases in *Raney* v. *Board of Education*, 391 U. S. 443 (1968), and *Monroe* v. *Board of Comm'rs*, 391 U. S. 450 (1968), neither of which involved large urban or metropolitan areas.

large city with extensive areas of residential segregation, presenting problems and calling for solutions quite different from those in the rural setting of New Kent County, Virginia.

But the doubt as to whether the affirmative duty concept would flower into a new constitutional principle of general application was laid to rest by *Swann* v. *Board of Education*, 402 U. S. 1 (1971), in which the duty articulated in *Green* was applied to the urban school system of metropolitan Charlotte, North Carolina. In describing the residential patterns in Charlotte, the Court noted the "familiar phenomenon" in the metropolitan areas of minority groups being "concentrated in one part of the city," 402 U. S., at 25, and acknowledged that:

> "Rural areas accustomed for half a century to the consolidated school system implemented by bus transportation could make adjustments more readily than metropolitan areas with dense and shifting population, numerous schools, congested and complex traffic patterns." 402 U. S., at 14.

Despite this recognition of a fundamentally different problem from that involved in *Green*, the Court nevertheless held that the affirmative duty rule of *Green* was applicable, and prescribed for a metropolitan school system with 107 schools and some 84,000 pupils essentially the same remedy—elimination of segregation "root and branch"—which had been formulated for the two schools and 1,300 pupils of New Kent County.

In *Swann*, the Court further noted it was concerned only with States having "a long history" of officially imposed segregation and the duty of school authorities in those States to implement *Brown I*. 402 U. S., at 5–6. In so doing, the Court refrained even from considering whether the evolution of constitutional doctrine from *Brown I* to *Green/Swann* undercut whatever logic once supported

the *de facto/de jure* distinction. In imposing on metropolitan southern school districts an affirmative duty, entailing large-scale transportation of pupils, to eliminate segregation in the schools, the Court required these districts to alleviate conditions which in large part did *not* result from historic, state-imposed *de jure* segregation. Rather, the familiar root cause of segregated schools in *all* the biracial metropolitan areas of our country is essentially the same: one of segregated residential and migratory patterns the impact of which on the racial composition of the schools was often perpetuated and rarely ameliorated by action of public school authorities. This is a national, not a southern phenomenon. And it is largely unrelated to whether a particular State had or did not have segregatory school laws.[9]

Whereas *Brown I* rightly decreed the elimination of state-imposed segregation in that particular section of the country where it did exist, *Swann* imposed obligations on southern school districts to eliminate conditions which are not regionally unique but are similar both in origin and effect to conditions in the rest of the country. As

---

[9] As Dr. Karl Taeuber states in his article, Residential Segregation, Scientific American, August 1965, at 14:

"No elaborate analysis is necessary to conclude from these figures that a high degree of residential segregation based on race is a universal characteristic of American cities. This segregation is found in the cities of the North and West as well as of the South; in large cities as well as small; in nonindustrial cities as well as industrial; in cities with hundreds of thousands of Negro residents as well as those with only a few thousand; and in cities that are progressive in their employment practice and civil rights policies as well as those that are not."

In his book, Negroes in Cities (1965), Dr. Taeuber stated that residential segregation exists "regardless of the character of local laws and policies and regardless of other forms of discrimination." *Id.*, at 35.

the remedial obligations of *Swann* extend far beyond the elimination of the outgrowths of the state-imposed segregation outlawed in *Brown*, the rationale of *Swann* points inevitably towards a uniform, constitutional approach to our national problem of school segregation.

II

The Court's decision today, while adhering to the *de jure/de facto* distinction, will require the application of the *Green/Swann* doctrine of "affirmative duty" to the Denver School Board despite the absence of any history of state-mandated school segregation. The only evidence of a constitutional violation was found in various decisions of the school board. I concur in the Court's position that the public school authorities are the responsible agency of the State, and that if the affirmative duty doctrine is sound constitutional law for Charlotte, it is equally so for Denver. I would not, however, perpetuate the *de jure/de facto* distinction nor would I leave to petitioners the initial tortuous effort of identifying "segregative acts" and deducing "segregatory intent." I would hold, quite simply, that where segregated public schools exist within a school district to a substantial degree, there is a prima facie case that the duly constituted public authorities (I will usually refer to them collectively as the "school board") are sufficiently responsible [10] to impose upon them a nationally applicable burden to demon-

---

[10] A prima facie case of constitutional violation exists when segregation is found to a substantial degree in the schools of a particular district. It is recognized, of course, that this term is relative and provides no precise standards. But circumstances, demographic and otherwise, vary from district to district and hard and fast rules should not be formulated. The existence of a substantial percentage of schools populated by students from one race only or predominately so populated, should trigger the inquiry.

strate they nevertheless are operating a genuinely integrated school system.

A

The principal reason for abandonment of the *de jure/de facto* distinction is that, in view of the evolution of the holding in *Brown I* into the affirmative duty doctrine, the distinction no longer can be justified on a principled basis. In decreeing remedial requirements for the Charlotte/Mecklenburg school district, *Swann* dealt with a metropolitan, urbanised area in which the basic causes of segregation were generally similar to those in all sections of the country, and also largely irrelevant to the existence of historic, state-imposed segregation at the time of the *Brown* decision. Further, the extension of the affirmative duty concept to include compulsory student transportation went well beyond the mere remedying of that portion of school segregation for which former state segregation laws were ever responsible. Moreover, as the Court's opinion today abundantly demonstrates, the facts deemed necessary to establish *de jure* discrimination present problems of subjective intent which the courts cannot fairly resolve.

At the outset, one must try to identify the constitutional right which is being enforced. This is not easy, as the precedents have been far from explicit. In *Brown I*, after emphasising the importance of education, the Court said that:

> "Such an opportunity, where the state has undertaken to provide it, is a right which must be made available to all on equal terms." 347 U. S., at 493.

In *Brown II*, the Court identified the "fundamental principle" enunciated in *Brown I* as being the unconstitutionality of "racial discrimination in public education," 349 U. S., at 298, and spoke of "the personal interest of the plaintiffs in admission to public schools as soon

as practicable on a nondiscriminatory basis." 349 U. S., at 300. Although this and similar language is ambiguous as to the specific constitutional right, it means—as a minimum—that one has the right not to be compelled by state action to attend a segregated school system. In the evolutionary process since 1954, decisions of this Court have added a significant gloss to this original right. Although nowhere expressly articulated in these terms, I would now define it as the right, derived from the Equal Protection Clause, to expect that once the State has assumed responsibility for education, local school boards will operate *integrated school systems* within their respective districts.[11] This means that school authorities, consistent with the generally accepted educational goal of attaining quality education for all pupils, must make and implement their customary decisions with a view toward enhancing integrated school opportunities.

The term "integrated school system" presupposes, of course, a total absence of any laws, regulations or policies supportive of the type of "legalized" segregation condemned in *Brown*. A system would be integrated in accord with constitutional standards if the responsible authorities had taken appropriate steps to (i) integrate faculties and administration; (ii) scrupulously assure equality of facilities, instruction and curricula opportunities throughout the district; (iii) utilize their authority to draw attendance zones to promote integration; and (iv) locate new schools, close old ones, and

[11] See discussion in Part III, *infra*, of the remedial action which is appropriate to accomplish *desegregation* where a court finds that a school board has failed to operate an *integrated school system* within its district. Plaintiffs must, however, establish the failure of a school board to operate an integrated school system before a court may order desegregative steps by way of remedy. These are two distinct steps which recognize the necessity of proving the constitutional violation before desegregative remedial action can be ordered.

determine the size and grade categories with this same objective in mind. Where school authorities decide to undertake the transportation of students, this also must be with integrative opportunities in mind.

The foregoing prescription is not intended to be either definitive or all-inclusive, but rather an indication of the contour characteristics of an *integrated school system* in which all citizens and pupils may justifiably be confident that racial discrimination is neither practiced nor tolerated. An integrated school system does not mean—and indeed could not mean in view of the residential patterns of most of our major metropolitan areas—that *every school* must in fact be an integrated unit. A school which happens to be all or predominantly white or all or predominantly black is not a "segregated" school in an unconstitutional sense if the system itself is a genuinely integrated one.

Having school boards operate an integrated school system provides the best assurance of meeting the constitutional requirement that racial discrimination, subtle or otherwise, will find no place in the decisions of public school officials. Courts judging past school board actions with a view to their *general integrative effect* will be best able to assure an absence of such discrimination while avoiding the murky, subjective judgments inherent in the Court's search for "segregatory intent." Any test resting on so nebulous and elusive an element as a school board's segregatory "intent" provides inadequate assurance that minority children will not be short-changed in the decisions of those entrusted with the non-discriminatory operation of our public schools.

Public schools are creatures of the State, and whether the segregation is state-created or state-assisted or merely state-perpetuated should be irrelevant to constitutional principle. The school board exercises pervasive and continuing responsibility over the long range plan-

ning as well as the daily operations of the public school system. It sets policies on attendance zones, faculty employment and assignments, school construction, closings and consolidations, and myriad other matters. School board decisions obviously are not the sole cause of segregated school conditions. But if, after such detailed and complete public supervision, substantial school segregation still persists, the presumption is strong that the school board, by its acts or omissions, is in some part responsible. Where state action and supervision are so pervasive and where, after years of such action, segregated schools continue to exist within the district to a substantial degree, this Court is justified in finding a prima facie case of a constitutional violation. The burden then must fall on the school board to demonstrate it is operating an "integrated school system."

It makes little sense to find prima facie violations and the consequent affirmative duty to desegregate solely in those States with state-imposed segregation at the time of the *Brown* decision. The history of state-imposed segregation is more widespread in our country than the *de jure/de facto* distinction has traditionally cared to recognize.[13] As one commentator has noted:

"the three court of appeals decisions denying a constitutional duty to abolish de facto segregation all

[13] Indeed, if one goes back far enough, it is probable that all racial segregation, wherever occurring and whether or not confined to the schools, has at some time been supported or maintained by government action. In *Becket* v. *School Board*, 308 F. Supp. 1274, 1311-1315 (ED Va. 1969), Judge Walter Hoffman compiled a summary of past public segregatory action which included examples from a great majority of States. He concluded that "only as to the states of Maine, New Hampshire, Vermont, Washington, Nevada, and Hawaii does it appear from this nonexhaustive research that no discriminatory laws appeared on the books at one time or another." *Id.*, at 1315.

arose in cities—Cincinnati, Gary and Kansas City, Kansas—where racial segregation in schools was formerly mandated by state or local law. [*Deal* v. *Cincinnati Bd. of Educ.*, 369 F. 2d 55 (CA6 1966), cert. denied, 377 U. S. 924 (1964); *Downs* v. *Board of Educ.*, 336 F. 2d 988 (CA10 1964), cert. denied, 380 U. S. 914, *Bell* v. *School City*, 324 F. 2d 209 (CA7 1963), cert. denied, 377 U. S. 924.] Ohio discarded its statute in 1887, Indiana in 1949, and Kansas City not until the advent of *Brown*. If Negro and white parents in Mississippi are required to bus their children to distant schools on the theory that the consequences of past de jure segregation cannot otherwise be dissipated, should not the same reasoning apply in Gary, Indiana, where no more than five years before *Brown* the same practice existed with presumably the same effects." Goodman, De Facto School Segregation: A Constitutional and Empirical Analysis, 60 Cal. L. Rev. 275, 297 (1972).[12]

Not only does the *de jure/de facto* distinction operate inequitably on communities in different sections of the

[12] The author continues:

"True, the earlier the policy of segregation was abandoned the less danger there is that it continues to operate covertly, is significantly responsible for present day patterns of residential segregation, or has contributed materially to present community attitudes toward Negro schools. But there is no reason to suppose that 1954 is a universally appropriate dividing line between de jure segregation that may safely be assumed to have spent itself and that which may not. For many remedial purposes, adoption of an arbitrary but easily administrable cutoff point might not be objectionable. But in a situation such as school desegregation, where both the rights asserted and the remedial burdens imposed are of such magnitude, and where the resulting sectional discrimination is passionately resented, it is surely questionable whether such arbitrariness is either politically or morally acceptable."

country: more importantly, it disadvantages minority children as well. As the Fifth Circuit stated:

> "The Negro children in Cleveland, Chicago, Los Angeles, Boston, New York, or any other area of the nation which the opinion classifies under de facto segregation, would receive little comfort from the assertion that the racial make-up of their school system does not violate their constitutional rights because they were born into a de facto society, while the exact same racial make-up of the school system in the 17 southern and border states violates the constitutional rights of their counterparts, or even their blood brothers, because they were born into a de jure society. All children everywhere in the nation are protected by the Constitution, and treatment which violates their constitutional rights in one area, also violates such constitutional rights in another area." *Cisneros* v. *Corpus Christi Independent School District*, 467 F. 2d 142, 148 (CA5 *en banc*, 1972) quoting *United States* v. *Jefferson County Board of Educ.*, 380 F. 2d 385, 397 (CA5 *en banc*) Gewin, J., dissenting).[14]

The Court today does move for the first time toward breaking down past sectional disparities, but it clings tenuously to its distinction. It searches for *de jure* action in what the Denver School Board has done or failed to do, and even here the Court does not rely upon the results or effects of the Board's conduct but feels compelled to find segregatory intent: [15]

"We emphasize that the differentiating factor be-

---

[14] See Bickel, *supra*, n. 7, at 119:
"If a Negro child perceives his separation as discriminatory and invidious, he is not, in a society a hundred years removed from slavery, going to make fine distinctions about the source of a particular separation."

[15] The Court today does not require, however, a segregatory intent with respect to the entire school system, and indeed holds that if such

tween *de jure* segregation and so-called *de facto* segregation to which we referred in *Swann* is *purpose* or *intent* to segregate." (Court Opinion, p. 18) (italics are the Court's).

The Court's insistence that the "differentiating factor" between *de jure* and *de facto* segregation be "purpose or intent" is difficult to reconcile with the language in so recent a case as *Wright* v. *Council of the City of Emporia*, 407 U. S. 451 (7972). In holding there that "motivation" is irrelevant, the Court said:

"In addition, an inquiry into the 'dominant' motivation of school authorities is as irrelevant as it is fruitless. The mandate of *Brown II* was to desegregate schools, and we have said that '[t]he measure of any desegregation plan is its effectiveness.' *Davis* v. *School Commissioners of Mobile County*, 402 U. S. 33, 37.

"Thus, we have focused upon the effect—not the purpose or motivation—of a school board's action in determining whether it is a permissible method of dismantling a dual system.

. . . . .

"Though the *purpose* of the new school district was found to be discriminatory in many of these cases, the

---

an intent is found with respect to some schools in a system, the burden—normally on the plaintiffs—shifts to the defendant school authorities to prove a negative: namely, that their purposes were benign, *ante*, pp. 17–18.

The Court has come a long way since *Brown I*. Starting from the unassailable *de jure* ground of the discriminatory constitutional and statutory provisions of some States, the new formulation—still professing fidelity to the *de jure* doctrine—is that desegregation will be ordered despite the absence of any segregatory laws if: (i) segregated schools in fact exist; (ii) a court finds that they result from some action taken with segregatory intent by the school board; (iii) such action relates to any "meaningful segment" of the school system; and (iv) the school board cannot prove that its intentions with respect to the remainder of the system were nonsegregatory.

courts' holdings rested not on motivation or purposes but on the *effect* of the action upon the dismantling of the dual school system involved. That was the focus of the District Court in this case, and we hold that its approach was proper." 407 U. S., at 462.

I can discern no basis in law or logic for holding that the motivation of school board action is irrelevant in Virginia and controlling in Colorado. It may be argued, of course, that in *Emporia* a prior constitutional violation had already been proven and that this justifies the distinction. The net result of the Court's language, however, is the application of an *effect* test to the actions of southern school districts and an *intent* test to those in other sections, at least until an initial *de jure* finding for those districts can be made. Rather than straining to perpetuate any such dual standard, we should hold forthrightly that significant segregated school conditions in whatever section of the country are a prima facie violation of constitutional rights. As the Court has noted elsewhere:

> "Circumstances or chance may well dictate that no persons in a certain class will serve on a particular jury or during some particular period. But it taxes our credulity to say that *mere chance* resulted in there being no members of this class among the over six thousand jurors called in the past 25 years. *The result bespeaks discrimination, whether or not it was a conscious decision on the part of any individual jury commissioner.*" *Hernandez* v. *Texas*, 347 U. S. 475, 482 (1954). (Emphasis added.)

B

There is thus no reason as a matter of constitutional principle to adhere to the *de jure/de facto* distinction in school desegregation cases. In addition, there are rea-

sons of policy and prudent judicial administration which point strongly toward the adoption of a uniform national rule. The litigation heretofore centered in the South already is surfacing in other regions. The decision of the Court today, emphasizing as it does the elusive element of segregatory intent, will invite numerous desegregation suits in which there can be little hope of uniformity of result.

The issue in these cases will not be whether segregated education exists. This will be conceded in most of them. The litigation will focus as a consequence of the Court's decision on whether segregation has resulted in any "meaningful or significant" portion of a school system from a school board's "segregatory intent." The intractable problems involved in litigating this issue are obvious to any lawyer. The results of litigation—often arrived at subjectively by a court endeavoring to ascertain the subjective intent of school authorities with respect to action taken or not taken over many years—will be fortuitous, unpredictable and even capricious.

The Denver situation is illustrative of the problem. The courts below found evidence of *de jure* violations with respect to the Park Hill schools and an absence of such violations with respect to the core city schools, despite the fact that actions taken by the school board with regard to those two sections were not dissimilar. It is, for example, quite possible to contend that both the construction of Manual High School in the core city area and Barrett Elementary School in the Park Hill area operated to serve their surrounding Negro communities and, in effect, to merge school attendance zones with segregated residential patterns. See Petitioner's Brief, pp. 80–83. Yet findings even on such similar acts will, under the *de jure/de facto* distinction, continue to differ, especially since the Court has never made clear what suffices to establish the requisite "segregatory intent" for

an initial constitutional violation. Even if it were possible to clarify this question, wide and unpredictable differences of opinion among judges would be inevitable when dealing with an issue as slippery as "intent" or "purpose," especially when related to hundreds of decisions made by school authorities under varying conditions over many years.

This Court has recognized repeatedly that it is "extremely difficult for a court to ascertain the motivation, or collection of different motivations, that lie behind a legislative enactment," *Palmer* v. *Thompson*, 403 U. S. 214, 224 (1971); *McGinnis* v. *Royster*, — U. S. —, — (1973); *United States* v. *O'Brien*, 391 U. S. 367, 383 (1968). Whatever difficulties exist with regard to a single statute will be compounded in a judicial review of years of administration of a large and complex school system.[14] Every act of a school board and school administration, and indeed every failure to act where affirmative action is indicated, must now be subject to scrutiny.

---

[14] As one commentator has expressed it:

"If the courts are indeed prepared to inquire into motive, thorny questions will arise even if one assumes that racial motivation is capable of being proven at trial. What of the case in which one or more members of a school board, but less than a majority, are found to have acted on racial grounds? What if it appears that the school board's action was prompted by a mixture of motives, including constitutionally innocent ones that alone would have prompted the board to act? What if the members of the school board were not themselves racially inspired but wished to please their constituents, many of whom they knew to be so? If such cases are classified as unconstitutional de jure segregation, there is little point in preserving the de jure-de facto distinction at all. And it may well be that the difference between any of these situations and one in which racial motivation is altogether lacking is too insignificant, from the standpoint of both the moral culpability of the state officials and the impact upon the children involved, to support a difference in constitutional treatment." Goodman, *supra*, n. 11, at 284-285.

The most routine decisions with respect to the operation of schools, made almost daily, can affect in varying degrees the extent to which schools are initially segregated, remain in that condition, are desegregated, or—for the long term future—are likely to be one or the other. These decisions include action or nonaction with respect to school building construction and location; the timing of building new schools and their size; the closing and consolidation of schools; the drawing or gerrymandering of student attendance zones; the extent to which a neighborhood policy is enforced; the recruitment, promotion and assignment of faculty and supervisory personnel; policies with respect to transfers from one school to another; whether, and to what extent, special schools will be provided, where they will be located, and who will qualify to attend them; the determination of curriculum, including whether there will be "tracks" that lead primarily to college or to vocational training, and the routing of students into these tracks; and even decisions as to social, recreational and athletic policies.

In *Swann* the Court did not have to probe into segregatory intent and proximate cause with respect to each of these "endless" factors. The basis for its *de jure* finding there was rooted primarily in the prior history of the desegregation suit. 402 U. S., at 5–6. But in a case of the present type, where no such history exists, a judicial examination of these factors will be required under today's decision. This will lead inevitably to uneven and unpredictable results, to protracted and inconclusive litigation, to added burdens on the federal courts, and to serious disruption of individual school systems. In the absence of national and objective standards, school boards and administrators will remain in a state of uncertainty and disarray, speculating as to what is required and when litigation will strike.

C

Rather than continue to prop up a distinction no longer grounded in principle, and contributing to the consequences indicated above, we should acknowledge that whenever public school segregation exists to a substantial degree there is prima facie evidence of a constitutional violation by the responsible school board. It is true, of course, that segregated schools—wherever located—are not solely the product of the action or inaction of public school authorities. Indeed, as indicated earlier, there can be little doubt that principal causes of the pervasive school segregation found in the major urban areas of this country, whether in the North, West, or South, are the socio-economic influences which have concentrated our minority citizens in the inner cities while the more mobile white majority disperse to the suburbs. But it is also true that public school boards have continuing, detailed responsibility for the public school system within their district and, as Judge John Minor Wisdom has noted, "where the figures [showing segregation in the schools] speak so eloquently, a *prima face* case *of* discrimination is established." *United States* v. *Texas Education Agency*, 467 F. 2d 848, 873 (CA5 *en banc* 1972). Moreover, as foreshadowed in *Swann* and as implicitly held today, school boards have a duty to minimize and ameliorate segregated conditions by pursuing an affirmative policy of desegregation. It is this policy which must be applied consistently on a national basis without regard to a doctrinal distinction which has outlived its time.

III

The preceding section addresses the constitutional obligation of public authorities in the school districts throughout our country to operate *integrated school sys-*

tems. When the schools of a particular district are found to be substantially segregated, there is a prima facie case that this obligation has not been met. The burden then shifts to the school authorities to demonstrate that they have in fact operated an integrated system as this term is defined above, *supra*, p. 10. If there is a failure successfully to rebut the prima facie case, the question then becomes what reasonable affirmative desegregative steps district courts may require to place the school system in compliance with the constitutional standard. In short, what specifically is the nature and scope of the remedy?

As the Court's opinion virtually compels the finding on remand that Denver has a "dual school system," that city will then be under an "affirmative duty" to desegregate its entire system "root and branch." *Green* v. *County School Board*, 391 U. S., at 438. Again, the critical question is what ought this constitutional duty to entail.

A

The controlling case is *Swann*, *supra*, and the question which will confront and confound the District Court and Denver School Board is what indeed does *Swann* require. *Swann* purported to enunciate no new principles, relying heavily on *Brown I* and *II* and on *Green*. Yet it affirmed a district court order which had relied heavily on "racial ratios" and sanctioned transportation of elementary as well as secondary pupils. Lower federal courts have often read *Swann* as requiring far-reaching transportation decrees[17] "to achieve the greatest possible degree of actual

[17] See, *e. g.*, *Thompson* v. *School Board of Newport News*, —— F. 2d ——, —— (1972), where the CA4 *en banc*, upheld a district court assignment plan where "travel time, varying from a minimum of forty minutes and a maximum of one hour, each way, would be required for busing black students out of the old City and white students into the old City in order to achieve a racial balancing of the

desegregation." 402 U. S., at 26. In the context of a large urban area, with heavy residential concentrations of white and black citizens in different—and widely separated—sections of the school district, extensive dispersal and transportation of pupils is inevitable if *Swann* is read as expansively as many courts have been reading it to date.

To the extent that *Swann* may be thought to require large-scale or long-distance transportation of students in our metropolitan school districts, I record my profound misgivings. Nothing in our Constitution commands or encourages any such court compelled disruption of public education. It may be more accurate to view *Swann* as having laid down a broad rule of reason under which desegregation remedies must remain flexible and other values and interests be considered. Thus the Court recognized that school authorities, not the federal judiciary, must be charged in the first instance with the task of desegregating local school systems. 402 U. S., at 16. It noted that school boards in rural areas can adjust more readily to this task than those in metropolitan dis-

---

district." This transportation was decreed for children from the third grade up, involving children as young as eight years of age.

In *Northcross* v. *Memphis Bd. of Educ.*, 466 F. 2d 390, 395 (1972), the CA6 affirmed a district court assignment plan which daily transported 14,000 children with "the maximum time to be spent on the buses by any child [being] 34 minutes. . . ," presumably each way. But as Judge Weick noted in dissent the CA6 instructed the district judge to implement yet further desegregation orders. Plans presently under consideration by that court call for the busing of 39,085 and 61,530 children respectively, for undetermined lengths of time. *Id.*, at 395–986.

Petitioners before this Court in *Potts* v. *Flax*, No. 72–288, cert. denied, — U. S. — (197–), contended that the implementation of the CA5's directive in *Flax* v. *Potts*, 464 F. 2d 865 (1972), would require bus rides of up to two hours and 20 minutes each day and a round trip of up to 70 miles. Petition, at 14. While respondents contend these figures represent an "astounding inflation," Response, at 7, transportation of a significant magnitude seems inevitable.

tricts "with dense and shifting population, numerous schools, congested and complex traffic patterns." *Id.*, at 14. Although the use of pupil transportation was approved as a remedial device, transportation orders are suspect "when the time or distance of travel is so great as to either risk the health of the children or significantly impinge on the education process." *Id.*, at 31. Finally, the age of the pupils to be transported was recognized by the Court in *Swann* as one important limitation on the time of student travel. *Ibid.*

These factors were supposed to help guide district courts in framing equitable remedies in school desegregation cases.[18] And the Court further emphasized that equitable decrees are inherently sensitive, not solely to the degree of desegregation to be achieved, but to a variety of other public and private interests:

> . . . a school desegregation case does not differ fundamentally from other cases involving the framing of equitable remedies to repair the denial of a constitutional right. The task is to correct, by a balancing of the individual and collective interest, the condition that offends the Constitution. *Swann, supra*, at 15–16.

Those words echoed a similar expression in *Brown II*, 349 U. S., at 229:

> "In fashioning and effecting the decrees, the courts will be guided by equitable principles. Traditionally, equity has been characterized by a practical flexibility in shaping its remedies and by a facility

---

[18] See *United States* v. *Texas Education Agency*, 467 F. 2d 848, 883 (CA5 1972) (Bell, J., concurring in an opinion in which seven other judges joined):

"In our view the remedy which the district court is required to formulate should be formulated within the *entire context* of the opinion in *Swann* v. *Charlotte-Mecklenburg Board of Education*. . . . [Emphasis added.]"

for adjusting and reconciling public and private needs."

Thus in school desegregation cases, as elsewhere, equity counsels reason, flexibility and balance. See, *e. g.*, *Lemon* v. *Kurtzman*, — U. S. — (1973). I am aware, of course, that reasonableness in any area is a relative and subjective concept. But with school desegregation, reasonableness would seem to embody a balanced evaluation of the obligation of public school boards to promote desegregation with other, equally important educational interests which a community may legitimately assert. Neglect of either the obligation or the interests destroys the even-handed spirit with which equitable remedies must be approached.[19] Overzealousness in pursuit of any single goal is untrue to the tradition of equity and to the "balance" and "flexibility" which this Court has always respected.

B

Where school authorities have defaulted in their duty to operate an integrated school system, district courts must insure that affirmative desegregative steps ensue. Many of these can be taken effectively without damaging state and parental interests in having children attend schools within a reasonable vicinity of home. Where desegregative steps are possible within the framework of a system of "neighborhood education," school authorities must pursue them. For example, bound-

[19] The relevant inquiry is "whether the costs of achieving desegregation in any given situation outweigh the legal, moral and educational considerations favoring it. . . . It is clear . . . that the Constitution should not be held to require any transportation plan that keeps children on a bus for a substantial part of the day, consumes significant portions of funds otherwise spendable directly on education, or involves a genuine element of danger to the safety of the child." School Desegregation After Swann: A Theory of Government Responsibility, 39 U. Chi. L. Rev. 421, 422, 443 (1972).

aries of neighborhood attendance zones should be drawn to integrate, to the extent practicable, the school's student body. Construction of new schools should be of such a size and at such a location as to encourage the likelihood of integration, *Swann*, at 21. Faculty integration should be attained throughout the school system, *Swann*, at 19; *United States* v. *Montgomery County Board of Education*, 395 U. S. 225 (1969). An optional majority to minority transfer program, with the State providing free transportation to desiring students, is also a helpful adjunct to a desegregated school system. *Swann*, at 26–27. It hardly need be repeated that allocation of resources within the school district must be made with scrupulous fairness among all schools.

The above examples are meant to be illustrative, not exhaustive. The point is that the over-all integrative impact of such school board decisions must be assessed by district courts in deciding whether the duty to desegregate has been met. For example, "neighborhood school plans are constitutionally suspect when attendance zones are superficially imposed upon racially defined neighborhoods, and when school construction preserves rather than eliminates the racial hegemony of given schools."[20] *Keyes* v. *School District No. 1, Denver Colorado*, —— F. 2d ——. *United States* v. *Board of Education of Tulsa County*, 429 F. 2d ——, 1258–1259. This does not imply that decisions on faculty assignment, attendance zones, school construction, closing and consolidation, must be made to the detriment of all neutral, nonracial considerations. But these considerations can, with proper school board initiative, generally be met in a manner that will enhance the degree of school desegregation.

---

[20] A useful study of the historical uses and abuses of the neighborhood school concept is M. Weinberg, Race & Place (1967).

C

Defaulting school authorities would have, at a minimum, the obligation to take affirmative steps of the sort outlined in the above section. School boards would, of course, be free to develop and initiate further plans to promote school desegregation. In a pluralistic society such as ours, it is essential that no racial minority feel demeaned or discriminated against and that students of all races learn to play, work, and cooperate with one another in their common pursuits and endeavors. Nothing in this opinion is meant to discourage school boards from exceeding minimal constitutional standards in promoting the values of an integrated school experience.

A *constitutional requirement* of extensive student transportation solely to achieve integration presents a vastly more complex problem. It promises on the one hand a greater degree of actual desegregation, while it infringes on what may fairly be regarded as other important community aspirations and personal rights. Such a requirement is further likely to divert attention and resources from the foremost goal of any school system: the best quality education for all pupils. The Equal Protection Clause does indeed command that racial discrimination not be tolerated in the decisions of public school authorities. But it does not require that school authorities undertake widespread student transportation solely for the sake of maximizing integration.[21]

---

[21] In fact, due to racially separate residential patterns that characterize our major urban areas it is quite unrealistic to think of achieving in many cities substantial integration throughout the school district without a degree of student transportation which would have the gravest economic and educational consequences. As Professor Bickel notes:

"In most of the larger urban areas, demographic conditions are such that no policy that a court can order, and a school board, a city or

This obviously does not mean that bus transportation has no place in public school systems or is not a permissible means in the desegregative process. The transporting of school children is as old as public education, and in rural and some suburban settings it is as indispensable as the providing of books. It is presently estimated that approximately half of all American children ride buses to school for reasons unrelated to integration.[23] At the secondary level in particular, where the schools are larger and serve a wider, more dispersed constituency than the elementary school, some form of public or privately financed transportation is often necessary. There is a significant difference, however, in transportation plans voluntarily initiated by local school boards for educational purposes and those imposed by a federal court. The former usually represent a necessary or convenient means of access to the school nearest home; the latter often require lengthy trips for no purpose other than to further integration.[24] Yet the

---

even a state has the capability to put into effect, will in fact result in the foreseeable future in racially balanced public schools. Only a reordering of the environment involving economic and social policy on the broadest conceivable front might have an appreciable impact." Bickel, *supra*, n. 7, at 132.

[23] Estimates vary. *Swann*, *supra*, at 29, noted that "eighteen million of the Nation's public school children, approximately 39%, were transported to their schools by bus in 1969–1970 in all parts of the country." Senator Ribicoff (D.-Conn.) a thoughtful student of this problem, stated that "two-thirds of all American children today ride buses to school for reasons unrelated to integration." 118 Cong. Rec. 32543, Feb. 24, 1972.

[24] Historically, distant transportation was wrongly used to promote segregation. "Negro children were generally considered capable of travelling longer distances to school and without the aid of any vehicle. What was too far for a white child became reasonably near for a Negro child," Weinberg, *supra*, n. 20, at 87.

This deplorable history has led some to argue that integrative bus rides are justified as atonement for past segregatory trips and that neighborhood education is now but a code-word for racial segrega-

Court in *Swann* was unquestionably right in describing bus transportation as "one tool of school desegregation." 402 U. S., at 30.[24] The crucial issue is when, under what circumstances, and to what extent such transportation may appropriately be ordered. The answer to this turns—as it does so often in the law—upon a sound exercise of discretion under the circumstances.

Swann itself recognized limits to desegregative obligations. It noted that a constitutional requirement of "any particular degree of racial balance or mixing . . . would be disproved . . . ," and sanctioned district court use of mathematical ratios as "no more than a starting point in the process of shaping a remedy. . . ." 402 U. S., at 24, 25. Thus particular schools may be all white or all black and still not infringe constitutional rights if the *system* is genuinely integrated and school authorities are pursuing integrative steps short of extensive and disruptive transportation. The refusal of the Court in *Swann* to require racial balance in schools throughout the

---

tion. But misuse of transportation in the past does not imply neighborhood schooling has no valid nonsegregatory uses for the present. Nor would wrongful transportation in the past justify detrimental transportation for the children of today.

[24] Some communities had transportation plans in effect at the time of court desegregation orders. See *Swann*, *supra*, at 29, n. 11; *Davis* v. *School Comm'rs of Mobile County*, 402 U. S. 33, 34–35 (1971). Courts have used the presence or absence of existing transportation in a district as one factor in framing and implementing desegregation decrees. *United States* v. *Watson Chapel School District*, 446 F. 2d 933, 937 (CA8 1971); *Northcross* v. *Board of Educ.*, 444 F. 2d 1179, 1182–1183 (CA6 1971); *Davis* v. *Board of Educ.*, 328 F. Supp. 1197, 1203 (ED Ark. 1971). Where a school board is voluntarily engaged in transporting students, a district court is, of course, obligated to insure that such transportation is not undertaken with segregatory effect. Where, also, voluntary transportation programs are already in progress, there may be greater justification for court-ordered transportation of students *for a comparable time and distance* to achieve greater integration.

district or the arbitrary elimination of all "one-race schools," 402 U. S., at 26, is grounded in a recognition that the State, parents, and children all have at stake in school desegregation decrees legitimate and recognizable interests.

The personal interest might be characterized as the desire that children attend community schools near home. Dr. James Coleman testified for petitioners at trial that "most school systems organize their schools in relation to the residents by having fixed school districts and some of these are very ethnically homogeneous." App. 1549a. In *Deal* v. *Cincinnati Board of Education*, 396 F. 2d 55, 60 (1966), the Sixth Circuit summarized the advantages of such a neighborhood system of schools: [25]

> "Appellants, however, pose the question of whether the neighborhood system of pupil placement, fairly administered without racial bias, comports with the requirements of equal opportunity if it nevertheless results in the creation of schools with predominantly or even exclusively Negro pupils. The neighborhood system is in wide use throughout the nation and has been for many years the basis of school administration. This is so because it is acknowledged to have several valuable aspects which are an aid to education, such as minimization of safety haz-

[25] The term "neighborhood school" should not be supposed to denote solely a walk-in school or one which serves children only in the surrounding blocks. The Court has noted, in a different context, that "the word 'neighborhood' is quite as susceptible of variation as the word 'locality.' Both terms are elastic and, dependent upon circumstances, may be equally satisfied by areas measured by rods or by miles." *Connally* v. *General Const. Co.*, 269 U. S. 385, 395 (1926). In the school context, "neighborhood" refers to relative proximity, to a preference for a school nearer, rather than more distant from home.

ards to children in reaching school, economy of cost in reducing transportation needs, ease of pupil placement and administration through the use of neutral, easily determined standards, and better home-school communication."

The neighborhood school does provide greater ease of parental and student access and convenience, as well as greater economy of public administration. These are obvious and distinct advantages, but the legitimacy of the neighborhood concept rests on more basic grounds.[26]

Neighborhod school systems, neutrally administered, reflect the deeply felt desire of citizens for a sense of community in their public education. Public schools have been a traditional source of strength to our Nation, and that strength may derive in part from the identification of many schools with the personal features of the surrounding neighborhood. Community support, interest and dedication to public schools may well run higher with a neighborhood attendance pattern: distance may encourage disinterest. Many citizens sense today a decline in the intimacy of our institutions—home, church, and school—which has caused a concomitant decline in the unity and communal spirit of our people. I pass no judgment on this viewpoint, but I do believe that this Court should be wary of compelling in the name of constitutional law what may seem to many a dissolution in the traditional, more personal fabric of their public schools.

Closely related to the concept of a community and neighborhood education, are those rights and duties parents have with respect to the education of their children.

---

[26] I do not imply that the neighborhood concept must be embodied in every school system. But where a school board has chosen it, federal judges should accord it respect in framing remedial decrees.

The law has long recognized the parental duty to nurture, support, and provide for the welfare of children, including their education. In *Pierce* v. *Society of Sisters*, 268 U. S. 510, 534, 535, a unanimous Court held that:

> "Under the doctrine of *Meyer* v. *Nebraska*, 262 U. S. 390, we think it entirely plain that the Act of 1922 unreasonably interferes with the liberty of parents and guardians to direct the upbringing and education of children under their control. . . . The child is not the mere creature of the state; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations."

And in *Griswold* v. *Connecticut*, 381 U. S. 479, 482 (1965), the Court noted that in *Pierce*, "the right to educate one's children as one chooses is made applicable to the States by the force of the First and Fourteenth Amendments." I do not believe recognition of this right can be confined solely to a parent's choice to send a child to public or private school. Most parents cannot afford the luxury of a private education for their children, and the dual obligation of private tuitions and public taxes. Those who may for numerous reasons seek public education for their children should not be forced to forfeit all interest or voice in the school their child attends. It would, of course, be impractical to allow the wishes of particular parents to be controlling. Yet the interest of the parent in the enhanced parent-school and parent-child communication allowed by the neighborhood unit ought not to be suppressed by force of law.

In the commendable national concern for alleviating public school segregation, courts may have overlooked the fact that the rights and interests of children affected by a desegregation program also are entitled to consid-

eration. Any child, white or black, who is compelled to leave his neighborhood and spend significant time each day being transported to a distant school suffers an impairment of his liberty and his privacy. Not long ago, James B. Conant wrote that "[a]t the elementary school level the issue seems clear. To send young children day after day to distant schools seems out of the question." [27] A community may well conclude that the portion of a child's day spent on a bus might be used more creatively in a classroom, playground, or some other extracurricular school activity. Decisions such as these, affecting the quality of a child's daily life, should not lightly be held constitutionally errant.

To this point I have focused mainly on the personal interests of parents and children which a community may believe to be best protected by a neighborhood system of schools. But broader considerations lead me to question just as seriously any remedial requirement of extensive student transportation solely to further integration. Any such requirement is certain to fall disproportionately on the school districts of our country, depending on their degree of urbanization, financial resources, and their racial composition. Some districts with little or no biracial population will experience little or no educational disruption, while others, notably in large, biracial metropolitan areas, must at considerable expense undertake extensive transportation to achieve the type of integration frequently being ordered by district courts.[28] At a time when public education generally is suffering serious financial malnutrition, the economic burdens of such transportation can be severe, requiring both initial capital outlays and annual operating costs in the millions of

---

[27] Slums and Suburbs, 29 (1961).

[28] See n. 21, *supra*.

dollars.[29] And while constitutional requirements have often occasioned uneven burdens, never have they touched so sensitive a matter as wide differences in the compulsory transportation requirements for literally hundreds of thousands of school children.

The argument for student transportation also overlooks the fact that the remedy exceeds that which may be necessary to redress the constitutional evil. Let us use Denver as an example. The Denver School Board, by its action and nonaction, may be legally responsible for some of the segregation that exists. But if one assumes a maximum discharge of constitutional duty by the Denver Board over the past decades, the fundamental problem of residential segregation would persist.[30] It is indeed a novel application of equitable power—not to mention a dubious extension of constitutional doctrine—to require so much greater a degree of forced school integration than would have resulted from purely natural and neutral nonstate causes.

The compulsory transportation of students carries a further infirmity as a constitutional remedy. With most constitutional violations, the major burden of remedial action falls on offending state officials. Public officials who act to infringe personal rights of speech, voting, or

---

[29] In Memphis, for example, which has no history of busing students, the minimum transportation plan ordered by the courts will require, in the School Board's estimate, an initial capital expenditure of $1,064,192 for buses plus an annual operating cost of $629,192. The Board estimates that a more extensive transportation program to be considered by the district court will require initial capital investments of $3,924,000 and annual operating costs of $1,783,490. The most drastic transportation plan before the district court requires estimated annual operating costs of from $2,354,220, $2,431,710, or $3,463,100 depending on the Board's transportation arrangements. *Northcross* v. *Board of Education of Memphis City Sch.*, *supra*, n. 17, at 898 (Weick, J., dissenting).

[30] See n. 9, *supra*.

religious exercise, for example, are obliged to cease the offending act or practice and, where necessary, institute corrective measures. It is they who bear the brunt of remedial action, though other citizens will to varying degrees feel its effects. School authorities responsible for segregation must, at the very minimum, discontinue segregatory acts. But when the obligation further extends to the transportation of students, the full burden of the affirmative remedial action is borne by children and parents who did not participate in any constitutional violation.

Finally, courts in requiring so far-reaching a remedy as student transportation solely to maximize integration, risk setting in motion unpredictable and unmanageable social consequences. No one can estimate the extent to which dismantling neighborhood education will hasten an exodus to private schools, leaving public school systems the preserve of the disadvantaged of both races. Or guess how much impetus such dismantlement gives the movement from innercity to suburb, and the further geographical separation of the races. Nor do we know to what degree this remedy may cause deterioration of community and parental support of public schools, or divert attention from the paramount goal of quality in education to a perennially devisive debate over who is to be transported where.

The problem addressed in this opinion has perplexed courts, school officials, other public authorities, and students of public education for nearly two decades. The problem, especially since it has focused on the "busing issue," has profoundly disquieted the public wherever extensive transportation has been ordered. I make no pretense of knowing the best answers. Yet, the issue in this and like cases comes to this Court as one of constitutional law. As to this issue, I have no doubt whatever. There is nothing in the Constitution, its history

or—until recently—in the jurisprudence of this Court that mandates the employment of forced transportation of young and teenage children to achieve a single interest, as important as this interest may be. We have strayed, quite far as I view it, from the rationale of *Brown I* and *II*, as reiterated in *Swann*, that courts in fashioning remedies must be "guided by equitable principles" which include the "adjusting and reconciling [of] public and private needs," *Brown II*, 349 U. S., at 229.

I urge a return to this rationale. This would result, as emphasized above, in no prohibition on court-ordered student transportation in furtherance of desegregation. But it would also require that the legitimate community interests in neighborhood school systems be accorded far greater respect. In the balancing of interests so appropriate to a fair and just equitable decree, transportation orders should be applied with special caution to any proposal as disruptive of family life and interests—and ultimately of education itself—as extensive transportation of elementary age children solely for desegregation purposes. As a minimum, this Court should not require school boards to engage in the unnecessary transportation away from their neighborhoods of elementary age children.[21] It is at this age level that neighborhood education performs its most vital educational role. It is with respect to children of tender years that the greatest concern exists for their physical and psycholog-

[21] There may well be advantages in commencing the integrative experiences at an early age, as young children may be less likely than older children and adults to develop an inhibiting racial consciousness. These advantages should be considered as school boards make the various decisions with the view to achieving and preserving an integrated school system. *Supra*, p. 10. But in the balancing of all relevant interests, the advantages of an early integrative experience must, and in all fairness should, be weighed against other relevant advantages and disadvantages and in light of the demographic characteristics of the particular community.

ical health. It is also here, at the elementary school, that the rights of parents and children are most sharply implicated."[*]

IV

The existing state of law has failed to shed light and provide guidance on the two issues addressed in this opinion: (i) whether a constitutional rule of uniform, national application should be adopted with respect to our national problem of school desegregation and (ii) if so, whether the ambiguities of *Swann*, construed to date almost uniformly in favor of extensive transportation, should be redefined to restore a more viable balance among the various interests which are involved. With all deference, it seems to me that the Court today has addressed neither of these issues in a way that will afford adequate guidance to the courts below in this case or lead to a rational, coherent national policy.

The Court has chosen, rather, to adhere to the *de facto/de jure* distinction under circumstances, and upon a rationale, which can only lead to increased and inconclusive litigation, and—especially regrettable—to deferment of a nationally consistent judicial position on this subject. There is, of course, state action in every school district in the land. The public schools always have been funded and operated by States and their local subdivisions. It is true that segregated schools, even in the cities of the South, are in large part the product of social and economic factors—and the resulting residential patterns. But there is also not a school dis-

[*] While greater transportation of secondary school students might be permitted, even at this level the desire of a community for racially neutral neighborhood schools should command judicial respect. It would ultimately be wisest, where there is no absence of good faith, to permit affected communities to decide this delicate issue of student transportation on their own.

trict in the United States, with any significant minority school population, in which the school authorities—in one way or the other—have not contributed in some measure to the degree of segregation which still prevails. Instead of recognizing the reality of similar, multiple segregatory causes in school districts throughout the country, the Court persists in a distinction whose duality operates unfairly on local communities in one section of the country and on minority children in the others.

The second issue relates to the ambiguities of *Swann* and the judicial disregard of legitimate community and individual interests in framing equitable decrees. In the absence of a more flexible and reasonable standard than that imposed by district courts after *Swann*, the desegregation which will now be decreed in Denver and other major cities may well involve even more extensive transportation than has been witnessed up to this time.

It is well to remember that the course we are running is a long one and the goal sought in the end—so often overlooked—is the best possible educational opportunity for all children. Communities deserve the freedom and the incentive to turn their attention and energies to this goal of quality education, free from protracted and debilitating battles over court-ordered student transportation. The single most disruptive element in education today is the widespread use of compulsory transportation, especially at elementary grade levels. This has risked distracting and diverting attention from basic educational ends, dividing and embittering communities, and exacerbating rather than ameliorating inter-racial friction and misunderstanding. It is time to return to a more balanced evaluation of the recognised interests of our society in achieving desegregation with other educational and societal interests a community may legitimately assert. This will help assure that integrated

school systems will be established and maintained by rational action, will be better understood and supported by parents and children of both races, and will promote the enduring qualities of an integrated society so essential to its genuine success.

SUPREME COURT OF THE UNITED STATES

No. 71-507

Wilfred Keyes et al., Petitioners, v. School District No. 1, Denver, Colorado, et al.

On Writ of Certiorari to the United States Court of Appeals for the Tenth Circuit.

[June 21, 1973]

MR. JUSTICE REHNQUIST, dissenting.

I

The Court notes at the outset of its opinion the differences between the claims made by the plaintiffs in this case and the classical "*de jure*" type of claims made by plaintiffs in cases such as *Brown* v. *Board of Education*, 347 U. S. 483 (1954), and its progeny. I think the similarities and differences, not only in the claims, but in the nature of the constitutional violation, deserve somewhat more attention than the Court gives them.

In *Brown*, the Court held unconstitutional statutes then prevalent in southern and border States mandating that Negro children and white children attend separate schools. Under such a statute, of course, every child in the school system is segregated by race, and there is no racial mixing whatever in the population of any particular school.

It is conceded that the State of Colorado and the city of Denver have never had a statute or ordinance of that description. The claim made by these plaintiffs, as described in the Court's opinion, is that the school board by "use of various techniques such as the manipulation of students' attendance zones, school site selection and a neighborhood school policy" took race into account

in making school assignments in such a way as to lessen that mixing of races that would have resulted from a racially neutral policy of school assignment. If such claims are proven, those minority students who as a result of such manipulative techniques are forced to attend schools other than those that they would have attended had attendance zones been neutrally drawn are undoubtedly deprived of their constitutional right to equal protection of the laws just as surely as were the plaintiffs in *Brown* v. *Board of Education* by the statutorily required segregation in that case. But the fact that invidious racial discrimination is prohibited by the Constitution in the north as well as the south must not be allowed to obscure the equally important fact that the consequences of manipulative drawing of attendance zones in a school district the size of Denver does not necessarily result in denial of equal protection to all minority students within that district. There are significant differences between the proof which would support a claim such as that alleged by plaintiffs in this case, and the total segregation required by statute which existed in *Brown*.

The Court's opinion obscures these factual differences between the situation shown by the record to have existed in Denver and the situations dealt with in earlier school desegregation opinions of the Court. The Court states, *ante*, p. 10, that ". . . we have never suggested that plaintiffs in school desegregation cases must bear the burden of proving the elements of *de jure* segregation as to each and every school or each and every student within the school system. Rather, we have held that where plaintiffs proved that a current condition of segregated schooling exists within a school district where a dual system was compelled or authorized by statute at the time of our decision in *Brown* v. *Board of Education*, 347 U. S. 483 (1954) (*Brown I*), the state automatically assumes that affirmative duty 'to effectuate a transition

to arrange a nondiscriminatory school system,' *Brown* v. *Board of Education*, 349 U. S. 294, 301 (1955) (*Brown II*) . . . ."

That statement is of course correct in the *Brown* context, but in the *Brown* cases and later ones that have come before the Court the situation which had invariably obtained at one time was a "dual" school system mandated by law, by a law which prohibited Negroes and whites from attending the same schools. Since under *Brown* such a law deprived each Negro child of the equal protection of the laws, there was no need to prove "the elements of *de jure* segregation as to each and every school," since the law itself had required just that sort of segregation.

But in a school district the size of Denver's, it is quite conceivable that the school board might have engaged in the racial gerrymandering of the attendance boundary between two particular schools in order to keep one largely Negro and Hispano, and the other largely Anglo, as the District Court found to have been the fact in this case. Such action would have deprived affected minority students who were the victims of such gerrymandering of their constitutional right to equal protection of the law. But if the school board had been evenhanded in its drawing of the attendance lines for other schools in the district, minority students required to attend other schools within the district would have suffered no such deprivation. It certainly would not reflect normal English usage to describe the entire district as "segregated" on such a state of facts, and it would be a quite unprecedented application of principles of equitable relief to determine that if the gerrymandering of one attendance zone were proven, particular racial mixtures could be required by a federal district court for every school in the district.

It is quite possible, of course, that a school district purporting to adopt racially neutral boundary zones

might with respect to every such zone individiously discriminate against minorities, so as to produce substantially the same result as was produced by the statutorily decreed segregation involved in *Brown*. If that were the case, the consequences would necessarily have to be the same as were the consequences in *Brown*. But in the absence of a statute requiring segregation, there must necessarily be the sort of factual inquiry which was unnecessary in those jurisdictions where racial mixing in the schools was forbidden by law.

Underlying the Court's entire opinion is its apparent thesis that a district judge is at least permitted to find that if a single attendance zone between two individual schools in the large metropolitan district is found by him to have been "gerrymandered," the school district is guilty of operating a "dual" school system, and is apparently a candidate for what is in practice a federal receivership. Not only the language of the Court in the opinion, but its reliance on the case of *Green* v. *County School Board*, 391 U. S. 430, 437–438 (1968), indicates that such would be the case. It would therefore presumably be open to the District Court to require, *inter alia*, that pupils be transported great distances throughout the district to and from schools whose attendance zones have not been gerrymandered. Yet unless the Equal Protection Clause of the Fourteenth Amendment now be held to embody a principle of "taint," found in some primitive legal systems but discarded centuries ago in ours, such a result can only be described as the product of judicial fiat.

Green, *supra*, represented a marked extension of the principles of *Brown* v. *Board of Education*, *supra*. The Court in *Green* said:

> "It is of course true that for the time immediately after *Brown II* [349 U. S. 294] the concern was with making an initial break in a long-established

pattern of excluding Negro children from schools attended by white children . . . . Under *Brown II* that immediate goal was only the first step, however. The transition to a unitary, nonracial system of public education was and is the ultimate end to be brought about . . . ." 391 U. S., at 436.

"*Brown II* was a call for the dismantling of well-entrenched dual system tempered by an awareness that complex and multifaceted problems would arise which would require time and flexibility for a successful resolution. School boards such as the respondent then operating state-compelled dual systems were nevertheless clearly charged with the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch." 391 U. S., at 437–438.

The drastic extension of *Brown* which *Green* represented was barely, if at all, explicated in the latter opinion. To require that a genuinely "dual" system be disestablished, in the sense that the assignment to a child of a particular school is not made to depend on his race, is one thing. To require that school boards affirmatively undertake to achieve racial mixing in schools where such mixing is not achieved in sufficient degree by neutrally drawn boundary lines is quite obviously something else.

The Court's own language in *Green* makes it unmistakably clear that this significant extension of *Brown's* prohibition against discrimination, and the conversion of that prohibition into an affirmative duty to integrate, was made in the context of a school system which had for a number of years rigidly excluded Negroes from attending the same schools as were attended by whites. Whatever may be the soundness of that decision in the

context of a genuinely "dual" school system, where segregation of the races had once been mandated by law, I can see no constitutional justification for it in a situation such as that which the record shows to have obtained in Denver.

II

The Court's opinion gives lip service to the notion that the inquiry as to whether or not the Denver school district was "segregated" is a factual one, though it refers in various critical language to the District Court's refusal to find that minority concentrations in the core area schools was the result of discriminatory action on the part of the school board. The District Court is said to have "fractionated" the district, *ante*, p. 3, and to have "held that its finding of intentional segregation in Park Hill was not in any sense material to the question of segregatory intent in other areas of the city," *ante*, p. 3. It is difficult to know what the Court means by the first of these references, and even more difficult to justify the second in the light of the District Court's opinion.

If by "fractionating" the district, the Court means that the District Court treated together events that occurred during the same time period, and that it treated those events separately from events that occurred during another time span, this is undoubtedly correct. This is the approach followed by most experienced and careful finders of fact.

In commencing that part of its comprehensive opinion which dealt with the "core-area" schools, the District Court observed:

> "The evidentiary as well as the legal approach to the remaining schools is quite different from that which has been outlined above. *For one thing, the concentrations of minorities occurred at an earlier date*, and in some instances, prior to the *Brown*

decision by the Supreme Court. Community attitudes were different, including the attitudes of the school board members. *Furthermore, the transitions were much more gradual and less perceptible than they were in the Park Hill School.*" (Emphasis supplied.) Appendix 57a.

The District Court noted, in its opinion of July 31, 1969, the differentiation that the plaintiffs themselves had made between the so-called "Park Hill" schools and the "core-area" schools. The plaintiffs had sought a preliminary injunction prohibiting the school board from rescinding three resolutions which had been adopted by a differently composed school board earlier in 1969 and which would have redrawn school boundary lines in the Park Hill area to achieve greater integration. In his opinion granting that injunction, the District Court said:

"Attention at this hearing has focused primarily on the schools in Northeast Denver, and particularly on the area which is commonly called Park Hill. The alleged segregated schools, elementary and junior high schools in this area, have acquired their character as such during the past ten years. The primary reason for this is the migration of the Negro community eastward from a confined community surrounding what is commonly called 'five points.' Before 1950 the Negroes all lived in the community bounded roughly by Twentieth Avenue on the south, Twentieth Street on the West, York Street on the east, and Thirty-Eighth Avenue on the north. The schools in this area were, and are now, largely Negro schools. However, we are not presently confronted with the validity of this condition. During this period the Negro population was relatively small, and this condition had developed over a long period of time. However, by 1960

and, indeed, at the present time this population is sizeable. As the population has expanded the move has been to the east, first to Colorado Boulevard, a natural dividing line, and later beyond Colorado Boulevard, but within a narrow corridor—more or less fixed North-South boundaries. The migration caused these areas to become substantially Negro and segregated." Appendix 4a.

Further reference to the District Court's several opinions shows that the allegedly discriminatory acts of the school board in the Park Hill area occurred between 1960 and 1969, in the context of a steadily expanding Negro school population in the Park Hill area and heightened sensitivity on the part of the community to the problems raised by integration and segregation.

The allegedly discriminatory acts with respect to the "core-area" schools—New Manual High School, Cole Junior High School, Morey Junior High School, and Boulevard and Columbine Elementary Schools—took place between the years 1952 and 1961. They took place, as indicated by the references to the District Court's opinion noted above, not in a context of a rapidly expanding Negro population, but in a context of a relatively fixed area of the city that had for an indefinite period of time been predominantly Negro.

Thus, quite contrary to the intimation of virtual arbitrariness contained in the Court's opinion, the District Court's separate treatment of the claims respecting these two separate areas was absolutely necessary if a careful factual determination, rather than a jumbled hash of unrelated events, was to emerge from the fact-finding process. The "intent" with which a public body performs an official act is difficult enough to ascertain under the most favorable circumstances. See *Palmer v. Thompson*, 403 U. S. 217 (1971); *Royster v. McGinnis*, —— U. S. —— (1973). Far greater difficulty is encoun-

tered if we are to assess the intentions with which official acts of a school board are performed over a period of years. Not only does the board consist of a number of members, but the membership customarily turns over as a result of frequent periodic elections. Indeed, it was as a result of the 1969 election for membership on the Denver School Board that the board's policy which had previously favored the correction of racial imbalance by implementation of resolutions was reversed by the election of new members to the board.

These difficulties obviously do not mean that the inquiry must be abandoned, but they do suggest that the care with which the District Court conducted it in this case is an absolutely essential ingredient to its successful conclusion.

The Court's bald statement that the District Court "held that its finding of additional segregation in Park Hill was not in any sense material to the question of segregatory intent in other areas of the city" is flatly belied by the following statement in the District Court's opinion:

> "Although past discriminatory acts may not be a substantial factor contributing to present segregation, they may nevertheless be probative on the issue of the segregative purpose of other discriminatory acts which are in fact a substantial factor in causing a present segregated situation." Appendix 70a.

Thus, it is apparent that the District Court was fully aware that it might take into consideration the intention with which it found the school board to have performed one act in assessing its intention in performing another act. This is the most that the references in the Court's opinion to evidentiary treatises such as *Wigmore* and *McCormick* support. And it should be noted that the cases cited by the Court, and by the authors of the treatises, almost invariably deal with the intention of a

particular individual or individuals, and not with the "intention" of a public body whose membership is constantly changing.

The Court's opinion totally confuses the concept of a permissible inference in such a situation, of which the District Court indicated it was well aware, with what the Court calls a "presumption" and what it calls a "shifting of the burden of proof" and a "shifting of the burden of going forward with the evidence." No case from this Court has ever gone further in this area than to suggest that a finding of intent in one factual situation may support a finding of fact in another related factual situation involving the same actor, a principle with which, as indicated above, the District Court was thoroughly familiar.

The District Court cases cited by the Court represent almost entirely the opinions of judges who were themselves finders of fact, concluding as a part of the fact-finding process that intent with respect to one act may support a conclusion of a like intent with respect to another. This is but a restatement of the principle of which the District Court showed it was aware. And obviously opinions of courts of appeals upholding such findings of the District Court do not themselves support any broader proposition than do the opinions of the District Court in question.

Chambers v. *Hendersonville City Board of Education*, 364 F. 2d 189 (CA4 1966), and *North Carolina Teachers Association* v. *Asheboro City Board of Education*, 393 F. 2d 736 (CA4 1968), involved a background of segregation by a law in the State of North Carolina and "the failure of the public school system to desegregate in compliance with the mandates of *Brown* until forced to do so by litigation." The courts held that the decimation in the ranks of the Negro teachers while white teachers were unaffected, raised an inference of discrim-

ination which cast upon the school board the burden of justifying such decimation. In each case, the school board had offered virtually no evidence supporting any nondiscriminatory basis for the result reached. The cases are thus wholly different in their factual background from the case now before the Court.

Also worthy of note is the fact that neither in *Chambers* nor in *Asheboro* did the Court of Appeals remand for a further hearing, but in effect ordered judgments for the appellant on the issue considered. This amounted to a determination that the factual finding of the District Court on that issue was "clearly erroneous," and the statement as to presumption was a statement as to the appellate court's method of evaluating the factual finding. This Court is in quite a different position in reviewing this case, with the factual finding of the District Court having been affirmed by the Court of Appeals for the Tenth Circuit, than was the Court of Appeals for the Fourth Circuit in reviewing the factual findings of the District Courts that were before it in *Chambers* and in *Asheboro*. Indeed, it would be contrary to settled principles for this Court to upset a factual finding sustained by the Court of Appeals. "A seasoned and wise rule of this Court makes concurrent findings of two courts final here in the absence of very exceptional showing of error." *Comstock* v. *Group of Institutional Investors*, 335 U. S. 211, 214 (1948).

The Court, doubtless realizing the difficulty of justifying an outright reversal, instead remands for further factual determination under newly enunciated standards governing the evidentiary treatment of the finding as to Park Hill by the District Court. These standards are called in some parts of the opinion an inference, and in other parts a shifting of the burden of going forward with the evidence, and in other parts a *prima facie* case. Quite apart from my disagreement with the majority on

its constitutional law, I cannot believe it is a service to any of the parties to this litigation to require further factual determination under such a vague and imprecise mandate. But more fundamentally, I believe that a district judge thoroughly sympathetic to the plaintiffs' claims gave them the full evidentiary hearing to which they were entitled and carefully considered all of the evidence before him. He showed full awareness of the evidentiary principle that he might infer from the "segregatory intent" with which he found the board to have acted in the Park Hill area a like intent with respect to the core area, but he deliberately declined to do so. This was his prerogative as the finder of fact, and his conclusion upon its affirmance by the Court of Appeals is binding upon us.

III

The Court has taken a long leap in this area of constitutional law in equating the district-wide consequences of gerrymandering individual attendance zones in a district where separation of the races was never required by law with statutes or ordinances in other jurisdictions which did so require. It then adds to this potpourri a confusing enunciation of evidentiary rules in order to make it more likely that the trial court will on remand reach the result which the Court apparently wants it to reach. Since I believe neither of these steps is justified by prior decisions of this Court, I dissent.

IN THE

Supreme Court of the United States

October Term 1971

No. 71-507

WILFRED KEYES, et al.,

Petitioners,

vs

SCHOOL DISTRICT NO. 1, DENVER COLORADO, et al.,

Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT

PETITION FOR REHEARING AND FOR STAY OF MANDATE

Respondents respectfully petition the Court for a rehearing on one of the two questions decided by the Court in its Opinion of June 21, 1973, namely, whether the courts below applied the correct legal standard in addressing petitioners' claims of state-imposed segregation in the core city schools; and as to that question, respondents seek rehearing only as to that part of the question relating to the shifting of the burden of proof discussed in Part III of the Opinion.

Respondents also request that the mandate be stayed until disposition of this petition.

Grounds for the Petition

1. Summary

The Opinion leaves doubt as to whether the school authorities have the burden of proving lack of segregative intent as to their actions prior to the intentionally segregative actions, first occurring in 1960, proven by the petitioners.

All precedent and authority hold that prior intentional acts are probative on the question of the intent associated with later acts. Yet the Opinion does not explicitly confine the effect of the burden-shifting principle to actions at or after the time of the proven intentional segregative acts.

Whether the respondents' burden of proof extends to school district actions prior to 1960, when the first segregative act, the building of Barrett School, was shown, will make a substantial difference, upon remand, in the scope of the proceedings, including the time required for trial preparation, the duration of the trial, and the expense to the school district. It will make the difference of whether the school district must carry the burden of proof respecting the intent of all of its actions for only the 14-year period extending back to 1959, or for a much longer period of at least twice that duration to the early 1940's when ethnic concentrations first began to appear in the Denver schools.

2. The Authorities and Precedents

All of the treatises and cases cited by the Court refer to prior or concurrent conduct. The touchstone for the burden-shifting rule is the

> ". . . well-settled evidentiary principle that 'the *prior* doing of other similar acts, whether clearly

> part of a scheme or not, is useful as reducing the possibility that the act in question was done with innocent intent.' II Wigmore, Evidence 200 (3d ed. 1940)." (emphasis added) (Opinion, p. 17)

The example of the application of the principle from the criminal context *(Nye & Nissen* v. *United States,* 336 U.S. 613 [1949]) involved presentation of false invoices during the same period of time as the acts charged (332 U.S. at 618).

The school desegregation cases cited by the Court — *Swann* v. *Charlotte-Mecklenburg Board of Education,* 402 U.S. 1 (1971), and the teacher discharge cases — all involved a "history of segregation," which the Court expressly defines:

> "Indeed, to say that a system has a 'history of segregation' is merely to say that a pattern of intentional segregation has been established in the *past.*" (emphasis added) (Opinion, p. 20)

The Court then restates its holding, in the light of these authorities, as follows:

> "Thus, be it a statutory dual system or an allegedly unitary system where a meaningful portion of the system is found to be intentionally segregated, the existence of *subsequent or other* segregated schooling within the same system justifies a rule imposing on the school authorities the burden of proving that *this* segregated schooling is not also the result of intentionally segregative acts." (emphasis added) (Opinion, p. 20)

The use of the words "subsequent or other," especially in light of the authorities cited, is consistent with the applicability of the shift of burden to subsequent or contemporaneous

situations, excluding prior segregated schooling from the operation of the burden-shifting rule.

3. The Application of the Rule by the Courts Below

The courts below clearly recognized that prior segregative acts have probative value on the issue of segregative intent with respect to later acts.

This Court commenced its discussion of the burden-shifting principle with the observation that the District Court had considered "*past* discriminatory acts . . . in assessing the causes of current segregation . . . " (emphasis added) (Opinion, n. 14, p. 16). The District Court had limited its consideration of the Park Hill actions in 1960 (building Barrett), 1962 and 1964 (boundary changes at Stedman and Hallett), and 1965 (mobile units at Stedman and Hallet), to the assessment of segregative purpose of the later 1969 acts (the repeal of the racial balancing resolutions). Thus, the limitation of the District Court's comment is *chronological*, not geographical.

When the Court of Appeals agreed with the District Court that the "petitioners had failed to prove" intentional discriminatory acts causing present racial imbalance in the core city schools, the Court of Appeals clearly limited the imposition of the burden on petitioners to the time period prior to 1960 when there were no prior segregative acts shown:

> "Where, as here, the system is not a dual one, and where no type of state imposed segregation has *previously* been established, the burden is on plaintiff to prove by a preponderance of evidence that the racial imbalance exists and that it was caused by intentional state action. (emphasis added) (445 F. 2d at 1006, A.P. 148a)

4. The Structure of the Case and the Order of Events

The segregative acts in Park Hill occurred in the 1960's, as the Opinion notes (p. 8); but, with one exception, the Opinion nowhere identifies the time period in which the acts with respect to the core city schools took place. The exception is the reference to actions in the core city area antedating the 1954 decision in *Brown*, where the focus of the Opinion was on the attenuation of causal effect, as distinct from intent. (Opinion, p. 20)

Respondents believe that it is probable that the Court, in formulating the burden-shifting principle, misapprehended the order of events as between the Park Hill schools and the core city schools. This could easily have happened because the Park Hill evidence was presented at the first hearing in support of the first cause of action, and the trial court's opinions thereon were announced and reported first. The District Court discussed the Park Hill evidence in the first part of its opinion on the merits, and the Court of Appeals did likewise in its opinion. Petitioners, in their brief, consistently reversed the chronology in discussing the evidence and other aspects of the case, and discussed the Park Hill events first before turning to the earlier events in the core city area.

Actually, almost all of the actions of the school district with respect to the core city area took place in the 1950's, under wholly different school boards, ten years before the Park Hill events.

5. The Secondary Issue of Causal Attenuation

Nor does the discussion of causal attenuation (Opinion, pp. 20, 21) appear to carry the application of the burden-shifting principle back to actions taken prior to the period of proven intentional segregation. This is because the showing of causal attenuation comes into play as to those acts

which cannot be shown to lack segregative intent. (Opinion, p. 21) And such intent, by all authorities cited, can be inferred only on the basis of prior or contemporaneous segregative acts, and not on the basis of subsequent intentional acts many years later.

Conclusion

We are assured by Biblical authority that the iniquities of the fathers will not be visited on the children. Conversely, the Court should not visit the "sins" of one generation of school board members and administrators upon the men and women serving in such capacities in an earlier generation.

WHEREFORE, respondents respectfully pray that rehearing be granted on the question of whether proven discriminatory acts may be deemed probative on the issue of the segregative purpose of earlier acts, thus shifting the burden of proof as to such earlier acts. A resolution of this question is of substantial importance in determining the scope of the future conduct of this litigation.

This petition is filed after the Court has adjourned; respondents, accordingly, also respectfuly request that the mandate of the Court be stayed until disposition of this petition, in the interests of orderly further proceedings below.

Respectfully submitted,
